MAKING CONNECTIONS *Recognize the larger developments and continuities within and across chapters by answering these questions.*

1. Ex-Confederates were not the first Americans to engage in violent protest against what they saw as tyrannical government power. Imagine, for example, a conversation between a participant in Shays's Rebellion (Chapter 6) and a southern Democrat who participated in the overthrow of a Republican government in his state. How would each describe his grievances? Whom would he name as enemies? Compare and contrast the tactics of these and other violent protests against government power in the United States. To what extent did these groups succeed?

2. Return to the image at the start of this chapter (p. 433), which shows a celebration in Baltimore after ratification of the Fifteenth Amendment. Note the various activities depicted as representations of the impact of emancipation and voting rights for black men. How might an African American family at the time have understood the image? What about a southern white family opposed to the Fifteenth Amendment?

KEY TURNING POINTS *Refer to the chapter chronology on page 434 for help in answering the question below.*

Identify two crucial turning points in the course of Reconstruction. What caused those shifts in direction, and what were the results?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS *Choose the correct answer for each question.*

Questions 1–3 refer to the excerpt below.

> "*Sec. 2* . . . All freedmen, free negroes and mulattoes in this State, over the age of eighteen years . . . with no lawful employment or business, or found unlawfully assembling themselves together, either in the day or night . . . shall be deemed vagrants . . . and shall be imprisoned at the discretion of the court. . . ."
>
> *Sec. 2* . . . it shall not be lawful for any freedman, free negro or mulatto to intermarry with any white person . . . and any person who shall so intermarry, shall be deemed guilty of a felony, and upon conviction thereof shall be confined in the State penitentiary for life. . . .
>
> *Sec. 1* . . . no freedman, free negro or mulatto, not in the military service of the United States government . . . shall keep or carry firearms of any kind, or any ammunition. . . .
>
> *Sec. 5* . . . If any freedman, free negro or mulatto, convicted of any of the misdemeanors provided against in this act, shall fail or refuse . . . to pay the fine and costs imposed, such person shall be hired out by the sheriff or other officers . . . to any white person who will pay said fine and all costs, and take said convict. . . ."
>
> The Mississippi Black Code, 1865

1. The Black Codes emerged most directly from the context of which of the following?
   - **a.** Southern resistance to Reconstruction
   - **b.** A "New South" economy based on sharecropping
   - **c.** The rise of democratic beliefs that influenced moral and social reforms
   - **d.** The spread of the ideology of Social Darwinism
2. The conditions leading to the establishment of the Black Codes showed the most similarity with which of the following developments?
   - **a.** 1920s political controversies over cultural modernism
   - **b.** 1950s policies and methods exposing suspected communists within the United States
   - **c.** 1960s social and political unrest sparked by desegregation
   - **d.** 2000s political and cultural debates over gender roles
3. Which of the following groups of the period would have most directly opposed the creation of the Black Codes?
   - **a.** Radical Republicans
   - **b.** Labor activists
   - **c.** The U.S. Supreme Court
   - **d.** The Populist Party

Questions 4–6 refer to the image below.

Library of Congress

4. The image is a response to which of the following developments in the United States?
   - **a.** Republican efforts to reorder race relations in the defeated South
   - **b.** The South's restriction of political opportunities and other leadership roles for former slaves
   - **c.** The abolitionist movement's willingness to use violence to achieve its goals
   - **d.** The support for racial segregation in the *Plessy v. Ferguson* decision

5. An individual who agreed with the artist's perspective as portrayed in the cartoon would express the greatest support for
   a. placing limits on African American rights.
   b. maintaining full legal equality for African Americans.
   c. utilizing systems of patronage at all levels of government.
   d. a moral obligation of wealthy people to help the less fortunate in society.

6. The image best reflects a growing trend in the North supporting policies in the South of political
   a. isolationism.
   b. imperialism.
   c. interventionism.
   d. reconciliation.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

1. Answer (a), (b), and (c).
   a. Briefly describe ONE specific historical change in the political behavior of women from after the Civil War to 1898.
   b. Briefly explain ONE specific historical factor that led to the change you identified in (a).
   c. Briefly explain ONE specific historical result of the change you described in (a) on American politics.

2. Answer (a), (b), and (c).
   a. Briefly describe ONE specific historical difference in the economic lives of African Americans from the period before the Civil War to the period after.
   b. Briefly explain ONE specific historical similarity in the economic lives of African Americans from the period before the Civil War to the period after.
   c. Briefly explain ONE specific historical factor that caused the similarity you explained in (b).

"African-American women decided to quit work over such grievances as low wages, long hours, and unpleasant tasks. . . . [I]t was an effective strategy to deprive employers of complete power over their labor. . . . Occasional refusals to sell their labor or self-imposed limits enabled working class women to conduct their own family and community affairs in ways that mitigated the demands of white supremacy and the market economy."

Tera W. Hunter, *To Joy My Freedom; Black Women's Lives and Labors After the Civil War*, 1997

"[B]lack working women . . . lacked the control over their own productive energies and material resources. . . . Though perhaps "freed" or "liberated" from narrow sex-role conventions, they remained tied to overwhelming wage-earning and child-rearing responsibilities. . . . [W]hen measured against traditional standards of power — usually defined in terms of wealth; personal autonomy; and control over workers, votes, or inheritances — black wives and mothers had little leverage with which to manipulate the behavior of their kinfolk.

Jacqueline Jones, *Labor of Love, Labor of Sorrow; Black Women, Work, and the Family, from Slavery to the Present*, 1986

3. Using the two excerpts at left, answer (a), (b), and (c).
   a. Briefly explain ONE major difference between Hunter's and Jones's historical interpretations of the lives of African American women in the second half of the nineteenth century.
   b. Briefly explain how ONE historical event or development not directly mentioned in the excerpts could be used to support Hunter's argument.
   c. Briefly mention how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Jones's argument.

AP® LEARNING FOCUS

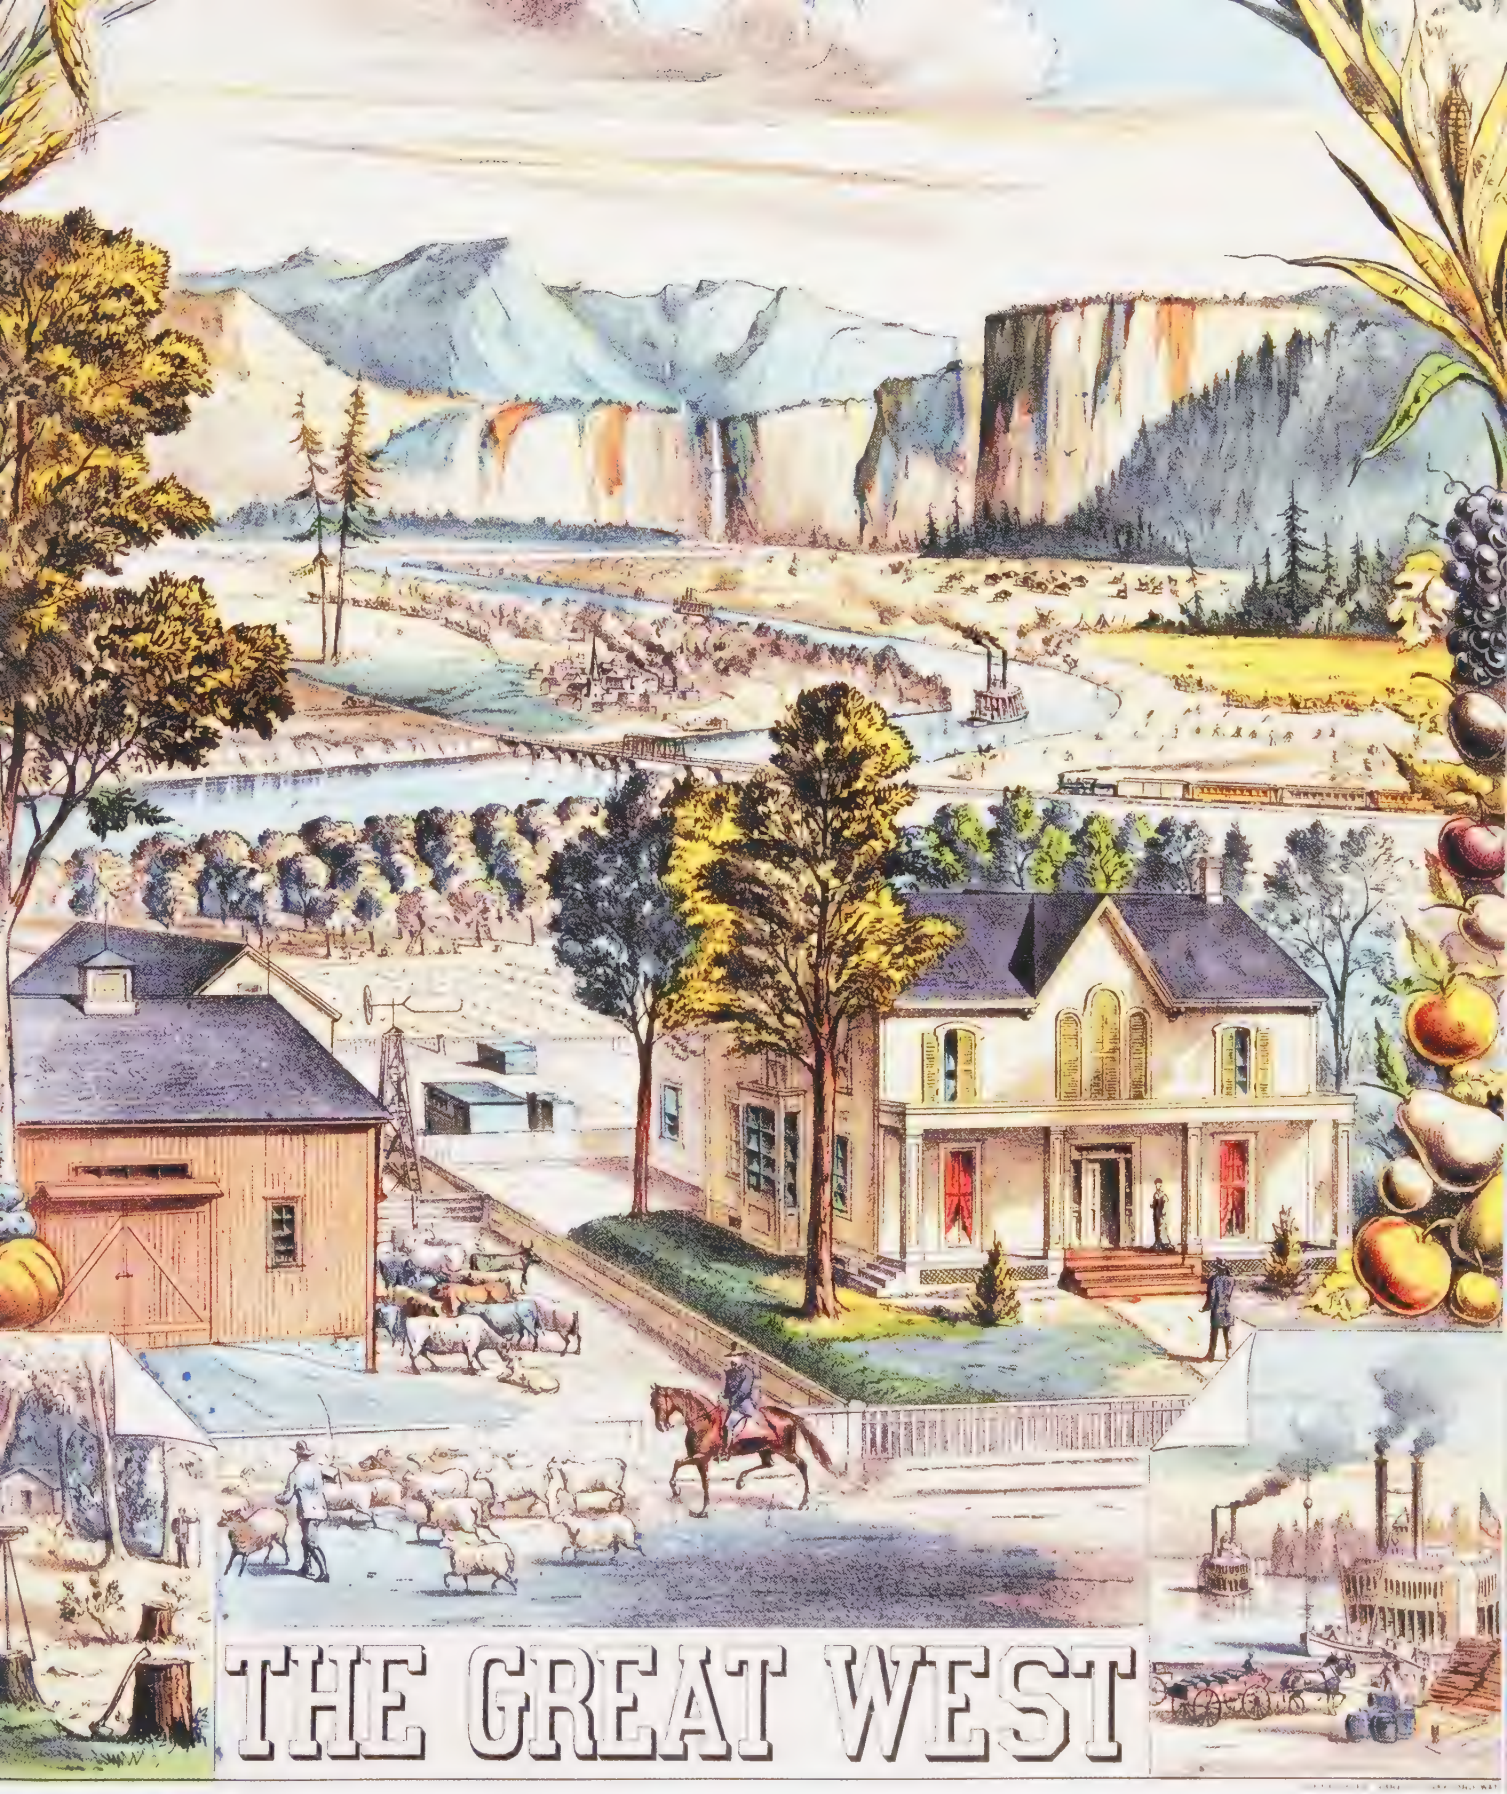
How did U.S. policymakers seek to stimulate the economy and integrate the trans-Mississippi west into the nation, and how did this affect people living there?

On May 10, 1869, Americans poured into the streets for a giant party. In big cities, the racket was incredible. Cannons boomed and train whistles shrilled. New York fired a hundred-gun salute at City Hall. Congregations sang anthems, while the less religious gathered in saloons to celebrate with whiskey. Philadelphia's joyful throngs reminded an observer of the day, four years earlier, when news had arrived of Lee's surrender. The festivities were prompted by a long-awaited telegraph message: executives of the Union Pacific and Central Pacific railroads had driven a golden spike at Promontory Point, Utah, linking up their lines. Unbroken track now stretched from the Atlantic to the Pacific. A journey across North America could be made in less than a week.

The first **transcontinental railroad** meant jobs and money. San Francisco residents got right to business: after firing a salute, they loaded Japanese tea on a train bound for St. Louis, marking California's first overland delivery to the East. In coming decades, trade and tourism fueled tremendous growth west of the Mississippi. San Francisco, which in 1860 had handled $7.4 million in imports, increased that figure to $49 million over thirty years. The new railroad would, as one speaker predicted in 1869, "populate our vast territory" and make America "the highway of nations."

The railroad was also a political triumph. Victorious in the Civil War, Republicans saw themselves as heirs to the American System envisioned by antebellum Whigs. They believed government intervention in the economy was the key to nation building. But unlike Whigs, whose plans had met stiff Democratic opposition, Republicans enjoyed a decade of unparalleled federal power. They used it vigorously: U.S. government spending per person, after skyrocketing in the Civil War, remained well above earlier levels. Republicans believed that national economic integration was the best guarantor of lasting peace. As a New York minister declared, the federally supported transcontinental railroad would "preserve the Union."

The minister was wrong on one point. He claimed the railroad was a peaceful achievement, in contrast to military battles that had brought "devastation, misery, and woe." In fact, creating a continental empire caused plenty of woe. Regions west of the Mississippi could only be incorporated if the United States subdued Native peoples and established favorable conditions for international investors—often at great domestic cost. And while conquering the West helped make the United States into an industrial power, it also deepened America's rivalry with European empires and created new patterns of exploitation.



The Great West In the wake of the Civil War, Americans looked westward. Republicans implemented an array of policies to foster economic development in the "Great West." Ranchers, farmers, and lumbermen cast hungry eyes on the remaining lands held by Native Americans. Steamboats and railroads, both visible in the background of this image, became celebrated as symbols of the expanding reach of U.S. economic might. This 1881 promotional poster illustrates the bountiful natural resources to be found out west, as well as the land available for ranching, farming, and commerce The men in the lower left corner are surveying land for sale. Libr

CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and identify the links among related events.

- **1859** ▸ Comstock silver lode discovered in Nevada
- **1862** ▸ Homestead Act
  ▸ Dakota Sioux uprising in Minnesota
  ▸ Morrill Act funds public state universities
- **1864** ▸ Sand Creek massacre of Cheyennes in Colorado
  ▸ Yosemite Valley reserved as public park
- **1865** ▸ Long Drive of Texas longhorns begins
- **1866** ▸ Fetterman massacre
- **1868** ▸ Burlingame Treaty with China
- **1869** ▸ Transcontinental railroad completed
  ▸ Wyoming women's suffrage
- **1870** ▸ Utah women's suffrage
- **1872** ▸ General Mining Act
  ▸ Yellowstone National Park created
- **1873** ▸ United States begins to move to gold standard
- **1876** ▸ Battle of Little Big Horn
- **1877** ▸ Nez Perce forcibly removed from ancestral homelands in Northwest
  ▸ *Munn v. Illinois* Supreme Court decision
- **1879** ▸ Exoduster migration to Kansas
  ▸ John Wesley Powell presents *Report on the Lands of the Arid Region of the United States*
- **1880s** ▸ Rise of the Ghost Dance movement
- **1885** ▸ Sitting Bull tours with Buffalo Bill's Wild West
- **1886** ▸ Dry cycle begins on the plains
  ▸ Chiricahua Apache leader Geronimo surrenders
- **1887** ▸ Dawes Severalty Act
- **1890** ▸ Massacre of Sioux Ghost Dancers at Wounded Knee, South Dakota

The Republican Vision

Reshaping the former Confederacy was only part of Republicans' plan for a reconstructed nation. They remembered the era after Andrew Jackson's destruction of the Second National Bank as one of economic chaos, when the United States had become vulnerable to international creditors and market fluctuations. Land speculation on the frontier had provoked extreme cycles of boom and bust. Failure to fund a transcontinental railroad had left different regions of the country disconnected. This, Republicans believed, had helped trigger the Civil War, and they were determined to set a new direction.

Even while the war raged, Congress made vigorous use of federal power, launching the transcontinental rail project and a new national banking system. Congress also raised the **protective tariff** on a range of manufactured goods, from textiles to steel, and on some agricultural products, like wool and sugar. At federal customhouses in each port, foreign manufacturers who brought merchandise into the United States had to pay import fees. These tariff revenues gave U.S. manufacturers, who did not pay the fees, a competitive advantage in America's vast domestic market.

The economic depression that began in 1873 set limits on Republicans' economic ambitions, just as it hindered their Reconstruction plans in the South. But their policies continued to shape the economy. Though some historians argue that the late nineteenth century was an era of *laissez faire* or unrestrained capitalism, in which government sat passively by, the industrial United States was actually the product of a massive public-private partnership in which government played critical roles.

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

AP® PRACTICES & SKILLS

CAUSATION

In what ways did Republicans use federal power on the world stage, and in what ways did they continue policies from the pre–Civil War era?

The New Union and the World

The United States emerged from the Civil War with new leverage in its negotiation with European countries, especially Great Britain, whose navy dominated the seas. Britain, which had allowed Confederate raiding ships such as CSS *Alabama* to be built in its shipyards, submitted afterward to arbitration and paid the United States $15.5 million in damages. Flush with victory, many Americans expected more British and Spanish territories to drop into the Union's lap. Senator Charles Sumner proposed, in fact, that Britain settle the *Alabama* claims by handing over Canada.

Such dreams were a logical extension of pre–Civil War conquests, especially in the U.S.-Mexico War. With the coasts now linked by rail, merchants and manufacturers looked across the Pacific, hungry for trade with Asia.

Union victory also increased U.S. economic influence in Latin America. While the United States was preoccupied with its internal war, France had **deposed** Mexico's government and installed an emperor. On May 5, 1867, Mexico overthrew the French invaders and executed Emperor Maximilian. But while Mexico regained independence, it lay open to the economic designs of its increasingly powerful northern neighbor.

A new model emerged for asserting U.S. power in Latin America and Asia: not by direct conquest, but through trade. The architect of this vision was William Seward, secretary of state from 1861 to 1869 under presidents Abraham Lincoln and Andrew Johnson. A New Yorker of grand ambition and ego, Seward believed, like many contemporaries, that Asia would become "the chief theatre of [world] events" and that commerce there was key to America's prosperity. He urged the Senate to purchase sites in both the Pacific and the Caribbean for naval bases and refueling stations. When Japan changed policy and tried to close its ports to foreigners, Seward dispatched U.S. naval vessels to join those of Britain, France, and the Netherlands in reopening trade by force. At the same time, Seward urged annexation of Hawaii. He also predicted that the United States would one day claim the Philippines and build a Panama canal.

Seward's short-term achievements were modest. Exhausted by civil war, Americans had little enthusiasm for further military exploits. Seward achieved only two significant victories. In 1868, he secured congressional approval for the **Burlingame Treaty** with China, which guaranteed the rights of U.S. missionaries in China and set official terms for the emigration of Chinese laborers, some of whom were already clearing farmland and building railroads in the West. That same year, Seward negotiated the purchase of Alaska from Russia. After the Senate approved the deal, Seward waxed poetic:

> Our nation with united interests blest
> Not now content to poise, shall sway the rest;
> Abroad our empire shall no limits know,
> But like the sea in endless circles flow.

Many Americans scoffed at the purchase of Alaska, a frigid arctic tract that skeptics nicknamed "Seward's Icebox." But the secretary of state mapped out a path his Republican successors would follow thirty years later in an aggressive bid for global power.

Christmas in Washington, 1883 Because high tariffs paid off the Union's Civil War debts with astonishing speed, and because the federal government provided no social services or safety net for workers in the booming economy, politicians in Washington faced a happy problem by the mid-1880s: a surplus. Here, *Puck* depicts congressional leaders dancing around a Christmas tree loaded with the treats they can buy with the extra money — while the taxpayer stands out in the cold. The Granger Collection, New York

Integrating the National Economy

Closer to home, Republicans focused on transportation infrastructure. Railroad development in the United States began well before the Civil War, with the first locomotives arriving from Britain in the early 1830s. Unlike canals or roads, railroads offered the promise of year-round, all-weather service. Locomotives could run in the dark and never needed to rest, except to take on coal and water. Steam engines crossed high mountains and rocky gorges where pack animals could find no fodder and canals could never reach. West of the Mississippi, railroads opened vast regions for farming, trade, and tourism. A transcontinental railroad executive was only half-joking when he said, "The West is purely a railroad enterprise."

AP® EXAM TIP

Identifying the development of railroads as a partnership between the federal government and private enterprise is critical for success on the AP® exam.

Governments could choose to build and operate railroads themselves or promote construction by private companies. Unlike most European countries, the United States chose the private approach. The federal government, however, provided essential loans, subsidies, and grants of public land. States and localities also lured railroads with offers of financial aid, mainly by buying railroad bonds. Without this aid, rail networks would have grown much more slowly and would probably have concentrated in urban regions. With it, railroads enjoyed an enormous — and reckless — boom. By 1900, virtually no corner of the country lacked rail service (Map 15.1). At the same time, U.S. railroads built across the border into Mexico (AP® America in the World).

Railroad companies transformed American capitalism. They adopted a legal form of organization, the corporation, that enabled them to raise private capital in prodigious amounts. In earlier decades, state legislatures had chartered corporations for specific public purposes, binding these creations to government goals and oversight. But over the course of the nineteenth century, legislatures gradually began to allow any business to become a corporation by simply applying for a state charter. Among the first corporations to become large interstate enterprises, private railroads were much freer than earlier companies to do as they pleased. After the Civil War, they received lavish public aid with few strings attached. Their position was like that of American banks in late 2008 after the big federal bailout: even critics acknowledged that public aid to these giant companies was good for the economy, but they observed that it also lent government support to fabulous accumulations of private wealth.

MAP 15.1 Expansion of the Railroad System, 1850–1890

In 1850, the United States had 9,000 miles of rail track; by 1890, it had 167,000 miles, including transcontinental lines terminating in San Francisco, Los Angeles, and Seattle. The tremendous burst of construction during the last twenty years of that period essentially completed the nation's rail network, although there would be additional expansion for the next two decades. The main areas of growth were in the South and in lands west of the Mississippi. Time zones — an innovation introduced not by government entities, but by railroad corporations in 1883 — are marked by the white lines.

Tariffs and Economic Growth Along with the transformative power of railroads, Republicans' protective tariffs helped build other U.S. industries, including textiles and steel in the Northeast and Midwest and, through tariffs on imported sugar and wool, sugar beet farming and sheep ranching in the West. Tariffs also funded government itself. In an era when the United States did not levy income taxes, tariffs provided the bulk of treasury revenue. The Civil War had left the Union with a staggering debt of $2.8 billion. Tariff income erased that debt and by the 1880s generated huge budget *surpluses*—a circumstance hard to imagine today.

As Reconstruction faltered, tariffs came under political fire. Democrats argued that tariffs taxed American consumers by denying them access to low-cost imported goods and forcing them to pay subsidies to U.S. manufacturers. Republicans claimed, conversely, that tariffs benefitted workers because they created jobs, blocked low-wage foreign competition, and safeguarded America from the kind of industrial poverty that had arisen in Europe. According to this argument, tariffs helped American men earn enough to support their families; wives could devote themselves to homemaking, and children could go to school, not the factory. For protectionist Republicans, high tariffs were akin to the abolition of slavery: they protected and uplifted the most vulnerable workers.

In these fierce debates, both sides were partly right. Protective tariffs did play a powerful role in economic growth. They helped transform the United States into a global industrial power. Eventually, though, even protectionist Republicans had to admit that Democrats had a point: tariffs had not prevented industrial poverty in the United States. Corporations accumulated massive benefits from tariffs but failed to pass them along to workers, who often toiled long hours for low wages. Furthermore, tariffs helped foster trusts, corporations that dominated whole sectors of the economy and wielded near-monopoly power. The rise of large private corporations and trusts generated enduring political problems.

Building the Central Pacific Railroad In 1865, Chinese workers had labored to build the 1,100-foot-long, 90-foot-high trestle over the divide between the American and Bear rivers at Secret Town in the Sierra Nevada Mountains. In 1877, the Chinese workers shown in this photograph by Carleton Watkins were again at work on the site, burying the trestle to avoid replacement of the aging timbers, which had become a fire hazard. Copyright Phoebe A. Hearst Museum of Anthropology and the Regents of the University of California Photography by unknown (Catalog No. 13.1304ee)

AP® EXAM TIP

Analyze the ways that the federal government used its power to support the growth of a national economy after the Civil War.

The Role of Courts While fostering growth, most historians agree, Republicans did not give government enough regulatory power over the new corporations. State legislatures did pass hundreds of regulatory laws after the Civil War, but interstate companies challenged them in federal courts. In ***Munn v. Illinois*** (1877), the Supreme Court affirmed that states could regulate key businesses, such as railroads and grain elevators, that were "clothed in the public interest." However, the justices feared that too many state and local regulations would impede business and fragment the national marketplace. Starting in the 1870s, they interpreted the "due process" clause of the new Fourteenth Amendment—which dictated that no state could "deprive any person of life, liberty, or property, without due process of law"—as shielding corporations from excessive regulation. Ironically, the Court refused to use the same amendment to protect the rights of African Americans.

In the Southwest as well, federal courts promoted economic development at the expense of racial justice. Though the United States had taken control of New Mexico and Arizona after the U.S.-Mexico War, much land remained afterward in the hands of Mexican farmers and ranchers. Many lived as *peónes*, under long-standing agreements with landowners who held large tracts originally granted by the Spanish crown. The post–Civil War years brought railroads and an influx of land-hungry Anglos. New Mexico's governor reported indignantly that Mexican shepherds were often "asked" to leave their ranges "by a cowboy or cattle herder with a brace of pistols at his belt and a Winchester in his hands."

The Santa Fe Railroad in Mexico and the United States

This map, based on an 1885 traveler's guide published by the Atchison, Topeka, and Santa Fe Railroad, includes the company's U.S. lines and also those of its Mexican Central Railroad, an ATSF subsidiary that crossed the border and terminated at Guaymas and Mexico City, Mexico. The dots represent the many stops that the trains made along the routes between major cities. Most Mexican railroads in this era were built and operated by U.S. companies. As you analyze this map, consider the significance of imported Mexican raw materials and agricultural products to the U.S. economy.

MAP 15.2 The Santa Fe Railroad System, 1885

QUESTIONS FOR ANALYSIS

1. In what directions could passengers and freight travel on ATSF lines in each country? What does this suggest about the objectives of railroad companies like this one?
2. Based on this evidence, how might Mexicans have experienced the arrival of railroads differently from residents of the western United States?

Existing land claims were so complex that Congress eventually set up a special court to rule on land titles. Between 1891 and 1904, the court invalidated most traditional claims, including those of many New Mexico *ejidos*, or villages owned collectively by their communities. Mexican Americans lost about 64 percent of the contested lands. In addition, much land was sold or appropriated through legal machinations like those of a notorious **cabal** of politicians and lawyers known as the Santa Fe Ring. The result was displacement of thousands of Mexican American villagers and farmers. Some found work as railroad builders or mine workers; others, moving into the sparse high country of the Sierras and Rockies where cattle could not survive, developed sheep raising into a major enterprise.

Silver and Gold In an era of nation building, U.S. and European policymakers sought new ways to rationalize markets. Industrializing nations, for example, tried to develop an international system of standard measurements and even a unified currency. Though these proposals failed as each nation **succumbed** to self-interest, governments did increasingly agree that, for "scientific" reasons, money should be based on gold, which was thought to have an intrinsic worth above other metals. Great Britain had long held to the **gold standard**, meaning that paper notes from the Bank of England could be backed by gold held in the bank's vaults. During the 1870s and 1880s, the United States, Germany, France, and other countries also converted to gold.

AP® EXAM TIP

Compare the impact of the gold standard on the growth of industries and on farmers and workers.

Beforehand, these nations had been on a bimetallic standard: they issued both gold and silver coins, with respective weights fixed at a relative value. The United States switched to the gold standard in part because treasury officials and financiers were watching developments out west. Geologists accurately predicted the discovery of immense silver deposits, such as Nevada's Comstock Lode, without comparable new gold strikes. A massive influx of silver would clearly upset the long-standing ratio. Thus, with a law that became infamous to later critics as the **"Crime of 1873,"** Congress chose gold. It directed the U.S. Treasury to cease minting silver dollars and, over a six-year period, retire Civil War–era greenbacks (paper dollars) and replace them with notes from an expanded system of national banks. After this process was complete in 1879, the treasury exchanged these notes for gold on request. (Advocates of bimetallism did achieve one small victory: the Bland-Allison Act of 1878 required the U.S. Mint to coin a modest amount of silver.)

By adopting the gold standard, Republican policymakers sharply limited the nation's money supply, to the level of available gold. The amount of money circulating in the United States had been $30.35 per person in 1865; by 1880, it fell to only $19.36 per person. Today, few economists would sanction such a plan, especially for an economy growing at breakneck speed. They would recommend, instead, increasing money supplies to keep pace with development. But at the time, policymakers remembered rampant antebellum speculation and the hardships of inflation during the Civil War. The United States, as a developing country, also needed to attract investment capital from Britain, Belgium, and other European nations that were on the gold standard. Making it easy to exchange U.S. bonds and currency for gold encouraged European investors to send their money to the United States.

Republican policies fostered exuberant growth and a breathtakingly rapid integration of the economy. Railroads and telegraphs tied the nation together. U.S. manufacturers amassed staggering amounts of capital and built corporations of national and even global scope. With its immense, integrated marketplace of workers, consumers, raw materials, and finished products, the United States was poised to become a mighty industrial power.

IN YOUR OWN WORDS What federal policies contributed to the rise of America's industrial economy, and what were their results?

Incorporating the West

Republicans wanted farms as well as factories. As early as 1860, popular lyrics hailed the advent of "Uncle Sam's Farm":

> A welcome, warm and hearty, do we give the sons of toil,
> To come west and settle and labor on Free Soil;
> We've room enough and land enough, they needn't feel alarmed—
> Oh! Come to the land of Freedom and vote yourself a farm.

The **Homestead Act** (1862) gave 160 acres of federal land to any applicant who occupied and improved the property. Republicans hoped the bill would help build up the interior West, which was inhabited by Indian peoples but remained "empty" on U.S. government survey maps.

AP® EXAM TIP

Compare the impact of the Homestead Act and the Morrill Act on the development of the West in the late nineteenth century.

Implementing this plan required innovative policies. The same year it passed the Homestead Act, Congress also created the federal Department of Agriculture and, through the Morrill Act, set aside 140 million federal acres that states could sell to raise money for public universities. The goal of these **land-grant colleges** was to broaden educational opportunities and foster technical and scientific expertise. After the Civil War, Congress also funded a series of geological surveys, dispatching U.S. Army officers, scientists, and photographers to chart unknown western terrain and catalog resources.

To a large extent, these policies succeeded in incorporating lands west of the Mississippi. The United States began to exploit its western empire for minerals, lumber, and other raw materials. But for ordinary Americans who went west, dreams often outran reality. Well-financed corporations, not individual prospectors, reaped most of the profits from western mines, while the Great Plains environment proved resistant to ranching and farming.

MAP 15.3 Mining Frontiers, 1848–1890

The Far West was America's gold country because of its geological history. Veins of gold and silver form when molten material from the earth's core is forced up into fissures caused by the tectonic movements that create mountain ranges, such as the ones that dominate the far western landscape. It was these veins, the product of mountain-forming activity many thousands of years earlier, that prospectors began to discover after 1848 and furiously exploit. Although widely dispersed across the Far West, the lodes that they found followed the mountain ranges bisecting the region and bypassing the great plateaus not shaped by the ancient tectonic activity.

Mining Empires

In the late 1850s, as easy pickings in the California gold rush diminished, prospectors scattered in hopes of finding riches elsewhere. They found gold at many sites, including Nevada, the Colorado Rockies, and South Dakota's Black Hills (Map 15.3). As news of each strike spread, remote areas turned overnight into mob scenes of prospectors, traders, prostitutes, and saloon keepers. At community meetings, white prospectors made their own laws, often using them as an instrument for excluding Mexicans, Chinese, and blacks.

The silver from Nevada's **Comstock Lode**, discovered in 1859, built the boomtown of Virginia City, which soon acquired fancy hotels, a Shakespearean theater, and even its own stock exchange. In 1870, a hundred saloons operated in Virginia City, brothels lined D Street, and men outnumbered women 2 to 1. In the 1880s, however, as the Comstock ore gave out, Virginia City suffered the fate of many mining camps: it became a ghost town. What remained was a ravaged landscape with mountains of debris, poisoned water sources, and surrounding lands stripped of timber.

In hopes of encouraging development of western resources, Congress passed the General Mining Act of 1872, which allowed those who discovered minerals on federally owned land to work the claim and keep all the proceeds. (The law — including the $5-per-acre fee for filing a claim — remains in force today.) Americans idealized the notion of the lone, hardy mining prospector with his pan and his mule, but digging into deep veins of underground ore required big money. **Consortiums** of powerful investors, bringing engineers and advanced equipment, generally extracted the most wealth. This was the case for the New York trading firm Phelps Dodge, which invested in massive copper mines and smelting operations on both sides of the U.S.-Mexico border. The mines created jobs in new towns like Bisbee and Morenci, Arizona — but with dangerous conditions and low pay, especially for those who received the segregated "Mexican wage." Anglos, testified one Mexican mine worker, "occupied decorous residences . . . and had large amounts of money," while "the Mexican population and its economic condition offered a pathetic contrast." He protested this affront to "the most elemental principles of justice."

The rise of western mining created an insatiable market for timber and produce from the Pacific Northwest. Seattle and Portland grew rapidly as supply centers, especially during the great gold rushes of California (after 1848) and the Klondike in Canada's Yukon Territory (after 1897). Residents of Tacoma, Washington, claimed theirs was the "City of Destiny" when it became the Pacific terminus for the Northern Pacific, the nation's third transcontinental railroad, in 1887. But rival businessmen in Seattle succeeded in promoting their city as the gateway to Alaska and the Klondike. Seattle, a town with 1,000 residents in 1870, grew over the next forty years to a population of a quarter million.

Hydraulic Mining, New Dutch Flat, California, 1868 When surface veins of gold played out, miners turned to hydraulic mining, the modern form of which was invented in California in 1853. The technology was simple, using high-pressure streams of water to wash away hillsides of gold-bearing soil. Although building the reservoirs, piping systems, and sluices cost money, the profits from hydraulic mining helped transform western mining into big business. But, as this photograph suggests, extensive hydraulic mining wreaked large-scale havoc on the environment. Library of Congress

Cattlemen on the Plains

While boomtowns arose across the West, hunters began transforming the plains. As late as the Civil War years, great herds of bison still roamed this region. But overhunting and the introduction of European animal afflictions, like the bacterial disease brucellosis, were already decimating the herds. In the 1870s, hide hunters finished them off so thoroughly that at one point fewer than two hundred bison remained in U.S. territory. Hunters hidden downwind, under the right conditions, could kill four dozen at a time without moving from the spot. They took hides but left the meat to rot, an act of vast wastefulness that shocked Native peoples.

Removal of the bison opened opportunities for cattle ranchers. South Texas provided an early model for their ambitious plans. By the end of the Civil War, about five million head of longhorn cattle grazed on Anglo ranches there. In 1865, the Missouri Pacific Railroad reached Sedalia, Missouri, far enough west to be accessible as Texas reentered the Union. A longhorn worth $3 in Texas might command $40 at Sedalia. With this incentive, ranchers inaugurated the Long Drive, hiring cowboys to herd cattle hundreds of miles north to the new rail lines, which soon extended into Kansas. At Abilene and Dodge City, Kansas, ranchers sold their longhorns and trail-weary cowboys crowded into saloons. These cow towns captured the nation's imagination as symbols of the Wild West, but the reality was much less exciting. Cowboys, many of them African Americans and Latinos, were really farmhands on horseback who worked long, harsh hours for low pay.

AP® EXAM TIP

Compare the experiences of settlers in the West who engaged in ranching and in mining in the late nineteenth century.

North of Texas, public grazing lands drew investors and adventurers eager for a taste of the West. By the early 1880s, as many as 7.5 million cattle were overgrazing the plains' native grasses. A cycle of good weather postponed disaster, which arrived in 1886: record blizzards and bitter cold. An awful scene of rotting carcasses greeted cowboys as they rode onto the range that spring. Further hit by a severe drought the following summer, the cattle boom collapsed.

Thanks to new strategies, however, cattle ranching survived and became part of the integrated national economy. As railroads reached Texas and ranchers there abandoned the Long Drive, the invention of barbed wire—which

Bison Skulls on the Plain, 1892 After hunters slaughtered millions of bison and left the carcasses to rot, pioneers gathered the skulls and sold them for processing. The destruction of the great bison herds, then, occurred as part of the broad process of industrialization: buffalo leather was converted into belts that operated industrial machinery, while the skulls were ground up for fertilizer or other uses, such as charcoal for sugar manufacture. Cowboys, Real and Mythic As early as the 1860s, popular dime novels such as this one (right) celebrated the alleged ruggedness, individual freedoms, and gun-slinging capabilities of western cowboys. (Note that this 1888 story, like most dime novels, was published in New York.) Generations of young Americans grew up on stories of frontier valor and "Cowboys versus Indians." In fact, cowboys like the ones depicted in the photograph were really wageworkers on horseback. An ethnically diverse group, including many blacks and Hispanics, they earned perhaps $25 a month, plus meals and a bed in the bunkhouse, in return for long hours of grueling, lonesome work. Left: Post/Getty Images. Right: Denver Public Library, Western History Collection, [call number illegible]

enabled ranchers and farmers to fence large areas cheaply and easily on the plains, where wood was scarce and expensive — made it easier for northern cattlemen to fence small areas and feed animals on hay. Stockyards appeared beside the rapidly extending railroad tracks, and trains took these gathered cattle to giant slaughterhouses in cities like Chicago, which turned them into cheap beef for customers back east.

Homesteaders

Republicans envisioned the Great Plains dotted with small farms, but farmers had to be persuaded that crops would grow there. Powerful interests worked hard to overcome the popular idea that the grassland was the Great American Desert. Railroads, eager to sell land the government had granted them, advertised aggressively. Land speculators, transatlantic steamship lines, and western states and territories joined the campaign.

Newcomers found the soil beneath the native prairie grasses deep and fertile. Steel plows enabled them to break through the tough roots, while barbed wire provided cheap, effective fencing against roaming cattle. European immigrants brought strains of hard-kernel wheat that tolerated the extreme temperatures of the plains. As if to confirm promoters' optimism, a wet cycle occurred between 1878 and 1886, increasing rainfall in the arid regions east of the Rockies. Americans decided that **"rain follows the plow"**: settlement and farming of the plains was increasing rainfall. Some attributed the rain to soil cultivation and tree planting, while others credited God. One Harvard

professor proposed that steel railroad tracks attracted moisture. Such optimists would soon learn their mistake.

The motivation for most settlers, American or immigrant, was to better themselves economically. Union veterans, who received favorable terms in staking homestead claims, played a major role in settling Kansas and other plains states. When severe depression hit northern Europe in the 1870s, Norwegians and Swedes joined German emigrants in large numbers. At the peak of "American fever" in 1882, more than 105,000 Scandinavians left for the United States. Swedish and Norwegian became the primary languages in parts of Minnesota and the Dakotas.

AP® EXAM TIP

Evaluate the opportunities and challenges that homesteading presented to various groups in the late nineteenth century.

For some African Americans, the plains represented a promised land of freedom. In 1879, a group of black communities left Mississippi and Louisiana in a quest to escape poverty and white violence. Some 6,000 blacks departed together, most carrying little but the clothes on their backs and faith in God. They called themselves **Exodusters**, participants in a great exodus to Kansas. The 1880 census reported 40,000 blacks there, by far the largest African American concentration in the West aside from Texas, where the expanding cotton frontier attracted hundreds of thousands of black migrants.

For newcomers, taming the plains differed from pioneering in antebellum Iowa or Oregon. Dealers sold big new machines to help with plowing and harvesting. Western wheat traveled by rail to giant grain elevators and traded immediately on world markets. Hoping frontier land values would appreciate rapidly, many farmers planned to profit from selling acres as much as (or more than) from their crops. In boom times, many rushed into debt to acquire more land and better equipment. All these enthusiasms — for cash crops, land speculation, borrowed money, and new technology — bore witness to the conviction that farming was, as one agricultural journal remarked, a business "like all other business."

Women in the West Early miners, lumbermen, and cowboys were overwhelmingly male, but homesteading was a family affair. The success of a farm depended on the work of wives and children who tended the garden and animals, preserved food, and helped out at harvest time. Some women struck out on their own: a study of North Dakota found between 5 and 20 percent of homestead claims filed by single women, often working land adjacent to that of sisters, brothers, and parents. Family members thus supported one another in the difficult work of farming, while easing the loneliness many newcomers felt. Looking back with pride on her homesteading days, one Dakota woman said simply, "It was a place to stay and it was mine."

While promoting farms in the West, Republicans clashed with the distinctive religious group that had already settled Utah: Mormons, or members of the Church of Jesus Christ of Latter-day Saints (LDS). After suffering persecution in Missouri and Illinois, Mormons had moved west to Utah in the 1840s, attracting many working-class converts from England as well. Most Americans at the time were deeply hostile to Mormonism, especially the LDS practice of plural marriage — sanctioned by church founder Joseph Smith — through which some Mormon men married more than one wife.

Mormons had their own complex view of women's role, illustrated by the career of Mormon leader Emmeline Wells. Born Emmeline Woodward in New Hampshire, Wells converted to Mormonism at age thirteen along with her mother and joined the exodus to Utah in 1848. After her first husband abandoned her when he left the church, Wells became the seventh wife of church elder Daniel Wells. In 1870, due in part to organized pressure from Wells and other Mormon women, the Utah legislature granted full voting rights to women, becoming the second U.S. territory to do so (after Wyoming, in 1869). The measure increased LDS control, since most Utah women were Mormons, while non-Mormons in mining camps were predominantly male. It also recognized the central role of women in Mormon life.

Amid the constitutional debates of Reconstruction, polygamy and women's voting rights became intertwined issues (AP® Analyzing Voices). Encouraged by other plural wives, Wells began in 1877 to write for a Salt Lake City newspaper, the *Woman's Exponent*. She served as editor for forty years and led local women's rights groups. At first, Utah's

Women's Rights in the West

In 1870, Utah's territorial legislature granted voting rights to women. The decision was a shock to advocates of women's suffrage in the East: they expected their first big victories would come in New England. Furthermore, Utah was overwhelmingly peopled by Mormons — members of the Church of Jesus Christ of Latter-day Saints (LDS). Critics saw Mormonism as a harshly patriarchal religion. They especially loathed the Mormon practice of "plural marriage," in which some Mormon men took more than one wife. Most easterners thought this practice was barbaric and demeaning to women. Over the next two decades, Republicans pressured Mormons to abolish plural marriage. They also disenfranchised Mormon women and required men to take an antipolygamy oath; Congress refused to admit Utah as a state. Only after 1890, when the LDS church officially abolished plural marriage, was Utah statehood possible. In 1896, when Utah became a state, women's voting rights were finally reinstated.

FANNY STENHOUSE

Exposé of Polygamy: A Lady's Life Among the Mormons (1872)

An Englishwoman who converted to the faith and moved to Utah, Stenhouse became disillusioned and published her book to criticize the practice of Mormon polygamy.

SOURCE: *Exposé of Polygamy: A Lady's Life Among the Mormons*, ed. Linda Wilcox DeSimone (Logan: Utah State University Press, 2008), 72–73, 155.

"How little do the Mormon men of Utah know what it is, in the truest sense, to have a wife, though they have so many 'wives,' after their own fashion. Almost imperceptibly to the husband, and even the wife herself, a barrier rises between them the very day that he marries another woman. It matters not how much she believes in the doctrine of plural marriages, or how willing she may be to submit to it; the fact remains the same. The estrangement begins by her trying to hide from him all secret sorrow; for she feels that what has been can not be undone now, and she says, 'I cannot change it; neither would I if I could, because it is the will of God, and I must bear it; besides, what good will it do to worry my husband with all my feelings?'

. . . A man may have a dozen wives; but from the whole of them combined he will not receive as much real love and devotion as he might from one alone, if he had made her feel that she had his undivided affection and confidence. How terribly these men deceive themselves! When peace, or rather quiet, reigns in their homes, they think that the spirit of God is there. But it is not so! It is a calm, not like the gentle silence of sleep, but as the horrible stillness of death — the death of the heart's best affections, and all that is worth calling love. All true love has fled, and indifference has taken its place. The very children feel it. What do they — what can they care about their fathers? They seldom see them.

Whatever, in the providence of God, may be the action of Congress toward Utah, if the word of a feeble woman can be listened to, let me respectfully ask the Honorable Senators and Representatives of the United States that, in the abolition of Polygamy, if such should be the decree of the nation, let no compromise be made where subtlety can bind the woman now living in Polygamy to remain in that condition."

ELIZA SNOW, HARRIET COOK YOUNG, PHOEBE WOODRUFF

A Defense of Plural Marriage

The vast majority of Mormon women defended their faith and the practice of plural marriage. The statements by Eliza Snow, Harriet Cook Young, and Phoebe Woodruff, below, were made at a public protest meeting in Salt Lake City in 1870. LDS women pointed proudly to their new suffrage rights as proof of their religion's just treatment of women. Why did Mormons, who dominated the Utah legislature, give women full voting rights? In part, they sought to protect their church by increasing Mormon voting power: most of the non-Mormons were single men who worked on ranches or in mining camps. But the LDS Church also celebrated women's central role in the family and community.

legislature blocked Wells's candidacy in a local election, based on her sex. But when Utah won statehood in 1896, Wells had the pleasure of watching several women win seats in the new legislature, including Dr. Martha Hughes Cannon, a physician and Mormon plural wife who became the first American woman to serve in a state senate. Like their counterparts in other western states, Utah's women experienced a combination of severe frontier hardships and striking new opportunities.

Environmental Challenges Homesteaders faced a host of challenges, particularly the natural environment of the Great Plains. Clouds of grasshoppers could descend and destroy a crop in a day; a prairie fire or hailstorm could do the job in an hour. In

Some women achieved prominence as midwives, teachers, and professionals.

SOURCE: Edward W. Tullidge, *Women of Mormondom* (New York: Tullidge & Crandall, 1877), 390–391, 396, 400.

"*Eliza Snow:* Our enemies pretend that, in Utah, woman is held in a state of vassalage — that she does not act from choice, but by coercion — that we would even prefer life elsewhere, were it possible for us to make our escape. What nonsense! We all know that if we wished we could leave at any time — either go singly, or to rise en masse, and there is no power here that could, or would wish to, prevent us. I will now ask this assemblage of intelligent ladies, do you know of anyplace on the face of the earth, where woman has more liberty, and where she enjoys such high and glorious privileges as she does here, as a latter-day saint? No! The very idea of woman here in a state of slavery is a burlesque on good common sense.

Harriet Cook Young: Wherever monogamy reigns, adultery, prostitution and foeticide, directly or indirectly, are its concomitants. . . . The women of Utah comprehend this; and they see, in the principle of plurality of wives, the only safeguard against adultery, prostitution, and the reckless waste of pre-natal life, practiced throughout the land.

Phoebe Woodruff: God has revealed unto us the law of the patriarchal order of marriage, and commanded us to obey it. We are sealed to our husbands for time and eternity, that we may dwell with them and our children in the world to come; which guarantees unto us the greatest blessing for which we are created. If the rulers of the nation will so far depart from the spirit and letter of our glorious constitution as to deprive our prophets, apostles and elders of citizenship, and imprison them for obeying this law, let them grant this, our last request, to make their prisons large enough to hold their wives, for where they go we will go also." ❞

SUSAN B. ANTHONY

Letter to *The Revolution*, July 5, 1871

National women's suffrage leaders responded awkwardly to the Utah suffrage victory. Being associated with Mormons, they understood, damaged their fragile new movement in the eyes of most Americans. But they tried tentatively to forge alliances with Mormon women they viewed as progressive, as well as dissidents in the church. Suffrage leader Susan B. Anthony traveled to Salt Lake City in 1871 to try to forge alliances with Mormon women, especially dissidents such as Fanny Stenhouse. Anthony expressed strong disapproval of polygamy, but she also tried to change the debate to focus on the vulnerability of all married women to exploitation by their husbands. Her report from Utah, published in her journal *The Revolution*, is below.

SOURCE: *The Revolution*, July 20, 1871.

"Woman's work in monogamy and polygamy is essentially one and the same — that of planting her feet on the solid ground of self-support; . . . there is and can be no salvation for womanhood but in the possession of power over her own subsistence.

The saddest feature here is that there really is nothing by which these women can earn an independent livelihood for themselves and children. No manufacturing establishments; no free schools to teach. Women here, as everywhere, must be able to live honestly and honorably without men, before it can be possible to save the masses of them from entering into polygamy or prostitution, legal or illegal. Whichever way I turn, whatever phase of social life presents itself, the same conclusion comes — independent bread alone can redeem woman from her sure subjection to man. . . .

Here is missionary ground. Not for 'thus saith the Lord,' divine rights, canting priests, or echoing priestesses of any sect whatsoever; but for great, god-like, humanitarian men and women, who 'feel for them in bonds as bound with them,' . . . a simple, loving, sisterly clasp of hands with these struggling women, and an earnest work with them. Not to modify nor ameliorate, but to ABOLISH the whole system of woman's subjection to man in both polygamy and monogamy." ❞

QUESTIONS FOR ANALYSIS

1. What arguments did the Mormon women make in defense of plural marriage? On what grounds did Stenhouse argue for its abolition?
2. Susan B. Anthony's letter was published in Boston. How might Mormon women have reacted to it? How might non-Mormon women have reacted to the statements by Snow, Young, and Woodruff?
3. Compare the experiences of plural marriage described by Stenhouse, on the one hand, and Snow, Young, and Woodruff, on the other. How do you account for these very different perspectives?

spring, homesteaders faced sudden, terrifying tornados, while their winter experiences in the 1870s added the word *blizzard* to America's vocabulary. On the plains, also, water and lumber were hard to find. Newly arrived families often cut dugouts into hillsides and then, after a season or two, erected houses made of turf cut from the ground.

Over the long term, homesteaders discovered that the western grasslands did not receive enough rain to grow wheat and other grains. As the cycle of rainfall shifted from wet to dry, farmers as well as ranchers suffered. "A wind hot as an oven's fury . . . raged like a pestilence," reported one Nebraskan, leaving "farmers helpless, with no weapon against this terrible and inscrutable wrath of nature." By the late 1880s, some recently

Family on the L. W. Hall Farm, Buffalo County, Nebraska, 1903 This family has moved from its original sod house into a new frame house. Perhaps they asked the photographer to include in his image the windmill, a key to their prosperity. Other photographs on this property, some taken in 1907, show thriving young trees and a woman proudly posed with her new hand-cranked washing machine. How might this family have responded to the argument, made in this textbook chapter and by some critics at the time, that farming was a failure on the arid Great Plains? What different story might they tell about their hardships and successes? Nebraska State Historical Society RG2608-3267. Image cropped slightly from original to remove border.

settled lands emptied as homesteaders fled in defeat — 50,000 from the Dakotas alone. It became obvious that farming in the arid West required methods other than those used east of the Mississippi.

Clearly, 160-acre homesteads were the wrong size for the West: farmers needed either small irrigated plots or immense tracts for dry farming, which involved deep planting to bring subsoil moisture to the roots and quick harrowing after rainfalls to slow evaporation. Dry farming developed most fully on huge corporate farms in the Red River Valley of North Dakota. But even family farms, the norm elsewhere, could not survive on less than 300 acres of grain. Crop prices were too low, and the climate too unpredictable, to allow farmers to get by on less.

In this struggle, settlers regarded themselves as nature's conquerors, striving, as one pioneer remarked, "to get the land subdued and the wilde nature out of it." Much about its "wilde nature" was hidden to the newcomers. They did not know that destroying biodiversity, which was what farming the plains really meant, opened pathways for exotic, destructive pests and weeds, and that removing native grasses left the soil vulnerable to erosion. By the turn of the twentieth century, about half the nation's cattle and sheep, one-third of its cereal crops, and nearly three-fifths of its wheat came from the Great Plains. But in the drier parts of the region, it was not a sustainable achievement. This renowned breadbasket was later revealed to be, in the words of one historian, "the largest, longest-run agricultural and environmental miscalculation in American history."

John Wesley Powell, a one-armed Union veteran, predicted the catastrophe from an early date. Powell, employed by the new U.S. Geological Survey, led a famous expedition in the West in which his team navigated the rapids of the Colorado River through the Grand Canyon in wooden boats. In his *Report on the Lands of the Arid Region of the United States* (1879), Powell told Congress bluntly that 160-acre homesteads would not work in dry regions. Impressed with the success of Mormon irrigation projects in Utah,

Powell urged the United States to follow their model. He proposed that the government develop the West's water resources, building dams and canals and organizing landowners into local districts to operate them. Doubting that rugged individualism would succeed in the West, Powell proposed massive cooperation under government control.

After heated debate, Congress rejected Powell's plan. Critics accused him of playing into the hands of large ranching corporations; boosters were not yet willing to give up the dream of small homesteads. But Powell turned out to be right. Though environmental historians do not always agree with Powell's proposed solutions, they point to his *Report on Arid Lands* as a **cogent** critique of what went wrong on the Great Plains. Later, federal funding paid for dams and canals that supported intensive agriculture in many parts of the West.

COMPARE & CONTRAST

Compare the development of mining, ranching, and farming in the West. How did their environmental consequences differ?

The First National Park

Powell was not the only one rethinking land use. The West's incorporation into the national marketplace occurred with such speed that some Americans began to fear rampant overdevelopment. Perhaps the federal government should not sell off all its public land, but instead hold and manage some of it. Amid the heady initiatives of Reconstruction, Congress began to preserve sites of unusual natural splendor. As early as 1864, Congress gave 10 square miles of the Yosemite Valley to California for "public use, resort, and recreation." (In 1890, Yosemite reverted to federal control.) In 1872, Congress set aside 2 million acres of Wyoming's Yellowstone Valley as the world's first national park: preserved as a public holding, it would serve as "a public park or pleasuring ground for the benefit and enjoyment of the people."

Railroad tourism, which developed side by side with other western industries, was an important motive for the creation of **Yellowstone National Park**. The Northern Pacific Railroad lobbied Congress vigorously to get the park established. Soon, luxury

Thomas Moran, *Grand Canyon of the Yellowstone*, 1872 In 1871, English-born artist Thomas Moran joined Ferdinand Hayden's expedition to the Yellowstone Valley on behalf of the U.S. Geological Survey, an important new federal agency dedicated to mapping and exploring the West, as well as undertaking scientific investigations of flora, fauna, and potential mineral and timber resources. Moran's painting, along with photographs by William Henry Jackson and other eyewitness testimony to Yellowstone's uniqueness and beauty, helped introduce the American public to their first new national park. The painting remains property of the federal government, who commissioned Hayden's expedition, and hangs in the Smithsonian American Art Museum. Smithsonian American Art

Pullman cars ushered visitors to Yellowstone's hotel, operated by the railroad itself. But creation of the park was fraught with complications. Since no one knew exactly what a "national park" was or how to operate it, the U.S. Army was dispatched to take charge; only in the early 1900s, when Congress established many more parks in the West, did consistent management policies emerge. In the meantime, soldiers spent much of their time arresting Native peoples who sought to hunt on Yellowstone lands.

The creation of Yellowstone was an important step toward an ethic of respect for land and wildlife. So was the 1871 creation of a **U.S. Fisheries Commission**, which made recommendations to stem the decline in wild fish; by the 1930s, it merged with other federal wildlife bureaus to become the U.S. Fish and Wildlife Service. At the same time, eviction of Indians showed that defining small preserves of "uninhabited wilderness" was part of conquest itself. In 1877, for example, the federal government forcibly removed the Nez Perce tribe from their ancestral land in what is now Idaho, Washington, and Oregon. Under the leadership of young Chief Joseph, the Nez Perce tried to flee to Canada. After a journey of 1,100 miles, they were forced to surrender just short of the border. During their trek, five bands crossed Yellowstone; as a Nez Perce named Yellow Wolf recalled, they "knew that country well." For thirteen days, Nez Perce men raided the valley for supplies, waylaying several groups of tourists. The conflict made national headlines. Easterners, proud of their new "pleasuring ground," were startled to find that it remained a site of Native resistance. Americans were not settling an empty West. They were *un*settling it by taking it from Native peoples who already lived there.

AP® PRACTICES & SKILLS

CAUSATION

What factors led to the creation of the first national parks?

IN YOUR OWN WORDS What factors led to transformation of the trans-Mississippi west after the Civil War?

A Harvest of Blood: Native Peoples Dispossessed

Before the Civil War, when most Americans believed the prairie could not be farmed, Congress reserved the Great Plains for Indian peoples. But in the era of steel plows and railroads, policymakers suddenly had the power and desire to incorporate the whole region. The U.S. Army fought against the loosely federated Sioux — the major power on the northern grasslands — as well as other peoples who had agreed to live on reservations but found conditions so desperate that they fled (Map 15.4). These "reservation wars," caused largely by local violence and confused federal policies, were messy and bitter. Pointing to failed military campaigns, army atrocities, and **egregious** corruption in the Indian Bureau, reformers called for new policies that would destroy Native peoples' traditional lifeways and "civilize" them — or, as one reformer put it, "kill the Indian and save the man."

AP® EXAM TIP

As you read through this section, trace violent conflicts in the West that resulted from the U.S. government violating treaties with Native groups and responding to Native resistance with force.

The Civil War and Indians on the Plains

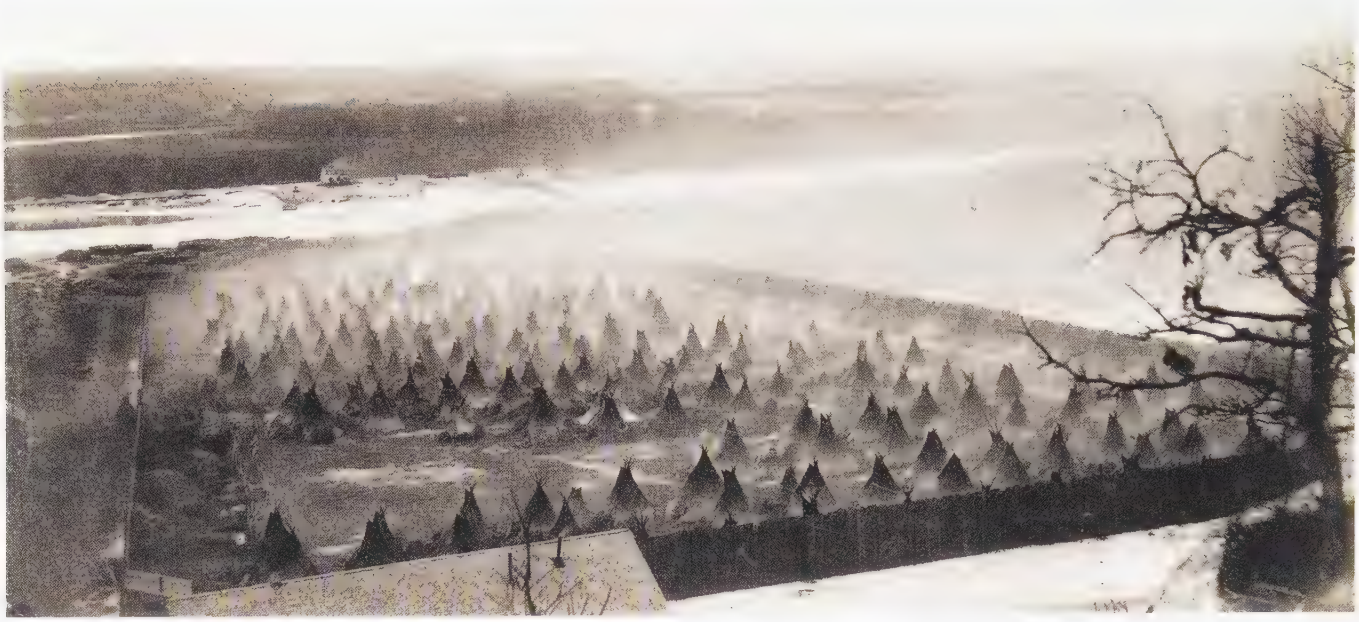
In August 1862, the attention of most Unionists and Confederates was riveted on General George McClellan's failing campaign in Virginia. But in Minnesota, the Dakota Sioux were increasingly frustrated. In 1858, the year Minnesota secured statehood, they had agreed to settle on a strip of land reserved by the government, in exchange for receiving regular payments and supplies. But Indian agents, contractors, and even Minnesota's territorial governor pocketed most of the funds. When the Dakotas protested that their children were starving, state officials dismissed their appeals. Corruption was so egregious that one leading Minnesotan, Episcopal bishop Henry Whipple, wrote an urgent appeal to President James Buchanan. "A nation which sows robbery," he warned, "will reap a harvest of blood."

MAP 15.4 Indian Country in the West, to 1890
As settlement pushed onto the Great Plains after the Civil War, Native peoples put up bitter resistance but ultimately to no avail. Over a period of decades, they ceded most of their lands to the federal government, and by 1890 they were confined to scattered reservations.

Whipple's prediction proved correct. During the summer of 1862, a decade of anger boiled over. In a surprise attack, Dakota fighters fanned out through the Minnesota countryside, killing immigrants and burning farms. They planned to sweep eastward to St. Paul but were stopped at Fort Ridgely. In the end, more than four hundred whites lay dead, including women and children from farms and small towns. Thousands fled; panicked officials telegraphed for aid, spreading hysteria from Wisconsin to Colorado.

Minnesotans' ferocious response to the uprising set the stage for further conflict. A hastily appointed military court, bent on revenge, sentenced 307 Dakotas to death, making it clear that rebellious Indians would be treated as criminals rather than warriors. President Abraham Lincoln reviewed the trial records and commuted most of the sentences but authorized the deaths of 38 Dakota men. They were hanged just after Christmas 1862 in the largest mass execution in U.S. history. Two months later, Congress canceled all treaties with the Dakotas, revoked their **annuities**, and expelled them from Minnesota. The scattered bands fled west to join nonreservation allies.

As the uprising showed, the Civil War created two dangerous conditions in the West, compounding the problems already caused by corruption. With the Union army fighting the Confederacy, western whites felt vulnerable to Indian attacks. They also



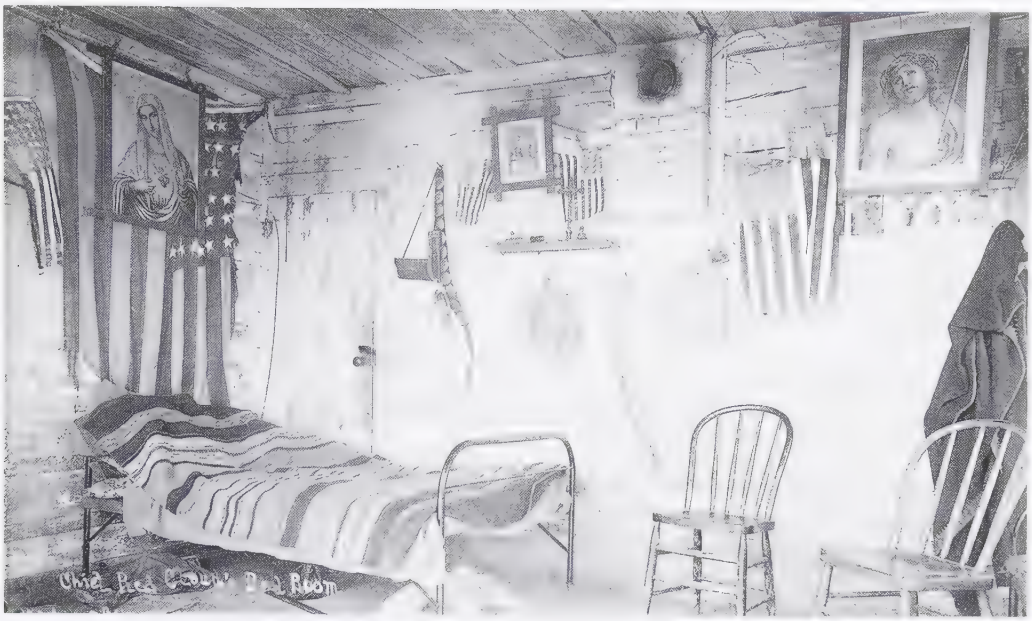
Enclosed Dakota Camp at Fort Snelling, Minnesota, 1862 During the trial of Dakota warriors involved in the 1862 rebellion, and through the harsh Minnesota winter that followed, more than a thousand Dakota people were imprisoned in an enormous enclosure on Pike Island, near St. Paul. A measles epidemic broke out in the crowded camp and dozens died, especially children. Though U.S. soldiers were often unfriendly toward their captives, local sentiment was even more hostile; troops regularly marched through the camp, in part to protect the Dakotas from vigilante violence. In 1863 all members of the tribe were forcibly removed from the state. In November 1862, photographer Benjamin Franklin Upton captured this image of Dakota tents in the Pike Island enclosure. Minnesota Historical Society

discovered they could fight Indians with minimal federal oversight. In the wake of the Dakota uprising, worried Coloradans favored a military campaign against the Cheyennes — allies of the Sioux — even though the Cheyennes had shown little evidence of hostility. Colorado militia leader John M. Chivington, an aspiring politician, determined to quell public anxiety and make his career.

In May 1864, Cheyenne chief Black Kettle, fearing his band would be attacked, consulted with U.S. agents, who instructed him to settle along Sand Creek in eastern Colorado until a treaty could be signed. On November 29, 1864, Chivington's Colorado militia attacked the camp while most of the men were out hunting, slaughtering more than a hundred women and children. "I killed all I could," one officer testified later. "I think and earnestly believe the Indian to be an obstacle to civilization and should be exterminated." Captain Silas Soule, who served under Chivington but refused to give his men the order to fire, dissented. "It was hard to see little children on their knees," he wrote later, "having their brains beat out by men professing to be civilized." Chivington's men rode back for a celebration in Denver, where they hung Cheyenne scalps (and women's genitals) from the rafters of the Apollo Theater.

The northern plains exploded in conflict. Infuriated by the **Sand Creek massacre**, Cheyennes carried war pipes to the Arapahos and Sioux, who attacked and burned white settlements along the South Platte River. Ordered to subdue these peoples, the U.S. Army failed miserably: officers could not even locate the enemy, who traveled rapidly in small bands and knew the country well. A further shock occurred in December 1866 when 1,500 Sioux warriors executed a perfect ambush, luring Captain William Fetterman and 80 soldiers from a Wyoming fort and wiping them out. With the **Fetterman massacre**, the Sioux succeeded in closing the Bozeman Trail, a private road under army protection that had served as the main route into Montana.

General William Tecumseh Sherman, now commanding the army in the West, swore to defeat defiant Indians. But the Union hero met his match on the plains.



Red Cloud's Bedroom, 1891 Taken on the Pine Ridge Reservation in South Dakota by photographer C. G. Morledge, this photograph shows the bedroom of Red Cloud, a distinguished Oglala Lakota leader. Red Cloud had won a war against the U.S. Army just after the Civil War. He negotiated so tenaciously and shrewdly, afterward, with what he saw as meddlesome Indian agents, that his people nicknamed Pine Ridge "The Place Where Everything Is Disputed." Some of the contents of Red Cloud's bedroom may surprise you. How do you interpret the presence of five American flags? The visual images on the walls? What strategies and ways of life, blending old and new, does the photograph suggest? Compare it to Edward S. Curtis, "Little Plume and Yellow Kidney" (p. 487). In what ways did Morledge and Curtis craft different representations of Indian life? Denver Public Library, Western History Collection/Bridgeman Images

Another year of fighting proved expensive and inconclusive. In 1868, the Sioux, led by the Oglala band under Chief Red Cloud, told a peace commission they would not sign any treaty unless the United States pledged to abandon all its forts along the Bozeman Trail. The commission agreed. Red Cloud had won.

In the wake of these events, eastern public opinion turned against the Indian wars, which seemed at best ineffective, at worst brutal. Congress held hearings on the slaughter at Sand Creek. Though Chivington, now a civilian, was never prosecuted, the massacre became an infamous example of western vigilantism. By the time Ulysses Grant entered the White House in 1869, the authors of Reconstruction in the South also began to seek solutions to what they called the "Indian problem."

AP® PRACTICES & SKILLS

CAUSATION

What factors led to warfare between whites and Native peoples on the plains?

Grant's Peace Policy

Grant inherited an Indian policy in disarray. Federal incompetence was highlighted by yet another mass killing of friendly Indians in January 1870, this time on the Marias River in Montana, by an army detachment that shot and burned to death 173 Piegans (Blackfeet). Having run out of other options, Grant introduced a peace policy, based on recommendations from Christian advisors. He offered selected appointments to the reformers — including many former abolitionists — who had created such groups as the Indian Rights Association and the Women's National Indian Association (AP® Interpreting the Past).

Rejecting the virulent anti-Indian stance of many westerners, reformers argued that Native peoples had the innate capacity to become equal with whites. They believed, however, that Indians could achieve this only if they embraced Christianity and white ways. Reformers thus aimed to destroy indigenous languages, cultures, and religions. Despite humane intentions, their condescension was obvious. They ignored dissenters like Dr. Thomas Bland of the National Indian Defense Association, who suggested that

What Factors Motivated America's Indian Policies?

In the latter nineteenth century, the U.S. government adopted a number of policies designed to eliminate the "Indian problem" by eliminating the Indian: first through military engagement, then through a program of assimilation. The Dawes Severalty Act of 1887, for example, distributed tribal lands among individual Native Americans to break apart reservations and tribal identities. Indian children were often placed in boarding schools under white supervision, where they learned English and were introduced to Christianity.

Scholars have not always agreed on how to explain the motivations of late-nineteenth-century reformers. Two historians, Francis Paul Prucha and Margaret D. Jacobs, interpret this period and America's Indian policies in different ways.

FRANCIS PAUL PRUCHA

SOURCE: Francis Paul Prucha, *The Indian in American Society: From the Revolutionary War to the Present* (Berkeley: University of California Press, 1985), 19.

The treaty system ended in 1871, when Congress decided that no more treaties would be made with Indian tribes . . . but the paternalism of the federal government toward the Indians continued . . . [under the] Board of Indian Commissioners . . . [which included] a remarkable collection of high-minded Christian philanthropists, suffused with a spirit of benevolence, who epitomized the evangelical religious atmosphere of the nineteenth century. For better or for worse, the American Indians fell into the hands of this group and their successors.

MARGARET D. JACOBS

SOURCE: Margaret D. Jacobs, *White Mother to a Dark Race: Settler Colonialism, Maternalism, and the Removal of Indigenous Children in the American West and Australia, 1880–1940* (Lincoln: University of Nebraska Press, 2009), 25, 88.

[O]fficials often proclaimed that they were ushering in a new age of dealing fairly and kindly with . . . indigenous inhabitants. Yet these new policies actually entailed one of the most draconian measures possible: the removal of indigenous children from their kin . . . to be raised in distant institutions. . . . [I]nstead of watching from the sidelines as male government officials designed and carried out policies of indigenous child removal, many white women reformers campaigned for a greater role in setting public policy for indigenous peoples and became deeply implicated in this phase of settler colonialism.

AP® SHORT ANSWER PRACTICE

1. Identify two ways these two historians differ in their description of America's Indian policies.
2. According to these two historians, what role did gender play in shaping policies toward Native Americans?
3. To what extent does this chapter support one or the other of these historians' interpretations of America's Indian policies?

AP® EXAM TIP

Recognizing the impact of Americanization on Native American populations is a "must know" on the AP® exam.

instead of an "Indian problem" there might be a "white problem"—refusal to permit Indians to follow their own lifeways. To most nineteenth-century Americans, such a notion was shocking and uncivilized. Increasingly dismissive of blacks' capacity for citizenship and hostile toward "heathen" Chinese immigrants, white Americans were even less willing to understand and respect Indian cultures. They believed that in the modern world, Native peoples were fated for extinction (AP® Thinking Like a Historian).

Indian Boarding Schools Reformers focused their greatest energy on educating the next generation. Realizing that acculturation—adoption of white ways—was difficult when children lived at home, agents and missionaries created off-reservation schools. Native families were exhorted, bullied, and bribed into sending their children to these schools, where, in addition to school lessons, boys learned farming skills and girls practiced housekeeping. "English only" was the rule; students were punished if they spoke their own languages. Mourning Dove, a Salish girl from what is now Washington State, remembered that her school "ran strictly. We never talked during meals without permission, given only on Sunday or special holidays. Otherwise there was silence—a

terrible silent silence. I was used to the freedom of the forest, and it was hard to learn this strict discipline. I was punished many times before I learned." The Lakota boy Plenty Kill, who at boarding school received the new name Luther, remembered his loneliness and fear upon arrival: "The big boys would sing brave songs, and that would start the girls to crying. . . . The girls' quarters were about a hundred and fifty yards from ours, so we could hear them." After having his hair cut short, Plenty Kill felt a profound change in his identity. "None of us slept well that night," he recalled. "I felt that I was no more Indian, but would be an imitation of a white man."

Even in the first flush of reform zeal, Grant's policies faced major hurdles. Most Indians had been pushed off traditional lands and assigned to barren ground that would have defeated the most enterprising farmer. Poverty and dislocation left Indians especially vulnerable to the ravages of infectious diseases like measles and scarlet fever. At the same time, Quaker, Presbyterian, and Methodist reformers fought turf battles among themselves and with Catholic missionaries. Many traders and agents also continued to steal money and supplies from people they were supposed to protect. In the late 1870s, Rutherford B. Hayes's administration undertook more housecleaning at the Bureau of Indian Affairs, but corruption lingered.

From the Indians' point of view, reformers often became just another interest group in a crowded field of whites sending hopelessly mixed messages. The attitudes of individual army representatives, agents, and missionaries ranged from courageous and sympathetic to utterly ruthless. Many times, after chiefs thought they had reached a face-to-face agreement, they found it drastically altered by Congress or Washington bureaucrats. Nez Perce leader Joseph observed that "white people have too many chiefs. They do not understand each other. . . . I cannot understand why so many chiefs are allowed to talk so many different ways, and promise so many different things." A Kiowa chief agreed: "We make but few contracts, and them we remember well. The whites make so many they are liable to forget them. The white chief seems not to be able to govern his braves."

Native peoples were nonetheless forced to accommodate, as independent tribal governance and treaty making came to an end. Back in the 1830s, the U.S. Supreme Court had declared Indians no longer sovereign but rather "domestic dependent nations." On a practical basis, however, both the U.S. Senate and agents in the field continued to negotiate treaties as late as 1869. Two years later, the House of Representatives, jealous of Senate privileges, passed a bill to abolish all treaty making with Indians. The Senate agreed, provided that existing treaties remained in force. It was one more step in a long, torturous erosion of Native rights. Eventually, the U.S. Supreme Court ruled in ***Lone Wolf v. Hitchcock*** (1903) that Congress could make whatever Indian policies it chose, ignoring all existing treaties. That same year, in *Ex Parte Crow Dog*, the Court ruled that no Indian was a citizen unless Congress designated him so. Indians were henceforth wards of the government. These rulings remained in force until the New Deal of the 1930s.

To see a longer excerpt of Mourning Dove's autobiography, along with other primary sources from this period, see ***Sources for America's History***.

Breaking Up Tribal Lands Reformers' most sweeping effort to assimilate Indians was the **Dawes Severalty Act** (1887), the dream of Senator Henry L. Dawes of Massachusetts, a leader in the Indian Rights Association. Dawes saw the reservation system as an ugly relic of the past. Through severalty — division of tribal lands — he hoped to force Indians onto individual landholdings, partitioning reservations into homesteads, just like those of white farmers. Supporters of the plan believed that landownership would encourage Indians to assimilate. It would lead, as Dawes wrote, to "a personal sense of independence." Individual property, echoed another reformer, would make the Indian man "intelligently selfish, . . . with a *pocket that aches to be filled with dollars!*"

The Dawes Act was a disaster. It played into the hands of whites who coveted Indian land and who persuaded the government to sell them land that was not needed for individual allotments. In this and other ways, the Bureau of Indian Affairs (BIA)

Representing Indians

The documents below, designed for white audiences, all depict American Indians in the West.

1. **Buffalo Bill Cody's Wild West advertisement, 1899.** *Cody never called the Wild West a "show," placing tremendous emphasis on its allegedly authentic reenactments of events.*

2. **Lewis Henry Morgan, *Ancient Society*, 1877.** *Morgan, a leading American anthropologist, studied the Iroquois and other Native peoples. In 1877 he published an influential theory of human development, ranking various peoples in their "progress" from the "lowest stage of savagery" through the pinnacle of "civilization" — northern Europeans.*

Some tribes and families have been left in geographical isolation to work out the problems of progress. . . . [Others] have been adulterated through external influence. Thus, while Africa was and is an ethnical chaos of savagery and barbarism, Australia and Polynesia were in savagery, pure and simple. . . . The Indian family of America, unlike any other existing family, exemplified the condition of mankind in three successive ethnical periods. . . . The far northern Indians and some of the coast tribes of North and South America were in the Upper Status of savagery; the partially Village Indians east of the Mississippi were in the Lower Status of

Status of Civilization (from Morgan, *Ancient Society*, 1877)	
I. Lower Status of Savagery	From the Infancy of the Human Race to the commencement of the next Period.
II. Middle Status of Savagery	From the acquisition of a fish subsistence and a knowledge of the use of fire . . .
III. Upper Status of Savagery	From the Invention of the Bow and Arrow . . .
IV. Lower Status of Barbarism	From the Invention of the Art of Pottery . . .
V. Middle Status of Barbarism	From the Domestication of animals on the Eastern hemisphere, and in the Western from the cultivation of maize and plants by Irrigation . . .
VI. Upper Status of Barbarism	From the Invention of the process of Smelting Iron Ore, with the use of iron tools . . .
VII. Civilization	From the Invention of writing, to the present time.

barbarism, and the Village Indians of North and South America were in the Middle Status. . . .

Commencing, then, with the Australians and Polynesians, following with the American Indian tribes, and concluding with the Roman and Grecian, who afford the highest exemplifications respectively of the six great stages of human progress, the sum of their united experiences may be supposed fairly to represent that of the human family. . . . We are dealing substantially, with the ancient history and condition of our own remote ancestors.

3. **Touring Indian Country, 1888 and 1894.** *Hoping to lure eastern tourists, the Northern Pacific Railroad published an annual journal,* Wonderland, *describing the natural splendors and economic progress of the West, as seen from its rail lines.*

We are now in the far-famed Yellowstone Valley. . . . There are but few Indians now to be seen along the line of the railroad, and those are engaged in agricultural and industrial pursuits. The extinction of the buffalo has rendered the Indian much more amenable to the civilizing influences brought to bear upon him than he formerly was, and very fair crops of grain are being raised at some of the agencies. At the Devil's Lake agency, for example, 60,000 bushels of wheat have been raised by the [Sioux and Chippewa] Indians in a single season. . . .

[The Crows'] great reservation is probably the garden spot of Montana, and the throwing open of a large portion of it to [white] settlement, which cannot long be delayed, will assuredly give an immense impetus to the agricultural interests of the Territory. . . .

The Flatheads have probably 10,000 or more horses and 5,000 or 6,000 cattle. . . . As ranchers and farmers the Flatheads are a success. It would be a matter of surprise to some people who think that the only good Indian is a dead Indian, to see the way some of the women handle sewing machines.

ANALYZING THE EVIDENCE

1. Compare the depiction of the Plains Indians and Buffalo Bill Cody in source 1. How does source 4 differ from source 1? From Edward Curtis's depiction of Little Plume and Yellow Kidney (p. 487), in which all traces of modern life were erased? How might these depictions of "actual life" have shaped their audience's understanding of the West?
2. What bases did Morgan use for his rankings in source 2? How did he define the relationship between American Indians and whites (whom he refers to, in this passage, as "we")? Why did he suggest that Indians offered a unique opportunity for study?
3. Imagine that you were a wealthy, well-educated tourist preparing to travel west in 1900. Which of these documents would you most likely have encountered in advance? How might they have shaped your expectations and experiences?
4. These documents had different creators: an artist, a scholar, and two sets of entrepreneurs. What audiences did they have in mind? How do you think this affected their messages?

AP® DBQ PRACTICE

Using these sources and your knowledge of the period, analyze the myths and realities of Native American life in the late nineteenth century.

AP® PRACTICES & SKILLS

POINT OF VIEW

How did post–Civil War reformers believe they were improving U.S. Indian policies, and in what ways did that prove to be true and untrue?

implemented the law carelessly, to the outrage of Dawes. In Indian Territory, a commission seized more than 15 million "surplus" acres from Native tribes by 1894, opening the way for whites to convert the last federal territory set aside for Native peoples into the state of Oklahoma. In addition to catastrophic losses of collectively held property, Native peoples lost 66 percent of their individually allotted lands between the 1880s and the 1930s, through fraud, BIA mismanagement, and pressure to sell to whites.

The End of Armed Resistance

As the nation consolidated control of the West in the 1870s, Americans hoped that Grant's peace policy was solving the "Indian problem." In the Southwest, such formidable peoples as the Kiowas and Comanches had been forced onto reservations. The Diné or Navajo nation, exiled under horrific conditions during the Civil War but permitted to reoccupy their traditional land, gave up further military resistance. An outbreak among California's Modoc people in 1873—again, humiliating to the army—was at last subdued. Only Sitting Bull, a leader of the powerful Lakota Sioux on the northern plains, openly refused to go to a reservation. When pressured by U.S. troops, he repeatedly crossed into Canada, where he told reporters that "the life of white men is slavery. . . . I have seen nothing that a white man has, houses or railways or clothing or food, that is as good as the right to move in open country and live in our own fashion."

In 1874, the Lakotas faced direct provocation. Lieutenant Colonel George Armstrong Custer, a brash self-promoter who had graduated last in his class at West Point, led an expedition into South Dakota's Black Hills and loudly proclaimed the discovery of gold. Amid the severe depression of the 1870s, prospectors rushed in. The United States, wavering on its 1868 treaty, pressured Sioux leaders to sell the Black Hills. The chiefs said no. Ignoring this answer, the government demanded in 1876 that all Sioux gather at the federal agencies. The policy backfired: not only did Sitting Bull refuse to report, but other Sioux, Cheyennes, and Arapahos slipped away from reservations to join him. Knowing they might face military attack, they agreed to live together for the summer in one great village numbering over seven thousand people. By June, they were camped on the Little Big Horn River in what is now southeastern Montana. Some of the young men wanted to organize raiding parties, but elders counseled against it. "We [are] within our treaty rights as hunters," they argued. "We must keep ourselves so."

The U.S. Army dispatched a thousand cavalry and infantrymen to drive the Indians back to the reservation. Despite warnings from experienced scouts—including Crow Indian allies—most officers thought the job would be easy. Their greatest fear was that the Indians would manage to slip away. But amid the nation's centennial celebration on the Fourth of July 1876, Americans received dreadful news. On June 26 and 27, Lieutenant Colonel Custer, leading the 7th Cavalry as part of a three-pronged effort to surround the Indians, had led 210 men in an ill-considered assault on Sitting Bull's camp. The Sioux and their allies had killed the attackers to the last man. "The Indians," one Oglala woman remembered, "acted just like they were driving buffalo to a good place where they could be easily slaughtered."

As retold by the press in sensational (and often fictionalized) accounts, the story of Custer's "last stand" quickly served to justify American conquest of Indian "savages." Long after Americans forgot the massacres of Cheyenne women and children at Sand Creek and of Piegan people on the Marias River, prints of the **Battle of Little Big Horn** hung in barrooms across the country. William F. "Buffalo Bill" Cody, in his traveling Wild West performances, enacted a revenge killing of a Cheyenne man named Yellow Hand in a tableau Cody called "first scalp for Custer." Notwithstanding that the tableau featured a white man scalping a Cheyenne, Cody depicted it as a triumph for civilization.

Little Big Horn proved to be the last military victory of Plains Indians against the U.S. Army. Pursued relentlessly after Custer's death and finding fewer and fewer bison to sustain them, Sioux parents watched their children starve through a bitter

Little Plume and Yellow Kidney Photographer Edward S. Curtis took this photograph of the Piegan (Blackfeet) leader Little Plume and his son Yellow Kidney. Curtis's extensive collection of photographs of Native Americans remains a valuable resource for historians. However, Curtis altered his images to make his Native subjects seem more "authentic": though Indians made widespread use of nonnative furniture, clothes, and other consumer goods (such as Singer sewing machines), Curtis removed those from the frame. He also retouched photographs to remove items such as belts and watches. Note the circular "shadow" here, against the lodge wall, near Little Plume's right arm: the original photograph included a clock. Library of Congress

winter. Slowly, families trickled into the agencies and accommodated themselves to reservation life (Map 15.5). The next year, the Nez Perces, fleeing for the Canadian border, also surrendered. The final holdouts fought in the Southwest with Chiricahua Apache leader Geronimo. Like many others, Geronimo had accepted reservation life but found conditions unendurable. Describing the desolate land the tribe had been allotted, one Apache said it had "nothing but cactus, rattlesnakes, heat, rocks, and insects. . . . Many, many of our people died of starvation." When Geronimo took up arms in protest, the army recruited other Apaches to track him and his band into the hills; in September 1886, he surrendered for the last time. The Chiricahua Apaches never returned to their homeland. The United States had completed its military conquest of the West.

AP® PRACTICES & SKILLS

CAUSATION

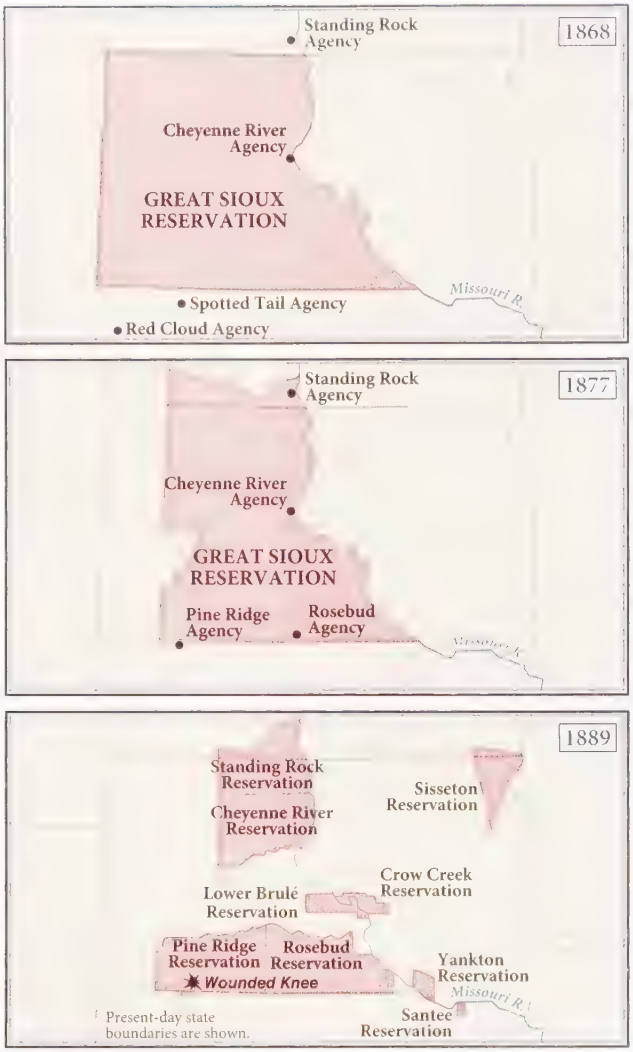
How did Grant's peace policy fail to consider the needs of Native Americans in the West, and what were its results?

Strategies of Survival

Though the warpath closed, many Native peoples continued secretly to practice traditional customs. Away from the disapproving eyes of agents and teachers, they passed on their languages, histories, and traditional arts and medicine to younger generations. Frustrated missionaries often concluded that little could be accomplished because bonds of kinship and custom were so strong. Parents also hated to relinquish their children to off-reservation boarding schools. Thus more and more Indian schools ended up on or near reservations; white teachers had to accept their pupils' continued participation in the rhythms of Indian community life.

AP® EXAM TIP

Be able to explain the strategies employed by Native Americans to preserve their cultural and tribal identities despite federal government policies.



MAP 15.5 The Sioux Reservations in South Dakota, 1868–1889

In 1868, when they bent to the demand that they move onto the reservation, the Sioux thought they had gained secure rights to a substantial part of their ancestral hunting grounds. But harsh conditions on reservations led to continuing military conflicts. Land-hungry whites exerted continuous local pressure, and officials in Washington repeatedly changed the terms of Sioux landholdings — always eroding Native claims.

Selectively, most indigenous peoples adopted some white ways. Many parents urged their sons and daughters to study hard, learn English, and develop skills to help them succeed in the new world they confronted. Even Sitting Bull announced in 1885 that he wanted his children "to be educated like the white children are." Some Indian students grew up to be lawyers, doctors, and advocates for their people, including writers and artists who interpreted Native experiences for national audiences. One of the most famous was a Santee Sioux boy named Ohiyesa, who became Dr. Charles Eastman. Posted to the Pine Ridge Reservation in South Dakota, Eastman practiced medicine side by side with traditional healers, whom he respected, and wrote popular books under his Sioux name. He remembered that when he left for boarding school, his father had said, "We have now entered upon this life, and there is no going back. . . . Remember, my boy, it is the same as if I sent you on your first war-path. I shall expect you to conquer."

Nothing exemplified this **syncretism**, or cultural blending, better than the **Ghost Dance movement** of the late 1880s and early 1890s, which fostered American Indian peoples' hope that they could, through sacred dances, resurrect the bison and call a great storm to drive whites back across the Atlantic. The Ghost Dance drew on Christian elements as well as Native ones. As the movement spread from reservation to reservation — Paiutes, Arapahos, Sioux — indigenous peoples developed new forms of pan-Indian identity and cooperation.

White responses to the Ghost Dance showed continued misunderstanding and lethal exertion of authority. In 1890, when a group of Lakota Sioux Ghost Dancers left their South Dakota reservation, they were pursued by the U.S. Army, who feared that further spread of the religion would provoke war. On December 29, at **Wounded Knee**, the 7th Cavalry caught up with fleeing Lakotas and killed at least 150 — perhaps as many as 300. Like other massacres, this one could have been avoided. The deaths at Wounded Knee stand as a final indictment of decades of relentless U.S. expansion, white ignorance and greed, chaotic and conflicting policies, and bloody mistakes.

Western Myths and Realities

The post–Civil War frontier produced mythic figures who have played starring roles in America's national folklore ever since: "savage" Indians, brave pioneers, rugged cowboys, and gun-slinging sheriffs. Far from being invented by Hollywood in the twentieth century, these oversimplified characters emerged in the era when the nation incorporated the West. Pioneers helped develop the mythic ideal. As one Montana woman claimed, they had come west "at peril of their lives" and faced down "scalp dances" and other terrors; in the end, they "conquered the wilderness and transformed it into a land of peace and plenty." Some former cowboys, capitalizing on the popularity of dime novel Westerns, spiced up their memoirs for sale. Eastern readers were eager for stories like *The Life and Adventures of Nat Love* (1907), written by a Texas cowhand who had been born in slavery in Tennessee and who, as a rodeo star in the 1870s, had won the nickname "Deadwood Dick."

No myth-maker proved more influential than Buffalo Bill Cody. Unlike those who saw the West as free or empty, Bill understood that the United States had taken it by conquest. Ironically, his famous Wild West, which he insisted was not a "show" but an

authentic representation of frontier experience, provided one of the few employment options for Plains Indians. To escape harsh reservation conditions, Sioux and Cheyenne men signed on with Bill and demonstrated their riding skills for cheering audiences across the United States and Europe, chasing buffalo and attacking U.S. soldiers and pioneer wagons in the arena. Buffalo Bill proved to be a good employer to Native men, including Lakota Sioux leader Sitting Bull, who toured with Bill's Wild West in 1885. Black Elk, another Lakota Sioux man who joined Cody's operation, recalled that Bill was generous and "had a strong heart." But Black Elk had a mixed reaction to the Wild West. "I liked the part of the show we made," he told an interviewer, "but not the part the Wasichus [white people] made." As he observed, the Wild West of the 1880s was at its heart a celebration of U.S. military conquest.

At this same moment of transition, a young historian named Frederick Jackson Turner reviewed recent census data and proclaimed the end of the frontier. Up to 1890, he wrote, a clear, westward-moving line had existed between "civilization and savagery." The frontier experience, Turner argued, shaped Americans' national character. It left them a heritage of "coarseness and strength, combined with acuteness and inquisitiveness," as well as "restless, nervous energy."

Today, historians reject Turner's depiction of Indian "savagery"—and his contradictory idea that white pioneers in the West claimed empty "free land." Many scholars have noted that frontier conquest was both violent and incomplete. The Dust Bowl of the 1930s, as well as more recent cycles of drought, have repeated late-nineteenth-century patterns of hardship and depopulation on the plains. During the 1950s and 1960s, also, uranium mining rushes in the West mimicked earlier patterns of boom and bust, leaving ghost towns in their wake. Turner himself acknowledged that the frontier had both good and evil elements. He noted that in the West, "frontier liberty was sometimes confused with absence of all effective government." But in 1893, when Turner first published "The Significance of the Frontier in American History," eager listeners heard only the positives. They saw pioneering in the West as evidence of American exceptionalism: of the nation's unique history and destiny. They claimed that "peaceful" American expansion was the opposite of European empires—ignoring the many military and economic similarities. Although politically the American West became a set of states rather than a colony, historians today emphasize the legacy of conquest that is central to its (and America's) history.

Less than two months after the massacre at Wounded Knee, General William T. Sherman died in New York. As the nation marked his passing with pomp and oratory, commentators noted that his career reflected a great era of conquest and consolidation of national power. Known primarily for his role in defeating the Confederacy, Sherman's first military exploits had been against Seminoles in Florida. Later, during the U.S.-Mexico War, he had gone west with the U.S. Army to help claim California. After the Civil War, the general went west again, supervising the forced removal of Sioux and Cheyennes to reservations.

When Sherman graduated from West Point in 1840, the United States had counted twenty-six states, none of them west of Missouri. At his death in 1891, the nation boasted forty-four states, stretching to the Pacific coast. The United States now rivaled Britain and Germany as an industrial giant, and its dynamic economy was drawing immigrants from around the world. Over the span of Sherman's career, the United States had become a major player on the world stage. It had done so through the kind of fierce military conquest that Sherman made famous, as well as through bold expansions of federal authority to foster economic expansion. From the wars and policies of Sherman's lifetime, the children and grandchildren of Civil War heroes inherited a vast empire. In the coming decades, it would be up to them to decide how they would use the nation's new power.

IN YOUR OWN WORDS **In the late nineteenth century, what strategies did Native peoples in the West pursue in response to dispossession of their lands and efforts to assimilate them?**

SUMMARY

Between 1861 and 1877, the United States completed its conquest of the continent. After the Civil War, expansion of railroads fostered integration of the national economy. Republican policymakers promoted this integration through protective tariffs, while federal court rulings facilitated economic growth and strengthened corporations. To attract foreign investment, Congress placed the nation on the gold standard. Federal officials also pursued a vigorous foreign policy, acquiring Alaska and asserting U.S. power indirectly through control of international trade in Latin America and Asia.

An important result of economic integration was incorporation of the Great Plains. Cattlemen built an industry linked to the integrated economy, in the process nearly driving the native bison to extinction. Homesteaders confronted harsh environmental conditions as they converted the grasslands for agriculture. Republicans championed homesteader families as representatives of domesticity, an ideal opposed to Mormon plural marriage in Utah. Homesteading accelerated the rapid, often violent, transformation of western environments. Perceiving this transformation, federal officials began setting aside natural preserves such as Yellowstone, often clashing with Native Americans who wished to hunt there.

Conflicts led to the dispossession of Native American lands. During the Civil War, whites clashed with the Sioux and their allies. Grant's peace policy sought to end this conflict by forcing Native Americans to acculturate to European-style practices. Indian armed resistance continued through the 1880s, ending with Geronimo's surrender in 1886. Thereafter, Native Americans survived by secretly continuing their traditions and selectively adopting white ways. Due in part to the determined military conquest of this period, the United States claimed a major role on the world stage. Frontier myths shaped Americans' view of themselves as rugged individualists with a unique national destiny.

CHAPTER 15 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. What federal policies contributed to the rise of America's industrial economy, and what were their results?
2. What factors led to transformation of the trans-Mississippi west after the Civil War?
3. In the late nineteenth century, what strategies did Native peoples in the West pursue in response to dispossession of their lands and efforts to assimilate them?
4. Review the events listed under "American and National Identity" and "Migration and Settlement" on the thematic timeline on pages 364–365. Between the 1840s and the 1870s, what distinctive patterns of racial and ethnic conflict occurred in the West? What were the results for different ethnic and racial groups?

MAKING CONNECTIONS *Recognize the larger developments and continuities within and across chapters by answering these questions.*

1. During the Reconstruction years, Republican policymakers made sweeping policy decisions — especially having to do with land rights, voting rights, and education — that shaped the future of African Americans in the South and American Indians in the West. In an essay, compare U.S. policies toward the two groups. What assumptions and goals underlay each effort to incorporate racial minorities into the United States? To what extent did each effort succeed or fail, and why? How did the actions of powerful whites in each region shape the results?
2. Consider the image at the start of this chapter, "The Great West" (p. 463), which depicts how many Americans of the era thought the West *ought* to look when settlement was complete. Identify at least two other images in Chapter 15 that show what the natural and built environments of the West *really* looked like. What do you conclude from this comparison about the impact or the limits of U.S. policies in the West?

KEY TURNING POINTS *Refer to the chapter chronology on page 464 for help in answering the question below.*

The military, political, and economic events of the Civil War years (1861–1865) are often treated as largely occurring in the Northeast and South — at places such as Shiloh, Gettysburg, and Washington, D.C. What impact did these developments have on the West, and what were their legacies?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS *Choose the correct answer for each question.*

Questions 1–3 refer to the excerpt below.

> "[T]he President of the United States . . . is authorized . . . to allot the lands . . . in severalty [individually] to any Indian located thereon in quantities as follows:
>
> To each head of a family, one-quarter of a section;
> To each single person over eighteen years of age, one-eighth of a section;
> To each orphan child under eighteen years of age, one-eighth of a section; and
> To each other single person under eighteen years now living . . . one-sixteenth of a section. . . .
>
> [E]very member [Indian] to whom allotments have been made shall have the benefit of and be subject to the laws, both civil and criminal, of the State or Territory in which they may reside. . . ."
>
> Dawes Severalty Act, 1887

1. The policy goals endorsed by the Dawes Severalty Act would have been most strongly supported by advocates of
   a. assimilation.
   b. containment.
   c. nativism.
   d. Social Darwinism.
2. The policy toward American Indians expressed in the Dawes Severalty Act resulted from all of the following conditions EXCEPT
   a. the near extinction of free-roaming bison on the Great Plains.
   b. the conflicts over landownership between white settlers and American Indians.
   c. the attempts by miners to extract mineral wealth from traditional American Indian lands.
   d. the forced relocation of American Indian tribes to lands west of the Mississippi River.
3. The growth of which of the following historical developments most strongly undermined American Indians' ownership of land during the period between 1850 and 1890?
   a. Telegraphs
   b. Sharecropping
   c. Railroads
   d. Newspapers

Questions 4–6 refer to the map below.

Expansion of the Railroad System, 1850–1890

4. Which of the following most directly contributed to the overall trend depicted in the map?
   a. Technological innovations
   b. The rise of organized labor
   c. Improved standards of living
   d. Increased trade with Latin America
5. The federal government most directly contributed to the trend depicted in the map by
   a. actively regulating the railroad industry.
   b. subsidizing railroad construction through land grants.
   c. passing federal income taxes to fund new railroads.
   d. taking direct ownership of the major railroad lines.
6. The trend depicted in the map led to all of the following EXCEPT
   a. large numbers of migrants moving to the West.
   b. the rise of cattle ranching in Texas.
   c. an overall increase in consumer prices.
   d. the growth of cooperative organizations for farmers.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

"The treaty system ended in 1871, when Congress decided that no more treaties would be made with Indian tribes . . . but the paternalism of the federal government toward the Indians continued . . . [under the] Board of Indian Commissioners . . . [which included] a remarkable collection of high-minded Christian philanthropists, suffused with a spirit of benevolence, who epitomized the evangelical religious atmosphere of the nineteenth century. For better or for worse, the American Indians fell into the hands of this group and their successors."

Francis Paul Prucha, *The Indian in American Society: From the Revolutionary War to the Present*, 1985

"[O]fficials often proclaimed that they were ushering in a new age of dealing fairly and kindly with . . . indigenous inhabitants. Yet these new policies actually entailed one of the most draconian measures possible: the removal of indigenous children from their kin . . . to be raised in distant institutions. . . . [I]nstead of watching from the sidelines as male government officials designed and carried out policies of indigenous child removal, many white women reformers campaigned for a greater role in setting public policy for indigenous peoples and became deeply implicated in this phase of settler colonialism."

Margaret D. Jacobs, *White Mother to a Dark Race: Settler Colonialism, Maternalism, and the Removal of Indigenous Children in the American West and Australia, 1880–1940*, 2009

1. Using the two excerpts above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE major difference between Prucha's and Jacobs's historical interpretations of the federal government's policies toward American Indians.
   - **b.** Briefly explain how ONE specific historical event or development from the period 1865 to 1898 that is not explicitly mentioned in the excerpts could be used to support Prucha's interpretation.
   - **c.** Briefly explain how ONE specific historical event or development from the period 1865 to 1898 that is not explicitly mentioned in the excerpts could be used to support Jacobs's interpretation.
2. Using the map of railroad expansion on the previous page, answer (a), (b), and (c).
   - **a.** Briefly explain ONE specific historical event or development that accounts for the pattern of railroad construction illustrated in the map.
   - **b.** Briefly explain ONE specific historical change in the U.S. economy that resulted from the change illustrated in the period from 1850 to 1900.
   - **c.** Briefly explain ONE specific historical environmental result of the change illustrated in the period from 1850 to 1900.
3. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE specific historical similarity in the interactions between the U.S. government and American Indians in the era immediately before the end of the Civil War (1840–1865) and the era immediately after the Civil War (1865–1890).
   - **b.** Briefly explain ONE specific historical difference in the interactions between the U.S. government and American Indians in the era immediately before the end of the Civil War (1840–1865) and the era immediately after the Civil War (1865–1890).
   - **c.** Briefly explain ONE specific historical example of American Indian resistance to U.S. government policies or actions in the era immediately before the end of the Civil War (1840–1865) OR the era immediately after the Civil War (1865–1890).

DOCUMENT-BASED QUESTION *Suggested reading period: 15 minutes. Suggested writing time: 45 minutes.*

DIRECTIONS: Question 1 is based on the accompanying documents. The documents have been edited for the purpose of this exercise.

1. Evaluate the extent to which the Civil War altered the lives of Americans in the North and the South between 1861 and 1865.

DOCUMENT 1

Source: Letter from Thomas Drayton, a South Carolina plantation owner, to his brother, a Union naval officer, April 17, 1861.

"Dear Percy,

I have received yours of the 9th last, and as Mr. Lincoln has threatened to stop the mails from us to you after they pass the Confederate Boundary, it is probable this may be a long time in getting to you. . . .

You say I don't yet understand the position you have taken. I do fully — but certainly differ from you when you say that to side with us — would be 'battling for slavery against freedom.' . . .

We are fighting for home & liberty. Can the North say as much? — Good night. And don't say again, that in siding for us — you would be defending slavery and fighting for what is abhorrent to your feelings & convictions. On the contrary, in fighting on our side, you will be battling for law & order & against abstract fanatical ideas which will certainly bring about vastly greater evils upon our race, than could possibly result from the perpetuation of slavery among us. . . .

P.S. Don't imagine that I have meant anything personal in what I have written. . . . I could not help, while alone at this midnight hour, but write in sadness & anguish of heart at the perils which may so soon encompass the orphan children I may so shortly leave behind me. I have meant no unkindness to you. I could not wound one whom I love so well. Goodnight, and pray to God for our country!"

DOCUMENT 2

Source: Letter from Major-General Benjamin Butler to Secretary of War Simon Cameron, July 30, 1861.

"But by the evacuation of Hampton, rendered necessary by the withdrawal of [Union] troops . . . I have therefore now within the Peninsula, this side of Hampton Creek, 900 negroes, 300 of whom are able-bodied men, 30 of whom are men substantially past hard labor, 175 women, 225 children under the age of 10 years, and 170 between 10 and 18 years, and many more coming in. The questions which this state of facts present are very embarrassing.

First — What shall be done with them? and, Second, What is their state and condition? . . . Is it forbidden to the troops to aid or harbor within their lines the negro children who are found therein, or is the soldier, when his march has destroyed their means of subsistence, to allow them to starve because he has driven off the rebel master? Now, shall the commander of regiment or battalion sit in judgment upon the question, whether any given black man has fled from his master, or his master fled from him? Indeed, how are the free born to be distinguished? . . .

In a loyal State I would put down a servile insurrection. In a state of rebellion I would confiscate that which was used to oppose my arms, and take all that property, which constituted the wealth of that State, and furnished the means by which the war is prosecuted, beside being the cause of the war; and if, in so doing, it should be objected that human beings were brought to the free enjoyment of life, liberty and the pursuit of happiness, such objections might not require much consideration."

Davis Museum at Wellesley College, Art Resource, NY

DOCUMENT 4

Source: Enrollment Act, March 3, 1863.

Be it enacted . . . that all able-bodied male citizens of the United States, and persons of foreign birth who shall have declared on oath their intention to become citizens under and in pursuance of the laws thereof, between the ages of twenty and forty-five years, except as hereinafter excepted, are hereby declared to constitute the national forces, and shall be liable to perform military duty in the service of the United States when called out by the President for that purpose. . . .

And, it be further enacted, That any person drafted and notified to appear as aforesaid, may, on or before the day fixed for his appearance, furnish an acceptable substitute to take his place in the draft; or he may pay to such person as the Secretary of War may authorize to receive it, such sum, not exceeding three hundred dollars, as the Secretary may determine, for the procuration of each substitute . . . and thereupon such person so furnishing the substitute, or paying the money, shall be discharged from further liability under that draft. . . .

DOCUMENT 5

Source: Letter from Hannah Johnson to President Abraham Lincoln, July 31, 1863.

"My son went in the 54th regiment. I am a colored woman and my son was strong and able as any to fight for his country and the colored people have as much to fight for as any. My father was a Slave and escaped from Louisiana before I was born more than forty years ago. . . . I never went to school, but I know just as well as any what is right between man and man. Now I know it is right that a colored man should go and fight for his country, and so ought to a white man. I know that a colored man ought to run no greater risks than a white, his pay is no greater, his obligation to fight is the same. So why should not our enemies be compelled to treat him the same, Made to do it. . . .

You must put the rebels to work in State prisons to making shoes and things, if they sell our colored soldiers, till they let them all go. And give their wounded the same treatment. It would seem cruel, but there [is] no other way, and a just man must do hard things sometimes, that show him[self] to be a great man. . . .

Will you see that the colored men fighting now, are fairly treated. You ought to do this, and do it at once, Not let the thing run along; meet it quickly and manfully, and stop this, mean cowardly cruelty. We poor oppressed ones, appeal to you, and ask fair play.

1864	176	77	3,992	11

DOCUMENT 7

Source: Black Codes of St. Landry's Parish, Louisiana, 1865.

SECTION 2. . . . That every negro who shall be found absent from the residence of his employer after 10 o'clock at night, without a written permit from his employer, shall pay a fine of five dollars, or in default thereof, shall be compelled to work five days on the public road, or suffer corporeal punishments. . . .

SECTION 4. Be it further ordained, That every negro is required to be in the regular service of some white person, or former owner. . . .

SECTION 6. Be it further ordained, That no negro shall be permitted to preach, exhort, or otherwise declaim to congregations of colored people, without a special permission in writing from the president of the police jury. . . .

SECTION 7. Be it further ordained, That no negro who is not in the military service shall be allowed to carry fire-arms, or any kind of weapons, within the parish, without the special written permission of his employers, approved and endorsed by the nearest or most convenient chief of patrol.

LONG ESSAY QUESTIONS *Suggested writing time: 40 minutes.*

DIRECTIONS: Please choose one of the following three questions to answer.

2. **Compare and contrast the effects of western settlement on the United States economy in the years immediately before the end of the Civil War (1840–1865) and the era immediately after the Civil War (1865–1880).**

3. **Evaluate the extent to which Reconstruction fostered changes for African Americans in the South from 1865 to 1877.**

4. **Evaluate the extent to which the Civil War and Reconstruction expanded the power of the federal government in the period from 1860 to 1890.**

CHAPTER 19
Whose Government? Politics, Populists, and Progressives, 1880–1917

Industrializing America: Upheavals and Experiments

1877–1917

Touring the United States around 1900, a Hungarian Catholic abbot named Count Péter Vay visited the steel mills of Pittsburgh. "Fourteen-thousand tall chimneys . . . discharge their burning sparks and smoke incessantly," he reported. He was moved by the plight of fellow Hungarians, laboring "wherever the heat is most insupportable, the flames most scorching." One worker had just been killed in a foundry accident. Vay, attending the funeral, worried that immigration was "of no use except to help fill the moneybags of the insatiable millionaires."

Vay witnessed America's emergence as an industrial power, the subject of Part 6 of *America's History*. We begin Part 6 in 1877 because the transformations wrought by capitalism drove the nation's most urgent controversies after the end of the Civil War and Reconstruction. Key working-class reform and protest movements developed new strategies and arguments in the four decades that followed the end of Reconstruction. The Democratic Party, traditionally hostile to strong central government but pressured in new directions by grassroots groups like the People's Party of the 1890s, began to advocate for new measures to address poverty and rein in growing corporate power. By 1910, thousands of middle-class and elite Americans had adopted their own reform visions. As ex-president Theodore Roosevelt declared, American citizens needed to "control the mighty commercial forces which they have called into being."

Part 6 ends in 1917 because we, like many other historians, see U.S. participation in World War I as a key turning point that helped bring about some measures that progressives had sought for decades, such as national women's suffrage, prohibition, and government ownership of railroads. As we shall see in Part 7, the aftermath of World War I also revealed the limits of those reforms. ▶

AP® CONCEPT CONNECTIONS

Corporations and Conflicts

Giant corporations developed global networks of production, marketing, and finance by innovating technically and developing ruthless tactics such as predatory pricing. Corporations' complex structures opened new careers for managers and "pink-collar workers," but wageworkers, including African Americans and millions of newly arrived immigrants, endured low pay, health hazards, and frequent unemployment. In addition to creating labor unions to protest such conditions, workers forged political alliances with farmers, who also found themselves economically vulnerable. Along with an eight-hour day and union recognition, workers agitated for, and won, Chinese exclusion.

Library of Congress

A Diverse, Urban Society

The values of thrift, piety, and domesticity faced challenges in the era of industrialization. Women took prominent roles in public life, while Charles Darwin's theory of evolution prompted some thinkers to justify economic inequality as a law of nature. Writers and artists experimented with realism and abstraction. People of religious faith had diverse reactions to these upheavals.

The nation's fast-growing cities offered enticing consumer pleasures, while also housing millions of impoverished immigrants. Cities proved challenging to govern, and reformers denounced the immigrant-supported political machines that controlled them. By 1900, however, some machine leaders helped lead urban progressive experiments.

National Archive

Reform Initiatives

Progressive reformers — a diverse group who were not at all united — sought to enhance democracy, limit corporate power, **ameliorate** poverty, and protect the environment. Though Republican President Theodore Roosevelt championed landmark legislation (1901–1909), much reform energy passed to other parties. During the presidency of Woodrow Wilson (1913–1921), Democrats enacted an impressive slate of laws, including new recognition of labor rights. Meanwhile, the Populist, Socialist, and Progressive parties proposed more radical responses to poverty and concentrated wealth. While none of these parties won national power, their ideas helped influence the shape of the emerging modern state.

AP® THEMATIC UNDERSTANDING

Industrializing America: Upheavals and Experiments 1877–1917

Los Angeles Public Library

This timeline arranges some of the important events of this period into themes.

What was the relationship of the two severe economic depressions listed under "Work, Exchange, and Technology" to political reform? Did reform tend to come during or after periods of economic crisis? Why do you think this was the case? In what ways did Americans respond politically to the depression of the 1870s? What continuities and changes do you see in their responses to the next severe depression, in the 1890s?

	AMERICAN AND NATIONAL IDENTITY	POLITICS AND POWER	WORK, EXCHANGE, AND TECHNOLOGY
1870	• Association for the Advancement of Women founded (1873) • Woman's Christian Temperance Union founded (1874) • National Farmers' Alliances form (1875–early 1880s) • San Francisco mob attacks Chinatown (1877)	• Greenback-Labor Party elects fifteen congressmen (1878)	• Economic depression (1873–1879) • First department store opens in Philadelphia (1875) • Alexander Graham Bell invents telephone (1876) • Great Railroad Strike (1877) • Deskilling of labor under mass production
1880	• Knights of Labor peaks in membership (1884) • Rock Springs massacre of Chinese miners (1885) • Haymarket Square violence in Chicago (1886) • American Federation of Labor founded (1886)	• Pendleton Act (1883) • Peak of Woman's Christian Temperance Union (1880s) • Hatch Act provides federal support for farmers (1887) • Interstate Commerce Act (1887) • New Jersey law invites trusts to operate in the state (1889) • Hull House settlement founded (1889)	• First vertically integrated corporations • John D. Rockefeller creates Standard Oil trust (1882) • First skyscraper completed in Chicago (1885) • Knights of Labor peaks • American Federation of Labor founded (1886)
1890	• National American Woman Suffrage Association unites suffragists (1890) • Lockout of workers at Carnegie plant in Homestead, Pennsylvania (1892) • Sierra Club founded (1892) • Booker T. Washington delivers Atlanta Compromise address (1895) • National Association of Colored Women founded (1896)	• Disfranchisement in South (1890–1905) • Sherman Antitrust Act (1890) • People's Party founded (1890) • Coxey's Army marches (1894) • *Plessy v. Ferguson* (1896) • William McKinley elected president (1896) • National Consumers' League founded (1899)	• Severe depression hits; causes mass unemployment and wave of corporate mergers (1893) • J. P. Morgan arranges gold purchases to rescue U.S. Treasury (1895) • Accelerated corporate mergers in key industries • First subway line opens in Boston (1897) • Central Labor Union protests in Cleveland (1899) • Birth of modern advertising
1900	• Women's Trade Union League founded (1903) • Industrial Workers of the World founded (1905) • National Association for the Advancement of Colored People founded (1909)	• McKinley assassinated; Theodore Roosevelt assumes presidency (1901) • Food and Drug Administration established (1906) • Hepburn Act (1906)	• J. P. Morgan creates U.S. Steel (1901) • Women's Trade Union League founded (1903) • Industrial Workers of the World founded (1905) • *Muller v. Oregon* (1908)
1910		• Woodrow Wilson wins presidency (1912) • Sixteenth and Seventeenth Amendments to the Constitution (1913) • Federal Reserve created (1913) • Clayton Antitrust Act (1914)	• Triangle Fire at Triangle Shirtwaist Company, New York (1911) • Supreme Court orders Standard Oil divided to lessen its monopoly power (1911)

CULTURE AND SOCIETY	MIGRATION AND SETTLEMENT	GEOGRAPHY AND THE ENVIRONMENT	AMERICA IN THE WORLD	
• Comstock Act bans circulation of most information about sex and birth control (1873) • Baseball's National League founded (1876) • Henry George publishes *Progress and Poverty* (1879) • Salvation Army established in United States (1879)		• First national park created at Yellowstone (1872) • Appalachian Mountain Club founded (1876) • Yellow fever epidemic devastates Memphis, Tennessee (1878)	• Social Darwinism gains growing acceptance in Europe and the United States • Hostility toward Chinese immigrants grows	1870
• Increasing numbers of students attend college • William Dean Howells calls for realism in literature • Booker T. Washington founds Tuskegee Institute (1881) • Birth of American football • Popularity of vaudeville	• Congress passes Chinese Exclusion Act (1882) • Violence prompts mass immigration of Russian Jews (1880s) • American Protective Association founded to oppose immigration (1887) • Jane Addams and Ellen Gates Starr found Hull House (1889)	• Hatch Act (1887) provides federal support for agricultural research and experiment stations • Industrialization and urban growth cause rising pollution	• Rapid industrialization draws immigrants from around the world; American cities grow rapidly • Chinese Exclusion Act (1882–1943)	1880
• Jacob Riis publishes *How the Other Half Lives* (1890) • World's Columbian Exposition in Chicago (1893) • Ragtime music introduced at Exposition, Chicago (1893) • Charles Sheldon publishes *In His Steps* (1896)	• New York's Ellis Island opens (1892)	• John Muir founds Sierra Club (1892) • "Bicycle craze" and rise of hiking and camping get more Americans outdoors	• Gorras Blancas confront wealthy Anglo interests in New Mexico • Unemployed whites attack Chinese farmworkers • Ellis Island opens (1892) • Supreme Court upholds segregation of schools and public facilities in *Plessy v. Ferguson* (1896)	1890
• First World Series (1903) • Robert Hunter publishes *Poverty* (1904) • Upton Sinclair's *The Jungle* published (1906) • Walter Dill Scott publishes *The Psychology of Advertising* (1908)	• Migration of African Americans to northern cities increases • New York passes Tenement House Law (1901) • Robert Hunter publishes *Poverty* (1904)	• Lacey Act protects wildlife (1900) • Antiquities Act (1906) • National Audubon Society forms (1901) • Newlands Reclamation Act (1902) • U.S. Forest Service created (1905)	• Rising immigration from Eastern and Southern Europe • Height of eugenics (1900s–1920s) • Increasing numbers of blacks move to cities; responses include "race riots" by whites	1900
• Armory Show of modern art held in New York City (1913)		• National Park Service created (1916)	• Peak of foreign missions activity by American Protestant churches (1915)	1910

AP LEARNING FOCUS

What new opportunities and risks did industrialization bring, and how did it reshape American society?

For millions of his contemporaries, Andrew Carnegie exemplified American success. Arriving from Scotland as a poor twelve-year-old in 1848, Carnegie found work as an errand boy for the Pennsylvania Railroad and rapidly scaled the managerial ladder. In 1865, he struck out on his own as an iron manufacturer, selling to friends in the railroad business. Encouraged by Republican tariffs to enter the steel industry, he soon built a massive steel mill outside Pittsburgh where a state-of-the-art Bessemer converter made steel refining dramatically more efficient. With Carnegie leading the way, steel became a major U.S. industry, reaching annual production of 10 million metric tons by 1900—almost as much as the *combined* output of the world's other top producers, Germany (6.6 million tons) and Britain (4.8 million).

At first, skilled workers at Carnegie's mill in Homestead, Pennsylvania, earned good wages. They had a strong union, and Carnegie affirmed workers' right to organize. But Carnegie—confident that new machinery enabled him to replace many skilled laborers—eventually decided that collective bargaining was too expensive. In the summer of 1892, he withdrew to his estate in Scotland, leaving his partner Henry Clay Frick in command. A former coal magnate and veteran foe of labor, Frick was well qualified to do the dirty work. He announced that after July 1, members of the Amalgamated Association of Iron and Steel Workers would be locked out of the Homestead mill. If they wanted to return to work, they would have to abandon the union and sign new individual contracts. Frick fortified the mill and prepared to hire replacement workers. The battle was on.

At dawn on July 6, barges chugging up the Monongahela River brought dozens of private armed guards from the Pinkerton Detective Agency, hired by Carnegie to defend the plant. Locked-out workers opened fire, starting a gunfight that left seven workers and three Pinkertons dead. Frick appealed to Pennsylvania's governor, who sent the state militia to arrest labor leaders on charges of riot and murder. Most of the locked-out workers lost their jobs. The union was dead.

As the **Homestead lockout** showed, industrialization was a controversial and often bloody process. During the half century after the Civil War, more and more Americans worked not as independent farmers or artisans but as employees of large corporations. Conditions of work changed for people of all economic classes. Drawn by the dynamic economy, immigrants arrived from around the globe. These transformations provoked working people, including farmers as well as industrial workers, to organize and defend their interests.

Marianna Mine Disaster The bituminous mines of Marianna, Pennsylvania, and many other rich sites provided the coal that fueled American industrial growth. On November 28, 1908, an explosion in the mine killed 158 workers. Many were American-born; some were Irish, Welsh, Italian, and Polish immigrants. Here, a horse-drawn wagon carries bodies recovered from the mine. Such catastrophes laid bare the human cost of industrialization. Marianna was one among many: in the same decade, disasters at Scofield, Utah; Jacobs Creek, Pennsylvania; Monongah, West Virginia; and Cherry, Illinois, each killed over 200 men. Library of Congress

CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and identify the links among related events.

- **1863** ▸ Cleveland, Ohio, becomes nation's petroleum refining center
- **1865** ▸ Chicago's Union Stock Yards opens
- **1867** ▸ National Grange of the Patrons of Husbandry founded
- **1869** ▸ Knights of Labor founded
- **1873** ▸ Panic followed by severe economic depression
- **1875** ▸ John Wanamaker opens nation's first department store in Philadelphia
- **1876** ▸ Alexander Graham Bell invents the telephone
- **1877** ▸ San Francisco mob attacks Chinatown
  ▸ Great Railroad Strike
  ▸ First Farmers' Alliances form in South and West

The Rise of Big Business

In the late 1800s, industrialization in Europe and the United States revolutionized the world economy. It brought large-scale commercial agriculture to many parts of the globe and prompted millions of migrants — both skilled workers and displaced peasants — to cross continents and oceans in search of jobs. Industrialization also created a production glut. The immense scale of agriculture and manufacturing caused a long era of deflation, when prices dropped worldwide (Figure 16.1).

Falling prices normally signal low demand for goods and services, and thus stagnation. In England, a mature industrial power, the late nineteenth century did bring economic decline. But in the United States, production expanded. Between 1877 and 1900, Americans' average real per capita income increased from $388 to $573. In this sense, Andrew Carnegie was right when he argued that, even though industrialization increased the gap between rich and poor, everyone's standard of living rose. In his famous 1889 essay "Wealth" — later called the **Gospel of Wealth** — he observed that "the poor enjoy what the rich could not before afford. What were the luxuries have become the necessaries of life."

Technological and business efficiencies allowed American firms to grow, invest in new equipment, and earn profits even as prices for their products fell. Growth depended, in turn, on America's large and growing population, expansion into the West, and an integrated national marketplace. In many fields, large corporations became the dominant form of business.

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

To see a longer excerpt of "The Gospel of Wealth," along with other primary sources from this period, see ***Sources for America's History***.

Innovators in Enterprise

As rail lines stretched westward between the 1850s and 1880s, operators faced a crisis. As one Erie Railroad executive noted, a superintendent on a 50-mile line could personally attend to every detail. But supervising a 500-mile line was impossible; trains ran late, communications failed, and trains crashed. Managers gradually invented systems to solve these problems. They distinguished top executives from those

responsible for day-to-day operations. They departmentalized operations by function — purchasing, machinery, freight traffic, passenger traffic — and established clear lines of communication. They perfected cost accounting, which allowed an industrialist like Carnegie to track expenses and revenues carefully and thus follow his Scottish mother's advice: "Take care of the pennies, and the pounds will take care of themselves." This **management revolution** created the internal structure adopted by many large, complex corporations.

During these same years, the United States became an industrial power by tapping North America's vast natural resources, particularly in the West. Industries that had once depended on water power began to use prodigious amounts of coal. Steam engines replaced human and animal labor, and kerosene replaced whale oil and wood. By 1900, America's factories and urban homes were converting to electric power. With new management structures and dependency on fossil fuels (oil, coal, natural gas), corporations transformed both the economy and the country's natural and built environments.

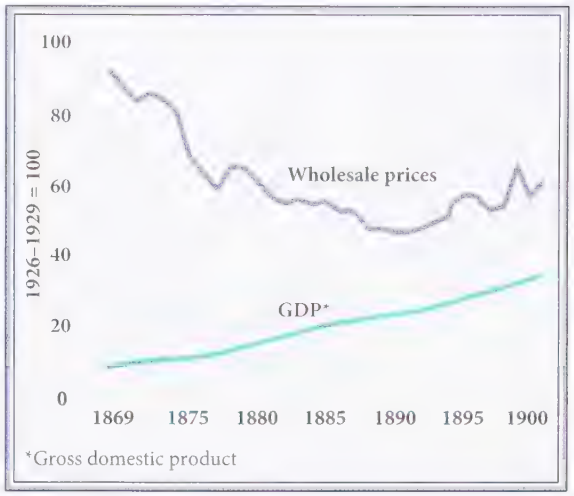

FIGURE 16.1 Business Activity and Wholesale Prices, 1869–1900
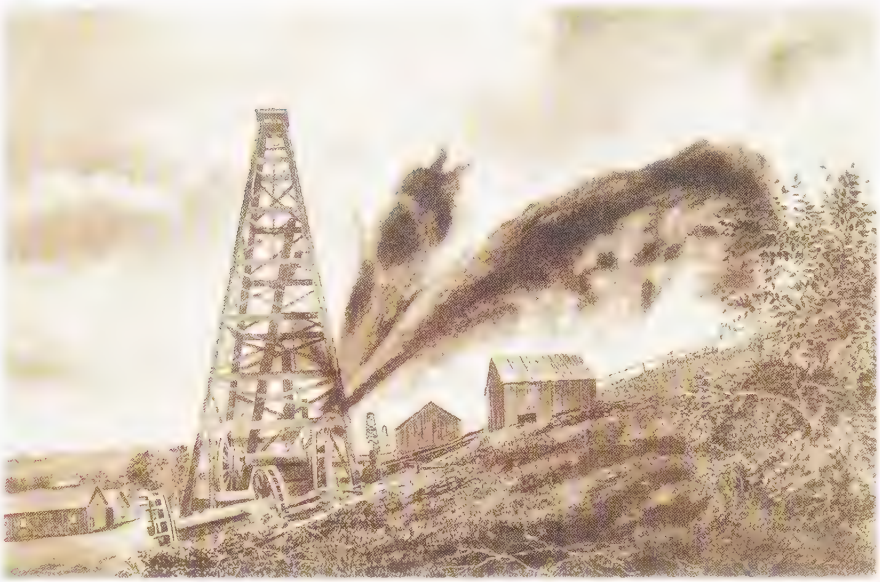
This graph shows the key feature of the performance of the late-nineteenth-century economy: while output was booming, wholesale prices were, on the whole, falling. Thus, while workers often struggled with falling wages — especially during decades of severe economic crisis — consumer products also became cheaper to buy.

Production and Sales After Chicago's Union Stock Yards opened in 1865, middlemen shipped cows by rail from the Great Plains to Chicago and from there to eastern cities, where slaughter took place in local butchertowns. Such a system — a national livestock market with local processing — could have lasted, as it did in Europe. But Gustavus Swift, a shrewd Chicago cattle dealer, saw that local slaughterhouses lacked the scale to utilize waste by-products and cut labor costs. To improve productivity, Swift invented the assembly line, where each wageworker repeated the same slaughtering task over and over.

Swift also pioneered **vertical integration**, a model in which a company controlled all aspects of production from raw materials to finished goods. Once his engineers designed a cooling system, Swift invested in a fleet of refrigerator cars to keep beef fresh as he shipped it eastward, priced below what local butchers could afford. In cities that received his chilled meat, Swift built branch houses and fleets of delivery wagons. He also constructed factories to make fertilizer and chemicals from the by-products of slaughter, and he developed marketing strategies for those products as well. Other Chicago packers followed Swift's lead. By 1900, five firms, all vertically integrated, produced nearly 90 percent of the meat shipped in interstate commerce.

Big packers invented new sales tactics. For example, Swift & Company periodically slashed prices in certain markets to below production costs, driving independent distributors to the wall. With profits from its sales elsewhere, a large firm like Swift could survive temporary losses in one locality until competitors went under. Afterward, Swift could raise prices again. This technique, known as predatory pricing, helped give a few firms unprecedented market control.

Standard Oil and the Rise of the Trusts No one used ruthless business tactics more skillfully than the king of petroleum, John D. Rockefeller. After inventors in the 1850s figured out how to extract kerosene — a clean-burning fuel for domestic heating and lighting — from crude oil, enormous oil deposits were discovered at Titusville, Pennsylvania. Just then, the Civil War severely disrupted whaling, forcing whale-oil customers to look for alternative lighting sources. Overnight, a forest of oil wells sprang up around Titusville. Connected to these Pennsylvania oil fields by rail in 1863, Cleveland, Ohio, became a refining center. John D. Rockefeller was then an up-and-coming Cleveland grain dealer. (He, like Carnegie and most other budding tycoons, hired a substitute to fight for him in the Civil War.) Rockefeller had strong nerves, a sharp eye for able partners, and a genius for finance. He went into the kerosene business



A "Gusher" in Pennsylvania Late nineteenth-century Americans tapped large petroleum fields in western Pennsylvania and later in Texas, developing an array of uses for kerosene and other fossil fuels. This 1880 sketch of an oil well shows what happened when drillers struck an underground petroleum pocket that was under pressure. Everett Collection

and borrowed heavily to expand. Within a few years, his firm — Standard Oil of Ohio — was Cleveland's leading refiner.

Like Carnegie and Swift, Rockefeller succeeded through vertical integration: to control production and sales all the way from the oil well to the kerosene lamp, he took a big stake in the oil fields, added pipelines, and developed a vast distribution network. Rockefeller allied with railroad executives, who, like him, hated the oil market's boom-and-bust cycles. What they wanted was predictable, high-volume traffic, and they offered Rockefeller secret **rebates** that gave him a leg up on competitors.

Rockefeller also pioneered a strategy called **horizontal integration**. After driving competitors to the brink of failure through predatory pricing, he invited them to merge their local companies into his conglomerate. Most agreed, often because they had no choice. Through such mergers, Standard Oil wrested control of 95 percent of the nation's oil refining capacity by the 1880s. In 1882, Rockefeller's lawyers created a new legal form, the **trust**. It organized a small group of associates — the board of trustees — to hold stock from a group of combined firms, managing them as a single entity. Rockefeller soon invested in Mexican oil fields and competed in world markets against Russian and Middle Eastern producers.

The Singer Sewing Machine The sewing machine was an American invention that swiftly found markets abroad. The Singer Manufacturing Company, the dominant firm by the time the Civil War began, exported sewing machines to markets as far-flung as Ireland, Russia, China, and India. The company also moved some manufacturing operations abroad, producing 200,000 machines annually at a Scottish plant that employed 6,000 workers. Singer's advertising rightly boasted of the international appeal of a product that the company dubbed "The Universal Sewing Machine." Collection of the New-York Historical Society, USA / Bridgeman Images

Other companies followed Rockefeller's lead, creating trusts to produce such products as linseed oil, sugar, and salt. Many expanded sales and production overseas. As early as 1868, Singer Manufacturing Company established a factory in Scotland to produce sewing machines. By World War I, such brands as Ford and General Electric had become familiar around the world.

Distressed by the development of near monopolies, reformers began to denounce "the trusts," a term that in popular usage referred to any large corporation that seemed to wield excessive power. Some states outlawed trusts as a legal form. But in an effort to attract corporate headquarters to its state, New Jersey broke ranks in 1889, passing a law that permitted the creation of holding companies and other combinations. Delaware soon followed, providing another legal haven for consolidated corporations. A wave of mergers further concentrated corporate power during the depression of the 1890s, as weaker firms succumbed to powerful rivals. By 1900, America's largest one hundred companies controlled a third of the nation's productive capacity. Purchasing several steel companies in 1901, including Carnegie Steel, J. P. Morgan created U.S. Steel, the nation's first billion-dollar corporation. Such familiar firms as DuPont and Eastman Kodak assumed dominant places in their respective industries (AP® Interpreting the Past).

AP® EXAM TIP

The consolidation of corporations into trusts and the resulting concentration of wealth is a "must know" on the AP® exam.

Assessing the Industrialists The work of men like Swift, Rockefeller, and Carnegie was controversial in their lifetimes and has been ever since. Carnegie, in his "Wealth" essay, argued that corporate titans attained their wealth through talent, proving they deserved their success. He also declared, however, that wealth was a "public trust" and that every elite man, after providing for his family, had a patriotic obligation to give away his millions to benefit education and other worthy causes. Carnegie advocated a near 100 percent inheritance tax on privately held wealth: inheriting large sums, he believed, discouraged young people's initiative, just as "handouts" of food or shelter to the poor discouraged them from working. Carnegie rejected both, viewing Social Darwinism, or "survival of the fittest," as the key principle of the new order (see Chapter 17).

Historians' opinions of the first industrial titans have tended to be harsh in eras of economic crisis, when the shortcomings of corporate America appear in stark relief. During the Great Depression of the 1930s, a historian coined the term *robber barons*, which is still used today. In periods of prosperity, both scholars and the public have tended to view early industrialists more favorably, calling them *industrial statesmen*.

Some scholars have argued that industrialists benefitted the economy by replacing the chaos of market competition with a "visible hand" of planning and expert management. But one recent study of railroads asserts that the main skills of early tycoons (as well as those of today) were cultivating political "friends," defaulting on loans, and lying to the public. Whether we consider the industrialists heroes, villains, or something in between, it is clear that the corporate economy was not the creation of just a few individuals, however famous or influential. It was a systemic transformation of the economy.

A National Consumer Culture As they integrated vertically and horizontally, corporations innovated in other ways. Companies such as Bell Telephone and Westinghouse set up research laboratories. Steelmakers invested in chemistry and materials science to make their products cheaper, better, and stronger. Mass markets brought an appealing array of goods to consumers who could afford them. Railroads whisked Florida oranges and other fresh produce to the shelves of grocery stores. Retailers such as F. W. Woolworth and the Great Atlantic and Pacific Tea Company (A&P) opened chains of stores that soon stretched nationwide.

AP® EXAM TIP

Recognizing the changes in consumer culture that led to dramatic increase in production of goods is critical for the AP® exam.

The department store was pioneered in 1875 by John Wanamaker in Philadelphia. These megastores displaced small retail shops, tempting customers with large show windows and Christmas displays. Like industrialists, department store magnates developed economies of scale that enabled them to slash prices. An 1898 newspaper advertisement for Macy's Department Store urged shoppers to "read our books, cook in our

How Modern Were Late-Nineteenth-Century Corporations?

The modern corporation emerged in the late nineteenth century as both a cause and consequence of industrialization and the expansion of the capitalist system. Unlike the smaller manufacturing and mercantile businesses of the early nineteenth century, which were often owned and operated by a single person or family, these sprawling and complex organizations developed elaborate administrative structures and employed a bureaucracy of managers to run daily operations. But were these professionals any good?

Historians Alfred D. Chandler Jr. and Richard White examine the railroad as the key industry pioneering the development of the modern corporation. In both accounts, the managerial class was central to this process because, unlike owners, who were often uninvolved stockholders, the managers oversaw the day-to-day running of these multifaceted organizations. Chandler and White, however, interpret the success of these managers and their corporations in different ways.

ALFRED D. CHANDLER JR.

SOURCE: Alfred D. Chandler Jr., *The Visible Hand: The Managerial Revolution in American Business* (Cambridge: The Belknap Press of Harvard University Press, 1977), 12, 87.

The visible hand of management replaced the invisible hand of market forces. . . . [S]afe, regular, reliable movement of goods and passengers, as well as the continuing maintenance and repair of locomotives, rolling stock, and track, roadbed, stations, roundhouses, and other equipment, required . . . special skills and training which could only be commanded by a full-time salaried manager. . . . This career orientation and the specialized nature of tasks gave the railroad managers an increasingly professional outlook on their work.

RICHARD WHITE

SOURCE: Richard White, *Railroaded: The Transcontinentals and the Making of Modern America* (New York: W. W. Norton & Company, 2011), xxix–xxxii.

[Railroads] were not the harbingers of order, rationality, and effective large-scale organization. . . . Managers blamed their failures on accidents and contingent events, but they also used them to cover their mistakes and claim quite fortuitous results as the fruits of their planning. . . . [The railroad corporations] not only failed to institute the order they desired; they also just plain failed and repeatedly needed rescuing by the state and the courts. . . . The transcontinental railroads are sometimes fetishized as the ultimate manifestation of modern rationality, but, when seen from within, these astonishingly mismanaged railroads are the anteroom to mystery.

AP SHORT ANSWER PRACTICE

1. Name two ways that each of these two historians evaluates the success of late-nineteenth-century corporations.
2. What are the key differences between Chandler's assessment of corporate planning and White's?
3. Besides railroads, what other examples from this chapter demonstrate the growth of the modern corporation described by either Chandler or White?

saucepans, dine off our china, wear our silks, get under our blankets, smoke our cigars, drink our wines — Shop at Macy's — and Life will Cost You Less and Yield You More Than You Dreamed Possible."

While department stores became urban fixtures, Montgomery Ward and Sears built mail-order empires. Rural families from Vermont to California pored over the companies' annual catalogs, making wish lists of tools, clothes, furniture, and toys. Mail-order companies used money-back guarantees to coax wary customers to buy products they could not see or touch. "Don't be afraid to make a mistake," the Sears catalog counseled. "Tell us what you want, in your own way." By 1900, America counted more than twelve hundred mail-order companies.

The active shaping of consumer demand became, in itself, a new enterprise. Outdoors, advertisements appeared everywhere: in New York's Madison Square, the Heinz Company installed a 45-foot pickle made of green electric lights. Tourists had difficulty admiring Niagara Falls because billboards obscured the view. By 1900, companies were spending more than $90 million a year ($2.3 billion today) on print

advertising, as the press itself became a mass-market industry. Rather than charging subscribers the cost of production, magazines began to cover their costs by selling ads. Cheap subscriptions built a mass readership, which in turn attracted more advertisers. In 1903, the *Ladies' Home Journal* became the first magazine with a million subscribers.

The Corporate Workplace

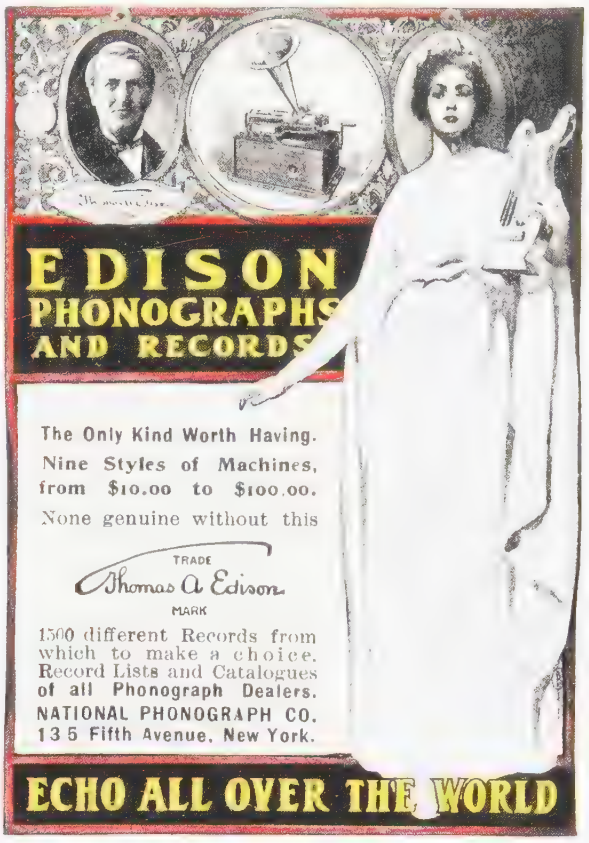
Before the Civil War, most American boys had hoped to become farmers, small-business owners, or independent artisans. Afterward, more and more Americans — both male and female — began working for someone else. Because they wore white shirts with starched collars, those who held professional positions in corporations became known as white-collar workers, a term differentiating them from blue-collar employees, who labored with their hands. For a range of employees — managers and laborers, clerks and salespeople — the rise of corporate work had wide-ranging consequences.

Managers and Salesmen As the managerial revolution unfolded, the headquarters of major corporations began to house departments handling specific activities such as purchasing and accounting. These departments were supervised by middle managers, something not seen before in American industry. Middle managers took on entirely new tasks, directing the flow of goods, labor, and information throughout the enterprise. They were key innovators, counterparts to the engineers in research laboratories who, in the same decades, worked to reduce costs and improve efficiency.

Corporations also needed a new kind of sales force. In post–Civil War America, the drummer, or traveling salesman, became a familiar sight on city streets and in remote country stores. Riding rail networks from town to town, drummers introduced merchants to new products, offered incentives, and suggested sales displays. They built nationwide distribution networks for such popular consumer products as cigarettes and Coca-Cola. By the late 1880s, the leading manufacturer of cash registers produced a sales script for its employees' conversations with local merchants. "Take for granted that he will buy," the script directed. "Say to him, 'Now, Mr. Blank, what color shall I make it?' . . . Handing him your pen say, 'Just sign here where I have made the cross.' "

With such companies in the **vanguard**, sales became systematized. Managers set individual sales quotas and awarded prizes to top salesmen, while those who sold too little were singled out for remedial training or dismissal. Executives embraced the ideas of business psychologist Walter Dill Scott, who published *The Psychology of Advertising* in 1908. Scott's principles — which included selling to customers based on their presumed "instinct of escape" and "instinct of combat" — were soon taught at Harvard Business School. Others also promised that a "scientific attitude" would "attract attention" and "create desire."

Women in the Corporate Office Beneath the ranks of managers emerged a new class of female office workers. Before the Civil War, most clerks at small firms had been young men who expected to rise through the ranks. In a large corporation, secretarial work became a dead-end job, and employers began assigning it to women. By the turn of the twentieth century, 77 percent of all **stenographers** and typists were female; by 1920, women held half of all low-level office jobs.



Thomas Edison Promotes the Phonograph The wondrous inventions that emerged from Edison's laboratory in Menlo Park, New Jersey, ranged from the phonograph to electric light bulbs, moving pictures, and Portland cement. Edison (1847–1931), whose face appears in the upper left, became a national hero — and the holder of over one thousand patents. He was also a shrewd entrepreneur. To demonstrate his electric lights, he illuminated the *New York Times* headquarters and the nearby offices of powerful financier J. P. Morgan. Note the price range for his phonograph, beginning at $10 (the equivalent of approximately $1,000 today). What does this tell you about Edison's target audience? Why do you think the elegant lady on the right appears in the advertisement? North Wind Picture Archives/The Image Work

AP® PRACTICES & SKILLS

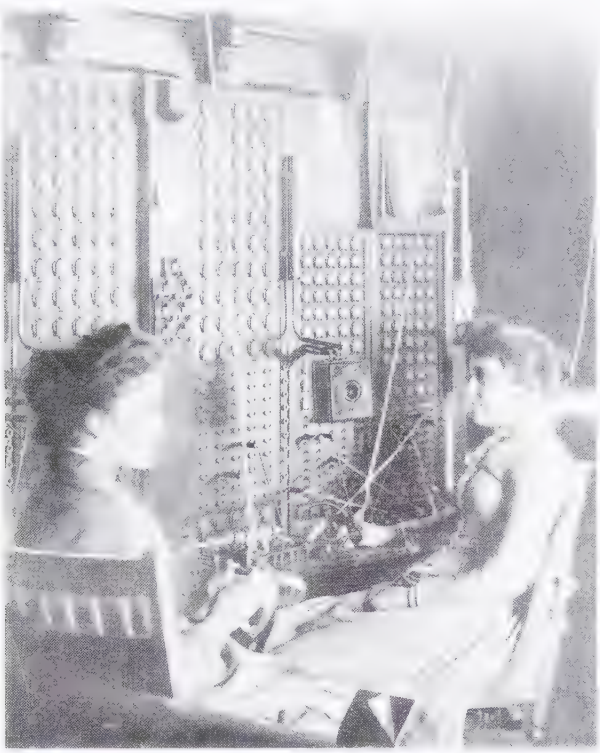
CAUSATION

Why did large corporations arise in the late nineteenth century, and how did leading industrialists consolidate their power?

AP® PRACTICES & SKILLS

CAUSATION

What opportunities did the rise of corporations offer to different types of "middle workers" — those who were neither top executives nor blue-collar laborers?



Telephone Operators, 1888 Like other women office workers, these switchboard operators enjoyed relatively high pay and comfortable working conditions — especially in the early years of the telephone industry, before operators' work routines speeded up. These young women worked for the Central Union Telephone Company in Canton, Ohio. [illegible]

AP® EXAM TIP

Explain the impact of economic change in the late nineteenth century on the roles of women in the U.S.

For white working-class women, clerking and office work represented new opportunities. In an era before most families had access to day care, mothers most often earned money at home, where they could tend children while also taking in laundry, caring for boarders, or doing piecework (sewing or other assembly projects, paid on a per-item basis). Unmarried daughters could enter domestic service or factory work, but clerking and secretarial work were cleaner and better paid.

New technologies provided additional opportunities for women. The rise of the telephone, introduced by inventor Alexander Graham Bell in 1876, was a notable example. Originally intended for business use on local exchanges, telephones were eagerly adopted by residential customers. Thousands of young women found work as telephone operators. By 1900, more than 4 million women worked for wages. About a third worked in domestic service; another third in industry; the rest in office work, teaching, nursing, or sales. As new occupations arose, the percentage of wage-earning women in domestic service dropped dramatically, a trend that continued in the twentieth century.

On the Shop Floor

Despite the managerial revolution at the top, skilled craft workers — almost all of them men — retained considerable autonomy in many industries. A coal miner, for example, was not an hourly wageworker but essentially an independent contractor, paid by the amount of coal he produced. He provided his own tools, worked at his own pace, and knocked off early when he chose. The same was true for puddlers and rollers in ironworks; molders in stove making; and machinists, glass blowers, and skilled workers in many other industries. Such workers abided by the stint, a self-imposed limit on how much they would produce each day. This informal system of restricting output infuriated efficiency-minded engineers, but to the workers it signified personal dignity, manly pride, and brotherhood with fellow employees. One shop in Lowell, Massachusetts, posted regulations requiring all employees to be at their posts by the time of the opening bell and to remain, with the shop door locked, until the closing bell. A machinist promptly packed his tools, declaring that he had not "been brought up under such a system of slavery."

Skilled workers — craftsmen, inside contractors, and foremen — enjoyed a high degree of autonomy. But those who paid helpers from their own pocket could also exploit them. Subcontracting arose, in part, to enable manufacturers to distance themselves from the consequences of shady labor practices. In Pittsburgh steel mills, foremen were known as "pushers," notorious for driving their gangs mercilessly. On the other hand, industrial labor operated on a human scale, through personal relationships that could be close and enduring. Striking craft workers would commonly receive the support of helpers and laborers, and labor gangs would sometimes walk out on behalf of a popular foreman.

As industrialization advanced, however, workers increasingly lost the independence characteristic of craft work. The most important cause of this was the **deskilling** of labor under a new system of mechanized manufacturing that men like meatpacker Gustavus Swift had pioneered and that automobile maker Henry Ford would soon call mass production. Everything from typewriters to automobiles came to be assembled from standardized parts, using machines that increasingly operated with little human oversight. A machinist protested in 1883 that the sewing machine industry was so "subdivided" that "one man may make just a particular part of a machine and may not know anything whatever about another part of the same machine." Such a worker, noted an observer, "cannot be master of a craft, but only master of a fragment." Employers, who originally favored automatic machinery because it increased output, quickly found that

***Ironworkers — Noontime*, 1880** The ideal qualities of the nineteenth-century craft worker — dignity, brotherhood, manliness — shine through in this painting by Thomas P. Anschutz. *Ironworkers — Noontime* became a popular painting after it was reproduced as an engraving in *Harper's Weekly* in 1884. Artepics/Alamy Stock Photo

it also helped them control workers and cut labor costs. They could pay unskilled workers less and replace them easily.

By the early twentieth century, managers sought to further reduce costs through a program of industrial efficiency called **scientific management**. Its inventor, a metal-cutting expert named Frederick W. Taylor, recommended that employers eliminate all brain work from manual labor, hiring experts to develop rules for the shop floor. Workers must be required to "do what they are told promptly and without asking questions or making suggestions." In its most extreme form, scientific management called for engineers to time each task with a stopwatch; companies would pay workers more if they met the stopwatch standard. Taylor assumed that workers would respond automatically to the lure of higher earnings. But scientific management was not, in practice, a great success. Implementing it proved to be expensive, and workers stubbornly resisted. Corporate managers, however, adopted bits and pieces of Taylor's system, and they enthusiastically agreed that decisions should lie with "management alone." Over time, in comparison with businesses in other countries, American corporations created a particularly wide gap between the roles of managers and those of the blue-collar workforce.

AP® EXAM TIP

Consider the impact of scientific management on the workplace environment of the working class.

Blue-collar workers had little freedom to negotiate, and their working conditions deteriorated markedly as deskilling and mass production took hold. At the same time, industrialization brought cheaper products that enabled many Americans to enjoy new consumer products — if they could avoid starvation. From executives down to unskilled workers, the hierarchy of corporate employment contributed to sharper distinctions among three economic classes: the wealthy elite; an emerging, self-defined "middle class"; and a struggling class of workers, who bore the brunt of the economy's new risks and included many Americans living in dire poverty. As it wrought these changes, industrialization prompted intense debate over inequality (AP® Thinking Like a Historian).

Health Hazards and Pollution Industrialized labor also damaged workers' health. In 1884, a study of the Illinois Central Railroad showed that, over the previous decade, one in twenty of its workers had been killed or permanently disabled by an accident on

Poverty and Food

Amid rising industrial poverty, food emerged as a reference point. How much was too little, or too much? If some Americans were going hungry, how should others respond? The documents below show some contributions to these debates.

1. **Lewis W. Hine, "Mealtime, New York Tenement," 1910.** *Hine was an influential photographer and reformer. He took a famous series of photographs at Ellis Island, remarking that he hoped Americans would view new immigrants in the same way they thought of the Pilgrims. What does the photographer emphasize in the living conditions of this Italian immigrant family and their relationships with one another? Why do you think Hine photographed them at the table?*

RLE: Pictorial Press Ltd./Alamy Stock Photo.

2. **Louisa May Alcott, *Little Women*, 1869.** *Alcott's novel, popular for decades, exemplified the ideal of Christian charity. At the start of this scene, Mrs. March returns from a Christmas morning expedition.*

Merry Christmas, little daughters! . . . I want to say one word before we sit down [to breakfast]. Not far away from here lies a poor woman with a little newborn baby. Six children are huddled into one bed to keep from freezing, for they have no fire. There is nothing to eat. . . . My girls, will you give them your breakfasts as a Christmas present?

. . . For a minute no one spoke, only a minute, for Jo exclaimed impetuously, I'm so glad you came before we began!

May I go and help . . . ? asked Beth eagerly.

I shall take the cream and the muffins, added Amy. . . . Meg was already covering the buckwheats and piling the bread into one big plate.

I thought you'd do it, said Mrs. March, smiling.

. . . A poor, bare, miserable room it was, with broken windows, no fire, ragged bedclothes, a sick mother, wailing baby, and a group of pale, hungry children. . . . Mrs. March gave the mother tea and gruel [while] the girls meantime spread the table [and] set the children round the fire. . . .

That was a very happy breakfast, though they didn't get any of it. And when they went away, leaving comfort behind, I think there were not in all the city four merrier people than the hungry little girls who gave away their breakfasts and contented themselves with bread and milk on Christmas morning.

3. **Mary Hinman Abel, *Promoting Nutrition*, 1890.** *This excerpt is from a cookbook that won a prize from the American Public Health Association. The author had studied community cooking projects in Europe and worked to meet the needs of Boston's poor. How does she propose to feed people on 13 cents a day — her most basic menu? What assumptions does she make about her audience? In what ways was her cookbook, itself, a product of industrialization?*

For family of six, average price 78 cents per day, or 13 cents per person.

. . . I am going to consider myself as talking to the mother of a family who has six mouths to feed, and no more money than this to do it with. Perhaps this woman has never kept accurate accounts. . . . I have in mind the wife [who has] time to attend to the housework and children. If a woman helps earn, as in a factory, doing most of her housework after she comes home at night, she must certainly have more money than in the first case in order to accomplish the same result.

the job. For brakemen — one of the most dangerous jobs — the rate was one in seven. Due to lack of regulatory laws and inspections, mining was 50 percent more dangerous in the United States than in Germany; between 1876 and 1925, an average of over two thousand U.S. coal miners died each year from cave-ins and explosions. Silver, gold, and copper mines were also not immune from such tragedies, but mining companies resisted demands for safety regulation.

. . . The Proteid column is the one that you must look to most carefully because it is furnished at the most expense, and it is very important that it should not fall below the figures I have given [or] your family would be undernourished.

[Sample spring menu]
Breakfast. Milk Toast. Coffee.
Dinner. Stuffed Beef's Heart. Potatoes stewed with Milk. Dried Apple Pie. Bread and Cheese. Corn Coffee.
Supper. Noodle Soup (from Saturday). Boiled Herring. Bread. Tea.

Proteids. (oz.)	21.20

Carbohydrates. (oz.)	77.08
Cost in Cents.	76

4. **Werner Sombart, *Why Is There No Socialism in the United States?*, 1906.** *Sombart, a German sociologist, compared living conditions in Germany and the United States in order to answer the question above. What conclusion did he reach?*

The American worker eats almost three times as much meat, three times as much flour and four times as much sugar as his German counterpart. . . . The American worker is much closer to the better sections of the German middle class than to the German wage-labouring class. He does not merely eat, but dines. . . .

It is no wonder if, in such a situation, any dissatisfaction with the "existing social order" finds difficulty in establishing itself in the mind of the worker. . . . All Socialist utopias came to nothing on roast beef and apple pie.

5. **Helen Campbell, *Prisoners of Poverty*, 1887.** *A journalist, Campbell investigated the conditions of low-paid seamstresses in New York City who did piecework in their apartments. Like Abel (source 3), she tried to teach what she called "survival economics." Here, a woman responds to Campbell's suggestion that she cook beans for better nutrition.*

"Beans!" said one indignant soul. "What time have I to think of beans, or what money to buy coal to cook 'em? What you'd want if you sat over a machine fourteen hours a day would be tea like lye to put a back-bone in you. That's why we have tea always in the pot, and it don't make much odds what's with it. A slice of bread is about all. . . . We'd our tea an' bread an' a good bit of fried beef or pork, maybe, when my husband was alive an' at work. . . . It's the tea that keeps you up."

6. **Julian Street, Show and Extravagance, 1910.** *Street, a journalist, was invited to an elite home in Buffalo, New York, for a dinner that included cocktails, fine wines, caviar, a roast, Turkish coffee, and cigars.*

Before we left New York there was newspaper talk about some rich women who had organized a movement of protest against the ever-increasing American tendency toward show and extravagance. . . . Our hostess [in Buffalo] was the first to mention it, but several other ladies added details. . . .

"We don't intend to go to any foolish extremes," said one. . . . "We are only going to scale things down and eliminate waste. There is a lot of useless show in this country which only makes it hard for people who can't afford things. And even for those who can, it is wrong. . . . Take this little dinner we had tonight. . . . In future we are all going to give plain little dinners like this."

"*Plain*?" I gasped. . . . "But I didn't think it had begun yet! I thought this dinner was a kind of farewell feast — that it was — "

Our hostess looked grieved. The other ladies of the league gazed at me reproachfully. . . . "Didn't you notice?" asked my hostess. . . .

"Notice *what*?"

"That we didn't have champagne!"

Husbands (White Plains, NY: International Arts and Sciences Press, 1976), 97, 105–106; (5) Helen Campbell, *Prisoners of Poverty* (Cambridge, MA: University Press, 1887), 123–124; (6) Julian Street, *Abroad at Home* (New York: The Century Co., 1915), 37–39.

ANALYZING THE EVIDENCE

1. These documents were created by journalists and reformers. What audiences did they seek to reach? Why do you think they all focused on food?
2. Imagine a conversation among these authors. How might we account for the differences in Sombart's and Campbell's findings? How might Hine, Abel, and Campbell respond to Alcott's vision of charitable Christian acts?

AP® DBQ PRACTICE

Using the documents above and your knowledge from this chapter, write a short essay explaining some challenges and opportunities faced by different Americans in the industrializing era — including those of the wealthy elite, emerging middle class, skilled blue-collar men, and very poorest unskilled laborers. How did labor leaders and reformers seek to persuade prosperous Americans to concern themselves with workers' problems? To what dominant values did they appeal?

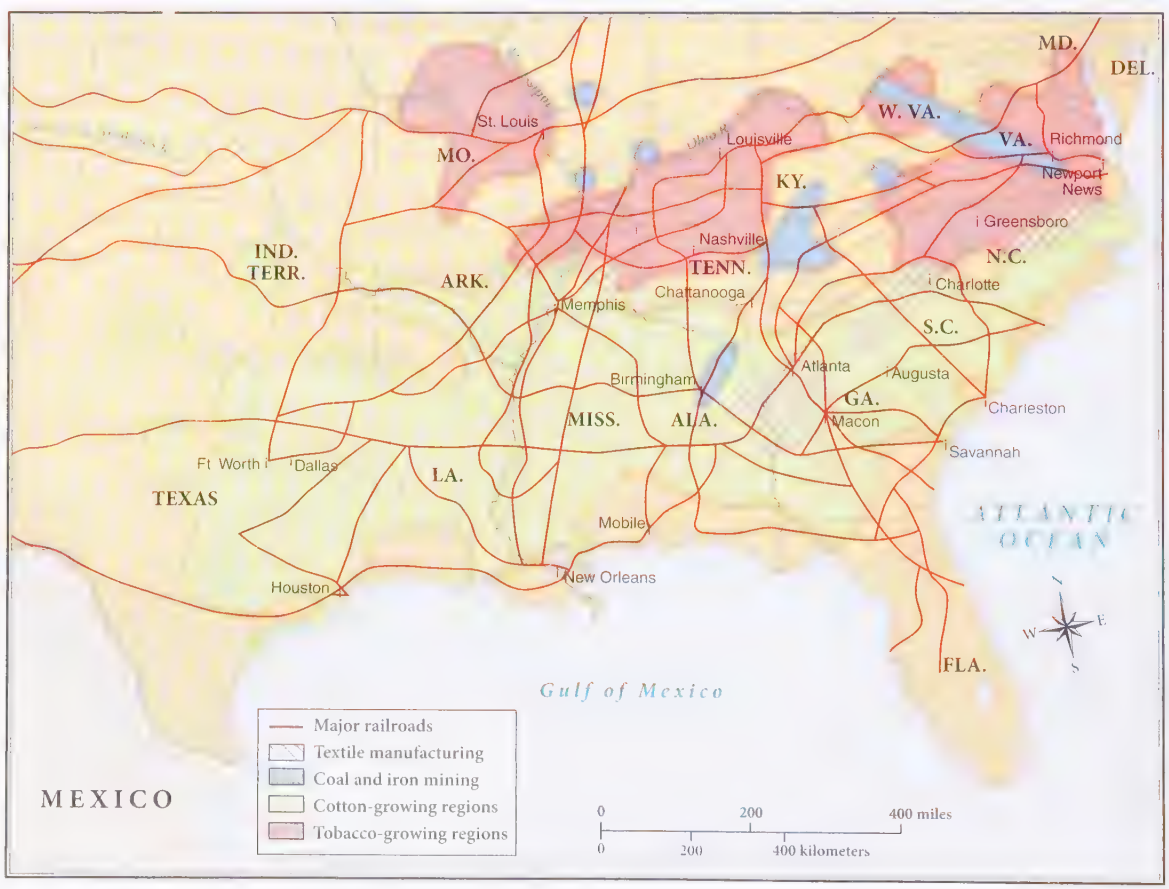
Extractive industries and factories also damaged nearby environments and the people who lived there. In big cities, poor residents suffered from polluted air and the dumping of noxious by-products into the water supply. Mines like those in Leadville, Colorado, contaminated the land and water with mercury and lead. Alabama convicts, forced to work in coal mines, faced brutal working conditions and fatal illnesses caused by the mines' contamination of local water. At the time, people were well aware of many

of these dangers, but workers had an even more urgent priority: work. Pittsburgh's belching smokestacks meant coughing and lung damage, but they also meant running mills and paying jobs.

Unskilled Labor and Discrimination As managers deskilled production, the ranks of factory workers came to include more and more women and children, who were almost always unskilled and low paid. Men often resented women's presence in factories, and male labor unions often worked to exclude women — especially wives, who they argued should remain in the home. Women vigorously defended their right to work. On hearing accusations that married women worked only to buy frivolous luxuries, one female worker in a Massachusetts shoe factory wrote a heated response to the local newspaper: "When the husband and father cannot provide for his wife and children, it is perfectly natural that the wife and mother should desire to work. . . . Don't blame married women if the land of the free has become a land of slavery and oppression."

In 1900, one of every five children under the age of sixteen worked outside the home. Child labor was most widespread in the ex-Confederacy. Here, a low-wage industrial sector emerged after Reconstruction, leading commentators to hail the region as a more economically diversified **New South** (Map 16.1). Textile mills sprouted in the Carolinas and Georgia, recruiting workers from surrounding farms; whole families often worked in the mills. Many children also worked in Pennsylvania coal fields, where death and injury rates were high. State law permitted children as

AP® EXAM TIP
Explain why child labor was more widespread in the "New South."



MAP 16.1 The New South, 1900
The economy of the Old South focused on raising staple crops, especially cotton and tobacco. In the New South, staple agriculture continued to dominate, but industrial regions also evolved, producing textiles, coal, and iron. By 1900, the South's industrial pattern was well defined, though the region still served — like the West — as a major producer of raw materials for the industrial region that stretched from New England to Chicago.

Child Labor For many working-class families, children's wages — even though they were low — made up an essential part of the household income. These boys worked the night shift in a glass factory in Indiana. Lewis Hine, an investigative photographer for the National Child Labor Committee, took their picture at midnight, as part of a campaign to educate more prosperous Americans about the widespread employment of child labor and the harsh conditions in which many children worked. Library of Congre

young as twelve to labor with a family member, but turn-of-the-century investigators estimated that about 10,000 additional boys, at even younger ages, were illegally employed in the mines.

Also at the bottom of the pay scale were most African Americans. Corporations and industrial manufacturers widely discriminated against them on the basis of race, and such prejudice was hardly limited to the South. After the Civil War, African American women who moved to northern cities were largely barred from office work and other new employment options; instead, they remained heavily concentrated in domestic service, with more than half employed as cooks or servants. African American men confronted similar exclusion. America's booming vertically integrated corporations turned black men away from all but the most menial jobs. In 1890, almost a third of black men worked in personal service. Employers in the North and West recruited, instead, a different kind of low-wage labor: newly arrived immigrants.

AP® PRACTICES & SKILLS

CHANGE OVER TIME

How did conditions change for industrial workers in the late nineteenth century, and why?

IN YOUR OWN WORDS **What new business practices arose in the late-nineteenth-century United States, and what impact did they have on employees, consumers, and the environment?**

Immigrants, East and West

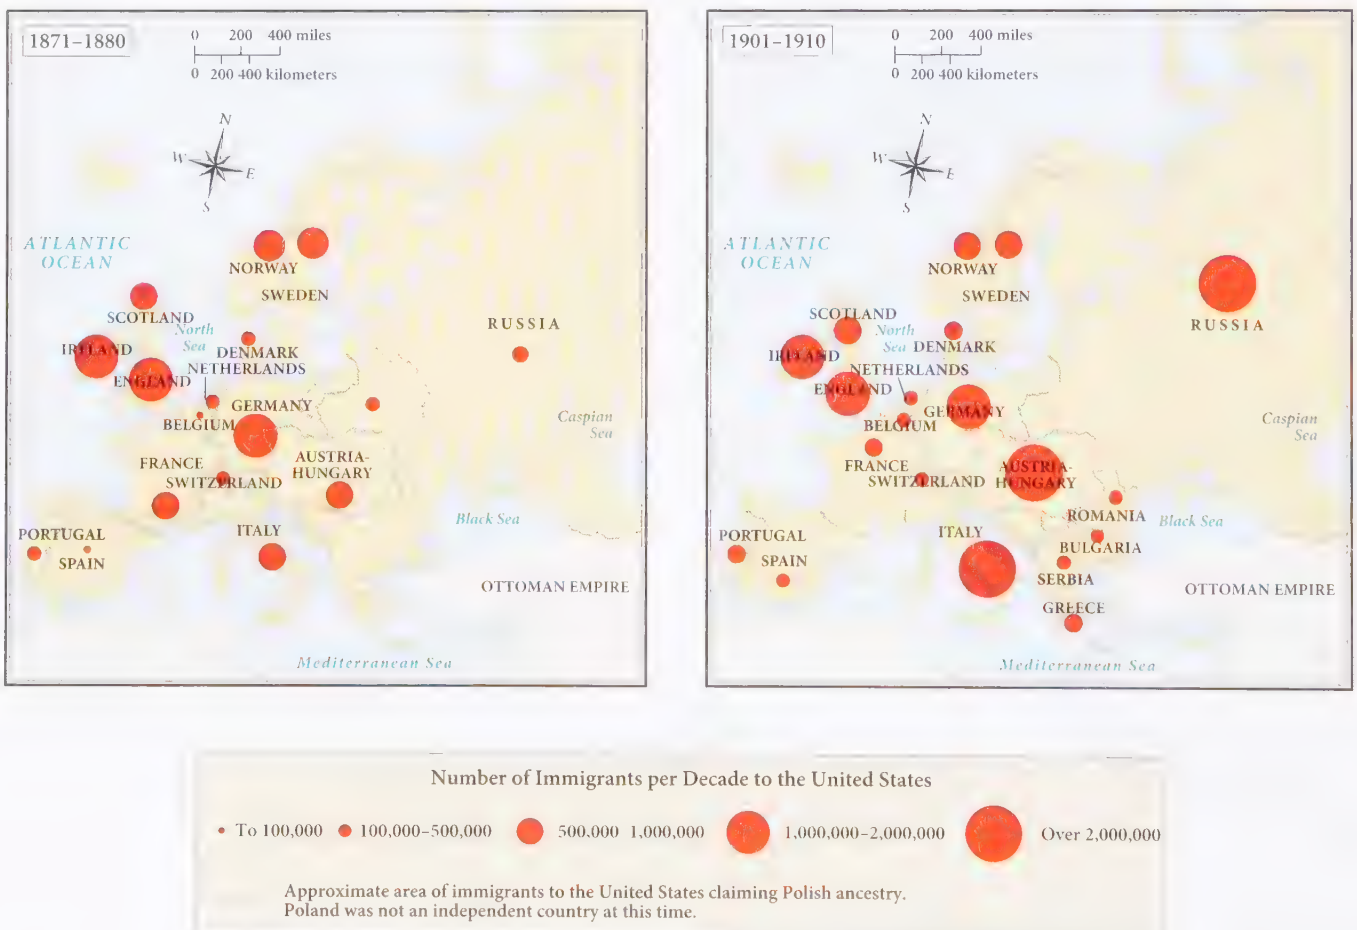
Across the globe, industrialization set people in motion with the lure of jobs. Between the Civil War and World War I, over 25 million immigrants entered the United States. The American working class became truly global, including not only people of

African and Western European descent but also Southern and Eastern Europeans, Mexicans, and Asians. In 1900, census-takers found that more than 75 percent of San Francisco and New York City residents had at least one parent who was foreign-born.

In the new industrial order, immigrants made an ideal labor supply. They took the worst jobs at low pay, and during economic downturns tens of thousands returned to their home countries, reducing the shock of unemployment in the United States. But many native-born Americans viewed immigrants with hostility, through the lens of racial, ethnic, and religious prejudices. They also feared that immigrants would take more coveted jobs and erode white men's wages. For immigrants themselves, America could be disorienting, liberating, and disappointing.

Newcomers from Europe

Mass migration from Western Europe had started in the 1840s, when more than one million Irish fled a terrible famine. In the following decades, as Europe's population grew rapidly and agriculture became commercialized, peasant economies suffered, first in Germany and Scandinavia, then across Austria-Hungary, Russia, Italy, and the Balkans. This upheaval displaced millions of rural people. Some went to Europe's mines and factories; others headed for South America and the United States (Map 16.2; AP® America in the World).



MAP 16.2 Sources of European Immigration to the United States, 1871–1910
Around 1900, Americans began to speak of the "new" immigration. They meant the large numbers of immigrants arriving from Eastern and Southern Europe — Poles, Slovaks and other Slavic peoples, Yiddish-speaking Jews, Greeks, and Italians — who overwhelmed the still substantial number of immigrants from the British Isles and Northern Europe.

Emigrants and Destinations, 1881–1915

The United States received more new residents than any other nation during the era of industrialization, but it was not the only place where emigrants (those departing) became immigrants (those arriving). The graph below shows six major destinations for emigrants from four European countries.

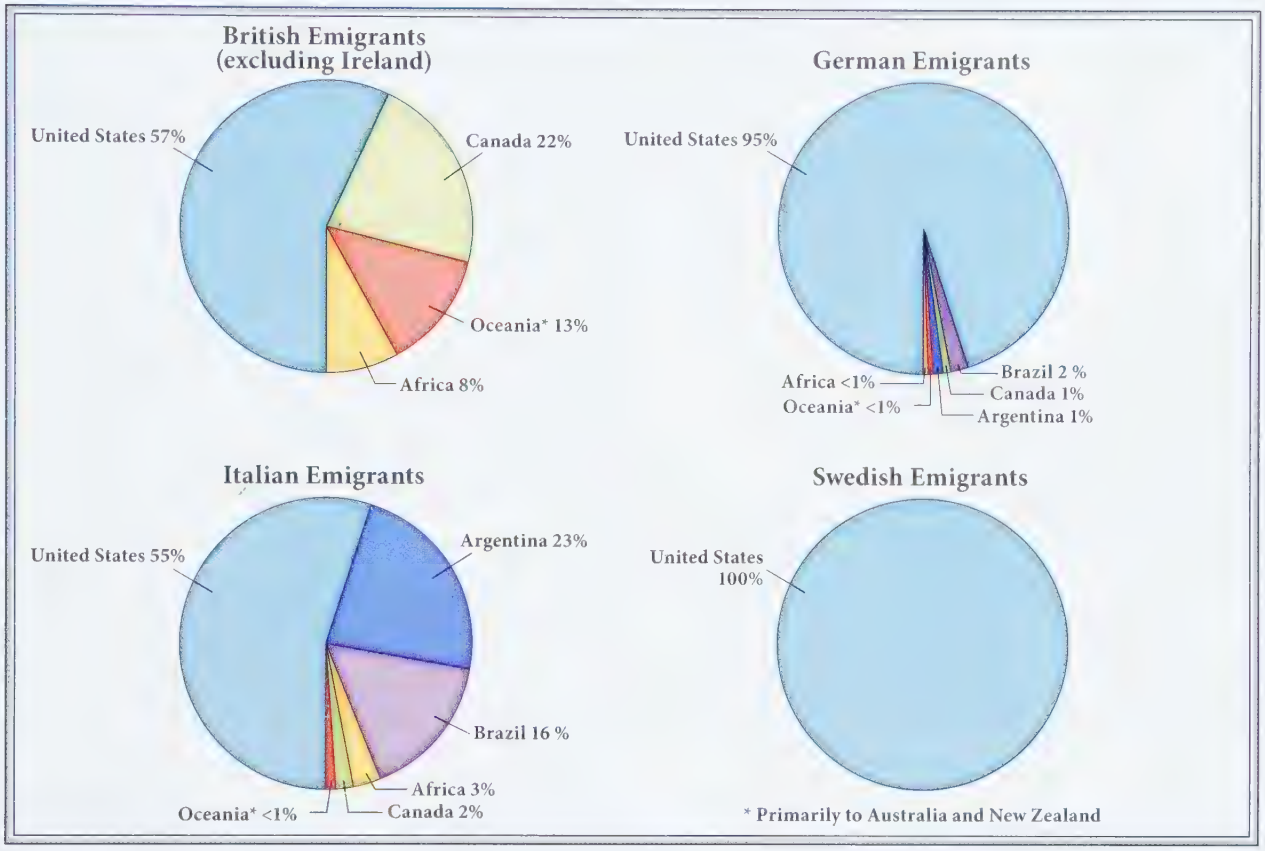


FIGURE 16.2 Major Destinations for Emigrants, 1881–1915

QUESTIONS FOR ANALYSIS

1. What might account for the different emigration patterns shown here?
2. What choices and limitations might each group of emigrants have faced in choosing the country to which they emigrated?
3. Do these figures suggest anything about the conditions various groups may have encountered in different countries, upon arrival?

"America was known to foreigners," remembered one Jewish woman from Lithuania, "as the land where you'd get rich." But the reality was much harsher. Even in the age of steam, a transatlantic voyage was grueling. For ten to twenty days, passengers in steerage class crowded below decks, eating terrible food and struggling with seasickness. An investigator who traveled with immigrants from Naples asked, "How can a steerage passenger remember that he is a human being when he must first pick the worms from his food?" After 1892, European immigrants were routed through the enormous receiving station at New York's Ellis Island.

Some immigrants brought skills. Many Welshmen, for example, arrived in the United States as experienced tin-plate makers; Germans came as machinists and carpenters, Scandinavians as sailors. But industrialization required, most of all, increasing

Jewish Immigrants in the Industrial Economy

Following anti-Semitic violence in Russia during the 1880s, thousands of Jews fled to the United States. Almost a quarter million came between 1881 and 1890, the majority settling in New York City. These poverty-stricken newcomers posed problems for New York's assimilated Jews, most of whom were German- or American-born. Community support networks were quickly overwhelmed; New York's United Hebrew Charities almost went bankrupt. Jewish leaders watched with dismay the expansion of tenement wards. They worried that the presence of so many Eastern European "beggars," as one Reform rabbi put it, would heighten American anti-Semitism.

In 1901, New York's Jewish leaders founded an Industrial Removal Office (IRO) to help disperse Jewish newcomers. By 1922 the office sent over 79,000 Eastern European Jews to locations across the country. IRO correspondence provides a window on how newcomers sought to negotiate places in America's industrial economy. Note that most of the letters are translated from Yiddish. As one immigrant noted, inability to speak English could limit employment opportunities and cause "great distress."

ALEX GRUBMAN

Letter from Portland, Oregon, 1905

"I write you how fortunate I am in being placed in one of the largest dry goods houses in Oregon by Hon. Sig Sichel. . . . He went personally with me until he procured the present position for me as inside salesman and to start at $60 a month. . . . [Many people here] wish me to thank the I.R.O. for helping them to success. . . . Mr. Lvov or Lvovsky, a tinsmith sent out direct 2 years ago has a stove and hardware store. M. Kaplan a tailor is earning $20–25.00 a week. Mr. Nathan Siegel who arrived only a few days ago is already employed as a clerk earning $10.00 for a start."

BARNET MARLIN

Letter from Atlanta, Georgia, 1906

"Dr. Wildauer secured a place for me to work, at wooden trunks. . . . I could not earn more than 60 cents a day and was working harder than a horse. . . . Atlanta does not pay to work, especially for a foreigner. . . . Several weeks passed by and at the end I was in debt. . . .

During that time I became acquainted with a Jewish policeman and he was the only one who took pity on me. . . . I told my friend the policeman that I had $15.00 (sent to me by my brother) and he advised me to go out peddling. He took me to a store and told the storekeeper to furnish me for over $30.00 worth of goods. He also acted as my reference and prepared me with everything. I went out peddling and gradually I earned enough money to pay all my debts; and so I kept on peddling. I earned enough money and bought a horse and wagon. I now convey goods from the city to the country and sell them there. I thank you very much for sending me to Atlanta."

RAPHAEL GERSHONI

Letter from Atlanta, Georgia, 1905

"Why do you sent people to Atlanta? You give them eight days worth of food and then you let them starve in the street among Negroes. . . . I was given a job to work in a restaurant kitchen, to wait on Negroes, and to clean the Negroes' closets, for three dollars a week. . . . I was then given ten dollars for goods so that I might go around and peddle in Atlanta. But out of this ten dollars, I have to pay four dollars for lodging and three dollars a month for a place just to lay my head. . . . It is hopeless to work in Atlanta. The highest wage is 75 cents a day. And for what kind of work? . . . The competition is difficult here. Why should anyone hire a white greenhorn when they can get a black Negro, who is strong as iron. . . . Everyone says that the only choice here is to go out into the countryside and peddle. But one needs 40–50 dollars worth of goods. How do I get the money? . . . I would like to ask you to help me out. Help me crawl out of black Atlanta and go to Chicago. There I have friends and can make out better."

quantities of unskilled labor. As poor farmers from Italy, Greece, and Eastern Europe arrived in the United States, heavy, low-paid labor became their domain.

In an era of cheap railroad and steamship travel, many immigrants expected to work and save for a few years and then head home. More than 800,000 French Canadians moved to New England in search of textile jobs, many families with hopes of scraping together enough savings to return to Quebec and buy a farm. Thousands of men came alone, especially from Ireland, Italy, and Greece. Many single Irishwomen also immigrated. But some would-be sojourners ended up staying a lifetime, while immigrants who had expected to settle permanently found themselves forced to leave

CHARLES ZWIRN

Letter from La Crosse, Wisconsin, 1913

"[Mr. Goldfish] took me into his house and gave me a very nice welcome. He then led me to the synagogue and introduced me to all the members. Mr. Goldfish is a Jew with a real Jewish heart. He is religiously inclined and the biggest businessman in the city. If any controversy arises, it is always settled by Mr. Goldfish. . . . [He] took me to a shop and they paid me $6 more than I earned in New York. When I wanted to thank him, he said that the only thing he expects of me is that I conduct myself properly and go on the right path so I can eventually succeed. This, he said, was the best reward I can give him. I did as he told me and saved a few hundred dollars. . . .

Another man sent here had been in the country two months. . . . He was sent to Mr. Goldfish, who found him a job sorting corks for $2 a day. . . . He then left. By the way, . . . would you be so kind as to send to me a boy to drive a milk wagon on Mr. Jacob's farm and an older man to work at junk? They must be honest and respectable people."

MARY RUBIN

Letter from New Orleans, Louisiana, 1905

"You have sent us out here to starve for hunger and live in the streets. . . . We have arrived in New Orleans about 12 o'clock in the night, and there was nobody to await us there, and we had to go around alnight and look for the address which you had given. . . . They put the nine of us all in one room, with out a bed or a pillow to sleep on. . . . Then they took Mr. Rubin and his wife up to the cigar factory and gave them both a job. Mrs. Rubin is getting about four ($4) a week and Mr. Rubin five ($5). Now we will ask you if a family man can make a living with that. And Mr. Rosenthal they told if he wants work he will have to look for it himself. . . . When he found work, they told him to bring his tools and come to work. He went to the office and asked for the tools; they told him that he can't have them.

. . . [The local Committee] sent mama to be a cook for $4 a month, which she had never done before, and if she wanted to be a cook in N.Y. she could have gotten 3 times that much or more, but it did not suit us to let our mother be a cook, and now we should have to do."

NATHAN TOPLITZKY

Letter from Detroit, Michigan, 1908

"I, Nathan Toplitzky, sent to the above city 5 months ago, wish to inform you that a great misfortune has happened to me. Your committee has placed me to work in a machine factory where I have earned $.75 a day, and being unskilled I have had 4 of my fingers torn from my right hand. I now remain a cripple throughout my life. For six weeks my sufferings were indescribable.

When the condition of my health improved a little, I called on the Committee and they advised me to go back to the old employer. I went back to him and he placed me to work at the same machine where the accident occurred. Having lost my fingers I was unable to operate the machine. . . . Kindly write to your Committee to find a position for me."

S. KLEIN

Letter from Cleveland, Ohio, 1905

"In the past week something terrible has happened here. Two men sent here by the Removal Office committed suicide out of despair. One took poison and the other hanged himself. . . . That shows the deplorable condition of those who are sent here by the Removal Office. The Cleveland Removal Office is managed by an inexperienced young man who maintains his position merely through favoritism. . . . It was told to me that the one who hanged himself came to this agent and implored him with tears in his eyes to provide some kind of employment."

Klein, Box 114, Folder 5. Reprinted by permission of the American Jewish Historical Society.

QUESTIONS FOR ANALYSIS

1. Based on the accounts above, what factors contributed to a Jewish immigrant's economic success or failure in a new location?
2. In at least ten places, the immigrants above report on wages — daily, weekly, or monthly. For comparison, make a rough conversion of all of these to weekly wages and list them. What do you conclude about compensation for professional, skilled, and unskilled work?
3. Using information from this chapter, as well as the documents above, explain why Jewish immigrants sent to the South might have faced more difficulties, on average, than those sent to other parts of the country.

by an accident or sudden economic depression. One historian has estimated that a third of immigrants to the United States in this era returned to their home countries.

Along with Italians and Greeks, Eastern European Jews were among the most numerous arrivals. The first American Jews, who numbered around 50,000 in 1880, had been mostly of German Jewish descent. In the next four decades, more than 3 million poverty-stricken Jews arrived from Russia, Ukraine, Poland, and other parts of Eastern Europe, transforming the Jewish presence in the United States. Like other immigrants, they sought economic opportunity, but they also came to escape religious repression (AP® Analyzing Voices).

AP® EXAM TIP

Evaluate the factors that accounted for the dramatic increase in immigration to the U.S. between the Civil War and World War I.

German Beer, Mexican Workers, c. 1900 Immigrants from Germany owned and managed most of the breweries in the United States. But workers at the Maier and Zoblein Brewery in Los Angeles came from many nations, including Mexico. At that time, about 4,000 Mexicans lived in Los Angeles County (about 4 percent of the population); by 1930, 150,000 Mexican-born immigrants lived in Los Angeles, making up about 7 percent of the city's rapidly growing population. Los Angeles Public Library

Wherever they came from, immigrants took a considerable gamble in traveling to the United States. Some prospered quickly, especially if they came with education, money, or well-placed business contacts. Others, by toiling many years in harsh conditions, succeeded in securing a better life for their children or grandchildren. Still others met with catastrophe or early death. One Polish man who came with his parents in 1908 summed up his life over the next thirty years as "a mere struggle for bread." He added: "Sometimes I think life isn't worth a damn for a man like me. . . . Look at my wife and kids — undernourished, seldom have a square meal." But an Orthodox Russian Jewish woman told an interviewer that she "thanked God for America," where she had married, raised three children, and made a good life. She "liked everything about this country, especially its leniency toward the Jews."

AP® PRACTICES & SKILLS

POINT OF VIEW

What factors accounted for the different expectations and experiences of immigrants in this era?

Asian Americans and Exclusion

AP® EXAM TIP

Compare the experiences of Asian and European immigrants in the U.S. in the late nineteenth and early twentieth centuries.

Compared with Europeans, newcomers from Asia faced even harsher treatment. The first Chinese immigrants had arrived in the late 1840s during the California gold rush. After the Civil War, the Burlingame Treaty between the United States and China opened the way for increasing numbers to emigrate. Fleeing poverty and upheaval in southern China, they, like European immigrants, filled low-wage jobs in the American economy. The Chinese confronted threats and violence. "We kept indoors after dark for fear of being shot in the back," remembered one Chinese immigrant to California. During the depression of the 1870s, a rising tide of racism was especially extreme in the Pacific coast states, where the majority of Chinese immigrants lived. "The Chinese must go!" railed Dennis Kearney, leader of the California Workingmen's Party, who referred to Asians as "almond-eyed lepers." Incited by Kearney in July 1877, a mob burned San Francisco's Chinatown and beat up residents. In the 1885 Rock Springs massacre in Wyoming, white men burned the local Chinatown and murdered at least twenty-eight Chinese miners.

Chinese Workers in a Salmon Cannery, c. 1900 Shut out of many fields of employment by racial discrimination, many Chinese immigrants founded their own restaurants, laundries, and other small businesses. Others, like these cannery workers in Astoria, Oregon, took on some of the most grueling and lowest-paid work in the American economy. Job segregation reinforced, in turn, racial prejudice. Visiting British author Rudyard Kipling, touring canneries along the Columbia River, described Chinese workers in the plants as "blood-besmeared yellow devils." These workers, refuting Kipling's slur, appear clean and respectable. Notice the man in an apron, on the left, who wears his traditional queue, or braided pigtail, tucked into his straw hat. Keystone France/Gamma-Keystone via Getty Image

Despite such atrocities, some Chinese managed to build profitable businesses and farms. Many did so by filling the only **niches** native-born Americans left open to them: running restaurants and laundries. Facing intense political pressure, Congress in 1882 passed the **Chinese Exclusion Act**, specifically barring Chinese laborers from entering the United States. Each decade thereafter, Congress renewed the law and tightened its provisions; it was not repealed until 1943. Exclusion barred almost all Chinese women, forcing husbands and wives to spend many years apart when men took jobs in the United States.

Asian immigrants made vigorous use of the courts to try to protect their rights. In a series of cases brought by Chinese and later Japanese immigrants, the U.S. Supreme Court ruled that all persons born in the United States had citizenship rights that could not be revoked, even if their parents had been born abroad. Nonetheless, well into the twentieth century, Chinese immigrants (as opposed to native-born Chinese Americans) could not apply for citizenship. Meanwhile, Japanese and a few Korean immigrants also began to arrive; by 1909, there were 40,000 Japanese immigrants working in

Anti-Chinese Racism This cartoon from the magazine *Puck*, drawn by James A. Wales during the 1880 presidential campaign, offers vivid evidence of the widespread and virulent American prejudice against Chinese immigrants. Republican candidate James Garfield, on the left, and Democratic candidate Winfield Scott Hancock, on the right, both nail up their party's "planks" in favor of restricting Chinese immigration. Asian immigrants were not permitted to apply for naturalization as U.S. citizens; they thus had no vote and no power in politics. Congress passed the Chinese Exclusion Act, with bipartisan support, soon after Garfield's victory. Library of Congress

agriculture, 10,000 on railroads, and 4,000 in canneries. In 1906, the U.S. attorney general ruled that Japanese and Koreans, like Chinese immigrants, were barred from citizenship.

The Chinese Exclusion Act created the legal foundations on which far-reaching exclusionary policies would be built in the 1920s and after (Chapter 21). To enforce the law, Congress and the courts gave sweeping new powers to immigration officials, transforming the Chinese into America's first illegal immigrants. Drawn, like others, by the promise of jobs in America's expanding economy, Chinese men stowed away on ships or walked across the borders. Disguising themselves as Mexicans — who at that time could freely enter the United States — some perished in the desert as they tried to reach California.

Some would-be immigrants, known as paper sons, relied on Chinese residents in the United States, who generated documents falsely claiming the newcomers as American-born children. Paper sons memorized pages of information about their supposed relatives and hometowns. The San Francisco earthquake of 1906 helped their cause by destroying all the port's records. "That was a big chance for a lot of Chinese," remembered one immigrant. "They forged themselves certificates saying they could go back to China and bring back four or five sons, just like that!" Such persistence ensured that, despite the harsh policies of Chinese exclusion, the flow of Asian immigrants never fully ceased.

AP® PRACTICES & SKILLS

CAUSATION

What were the long-term consequences of the Chinese Exclusion Act for U.S. immigration policy?

IN YOUR OWN WORDS What factors encouraged immigrants to seek entry into the United States, and how did their experiences differ?

Labor Gets Organized

In the American political system, labor has typically been weak. Industrial workers cluster in cities, near factories and jobs; compared with small towns and rural areas, urban areas have been underrepresented in bodies such as the U.S. Senate and the presidential electoral college, in which representation is calculated by state, rather than (or in addition to) individuals. This problem became acute in the era of industrialization, and it has lingered. Even today, the twenty-two U.S. senators elected from Alaska, Idaho, Iowa, Maine, Mississippi, Montana, New Mexico, North Dakota, Vermont, West Virginia, and Wyoming represent a smaller number of people, *combined*, than the two U.S. senators who represent heavily urban California.

Faced with this obstacle, labor advocates could adopt one of two strategies. First, they could try to make political alliances with sympathetic rural voters who shared their problems. Second, they could reject politics and create narrowly focused trade unions to negotiate directly with employers. In general, labor advocates emphasized the first strategy between the 1870s and the early 1890s, and the latter in the early twentieth century. Across this era, while industrialization made America increasingly rich and powerful, it also brought large-scale conflict between labor and capital.

The Emergence of a Labor Movement

The problem of industrial labor entered Americans' consciousness dramatically with the **Great Railroad Strike of 1877**. Protesting steep wage cuts amid the depression that had begun in 1873, thousands of railroad workers walked off the job. Broader issues were at stake. "The officers of the road," reported strike leader Barney Donahue in upstate New York, "were bound to break the spirit of the men, and any or all organizations they belonged to." He believed railroad companies wanted to block workers from "all fellowship for mutual aid." The strike brought rail travel and commerce to a halt. Thousands of people poured into the streets of Buffalo, Pittsburgh, and Chicago to protest the economic injustice wrought by railroads — as well as fires caused by stray sparks from locomotives and injuries and deaths on train tracks in urban neighborhoods. When Pennsylvania's governor sent state militia to break the strike, Pittsburgh crowds reacted by burning railroad property and overturning locomotives. Similar clashes between police and protesters occurred in other cities across the country, from Galveston, Texas, to San Francisco.

The 1877 strike left more than fifty people dead and caused $40 million worth of damage, primarily to railroad property. "It seemed as if the whole social and political structure was on the very brink of ruin," wrote one journalist. For their role in the strike, many railroad workers were fired and blacklisted: railroad companies circulated their names on a "do not hire" list to prevent them from getting any work in the industry. In the aftermath of the strike, the U.S. government created the National Guard, intended not to protect Americans against foreign invasion but to enforce order at home.

Watching the upheavals of industrialization, some radical thinkers pointed out its impact on workers. Among the most influential was Henry George, whose book *Progress and Poverty* (1879) was a best-seller for decades after publication. George warned that Americans had been too optimistic about the impact of railroads and manufacturing, which they hoped would — after an initial period of turmoil — bring prosperity to all. George believed the emerging industrial order meant permanent poverty. Industrialization, he wrote, was driving a wedge through society, lifting the fortunes of professionals and the middle class but pushing the working class down by forcing them into deskilled, dangerous, and low-paid labor. George's proposed solution, a federal "single tax" on landholdings, did not win widespread support, but his insightful diagnosis of the problem helped encourage radical movements for economic reform.

Many rural people believed they faced the same problems as industrial workers. In the new economy, they found themselves at the mercy of large corporations, from equipment dealers who sold them harvesters and plows to railroads and grain elevators that shipped and stored their products. Though farmers appeared to have more independence than corporate employees, many felt trapped in a web of middlemen who chipped away at their profits while international forces robbed them of decision-making power.

Farmers denounced not only corporations but also the previous two decades of government efforts to foster economic development — policies that now seemed wrongheaded. Farmers' advocates argued that high tariffs forced rural families to pay too much for basic necessities while failing to protect America's great export crops, cotton and wheat. At the same time, they charged, Republican financial policies benefitted banks, not borrowers. Farmers blamed railroad companies for taking government grants and subsidies to build but then charging unequal rates that privileged big manufacturers. From the farmers' point of view, public money had been used to build giant railroad companies that turned around and exploited ordinary people.

The most prominent rural protest group of the early postwar decades was the National Grange of the Patrons of Husbandry, founded in 1867. Like industrial

AP® EXAM TIP

Compare the experiences of farmers and workers that led them to organize to confront business and government leaders in the late nineteenth century.

Farmers' Political Message This 1875 lithograph illustrates "producerism," the pride of farmers in the value of their labor. The farmer looms large in comparison with other representative men of the new economy. Depicted clockwise from the top left are a lawyer, the U.S. president, a military officer, a minister, two merchants, a doctor, a bond and stock broker, and a railroad owner. Farmers' particular contempt for middlemen and speculators is revealed in the slogan of the "general brokerage" employee: "I fleece you all." Presidential candidate William Jennings Bryan represented a similar agrarian vision in his famous 1896 "Cross of Gold" speech, warning that if the nation's farms failed, its cities would also collapse. Library of Congress

workers, Grange farmers sought to counter the rising power of corporate middlemen through cooperation and mutual aid. Local Grange halls brought farm families together for recreation and conversation. The Grange set up its own banks, insurance companies, and grain elevators, and, in Iowa, even a farm implement factory. Many Grange members also advocated political action, building independent local parties that ran on anticorporate platforms.

During the 1870s depression, Grangers, labor advocates, and local workingmen's parties forged a national political movement, the **Greenback-Labor Party**. In the South, Greenbackers protested the collapse of Reconstruction and urged that every man's vote be protected. Across the country, Greenbackers advocated laws to regulate corporations and enforce an eight-hour workday to reduce long, grueling work hours. They called for the federal government to print more greenback dollars and increase the amount of money in circulation; this, they argued, would stimulate the economy, create jobs, and help borrowers by allowing them to pay off debts in dollars that, over time, slowly decreased in value. Greenbackers, like many industrial labor leaders, subscribed to the

ideal of **producerism**: they dismissed middlemen, bankers, lawyers, and investors as idlers who lived off the sweat of people who worked with their hands. As a Pittsburgh worker put it in an 1878 poem, it was not the money-handlers or executives at the top but the "noble sons of Labor . . . who with bone, and brain, and fiber make the nation's wealth."

The Greenback movement radicalized thousands of farmers, miners, and industrial workers. In Alabama's coal-mining regions, black and white miners cooperated in the party. Texas boasted seventy African American Greenback clubs. In 1878, Greenback-Labor candidates won more than a million votes, and the party elected fifteen congressmen nationwide. In the Midwest, Greenback pressure helped trigger a wave of economic regulatory actions known as **Granger laws**. By the early 1880s, twenty-nine states had created railroad commissions to supervise railroad rates and policies; others appointed commissions to regulate insurance and utility companies. Such early regulatory efforts were not always effective, but they were crucial starting points for reform. While short-lived, the Greenback movement created the foundation for more sustained efforts to regulate big business.

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

How did the methods used by railroad workers to protest their working conditions compare with the tactics employed by the Greenbackers, who also sought reform?

The Knights of Labor

The most important union of the late nineteenth century, the **Knights of Labor**, was founded in 1869 as a secret society of garment workers in Philadelphia. In 1878, as the Greenback movement reached its height, some Knights served as delegates to Greenback-Labor conventions. Like Grangers, Knights believed that ordinary people needed control over the enterprises in which they worked. They proposed to set up shops owned by employees, transforming America into what they called a cooperative commonwealth. In keeping with this broad-based vision, the order practiced open membership, irrespective of race, gender, or field of employment — though, like other labor groups, the Knights excluded Chinese immigrants.

The Knights had a strong political bent. They believed that only electoral action could bring about many of their goals, such as government regulation of corporations and laws that required employers to negotiate during strikes. Their 1878 platform denounced the "aggressiveness of great capitalists and corporations." "If we desire to enjoy the full blessings of life," the Knights warned, "a check [must] be placed upon unjust accumulation, and the power for evil of aggregated wealth." Among their demands were workplace safety laws, prohibition of child labor, a federal tax on the nation's highest incomes, public ownership of telegraphs and railroads, and government recognition of workers' right to organize. The Knights also advocated personal responsibility and self-discipline. Their leader, Terence Powderly, warned that the abuse of liquor robbed as many workers of their wages as did ruthless employers.

Growing rapidly in the 1880s, the Knights' union was sprawling and decentralized. It included not only skilled craftsmen such as carpenters, ironworkers, and beer brewers but also textile workers in Rhode Island, domestic workers in Georgia, and tenant farmers in Arkansas. Knights organized workingmen's parties to advocate a host of reforms, ranging from an eight-hour workday to cheaper streetcar fares and better garbage collection in urban areas. One of their key innovations was hiring a full-time women's organizer, Leonora Barry. An Irish American widow who was

The Knights of Labor The caption on this union card — "By Industry we Thrive" — expresses the core principle of the Knights of Labor that everything of value is the product of honest labor. The two figures are ideal representations of that "producerist" belief — handsome workers, respectably attired, doing productive labor. A picture of the Grand Master Workman, Terence V. Powderly, hangs on the wall, benignly watching them. Picture Research Consultant

forced into factory work after her husband's death, Barry became a labor advocate out of horror at the conditions she experienced on the job. To the discomfort of some male Knights, she investigated and exposed widespread evidence of sexual harassment on the job.

The Knights' growth in the 1880s showed the grassroots basis of labor activism. Powderly tried to avoid strikes, which he saw as costly and risky. But the organization's greatest growth resulted from spontaneous, grassroots striking. In 1885, thousands of workers on the Southwest Railroad walked off the job to protest wage cuts; afterward, they telegraphed the Knights and asked to be admitted as members. The strike enhanced the Knights' reputation among workers and built membership to 750,000. By the following year, local assemblies had sprung up in every state and almost every county in the United States.

Just as the Knights reached this pinnacle of influence, an episode of violence brought them down. In 1886, a protest at the McCormick reaper works in Chicago led to a clash with police that left four strikers dead. (Three unions, including a Knights of Labor assembly, had struck, but the Knights had reached an agreement and returned to work. Only the machinists' union remained on strike when the incident occurred.) Chicago was a hotbed of **anarchism**, the revolutionary advocacy of a stateless society. Local anarchists, many of them German immigrants, called a protest meeting the next day, May 4, 1886, at **Haymarket Square**. When police tried to disperse the crowd, someone threw a bomb that killed several policemen. Officers responded with gunfire. In the trial that followed, eight anarchists were found guilty of murder and criminal conspiracy. All were convicted, not on any definitive evidence that one of them threw the bomb (the bomber's identity remains unknown) but on the basis of their antigovernment speeches. Four of the eight were executed by hanging, one committed suicide in prison, and the others received long sentences.

The Haymarket violence profoundly damaged the American labor movement. Seizing on resulting antiunion hysteria, employers took the offensive. They broke strikes with mass arrests, tied up the Knights in expensive court proceedings, and forced workers to sign contracts pledging not to join labor organizations. The Knights of Labor never recovered. In the view of the press and many prosperous Americans, they were tainted by their alleged links with anarchism. Struggles between industrialists and workers had created bitter divides.

AP® PRACTICES & SKILLS

CAUSATION

What factors contributed to the rapid rise of the Knights of Labor? To its decline?

Farmers and Workers: The Cooperative Alliance

AP® EXAM TIP

Evaluate the impact of farmers' organizations on state and federal laws to regulate big business.

In the aftermath of Haymarket, the Knights' cooperative vision did not entirely fade. A new rural movement, the **Farmers' Alliance**, arose to take up many of the issues that Grangers and Greenbackers had earlier sought to address. Founded in Texas during the depression of the 1870s, the Farmers' Alliance spread across the plains states and the South, becoming by the late 1880s the largest farmer-based movement in American history. A separate Colored Farmers' Alliance arose to represent rural African Americans. The harsh conditions farmers were enduring — including drought in the West and plunging global prices for corn, cotton, and wheat — intensified the movement's appeal. Traveling Alliance lecturers exhorted farmers to "stand as a great conservative body against . . . the growing corruption of wealth and power."

Like earlier movements, Alliance leaders pinned their initial hopes on cooperative stores and exchanges that would circumvent middlemen. Cooperatives gathered farmers' orders and bought in bulk at wholesale prices, passing the savings along. Alliance cooperatives achieved notable victories in the late 1880s. The Dakota Alliance, for example, offered members cheap hail insurance and low prices on machinery and farm supplies. The Texas Alliance established a huge cooperative enterprise to market cotton and provide farmers with cheap loans. When cotton prices fell further in 1891,

Industrial Violence: A Dynamited Mine, 1894 Strikes in the western mining regions pitted ruthless owners, bent on control of their property and workforce, against fiercely independent miners who knew how to use dynamite. Some of the bloodiest conflicts occurred in Colorado mining towns, where the Western Federation of Miners (WFM) had strong support and a series of Republican governors sent state militia to back the mine owners. Violence broke out repeatedly between the early 1890s and the 1910s. At Victor, Colorado, in May 1894, as dozens of armed sheriffs' deputies closed in on angry WFM members occupying the Strong Mine in protest, the miners blew up the mine's shaft house and boiler. Showered with debris, the deputies boarded the next train out of town. Because Colorado then had a Populist governor, Davis Waite, who sympathized with the miners and ordered the deputies to disband, this strike was one of the few in which owners and miners reached a peaceful settlement — a temporary victory for the union. Denver Public Library, Western History Collection/Bridgeman Image

however, the Texas exchange failed. Other cooperatives also suffered from chronic underfunding and lack of credit, and they faced hostility from merchants and lenders they tried to circumvent.

The Texas Farmers' Alliance thus proposed a federal price-support system for farm products, modeled on the national banks. Under this plan, the federal government would hold crops in public warehouses and issue loans on their value until they could be profitably sold. When Democrats — still wary of big-government schemes — declared the idea too radical, Alliances in Texas, Kansas, South Dakota, and elsewhere decided to create a new political party, the Populists (see Chapter 19). In this venture, the Alliance cooperated with the weakened Knights of Labor, seeking to use rural voters' substantial clout on behalf of urban workers who shared their vision.

By this time, farmer-labor coalitions had made a considerable impact on state politics. But state laws and commissions were proving ineffective against corporations of national and even global scope. It was difficult for Wisconsin, for instance, to enforce new laws against a railroad company whose lines might stretch from Chicago to Seattle and whose corporate headquarters might be in Minnesota. Militant farmers and labor advocates demanded federal action.

In 1887, responding to this pressure, Congress and President Grover Cleveland passed two landmark laws. The Hatch Act provided federal funding for agricultural research and education, meeting farmers' demands for government aid to agriculture.

The **Interstate Commerce Act** counteracted a Supreme Court decision of the previous year, *Wabash v. Illinois* (1886), that had struck down states' authority to regulate railroads. The act created the Interstate Commerce Commission (ICC), charged with investigating interstate shipping, forcing railroads to make their rates public, and suing in court when necessary to make companies reduce "unjust or unreasonable" rates.

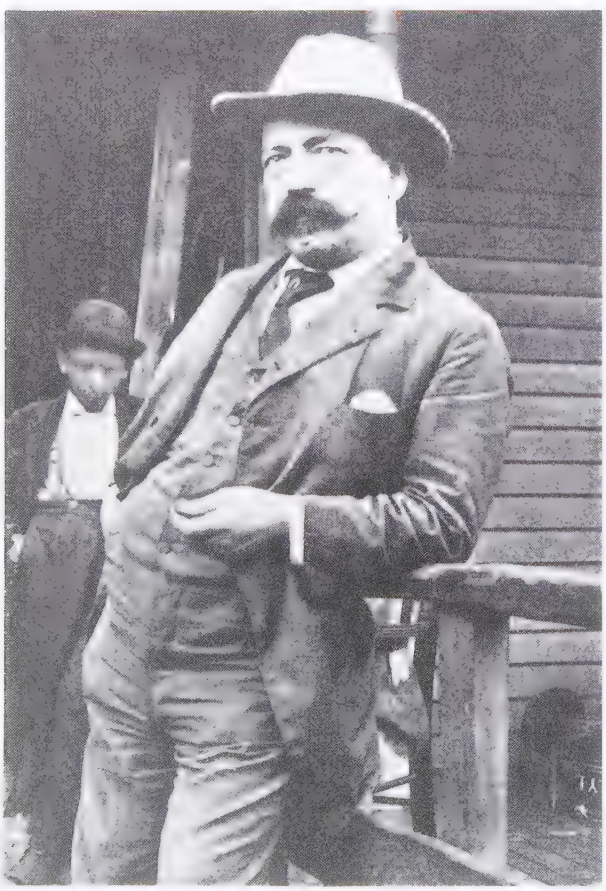
Though creation of the ICC was a direct response to farmer-labor demands, its final form represented a compromise. Radical leaders wanted Congress to establish a direct set of rules under which railroads must operate. If a railroad did not comply, any citizen could take the company to court; if the new rules triggered bankruptcy, the railroad could convert to public ownership. But getting such a plan through Congress proved impossible. Lawmakers more sympathetic to business called instead for an expert commission to oversee the railroad industry. In a pattern that repeated frequently over the next few decades, the commission model proved more acceptable to the majority of congressmen.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

Why did farmers and industrial workers cooperate, and what political objectives did they achieve?

The ICC faced formidable challenges. Though the new law forbade railroads from reaching secret rate-setting agreements, evidence was difficult to gather and secret "pooling" continued. A hostile Supreme Court also undermined the commission's powers. In a series of sixteen decisions over the two decades after the ICC was created, the Court sided with railroads fifteen times. The justices delivered a particularly hard blow in 1897 when they ruled that the ICC had no power to interfere with shipping rates. Nonetheless, the ICC's existence was a major achievement. In the early twentieth century, Congress would strengthen the commission's powers, and the ICC would become one of the most powerful federal agencies charged with overseeing private business.



Samuel Gompers, c. 1890s Samuel Gompers (1850–1924) was one of the founders of the American Federation of Labor, and its president for nearly forty years. A company detective took this photograph when the labor leader was visiting striking miners in West Virginia, an area where mine operators resisted unions with special fierceness. Labor in America Collection, University of Maryland Libraries

Another Path: The American Federation of Labor

While the Knights of Labor exerted political pressure, other workers pursued a different strategy. In the 1870s, printers, ironworkers, bricklayers, and other skilled workers organized nationwide trade unions. These "brotherhoods" focused on the everyday needs of workers in skilled occupations. Trade unions sought a closed shop — with all jobs reserved for union members — that kept out lower-wage workers. Union rules specified terms of work, sometimes in minute detail. Many unions emphasized mutual aid. Because working on the railroads was a high-risk occupation, for example, brotherhoods of engineers, brakemen, and firemen pooled contributions into funds that provided accident and death benefits. Above all, trade unionism asserted craft workers' rights as active decision-makers in the workplace, not just cogs in a management-run machine.

In the early 1880s, many trade unionists joined the Knights of Labor coalition. But the aftermath of the Haymarket violence persuaded them to leave and create the separate **American Federation of Labor** (AFL). The man who led them was Samuel Gompers, a Dutch-Jewish cigar maker whose family had immigrated to New York in 1863. Gompers headed the AFL for nearly forty years. He believed the Knights relied too much on electoral politics, where victories were likely to be limited, and he did not share their sweeping critique of

capitalism. The AFL, made up of relatively skilled and well-paid workers, was less interested in challenging the corporate order than in winning a larger share of its rewards.

Having gone to work at age ten, Gompers always contended that what he missed at school he more than made up for in the shop, where cigar makers paid one of their members to read to them while they worked. As a young worker-intellectual, Gompers gravitated to New York's radical circles, where he participated in lively debates about which strategies workingmen should pursue. Partly out of these debates, and partly from his own experience in the Cigar Makers Union, Gompers hammered out a doctrine that he called pure-and-simple unionism. *Pure* referred to membership: strictly limited to workers, organized by craft and occupation, with no reliance on outside advisors or allies. *Simple* referred to goals: only those that immediately benefitted workers — better wages, hours, and working conditions. Pure-and-simple unionists distrusted politics. Their aim was collective bargaining with employers.

On one level, pure-and-simple unionism worked. The AFL was small at first, but by 1904 its membership rose to more than two million. In the early twentieth century, it became the nation's leading voice for workers, lasting far longer than movements like the Knights of Labor. The AFL's strategy — personified by Gompers — was well suited to an era when Congress and the courts were hostile to labor. By the 1910s, the political climate would become more responsive; at that later moment, Gompers would soften his antipolitical stance and join the battle for new labor laws (Chapter 19).

AP® EXAM TIP

Compare the leadership, goals, membership, and methods of the Knights of Labor and the American Federation of Labor.

What Gompers gave up most crucially, in the meantime, was the inclusiveness of the Knights. By comparison, the AFL was far less welcoming to women and blacks; it included mostly skilled craftsmen. There was little room in the AFL for department-store clerks and other service workers, much less the farm tenants and domestic servants whom the Knights had organized. Despite the AFL's success among skilled craftsmen, the narrowness of its base was a problem that would come back to haunt the labor movement later on. Gompers, however, saw that corporate titans and their political allies held tremendous power, and he advocated what he saw as the most practical defensive plan. In the meantime, the upheaval wrought by industrialization spread far beyond the workplace, transforming every aspect of American life.

IN YOUR OWN WORDS **How did the key institutions and goals of the labor movement change between 1877 and 1900, and what gains and losses resulted from these shifts?**

SUMMARY

The end of the Civil War ushered in the era of American big business. Exploiting the continent's vast resources, vertically integrated corporations emerged as the dominant business form, and giant companies built near monopolies in some sectors of the economy. Corporations devised new modes of production, distribution, and marketing, extending their reach through the department store, the mail-order catalog, and the new advertising industry. These developments laid the groundwork for mass consumer culture. They also offered emerging jobs in management, sales, and office work.

Rapid industrialization drew immigrants from around the world. Until the 1920s, most European and Latin American immigrants were welcome to enter the United States, though they often endured harsh conditions after they arrived. Asian immigrants, by contrast, faced severe discrimination. The Chinese Exclusion

Act blocked all Chinese laborers from coming to the United States; it was later extended to other Asians, and it built the legal framework for broader forms of exclusion.

Nationwide movements for workers' rights arose in response to industrialization. During the 1870s and 1880s, coalitions of workers and farmers, notably the Knights of Labor and the Farmers' Alliance, sought political solutions to what they saw as large corporations' exploitation of working people. Pressure from such movements led to the first major attempts to regulate corporations, such as the federal Interstate Commerce Act. Radical protest movements were weakened, however, after public condemnation of anarchist violence in 1886 at Chicago's Haymarket Square. Meanwhile, trade unions such as the American Federation of Labor organized skilled workers and negotiated directly with employers, becoming the most popular form of labor organization in the early twentieth century.

CHAPTER 16 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. What new business practices arose in the late-nineteenth-century United States, and what impact did they have on employees, consumers, and the environment?
2. What factors encouraged immigrants to seek entry into the United States, and how did their experiences differ?
3. How did the key institutions and goals of the labor movement change between 1877 and 1900, and what gains and losses resulted from these shifts?
4. Review the events listed under "Politics and Power," "Migration and Settlement," and "Work, Exchange, and Technology" on the thematic timeline on pages 494–495. How did industrialization as an *economic* process transform American society and politics?

AP® TERMS TO KNOW

Identify and explain the significance of each term below.

Key Concepts and Events

Homestead lockout (p. 496)
Gospel of Wealth (p. 498)
management revolution (p. 499)
vertical integration (p. 499)
horizontal integration (p. 500)
trust (p. 500)
deskilling (p. 504)
scientific management (p. 505)
New South (p. 508)
Chinese Exclusion Act (p. 515)
Great Railroad Strike of 1877 (p. 517)
Greenback-Labor Party (p. 518)
producerism (p. 519)
Granger laws (p. 519)
Knights of Labor (p. 519)
anarchism (p. 520)
Haymarket Square (p. 520)
Farmers' Alliance (p. 520)
Interstate Commerce Act (p. 522)
American Federation of Labor (p. 522)

Key People

Andrew Carnegie (p. 498)
Gustavus Swift (p. 499)
John D. Rockefeller (p. 499)
Henry George (p. 517)
Terence Powderly (p. 519)
Leonora Barry (p. 519)
Samuel Gompers (p. 522)

Key Academic Terms

ameliorate (p. 493)
rebate (p. 500)
vanguard (p. 503)
stenographer (p. 503)
niche (p. 515)

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. Compare the two phases of industrialization experienced in the nineteenth-century United States: one before the Civil War (Chapter 8) and one afterward (discussed in this chapter). What factors drove each period of economic expansion? What kinds of new industries arose, and in which regions and locations? In what ways were workers' experiences similar in the two periods, and how did they differ? What political challenges arose with each wave of industrialization?
2. Return to the chapter-opening photograph (p. 497), taken in the aftermath of a terrible mining accident in Pennsylvania. Imagine, first, that the young man in the middle of the picture, facing the camera, is the nephew of an Irish immigrant miner who was killed in the explosion. In the voice of this young man, write a letter to the editor of the local paper explaining what lessons Americans should take from the disaster.

   Now imagine instead that the young man has enrolled in business school to become a manager; he is the son of a Scottish-born executive in the mining company, and Andrew Carnegie is his hero. In the voice of this young man, write a letter to the editor explaining what lessons Americans should take from the disaster.

KEY TURNING POINTS

Refer to the chapter chronology on page 498 for help in answering the question below.

In the era of industrialization, what events prompted the rise of labor unions and other reform groups that called for stronger government responses to corporate power? Before 1900, what key events or turning points marked reformers' successes and failures?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS

Choose the correct answer for each question.

Questions 1–3 refer to the excerpt below.

> "The recent alarming development and aggression of aggregated wealth, which, unless checked, will inevitably lead to the pauperization and hopeless degradation of the toiling masses, render it imperative, if we desire to enjoy the blessings of the government bequeathed to us by the founders of the republic, that a check should be placed upon its power and unjust accumulation, and a system adopted which will secure to the laborer the fruits of his toil; and as this much desired object can only be accomplished by the thorough unification of labor . . . we have formed the Industrial Brotherhood, with a view of securing the organization and direction, by co-operative effort of power of the industrial classes . . . calling upon all who believe in securing 'the greatest good for the greatest number,' to aid and assist us. . . ."
>
> Terence Powderly, *Thirty Years of Labor*, 1889

1. The ideas of Powderly as expressed in the passage above had the most in common with the ideas of which of the following?
   a. The Populist Party
   b. Advocates for a "New South"
   c. The Whig Party
   d. The Gospel of Wealth
2. Which of the following developments represents a continuation of the ideas described in the passage at left?
   a. Supreme Court decisions regarding reforms from 1900 to 1910
   b. Laissez-faire policies advocated by presidents in the 1920s
   c. New Deal programs of the 1930s
   d. Deregulation established by Ronald Reagan in the 1980s
3. The ideas expressed in the excerpt were most directly a response to the
   a. decreasing prices of many goods as the real wages of workers increased.
   b. increasing ethnic diversity of an expanding workforce.
   c. greater concentration of wealth through consolidation of corporations into trusts.
   d. growing power of political machines in urban areas.

Questions 4–6 refer to the excerpt below.

> "It is commonly admitted that while a man or woman who does some small thing in the manufacture of an article . . . may become marvelously expert, the operator runs the risk of becoming more or less of a machine . . . the minute division of labor that makes such wonders possible brutalizes the laborer, and . . . if the girl made the whole article instead of doing one operation out of fifty, she would gain in intelligence if not in expertness. From an economic, or rather an industrial[,] point of view, however, manufacturing has to be carried on at present with the greatest subdivision possible. Fierce competition and a small margin of profit demand it."
>
> Philip Hubert, *The Business of a Factory*, 1897

4. The developments in the passage played the greatest role in inspiring a movement to pass the
   a. 13th Amendment.
   b. 14th Amendment.
   c. 18th Amendment.
   d. 19th Amendment.

5. The process described in the passage at left most directly led to controversies in the late nineteenth century over
   a. the wages and working conditions of workers.
   b. government intervention during economic downturns.
   c. the political implementation of the Social Gospel.
   d. urban neighborhoods segregated by ethnicity and class.

6. Which of the following would be most supportive of the ideas expressed in the passage?
   a. Populists
   b. The Gospel of Wealth
   c. Members of the American Protective Association
   d. The Knights of Labor

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

> "The visible hand of management replaced the invisible hand of market forces. . . . [S]afe, regular, reliable movement of goods and passengers, as well as the continuing maintenance and repair of locomotives, rolling stock, and track, roadbed, stations, roundhouses, and other equipment, required . . . special skills and training which could only be commanded by a full-time salaried manager. . . . This career orientation and the specialized nature of tasks gave the railroad managers an increasingly professional outlook on their work."
>
> Alfred D. Chandler Jr., *The Visible Hand: The Managerial Revolution in American Business*, 1977

> "[Railroads] were not the harbingers of order, rationality, and effective large-scale organization. . . . Managers blamed their failures on accidents and contingent events, but they also used them to cover their mistakes and claim quite fortuitous results as the fruits of their planning. . . . [The railroad corporations] not only failed to institute the order they desired; they also just plain failed and repeatedly needed rescuing by the state and the courts. . . . The transcontinental railroads are sometimes fetishized as the ultimate manifestation of modern rationality, but, when seen from within, these astonishingly mismanaged railroads are the anteroom to mystery."
>
> Richard White, *Railroaded: The Transcontinentals and the Making of Modern America*, 2011

1. Using the two excerpts on the previous page, answer (a), (b), and (c).
   a. Briefly explain ONE major difference between Chandler's and White's historical interpretations of corporate American railroads in the second half of the nineteenth century.
   b. Briefly explain how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Chandler's argument.
   c. Briefly explain how ONE specific historical event or development not directly mentioned in the excerpts could be used to support White's argument.
2. Answer (a), (b), and (c).
   a. Briefly explain ONE specific historical change in the United States production of goods between 1865 and 1900.
   b. Briefly explain ONE specific historical change in the living patterns of communities in the United States between 1865 and 1900.
   c. Briefly explain ONE specific historical effect of immigration on the United States economy between 1865 and 1900.
3. Answer (a), (b), and (c).
   a. Briefly explain which ONE of the following developments was the most significant factor contributing to political divisions in the United States between 1865 and 1900.
      - Tariff policy
      - Currency issues
      - Political machines
   b. Briefly explain ONE specific historical event or development that supports your argument in (a).
   c. Briefly explain a specific historical reason that ONE of the other options represents a less significant factor contributing to political divisions in the United States between 1865 and 1900.

AP® LEARNING FOCUS

How did the changes wrought by industrialization shape Americans' identities, beliefs, and culture?

Between 1888 and 1900, American archaeologists conducted their first explorations in what is now Iraq, at the site of the ancient city of Nippur. Leaders of the expedition included Protestant ministers and the editor of the national *Sunday-School Times*. Their goal was to practice biblical archaeology: to confirm the truth of Old Testament accounts of Babylon. As one participant wrote, they sought to blend a "spirit of Christian enlightenment" with modern "scientific inquiry." The expeditions unearthed thousands of **cuneiform** tablets, which Jewish and Christian **linguists** and anthropologists used to reveal much about ancient Assyrian society. Some investigators found that these discoveries strengthened their faith in biblical truth. Others were not so sure.

As shown by the Babylonian expeditions, a passion for scientific inquiry swept the late-nineteenth-century United States, often inspired by religious teachings but ultimately calling into question many tenets of faith. Between the 1870s and the 1910s, a stunning series of scientific discoveries — from dinosaur fossils to telescopic observations of nebulae — challenged long-held beliefs. Biological theories of evolution prompted fierce debate, but so did the effects of technological innovations such as medical vaccines and electric chairs. While science gained popularity, religion hardly faded. In fact, religious diversity grew, as immigrants brought new faiths to the United States and Protestants responded with innovations of their own.

At the same time, industrialization reshaped class identities and generated an alluring consumer culture. Lavish urban department stores catered to middle-class customers, while working-class men and women enjoyed vaudeville shows. Americans of all backgrounds and classes mingled at baseball games and summer amusement parks. An older ethos of duty, self-restraint, and moral uplift gave way to expectations of leisure and fun. As African Americans and women claimed a right to education and public space — the opportunity to shop, dine, and travel freely — they built powerful reform movements. At the same time, the pressures of the industrial workplace led to aggressive calls for masculine fitness, exemplified by the rise of sports. Here, too, scientific research sparked debates over the body, gender, and race. Americans found themselves living in a modern world — one in which many of their grandparents' beliefs and practices might no longer apply.

Tourist Postcard of the Electric Tower, 1901 The Pan-American Exposition in Buffalo, New York, featured displays and exhibits from across the Western Hemisphere. Like other world's fairs it celebrated technology, and the 389-foot tower, crowned with "The Goddess of Light," became what one observer called a "fitting . . . focal point" for "the Age of Electricity." Inside the tower were restaurants and a promenade near the top from which viewers could view the Exposition grounds. The Exposition's director of sculpture, influenced by Social Darwinism, used the fair's layout to illustrate "the intellectual progress of man," with the Tower of Light representing "the culmination of man's intellectual and physical mastery of Nature."

CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and identify the links among related events.

- **1870s** ▸ Social Darwinism gains growing acceptance
- **1873** ▸ Comstock Act
- **1874** ▸ Woman's Christian Temperance Union founded
- **1876** ▸ Baseball's National League founded
  ▸ Appalachian Mountain Club founded
- **1879** ▸ Salvation Army established in the United States
- **1881** ▸ Tuskegee Institute founded
- **1885** ▸ Mississippi State College for Women founded
- **1887** ▸ American Protective Association founded to oppose immigration
- **1890** ▸ National American Woman Suffrage Association founded
  ▸ Daughters of the American Revolution founded
- **1892** ▸ Elizabeth Cady Stanton delivers "solitude of self" speech to Congress
  ▸ John Muir founds Sierra Club
- **1893** ▸ Chicago World's Columbian Exposition

- **1913** ▸ Armory Show of modern art held in New York City
- **1915** ▸ Peak of foreign missions activity by American Protestant churches
- **1916** ▸ National Park Service created

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

Science and Faith

In the early nineteenth century, most Americans believed the world was about six thousand years old. No one knew what lay beyond the solar system. By the 1910s, **paleontologists** were classifying Jurassic dinosaurs, astronomers had identified distant galaxies, and physicists were beginning to measure the speed of light. Many scientists and ordinary Americans accepted Charles Darwin's theory of evolution, though exactly how "natural selection" worked — and its implications for religious belief — remained contested.

Scientific discoveries received widespread publicity through a series of great world's fairs, most famously Chicago's 1893 World's Columbian Exposition, held (a year late) to mark the four-hundredth anniversary of Columbus's first voyage to America. At the fairgrounds, visitors strolled through enormous buildings that displayed the latest inventions in industry, machinery, and transportation. They marveled over steam engines, weather-forecasting equipment, and moving sidewalks. At dusk they gathered to watch the fair buildings illuminated with strings of electric lights. One observer called the exposition "a vast and wonderful university of the arts and sciences."

It is hardly surprising, amid these achievements, that "fact worship" became a central feature of American intellectual life. Researchers in many fields argued that one could rely only on hard facts to understand the "laws of life." In their enthusiasm, some economists and **sociologists** rejected all social reform as sentimental. Fiction writers and artists kept a more humane emphasis, but they made use of similar methods — close observation and attention to real-life experience — to create works of realism. Meanwhile, other Americans struggled to reconcile scientific discoveries with religious faith.

Darwinism and Its Critics

Evolution — the idea that species are not fixed, but ever changing — was not a simple idea on which all scientists agreed. In his immensely influential 1859 book, *On the Origin of Species*, British naturalist Charles Darwin argued that all creatures struggle to

survive. When individual members of a species are born with random genetic mutations that better suit them for their environment — for example, camouflage coloring for a moth — these characteristics, since they are genetically transmissible, become dominant in future generations. Many scientists rejected this theory of natural selection. They followed a line of thinking laid out by French biologist Jean Baptiste Lamarck, who argued, unlike Darwin, that individual animals or plants could acquire transmittable traits within a single lifetime. A rhinoceros that fought fiercely, in Lamarck's view, could build up a stronger horn; its offspring would then be born with that trait.

Evolution and Capitalism Darwin himself disapproved of the word *evolution* (which does not appear in his book) because it implied upward progress. In his view, natural selection was blind: environments and species changed randomly. Others were less scrupulous about drawing sweeping conclusions from Darwin's work. In the 1870s, British philosopher Herbert Spencer spun out an elaborate theory of how human society advanced through ruthless competitive struggle, resulting in "survival of the fittest." He applied this particularly to capitalism and industry.

The doctrine of **Social Darwinism**, as Spencer's idea became (confusingly) known, found its American champion in William Graham Sumner, a sociology professor at Yale. Competition, said Sumner, was a law of nature, like gravity. Who were the fittest? "Millionaires," Sumner declared. Their success showed they were "naturally selected." Sumner's views bolstered the pride and self-justification of industrial titans such as Andrew Carnegie, who loved Herbert Spencer's works and invited him to tour Pittsburgh. (Spencer was not impressed.) "The concentration of capital is necessary for meeting the demands of our day," was the message Carnegie took from Spencer. Similarly, John D. Rockefeller of Standard Oil declared that "the growth of a large business is merely a survival of the fittest. This is not an evil tendency of business. It is merely the working out of a law of nature and a law of God."

AP® EXAM TIP

The impact of Darwin's ideas on society and the business world is a "must know" on the AP® exam.

Even in the heyday of Social Darwinism, Spencer and Sumner's views were controversial. Many thinkers objected to the application of biological findings to the realm of economics and society. They pointed out that Darwin had observed finches and tortoises, not human institutions. Sociologist Lester Frank Ward argued that humanity "progresses through the *protection* of the weak," not through ruthless competition. "Man," he wrote, "through his intelligence, has labored successfully to resist the law of nature." Ward suggested, tongue in cheek, that if Americans subscribed to a doctrine of "survival of the fittest," they should abolish police and fire departments, irrigation works, and flood control. Social Darwinism, such critics argued, was simply an excuse for the worst excesses of industrialization. By the early twentieth century, intellectuals revolted against Sumner and his allies (AP® Analyzing Voices).

Eugenics Meanwhile, though, some of the most dubious applications of evolutionary ideas were codified into new reproductive laws based on **eugenics**, a so-called science of human breeding. Eugenicists argued that mentally deficient people should be prevented from reproducing. They proposed to sterilize those deemed "unfit," especially residents of state asylums for the insane or mentally disabled. In early-twentieth-century America, almost half of the states enacted eugenics laws. By the time eugenics subsided in the 1930s, tens of thousands of people had been sterilized, with California and Virginia taking the lead. Women in Puerto Rico and other U.S. imperial possessions (see Chapter 20) also suffered from eugenic policies.

Advocates of eugenics had a broad impact. Because they associated mental unfitness with "lower races" — including people of African, Asian, and Native American descent — their arguments lent support to Jim Crow segregation laws and racial discrimination. In a wave of legislation beginning in the 1870s and peaking in the 1910s, most states in the South and West passed laws prohibiting interracial

William Graham Sumner and W. E. B. Du Bois on Heredity and Success

In an age of industrialization and bitter class conflict, the idea that human society advanced through "survival of the fittest," referred to by historians as "Social Darwinism," generated fierce debate. Was growing wealth inequality a sign of progress or a menace to democracy? How much did genetics shape individuals' character and achievement? What role did environmental factors play, and what policies should government pursue (or not) when confronting widespread poverty? Leading thinkers offered contrasting answers.

WILLIAM GRAHAM SUMNER

What Social Classes Owe to Each Other, 1883

William Graham Sumner, a professor of sociology at Yale, was a leading U.S. proponent of individualism and Social Darwinism. His book *What Social Classes Owe to Each Other* argued that wealth and poverty resulted from inherent talent, or lack thereof.

SOURCE: William Graham Sumner, *What Social Classes Owe to Each Other* (New York: Harper & Brothers, 1883), 43–57.

"There is an old ecclesiastical prejudice in favor of the poor and against the rich. . . . We all agree that he is a good member of society who works his way up from poverty to wealth, but as soon as he has worked his way up we begin to regard him with suspicion. . . . Think of the piles of rubbish that one has read about corners, and watering stocks, and selling futures! Undoubtedly there are, in connection with each of these things, cases of fraud, swindling, and other financial crimes; that is to say, the greed and selfishness of men are perpetual. . . . The criminal law needs to be improved to meet new forms of crime, but to denounce financial devices which are useful and legitimate because use is made of them for fraud, is ridiculous and unworthy of the age in which we live.

. . . Let any one try to get a railroad built, or to start a factory and win reputation for its products, . . . and he will find what obstacles must be overcome, what risks must be taken, what perseverance and courage are required, what foresight and sagacity are necessary. . . . Persons who possess the necessary qualifications obtain great rewards. They ought to do so. It is foolish to rail at them. . . . Men who can do what they are told are not hard to find; but men who can think and plan and tell the routine men what to do are very rare. They are paid in proportion to the supply and demand of them. . . . Labor organizations are formed, not to employ combined effort for a common object, but to indulge in declamation and denunciation, and especially to furnish an easy living to some officers who do not want to work.

The aggregation of large fortunes is not at all a thing to be regretted. On the contrary, it is a necessary condition of many forms of social advance. If we should set a limit to the accumulation of wealth, we should say to our most valuable producers, 'We do not want you to do us the services which you best understand how to perform, beyond a certain point.' It would be like killing off our generals in war. A great deal is said . . . about 'ethical views of wealth,' and we are told that some day men will be found of such public spirit that, after they have accumulated a few millions, they will be willing to go on and labor simply for the pleasure of paying the wages of their fellow-citizens. Possibly this is true. It is a prophecy. . . . There are no such men now. . . ."

W. E. B. DU BOIS

"Heredity and the Public Schools," 1904

W. E. B. Du Bois, an African American sociologist who trained at Harvard and then in Germany, emerged as a leading critic of Social Darwinism. Du Bois also challenged the civic leadership of educator

How did the ideas of scientists and social scientists reflect events they saw happening around them?

marriage, claiming that only separation of the races could foster human advancement. By warning that immigrants from Eastern and Southern Europe would dilute white Americans' racial purity, eugenicists helped win passage of immigration restriction in the 1920s.

Religion: Diversity and Innovation

By the turn of the twentieth century, emerging scientific and cultural **paradigms** posed a significant challenge to religious faith. Some Americans argued that science and modernity would sweep away religion altogether. Contrary to such predictions, American religious practice remained vibrant. Protestants developed creative new responses to the challenges of industrialization, while millions of newcomers built institutions for worship and religious education.

Booker T. Washington and helped found the Niagara movement and the NAACP (Chapter 19). In this excerpt, from a speech given to African American school principals in Washington, D.C., in 1904, Du Bois emphasizes the role of environmental factors in shaping children and society.

SOURCE: W. E. B. Du Bois, "Heredity and the Public Schools," in *Du Bois on Education*, ed. Eugene F. Provenzo Jr. (Walnut Creek, CA: Altamira Press, 2002), 114–121.

"The recognition of the wonderful part which heredity and variation play in animal life literally changed the world's language . . . and especially did the phrase: '*the survival of the fittest.*' Undoubtedly this phrase led to a hardening of human hearts. . . . Physical heredity is by no means the only heredity in the world nor is it in all probability the more important heredity. The human child receives its body and the physical bases of life from its parents, but it receives its thoughts, the larger part of its habits, its tricks of doing, of religion; its whole conception of what it is and what the whole world about it is from the society in which it is placed; and this heredity which is not physical at all has been aptly called social heredity. . . . Nine tenths of what a man is, depends on social rather than on physical heredity. . . . It is not until the present decade perhaps that [this] idea has received that scientific formulation that enables us to comprehend it broadly, and when people do comprehend it, it is going to revolutionize modern thought and modern conceptions of education. . . .

How does all this apply to the American Negro? In many ways. . . . As to sheer physical heredity, . . . it is an unproved and to all appearance an unprovable thesis that the physical development of men shows any color line. . . . Nevertheless it is true that if here in the city of Washington we gather haphazard a hundred white children and a hundred black children of the same age, the white would be further advanced, somewhat brighter in intellect and quicker in adaptability. This is not simply true in Washington, in Atlanta, in Chicago, but practically throughout the United States. People who discover this fact usually greet it either with a gasp of astonishment or a word of apology, and many a thoughtless person has without argument or inquiry taken this as self-evident proof of race inferiority. . . .

What does this prove? Let us look at the facts narrowly. Here are two boys being trained for life; six hours a day they are in school; three hours they are in the street; fifteen hours they are at home. The schools they are in are similar — the teachers are of the same sort; but one walks and plays in alleys, with sordid companions, amid poverty and perhaps crime; the other lives on clean streets, with pavements; . . . the home of one is dark, cheerless and empty; the home of the other is large, cheerful, filled with books and pictures, music and instruction; the parents of the one are ignorant, driven by the shadow of poverty, harassed by doubt and dream, worn with querulousness, fretting and scolding; the other has hands to lead him, hearts to soothe him, heads to guide him and correct him. Would you expect these two boys after ten years of this training to be equal in endowment and accomplishment? . . .

We are so fond of explaining differences of men by the enigmatical word 'heredity' that we forget how far those differences depend upon homely, every day life, and we are so eager to seize any excuse for shirking our great responsibility toward the weak and lowly and unfortunate that we hasten on the slightest pretext to attribute to the act of God or to unknown forces of nature obviously and perfectly intelligible results of the deeds of men. . . . We must seek not simply to improve the schools but just as strenuously to improve the social surroundings, the social opportunities, and the social heritage."

QUESTIONS FOR ANALYSIS

1. How do Sumner and Du Bois each explain inequalities of wealth and accomplishment?
2. What government policies would each man likely recommend on the extent to which large fortunes should be taxed; the extent and types of aid to the poor; and support for public schools?

Immigrant Faiths Arriving in the United States in large numbers, Catholics and Jews wrestled with similar questions. To what degree should they adapt to Protestant-dominated American society? Should the education of clergy be changed? Should children attend religious or public schools? What happened if they married outside the faith? Among Catholic leaders, Bishop John Ireland of Minnesota argued that "the principles of the Church are in harmony with the interests of the Republic." But traditionalists, led by Archbishop Michael A. Corrigan of New York, disagreed. They sought to insulate Catholics from the pluralistic American environment. Indeed, by 1920, almost two million children attended Catholic elementary schools nationwide, and **Catholic dioceses** operated fifteen hundred high schools. Catholics as well as Jews feared some of the same threats that distressed Protestants: industrial poverty and overwork kept working-class people away from worship services, while new consumer pleasures enticed many of them to go elsewhere.

AP® EXAM TIP

Evaluate the extent that immigrant groups maintained their faith in the face of assimilation.

Faithful immigrant Catholics were anxious to preserve familiar traditions from Europe, and they generally supported the Church's traditional wing. But they also wanted religious life to express their ethnic identities. Italians, Poles, and other new arrivals wanted separate parishes where they could celebrate their customs, speak their languages, and establish their own **parochial** schools. When they became numerous enough, they also demanded their own bishops. Since the demand for ethnic parishes implied local control of church property, the Catholic hierarchy, dominated by Irish Americans, felt that the integrity of the Church was at stake. With some strain, however, the Catholic Church managed to satisfy the diverse needs of the immigrant faithful. It met the demand for representation, for example, by appointing immigrant priests as auxiliary bishops within existing dioceses.

In the same decades, many prosperous native-born Jews embraced Reform Judaism, abandoning such religious practices as keeping a kosher kitchen and conducting services in Hebrew. This was not the way of Yiddish-speaking Jews from Eastern Europe, who arrived in large numbers after the 1880s. Generally much poorer and eager to preserve their own traditions, they founded Orthodox synagogues, often in vacant stores, and practiced Judaism as they had at home.

But in Eastern Europe, Judaism had been an entire way of life, one not easily replicated in a large American city. "The very clothes I wore and the very food I ate had a fatal effect on my religious habits," confessed the hero of Abraham Cahan's novel *The Rise of David Levinsky* (1917). "If you . . . attempt to bend your religion to the spirit of your surroundings, it breaks. It falls to pieces." Levinsky shaved off his beard and plunged into the Manhattan clothing business. Orthodox Judaism survived the transition to America, but like other immigrant religions, it had to renounce its claims to some of the faithful.

Protestant Innovations One of the era's dramatic religious developments—facilitated by global steamship and telegraph lines—was the rise of Protestant foreign missions. From a modest start before the Civil War, this movement peaked around 1915, a year when American religious organizations sponsored more than nine thousand overseas missionaries, supported at home by armies of volunteers, including

Christian Missions in Japan, 1909 Through this colorful postcard, Protestant missionaries in Japan demonstrate their success in winning converts (at least a few) and their adaptation of missionary strategies to meet local needs and expectations. Here, outside their headquarters, they demonstrate "preaching by means of banners." The large characters on the vertical banner proclaim the "Association of Christian Gospel Evangelists." The horizontal banner is a Japanese translation of Matthew 11:28, "Come unto me, all ye who labor and are heavy laden, and I will give you rest." Corbis/Getty Imag

more than three million women. A majority of Protestant missionaries served in Asia, with smaller numbers posted to Africa and the Middle East. Most saw American-style domesticity as a central part of evangelism, and missionary societies sent married couples into the field. Many unmarried women also served overseas as missionary teachers, doctors, and nurses, though almost never as ministers. "American woman," declared one Christian reformer, has "the exalted privilege of extending over the world those blessed influences, that are to renovate degraded man."

Protestant missionaries won converts, in part, by providing such modern services as medical care and women's education. Some missionaries developed deep bonds of respect with the people they served. Others showed considerable condescension toward the "poor heathen," who in turn bristled at their assumptions (AP® America in the World). One Presbyterian, who found Syrians uninterested in his gospel message, angrily denounced all Muslims as "corrupt and immoral." By imposing their views of "heathen races" and attacking those who refused to convert, Christian missionaries sometimes ended up justifying Western imperialism.

Cultural imperialism abroad reflected attitudes at home. Starting in Iowa in 1887, militant Protestants created a powerful political organization, the **American Protective Association** (APA), which for a brief period in the 1890s counted more than two million members. This virulently nativist group expressed outrage at the existence of separate Catholic schools while demanding, at the same time, that all public school teachers be Protestants. The APA called for a ban on Catholic officeholders, arguing that they were beholden to an "ecclesiastic power" that was "not created and controlled by American citizens." In its virulent anti-Catholicism and calls for restrictions on immigrants, the APA prefigured the revived Ku Klux Klan of the 1920s (Chapter 21).

AP® EXAM TIP

Being able to explain reactions to immigration by nativists and social reformers is critical to success on the AP® exam.

The APA arose, in part, because Protestants found their dominance challenged. Millions of Americans, especially in the industrial working class, were now Catholics or Jews. Overall, in 1916, Protestants still constituted about 60 percent of Americans affiliated with a religious body. But they faced formidable rivals: the number of practicing Catholics in 1916 — 15.7 million — was greater than the number of Baptists, Methodists, and Presbyterians combined.

Some Protestants responded to the urban, immigrant challenge by evangelizing among the unchurched. They provided reading rooms, day nurseries, vocational classes, and other services. The goal of renewing religious faith through dedication to justice and social welfare became known as the **Social Gospel**. Its goals were epitomized by Charles Sheldon's novel *In His Steps* (1896), which told the story of a congregation that resolved to live by Christ's **precepts** for one year. "If church members were all doing as Jesus would do," Sheldon asked, "could it remain true that armies of men would walk the streets for jobs, and hundreds of them curse the church, and thousands of them find in the saloon their best friend?"

The Salvation Army, which arrived from Great Britain in 1879, also spread a gospel message among the urban poor, offering assistance that ranged from soup kitchens to shelters for former prostitutes. When all else failed, down-and-outers knew they could count on the Salvation Army, whose bell ringers became a familiar sight on city streets. The group borrowed up-to-date marketing techniques and used the latest business slang in urging its Christian soldiers to "hustle."

The Salvation Army succeeded, in part, because it managed to bridge an emerging divide between Social Gospel reformers and Protestants who were taking a different theological path. Disturbed by what they saw as rising secularism, conservative ministers and their allies held a series of Bible Conferences at Niagara Falls between 1876 and 1897. The resulting "Niagara Creed" reaffirmed the literal truth of the Bible and the certain damnation of those not born again in Christ. By the 1910s, a network of churches and Bible institutes had emerged from these conferences. They called their movement **fundamentalism**, based on their belief in the fundamental truth of the Bible.

Fundamentalists and their allies made particularly effective use of revival meetings. Unlike Social Gospel advocates, revivalists said little about poverty or earthly justice,

Christianity in the United States and Japan

During the 1893 Chicago World's Columbian Exhibition, a Parliament of Religions brought together representatives of prominent faiths for discussion. English-speaking Protestants dominated the program, but several Asian representatives included Kinzo Hirai, a lay Buddhist from Japan. In his speech, Hirai reviewed Japan's experiences with the United States since Commodore Matthew C. Perry "opened" the country in 1853.

I do not understand why the Christian lands have ignored the rights and advantages of forty million souls of Japan for forty years. . . . One of the excuses offered by foreign nations is that our country is not yet civilized. Is it the principle of civilized law that the rights and profits of the so-called uncivilized, or the weaker, should be sacrificed? As I understand it, the spirit and necessity of law is to protect the rights and profits of the weaker against the aggression of the stronger. . . .

From the religious source, the claim is made that the Japanese are idolaters and heathen. . . . [A]dmitting for the sake of argument that we are idolaters and heathen, is it Christian morality to trample upon the rights and advantages of a non-Christian nation, coloring all their natural happiness with the dark stain of injustice? . . .

You send your missionaries to Japan and they advise us to be moral and believe Christianity. We like to be moral, we know that Christianity is good; and we are very thankful for this kindness. But at the same time our people are rather perplexed. . . . For when we think that the treaty stipulated in the time of feudalism, when we were yet in our youth, is still clung to by the powerful nations of Christendom; when we find that every year a good many western vessels of seal fishery are smuggled into our seas; when legal cases are always decided by the foreign authorities in Japan unfavorably to us; when some years ago a Japanese was not allowed to enter a university on the Pacific coast of America because of his being of a different race; when a few months ago the school board in San Francisco enacted a regulation that no Japanese should be allowed to enter the public school there; when last year the Japanese were driven out in wholesale from one of the territories of the United States; when our business men in San Francisco were compelled by some union not to employ Japanese assistants and laborers, but the Americans; when there are some in the same city who speak on the platform against those of us who are already here; when there are many who go in procession hoisting lanterns marked "Japs must go"; when the Japanese in the Hawaiian Islands were deprived of their suffrage; when we see some western people in Japan who erect before the entrance to their houses a special post upon which is the notice, "No Japanese is allowed to enter here" — just like a board upon which is written, "No dogs allowed"; when we are in such a situation, notwithstanding the kindness of the western nations from one point of view, who send their missionaries to us, that we unintelligent heathens are embarrassed and hesitate to swallow the sweet and warm liquid of the heaven of Christianity, will not be unreasonable.

SOURCE: *The World's Parliament of Religions*, ed. John Henry Barrows (Chicago: Parliament Publishing Co., 1893), 444–450.

QUESTIONS FOR ANALYSIS

1. What is Hirai's attitude toward American Christians?
2. Of what events is Hirai aware that are taking place in the United States? How does this shape his view of Christian missions in Japan?
3. How might American delegates to the Parliament, especially Protestant missionaries, have responded to Hirai?

focusing not on the matters of the world, but on heavenly redemption. The pioneer modern evangelist was Dwight L. Moody, a former Chicago shoe salesman and YMCA official who won fame in the 1870s. Eternal life could be had for the asking, Moody promised. His listeners needed only "to come forward and take, TAKE!" Moody's successor, Billy Sunday, helped bring evangelism into the modern era. More often than his predecessors, Sunday took political stances based on his Protestant beliefs. Condemning the "booze traffic" was his greatest cause. Sunday also denounced unrestricted immigration and labor radicalism. "If I had my way with these ornery wild-eyed Socialists," he once threatened, "I would stand them up before a firing squad." Sunday supported some progressive reform causes; he opposed child labor, for example, and advocated voting rights for women. In other ways, his views anticipated the nativism and antiradicalism that would dominate American politics after World War I.

AP PRACTICES & SKILLS

CAUSATION

How did America's religious life change in this era, and what prompted those changes?

Realism in the Arts

Inspired by the quest for facts, American authors rejected nineteenth-century romanticism and what they saw as its unfortunate product, sentimentality. Instead, they took up literary **realism**. In the 1880s, editor and novelist William Dean Howells called for writers "to picture the daily life in the most exact terms possible." By the 1890s, a younger generation of writers pursued this goal. Theodore Dreiser dismissed unrealistic novels that always had "a happy ending." In *Main-Travelled Roads* (1891), based on the struggles of his midwestern farm family, Hamlin Garland turned the same unsparing eye on the hardships of rural life. Stephen Crane's *Maggie: A Girl of the Streets* (1893), privately printed because no publisher would touch it, described the seduction, abandonment, and death of a slum girl.

Some authors believed realism did not go far enough to overturn sentimentalism. Jack London spent his teenage years as a factory worker, sailor, and tramp. In stories such as "The Law of Life" (1901), he dramatized what he saw as the harsh reality of an uncaring universe. American society, he said, was "a jungle wherein wild beasts eat and are eaten." Similarly, Stephen Crane tried to capture "a world full of fists." London and Crane suggested that human beings were not so much rational shapers of their own destinies as blind victims of forces beyond their control — including their own subconscious impulses.

America's most famous writer, Samuel Langhorne Clemens, who took the pen name of Mark Twain, came to an equally bleak view. Though he achieved enormous success with such lighthearted books as *The Adventures of Tom Sawyer* (1876), Clemens courted controversy with *The Adventures of Huckleberry Finn* (1884), notable for its indictment of slavery and racism. In his novel *A Connecticut Yankee in King Arthur's Court* (1889), which ends with a bloody, technology-driven slaughter of Arthur's knights, Mark Twain became one of the bitterest critics of America's idea of progress. Afterward, Clemens was devastated by the loss of his wife and two daughters, as well as by failed investments and bankruptcy. An outspoken critic of imperialism and foreign missions, Twain eventually denounced Christianity itself as a hypocritical delusion. Like his friend the industrialist Andrew Carnegie, Clemens "got rid of theology."

By the time Clemens died in 1910, American artists had laid the groundwork for **modernism**, which rejected traditional canons of artistic taste. Questioning the whole idea of progress and order, modernists focused on the subconscious and "primitive" mind. Above all, they sought to overturn convention and tradition. Poet Ezra Pound exhorted, "Make it new!" Modernism became the first great literary and artistic movement of the twentieth century.

In the visual arts, new technologies influenced aesthetics. By 1900, some photographers argued that their "true" representations made painting obsolete. But painters invented their own forms of realism. Nebraska-born artist Robert Henri became fascinated with life in the great cities. "The backs of tenement houses are living documents," he declared, and he set out to put them on canvas. Henri and his followers, notably John Sloan and George Bellows, called themselves the New York Realists. Critics **derided** them as the Ash Can school because they chose subjects that were not conventionally beautiful.

In 1913, realists participated in one of the most controversial events in American art history, the Armory Show. Housed in an enormous National Guard building in New York, the exhibit introduced America to modern art. Some painters whose work appeared at the show were experimenting with cubism, characterized by abstract, geometric forms. Along with works by Henri, Sloan, and Bellows, organizers featured paintings by European rebels such as Pablo Picasso. America's academic art world was shocked. One critic called cubism "the total destruction of the art of painting." But as the exhibition went on to Boston and Chicago, more than 250,000 people crowded to see it.

A striking feature of both realism and modernism, as they developed, was that many leading writers and artists were men. In making their work strong and modern,

What effect did technology and scientific ideas have on literature and the arts?

they also strove to assert their masculinity. Paralleling Theodore Roosevelt's call for "manly sports," they denounced nineteenth-century culture as hopelessly feminized. Stephen Crane called for "virility" in literature. Jack London described himself as a "man's man, . . . lustfully roving and conquering." Artist Robert Henri banned small brushes as "too feminine." In their own ways, these writers and artists contributed to a broad movement to masculinize American culture.

IN YOUR OWN WORDS **How did Charles Darwin's theory of evolution and other scientific ideas impact American culture and intellectual life in the late nineteenth century? What uses did nonscientists make of such ideas?**

Commerce and Culture

Debates over faith, science, and society affected Americans in widely different ways, partly because divisions between rural and urban life, and between affluent and poor Americans, were growing. As the United States industrialized, the terms *middle class* and *working class* came widely into use. Americans adopted these broad identities not only in the workplace but also in their leisure time. As professionals and corporate managers prospered, they and their families enjoyed rising income and an array of tempting ways to spend their dollars. Celebrating these new technological wonders, Americans hailed inventors as heroes. The most famous, Thomas Edison, operated an

independent laboratory rather than working for a corporation. Edison, like many of the era's businessmen, was a shrewd entrepreneur who focused on commercial success. He and his colleagues helped introduce such lucrative products as the incandescent light bulb and the phonograph.

Even working-class Americans enjoyed cheaper products delivered by global trade and mass production, from bananas and cigarettes to colorful dime novels and magazines. Edison's moving pictures, for example, first found popularity among the urban working class. Consumer culture appeared, at least, to be democratic: anyone could eat at a restaurant or buy a rail ticket for the "ladies' car" — as long as she or he could pay. In practice, though, well-to-do Americans enjoyed new amenities at much higher rates. Consumer culture thus became a site of struggle over class inequality, race privilege, and proper male and female behavior.

Consumer Spaces

America's public spaces — from election polls to saloons and circus shows — had long been boisterous and male-centered. A woman who ventured there without a male chaperone risked damaging her reputation (or worse). But the rise of new businesses encouraged change. To attract an eager public, purveyors of consumer culture invited women and families, especially those of the middle class, to linger in department stores and enjoy new amusements.

No one promoted commercial domesticity more successfully than showman P. T. Barnum, who used the country's expanding rail network to develop his famous

Chicago Department Store Advertisement, 1893 In the same year that the Chicago World's Columbian Exhibition offered an array of dazzling experiences for visitors, the city's Siegel-Cooper Department Store did the same for consumers who could afford to shop in its halls. Its "Sixty-Five Complete Departments" offered many types of goods and services, from meat and groceries to medical and legal advice. © Chicago History Museum, USA/Bridgeman Images

traveling circus. Barnum condemned earlier circus managers who had opened their tents to "the rowdy element." Proclaiming children as his key audience, he created family entertainment for diverse audiences (though in the South, black audiences sat in segregated seats or attended separate shows). He promised middle-class parents that his circus would teach children courage and promote the benefits of exercise. To encourage women's attendance, Barnum emphasized the respectability and refinement of his female performers.

Department stores also lured middle-class women by offering tearooms, children's play areas, umbrellas, and clerks to wrap and carry every purchase. Store credit plans enabled well-to-do women to shop without handling money in public. Such tactics succeeded so well that New York's department store district became known as Ladies' Mile. Boston department store magnate William Filene called the department store an "Adamless Eden."

AP® EXAM TIP

Analyze the differentiation of the middle class from the working class in American culture.

These Edens were reserved for the elite and middle classes. Though bargain basements and neighborhood stores served working-class families, big department stores used vagrancy laws and police to discourage the "wrong kind" from entering. Working-class women gained access primarily as clerks, cashiers, and cash girls, who at age twelve or younger served as internal store messengers, carrying orders and change for $1.50 a week. The department store was no Eden for these women, who worked long hours on their feet, often dealing with difficult customers. Nevertheless, many clerks claimed their own privileges as shoppers, making enthusiastic use of employee discounts and battling employers for the right to wear their fashionable purchases while they worked in the store.

In similar ways, class status was marked by the ways technology entered American homes. The rise of electricity, in particular, marked the gap between affluent urban consumers and rural and working-class families. In elite houses, domestic servants began to use — or find themselves replaced by — an array of new devices, from washing machines to vacuum cleaners. When Alexander Graham Bell invented the telephone in 1876, entrepreneurs introduced the device for business use, but it soon found eager residential customers, especially among the affluent (Figure 17.1). Telephones changed etiquette and social relations for middle-class suburban women — while providing their working-class counterparts with new employment as operators or "hello girls."

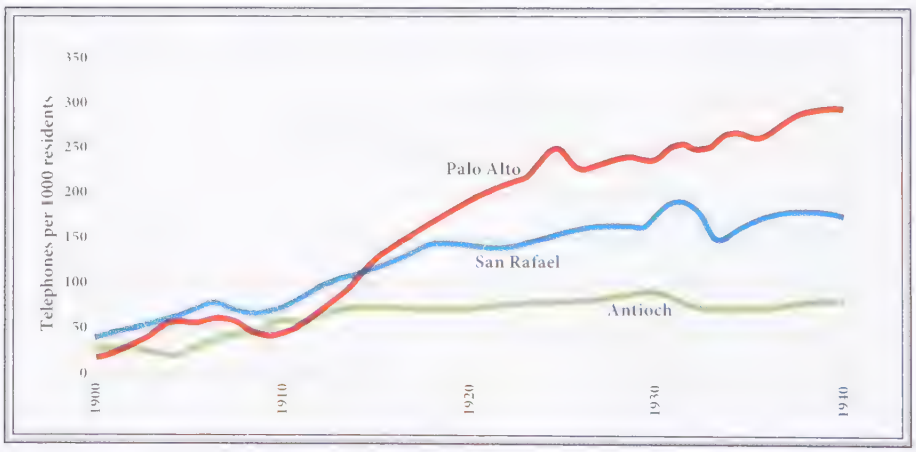

FIGURE 17.1 Estimated Number of Residential Telephones in Three California Locations, 1900–1940

This graph tracks the adoption of telephones in three California locations. Palo Alto was an affluent university town; Antioch was a working-class city; and San Rafael had a mixed economy, including some manufacturing, but served increasingly as a bedroom community for San Francisco professionals. What does the chart suggest about telephone usage? Consider, from the narrative, the changes that were occuring in family size, especially among the middle class, and note that expensive rent often led to overcrowding in working-class homes and apartments. Based on per-capita telephone adoption rates, how likely do you think it was that a person in Palo Alto had access to a private phone? A person in Antioch? Figure based on Claude S. Fischer, *A Social History of the Telephone to 1940*, copyright © 1992 by the Regents of the University of California (Los Angeles: University of California Press, 1992). Figure 9. Reprinted by permission of the University of California Press.

Railroads also reflected the emerging privileges of professional families. Finding prosperous Americans eager for excursions, railroad companies, like department stores, made things comfortable for middle-class women and children. Boston's South Station boasted of its modern amenities, including "everything that the traveler needs down to cradles in which the baby may be soothed." Rail cars manufactured by the famous Pullman Company of Chicago set a national standard for taste and elegance. Part of their appeal was the chance for people of modest means to emulate the rich. An experienced train conductor observed that the wives of grocers, not millionaires, were the ones most likely to "sweep . . . into a parlor car as if the very carpet ought to feel highly honored by their tread."

First-class "ladies' cars" soon became sites of struggle for racial equality. For three decades after the end of the Civil War, state laws and railroad regulations varied, and African Americans often succeeded in securing seats. One reformer noted, however, "There are few ordeals more nerve-wracking than the one which confronts a colored woman when she tries to secure a Pullman reservation in the South and even in some parts of the North." When they claimed first-class seats, black women often faced confrontations with conductors, resulting in numerous lawsuits in the 1870s and 1880s. Riding the Chesapeake & Ohio line in 1884, young African American journalist Ida B. Wells was told to leave. "I refused," she wrote later, "saying that the [nearest alternative] car was a smoker, and as I was in the ladies' car, I proposed to stay." Wells resisted, but the conductor and a baggage handler threw her bodily off the train. Returning home to Memphis, Wells sued and won in local courts, but Tennessee's supreme court reversed the ruling.

In 1896, the U.S. Supreme Court settled such issues decisively, but not justly. The case, ***Plessy v. Ferguson***, was brought by civil rights advocates on behalf of Homer Plessy, a New Orleans resident who was one-eighth black. Ordered to leave a first-class car and move to the "colored" car of a Louisiana train, Plessy refused and was arrested. The Court ruled that such segregation did not violate the Fourteenth Amendment as long as blacks had access to accommodations that were "separate but equal" to those of whites. "Separate but equal" was a myth: segregated facilities in the South were flagrantly inferior. **Jim Crow** segregation laws, named for a stereotyped black character who appeared in minstrel shows, clearly discriminated, but the Court allowed them to stand.

Jim Crow laws applied to public schools and parks and also to emerging commercial spaces—hotels, restaurants, streetcars, trains, and eventually sports stadiums and movie theaters. Placing a national stamp of approval on segregation, the *Plessy* decision remained in place until 1954, when the Court's *Brown v. Topeka Board of Education* ruling finally struck it down (Chapter 26). Until then, blacks' exclusion from first-class "public accommodations" was one of the most painful marks of racism. The *Plessy* decision, like the rock-bottom wages earned by twelve-year-old girls at Macy's, showed that consumer culture could be modern and innovative without being politically progressive. Business and consumer culture were shaped by, and themselves shaped, racial and class injustices.

AP® EXAM TIP

Recognizing the role of *Plessy v. Ferguson* in American history is a "must know" on the AP® exam.

AP® PRACTICES & SKILLS

CAUSATION

How did new consumer practices arising from industrialization reshape Americans' gender, class, and race relationships?

Masculinity and the Rise of Sports

Industrialization changed expectations in the workplace. Traditionally, the mark of a successful American man was economic independence: he was his own boss. Now, tens of thousands worked for other men in big companies and in offices, rather than using their muscles. Would the professional American male, through his concentration on "brain work," become "weak, effeminate, [and] decaying," as one editor warned? How could well-to-do men assert their independence if work no longer required them to prove themselves physically? How could they develop toughness and strength? One answer was athletics.

"Muscular Christianity" The **Young Men's Christian Association** (YMCA) was one of the earliest and most successful promoters of athletic fitness. Introduced in

Horatio Alger Jr. In dozens of popular boys' books published between 1867 and 1917, Horatio Alger Jr. assured young readers that if they were honest, worked hard, and cultivated good character, they could succeed in the new competitive economy. His heroes, such as the famous "Ragged Dick," often grew up in poverty on the streets of big cities. *Brave and Bold* (1874) tells the story of a small-town boy forced to work in a factory; he is unfairly fired, but through persistence and courage he wins a good job and recovers an inheritance for his mother. Alger's books were republished often, as in this boys' magazine from 1911, and many remain in print today. Courtesy of the Department of Special Collections, Stanford University Libraries

Boston in 1851, the group promoted muscular Christianity, combining evangelism with gyms and athletic facilities where men could make themselves "clean and strong." Focusing first on white-collar workers, the YMCA developed a substantial industrial program after 1900. Railroad managers and other corporate titans hoped YMCAs would foster a loyal and contented workforce, discouraging labor unrest. Business leaders also relied on sports to build physical and mental discipline and help men adjust their bodies to the demands of the industrial clock. Sports honed men's competitive spirit, they believed; employer-sponsored teams instilled teamwork and company pride.

Working-class men had their own ideas about sports and leisure, and YMCAs quickly became a site of negotiation. Could workers come to the "Y" to play billiards or cards? Could they smoke? At first, YMCA leaders said no, but to attract working-class men they had to make concessions. As a result, the "Y" became a place where middle-class and working-class customs blended — or existed in uneasy tension. At the same time, YMCA leaders innovated. Searching for winter activities in the 1890s, YMCA instructors invented the new indoor games of basketball and volleyball.

For elite Americans, meanwhile, country clubs flourished; both men and women could enjoy tennis, golf, and swimming facilities as well as social gatherings. By the turn of the century — perhaps because country club women were encroaching on their athletic turf — elite men took up even more aggressive physical sports, including boxing, weightlifting, and martial arts. As early as 1890, future president Theodore Roosevelt argued that such "virile" activities were essential to "maintain and defend this very civilization." "Most masterful nations," he claimed, "have shown a strong taste for manly sports." Roosevelt, son of a wealthy New York family, became one of the first American devotees of jujitsu. During his presidency (1901–1909), he designated a judo room in the White House and hired an expert Japanese instructor. Roosevelt also wrestled and boxed, urging other American men — especially among the elite — to increase their leadership fitness by pursuing the "strenuous life."

To see a longer excerpt of Theodore Roosevelt's views on sports, along with other primary sources from this period, see ***Sources for America's History***.

America's Game Before the 1860s, the only distinctively American game was Native American lacrosse, and the most popular team sport among European Americans was cricket. After the Civil War, however, team sports became a fundamental part of American manhood, none more successfully than baseball. A derivative of cricket, the game's formal rules had begun to develop in New York in the 1840s and 1850s; its popularity spread in military camps during the Civil War. Afterward, the idea that baseball "received its baptism in the bloody days of our Nation's direst danger," as one promoter put it, became part of the game's mythology.

Until the 1870s, most amateur players were clerks and white-collar workers who had the leisure time to play and the income to buy their own uniforms. Business frowned on baseball and other sports as a waste of time, especially for working-class men. But late-nineteenth-century employers came to see baseball, like other athletic pursuits, as a benefit for workers. It provided fresh air and exercise, kept men out of saloons, and promoted discipline and teamwork. Players on company-sponsored teams, wearing uniforms emblazoned with their employers' names, began to compete on paid work time. Baseball thus set a pattern for how other American sports developed. Begun among independent craftsmen, it was taken up by elite men anxious to prove their strength and fitness. Well-to-do Americans then decided the sport could benefit the working class.

Big-time professional baseball arose with the launching of the National League in 1876. The league quickly built more than a dozen teams in large cities, from the Brooklyn Trolley Dodgers to the Cleveland Spiders. Team owners were, in their own right, profit-minded entrepreneurs who shaped the sport to please consumers (AP® Interpreting the Past). Wooden grandstands soon gave way to concrete and steel stadiums. By 1900, boys collected lithographed cards of their favorite players, and the baseball cap came into fashion. In 1903, the Boston Americans defeated the Pittsburgh Pirates in the first World Series. American men could now adopt a new consumer identity — not as athletes, but as fans.

AP® EXAM TIP

Evaluate changes in leisure activities that helped to define American culture.

Rise of the Negro Leagues Baseball stadiums, like first-class rail cars, were sites of racial negotiation and conflict. In the 1880s and 1890s, major league managers hired a few African American players. As late as 1901, the Baltimore Orioles succeeded in signing Charlie Grant, a light-skinned black player from Cincinnati, by renaming him Charlie Tokohoma and claiming he was Cherokee. But as this **subterfuge** suggested, black players were increasingly barred. A Toledo team received a threatening note before one game in Richmond, Virginia: if their "negro catcher" played, he would be

FRANK MERRIWELL'S CHUMS
OR OUT AGAIN FOR SPORT

Frank Merriwell's Chums *Tip Top Weekly*, one of many magazines and dime novels for young readers, celebrated sports and adventure. This 1902 cover story by Burt L. Standish (a pseudonymn for Gilbert Patten) featured the hero Frank Merriwell, a talented player of football, basketball, baseball, and track who eventually became a star student and athlete at Yale. Merriwell also solved crimes and mysteries while embodying clean living and honorable behavior. His exploits eventually became the basis for a comic strip, radio shows, and films. Picture Research Consultants & Archives

Was Professional Baseball a Pastime or a Business Monopoly — or Both?

By the late nineteenth century, baseball was already hailed as America's national pastime. Supported by a willing press promoting baseball's all-American virtues, the game sparked community pride. Fans cheered the home team, followed star players, and enjoyed the fresh air and warm sunlight of an afternoon amusement. Baseball, many said, taught young boys life lessons about teamwork, the virtue of sacrificing for another, and fair play. Historians have begun to challenge this nostalgic and romantic history. Here, scholars Steven A. Riess and Stuart Banner examine the professional game as a reflection of the political, economic, and cultural developments of the age.

STEVEN A. RIESS

SOURCE: Steven A. Riess, *Touching Base: Professional Baseball and American Culture in the Progressive Era* (Urbana: University of Illinois Press, 1999), 98.

Major league club owners were primarily men of new affluence, often Irish Catholics or German Jews. . . . These owners had important political connections that helped their sporting businesses succeed. . . . This created a fascinating paradox since WASPs [white, Anglo-Saxon Protestants] and other acculturated Americans regarded baseball as the institution that best epitomized the finest American beliefs, traditions, and values. Yet the baseball magnates were urban politicians, often machine politicians, who symbolized all that progressive small-town Americans believed was wrong with and destructive to American society.

STUART BANNER

SOURCE: Stuart Banner, *The Baseball Trust: A History of Baseball's Antitrust Exemption* (New York: Oxford University Press, 2013), 4–6.

The reserve clause would be a standard term in player contracts for nearly a century. . . . The teams first considered establishing limits on salaries, but they decided that it would be easier if they simply ceased competing with each other to hire the best players. Each club was accordingly allowed to reserve . . . players for the ensuing season. . . . Once a club reserved a player, the other clubs would treat him as if he were already under contract. . . . The result was an unusual system of labor relations, in which players were effectively bound for life to the teams that first signed them. . . . Even in the late nineteenth century, when workers throughout the economy had few rights enforceable against their employers, baseball stood out as a business in which the rules governing labor were conspicuously one-sided.

AP SHORT ANSWER PRACTICE

1. Identify one similarity and one difference in the way Riess and Banner describe the turn-of-the-century history of baseball.
2. How does their focus on the economics and politics of baseball change the story typically told about our "national pastime"?
3. From your reading of the excerpts and the textbook chapter, identify two specific ways baseball reflects broader developments in American history during this period.

lynched. Toledo put a substitute on the field, and at the end of the season the club terminated the black player's contract.

Shut out of white leagues, players and fans turned to all-black professional teams, where black men could showcase athletic ability and race pride. Louisiana's top team, the New Orleans Pinchbacks, pointedly named themselves after the state's black Reconstruction governor. By the early 1900s, such teams organized into separate **Negro Leagues**. Though players suffered from erratic pay and rundown ball fields, the leagues thrived until the desegregation of baseball after World War II. In an era of stark discrimination, they celebrated black manhood and talent. "I liked the way their uniform fit, the way they wore their cap," wrote an admiring fan of the Newark Eagles. "They showed a style in almost everything they did."

American Football The most controversial sport of the industrializing era was football, which began at elite colleges during the 1880s. The great powerhouse was the Yale team, whose legendary coach Walter Camp went on to become a

Football Practice, Chilocco Indian School, 1911 Football became widely popular, spreading from Ivy League schools and state universities to schools like this one, built on Cherokee land in Oklahoma. The uniforms of this team, typical of the day, show very limited padding and protection — a factor that contributed to high rates of injury and even death on the field. As they practiced in 1911, these Chilocco students had an inspiring model to look up to: in that year Jim Thorpe, a fellow Oklahoman and a member of the Sac and Fox tribe, was winning national fame by leading the all-Indian team at Pennsylvania's Carlisle School to victory against Harvard. Thorpe, one of the finest athletes of his generation, went on to win gold medals in the pentathlon and decathlon at the 1912 Olympics in Stockholm, Sweden. National Archives

watch manufacturer. Between 1883 and 1891, under Camp's direction, Yale scored 4,660 points; its opponents scored 92. Drawing on the workplace model of scientific management, Camp emphasized drill and precision. He and other coaches argued that football offered perfect training for the competitive world of business. The game was violent: six players' deaths in the 1908 college season provoked a public outcry. Eventually, new rules protected quarterbacks and required coaches to remove injured players from the game. But such measures were adopted grudgingly, with supporters arguing that they ruined football's benefits in manly training.

Like baseball and the YMCA, football attracted sponsorship from business leaders hoping to divert workers from labor activism. The first professional teams emerged in western Pennsylvania's steel towns, soon after the defeat of the steelworkers' union. Carnegie Steel executives organized teams in Homestead and Braddock; the first league appeared during the anthracite coal strike of 1902. Other teams arose in the midwestern industrial heartland. The Indian-Acme Packing Company sponsored the Green Bay Packers; the future Chicago Bears, first known as the Decatur Staleys, were funded by a manufacturer of laundry starch. Like its baseball equivalent, professional football encouraged men to buy in as spectators and fans.

AP® PRACTICES & SKILLS

CHANGE OVER TIME

How and why did American sports evolve, and how did athletics soften or sharpen social divisions?

The Great Outdoors

As the rise of sports suggests, by the 1890s elite and middle-class Americans began to see Victorian culture as stuffy and claustrophobic. They revolted by heading outdoors. A craze for bicycling swept the country; in 1890, at the height of the mania, U.S. manufacturers sold an astonishing ten million bikes. Women were not far behind men in taking up athletics. By the 1890s, even elite women, long confined to corsets and heavy clothes that restricted their movement, donned lighter dresses and pursued archery and golf. Artist Charles Gibson became famous for his portraits of the Gibson Girl, an elite beauty depicted on the tennis court or swimming at the beach. The Gibson Girl personified the ideal of "New Women," more educated, athletic, and independent than their mothers.

Those with money and leisure time used railroad networks to get to the national parks of the West, which, as one senator put it, became a "breathing-place for the national lungs." People of more modest means began to take up camping. As early as 1904, California's Coronado Beach offered tent rentals for $3 a week. A decade later, campgrounds and cottages in many parts of the country catered to a working-class clientele. In an industrial society, the outdoors became associated with leisure and renewal rather than danger and hard work. One journalist, reflecting on urban life from the vantage point of a western vacation, wrote, "How stupid it all seems: the mad eagerness of money-making men, the sham pleasures of conventional society." In the wilderness, he wrote, "your blood clarifies; your brain becomes active. You get a new view of life."

As Americans searched for such renewal in remnants of unexploited land, the nation's first environmental movement arose. John Muir, who fell in love with the Yosemite Valley in 1869, became the most famous voice for wilderness. Raised in a stern Scots Presbyterian family on a Wisconsin farm, Muir knew much of the Bible by heart. He was a keen observer who developed a deeply spiritual relationship with the natural world. His contemporary Mary Austin, whose book *Land of Little Rain* (1905) celebrated the austere beauty of the California desert, called him "a devout man." In cooperation with his editor at *Century* magazine, Muir founded the **Sierra Club** in 1892. Like the earlier Appalachian Mountain Club, founded in Boston in 1876, the Sierra Club dedicated itself to preserving and enjoying America's great mountains.

Winslow Homer, *In the Mountains* This 1877 painting, depicting hikers in the Adirondacks, suggests the appeal of outdoor exploration for women as well as men. Those who could afford a trip to the mountains could join walking and hiking clubs or in winter even try snowshoeing or skiing. Movements to protect wildlife and preserve wilderness date from this era. Unlike federal parks in the west, New York's Adirondacks evolved as a mixed-use area: homes, businesses, and communities remained, interspersed with 2.5 million acres of public lands where logging, mining, and building were prohibited. By 1895 the Adirondack Park, set aside "for the use of all the people forever," won protection in the New York state constitution. Brooklyn Museum of Art, New York, USA/Bridgeman Images

Encouraged by such groups, national and state governments set aside more public lands for preservation and recreation. The United States substantially expanded its park system and, during Theodore Roosevelt's presidency, extended the reach of national forests. Starting in 1872 with the preservation of Yellowstone in Wyoming, Congress had begun to set aside land for national parks. In 1916, President Woodrow Wilson provided comprehensive oversight of these national parks, signing an act creating the **National Park Service** (Map 17.1). A year later, the system numbered thirteen parks—including Maine's Acadia, the first east of the Mississippi River.

Environmentalists also worked to protect wildlife. By the 1890s, several state Audubon Societies, named in honor of antebellum naturalist John James Audubon, banded together to advocate broader protections for wild birds, especially herons and egrets, which were being slaughtered by the thousands for their plumes. They succeeded in winning the Lacey

MAP 17.1 National Parks and Forests, 1872–1980

Yellowstone, the first national park in the United States, dates from 1872. In 1893, the federal government began to intervene to protect national forests. Without Theodore Roosevelt, however, the national forest program might have languished; during his presidency, he added 125 million acres to the forest system, plus six national parks in addition to several that had already been created during the 1890s. America's national forest and park systems remain one of the most visible and beloved legacies of federal policy innovation in the decades between the Civil War and World War I.

Act (1900), which established federal penalties for selling specified birds, animals, and plants. Soon afterward, state organizations joined together to form the National Audubon Society. Women played prominent roles in the movement, promoting boycotts of hats with plumage. In 1903, President Theodore Roosevelt created the first National Wildlife Refuge at Pelican Island, Florida.

Roosevelt also expanded preservation under the **Antiquities Act** (1906), which enabled the U.S. president, without congressional approval, to set aside "objects of historic and scientific interest" as national monuments. Two years later, Roosevelt used these powers to preserve 800,000 acres at Arizona's magnificent Grand Canyon. The act proved a mixed blessing for conservation. Monuments received weaker protection than national parks did; many fell under the authority of the U.S. Forest Service, which permitted logging and grazing. Business interests thus lobbied to have coveted lands designated as monuments rather than national parks so they could more easily exploit resources. Nonetheless, the creation of national monuments offered some protection, and many monuments (such as Alaska's Katmai) later obtained park status. The expanding network of parks and monuments became popular places to hike, camp, and contemplate natural beauty.

The great outdoors provided new opportunities for women with the means to travel. One writer, advising women to enjoy mountain hikes, hinted at liberating possibilities: "For those loving freedom and health," he recommended "short skirts, pantlets, stout shoes, tasty hat." And like other leisure venues, "wilderness" did not remain in the hands of elite men and women. As early as the late 1880s, the lakes and hiking trails of the Catskill Mountains became so thronged with working-class tourists from nearby New York City, including many Jewish immigrants, that elite visitors began to segregate themselves into gated summer communities. They thus preserved the "seclusion and

privacy" that they snobbishly claimed as the privilege of those who could demonstrate "mental and personal worth."

At the state level, meanwhile, new game laws triggered conflicts between elite **conservationists** and the poor. Shifting from year-round subsistence hunting to a limited, recreational hunting season brought hardship to poor rural families who depended on game for food. Regulation brought undeniable benefits: it suppressed such popular practices as songbird hunting and the use of dynamite to kill fish. Looking back on the era before game laws, one Alabama hunter remembered that "the slaughter was terrific." But while game laws prevented further extinctions like that of the passenger pigeon, which vanished around 1900, they made it harder for rural people to support themselves through subsistence hunting and fishing.

AP® PRACTICES & SKILLS

CAUSATION

What changes in American society precipitated the rise of national parks and monuments?

IN YOUR OWN WORDS How did industrialization change Americans' ideas about appropriate leisure activities for men and women of various social classes?

Women, Men, and the Solitude of Self

Speaking to Congress in 1892, women's rights advocate Elizabeth Cady Stanton described what she called the "solitude of self." Stanton rejected the claim that women did not need equal rights because they enjoyed men's protection. "The talk of sheltering woman from the fierce storms of life is the sheerest mockery," she declared. "They beat on her from every point of the compass, just as they do on man, and with more fatal results, for he has been trained to protect himself."

Stanton's argument captured one of the dilemmas of industrialization: the marketplace of labor brought both freedom and risk, and working-class women were particularly vulnerable. At the same time, middle-class women — expected to engage in selfless community service — often saw the impact of industrialization more clearly than fathers, brothers, and husbands did. In seeking to address alcoholism, poverty, and other social and economic ills, they gained a new sense of their own collective power. Women's protest and reform work thus helped lay the foundations for progressivism (Chapter 19) and modern women's rights.

Changing Families

AP® EXAM TIP

Identifying the changes in family life in the late nineteenth century is critical on the AP® exam.

The average American family, especially in the middle class, decreased in size during the industrial era. In 1800, white women who survived to menopause had borne an average of 7.0 children; by 1900, the average was 3.6. On farms and in many working-class families, youngsters counted as assets on the family balance sheet: they worked in fields or factories. But parents who had fewer sons and daughters could concentrate their resources, educating and preparing each child for success in the new economy. Among the professional classes, education became a necessity, while limiting family size became, more broadly, a key to upward mobility.

Several factors limited childbearing. Americans married at older ages, and many mothers tried to space pregnancies more widely — as their mothers and grandmothers had — by nursing children for several years, which suppressed fertility. By the late nineteenth century, as vulcanized rubber became available, couples also had access to a range of other contraceptive methods, such as condoms and diaphragms. With pressure for family limitation rising, these methods were widely used and apparently effective. But couples rarely wrote about them. Historians' evidence comes from the occasional frank diary and from the thriving success of the mail-order contraceptive industry, which advertised prominently and shipped products — wrapped in discreet brown paper packages — to customers nationwide.

Reluctance to talk about contraceptives was understandable, since information about them was **stigmatized** and, after 1873, illegal to distribute. During Reconstruction, Anthony Comstock, crusading secretary of the New York Society for the Suppression of Vice, secured a federal law banning "obscene materials" from the U.S. mail. The **Comstock Act** (1873) prohibited circulation of almost any information about sex and birth control — even in private letters. Comstock won support for the law, in part, by appealing to parents' fears that young people were receiving sexual information through the mail, promoting the rise of "secret vice." Though critics charged Comstock with high-handed interference in private matters, others supported his work, fearful of the rising tide of pornography, sexual information, and contraceptives made available by industrialization. A committee of the New York legislature declared Comstock's crusade "wholly essential to the safety and decency of the community." It appears, however, that Comstock had little success in stopping the lucrative and popular trade in contraceptives.

Portrait of a Middle-Class American Family This photograph of the Hedlund family was taken on July 4, 1911, on the front porch of their home in St. Paul, Minnesota. Christian, Grace, and Anna Hedlund appear on the top row, Louis and George on the bottom. Families like this one — with three children — were becoming typical among the middle class, in contrast to larger families in earlier generations. This photo was taken by twenty-one-year-old Joseph Pavlicek, a recent immigrant from Eastern Europe who was boarding with the Hedlunds. Pavlicek bought fireworks for the children to celebrate the holiday. He remembered being so proud and grateful to be in America that his heart "was nearly bursting." Minnesota Historical Society

Education

In the industrial economy, the watchword for young people who hoped to secure good jobs was *education*. A high school diploma — now a gateway to a college degree — was valuable for boys who hoped to enter professional or managerial work. Daughters attended in even larger numbers than their brothers. Parents of the Civil War generation, who had witnessed the plight of war widows and orphans, encouraged girls to prepare themselves for teaching or office jobs, work before marriage, and gain skills they could fall back on, "just in case." By 1900, 71 percent of Americans between the ages of five and eighteen attended school. That figure rose further in the early twentieth century, as public officials adopted laws requiring school attendance.

Most high schools were coeducational, and almost every high school featured athletics. Recruited first as cheerleaders for boys' teams, girls soon established field hockey and other sports of their own. Boys and girls engaged in friendly — and sometimes not-so-friendly — rivalry in high school. In 1884, a high school newspaper in Concord, New Hampshire, published this poem from a disgruntled boy who caricatured his female classmates:

> We know many tongues of living and dead,
> In science and fiction we're very well read,
> But we cannot cook meat and cannot make bread
> And we've wished many times that we were all dead.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

In what ways did the Comstock Act reflect and contradict the realities of American life in the industrial era?

A female student shot back a poem of her own, denouncing male students' smoking habit:

> But if boys will smoke cigarettes
> Although the smoke may choke them,
> One consolation still remains —
> *They kill the boys that smoke them.*

The rate of Americans attending college had long hovered around 2 percent; driven by public universities' expansion, the rate rose in the 1880s, reaching 8 percent by 1920. Much larger numbers attended a growing network of business and technical schools. "GET A PLACE IN THE WORLD," advertised one Minneapolis business college in 1907, "where your talents can be used to the best advantage." Typically, such schools offered both day and night classes in subjects such as bookkeeping, typewriting, and shorthand.

AP® EXAM TIP

Compare the leadership of Booker T. Washington and W. E. B. Du Bois (see AP® Analyzing Voices on p. 530).

The needs of the new economy also shaped the curriculum at more traditional collegiate institutions. State universities emphasized technical training and fed the growing professional workforce with graduates trained in fields such as engineering. Many private colleges distanced themselves from such practical pursuits; their administrators argued that students who aimed to be leaders needed broad-based knowledge. But they modernized course offerings, emphasizing French and German, for example, rather than Latin and Greek. Harvard, led by dynamic president Charles W. Eliot from 1869 to 1909, pioneered the liberal arts. Students at the all-male college chose from a range of electives, as Eliot called for classes that developed each young man's "individual reality and creative power."

Booker T. Washington In an age of severe racial oppression, Booker T. Washington emerged as the leading public voice of African Americans. He was remarkable both for his effectiveness in speaking to white Americans and for his deep understanding of the aspirations of blacks. Born a slave, Washington had plenty of firsthand experience with racism. But having befriended several whites in his youth, he also believed that African Americans could appeal to whites of good will — and maneuver around those who were hostile — in the struggle for equality. He hoped, most of all, that economic achievement would erase white prejudice.

In the South, one of the most famous educational projects was Booker T. Washington's Tuskegee Institute, founded in 1881. Washington both taught and exemplified the goal of self-help; his autobiography, *Up from Slavery* (1901), became a best-seller. Because of the deep poverty in which most southern African Americans lived, Washington concluded that "book education" for most "would be almost a waste of time." He focused instead on industrial education. Students, he argued, would "be sure of knowing how to make a living after they had left us." Tuskegee sent female graduates into teaching and nursing; men more often entered the industrial trades or farmed by the latest scientific methods.

Washington gained national fame in 1895 with his **Atlanta Compromise** address, delivered at the Cotton States Exposition in Atlanta, Georgia. For the exposition's white organizers, the racial "compromise" was inviting Washington to speak at all. It was a move intended to show racial progress in the South. Washington, in turn, delivered an address that many interpreted as approving racial segregation. Stating that African Americans had, in slavery days, "proved our loyalty to you," he assured whites that "in our humble way, we shall stand by you . . . ready to lay down our lives, if need be, in defense of yours." The races could remain socially detached: "In all things that are purely social we can be as separate as the fingers, yet one as the hand in all things essential to mutual progress." Washington urged, however, that whites join him in working for "the highest intelligence and development of all."

Whites greeted this address with enthusiasm, and Washington became the most prominent black leader of his generation. His soothing rhetoric and style of leadership, based on avoiding

confrontation and cultivating white patronage and private influence, was well suited to the difficult years after Reconstruction. Washington believed that money was color-blind, that whites would respect economic success. He represented the ideals of millions of African Americans who hoped education and hard work would erase white prejudice. That hope proved tragically overoptimistic. As the tide of disfranchisement and segregation rolled in, Washington would come under fire from a younger generation of race leaders who argued that he accommodated too much to white racism.

In addition to African American education, women's higher education expanded notably. In the Northeast and South, women most often attended single-sex institutions, including teacher-training colleges. For affluent families, private colleges offered an education equivalent to men's—for an equally high price. Vassar College started the trend when it opened in 1861; Smith, Wellesley, and others followed. Anxious doctors warned that these institutions were dangerous: intensive brain work would unsex young women and drain energy from their ovaries, leading them to bear weak children. But as thousands of women earned degrees and suffered no apparent harm, fears faded. Single-sex higher education for women spread from private to public institutions, especially in the South, where the Mississippi State College for Women (1885) led the way.

Class of 1896, Radcliffe College When Harvard University, long a bastion of male privilege, created an "Annex" for women's instruction in 1879, it was a sure sign of growing support for women's higher education. The Annex became Radcliffe College in 1894. Two years later, this graduating class of thirty posed for their portrait. Among them was Alice Sterling of Bridgeport, Connecticut, who went on to marry Harvard graduate Frank Cook and devote herself to Protestant foreign missions. On two trips around the world, Alice Sterling Cook visited all the women's colleges that missionaries had founded in India, China, and Japan. Cook's energetic public activities typified those of many women's college alumnae. Schlesinger Library, Radcliffe Institute, Harvard University/Bridgeman Images

Coeducation was more prevalent in the Midwest and West, where many state universities opened their doors to female students after the Civil War. Women were also admitted to most African American colleges founded during Reconstruction. By 1910, 58 percent of America's colleges and universities were coeducational. While students at single-sex institutions forged strong bonds with one another, women also gained benefits from learning with men. When male students were friendly, they built comfortable working relationships; when men were hostile, women learned coping skills that served them well in later employment or reform work. One doctor who studied at the University of Iowa remembered later that he and his friends mercilessly harassed the first women who entered the medical school. But when the women showed they were good students, the men's attitudes changed to "wholesome respect."

Whether or not they got a college education, more and more women recognized, in the words of Elizabeth Cady Stanton, their "solitude of self." In the changing economy, they could not always count on fathers and husbands. Women who needed to support themselves could choose from dozens of guidebooks such as *What Girls Can Do* (1880) and *How to Make Money Although a Woman* (1895). The Association for the Advancement of Women, founded in 1873 by women's college graduates, defended women's higher education and argued that women's paid employment was a positive good.

Today, many economists argue that education and high-quality jobs for women are keys to reducing poverty in the developing world. In the United States, that process also led to broader gains in women's political rights. As women began to earn advanced degrees, work for wages and salaries, and live independently, it became harder to argue that women were "dependents" who did not need to vote.

AP® PRACTICES & SKILLS

CHANGE OVER TIME

How did educational opportunities change after the Civil War, and for whom?

Toward Women's Emancipation

As the United States confronted industrialization, middle-class women steadily expanded their place beyond the household, building reform movements and taking political action. Starting in the 1880s, women's clubs sprang up and began to study such problems as pollution, unsafe working conditions, and urban poverty. So many formed by 1890 that their leaders created a nationwide umbrella organization, the General Federation of Women's Clubs. Women justified such work through the ideal of **maternalism**, appealing to their special role as mothers. Maternalism was an intermediate step between domesticity and modern arguments for women's equality. "Women's place is Home," declared the journalist Rheta Childe Dorr. But she added, "Home is the community. The city full of people is the Family. . . . Badly do the Home and Family need their mother."

AP® EXAM TIP

As you read through this section, analyze the changes that occurred in women's activism in the late nineteenth and early twentieth centuries.

Women's Temperance Activism

One maternalist goal was to curb alcohol abuse by prohibiting liquor sales. The **Woman's Christian Temperance Union** (WCTU), founded after a series of women's grassroots campaigns in 1874, spread rapidly after 1879, when charismatic Frances Willard became its leader. More than any other group of the late nineteenth century, the WCTU launched women into reform. Willard knew how to frame political demands in the language of feminine self-sacrifice. "Womanliness first," she advised her followers; "afterward, what you will." WCTU members vividly described the plight of abused wives and children when men suffered in the grip of alcoholism. Willard's motto was "Home Protection," and though it placed all the blame on alcohol rather than other factors, the WCTU became the first organization to identify and combat domestic violence.

The prohibitionist movement drew activists from many backgrounds. Middle-class city dwellers worried about the link between alcoholism and crime, especially in the growing immigrant wards. Rural citizens equated liquor with big-city sins such as prostitution and political corruption. Methodists, Baptists, Mormons, and members of other denominations condemned drinking for religious reasons. Immigrants passionately disagreed, however: Germans and Irish Catholics enjoyed their Sunday beer and saw no harm in it. Saloons were a centerpiece of working-class leisure and community life, offering free lunches, public toilets, and a place to share neighborhood news. Thus, while some labor unions advocated voluntary temperance, attitudes toward prohibition divided along ethnic, religious, and class lines.

WCTU activism led some leaders to raise radical questions about the shape of industrial society. As she investigated alcohol abuse, Willard increasingly confronted poverty, hunger, unemployment, and other industrial problems (AP® Thinking Like a Historian). Across the United States, WCTU locals founded soup kitchens and free libraries. They introduced a German educational innovation, the kindergarten. They investigated prison conditions. Though she did not persuade most prohibitionists to follow her lead, Willard declared herself a Christian Socialist and urged more attention to

Family Temperance Pledge This pledge form lists twelve reasons for abstaining from drinking alcoholic beverages and provides space for all family members to sign. It warns that "moderate drinking" can lead to alcoholism, "the Bible pronounces no blessing upon drinking," and "intemperance obstructs civilization, education, religion and every useful reform." Compare this pledge, printed around 1900, to the one from 1841 that appears in Chapter 10 (see p. 306). What continuities and changes do they suggest in ideals of religion, reform, and family life? Hearn Collection/Getty Images

workers' plight. She advocated laws establishing an eight-hour workday and abolishing child labor.

Willard also called for women's voting rights, lending powerful support to the independent suffrage movement that had emerged during Reconstruction. Controversially, the WCTU threw its energies behind the Prohibition Party, which exercised considerable clout during the 1880s. Women worked in the party as speakers, convention delegates, and even local candidates. Liquor was big business, and powerful interests mobilized to block antiliquor legislation. In many areas—particularly the cities—prohibition simply did not gain majority support. Willard retired to England, where she died in 1898, worn and discouraged by many defeats. But her legacy was powerful. Other groups took up the cause, eventually winning national prohibition after World War I.

Through its emphasis on human welfare, the WCTU encouraged women to join the national debate over poverty and inequality of wealth. Some became active in the People's Party of the 1890s, which welcomed women as organizers and **stump** speakers. Others led groups such as the National Congress of Mothers, founded in 1897, which promoted better child-rearing techniques in rural and working-class families. The WCTU had taught women how to lobby, raise money, and even run for office. Willard wrote that "perhaps the most significant outcome" of the movement was women's "knowledge of their own power."

AP® PRACTICES & SKILLS

POINT OF VIEW

How did women use widespread beliefs about their "special role" to justify political activism, and for what goals?

Women, Race, and Patriotism As in temperance work, women played central roles in patriotic movements and African American community activism. Members of the Daughters of the American Revolution (DAR), founded in 1890, celebrated the memory of Revolutionary War heroes. Equally influential was the United Daughters of the Confederacy (UDC), founded in 1894 to extol the South's "Lost Cause." The UDC's elite southern members shaped Americans' memory of the Civil War by constructing monuments, distributing Confederate flags, and promoting school textbooks that defended the Confederacy and condemned Reconstruction. The UDC's work helped build and maintain support for segregation and disfranchisement (see Chapter 14, Thinking Like a Historian).

African American women did not sit idle in the face of this challenge. In 1896, they created the **National Association of Colored Women**. Through its local clubs, black women arranged for the care of orphans, founded homes for the elderly, advocated temperance, and undertook public health campaigns. Such women shared with white women a determination to carry domesticity into the public sphere. Journalist Victoria Earle Matthews hailed the American home as "the foundation upon which nationality rests, the pride of the citizen, and the glory of the Republic." She and other African American women used the language of domesticity and respectability to justify their work.

One of the most radical voices was Ida B. Wells, who as a young Tennessee schoolteacher sued the Chesapeake & Ohio Railroad for denying her a seat in the ladies' car (see p. 539). In 1892, a white mob in Memphis invaded a grocery store owned by three of Wells's friends, angry that it competed with a nearby white-owned store. When the black store owners defended themselves, wounding several of their attackers, all three were lynched. Grieving their deaths, Wells left Memphis and urged other African Americans to join her in boycotting the city's white businesses. As a journalist, she launched a one-woman campaign against lynching. Wells's investigations demolished the myth that

1892.

Ida B. Wells In 1887, Ida Wells (Wells-Barnett after she married in 1895) was thrown bodily from a train in Tennessee for refusing to vacate her seat in a section reserved for whites, launching her into a lifelong crusade for racial justice. Her mission was to expose the evil of lynching in the South. This image is the title page of a pamphlet she published in 1892.

WCTU Women "Do Everything"

Frances Willard, one of late-nineteenth-century America's most dynamic and admired reformers, rose to leadership of the Woman's Christian Temperance Union (WCTU) in the 1870s, when she was in her thirties. She built the WCTU, which had emerged from a series of spontaneous protests in Ohio in the 1870s, into a powerful national organization, touring the West, the ex-Confederacy, and Europe and reaching out to African Americans, immigrants, and farmer-labor organizations. Urging women to view alcohol abuse in a broad context, she famously challenged them to "Do Everything": start libraries, soup kitchens, and kindergartens; advocate prison reform; oppose prostitution; work for women's suffrage; and elect male prohibitionists to office — or run as candidates themselves. Though the WCTU had limited electoral success, it trained tens of thousands of women in strategies for civic engagement.

1. **Consequences of Intemperance, 1874.** *In songs, lectures, personal testimony, and illustrations like this one, prohibitionists described — sometimes luridly — the effects of alcoholism.*

Source: Library of Congress

2. **Frances E. Willard, *Hints and Helps in Our Temperance Work*, 1875.** Hints and Helps *was one of Willard's first guidebooks for WCTU members.*

An attempt has here been made to anticipate questions that arise in the minds of Christian women who are willing to labor in the temperance cause, but not informed concerning plans of organization or methods of work. . . .

Write to your state secretary for a list of the best speakers available to you.

Observe the 23rd of December, the anniversary of the [1873 Ohio] crusade, by special exercises, in which men, women, and children all participate.

Get correct statistics of intemperance in *your own town*, and have them kept before the people. These will tell more than imported figures. Interest the press in your work. Wherever practicable, edit a column in the local newspaper. . . .

Whatever you neglect, keep up your *prayer-meeting*, and so far as possible get men and women in the bondage of strong drink to come there and sign the pledge and seek "the Lord behind the pledge." But while you are thus caring for the sick and wounded, do not forget that, after all, your most effective work is *drilling the juvenile troops*, and carrying your peaceful war right into the ranks of the men who vote. . . .

So far as possible, enlist *the pastors and the churches*. Seek to influence each church to become practically *a Temperance Society*. . . .

Write in a blank-book this agreement: "We, the undersigned, believing it to be for the greatest numbers' greatest good, agree to pay our employees on Monday (or the first of the week) instead of on Saturday night, from this time henceforth." Get all the business men to sign it. . . .

Seek to multiply places and sources of rational recreation for the young. If possible, induce each church in the town to fit up one of its apartments as a reading-room and place for social gatherings. . . .

Homes for Inebriates — both men and women — should be established in our cities, and the Women's Unions can do much to aid in this enterprise, by soliciting aid from the state and municipal governments and from the public. . . .

Drinking fountains for "man and beast" ought to be erected by our Unions in every city, town, and village. . . .

During the session of the legislature the Woman's State Union should plan for a convention or a series of mass-meetings at the capital. . . .

3. **Frances Willard on "Home Protection," 1879.** *Early in her career Willard took on the controversial issue of women's suffrage. By the late 1880s, most state WCTUs in the Northeast, Midwest, and West took up suffrage advocacy.*

"Home Protection" is the general name given to a movement already endorsed by the W.C.T. Unions of eight states, the object of which is to secure for all women above the age of twenty-one years the ballot as one means for the protection of their homes from the devastation caused by the legalized traffic in strong drink. . . .

We want [the] ballot because the liquor traffic is entrenched in law, and law grows out of the will of majorities. . . . As steam can be applied to locomotion only through an engine, and as electricity can be utilized only through a battery, so, in a Republic, we can condense the opinion of this majority of women into law only through the magical little paper which falls

As snowflakes fall upon the sod;

But executes a freeman's will

As lightnings do the will of God.

4. **Frances E. W. Harper, "The Woman's Christian Temperance Union and the Colored Woman," 1888.** *Writer and activist Frances E. W. Harper became one of the most prominent African American leaders in the WCTU. As Harper notes, black women worked largely in separate unions, sometimes by choice, but more often because white women insisted on maintaining all-white unions.*

Victor Hugo has spoken of the nineteenth century as being woman's era, and among the most noticeable epochs of this era is the uprising of women against the twin evils of slavery and intemperance. . . . In the great anti-slavery conflict women had borne a part, but after the storm cloud of battle had rolled away, it was found that an enemy, old and strong and deceptive, was warring against the best interests of society; not simply an enemy to one race, but an enemy to all races. . . . To dislodge this enemy, to put prohibition not simply on the statute book, but in the heart and conscience of a nation, embracing within itself such heterogeneous classes, is no child's play. . . .

One of the pleasantest remembrances of my connection with the Woman's Christian Temperance Union was the kind and hospitable reception I met in the Missouri State Convention, [whose] President, Mrs. Hoffman, . . . declared that the color-line was eliminated. A Superintendent was chosen at that meeting for colored work in the State. . . . Our work is divided into about forty departments, [including] departments for parlor meetings, juvenile and evangelistic work. . . . The Union held meetings in Methodist and Baptist churches, and opened in the African Methodist Episcopal Church an industrial school for children. . . . Some of the Unions . . . took the initiative for founding an orphan asylum for colored children. . . .

In the farther South separate State Unions have been formed. Southern white women, it may be, fail to make in their minds the discrimination between social equality and Christian affiliation. . . . Whether or not the members of the farther South will subordinate the spirit of caste to the spirit of Christ, time will show. . . .

5. **Frances Willard on her bicycle in Evanston, Illinois, 1893.** *Willard was in her fifties and in failing health when the United States was swept up in a bicycle craze, but she nonetheless undertook to show worried parents that bike riding was safe and fun for women and girls. As she reported in* A Wheel Within a Wheel, *biking gave girls self-confidence and an independent spirit to meet the challenges of the "wider world." Here, her two stenographers help her with her bicycle, which she nicknamed Gladys.*

Courtesy of the Frances E. Willard Memorial Library and Archives

6. **Rozette Hendrix, Minnesota's WCTU president, reports on the Union's work, 1912.** *Although Frances Willard died in 1898 and newer groups such as the Anti-Saloon League captured public attention, the WCTU continued organizing until the passage of national prohibition in 1920 (Chapter 21). This report suggests the diversity of its interests and alliances.*

Years ago the women began a war against child labor and also to procure compulsory educational laws, and sentiment has been created and much done along these lines. By the revision of our own state laws children under sixteen years of age are prohibited from employment in factories . . . and children under sixteen years of age are required to be in school. . . .

There is an aroused interest along all lines of Purity, not only in work done by our own organization but by others. A National Society of Moral Hygiene to promote sex teaching has been started, and an American Vigilance Association has been formed . . . [whose] purpose is the suppression of commercialized vice. . . . We have secured in our state such laws as are necessary for the suppression of [sex] traffic except the Injunction and Abatement measure which we failed of getting last session because of lack of time, and which we hope to get at our coming legislature. . . .

During the past year another state has been added to those already giving full suffrage. . . . [As one doctor puts it], "How absurd that women who suffer most because of intemperance should not be permitted to have anything to do with settling the question of the saloon." Women who are the home makers are the ones who are most concerned in these matters and when they have had a chance to vote, they have shown their interest. . . .

We are out to win. We are in the midst of a battle for state-wide prohibition and we shall never know defeat, victory may be delayed but it will come. God lives and right will prevail. . . . Have you not caught the vision of the homes protected, children free from the evils of drink, the tears wiped from the faces of mothers, sisters, and wives. Let us . . . work and pray as we never have before, for the homes, for the boys and the girls of Minnesota.

Willard* (Urbana: University of Illinois Press, 2007), 12–14; (3) Frances E. Willard, *Home Protection Manual* (New York: Independent, 1879), 4–5; (4) *A.M.E. Church Review* 12 (1888): 313–316; (6) Rozette Hendrix, "President's Annual Address," *Minutes of the Thirty-Sixth Annual Meeting of the WCTU of the State of Minnesota* (Minneapolis: Thurston & Gould, 1912), in Kathryn Kish Sklar and Thomas Dublin, eds., *Women and Social Movements in the United States, 1600-2000*, accessed through Vassar College Library at library.vassar.edu, Jan. 3, 2017.

ANALYZING THE EVIDENCE

1. How did Willard and other prohibitionists craft their public appeals? Use evidence from the sources to explain what values and identities WCTU leaders hoped would motivate others to join.
2. In addition to outlawing the manufacture and sale of liquor, the WCTU worked for a range of other measures. What policy recommendations appear in these documents? How might antiliquor work have led women to advocate these other policies?
3. Which Americans were likely most receptive to the WCTU's message, and why? Who may have been indifferent or hostile, and why?

AP® DBQ PRACTICE

Using evidence from these sources and your knowledge of the period, write an essay responding to Frances Harper's comment, drawn from Victor Hugo, that the late nineteenth century was "women's era." What roles did the WCTU play in women's activism and women's rights?

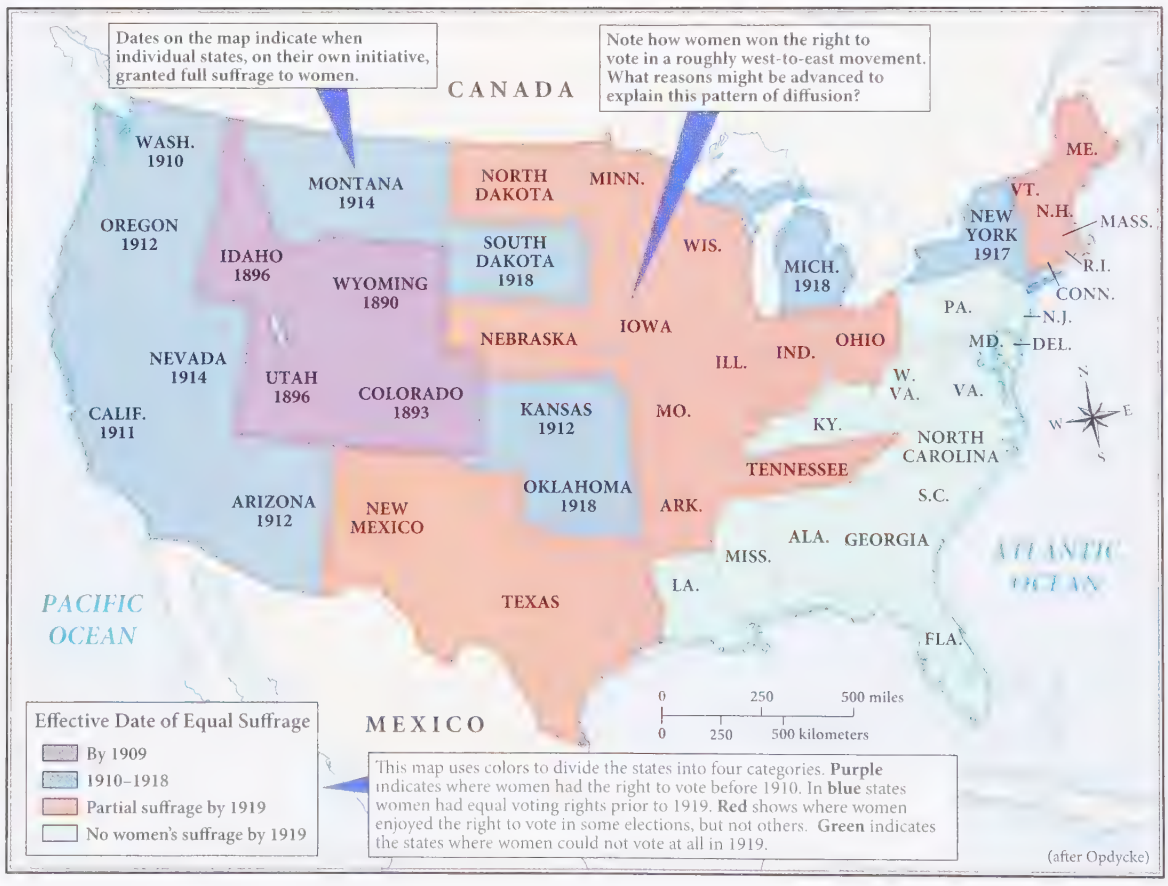
AP® EXAM TIP

Evaluate the context in which Ida B. Wells became a spokeswoman for racial equality.

lynchers were reacting to the crime of rape; she showed that the real cause was more often economic competition, a labor dispute, or a consensual relationship between a white woman and a black man. Settling in Chicago, Wells became a noted and accomplished reformer, but in an era of increasing racial injustice, few whites supported her cause.

The largest African American women's organization arose within the National Baptist Church (NBC), which by 1906 represented 2.4 million black churchgoers. Founded in 1900, the Women's Convention of the NBC funded night schools, health clinics, kindergartens, day care centers, and prison outreach programs. Adella Hunt Logan, born in Alabama, exemplified how such work could lead women to demand political rights. Educated at Atlanta University, Logan became a women's club leader, teacher, and suffrage advocate. "If white American women, with all their mutual and acquired advantage, need the ballot," she declared, "how much more do Black Americans, male and female, need the strong defense of a vote to help secure them their right to life, liberty, and the pursuit of happiness?"

Women's Rights Though it had split into two rival organizations during Reconstruction (Chapter 14), the movement for women's suffrage reunited in 1890 in the **National American Woman Suffrage Association** (NAWSA). Soon afterward,



MAP 17.2 Women's Suffrage, 1890–1919

By 1909, after more than sixty years of agitation, only four lightly populated western states had granted women full voting rights. A number of other states offered partial suffrage, limited to voting for school boards and such issues as taxes and local referenda on whether or not to permit the sale of liquor licenses (the so-called local option). Between 1910 and 1918, as the effort shifted to the struggle for a constitutional amendment, eleven states joined the list granting full suffrage. The West remained the most progressive region in granting women's voting rights; the most stubborn resistance lay in the ex-Confederacy.

suffragists built on earlier victories in the West, winning full ballots for women in Colorado (1893), Idaho (1896), and Utah (1896, reestablished as Utah gained statehood). Afterward, movement leaders were discouraged by a decade of state-level defeats and Congress's refusal to consider a constitutional amendment. But suffrage again picked up momentum after 1911 (Map 17.2). By 1913, most women living west of the Mississippi River had the ballot. In other localities, women could vote in municipal elections, school elections, or liquor referenda.

The rising prominence of the women's suffrage movement had an ironic result: it prompted some women — and men — to organize against it, in groups such as the National Association Opposed to Woman Suffrage (1911). Antisuffragists argued that it was expensive to add so many voters to the rolls; wives' ballots would just "double their husbands' votes" or worse, cancel them out, subjecting men to "petticoat rule." Some antisuffragists also argued that voting would undermine women's special roles as disinterested reformers: no longer above the fray, they would be plunged into the "cesspool of politics." In short, women were "better citizens without the ballot." Such arguments helped delay passage of national women's suffrage until after World War I.

By the 1910s, some women moved beyond suffrage to take a public stance for what they called **feminism** — women's full political, economic, and social equality. A famous site of sexual rebellion was New York's Greenwich Village, where radical intellectuals, including many gays and lesbians, created a vibrant community. Among other political activities, women there founded the Heterodoxy Club (1912), open to any woman who pledged not to be "orthodox in her opinions." The club brought together intellectuals, journalists, and labor organizers. Almost all supported suffrage, but they had a more ambitious view of what was needed for women's liberation. "I wanted to belong to the human race, not to a ladies' aid society," wrote one divorced journalist who joined Heterodoxy. Feminists argued that women should not simply fulfill expectations of feminine self-sacrifice; they should work on their own behalf. As the United States entered the modern era, then, greater advocacy for women's rights proved to be — like new consumer spaces, literary realism, and appreciation for wilderness — another unexpected transformation wrought by industrialization.

AP® EXAM TIP

Identifying the causes for the rise of feminism is a "must know" for the AP® exam.

IN YOUR OWN WORDS How did women's public activism impact American politics and society?

SUMMARY

In the era of industrialization, new intellectual currents, including Darwinism, challenged nineteenth-century certainties. Debates over evolution, especially its implications for the human species, proved particularly intense and long-lasting. "Survival of the fittest" — a term invented not by Charles Darwin, but by Herbert Spencer — was cited to justify ruthless business practices and inequalities of wealth. Eugenic "science" underlay such discriminatory practices as forced sterilization and laws against interracial marriage.

Science and modernism did not, however, displace religion. Newly arrived Catholics and Jews, as well as old-line Protestants, adapted their faiths to the conditions of modern life. Foreign missions spread the Christian gospel around the world, with mixed results for those receiving the message.

In the arts, realist and naturalist writers rejected both romanticism and the tenets of domesticity. Many Americans were shocked by the results, including Theodore Dreiser's scandalous novel *Sister Carrie*, Mark Twain's rejection of Christian faith, and the boldly modernist paintings displayed at New York's Armory Show.

Industrialization and new consumer practices created foundations for modern American culture. While middle-class families sought to preserve the Victorian domestic ideal, a variety of factors transformed family life. Families had fewer children, and a substantial majority of young people achieved more education than their parents had obtained. Across class and gender lines, Americans enjoyed athletics and the outdoors, fostering the rise of environmentalism.

Among an array of women's reform movements, the Woman's Christian Temperance Union sought prohibition of liquor, but it also addressed issues such as domestic violence, poverty, and education. Members of women's clubs pursued a variety of social and economic reforms, while other women organized for race uplift and patriotic work. Gradually, the Victorian ideal of female moral superiority gave way to modern claims for women's equal rights.

CHAPTER 17 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. How did Charles Darwin's theory of evolution and other scientific ideas impact American culture and intellectual life in the late nineteenth century? What uses did nonscientists make of such ideas?
2. How did industrialization change Americans' ideas about appropriate leisure activities for men and women of various social classes?
3. How did women's public activism impact American politics and society?
4. On the Part 6 thematic timeline (p. 495), review developments in "Culture and Society" and "Geography and the Environment." How did industrialization change Americans' relationship to the outdoors — to natural environments? What connections do you see between those changes and other, broader shifts in American society and culture?

AP® TERMS TO KNOW

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. This chapter explains cultural transformation as largely the result of industrialization. That's true, but it's not the whole story: the Civil War also helped bring about change. Review the material in Chapters 13 and 14, on the Civil War and its aftermath, and then write an essay in which you explain how changes in American society during the Civil War and Reconstruction laid the groundwork for cultural change in the areas of race relations, reform, science, and religious faith.
2. Consider the images in "Portrait of a Middle-Class American Family" (p. 547), the Radcliffe class of 1896 (p. 549), and the cover of Ida B. Wells's investigative report on lynchings (p. 551). What do women's dress, hair, and deportment suggest about expectations for women at the time? In what ways do these images suggest how standards might have been changing for younger women and girls?

KEY TURNING POINTS

Refer to the chapter chronology on page 528 for help in answering the question below.

Some historians have argued that the 1890s was a crucial turning point in American culture — a decade when "modernity arrived." Based on events in this chapter, do you agree?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS

Choose the correct answer for each question.

Questions 1–3 refer to the following excerpt.

> "Private property . . . in the natural conditions of the struggle for existence produces inequalities between men. The struggle for existence is aimed against nature. It is from her . . . hand that we have to wrest the satisfactions for our needs, but our fellow-men are our competitors for the meager supply. Competition, therefore, is a law of nature. Nature is entirely neutral; she submits to him who most energetically and resolutely assails her. She grants her awards to the fittest, therefore, without regard to other considerations of any kind. . . . If we do not like it, and if we try to amend it, there is only one way in which we can do it. We can take from the better and give to the worse. . . . We shall thus lessen the inequalities. We shall favor the survival of the unfittest, and we shall accomplish this by destroying liberty."
>
> Essay by Yale Professor William Graham Sumner, 1880

1. The ideas in the passage above most directly led to controversies in the 1880s and 1890s over
   a. increasing numbers of international migrants.
   b. business efforts to secure international markets.
   c. wages and working conditions.
   d. the moral obligations of business leaders to improve society.
2. Which of the following late twentieth century events represent a continuation of the ideas described in the passage at left?
   a. Increased military spending of the Reagan administration
   b. Deregulation of industry implemented by conservatives
   c. International free-trade agreements
   d. Great Society reforms enacted by liberals
3. Which of the following ideologies express the greatest difference from the ideas expressed in the excerpt?
   a. Populism
   b. Social Darwinism
   c. Nativism
   d. Laissez-faire capitalism

Questions 4–6 refer to the excerpt below.

> "It is hardly necessary at the present day to enter a plea for athletic exercise and manly out-door sports. . . . [T]his growth can best be promoted by stimulating, within proper bounds, the spirit of rivalry on which all our games are based. . . . As a nation we have many tremendous problems to work out, and we need to bring every ounce of vital power possible to the solution. No people has ever yet done great and lasting work if its physical type was infirm and weak. . . .
>
> In college — and in most of the schools which are preparatory for college — rowing, foot-ball, base-ball, running, jumping, sparring, and the like have assumed a constantly increasing prominence. Nor is this a matter for regret . . . . [A]thletic sports, if followed properly, and not elevated into a fetish, are admirable for developing character, besides bestowing on the participants an invaluable fund of health and strength. . . ."
>
> Theodore Roosevelt, "Professionalism in Sports," 1890

4. Roosevelt's remarks in the excerpt most directly reflected which of the following developments during the late nineteenth century?
   a. New cultural opportunities in urban areas
   b. Increasing amounts of leisure time for the middle and upper classes
   c. More numerous critics championing alternative visions for U.S. society
   d. The growing income gap between rich and poor

5. Which of the following developments best represents a logical extension of the ideas expressed in the excerpt?
   a. Cultural and political controversy as Americans debated modernism in the 1920s
   b. The increasing homogeneity of mass culture in the post–World War II years
   c. The expansion of higher education opportunities in the 1950s
   d. An increased anxiety about radicalism immediately after World War I

6. In the late nineteenth and twentieth centuries the professionalization of athletics in the United States shared causes that also led most directly to a trend toward
   a. economic instability and political discontent among farmers.
   b. increasing urbanization of the United States.
   c. movements of women to seek greater equality with men.
   d. greater ethnic diversity in the industrial workforce.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

"Major league club owners were primarily men of new affluence, often Irish Catholics or German Jews. . . . These owners had important political connections that helped their sporting business succeed. . . . This created a fascinating paradox since WASPs [white, Anglo-Saxon Protestants] and other acculturated Americans regarded baseball as the institution that best epitomized the finest American beliefs, values, and traditions. Yet the baseball magnates were urban politicians, often machine politicians, who symbolized all that progressive small town Americans believed was destructive and wrong with American society."

Steven A. Reiss, *Touching Base: Professional Baseball and American Culture in the Progressive Era*, 1999

"The reserve clause would be a standard term in player contracts for nearly a century . . . the teams first considered establishing limits on salaries, but they decided that it would be easier if they simply ceased competing with each other to hire the best players. Each club was accordingly allowed to reserve . . . players for the ensuing season. . . . Once a club reserved a player, the other clubs would treat him as if he were already under contract . . . the result was an unusual system of labor relations, in which players were effectively bound for life to the teams that first signed them. . . . Even in the late nineteenth century, when workers throughout the economy had few rights enforceable against their employers, baseball stood out as a business in which the rules governing labor were conspicuously one-sided."

Stuart Banner, *The Baseball Trust: A History of Baseball's Antitrust Exemption*, 2013

1. Using the two excerpts above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE major difference between Reiss's and Banner's historical interpretations of baseball's role in American society in the second half of the nineteenth century.
   - **b.** Briefly explain how ONE historical event or development not directly mentioned in the excerpts could be used to support Reiss's argument.
   - **c.** Briefly mention how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Banner's argument.
2. Answer (a), (b), and (c).
   - **a.** Briefly describe ONE specific historical change in American consumer culture during the late nineteenth century.
   - **b.** Briefly explain ONE specific historical cause that led to the change you identified in (a).
   - **c.** Briefly explain ONE specific historical effect that followed from the change in American consumer culture you described in (a).
3. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE important difference in the development of Protestant and Catholic religious faiths during the Gilded Age.
   - **b.** Briefly explain ONE important similarity in the development of Protestant and Catholic religious faiths during the Gilded Age.
   - **c.** Briefly explain ONE important historical factor that accounts for the similarity or difference between the development of Protestant and Catholic religious faiths during the Gilded Age.

Cities and National Politics

AP LEARNING FOCUS

How did the rise of big cities shape American society and politics?

Clarence Darrow, a successful lawyer from Ashtabula, Ohio, felt isolated and overwhelmed when he moved to Chicago in the 1880s. "There is no place so lonely to a young man as a great city," Darrow later wrote. "When I walked along the street I scanned every face I met to see if I could not perchance discover someone from Ohio." Instead, he saw a "sea of human units, each intent upon hurrying by." At one point, Darrow felt near despair. "If it had been possible I would have gone back to Ohio," he wrote, "but I didn't want to borrow the money, and I dreaded to confess defeat." Yet Darrow stayed in Chicago and eventually prospered, becoming one of the nation's most famous defense attorneys.

In the era of industrialization, more and more Americans had experiences like Darrow's. In 1860, the United States was rural: less than 20 percent of Americans lived in an urban area, defined by census-takers as a place with more than 2,500 inhabitants. By 1910, more Americans lived in cities (42.1 million) than had lived in the entire nation on the eve of the Civil War (31.4 million). The country now had three of the world's ten largest cities (AP® America in the World). Though the Northeast remained by far the most urbanized region, the industrial Midwest was catching up. Seattle, San Francisco, and soon Los Angeles became hubs on the Pacific coast. Even the South boasted of thriving Atlanta and Birmingham. As journalist Frederic C. Howe declared in 1905, "Man has entered on an urban age." (See AP® America in the World.)

The scale of industrial cities encouraged experiments that ranged from the amusement park to the art museum, the skyscraper to the subway. Yet the city's complexity also posed problems, some of them far worse than Clarence Darrow's loneliness. Brothels flourished, as did slums, pollution, disease, and corrupt political machines. Fast-talking **hucksters** enjoyed prime opportunities to fleece newcomers; homeless men slept in the shadows of the mansions of the superrich. One African American observer called the city "Civilization's Inferno." The locus of urgent problems, industrial cities became important sites of political innovation and reform.

George Bellows, *New York* George Bellows, a member of the so-called Ash Can school of painters, was fascinated by urban life. In this 1911 painting, he depicts Madison Square during a winter rush-hour, crowded with streetcars, horse-drawn wagons, and pedestrians. If you could enter the world of this painting, what might you hear, feel, and smell as well as see? What does Bellows suggest about the excitement and challenges of life in the big city? CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and identify the links among related events.

- **1871** First elevated railroad begins operation in New York
- **1878** Yellow fever epidemic in Memphis, Tennessee
- **1883** Metropolitan Opera opens in New York
- **1885** First skyscraper completed in Chicago
- **1887** First electric trolley system built in Richmond, Virginia
- **1889** Jane Addams and Ellen Gates Starr found Hull House in Chicago
- **1890** Jacob Riis publishes *How the Other Half Lives*
- **1892** New York's Ellis Island opens
- **1893** Ragtime introduced to national audiences at Chicago World's Columbian Exposition
- **1897** First subway line opened in Boston
- **1899** Central Labor Union protests in Cleveland
  National Consumers' League founded
- **1901** New York passes Tenement House Law
- **1903** Women's Trade Union League founded
- **1906** Upton Sinclair publishes *The Jungle*
  Food and Drug Administration established
  Atlanta race riot
- **1910** Mann Act prohibits transportation of prostitutes across state lines
- **1911** Triangle Fire at Triangle Shirtwaist Company in New York

The New Metropolis

Mark Twain, arriving in New York in 1867, remarked, "You cannot accomplish anything in the way of business, you cannot even pay a friendly call without devoting a whole day to it. . . . [The] distances are too great." But new technologies allowed engineers and planners to reorganize urban geographies. Specialized districts began to include not only areas for finance, manufacturing, wholesaling, and warehousing but also immigrant wards, shopping districts, and business-oriented downtowns. It was an exciting and bewildering world.

The Shape of the Industrial City

Before the Civil War, cities served the needs of commerce and finance, not industry. Early manufacturing sprang up mostly in the countryside, where mill owners could draw water power from streams, find plentiful fuel and raw materials, and recruit workers from farms and villages. The nation's largest cities were seaports; urban merchants bought and sold goods for distribution into the interior or to global markets.

AP® EXAM TIP

Evaluate the impact of technological innovation in the rise of urban centers in the late nineteenth century as you read this section.

As industrialization developed, though, cities became sites for manufacturing as well as finance and trade. Steam engines played a central role in this change. With them, mill operators no longer had to depend on less reliable water power. Steam power also vastly increased the scale of industry. A factory employing thousands of workers could instantly create a small city such as Aliquippa, Pennsylvania, which belonged body and soul to the Jones and Laughlin Steel Company. Older commercial cities also industrialized. Warehouse districts converted to small-scale manufacturing. Port cities that served as immigrant gateways offered abundant cheap labor, an essential element in the industrial economy.

Mass Transit New technologies helped residents and visitors negotiate the industrial city. Steam-driven cable cars appeared in the 1870s. By 1887, engineer Frank Sprague designed an electric trolley system for Richmond, Virginia. Electricity from a central generating plant was fed to trolleys through overhead power lines, which each trolley touched with a pole mounted on its roof. Trolleys soon became the primary mode of transportation in most American cities. Congestion and frequent

accidents, however, led to demands that trolley lines be moved off streets. The "el" or elevated railroad, which began operation as early as 1871 in New York City, became a safer alternative. Other urban planners built down, not up. Boston opened a short underground line in 1897; by 1904, a subway running the length of Manhattan demonstrated the full potential of high-speed underground trains.

Even before the Civil War, the spread of railroads led to growth of outlying residential districts for the well-to-do. The high cost of transportation effectively segregated these wealthy districts. In the late nineteenth century, the trend accelerated. Businessmen and professionals built homes on large, beautifully landscaped lots in outlying towns such as Riverside, Illinois, and Tuxedo Park, New York. In such places, affluent wives and children enjoyed refuge from the pollution and perceived dangers of the city.

Los Angeles entrepreneur Henry Huntington, nephew of a wealthy Southern Pacific Railroad magnate, helped foster an emerging suburban ideal as he pitched the benefits of southern California sunshine. Huntington invested his family fortune in Los Angeles real estate and transportation. Along his trolley lines, he subdivided property into lots and built rows of bungalows, planting the tidy yards with lush trees and tropical fruits. Middle-class buyers flocked to purchase Huntington's houses. One exclaimed, "I have apparently found a Paradise on Earth." Anticipating twentieth-century Americans' love for affordable single-family homes near large cities, Huntington had begun to invent southern California sprawl.

Downtown St. Louis, c. 1890 This photograph suggests how new technologies transformed urban spaces. Architects built up; streetcars carried pedestrians from home to work and play; and telegraph and telephone wires began to crisscross streets, causing some to complain that they were dangerous eyesores. The unusual cleanliness of this street also suggests the impact of streetcars, subways, and other modern forms of transport: horses and their manure gradually disappeared from cities, replaced by fossil fuels. Library of

Skyscrapers By the 1880s, the invention of steel girders, durable plate glass, and passenger elevators began to revolutionize urban building methods. Architects invented the skyscraper, a building supported by its steel skeleton. Its walls bore little weight, serving instead as curtains to enclose the structure. Although expensive to build, skyscrapers allowed downtown landowners to profit from small plots of land. By investing in a skyscraper, a landlord could collect rent for ten or even twenty floors of space. Large corporations commissioned these striking designs as symbols of business prowess.

The first skyscraper was William Le Baron Jenney's ten-story Home Insurance Building (1885) in Chicago. Though unremarkable in appearance — it looked just like other downtown buildings — Jenney's steel-girder construction inspired the creativity of American architects. A **Chicago school** sprang up, dedicated to the design of buildings whose form expressed, rather than masked, their structure and function. The presiding genius of this school was architect Louis Sullivan, whose "vertical aesthetic" of set-back windows and strong columns gave skyscrapers a "proud and soaring" presence and offered plentiful natural light for workers inside. Chicago pioneered skyscraper construction, but New York, with its unrelenting demand for prime downtown space, took the lead by the late 1890s. The fifty-five-story Woolworth Building, completed in 1913, marked the beginning of Manhattan's modern skyline.

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

The World's Biggest Cities, 1800–2000

This table lists the ten largest cities in the world, by population in millions, at the start of the nineteenth, twentieth, and twenty-first centuries.

TABLE 18.1

1800

City	Population
Beijing, China	1.10 million
London, United Kingdom	0.86
Guangzhou, China	0.80
Istanbul, Turkey	0.57
Paris, France	0.55
Hangzhou, China	0.50
Edo (later Tokyo), Japan	0.49
Naples (later part of Italy)	0.43
Suzhou, China	0.39
Osaka, Japan	0.38

1900

City	Population
London, United Kingdom	6.48 million
New York, United States	4.24
Paris, France	3.33
Berlin, Germany	2.42
Chicago, United States	1.72
Vienna, Austria	1.66
Tokyo, Japan	1.50
St. Petersburg, Russia	1.44
Philadelphia, United States	1.42
Manchester, United Kingdom	1.26

2000

City	Population
Tokyo, Japan	34.45 million
Mexico City, Mexico	18.02
New York City/Newark, United States	17.85
São Paulo, Brazil	17.10
Mumbai (Bombay), India	16.09
Delhi, India	15.73
Shanghai, China	13.22
Calcutta, India	13.06
Buenos Aires, Argentina	11.85
Los Angeles, United States	11.81

QUESTIONS FOR ANALYSIS

1. In each year, how many of the world's ten largest cities were located in the United States? In what regions of the world were the other cities located? What does this tell us about the United States's role in the world at each of these historical moments?
2. The figures from 1900 and 2000 show, to a large degree, the effects of industrialization. What does the table suggest about its impact?

The Electric City One of the most dramatic urban amenities was electric light. Gaslight, produced from coal gas, had been used for residential light since the early nineteenth century, but gas lamps were too dim to brighten streets and public spaces. In the 1870s, as generating technology became commercially viable, electricity proved far better. Electric arc lamps, installed in Wanamaker's department store in Philadelphia in 1878, astonished viewers with their brilliant illumination. Electric streetlights soon replaced gaslights on city streets.

Before it had a significant effect on industry, electricity gave the city its modern tempo. It lifted elevators, illuminated department store windows, and above all, turned night into day. Electric streetlights made residents feel safer; as one magazine put it in 1912, "A light is as good as a policeman." Nightlife became less risky and more

The San Francisco Earthquake California's San Andreas Fault had caused earthquakes for centuries — but when a major metropolis arose nearby, it created new potential for catastrophe. The devastating earthquake of April 18, 1906, occurred at 5:12 A.M., when many residents were sleeping. This photograph of Sacramento Street shows the resulting devastation and fires. The quake probably killed over 2,000 people, though the exact number will never be known. A massive 296-mile rupture along the fault, felt as far away as Los Angeles, Oregon, and central Nevada, the earthquake refuted contemporary geological theories. It prompted researchers to open new lines of inquiry aimed at predicting tremors — and constructing urban buildings that could withstand them. Universal History Archive/UIG/Bridgeman Images

appealing. One journalist described Broadway in 1894: "All the shop fronts are lighted, and the entrances to the theaters blaze out on the sidewalk." At the end of a long working day, city dwellers flocked to this free entertainment. Nothing, declared an observer, matched the "festive panorama" of Broadway "when the lights are on."

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

How were America's industrial cities different from the typical city before 1860?

Newcomers and Neighborhoods

Explosive population growth made cities a world of new arrivals, including many young women and men arriving from the countryside. Traditionally, rural daughters had provided essential labor for spinning and weaving cloth, but industrialization relocated those tasks from the household to the factory. Finding themselves without a useful household role, many farm daughters sought paid employment. In an age of declining rural prosperity, many sons also left the farm and — like immigrants arriving from other countries — set aside part of their pay to help the folks at home. Explaining why she moved to Chicago, an African American woman from Louisiana declared, "A child with any respect about herself or hisself wouldn't like to see their mother and father work so hard and earn nothing. I feel it my duty to help."

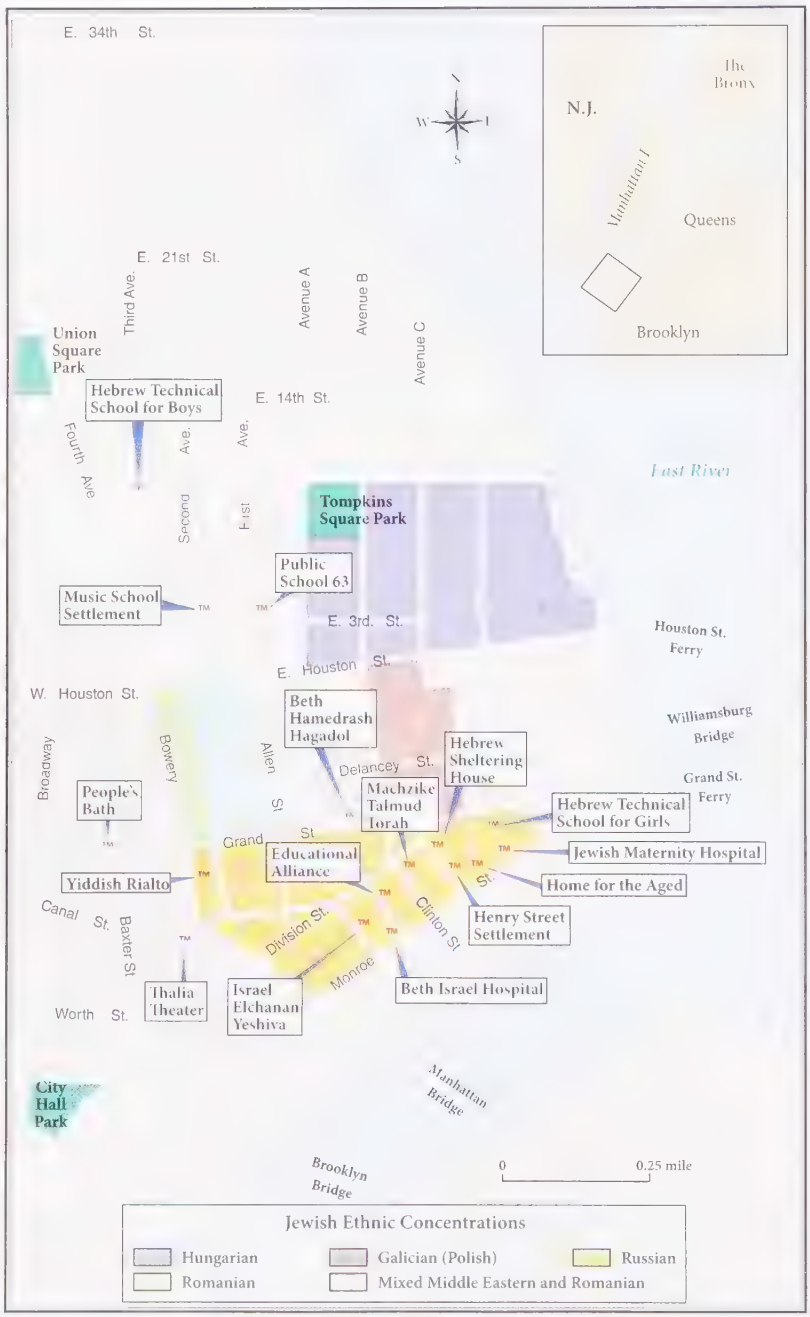
America's cities also became homes for millions of overseas immigrants. Most numerous in Boston were the Irish; in Minneapolis, Swedes; in other northern cities, Germans. Arriving in a great metropolis, immigrants confronted many difficulties. One Polish man, who had lost the address of his American cousins, felt utterly alone after disembarking at New York's main immigration facility, Ellis Island, which opened in 1892. Then he heard a kindly voice in Polish, offering to help. "From sheer joy," he recalled, "tears welled up in my eyes to hear my native tongue." Such experiences suggest why immigrants stuck together, relying on relatives and friends to get oriented and

AP® EXAM TIP

Identifying the ways immigrants maintained cultural identity in American cities is a "must know" on the AP® exam.

find jobs. A high degree of ethnic clustering resulted, even within a single factory. At the Jones and Laughlin steelworks in Pittsburgh, for example, the carpentry shop was German, the hammer shop Polish, and the blooming mill Serbian. "My people . . . stick together," observed a son of Ukrainian immigrants. But he added, "We who are born in this country . . . feel this country is our home."

Patterns of settlement varied by ethnic group. Many Italians, recruited by *padroni*, or labor bosses, found work in northeastern and Mid-Atlantic cities. Their urban concentration was especially marked after the 1880s, as more and more laborers arrived from southern Italy. The attraction of America was obvious to one young man, who had grown up in a poor southern Italian farm family. "I had never gotten any wages of any kind before," he reported after settling with his uncle in New Jersey. "The work here was just as hard as that on the farm; but I didn't mind it much because I would receive what seemed to me like a lot." Amadeo Peter Giannini, who started off as a produce merchant in San Francisco, soon turned to banking. After the San Francisco earthquake in 1906, his Banca d'Italia was the first financial institution to reopen in the Bay area. Expanding steadily across the West, it eventually became Bank of America.



MAP 18.1 The Lower East Side, New York City, 1900
As this map shows, the Jewish immigrants dominating Manhattan's Lower East Side preferred to live in neighborhoods populated by those from their home regions of Eastern Europe. Their sense of a common identity made for a remarkable flowering of educational, cultural, and social institutions on the Jewish East Side. Ethnic neighborhoods became a feature of almost every American city.

Like Giannini's bank, institutions of many kinds sprang up to serve ethnic urban communities. Throughout America, Italian speakers avidly read the newspaper *Il Progresso Italo-Americano*; Jews read the Yiddish-language *Jewish Daily Forward*, also published in New York. Bohemians gathered in singing societies, while New York Jews patronized a lively Yiddish theater. By 1903, Italians in Chicago had sixty-six **mutual aid societies**, most composed of people from a particular province or town. These societies collected dues from members and paid support in case of death or disability on the job. Mutual benefit societies also functioned as fraternal clubs. "We are strangers in a strange country," explained one member of a Chinese *tong*, or mutual aid society, in Chicago. "We must have an organization (*tong*) to control our country fellows and develop our friendship."

Sharply defined ethnic neighborhoods such as San Francisco's Chinatown, Italian North Beach, and Jewish Hayes Valley grew up in every major city, driven by both discrimination and immigrants' desire to stick together (Map 18.1). In addition to patterns of ethnic and racial segregation, residential districts in almost all industrial cities divided along lines of economic class. Around Los Angeles's central plaza, Mexican neighborhoods diversified, incorporating Italians and Jews. Later, as the plaza

became a site for business and tourism, immigrants were pushed into working-class neighborhoods like Belvedere and Boyle Heights, which sprang up to the east. Though ethnically diverse, East Los Angeles was resolutely working class; middle-class white neighborhoods grew up predominantly in West Los Angeles.

African Americans also sought urban opportunities. In 1900, almost 90 percent of American blacks still lived in the South, but increasing numbers had moved to cities such as Baton Rouge, Jacksonville, Montgomery, and Charleston, all of whose populations were more than 50 percent African American. Blacks also settled in northern cities, albeit not in the numbers that would arrive during the Great Migration of World War I. Though blacks constituted only 2 percent of New York City's population in 1910, they already numbered more than 90,000. These newcomers confronted conditions even worse than those for foreign-born immigrants. Relentlessly turned away from manufacturing jobs, most black men and women took up work in the service sector, becoming porters, laundrywomen, and domestic servants.

Blacks faced another urban danger: the so-called **race riot**, an attack by white mobs triggered by street altercations or rumors of crime. One of the most virulent episodes occurred in Atlanta, Georgia, in 1906. The violence was fueled by a nasty political campaign that generated sensational false charges of "negro crime." Roaming bands of white men attacked black Atlantans, invading middle-class black neighborhoods and in one case lynching two barbers after seizing them in their shop. The rioters killed at least twenty-four blacks and wounded more than a hundred. The disease of hatred was not limited to the South. Race riots broke out in New York City's Tenderloin district (1900); Evansville, Indiana (1903); and Springfield, Illinois (1908). By then, one journalist observed, "In every important Northern city, a distinct race-problem already exists which must, in a few years, assume serious proportions."

The Cherry Family, 1906 Wiley and Fannie Cherry migrated in 1893 from North Carolina to Chicago, settling in the small African American community that had established itself on the city's West Side. The Cherrys apparently prospered. By 1906, when this family portrait was taken, they had entered the black middle class. When migration intensified after 1900, longer-settled urban blacks like the Cherrys often became uncomfortable, and relations with needy rural newcomers were sometimes tense. Collection of Lorraine Heffner/Picture Research Consultants & Archive

AP® EXAM TIP

Evaluate the specific challenges facing African Americans in American cities.

Whether they arrived from the South or from Europe, Latin America, or Asia, working-class city residents needed cheap housing near their jobs. They faced grim choices. As urban land values climbed, speculators tore down houses that were vacated by middle-class families moving away from the industrial core. In their place, they erected five- or six-story **tenements**, buildings that housed twenty or more families in cramped, airless apartments (Figure 18.1). Tenements fostered rampant disease and horrific infant mortality. In New York's Eleventh Ward, an average of 986 persons occupied each acre. One investigator in Philadelphia described twenty-six people living in nine rooms of a tenement. "The bathroom at the rear of the house

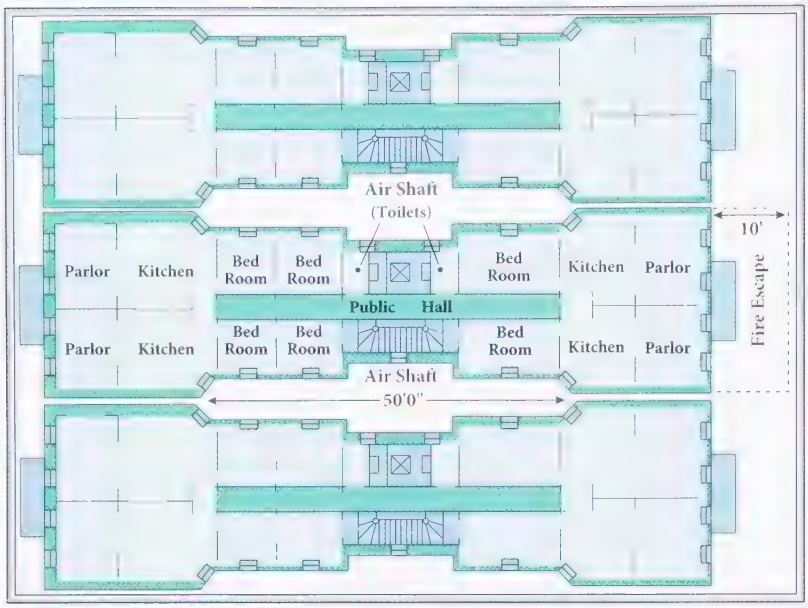


FIGURE 18.1 Floor Plan of a Dumbbell Tenement

In a contest for a design that met an 1879 requirement for every room to have a window, the dumbbell tenement won. The interior indentation, which created an airshaft between adjoining buildings, gave the tenement its "dumbbell" shape. But what was touted as a model tenement demonstrated instead the futility of trying to reconcile maximum land usage with decent housing. Each floor contained four apartments of three or four rooms, the largest only 10 by 11 feet. The two toilets in the hall became filthy or broke down under daily use by forty or more people. The narrow airshaft provided almost no light for the interior rooms and served mainly as a dumping ground for garbage. So deplorable were these tenements that they became the stimulus for the next wave of New York housing reform.

was used as a kitchen," she reported. "One privy compartment in the yard was the sole toilet accommodation for the five families living in the house." African Americans often suffered most. A study of Albany, Syracuse, and Troy, New York, noted, "The colored people are relegated to the least healthful buildings."

Denouncing these conditions, reformers called for model tenements financed by public-spirited citizens willing to accept a limited return on their investment. When private philanthropy failed to make a dent, cities turned to housing codes. The most advanced was New York's Tenement House Law of 1901, which required interior courts, indoor toilets, and fire safeguards for new structures. The law, however, had no effect on the 44,000 tenements that already existed in Manhattan and the Bronx. Reformers were thwarted by the economic facts of urban development. Industrial workers could not afford transportation and had to live near their jobs; commercial development pushed up land values. Only high-density, cheaply built housing earned landlords a significant profit.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

What opportunities did urban neighborhoods provide to immigrants and African Americans, and what problems did these newcomers face?

City Cultures

Despite their dangers and problems, industrial cities could be exciting places to live. In the nineteenth century, white middle-class Protestants had set the cultural standard; immigrants and the poor were expected to follow cues from their betters, seeking "uplift" and respectability. But in the cities, new mass-based entertainments emerged among the working classes, especially youth. These entertainments spread from the working class to the middle class — much to the distress of many middle-class parents. At the same time, cities became stimulating centers for intellectual life.

Urban Amusements One enticing attraction was **vaudeville theater**, which arose in the 1880s and 1890s. Vaudeville customers could walk in anytime and watch a continuous sequence of musical acts, skits, magic shows, and other entertainment. First popular among the working class, vaudeville quickly broadened its appeal to include middle-class audiences. By the early 1900s, vaudeville faced competition from early movie theaters, or nickelodeons, which offered short films for a nickel entry fee. With distaste, one reporter described a typical movie audience as "mothers of bawling infants" and "newsboys, bootblacks, and smudgy urchins." By the 1910s, even working girls who refrained from less respectable amusements might indulge in a movie once or twice a week.

More spectacular were the great amusement parks that appeared around 1900, most famously at New York's Coney Island. These parks had their origins in world's fairs, whose paid entertainment areas had offered giant Ferris wheels and camel rides through "a street in Cairo." Entrepreneurs found that such attractions were big business. Between 1895 and 1904, they installed them at several rival amusement parks near Coney Island's popular beaches. The parks offered New Yorkers a chance to come by ferry, escape the hot city, and enjoy roller coasters, lagoon plunges, and "hootchy-kootchy" dance shows.

Among the amazed observers was Cuban revolutionary José Martí, working as a journalist in the United States. "What facilities for every pleasure!" Martí wrote. "What absolute absence of any outward sadness or poverty! . . . The theater, the photographers' booth, the bathhouses!" He concluded that Coney Island epitomized America's commercial society, driven not by "love or glory" but by "a desire for gain." Similar parks grew up around the United States. By the summer of 1903, Philadelphia's Willow Grove counted three million visitors annually; so did two amusement parks outside Los Angeles.

Amusement Park, Long Beach, California The origins of the roller coaster go back to a Switchback Railway installed at New York's Coney Island in 1884, featuring gentle dips and curves. By 1900, when the Jack Rabbit Race was constructed at Long Beach, California, the goal was to create the biggest possible thrill. Angelenos journeyed by trolley to Long Beach to take a dip in the ocean as well as to ride the new roller coaster — and the whip ride in the foreground. Private Collection/Ph GraphicaArts/Bridgeman Image

Ragtime and City Blues Music also became a booming urban entertainment. By the 1890s, Tin Pan Alley, the nickname for New York City's song-publishing district, produced such national hit tunes as "A Bicycle Built for Two" and "My Wild Irish Rose." The most famous sold more than a million copies of sheet music, as well as audio recordings for the newly invented phonograph. To find out what would sell, publishers had musicians play at New York's working-class beer gardens and dance halls. One publishing agent, who visited "sixty joints a week" to test new songs, declared that "the best songs came from the gutter."

African American musicians brought a syncopated beat that began, by the 1890s, to work its way into mainstream hits like "A Hot Time in the Old Town Tonight." Black performers became stars in their own right with the rise of ragtime. This music, apparently named for its ragged rhythm, combined a steady beat in the bass (played with the left hand on the piano) with syncopated, off-beat rhythms in the treble (played with the right). Ragtime became wildly popular among audiences of all classes and races who heard in its infectious rhythms something exciting — a decisive break with Victorian hymns and parlor songs.

For the master of the genre, composer Scott Joplin, ragtime was serious music. Joplin, the son of former slaves, grew up along the Texas-Arkansas border and took piano lessons as a boy from a German teacher. He and other traveling performers introduced ragtime to national audiences at the Chicago World's Fair in 1893. Seeking to elevate African American music and secure a broad national audience, Joplin warned pianists, "It is never right to play 'Ragtime' fast." But his instructions were widely ignored. Young Americans embraced ragtime.

They also embraced each other, as ragtime ushered in an urban dance craze. By 1910, New York alone had more than five hundred dance halls. In Kansas City, shocked guardians of morality counted 16,500 dancers on the floor on a Saturday night; Chicago had 86,000. Some young Polish and Slovak women chose restaurant jobs rather than domestic service so they would have free time to visit dance halls "several nights a week." New dances like the Bunny Hug and Grizzly Bear were overtly sexual: they called for close body contact and plenty of hip movement. In fact, many of these dances originated in brothels.

Inside a San Francisco Dance Hall, 1911 San Francisco's "Barbary Coast" had a wild reputation as a district of brothels, saloons, and other houses of ill repute. As this photo of Spider Kelly's bar suggests, however, nightclubs could provide a safe place for young couples to meet and dance. Urban singles made such bars wildly popular by the 1910s, prompting reformers and older Americans to express anxiety or condemnation of "dance madness" and its potential moral dangers. San Francisco History Center, San Francisco Public Library

Despite widespread denunciation, dance mania quickly spread from the urban working classes to rural and middle-class youth.

By the 1910s, black music was achieving a central place in American popular culture. African American trumpet player and bandleader W. C. Handy, born in Alabama, electrified national audiences by performing music drawn from the cotton fields of the Mississippi Delta. Made famous when it reached the big city, this music became known as the **blues**. Blues music spoke of hard work and heartbreak, as in Handy's popular hit "St. Louis Blues" (1914):

> Got de St. Louis Blues jes blue as I can be,
> Dat man got a heart lak a rock cast in the sea,
> Or else he wouldn't gone so far from me.

Blues spoke to the emotional lives of young urbanites who were far from home, experiencing dislocation, loneliness, and bitter disappointment along with the thrills of city life. Like Coney Island and other leisure activities, ragtime and blues helped forge new collective experiences in a world of strangers.

Ragtime and blues spread quickly and had a profound influence on twentieth-century American culture. By the time Handy published "St. Louis Blues," composer Irving Berlin, a Russian Jewish immigrant, was introducing altered ragtime pieces into musical theater — which eventually transferred to radio and film. Lyrics often featured sexual innuendo, as in the title of Berlin's hit song "If You Don't Want My Peaches (You'd Better Stop Shaking My Tree)." The popularity of such music marked the arrival of modern youth culture. Its enduring features included "crossover" music that originated in the black working class and a commercial music industry that brazenly appropriated African American musical styles.

AP® EXAM TIP

Evaluate the degree to which mass culture in urban areas challenged tradition in American society.

New Sexual Freedoms In the city, many young people found parental oversight weaker than it had been before. Amusement parks and dance halls helped foster the new custom of dating, which like other cultural innovations emerged first among the working class. Gradually, it became acceptable for a young man to escort a young woman out on the town for commercial entertainments rather than spending time at home under a chaperone's watchful eye. Dating opened a new world of pleasure, sexual adventure, and danger. Young women headed to dance halls alone to meet men; the term *gold digger* came into use to describe a woman who wanted a man's money more than the man himself.

But young women, not men, proved most vulnerable in the system of dating. Having less money to spend because they earned half or less of men's wages, working-class girls relied on the **"treat."** Some tried to maintain strict standards of respectability, keenly aware that their prospects for marriage depended on a virtuous reputation. Others became so-called charity girls, eager for a good time. Such young women, one investigator reported, "offer themselves to strangers, not for money, but for presents, attention and pleasure." For some women, sexual favors were a matter of practical necessity. "If I did not have a man," declared one waitress, "I could not get along on my wages." In the anonymous city, there was not always a clear line between working-class treats and casual prostitution.

Dating and casual sex were hallmarks of an urban world in which large numbers of residents were young and single. The 1900 census found that more than 20 percent of women in Detroit, Philadelphia, and Boston lived as boarders and lodgers, not in family units; the percentage topped 30 percent in St. Paul and Minneapolis. Single men also found social opportunities in the city. One historian has called the late nineteenth century the Age of the Bachelor, a time when being an unattached male lost its social stigma. With boardinghouses, restaurants, and abundant personal services, the city afforded bachelors all the comforts of home and, on top of that, an array of men's clubs, saloons, and sporting events.

Many industrial cities developed robust gay subcultures. New York's gay underground, for example, included an array of drinking and meeting places, as well as clubs and drag balls. Middle-class men, both straight and gay, frequented such venues for entertainment or to find companionship. One medical student remembered being taken to a ball at which he was startled to find five hundred gay and lesbian couples waltzing to "a good band." By the 1910s, the word *queer* had come into use as slang for *homosexual*. Though harassment was frequent and moral reformers like Anthony Comstock issued regular denunciations of sexual "degeneracy," arrests were few. Gay sex shows and saloons were lucrative for those who ran them (and for police, who took bribes to look the other way, just as they did for brothels). The exuberant gay urban subculture offered a dramatic challenge to Victorian ideals.

High Culture For elites, the rise of great cities offered an opportunity to build museums, libraries, and other cultural institutions that could flourish only in major metropolitan centers. Millionaires patronized the arts partly to advance themselves socially but also out of a sense of civic duty and national pride. As early as the 1870s, symphony orchestras emerged in Boston and New York. Composers and conductors soon joined Europe in new experiments. The Metropolitan Opera, founded in 1883 by wealthy businessmen, drew enthusiastic crowds to hear the innovative work of Richard Wagner. In 1907, the Met shocked audiences by presenting Richard Strauss's sexually scandalous opera *Salome*.

Art museums and natural history museums also became prominent new institutions in this era. The nation's first major art museum, the Corcoran Gallery of Art, opened in Washington, D.C., in 1869, while New York's Metropolitan Museum of Art settled into its permanent home in 1880. In the same decades, public libraries grew from modest collections into major urban institutions. The greatest library benefactor was steel magnate Andrew Carnegie, who announced in 1881 that he would build a library in any town or city that was prepared to maintain it. By 1907, Carnegie had spent more than $32.7 million to establish over a thousand libraries throughout the United States.

Urban Journalism Patrons of Carnegie's libraries could read, in addition to books, an increasing array of mass-market newspapers. Joseph Pulitzer, owner of the *St. Louis Post-Dispatch* and *New York World*, led the way in building his sales base with sensational investigations, human-interest stories, and targeted sections covering sports and high society. By the 1890s, Pulitzer faced a challenge from William Randolph Hearst (AP® Thinking Like a Historian). The arrival of Sunday color comics featuring the "Yellow Kid" gave such publications the name **yellow journalism**, a derogatory term for mass-market newspapers. Hearst's and Pulitzer's sensational coverage was often irresponsible. In the late 1890s, for example, their papers helped whip up frenzied pressure for the United States to declare war against Spain (Chapter 20). But Hearst and Pulitzer also exposed scandals and injustices. They believed their papers should challenge the powerful by speaking to and for ordinary Americans.

Along with Hearst's and Pulitzer's stunt reporters, other urban journalists also worked to promote reform. New magazines such as *McClure's* introduced national audiences to reporters such as Ida Tarbell, who exposed the machinations of John D. Rockefeller, and David Graham Phillips, whose "Treason of the Senate," published in *Cosmopolitan* in 1906, documented the deference of U.S. senators—especially Republicans—to wealthy corporate interests. Theodore Roosevelt dismissed such writers as **muckrakers** who focused too much on the negative side of American life. The term stuck, but muckrakers' influence was profound. They inspired thousands of readers to get involved in reform movements and tackle the problems caused by industrialization.

COMPARE & CONTRAST

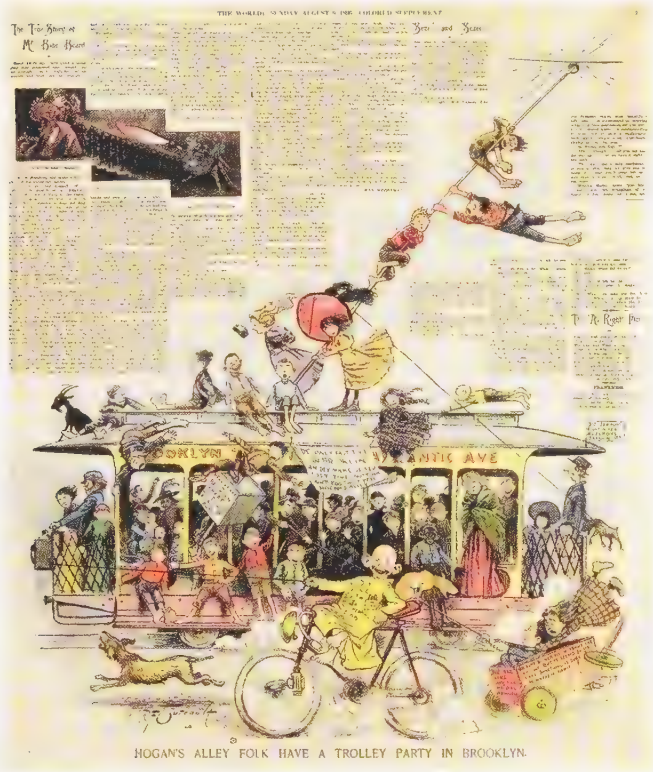
How did working-class and elite city residents differ in how they spent their money and leisure time?

IN YOUR OWN WORDS How did American cities change in the late nineteenth century?

Making Mass Media: Newspaper Empires

Among the businesses that served urban consumers were mass-market newspapers. Joseph Pulitzer's *New York World* led the way in the 1880s; a decade later Pulitzer had a powerful rival in the *New York Journal*, owned by William Randolph Hearst.

1. **R. F. Outcault's "The Yellow Kid" comic, *The World*, August 9, 1896.** *Pulitzer and Hearst introduced Sunday color comics, including "The Yellow Kid" (shown here on a bicycle). Working-class readers instantly recognized the "kid," slang that then referred to working-class immigrant children. The Kid, like other boys of his age, wore skirts; tenement toddlers' heads were shaved to discourage lice.*



Source: Picture Research Consultants & Archives

2. **Editorial, *Wheeling Register*, April 6, 1885.** *A West Virginia newspaper commented on a campaign by the* New York World *to complete the Statue of Liberty. Parts of the statue, donated by France, were languishing in New York City parks.*

   The *New York World* is a liberty-loving journal. It has taken the responsibility of being foster mother to that much abused piece of bronze called the "BARTHOLDI statue." It begins to look as if the *World* may nurse it to a successful termination by raising funds enough through public contributions to complete the pedestal upon which it is to stand. Success to the enterprise.

3. **"HOMELESS, HOPELESS! Nellie Bly in a Night Haunt of the City's Wretchedest of Women," *New York World*, February 9, 1896.** *Pulitzer and Hearst hired many "stunt reporters." The most famous was Elizabeth Jane Cochrane, who took her pen name, Nellie Bly, from a popular song. In 1892, sponsored by the* World, *Bly beat the record in Jules Verne's famous novel* Around the World in Eighty Days, *circumnavigating the world in seventy-two days. She filed many investigative pieces such as this one.*

   An old woman stood with her back against the side of a building. Over her head was a ragged shawl that had once been red. Around her knees hung a limp and shapeless calico skirt. The rain and sleet were falling steadily and lay thick and slushy upon the streets.

   I shivered as I stopped to watch. . . . If the old woman felt the cold she gave no sign. She stood motionless, peeping around the corner. Her eyes were fixed upon the door of the Oak Street Station-House.

   Just then three small boys, unmindful of the weather, came trudging down the street . . . industriously gathering every white spot that showed upon the pavement to add to the black snowballs they held in their wet red hands.

   Turning the corner suddenly they came upon the old woman. For a second they paused and looked at her and she glared at them. It reminded me of the way dogs behave when they turn a corner and espy a cat. . . . The old woman started on a frantic hobble across the street, the boys after her. Their black snowballs landed squarely and soakingly against her bent back. . . . The old woman shouted things as she ran, things that do not sound well and are never by any chance reproduced in print, but they seemed to increase the delight of the fiendish boys. . . . As fast as she could hobble she made for the station-house and the boys pursued her, pelting her.

4. **Newsboys strike coverage, *New York Herald-Tribune*, July 25, 1899.** *As sales plummeted after the War of 1898, Pulitzer and other newspaper titans raised the cost of a newspaper bundle, for children who resold them, from 50 to 60 cents. Newsboys struck. They failed to get the 50-cent price reinstated, but the* World *and other companies agreed to buy back unsold papers, which they had not done before. Kid Blink, the strike leader, was blind in one eye.*

   The newsboys' strike gathered new strength last night in a monster mass meeting held at New Irving Hall. . . . "Kid"

Blink, who has been made Grand Master Workman of the union, led the procession. . . . The unbiased spectator last evening could not fail to be impressed with the resolute, manly fight the little fellows are making. . . .

SPEECH OF "KID" BLINK

. . . Dis is de time when we'se got to stick togedder like glue! But der's one ting I want ter say before I goes any furder. I don't believe in getting' no feller's papers frum him and tearin' 'em up. I know I done it. (Cries of "You bet you did!") But I'm sorry fer it. No! der ain't nuttin in dat. We know wot we wants and we'll git it. . . . Dem 10 cents is as good ter us as to de millionaires — maybe better. . . . We'll strike and restrike till we get it. . . . We'll stick togedder like plaster, won't we, boys?

The boys answered that they would.

5. Lewis Wickes Hine, newsboys selling at a Hartford, Connecticut saloon, 9:30 P.M., March 1909. *In addition to subscriptions and sales at newsstands, newspapers sold bundles of one hundred papers to boys and girls, who resold as many as they could. Photographer Lewis Hine's caption, included below, suggests one strategy for selling papers. Hine, working for the National Child Labor Committee, took many such images.*

A common case of "team work." The smaller boy . . . goes into one of the saloons and sells his "last" papers. Then comes out and his brother gives him more. Joseph said, "Drunks are me best customers. . . . Dey buy me out so I kin go home." He sells every afternoon and night. Extra late Saturday. At it again at 6 A.M.

6. Circulation statistics for the *New York World* from *N. W. Ayer and Son's American Newspaper Annual and Directory*, 1910.

Edition	Political affiliation	No. of Pages	Circulation
Morning	Democratic	16	361,412
Evening	Independent	12–16	410,259
Sunday	Democratic	56–72	459,663

SOURCES: (2) *Wheeling Register*, April 6, 1885; (3) *New York World*, February 9, 1896; (4) *New York Herald-Tribune*, July 25, 1899; (6) *N. W. Ayer and Son's American Newspaper Annual and Directory* (Philadelphia: N. W. Ayer and Son, 1910), 623.

ANALYZING THE EVIDENCE

1. Based on these sources, why do you think "yellow journalism" was popular and profitable? What audiences did it serve, and how?
2. Consider the tone and point of view of sources 1, 3, and 5. What do they suggest about American attitudes toward the urban poor?
3. What do these sources say about how Pulitzer and Hearst viewed their roles as publishers? How might we compare their newspaper empires to other corporations of the industrial era (Chapter 16)?

AP® DBQ PRACTICE

Write a brief essay in which you explain the ways in which the rise of mass-market newspapers might have contributed to and helped to publicize calls for progressive reform.

Governing the Great City

One of the most famous muckrakers was Lincoln Steffens, whose book *The Shame of the Cities* (1904), first published serially in *McClure's* magazine, denounced the corruption afflicting America's urban governments. Steffens used dramatic language to expose "swindling" politicians. He claimed, for example, that the mayor of Minneapolis had turned his city over to "outlaws." In St. Louis, "bribery was a joke," while Pittsburgh's Democratic Party operated a private company that handled most of the city's street-paving projects — at a hefty profit. Historians now believe that Steffens and other middle-class crusaders took a rather extreme view of urban politics; the reality was more complex. But charges of corruption could hardly be denied. As industrial cities grew with breathtaking speed, they posed a serious problem of governance.

Urban Machines

In the United States, cities relied largely on private developers to build streetcar lines and provide urgently needed water, gas, and electricity. This preference for business solutions gave birth to what one urban historian calls the "private city" — an urban environment shaped by individuals and profit-seeking businesses. Private enterprise, Americans believed, spurred great innovations — trolley cars, electric lighting, skyscrapers — and drove urban real estate development. Investment opportunities looked so tempting, in fact, that new cities sprang up almost overnight from the ruins of a catastrophic Chicago fire in 1871 and a major San Francisco earthquake in 1906. Real estate interests were often instrumental in encouraging streetcar lines to build outward from the central districts.

Sending Bosses to Prison, 1894 In this cartoon the humor journal *Puck* imagines the citizenry removing Democrat Edward Murphy Jr. from the U.S. Senate and depositing him in New York's state prison at Ossining, beside convicted Coney Island boss John McKane. *Puck*'s prediction did not come true: despite allegations of graft, Murphy had a long and successful career. Library of Congress

When contractors sought city business, or saloonkeepers needed licenses, they turned to **political machines**: local party bureaucracies that kept an unshakable grip on both elected and appointed public offices. A machine like New York's infamous Tammany Society — known by the name of its meeting place, Tammany Hall — consisted of layers of political **functionaries**. At the bottom were **precinct** captains who knew every city neighborhood and block; above them were ward bosses and, at the top, powerful citywide leaders, who had usually started at the bottom and worked their way up. Machines dispensed jobs and patronage, arranged for urban services, and devoted their energies to staying in office, which they did, year after year, on the strength of their political clout and popularity among urban voters.

For constituents, political machines acted as a rough-and-ready social service agency, providing jobs for the jobless or a helping hand for a bereaved family. Tammany ward boss George Washington Plunkitt, for example, reported that he arranged housing for families after their apartments burned, "fix[ing] them up until they get things runnin' again." Plunkitt was an Irishman, and so were most Tammany Hall leaders. But by the 1890s, Plunkitt's Fifteenth District was filling up with Italians and Russian Jews. On a given day (as recorded in his diary), he might attend an Italian funeral in the afternoon and a Jewish wedding in the evening. Wherever he went, he brought gifts, listened to his constituents' troubles, and offered a helping hand.

The favors dispensed by men like Plunkitt came via a system of boss control that was, as Lincoln Steffens charged, corrupt. Though rural, state, and national politics were hardly immune to such problems, cities offered flagrant opportunities for bribes and kickbacks. The level of corruption, as Plunkitt observed, was greater in cities, "accordin' to the opportunities." When politicians made contracts

for city services, some of the money ended up in their pockets. In the 1860s, William Marcy Tweed, known as Boss Tweed, had made Tammany Hall a byword for corruption, until he was brought down in 1871 by flagrant overpricing of contracts for a lavish city courthouse. Thereafter, machine corruption became more **surreptitious**. Plunkitt declared that he had no need for outright bribes. He favored what he called "honest graft" — the profits that came to savvy insiders who knew where and when to buy land. Plunkitt made most of his money building wharves on Manhattan's waterfront.

AP® EXAM TIP

Recognizing the role of political machines in the development of cities is a "must know" on the AP® exam.

Middle-class reformers condemned immigrants for supporting machines. But urban immigrants believed that few middle-class Americans cared about the plight of poor city folk like themselves. Machines were hardly perfect, but immigrants could rely on them for jobs, emergency aid, and the only public services they could hope to obtain. Astute commentators saw that bosses dominated city government because they provided what was needed, with no condescending moral judgments. As reformer Jane Addams put it, the ward boss was a "stalking survival of village kindness." Voters knew he was corrupt, but on election day they might say, "Ah, well, he has a big Irish heart. He is good to the widow and the fatherless," or, "he knows the poor." Addams concluded that middle-class reformers would only make headway if they set aside their prejudices, learned to "stand by and for and with the people," and did a better job of it than the machine bosses did.

To see a longer excerpt of the Jane Addams essay, along with other primary sources from this period, see ***Sources for America's History***.

Machine-style governments achieved some notable successes. They arranged (at a profit) for companies to operate streetcars, bring clean water and gaslight, and remove garbage. Nowhere in the world were there more massive public projects — aqueducts, sewage systems, bridges, and spacious parks — than in the great cities of the United States. The nature of this achievement can be grasped by comparing Chicago, Illinois, with Berlin, the capital of Germany, in 1900. At that time, Chicago's waterworks pumped 500 million gallons of water a day, providing 139 gallons per resident; Berliners made do with 18 gallons each. Flush toilets, a rarity in Berlin, could be found in 60 percent of Chicago homes. Chicago lit its streets with electricity, while Berlin still relied mostly on gaslight. Chicago had twice as many parks as the German capital, and it had just completed an ambitious sanitation project that reversed the course of the Chicago River, carrying sewage into Lake Michigan, away from city residents.

These achievements were remarkable, because American municipal governments labored under severe political constraints. Judges did grant cities some authority: in 1897, for example, New York's state supreme court ruled that New York City was entirely within its rights to operate a municipally owned subway. Use of private land was also subject to whatever regulations a city might impose. But, starting with an 1868 ruling in Iowa, the American legal system largely classified the city as a "corporate entity" subject to state control. In contrast to state governments, cities had only a limited police power, which they could use, for example, to stop crime but not to pass more ambitious measures for public welfare. States, not cities, held most taxation power and received most public revenues. Machines and their private allies flourished, in part, because cities were starved for legitimate cash.

Thus money talked; powerful economic interests warped city government. Working-class residents — even those loyal to their local machines — knew that the newest electric lights and best trolley lines served affluent neighborhoods, where citizens had the most clout. Hilda Satt, a Polish immigrant who moved

A Hint to Boards of Health In 1884, *Frank Leslie's Illustrated Newspaper* urged municipal and state boards of health to work harder to protect urban children. When this cartoon appeared, New Yorkers were reading shocking reports of milk dealers who diluted milk with borax and other chemicals. Note the range of health threats that the cartoonist identifies. Ruther

AP® PRACTICES & SKILLS

CAUSATION

Why, given that everyone agreed machines were corrupt, did urban voters support them?

into a poor Chicago neighborhood in 1893, recalled garbage-strewn streets and filthy backyard privies. "The streets were paved with wooden blocks," she later wrote, "and after a heavy rainfall the blocks would become loose and float about in the street." She remembered that on one such occasion, local pranksters posted a sign saying, "The Mayor and the Aldermen are Invited to Swim Here." As cities expanded, the limitations of political machines became increasingly clear.

The Limits of Machine Government

The scale of urban problems became dramatically evident in the depression of the 1890s, when unemployment reached a staggering 25 percent in some cities. Homelessness and hunger were rampant; newspapers nationwide reported on cases of starvation, desperation, and suicide. To make matters worse, most cities had abolished the early-nineteenth-century system of outdoor relief, which provided public support for the indigent. Fearing the system promoted laziness among the poor, middle-class reformers had insisted on private, not public, charity. Even cities that continued to provide outdoor relief in the 1890s were overwhelmed by the magnitude of the crisis. Flooded with "tramps," police stations were forced to end the long-standing practice of allowing homeless individuals to sleep inside.

AP® EXAM TIP

Evaluate the causes for the changes that occurred in municipal governments in the early twentieth century.

Faced with this crisis, many urban voters proved none too loyal to the machines when better alternatives arose. Cleveland, Ohio, for example, experienced eighty-three labor strikes between 1893 and 1898. Workers' frustration centered on corrupt businesses with close ties to municipal officials. The city's Central Labor Union, dissatisfied with Democrats' failure to address its concerns, worked with middle-class allies to build a thriving local branch of the People's Party (Chapter 19). Their demands for stronger government measures, especially to curb corporate power, culminated in citywide protests in 1899 during a strike against the hated streetcar company. That year, more than eight thousand workers participated in the city's annual Labor Day parade. As they passed the mayor's reviewing stand, the bands fell silent and the unions furled their flags in a solemn protest against the mayor's failure to support their cause.

To recapture support from working-class Clevelanders, Democrats made a dramatic change in 1901, nominating Tom Johnson for mayor. Johnson, a reform-minded businessman, advocated municipal ownership of utilities and a tax system in which "monopoly and privilege" bore the main burdens. (Johnson once thanked Cleveland's city appraisers for raising taxes on his own mansion.) Johnson's comfortable victory transformed the Democrats into Cleveland's leading reform party. While the new mayor did not fulfill the whole agenda of the Central Labor Union and its allies, he became an advocate of publicly owned utilities and one of the nation's most famous and innovative reformers.

Like Johnson, other mayors began to oust machines and launch ambitious programs of reform. Some modeled their municipal governments on those of Glasgow, Scotland; Düsseldorf, Germany; and other European cities on the cutting edge of innovation. In Boston, Mayor Josiah Quincy built public baths, gyms, swimming pools, and playgrounds and provided free public concerts. Like other mayors, he battled streetcar companies to bring down fares. The scope of such projects varied. In 1912, San Francisco managed to open one small municipally owned streetcar line to compete with private companies. Milwaukee, Wisconsin, on the other hand, elected socialists who experimented with a sweeping array of measures, including publicly subsidized medical care and housing.

Republican Hazen Pingree, mayor of Detroit from 1890 to 1897, was a particularly noted reformer who worked for better streets and public transportation. During the depression, Pingree opened a network of vacant city-owned lots as community vegetable gardens. Though some people ridiculed "Pingree's Potato Patches," the gardens helped feed thousands of Detroit's working people during the harsh depression years. By 1901, a coalition of reformers who campaigned against New York's Tammany Hall

began to borrow ideas from Pingree and other mayors. In the wealthier wards of New York, they promised to reduce crime and save taxpayer dollars. In working-class neighborhoods, they vowed to provide affordable housing and municipal ownership of gas and electricity. They defeated Tammany's candidates, and though they did not fulfill all of their promises, they did provide more funding for overcrowded public schools.

Reformers also experimented with new ways of organizing municipal government itself. After a devastating hurricane in 1900 killed an estimated six thousand people in Galveston, Texas, and destroyed much of the city, rebuilders adopted a commission system that became a nationwide model for efficient government. Leaders of the **National Municipal League** advised cities to elect small councils and hire professional city managers who would direct operations like a corporate executive. The league had difficulty persuading politicians to adopt its business-oriented model; it won its greatest victories in young, small cities like Phoenix, Arizona, where the professional classes held political power. Other cities chose, instead, to enhance democratic participation. As part of the Oregon System, which called for direct voting on key political questions, Portland voters participated in 129 municipal referendum votes between 1905 and 1913.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

How did reformers try to address the limits of machine government? To what extent did they succeed?

IN YOUR OWN WORDS What problems did big cities pose for those who ran them, and how did political leaders try to meet those challenges?

Crucibles of Progressive Reform

The challenges posed by urban life presented rich opportunities for experimentation and reform. As happened in Cleveland with Tom Johnson's election as mayor, working-class radicals and middle-class reformers often mounted simultaneous challenges to political machines, and these combined pressures led to dramatic change. Many reformers pointed to the plight of the urban poor, especially children. Thus it is not surprising that **progressivism**, an overlapping set of movements to combat the ills of industrialization (Chapter 19), had important roots in the city. In the slums and tenements of the metropolis, reformers invented new forms of civic participation that shaped the course of national politics.

AP® EXAM TIP

Take detailed notes on the role of popular media in the rise of progressivism.

Fighting Dirt and Vice

As early as the 1870s and 1880s, news reporters drew attention to corrupt city governments, the abuse of power by large corporations, and threats to public health. Researcher Helen Campbell reported on tenement conditions in such exposés as *Prisoners of Poverty* (1887). Making innovative use of the invention of flash photography, Danish-born journalist Jacob Riis included photographs of tenement interiors in his famous 1890 book, *How the Other Half Lives*. Riis had a profound influence on Theodore Roosevelt when the future president served as New York City's police commissioner. Roosevelt asked Riis to lead him on tours around the tenements, to help him better understand the problems of poverty, disease, and crime.

Cleaning Up Urban Environments One of the most urgent problems of the big city was disease. In the late nineteenth century, scientists in Europe came to understand the role of germs and bacteria. Though researchers could not yet cure epidemic diseases, they could recommend effective measures for prevention. Following up on New York City's victory against cholera in 1866—when government officials instituted an effective quarantine and prevented large numbers of deaths—city and state officials began to champion more public health projects. With a major clean-water initiative for its industrial cities in the late nineteenth century, Massachusetts

City Garbage "How to get rid of the garbage?" was a question that bedeviled every American city. The difficulties of keeping up are all too clear in this ground-level photograph by the great urban investigator Jacob Riis, looking down Tammany Street in New York City around 1890. © Museum of the City of New York, USA
Bridgeman Art Library

demonstrated that it could largely eliminate typhoid fever. After a horrific yellow fever epidemic in 1878 that killed perhaps 12 percent of its population, Memphis, Tennessee, invested in state-of-the-art sewage and drainage. Though the new system did not eliminate yellow fever, it unexpectedly cut death rates from typhoid and cholera, as well as infant deaths from water-borne disease. Other cities followed suit. By 1913, a nationwide survey of 198 cities found that they were spending an average of $1.28 per resident for sanitation and other health measures.

The public health movement became one of the era's most visible and influential reforms. In cities, the impact of pollution was obvious. Children played on piles of garbage, breathed toxic air, and consumed poisoned food, milk, and water. Infant mortality rates were shocking: in the early 1900s, a baby born to a Slavic woman in an American city had a 1 in 3 chance of dying in infancy. Outraged, reformers mobilized to demand safe water and better garbage collection. Hygiene reformers taught hand-washing and other techniques to fight the spread of **tuberculosis**.

Americans worked in other ways to make industrial cities healthier and more beautiful to live in. Many municipalities adopted smoke-abatement laws, though they had limited success with enforcement until the post–World War I adoption of natural gas, which burned cleaner than coal. Recreation also received attention. Even before the Civil War, urban planners had established sanctuaries like New York's Central Park, where city people could stroll, rest, and contemplate natural landscapes. By the turn of the twentieth century, the **"City Beautiful" movement** arose to advocate more and better urban park spaces. Though most parks still featured flower gardens and tree-lined paths, they also made room for skating rinks, tennis courts, baseball fields, and swimming pools. Many included play areas with swing sets and seesaws, promoted by the National Playground Association as a way to keep urban children safe and healthy (AP® Interpreting the Past).

How Did Urban Progressive Reformers Approach Environmentalism?

Contemporary stereotypes often associate environmentalism with wild landscapes, but environmentalism had an early history in America's cities. The urban landscapes of the late nineteenth and early twentieth centuries were the focus of reformers' efforts to manage the ill effects of industrialization and overcrowding. Though progressive environmentalists responded in different ways, they shared the view that America's cities were in danger.

The evidence was all around them. The nation's industrial factories belched plumes of coal ash. The pigs and horses wandering unpaved city streets dropped manure. The waste from overcrowded tenements spilled onto city sidewalks. With an inadequate and frequently corrupt public works infrastructure, cities were easily viewed as environmental disasters. Armed with an ideal of the city, reformers embraced an environmental mission to transform America's urban spaces. But what goals of environmentalism did reformers prioritize? In the excerpts below, two historians, William H. Wilson and David Stradling, emphasize different approaches to Progressive Era urban environmentalism.

WILLIAM H. WILSON

SOURCE: William H. Wilson, *The City Beautiful Movement* (Baltimore: The Johns Hopkins University Press, 1989), 79–80, 86–87.

[T]hose who endorsed the City Beautiful [movement] were environmentalists. When they trumpeted the meliorative power of beauty, they were stating their belief in its capacity to shape human thought and behavior. . . . [T]he whole urban environment and the entire human experience within it were critical to the City Beautiful movement. If the city became the locus of harmony, mutual responsibility, and interdependence between classes, mediated by experts, then it would be a peaceful, productive place. . . . [A]dvocates found secular salvation for humans in their belief in a flexible, organic city. . . . City Beautiful praised flowers, shrubs, and trees for their enhancing, softening qualities in city settings . . . [and] urged grass plots, ground covers, flowers, and plant groupings . . . [and] treated naturalistic parks and parkways as precious assets.

DAVID STRADLING

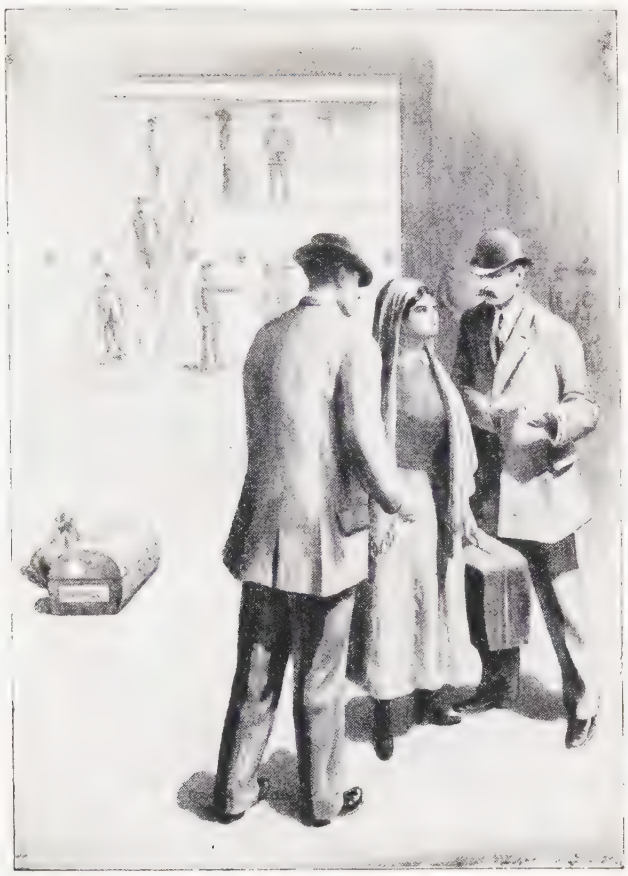
SOURCE: David Stradling, *The Nature of New York: An Environmental History of the Empire State* (Ithaca: Cornell University Press, 2010), 118–119.

Municipal health officials and city inspectors did make some advances against disease, especially through the improvement of the urban environment. They banned pigs from city streets, regulated notoriously unhealthy dairies inside city limits, and stepped up oversight of street cleaning and garbage removal. . . . [T]he Ladies Health Protective Association . . . shared a concern for the vile odors emanating from a manure handler along the East River . . . [and] the entire slaughterhouse district near . . . the tenements fouled by sickening smells and backed-up sewage. . . . [T]he association contacted business owners directly with their complaints, and . . . organized demonstrations at the offending locations, inviting the press to witness their lay inspections. . . . The women also gained considerable publicity when they brought their complaints to the Board of Health.

AP SHORT ANSWER PRACTICE

1. What different perspectives of Progressive Era environmentalism do these two historians emphasize?
2. What do these excerpts reveal about the different strategies and tactics urban environmental reformers pursued?
3. What characteristics of progressivism, as discussed in this textbook, are visible in the urban environmental movements described in these excerpts?

Closing Red Light Districts Distressed by the commercialization of sex, reformers also launched a campaign against urban prostitution. They warned, in dramatic language, of the threat of white slavery, alleging (in spite of considerable evidence to the contrary) that large numbers of young white women were being kidnapped and forced into prostitution. In *The City's Perils* (1910), author Leona Prall Groetzinger wrote that young women arrived from the countryside "burning with high hope and filled with great resolve, but the remorseless city takes them, grinds them, crushes them, and at last deposits them in unknown graves."



"FRIENDS" MEETING EMIGRANT GIRL AT THE DOCK

"The girl was met at New York by two 'friends' who took her in charge. These 'friends' were two of the most brutal of all the white slave traders who are in the traffic."

U. S. Dist. Attorney Edwin W. Sims

Foreign girls are more helplessly at the mercy of white slave hunters than girls at home. Every year thousands of girls arriving in America from Italy, Sweden, Germany, etc., are never heard of again.

The Crusade Against "White Slavery" With the growth of large cities, prostitution was a major cause of concern in the Progressive Era. Though the number of sex workers per capita in the United States was probably declining by 1900, the presence of red light districts was obvious; thousands of young women (as well as a smaller number of young men) were exploited in the sex trade. This image appeared in *The Great War on White Slavery*, published by the American Purity Foundation in 1911. It illustrates how immigrant women could be ensnared in the sex trade by alleged "friends" who offered them work. Reformers' denunciations of "white slavery" show an overt racial bias: while antiprostitution campaigners reported on the exploitation of Asian and African American women, the victimization of white women received the greatest emphasis and most effectively grabbed the attention of prosperous, middle-class Americans. *The Great War on White* by Clifford G. Roe, 1911. Courtesy Vassar College Special Collection

Practical investigators found a more complex reality: women entered prostitution as a result of many factors, including low-wage jobs, economic desperation, abandonment, and often sexual and domestic abuse. Women who bore a child out of wedlock were often shunned by their families and forced into prostitution. Some working women and even housewives undertook casual prostitution to make ends meet. For decades, female reformers had tried to "rescue" such women and retrain them for more respectable employments, such as sewing. Results were, at best, mixed. Efforts to curb demand — that is, to focus on arresting and punishing men who employed prostitutes — proved unpopular with voters.

Nonetheless, with public concern mounting over "white slavery" and the payoffs machine bosses exacted from brothel keepers, many cities appointed vice commissions in the early twentieth century. A wave of brothel closings crested between 1909 and 1912, as police shut down red light districts in cities nationwide. Meanwhile, Congress passed the Mann Act (1910) to prohibit the transportation of prostitutes across state lines.

The crusade against prostitution accomplished its main goal, closing brothels, but in the long term it worsened the conditions under which many prostitutes worked. Though conditions in some brothels were horrific, sex workers who catered to wealthy clients made high wages and were relatively protected by madams, many of whom set strict rules for clients and provided medical care for their workers. In the wake of brothel closings, such women lost control of the prostitution business. Instead, almost all sex workers became "streetwalkers" or "call girls," more vulnerable to violence and often earning lower wages than they had before the antiprostitution crusade began.

The Movement for Social Settlements

Some urban reformers focused their energies on building a creative new institution, the **social settlement**. These community welfare centers investigated the plight of the urban poor, raised funds to address urgent needs, and helped neighborhood residents advocate on their own behalf. At the movement's peak in the early twentieth century, dozens of social settlements operated across the United States. The most famous, and one of the first, was **Hull House** on Chicago's West Side, founded in 1889 by Jane Addams and her companion Ellen Gates Starr. Their dilapidated mansion, flanked by saloons in a neighborhood of Italian and Eastern European immigrants, served as a spark plug for community improvement and political reform.

The idea for Hull House came partly from Toynbee Hall, a London settlement that Addams and Starr had visited while touring Europe. Social settlements also drew inspiration from U.S. urban missions of the 1870s and 1880s. Some of these, like the Hampton Institute, had aided former slaves during Reconstruction; others, like Grace Baptist in Philadelphia, arose in northern cities. To meet the needs of urban residents, missions offered employment counseling, medical clinics, day care centers, and

AP® PRACTICES & SKILLS

CAUSATION

What prompted the rise of urban environmental and antiprostitution campaigns?

sometimes athletic facilities in cooperation with the Young Men's Christian Association (YMCA).

Jane Addams, a daughter of the middle class, first expected Hull House to offer art classes and other cultural programs for the poor. But Addams's views quickly changed as she got to know her new neighbors and struggled to keep Hull House open during the depression of the 1890s. Addams's views were also influenced by conversations with fellow Hull House resident Florence Kelley, who had studied in Europe and returned a committed socialist. Dr. Alice Hamilton, who opened a pediatric clinic at Hull House, wrote that Addams came to see her settlement as "a bridge between the classes. . . . She always held that this bridge was as much of a help to the well-to-do as to the poor." Settlements offered idealistic young people "a place where they could live as neighbors and give as much as they could of what they had."

Addams and her colleagues believed that working-class Americans already *knew* what they needed. What they lacked were resources to fulfill those needs, as well as a political voice. These, settlement workers tried to provide. Hull House was typical in offering a bathhouse, playground, kindergarten, and day care center. Some settlements opened libraries and gymnasiums; others operated penny savings banks and cooperative kitchens where tired mothers could purchase a meal at the end of the day. (Addams humbly closed the Hull House kitchen when she found that her bland New England cooking had little appeal for Italians; her coworker, Dr. Alice Hamilton, soon investigated the health benefits of garlic.) At the Henry Street Settlement in New York, Lillian Wald organized visiting nurses to improve health in tenement wards. Addams, meanwhile, encouraged local women to inspect the neighborhood and bring back a list of dangers to health and safety. Together, they prepared a complaint to city council. The women, Addams wrote, had shown "civic enterprise and moral conviction" in carrying out the project themselves.

AP® EXAM TIP

The impact of Hull House is a "must know" on the AP® exam.

Social settlements took many forms. Some attached themselves to preexisting missions and African American colleges. Others were founded by energetic college graduates. Catholics ran St. Elizabeth Center in St. Louis; Jews, the Boston Hebrew Industrial School. Whatever their origins, social settlements were, in Addams's words, "an experimental effort to aid in the solution of the social and industrial problems which are engendered by the modern condition of life in a great city."

Settlements served as a springboard for many other projects. Settlement workers often fought city hall to get better schools and lobbied state legislatures for new workplace safety laws. At Hull House, Hamilton investigated lead poisoning and other health threats at local factories. Her colleague Julia Lathrop investigated the plight of teenagers caught in the criminal justice system. She drafted a proposal for separate juvenile courts and persuaded Chicago to adopt it. Pressuring the city to experiment with better rehabilitation strategies for juveniles convicted of crime, Lathrop created a model for juvenile court systems across the United States.

Another example of settlements' long-term impact was the work of Margaret Sanger, a nurse who moved to New York City in 1911 and volunteered with a Lower East Side settlement. Horrified by women's suffering from constant pregnancies — and remembering her devout Catholic mother, who had died young after bearing eleven children — Sanger launched a crusade for what she called birth control. Her newspaper column, "What Every Girl Should Know," soon garnered an indictment for violating obscenity laws. The publicity that resulted helped Sanger launch a national birth control movement.

Settlements were thus a crucial proving ground for many progressive experiments, as well as for the emerging profession of social work, which transformed the provision of public welfare. Social workers rejected the older model of private Christian charity, dispensed by well-meaning middle-class volunteers to those in need. Instead, social workers defined themselves as professional caseworkers who served as advocates of social justice. Like many reformers of the era, they allied themselves with the new social sciences, such as sociology and economics, and undertook statistical surveys and other

Hull House Playground, Chicago, 1906 When this postcard was made, the City of Chicago's Small Parks Commission had just taken over management of the playground from settlement workers at Hull House, who had created it. In a pattern repeated in many cities, social settlements introduced new institutions and ideas — such as safe places for urban children to play — and inspired municipal authorities to assume responsibility and control. CHANGE OVER TIME

What were the origins of social settlements, and how did they develop over time?

systematic methods for gathering facts. Social work proved to be an excellent opportunity for educated women who sought professional careers. By 1920, women made up 62 percent of U.S. social workers.

Cities and National Politics

Despite reform efforts, the problems wrought by industrialization continued to cause suffering in urban workplaces and environments. In 1906, journalist Upton Sinclair exposed some of the most extreme forms of labor exploitation in his novel *The Jungle*, which described appalling conditions in Chicago meatpacking plants. What caught the nation's attention was not Sinclair's account of workers' plight, but his descriptions of rotten meat and filthy packing conditions. With constituents up in arms, Congress passed the **Pure Food and Drug Act** (1906) and created the federal Food and Drug Administration to oversee compliance with the new law.

The impact of *The Jungle* showed how urban reformers could affect national politics. Even more significant was the work of Josephine Shaw Lowell, a Civil War widow from a prominent family. After years of struggling to aid poverty-stricken individuals in New York City, Lowell concluded that charity was not enough. In 1890, she helped found the New York Consumers' League to improve wages and working conditions for female store clerks. The league encouraged shoppers to patronize only stores where wages and working conditions were known to be fair. By 1899, the organization had become the **National Consumers' League** (NCL). At its head stood the outspoken and skillful Florence Kelley, a Hull House worker and former chief factory inspector of Illinois. Kelley believed that only government oversight could protect exploited workers. Under her crusading leadership, the NCL became one of the most powerful progressive organizations advocating worker protection laws.

Many labor organizations also began in a single city and then grew to national stature. One famous example was the **Women's Trade Union League**, founded in New York in 1903. Financed by wealthy women who supported its work, the league trained working-class leaders like Rose Schneiderman, who organized unions among garment workers. Although often frustrated by the patronizing attitude of elite sponsors, trade-union women joined together in the broader struggle for women's rights. When New York State held referenda on women's suffrage in 1915 and 1917, strong support came from Jewish and Italian precincts where unionized garment workers lived. Working-class voters hoped, in turn, that enfranchised women would use their ballots to help industrial workers.

Residents of industrial cities, then, sought allies in state and national politics. The need for broader action was made clear in New York City by a shocking event on March 25, 1911. On that Saturday afternoon, just before quitting time, a fire broke out at the Triangle Shirtwaist Company. The **Triangle Fire** quickly spread through the three floors the company occupied at the top of a ten-story building. Panicked workers discovered that, despite fire safety laws, employers had locked the emergency doors to prevent theft. Dozens of Triangle workers, mostly young immigrant women, were trapped in the flames. Many leaped to their deaths; the rest never reached the windows. The average age of the 146 people who died was just nineteen (AP® Analyzing Voices).

Outrage after the Triangle Fire This graphic cartoon by John Sloan was titled "In Memoriam — The Real Triangle." It appeared in a prolabor newspaper, the *New York Call*. "How Long," asked the *Call*'s headline, "Will the Workers Permit Themselves to be Burned As Well As Enslaved in Their Shops?" Who benefitted from the rent, interest, and profit that Sloan names as causes of the fire? The Granger Collection, New York

AP® EXAM TIP

The impact of the Triangle Fire on the Progressive Era is critical on the AP® exam.

Shocked by this horrific event, New Yorkers responded with an outpouring of anger and grief that crossed ethnic, class, and religious boundaries. Many remembered that, only a year earlier, shirtwaist workers had walked off the job to protest abysmal safety and working conditions — and that the owners of Triangle, among other employers, had broken the strike. Facing demands for action, New York State appointed a factory commission that developed a remarkable program of labor reform: fifty-six laws dealing with such issues as fire hazards, unsafe machines, and wages and working hours for women and children. The chairman and vice chairman of the commission were Robert F. Wagner and Alfred E. Smith, both Tammany Hall politicians then serving in the state legislature. They established the commission, participated fully in its work, and marshaled party regulars to pass the proposals into law — all with the approval of Tammany. The labor code that resulted was the most advanced in the United States.

Tammany's response to the Triangle Fire showed that it was acknowledging its need for help. The social and economic problems of the industrial city had outgrown the power of party machines; only stronger state and national laws could bar industrial firetraps, alleviate sweatshop conditions, and improve slums. Politicians like Wagner and Smith saw that Tammany had to change or die. The fire had unforeseen further consequences. Frances Perkins, a Columbia University student who witnessed the horror of Triangle workers leaping from the windows to their deaths, decided she would devote her efforts to the cause of labor. Already active in women's reform organizations, Perkins went to Chicago, where she volunteered for several years at Hull House. In 1929, she became New York State's first commissioner of labor; four years later, during

"These Dead Bodies Were the Answer": The Triangle Fire

Entire books have been written about the catastrophic 1911 fire at the Triangle Shirtwaist Company in New York City. The following excerpts are from documents by four contemporaries who in various ways played a part in the Triangle tragedy and its aftermath. Note the different audiences that these speakers and authors were addressing and the lessons that each one draws from this horrific event.

WILLIAM G. SHEPHERD, REPORTER

William G. Shepherd's eyewitness account appeared in newspapers across the country. Working for the United Press, Shepherd phoned the story to his editor as he watched the unfolding tragedy.

"I was walking through Washington Square when a puff of smoke issuing from a factory building caught my eye. I reached the building before the alarm was turned in. I saw every feature of the tragedy visible from outside the building. I learned a new sound — a more horrible sound than description can picture. It was the thud of a speeding, living body on a stone sidewalk. . . .

I looked up — saw that there were scores of girls at the windows. The flames from the floor below were beating in their faces. Somehow I knew that they, too, must come down, and something within me — something I didn't know was there — steeled me.

I even watched one girl falling. Waving her arms, trying to keep her body upright until the very instant she struck the sidewalk, she was trying to balance herself. Then came the thud — then a silent, unmoving pile of clothing and twisted, broken limbs. . . .

On the sidewalk lay heaps of broken bodies. A policeman later went about with tags, which he fastened with wire to the wrists of the dead girls, numbering each with a lead pencil, and I saw him fasten tag no. 54 to the wrist of a girl who wore an engagement ring. . . .

The floods of water from the firemen's hose that ran into the gutter were actually stained red with blood. I looked upon the heap of dead bodies and I remembered these girls were the shirtwaist makers. I remembered their great strike of last year in which these same girls had demanded more sanitary conditions and more safety precautions in the shops. These dead bodies were the answer."

STEPHEN S. WISE, RABBI

A week after the fire, on April 2, 1911, a memorial meeting was held at the Metropolitan Opera House. One of the speakers, Rabbi Stephen S. Wise, a prominent figure in New York reform circles, made the following remarks.

"This was not an inevitable disaster which man could neither foresee nor control. We might have foreseen it, and some of us did; we might have controlled it, but we chose not to do so. . . . It is not a question of enforcement of law nor of inadequacy of law. We have the wrong kind of laws and the wrong kind of enforcement. Before insisting upon inspection and enforcement, let us lift up the industrial standards so as to make conditions worth inspecting, and, if inspected, certain to afford security to workers. . . . And when we go before the legislature of the state, and demand increased appropriations in order to ensure the possibility of a sufficient number of inspectors, we will not forever be put off with the answer: We have no money.

The lesson of the hour is that while property is good, life is better; that while possessions are valuable, life is priceless. The meaning of the hour is that the life of the lowliest worker in the nation is sacred and inviolable, and, if that sacred human right be violated, we shall stand adjudged and condemned before the tribunal of God and history."

ROSE SCHNEIDERMAN, TRADE UNIONIST

Rose Schneiderman also spoke at the Metropolitan Opera House meeting. At age thirteen, she had gone to work in a garment factory like Triangle Shirtwaist's and, under the tutelage of the Women's Trade Union League, had become a labor organizer. The strike she mentions in her speech was popularly known as the Uprising of the 30,000, a nearly spontaneous walkout in 1909 that launched the union movement in the women's garment trades.

"I would be a traitor to these poor burned bodies if I came here to talk good fellowship. We have tried you good people of the public and we have found you wanting. The old Inquisition had its rack and its thumbscrews and its instruments of torture with iron teeth. We know what these things are today; the iron teeth are our necessities, the thumbscrews are the high-powered and swift machinery

the New Deal (Chapter 22), Franklin D. Roosevelt appointed her as U.S. secretary of labor — the first woman to hold a cabinet post.

The political aftermath of the Triangle Fire demonstrated how challenges posed by industrial cities pushed politics in new directions, transforming urban government and initiating broader movements for reform. The nation's political and cultural standards had long been set by native-born, Protestant, middle-class Americans. By 1900, the people who thronged to the great cities helped build America into a global industrial

close to which we must work, and the rack is here in the firetrap structures that will destroy us the minute they catch on fire.

This is not the first time girls have been burned alive in the city. . . . Every year thousands of us are maimed. The life of men and women is so cheap and property is so sacred. There are so many of us for one job it matters little if 146 of us are burned to death.

We have tried you citizens; we are trying you now, and you have a couple of dollars for the sorrowing mothers, brothers, and sisters by way of a charity gift. But every time the workers come out in the only way they know to protest against conditions which are unbearable the strong hand of the law is allowed to press down heavily upon us . . . [and] beats us back, when we rise, into the conditions that make life unbearable.

I can't talk fellowship to you who are gathered here. Too much blood has been spilled. I know from my experience it is up to the working people to save themselves. The only way they can save themselves is by a strong working-class movement. ❞

MAX D. STEUER, LAWYER

After finding physical evidence of the locked door that had blocked escape from the fire, New York's district attorney brought manslaughter charges against the Triangle proprietors, Max Blanck and Isaac Harris, who hired in their defense the best, highest-priced trial attorney in town, Max D. Steuer. In this talk, delivered some time later to a rapt audience of lawyers, Steuer described how he undermined the testimony of the key witness for the prosecution by suggesting that she had been coached to recite her answer. The trial judge instructed the jury that it could only convict Blanck and Harris if it was *certain* they had known the emergency exits were locked; as Steuer notes, the jury voted to acquit.

❝ There are many times, many times when a witness has given evidence very hurtful to your cause and you say, 'No questions,' and dismiss him or her in the hope that the jury will dismiss the evidence too. [*Laughter.*] But can you do that when the jury is weeping, and the little girl witness is weeping too? [*Laughter.*] . . . There is one [rule] that commands what not to do. Do not attack the witness. Suavely, politely, genially, toy with the story.

In the instant case, about half an hour was consumed by the examiner [Steuer]. . . . Very little progress was made; but the tears had stopped. And then [the witness] was asked, 'Now, Rose, in your own words, and in your own way will you tell the jury everything you did, everything you said, and everything you saw from the moment you first saw flames.'

The question was put in precisely the same words that the District Attorney had put it, and little Rose started her answer with exactly the same word that she had started it to the District Attorney . . . and the only change in her recital was that Rose left out one word. And then Rose was asked, 'Didn't you leave out a word that you put in when you answered it before?' . . . So Rose started to repeat to herself the answer [*laughter*], and as she came to the missing word she said, 'Oh, yes!' and supplied it; and thereupon the examiner went on to an entirely different subject. . . . [W]hen again he [asked her to repeat her story] . . . Rose started with the same word and finished with the same word, her recital being identical with her first reply to the same question.

The jurymen were not weeping. Rose had not hurt the case, and the defendants were acquitted; there was not a word of reflection at any time during that trial upon poor little Rose. ❞

QUESTIONS FOR ANALYSIS

1. The hardest task of the historian is to conjure up the reality of the past — to say, "This is what it was really like." That's where eyewitness evidence like the reporter Shepherd's comes in. What is there in his account that you could only obtain from an eyewitness?
2. Both Rabbi Wise and Rose Schneiderman were incensed at the Triangle carnage, yet their speeches are quite different. In what ways? What conclusions do you draw about the different motivations and arguments that led to reform?
3. Max Steuer and Rose Schneiderman came from remarkably similar backgrounds. They were roughly the same age, grew up in poverty on the Lower East Side, and started out as child workers in the garment factories. The differences in their adult lives speak to the varieties of immigrant experience in America. What in their statements help to account for their differing life paths? What might have happened if Rose Schneiderman, rather than "little Rose," had faced Max Steuer on the witness stand?

power — and in the process, created an electorate that was far more ethnically, racially, and religiously diverse.

In the era of industrialization, some rural and native-born commentators warned that immigrants were "inferior breeds" who would "mongrelize" American culture. But urban political leaders defended cultural pluralism, expressing appreciation — even admiration — for immigrants, including Catholics and Jews, who sought a better life in the United States. At the same time, urban reformers worked to improve conditions of

AP PRACTICES & SKILLS

CAUSATION

How did urban reform movements impact state and national politics?

life for the diverse residents of American cities. Cities, then, and the innovative solutions proposed by urban leaders, held a central place in America's consciousness as the nation took on the task of progressive reform.

IN YOUR OWN WORDS **Why and how did large cities become what one commentator called "seedbeds for reform"?**

SUMMARY

After 1865, American cities grew at an unprecedented rate, and urban populations swelled with workers from rural areas and abroad. To move their burgeoning populations around, cities pioneered innovative forms of mass transit. Skyscrapers came to mark urban skylines, and new electric lighting systems encouraged nightlife. Neighborhoods divided along class and ethnic lines, with the working class inhabiting crowded, shoddily built tenements. Immigrants developed new ethnic cultures in their neighborhoods, while racism followed African American migrants from the country to the city. At the same time, new forms of popular urban culture bridged class and ethnic lines, challenging traditional sexual norms and gender roles. Popular journalism rose to prominence and helped build rising sympathy for reform.

Industrial cities confronted a variety of new political challenges. Despite notable achievements, established machine governments could not address urban problems through traditional means. Forward-looking politicians took the initiative and implemented a range of political, labor, and social reforms. Urban reformers also launched campaigns to address public health, morals, and welfare. They did so through a variety of innovative institutions, most notably social settlements, which brought affluent Americans into working-class neighborhoods to learn, cooperate, and advocate on behalf of their neighbors. Such projects began to increase Americans' acceptance of urban diversity and their confidence in government's ability to solve the problems of industrialization.

CHAPTER 18 REVIEW

AP® CONTENT REVIEW *Answer these questions to demonstrate your understanding of the chapter's main ideas.*

1. How did American cities change in the late nineteenth century?
2. What problems did big cities pose for those who ran them, and how did political leaders try to meet those challenges?
3. Why and how did large cities become what one commentator called "seedbeds for reform"?
4. Using the thematic timeline on pages 494–495, consider some of the ways in which mass migrations of people — both from other countries and from places within the United States — shaped industrial cities. How did this influence American society, culture, and national identity?

AP® TERMS TO KNOW *Identify and explain the significance of each term below.*

MAKING CONNECTIONS *Recognize the larger developments and continuities within and across chapters by answering these questions.*

1. What broader economic changes that were occurring in the United States (Chapters 16 and 17) affected cities? How did urban dwellers' responses to these changes vary from those of farmers and other rural Americans?
2. Imagine that you have just arrived in a big American city in the early 1900s. Review the images of St. Louis (p. 561), amusement park (p. 567), urban garbage (p. 576), playground (p. 580), and Triangle Fire aftermath (p. 581), and the cartoon "A Hint to Boards of Health" (p. 573). What do these images suggest about the problems and dangers you might encounter? What opportunities might appeal to you as a newcomer? On balance, do you think you want to stay, or turn around and head back home? Why? What factors shape your decision?

KEY TURNING POINTS *Refer to the chapter chronology on page 560 for help in answering the questions below.*

Based on the chapter chronology and the chapter narrative, what tipping points can you identify when Americans began to propose political solutions for urban industrial problems? What issues did they emphasize?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS *Choose the correct answer for each question.*

Questions 1–4 refer to the 1871 below political cartoon by Thomas Nast depicting Boss Tweed.

Fotosearch/Archive Photos/Getty Images

1. The political situation depicted in the image was most directly caused by
   a. the First American Party System debates over the Alien Act.
   b. the Second American Party System debates over the national bank.
   c. large-scale international migration to cities of the United States.
   d. journalists seeking government reforms during the Progressive Era.
2. The conditions depicted in the cartoon were most prevalent in which type of election race?
   a. County
   b. City
   c. State
   d. Federal
3. Which of the following would have most likely critiqued the arrangement of political power portrayed in the image?
   a. Local party bureaucrats
   b. Recent immigrants
   c. College-educated women
   d. Political machine bosses
4. Which of the following reform movements drew the greatest extent of inspiration from the political situation depicted in the image?
   a. Radical reconstruction
   b. Populist
   c. Progressive
   d. Women's rights

Questions 5–7 refer to the excerpt below.

> "There were those who made the tins for the canned meat; and their hands, too, were a maze of cuts, and each cut represented a chance for blood poisoning. Some worked at the stamping machines, and it was very seldom that one could work long there at the pace that was set, and not give out and forget himself and have a part of his hand chopped off. . . . [A]nd as for the other men, who worked in tank rooms full of steam, and in some of which there were open vats near the level of the floor, their peculiar trouble was that they fell into the vats; and when they were fished out, there was never enough of them left to be worth exhibiting, — sometimes they would be overlooked for days, till all but the bones of them had gone out to the world as Durham's Pure Beef Lard!"
>
> Upton Sinclair, *The Jungle*, 1906

5. The conditions described in the passage resulted most directly from
   a. reliance on unskilled labor in meatpacking industry.
   b. mechanization leading to lower meat prices.
   c. an unregulated business environment emphasizing profits.
   d. labor unions prioritizing pay raises over workplace safety.
6. During which earlier time period did American factory workers most commonly face comparably dangerous working conditions as those described in the excerpt?
   a. 1650 to 1700
   b. 1700 to 1750
   c. 1750 to 1800
   d. 1800 to 1850
7. The publication of muckraking accounts such as *The Jungle* most directly contributed to which of the following changes?
   a. Expanded governmental oversight of businesses
   b. Increased use of automation in factories
   c. Consolidation of large corporations into trusts
   d. Outsourcing of factories to lower wage countries

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

"[T]hose who endorsed the City Beautiful [movement] were environmentalists. When they trumpeted the meliorative power of beauty, they were stating their belief in its capacity to shape human thought and behavior. . . . [T]he whole urban environment and the entire human experience within it were critical to the City Beautiful movement. If the city became the locus of harmony, mutual responsibility, and interdependence between classes, mediated by experts, then it would be a peaceful, productive place. . . . [A]dvocates found secular salvation for humans in their belief in a flexible, organic city. . . . City Beautiful praised flowers, shrubs, and trees for their enhancing, softening qualities in city settings . . . [and] urged grass plots, ground covers, flowers, and plant groupings . . . [and] treated naturalistic parks and parkways as precious assets."

William H. Wilson, *The City Beautiful Movement*, 1989

"Municipal health officials and city inspectors did make some advances against disease, especially through the improvement of the urban environment. They banned pigs from city streets, regulated notoriously unhealthy dairies inside city limits, and stepped up oversight of street cleaning and garbage removal. . . . [T]he Ladies Health Protective Association . . . shared a concern for the vile odors emanating from a manure handler along the East River . . . [and] the entire slaughterhouse district near . . . the tenements fouled by sickening smells and backed-up sewage. . . . [T]he association contacted business owners directly with their complaints, and . . . organized demonstrations at the offending locations, inviting the press to witness their lay inspections. . . . The women also gained considerable publicity when they brought their complaints to the Board of Health."

David Stradling, *The Nature of New York: An Environmental History of the Empire State*, 2010

1. Using the two excerpts above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE major difference between Wilson's and Stradling's historical interpretations of Progressive Era municipal reform.
   - **b.** Briefly explain how ONE specific historical event or development from the period 1880 to 1917 that is not explicitly mentioned in the excerpts could be used to support Wilson's interpretation.
   - **c.** Briefly explain how ONE specific historical event or development from the period 1880 to 1917 that is not explicitly mentioned in the excerpts could be used to support Stradling's interpretation.

Rural and Urban Populations in the United States, 1870–1900

2. Using the graph above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE specific historical event or development that accounts for the change illustrated in the graph.
   - **b.** Briefly explain ONE specific historical political effect of the change illustrated in the graph.
   - **c.** Briefly explain ONE specific historical economic effect of the change illustrated in the graph.
3. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE specific historical similarity between urban reform efforts in the period 1820 to 1860 and the period 1880 to 1920.
   - **b.** Briefly explain ONE specific historical difference between urban reform efforts in the period 1820 to 1860 and the period 1880 to 1920.
   - **c.** Briefly explain ONE specific success or failure of the urban reform movement in the period 1880 to 1920.

AP® LEARNING FOCUS

How and why did Progressive Era reformers seek to address the problems of industrial America, and to what extent did they succeed?

"We are living in a grand and wonderful time," declared Kansas political organizer Mary E. Lease in 1891. "Men, women and children are in commotion, discussing the mighty problems of the day." This "movement among the masses," she said, was based on the words of Jesus: "Whatsoever ye would that men should do unto you, do ye even so unto them." Between the 1880s and the 1910s, thousands of reformers like Lease confronted the problems of industrialization. Lease herself stumped not only for the People's Party, which sought more government regulation of the economy, but also for the Knights of Labor and Woman's Christian Temperance Union (WCTU), as well as for women's suffrage and public health.

Between the end of Reconstruction and the start of World War I, political reformers focused on four main goals: cleaning up politics, limiting the power of big business, reducing poverty, and promoting social justice. Historians call this period of agitation and innovation the Progressive Era. In the 1880s and 1890s, labor unions and farm groups took the lead in critiquing the industrial order and demanding change. But over time, more and more middle-class and elite Americans took up the call, earning the name *progressives*. On the whole, they proposed more limited measures than farmer-labor advocates did, but since they had more political clout, they often had greater success in winning new laws. Thus both radicals and progressives played important roles in advancing reform.

No single group defined the Progressive Era. On the contrary, reformers took opposite views on such questions as immigration, racial justice, women's rights, and imperialism. Leaders such as Theodore Roosevelt and Woodrow Wilson, initially hostile to the sweeping critiques of capitalism offered by radicals, gradually adopted bolder ideas. Dramatic political changes influenced the direction of reform. Close party competition in the 1880s gave way to Republican control between 1894 and 1910, followed by a period of Democratic leadership during Wilson's presidency (1913–1919). Progressives gave the era its name, not because they acted as a unified force, but because they engaged in diverse, energetic movements to improve America.

Coxey's Army on the March, 1894 During the severe depression of the 1890s, Ohio businessman Jacob Coxey organized unemployed men for a peaceful march to the U.S. Capitol to plead for an emergency jobs program. They called themselves the Commonweal of Christ but won the nickname "Coxey's Army." Though it failed to win sympathy from Congress, the army's march on Washington — one of the nation's first — inspired similar groups to set out from many cities. Here, Coxey's group nears Washington, D.C. The man on horseback is Carl Browne, one of the group's leaders and a flamboyant publicist. As the marchers entered Washington, Coxey's seventeen-year-old daughter Mamie, dressed as the "Goddess of Peace," led the procession on a white Arabian horse. Library of Congress

- **1914** ▸ Clayton Antitrust Act

Reform Visions, 1880–1892

In the 1880s, radical farmers' groups and the Knights of Labor provided a powerful challenge to industrialization (Chapter 16). At the same time, groups such as the WCTU (Chapter 17) and urban settlements (Chapter 18) laid the groundwork for progressivism, especially among women. Though they had different goals, these groups confronted similar dilemmas upon entering politics. Should they work through existing political parties? Create new ones? Or generate pressure from the outside? Reformers tried all these strategies.

Electoral Politics After Reconstruction

AP® EXAM TIP

Evaluate the application of the name "Gilded Age" to the late nineteenth century.

The end of Reconstruction ushered in a period of fierce partisan conflict. Republicans and Democrats traded control of the Senate three times between 1880 and 1894, and the House majority five times. Causes of this tight competition included northerners' disillusionment with Republican policies and the resurgence of southern Democrats, who regained a strong base in Congress. Dizzying population growth also changed the size and shape of the House of Representatives. In 1875, it counted 243 seats; two decades later, that had risen to 356. Between 1889 and 1896, entry of seven new western states — Montana, North and South Dakota, Washington, Idaho, Wyoming, and Utah — contributed to political instability.

Heated competition and the legacies of the Civil War drew Americans into politics. Union veterans donned their uniforms to march in Republican parades, while ex-Confederate Democrats did the same in the South. When politicians appealed to war loyalties, critics ridiculed them for "waving the bloody shirt": whipping up old animosities that ought to be set aside. For those who had fought or lost beloved family members in the conflict, however — as well as those struggling over African American rights in the South — war issues remained crucial. Many voters also had strong views on economic policies, especially Republicans' high protective tariffs. Proportionately more voters turned out in presidential elections from 1876 to 1892 than at any other time in American history.

AP® PRACTICES & SKILLS

CAUSATION

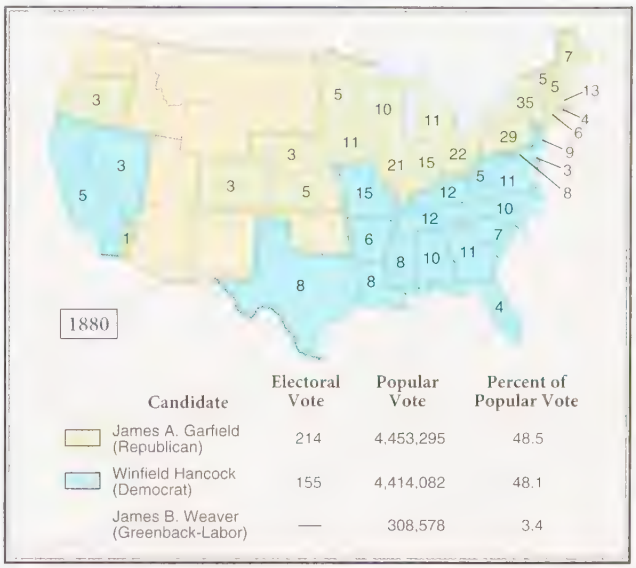
What factors led to close party competition in the 1880s?

The presidents of this era had limited room to maneuver in a period of narrow victories, when the opposing party often held one or both houses of Congress. Republicans Rutherford B. Hayes and Benjamin Harrison both won the electoral college but lost the popular vote. In 1884, Democrat Grover Cleveland won only 29,214 more votes than his opponent, James Blaine, while almost half a million voters rejected both major candidates (Map 19.1). With key states decided by razor-thin margins, both Republicans and Democrats engaged in vote buying and other forms of fraud. The fierce struggle for advantage also prompted innovations in political campaigning (AP® Thinking Like a Historian).

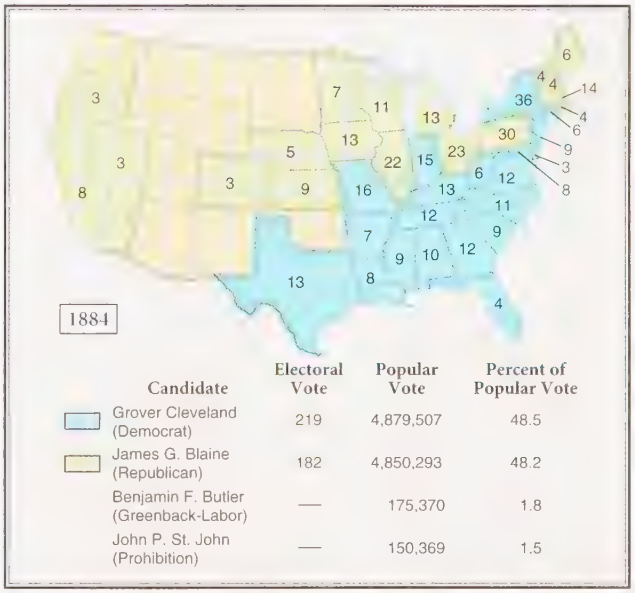
Some historians have characterized this period as a Gilded Age, when politics was corrupt and stagnant and elections centered on "meaningless hoopla." The term *Gilded Age*, borrowed from the title of an 1873 novel cowritten by Mark Twain, suggested that America had achieved a glittery outer coating of prosperity and lofty rhetoric, but underneath suffered from moral decay. Economically, the term *Gilded Age* seems apt: as we have seen in previous chapters, a handful of men made spectacular fortunes, and their triumphs belied a rising crisis of poverty, pollution, and erosion of workers' rights. But political leaders were not blind to these problems, and the political scene was hardly idle or indifferent. Rather, Americans bitterly disagreed about what to do. Nonetheless, as early as the 1880s, Congress passed important new federal measures to clean up corruption and rein in corporate power. That decade deserves to be considered an early stage in the emerging Progressive Era (AP® Interpreting the Past).

New Initiatives One of the first reforms resulted from tragedy. On July 2, 1881, only four months after entering the White House, James Garfield was shot at a train station in Washington, D.C. ("Assassination," he had told a friend, "can no more be guarded against than death by lightning, and it is best not to worry about either.") After lingering for several agonizing months, Garfield died. Most historians now believe the assassin, Charles Guiteau, suffered from mental illness. But reformers then blamed the spoils system, arguing that Guiteau had murdered Garfield out of disappointment in the scramble for patronage, the granting of government jobs to party loyalists.

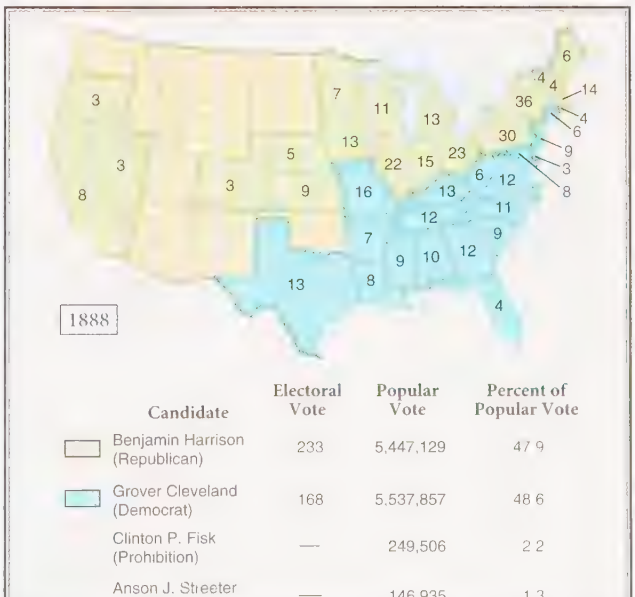
In the wake of Garfield's death, Congress passed the **Pendleton Act** (1883), establishing a nonpartisan Civil Service Commission to fill federal jobs by examination. Initially, civil



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
James A. Garfield (Republican)	214	4,453,295	48.5
Winfield Hancock (Democrat)	155	4,414,082	48.1
James B. Weaver (Greenback-Labor)	—	308,578	3.4



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Grover Cleveland (Democrat)	219	4,879,507	48.5
James G. Blaine (Republican)	182	4,850,293	48.2
Benjamin F. Butler (Greenback-Labor)	—	175,370	1.8
John P. St. John (Prohibition)	—	150,369	1.5



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Benjamin Harrison (Republican)	233	5,447,129	47.9
Grover Cleveland (Democrat)	168	5,537,857	48.6
Clinton P. Fisk (Prohibition)	—	249,506	2.2
Anson J. Streeter (Union Labor)	—	146,935	1.3

MAP 19.1 The Presidential Elections of 1880, 1884, and 1888
The anatomy of hard-fought, narrowly won presidential campaigns is evident in this trio of electoral maps. First, note the equal division of the popular vote between Republicans and Democrats. Second, note the persistent pattern of electoral votes, as states overwhelmingly went to the same party in all three elections. Here, we can identify who determined the outcomes — voters in swing states, such as New York and Indiana, whose vote shifted every four years and always in favor of the winning candidate.

Making Modern Presidents

Between 1880 and 1917, the stature and powers of the U.S. president grew in relation to those of Congress. Presidential campaign techniques also changed. The sources below shed light on candidates' increasing public visibility and new uses of campaign funds.

1. **Household sewing machine company advertisement, 1880s.** *President Grover Cleveland, a bachelor, married young Frances Folsom in a quiet White House ceremony in June 1886. The bride, a college graduate who was twenty-six years younger than her husband, proved wildly popular. The Clevelands never authorized political or commercial use of the First Lady's image. Nonetheless, over their objections, young women organized "Frankie Cleveland Clubs" to march in Democratic parades, while companies such as this one capitalized on her popularity in advertising.*

© t. Picture Research Consultants & Archives

2. **Account of Benjamin Harrison's front porch campaign in Indianapolis, *New York Tribune*, October 12, 1888.** *For much of the nineteenth century, presidential candidates left campaigning to their allies. A man who promoted himself risked appearing vain and greedy for office. By the 1880s, Republicans began to run "front porch campaigns": party leaders arranged for delegations to visit the candidate at home.*

This morning General Harrison's home was surrounded by visitors, who had arrived in the city in the night and on the early morning trains. . . . There were many relic-hunters among the early visitors and they swarmed about the house, taking, without protest from any one, whatever they were pleased to seize. There is no longer a fence about the house to be converted into relics, and so the visitors are taking the trees now. The shrubbery has almost disappeared. . . . The informal reception began as soon as the General got up from [breakfast] and continued until afternoon. The first delegation was composed of representatives of the Cincinnati Republican Clubs. . . . A delegation from Belleville, Ill., which . . . had patiently waited for more than four hours, were next invited to enter the house, and they were accorded the usual handshaking reception. . . .

The parade early in the afternoon was the principal feature of the day's demonstration. Two hundred or more clubs participated and they came from all parts of the State, representing various classes and interests. . . . There were mounted men and men on foot, women in wagons and women in uniform marching, brass bands. . . .

On the balcony beside General Harrison stood his wife, with several of her lady friends.

3. **Henry George on money in politics, *Wheeling Register*, September 19, 1896.** *Reformer Henry George was among many who warned of the influence of corporate contributions, solicited brilliantly in 1896 by William McKinley's campaign manager, Mark Hanna. Short of funds, Democratic candidate William Jennings Bryan undertook exhausting nationwide speaking tours.*

There is no question which of the great parties represents the house of Have and which the house of Want. . . . Democrat[s] are cramped for want of funds. . . . On the other hand there is

service applied to only 10 percent of such jobs, but the act laid the groundwork for a sweeping transformation of public employment. By the 1910s, Congress extended the act to cover most federal positions; cities and states across the country enacted similar laws.

Civil service laws had their downside. In the race for government jobs, they tilted the balance toward middle-class applicants who could perform well on tests. "Firemen now must know equations," complained a critic, "and be up on Euclid too." But the laws put talented professionals in office and discouraged politicians from appointing

practically "no end of money" at the disposal of the McKinley committees. . . .

As for the banks, the great railroad companies and insurance companies, who, even in ordinary times find it to their interest to help financially one, and frequently both, sides . . . , their purse strings are unloosed more freely than ever before, but only in one direction.

The danger to a republican form of government of a money interest in politics is so clear that it needs not to be dwelt upon. . . . The steady tendency of American legislation, national and state, has not merely been to create great special interests, but in the very effort to control them for the benefit of the public, to concern them directly in politics.

4. Theodore Roosevelt on the campaign trail, 1904. *Having watched Bryan's electrifying tours, Theodore Roosevelt became the first winning candidate to adopt the practice. In 1904, after a summer front porch campaign, he undertook a thirty-day speaking tour of the West. To cover as much ground as possible, Roosevelt often spoke from the last car of his train.*

Source: Library of Congress

5. "Expenses of the Campaign," *Springfield Daily Republican*, September 22, 1900.

It is estimated that it costs $25,000,000 to elect a president of the United States. The annual allowance which the British Parliament makes to Queen Victoria is $1,925,000 . . . indicat[ing] that it is much cheaper to maintain a queen permanently than it is to elect a president. . . .

More than half of the money spent by both national and state committees goes for campaign orators. During the next three months it is estimated that the Republican national committee will have 3000 "spellbinders" traveling out of the Chicago headquarters and 2500 who will report to the New York office. . . .

The next largest item on the campaign bill is that for printing. . . . Each of the national committees will spend at least $500,000 in this way. Before the campaign is over it is estimated that both the Republican and Democratic committees will send out 100,000,000 separate documents. . . .

One more important branch of the work is the two house-to-house canvasses of the voters. . . . Hundreds of men are employed in each state, and the work of tabulating and classifying the results is by no means small. . . .

Some novel campaign methods will be adopted by both the great parties during the campaign just opening. The Republicans, it is stated, have decided to use phonographs. . . . Some eloquent party man . . . will deliver a speech before a phonographic record, from which any desired number of copies may be made . . . and sent far out into the rural districts, where it would be impossible for the more popular and important orators to go. . . .

Democrats, on the other hand, will pin their faith to stereopticons [an early slide projector].

ANALYZING THE EVIDENCE

1. What did a presidential candidate need in the 1880s to run an effective campaign? Two decades later, what had changed, and what had not?
2. Based on these documents, what developments both inside and outside of politics seem to have influenced changing campaign strategies?

AP® DBQ PRACTICE

Historians have traced the rise of an "imperial presidency" in the late 1890s and early 1900s. How might new campaign techniques have reflected, and perhaps contributed to, this rise? To what extent was it a Republican invention?

unqualified party hacks. The civil service also brought stability and consistency to government, since officials did not lose their jobs every time their party lost power. In the long run, civil service laws markedly reduced corruption.

Leaders of the civil service movement included many classical liberals (Chapter 14): former Republicans who became disillusioned with Reconstruction and advocated smaller, more professionalized government. Many had opposed President Ulysses S. Grant's reelection in 1872. In 1884, they again left the Republican Party because they

Were the "Gilded Age" and "Progressive Era" Separate Periods?

Starting in the 1920s, historians borrowed the title of *The Gilded Age*, an 1873 novel by Mark Twain and Charles Dudley Warner, to describe the late-nineteenth-century United States. "Gilded" implies a false impression of beauty: though American politics and society glittered on the outside, according to this view, they were dull or rotten underneath. Following this view, historians have described the years between 1870 and 1900 as marked by political stagnation and corruption, rampant greed and corporate ruthlessness, *laissez faire* government, and ineffective "dud presidents." Only after 1900 did a more optimistic, reform-minded "Progressive Era" begin. Some historians, including Elisabeth Israels Perry and Rebecca Edwards (one of the authors of this textbook), have identified themes that give us a different perspective on the late-nineteenth-century United States.

ELISABETH ISRAELS PERRY

SOURCE: Elisabeth Israels Perry, "Men Are from the Gilded Age, Women Are from the Progressive Era," *Journal of the Gilded Age and Progressive Era* 1, no. 1 (January 2002): 43.

"When *was* the Progressive Era exactly?" my students ask. Roughly during the first two decades of the twentieth century, I tell them. . . . Some historians still use 1900 as a starting date, although more recently 1890 has become popular. . . . From the perspective of women progressives, however, these boundaries need to be much more fluid. . . . The women who founded social settlements in the 1880s, along with the temperance and suffrage campaigners, comprise a group of American citizens active in conceptualizing progressive reform long before the presumed dawn of progressivism.

REBECCA EDWARDS

SOURCE: Rebecca Edwards, *New Spirits: Americans in the "Gilded Age," 1865–1905*, 3rd ed. (New York: Oxford University Press, 2015), 5–6.

Millions of freedmen, immigrants, students, workers, artists, intellectuals, and reformers believed that post–Civil War America offered a chance to start anew. . . . Many Americans worked energetically between 1865 and 1900 to purify politics, restrict the power of big business, and fight injustice. Those decades witnessed the first march on Washington, the first federal welfare programs, the first elections in which women and black men voted for president, and the first national park in the world. At the same time, problems that plagued the so-called Gilded Age continued and even intensified during the so-called "Progressive Era."

AP® SHORT ANSWER PRACTICE

1. How does each of these historians challenge conventional interpretations of the "Gilded Age" and "Progressive Era" as separate periods?
2. Identify one key difference between these two assessments of the Gilded Age and Progressive Era.
3. Based on your reading of Chapters 14 to 19, how would you date and name the post–Civil War decades? Why?

could not stomach its scandal-tainted candidate, James Blaine. Liberal Republicans—ridiculed by their enemies as Mugwumps (fence-sitters who had their "mugs" on one side and their "wumps" on the other)—helped elect Democrat Grover Cleveland. They believed he shared their vision of smaller government.

AP® EXAM TIP

Evaluate the impact of legislation to regulate business and industry in the late nineteenth century.

As president, Cleveland showed that he largely did share their views. He vetoed, for example, thousands of bills providing pensions for individual Union veterans. But in 1887, responding to pressure from farmer-labor advocates in the Democratic Party who demanded action to limit corporate power, he signed the Interstate Commerce Act (Chapter 16). At the same time, municipal and state-level initiatives were showing how expanded government could help solve industrial problems. In the 1870s and early 1880s, many states created Bureaus of Labor Statistics to investigate workplace safety and unemployment. Some appointed commissions to oversee key industries, from banking to dairy farming. By later standards, such commissions were underfunded, but even when they lacked legal power, energetic commissioners could serve as public advocates, exposing unsafe practices and generating pressure for further laws.

Republican Activism In 1888, after a decade of divided government, Republicans gained control of both Congress and the White House. They pursued an ambitious agenda they believed would meet the needs of a modernizing nation. In 1890, Congress extended pensions to all Union veterans and yielded to growing public outrage over trusts by passing a law to regulate interstate corporations. Though it proved difficult to enforce and was soon weakened by the Supreme Court, the **Sherman Antitrust Act** (1890) was the first federal attempt to forbid any "combination, in the form of trust or otherwise, or conspiracy, in restraint of trade."

President Benjamin Harrison also sought to protect black voting rights in the South. Warned during his campaign that the issue was politically risky, Harrison vowed that he would not "purchase the presidency by a compact of silence upon this question." He found allies in Congress. Massachusetts representative Henry Cabot Lodge drafted the Federal Elections Bill of 1890, or **Lodge Bill**, proposing that whenever one hundred citizens in any district appealed for intervention, a bipartisan federal board could investigate and seat the rightful winner.

Despite cries of outrage from southern Democrats, who warned that it meant "Negro supremacy," the House passed the measure. But it met resistance in the Senate. Northern classical liberals, who wanted the "best men" to govern through professional expertise, thought it provided too much democracy, while machine bosses feared the threat of federal interference in the cities. Unexpectedly, many western Republicans also opposed the bill—and with the entry of ten new states since 1863, the West had gained enormous clout. Senator William Stewart of Nevada, who had southern family ties, claimed that federal oversight of elections would bring "monarchy or revolution." He and his allies killed the bill by a single vote.

The defeat was a devastating blow to those seeking to defend black voting rights. In the verdict of one furious Republican leader who supported Lodge's proposal, the episode marked the demise of the party of emancipation. "Think of it," he fumed. "Nevada, barely a respectable *county*, furnished two senators to betray the Republican Party and the rights of citizenship."

"Political Purity," *Puck*, 1884 This Democratic cartoon suggests the disillusionment with Republicans that emerged among many voters in the 1880s. Here, the party chooses a dress, bustle, and plume to celebrate Republicans' achievements in prior decades: the Union war record, emancipation, and "high moral ideals." Her undergarments tell a different story: they are marked with scandals of the Grant era (Chapter 14), while the economic interests of tariff supporters ("protection") are depicted as her corset. The hats in the upper right corner show Republicans' attempts to appeal to various constituencies: temperance advocates and German immigrants, workingmen and business leaders. Whitelaw Reid, staunchly Republican editor of the *New York Tribune*, appears as the party's handmaiden. Picture Research Consultants & Archive

Other Republican initiatives also proved unpopular—at the polls as well as in Congress. In the Midwest, swing voters reacted against local Republican campaigns to prohibit liquor sales and end state funding for Catholic schools. Blaming high consumer prices on protective tariffs, other voters rejected Republican economic policies. In a major shift in the 1890 election, Democrats captured the House of Representatives. Two years later, by the largest margin in twenty years, voters reelected Democrat Grover Cleveland to the presidency for a nonconsecutive second term. Republican congressmen abandoned any further attempt to enforce fair elections in the South.

The Populist Program

As Democrats took power in Washington, they faced rising pressure from rural voters in the South and West who had organized the Farmers' Alliance. Savvy politicians responded quickly. Iowa Democrats, for example, took up some of the farmers' demands, forestalling creation of a separate farmer-labor party in that state. But other politicians listened to Alliance pleas and did nothing. It was a response they came to regret.

Republicans utterly dominated Kansas, a state chock-full of Union veterans and railroad boosters. But politicians there treated the Kansas Farmers' Alliance with contempt.

Riding to a Populist Rally, Dickinson County, Kansas, 1890s Farm families in wagons carry their banners to a local meeting of the People's Party. Men, women, and children often traveled together to campaign events, which included not only stump speeches but also picnics, glee club music, and other family entertainments.

In 1890, the Kansas Alliance joined with the Knights of Labor to create a People's Party. They then stunned the nation by capturing four-fifths of the lower house of the Kansas legislature and most of the state's congressional seats. The victory electrified labor and agrarian radicals nationwide. In July 1892, delegates from these groups met at Omaha, Nebraska, and formally created the national People's Party. Nominating former Union general and Greenback-Labor leader James B. Weaver for president, the Populists, as they became known, captured a million votes in November. They returned to Washington with three representatives in the U.S. Senate and eleven in the House (Map 19.2). By 1896 they would double those totals — still only a sliver of congressional offices, but enough to make them one of the most successful insurgent parties in U.S. history.

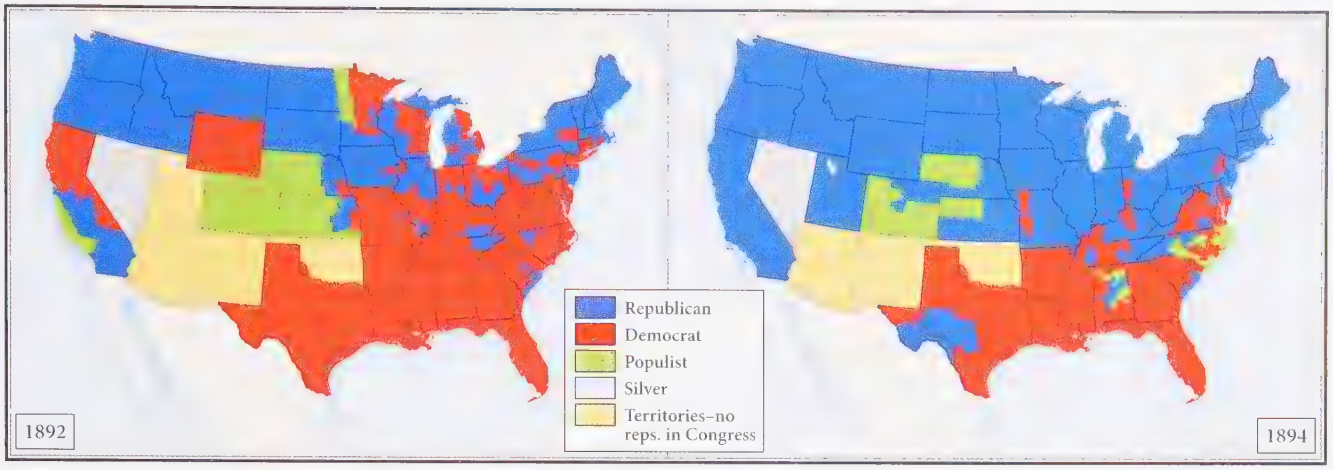
Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

In recognizing an "irrepressible conflict between capital and labor," Populists split from the mainstream parties, calling for stronger government to protect ordinary Americans. Their **Omaha Platform** called for public ownership of railroad and telegraph systems, protection of land from monopoly and foreign ownership, a federal income tax on the rich, and a looser monetary policy to help borrowers (AP® Analyzing Voices). Some Populist allies went further to make their point: in New Mexico, the Gorras Blancas, a vigilante group of small-scale Mexican American farmers, protested exploitative railroads and "land grabbers" by intimidating railroad workers and cutting fences on large Anglo farms.

AP® EXAM TIP

Being able to explain the reforms proposed in the Omaha Platform is critical for success on the AP® exam.

Populist leaders represented a grassroots uprising of ordinary farmers, and some won colorful nicknames. After a devastating debate triumph, James H. Davis of Texas became known as "Cyclone." Mary E. Lease was derided as "Yellin' Mary Ellen"; her fellow Kansan Jerry Simpson was called "Sockless Jerry" after he ridiculed a wealthy opponent for wearing "fine silk hosiery," boasting that he himself wore no socks at all.



MAP 19.2 House of Representatives Elected in 1892 and 1894
Americans focus intensive effort and attention on presidential elections, but midterm congressional elections can be key turning points, as well. In response to the severe economic depression that began in 1893, American voters turned sharply away from the Democrats and toward the Republicans. That dramatic shift was first obvious not in 1896, with the election of President William McKinley, but in the midterm election that transformed Congress. These maps show the number of Democrats, Republicans, and Populists in the House of Representatives after the elections of 1892 (left) and 1894 (right). Where did Republicans make the biggest gains? How would the parties' strength in Congress have differed if Southern Populists in states such as Alabama, Arkansas, and Georgia had not been defeated through fraud?

The national press, based in northeastern cities, ridiculed such "hayseed politicians," but farmers insisted on being taken seriously. In the run-up to one election, a Populist writer encouraged party members to sing these lyrics to the tune of an old gospel hymn:

I once was a tool of oppression,
    As green as a sucker could be
And monopolies banded together
    To beat a poor hayseed like me. . . .
But now I've roused up a little,
    And their greed and corruption I see,
And the ticket we vote next November
    Will be made up of hayseeds like me.

Driven by farmers' votes, the People's Party had mixed success in attracting other constituencies. Its labor planks won support among Alabama steelworkers and Rocky Mountain miners, but not among many other industrial workers, who stuck with the major parties. Prohibitionist and women's suffrage leaders attended Populist conventions, hoping their issues would be taken up, but they were disappointed. The legacies of the Civil War also hampered the party. Southern Democrats warned that Populists were really Radical Republicans in disguise, while northeastern Republicans claimed the southern "Pops" were ex-Confederates plotting another round of treason. Amid these heated debates, the political system suddenly confronted an economic crisis.

IN YOUR OWN WORDS How did the political goals of Populists differ from those of Democrats and Republicans?

The Political Earthquakes of the 1890s

In 1893, a severe economic depression hit the United States. Though it was a global shock, and the agriculture sector had already lagged for years, Republicans blamed Grover Cleveland, who had just reentered the White House. "On every hand can be seen evidences of Democratic times," declared one Republican. "The deserted farm, the silent factory."

The Omaha Platform, 1892

Adopted by the People's Party's first national convention a year before the terrible depression of 1893 began, the Omaha Platform indicates that economic hardship was already widespread. The new party denounced the situation in a preamble written by Populist leader Ignatius Donnelly of Minnesota. It then proposed specific measures for reform and appended a series of less binding "resolutions." Delegates adopted the platform unanimously. A Nebraska historian later commented that the document became "the Bible and common prayer book of millions of people" as well as "the object of the most intense denunciation and attack," and eventually a source for later Democratic, Republican, and Progressive reform ideas.

NATIONAL PEOPLE'S PARTY PLATFORM

SOURCE: George Brown Tindall, ed., *A Populist Reader, Selections from the Works of American Populist Leaders* (New York: Harper & Row, 1966), 90–96.

Assembled upon the 116th anniversary of the Declaration of Independence, the People's Party of America, in their first national convention, invoking upon their action the blessing of Almighty God, put forth in the name and on behalf of the people of this country, the following preamble and declaration of principles:

PREAMBLE

The conditions which surround us best justify our co-operation; we meet in the midst of a nation brought to the verge of moral, political, and material ruin. Corruption dominates the ballot-box, the Legislatures, the Congress, and touches even the ermine of the bench. The people are demoralized; . . . newspapers are largely subsidized or muzzled, public opinion silenced, business prostrated, homes covered with mortgages, labor impoverished, and the land concentrating in the hands of capitalists. The urban workmen are denied the right to organize for self-protection, imported pauperized labor beats down their wages, a hireling standing army, unrecognized by our laws, is established to shoot them down, and they are rapidly degenerating into European conditions. The fruits of the toil of millions are boldly stolen to build up colossal fortunes for a few, unprecedented in the history of mankind; and the possessors of those, in turn, despise the republic and endanger liberty. From the same prolific womb of governmental injustice we breed the two great classes — tramps and millionaires.

The national power to create money is appropriated to enrich bondholders; a vast public debt payable in legal tender currency has been funded into gold-bearing bonds, thereby adding millions to the burdens of the people.

Silver, which has been accepted as coin since the dawn of history, has been demonetized to add to the purchasing power of gold by decreasing the value of all forms of property as well as human labor, and the supply of currency is purposely abridged to fatten usurers, bankrupt enterprise, and enslave industry. A vast conspiracy against mankind has been organized on two continents, and it is rapidly taking possession of the world. If not met and overthrown at once it forebodes terrible social convulsions, the destruction of civilization, or the establishment of an absolute despotism.

We have witnessed for more than a quarter of a century the struggles of the two great political parties for power and plunder, while grievous wrongs have been inflicted upon the suffering people. We charge that the controlling influences dominating both these parties have permitted the existing dreadful conditions to develop without serious effort to prevent or restrain them. Neither do they now promise us any substantial reform. They have agreed together to ignore, in the coming campaign, every issue but one. They propose to drown the outcries of a plundered people with the uproar of a sham battle over the tariff, so that capitalists, corporations, national banks, rings, trusts, watered stock, the demonetization of silver and the oppressions of the usurers may all be lost sight of. They propose to sacrifice our homes, lives, and children on the altar of mammon; to destroy the multitude in order to secure corruption funds from the millionaires.

Assembled on the anniversary of the birthday of the nation, and filled with the spirit of the grand general and chief who established our independence, we seek to restore the government of the Republic to the hands of "the plain people," with which class it originated. We assert our purposes to be identical with the purposes of the National Constitution; to form a more perfect union and establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty for ourselves and our posterity.

We declare that this Republic can only endure as a free government while built upon the love of the whole people for each other and for the nation; that it cannot be pinned together by bayonets; that the civil war is over, and that every passion and resentment which grew out of it must die with it, and that we must be in fact, as we are in name, one united brotherhood of free men.

Our country finds itself confronted by conditions for which there is no precedent in the history of the world; our annual agricultural productions amount to billions of dollars in value, which must, within a few weeks or months, be exchanged for billions of dollars' worth of commodities consumed in their production; the existing currency supply is wholly inadequate to make this exchange; the results are falling prices, the formation of combines and rings, the impoverishment of the producing class. . . .

We believe that the power of government — in other words, of the people — should be expanded (as in the case of the postal service) as rapidly and as far as the good sense of an intelligent people and the teachings of experience shall

justify, to the end that oppression, injustice, and poverty shall eventually cease in the land. . . .

PLATFORM

We declare, therefore —

First. — That the union of the labor forces of the United States this day consummated shall be permanent and perpetual; may its spirit enter into all hearts for the salvation of the Republic and the uplifting of mankind.

Second. — Wealth belongs to him who creates it, and every dollar taken from industry without an equivalent is robbery. "If any will not work, neither shall he eat." The interests of rural and civic labor are the same; their enemies are identical.

Third. — We believe that the time has come when the railroad corporations will either own the people or the people must own the railroads, and should the government enter upon the work of owning and managing all railroads, we should favor an amendment to the Constitution by which all persons engaged in the government service shall be placed under a civil-service regulation of the most rigid character, so as to prevent the increase of the power of the national administration by the use of such additional government employees.

FINANCE. — We demand a national currency, safe, sound, and flexible, issued by the general government only, a full legal tender for all debts, public and private, and that without the use of banking corporations, a just, equitable, and efficient means of distribution direct to the people, at a tax not to exceed 2 per cent. per annum, to be provided as set forth in the sub-treasury plan of the Farmers' Alliance, or a better system; also by payments in discharge of its obligations for public improvements.

1. We demand free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1.
2. We demand that the amount of circulating medium be speedily increased to not less than $50 per capita.
3. We demand a graduated income tax.
4. We believe that the money of the country should be kept as much as possible in the hands of the people, and hence we demand that all State and national revenues shall be limited to the necessary expenses of the government, economically and honestly administered.
5. We demand that postal savings banks be established by the government for the safe deposit of the earnings of the people and to facilitate exchange.

TRANSPORTATION. — Transportation being a means of exchange and a public necessity, the government should own and operate the railroads in the interest of the people. The telegraph, telephone, like the post-office system, being a necessity for the transmission of news, should be owned and operated by the government in the interest of the people.

LAND. — The land, including all the natural sources of wealth, is the heritage of the people, and should not be monopolized for speculative purposes, and alien ownership of land should be prohibited. All land now held by railroads and other corporations in excess of their actual needs, and all lands now owned by aliens should be reclaimed by the government and held for actual settlers only.

. . . *Whereas,* Other questions have been presented for our consideration, we hereby submit the following, not as a part of the Platform of the People's Party, but as resolutions expressive of the sentiment of this Convention.

1. RESOLVED, That we demand a free ballot and a fair count in all elections and pledge ourselves to secure it to every legal voter without Federal Intervention. . . .
2. RESOLVED, That the revenue derived from a graduated income tax should be applied to the reduction of the burden of taxation now levied upon the domestic industries of this country.
3. RESOLVED, That we pledge our support to fair and liberal pensions to ex-Union soldiers and sailors.
4. RESOLVED, That we condemn the fallacy of protecting American labor under the present system, which opens our ports to the pauper and criminal classes of the world and crowds out our wage-earners; and we denounce the present ineffective laws against contract labor, and demand the further restriction of undesirable emigration.
5. RESOLVED, That we cordially sympathize with the efforts of organized workingmen to shorten the hours of labor, and demand a rigid enforcement of the existing eight-hour law on Government work, and ask that a penalty clause be added to the said law.
6. RESOLVED, That we regard the maintenance of a large standing army of mercenaries, known as the Pinkerton system, as a menace to our liberties, and we demand its abolition. . . .
7. RESOLVED, That we commend to the favorable consideration of the people and the reform press the legislative system known as the initiative and referendum.
8. RESOLVED, That we favor a constitutional provision limiting the office of President and Vice-President to one term, and providing for the election of Senators of the United States by a direct vote of the people.
9. RESOLVED, That we oppose any subsidy or national aid to any private corporation for any purpose.
10. RESOLVED, That this convention sympathizes with the Knights of Labor and their righteous contest with the tyrannical combine of clothing manufacturers of Rochester, and declare it to be a duty of all who hate tyranny and oppression to refuse to purchase the goods made by the said manufacturers, or to patronize any merchants who sell such goods.

QUESTIONS FOR ANALYSIS

1. What problems does the document's preamble identify? What specific legislation does the platform propose, and how do the authors suggest those will remedy problems the Populists have named?
2. In addition to its main planks, the Platform includes ten nonbinding resolutions. What differences do you see between the main planks and the resolutions? What might you conclude from this about the party's main base and about additional constituencies who may have had some influence, but less power, in the convention?
3. Based on the platform and your reading of the chapter, which groups of Americans do you think would have been likely to support Populist candidates in 1892, and which groups would have opposed them?

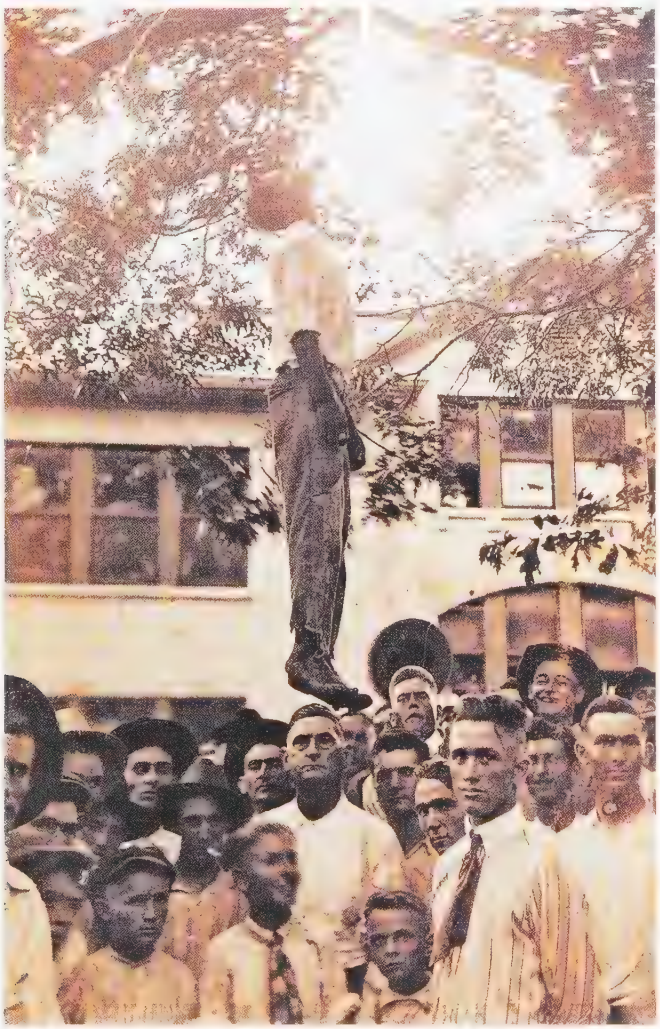
Apparently receptive to such appeals, voters outside the South abandoned the Democrats in 1894 and 1896. Republicans, promising prosperity, gained control of the White House and both chambers of Congress for the next sixteen years. This development created both opportunities and challenges for progressive reformers. A different pattern emerged in the South: Democrats deployed fraud, violence, and race-based appeals for white solidarity to defeat the Populist revolt.

AP® EXAM TIP

Identifying the causes of popular action against the federal government is critical for success on the AP® exam.

Depression and Reaction

When Cleveland took the oath of office in March 1893, hard times were prompting European investors to pull money out of the United States; farm foreclosures and railroad bankruptcies signaled economic trouble. A few weeks later, a Pennsylvania railroad went bankrupt, followed by several other companies. Investors panicked; the stock market crashed. By July, major banks had drained their reserves and "suspended" withdrawals, unable to give depositors access to their money. By year's end, five hundred banks and thousands of other businesses had gone under. "Boston," one man remembered, "grew suddenly old, haggard, and thin." The unemployment rate in industrial cities soared above 20 percent.



Lynching in Texas Lynchings peaked between 1890 and 1910; while most common in the South, they occurred in almost every state, from Oregon to Minnesota to New York. After many lynchings — such as this one in the town of Center, Texas, in 1920 — crowds posed to have their pictures taken. Commercial photographers often, as in this case, produced photographic postcards to sell as souvenirs. What do we make of these gruesome rituals? Who is in the crowd, and who is not? What do we learn from the fact that this group of white men, some of whom may have been responsible for the lynching, felt comfortable having their photographs recorded with the body? The victim in this photograph, a young man named Lige Daniels, was seized from the local jail by a mob that broke down the prison door to kidnap and kill him. The inscription on the back of the postcard includes information about the killing, along with the instructions "Give this to Bud From Aunt Myrtle." Texas Images Consultants & Archive

For Americans who had lived through the terrible 1870s, conditions looked grimly familiar. Even fresher in the public mind were recent labor uprisings, including the 1886 Haymarket violence and the 1892 showdown at Homestead — followed, during the depression's first year, by a massive Pennsylvania coal strike and a Pullman railroad boycott that ended with bloody clashes between angry crowds and the U.S. Army. Prosperous Americans, fearful of Populism, were even more terrified that workers would embrace socialism or Marxism. Reminding Americans of upheavals such as the Paris Commune of 1871 and its bloody aftermath, conservative commentators of the 1890s launched America's first "Red Scare" — a precursor to similar episodes of hysteria in the 1920s and 1950s.

In the summer of 1894, a further protest jolted affluent Americans. Radical businessman Jacob Coxey of Ohio proposed that the U.S. government hire the unemployed to fix America's roads. In 1894, he organized hundreds of jobless men — nicknamed Coxey's Army — to march peacefully to Washington and appeal for the program. Though public employment of the kind Coxey proposed would become central to the New Deal in the 1930s, many Americans in the 1890s viewed Coxey as a dangerous extremist. Public alarm grew when more protesters, inspired by Coxey, started out from Los Angeles, Seattle, and other cities. As they marched east, these men found warm support and offers of aid in Populist-leaning cities and towns. In other places, police and property owners drove marchers away at gunpoint. Coxey was stunned by what happened when he reached Capitol Hill: he was jailed for trespassing on the grass. Some of his men, arrested for vagrancy, ended up in Maryland chain gangs. The rest went home hungry.

As this response suggested, President Grover Cleveland's administration was increasingly out of step with rural and working-class demands. Any president would have been hard-pressed to cope with the depression, but Cleveland was

particularly inept. He steadfastly resisted pressure to loosen the money supply by expanding federal coinage to include silver as well as gold. Advocates of this **free silver** policy ("free" because, under this plan, the U.S. Mint would not charge a fee for minting silver coins) believed the policy would encourage borrowing and stimulate industry. But Cleveland clung to the gold standard. However dire things became, he believed, the money supply must remain tied to the nation's reserves of gold.

As the 1894 midterm elections loomed, Democratic candidates tried to distance themselves from the president. But on election day, large numbers of voters chose Republicans, who promised to support business, put down social unrest, and bring back prosperity. Western voters turned many Populists out of office. In the next congressional session, Republicans controlled the House by a margin of 245 to 105 (see Map 19.2).

AP® PRACTICES & SKILLS

CAUSATION

How did different groups of Americans react to the economic depression of the 1890s, and what happened as a result?

Democrats and the "Solid South"

In the South, the only region where Democrats gained strength in the 1890s, the People's Party lost ground for distinctive reasons. After the end of Reconstruction, African Americans in most states had continued to vote in significant numbers. As long as Democrats competed for (and sometimes bought) black votes, the possibility remained that other parties could win them away. Populists proposed new measures to help farmers and wage earners — an appealing message for poverty-stricken people of both races. Some white Populists went out of their way to build cross-racial ties. "The accident of color can make no difference in the interest of farmers, croppers, and laborers," argued Georgia Populist Tom Watson. "You are kept apart that you may be separately fleeced of your earnings."

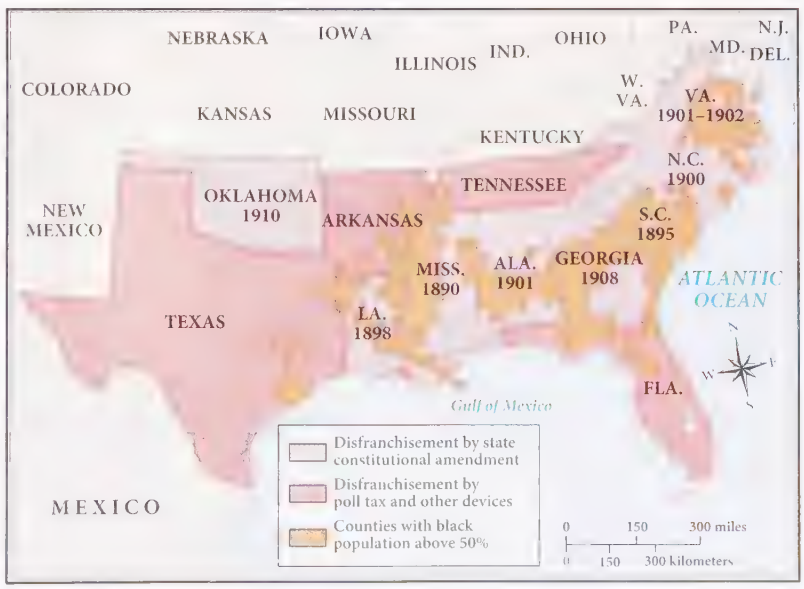
Such appeals threatened the foundations of southern politics. Democrats struck back, calling themselves the "white man's party" and denouncing Populists for advocating "Negro rule." From Georgia to Texas, many poor white farmers, tenants, and wage earners ignored such appeals and continued to support the Populists in large numbers. Democrats found they could put down the Populist threat only through fraud and violence. After using such tactics, Pitchfork Ben Tillman of South Carolina openly bragged that he and other southern whites had "done our level best" to block "every last" black vote. "We stuffed ballot boxes," he said in 1900. "We shot them. We are not ashamed of it." "We had to do it," a Georgia Democrat later argued. "Those damned Populists would have ruined the country."

AP® EXAM TIP

The impact of the disfranchisement of African Americans is a "must know" on the AP® exam.

Having suppressed the political revolt, Democrats looked for new ways to enforce white supremacy. In 1890, a constitutional convention in Mississippi had adopted a key innovation: an "understanding clause" that required would-be voters to interpret parts of the state constitution, with local Democratic officials deciding who met the standard. After the Populist uprising, such measures spread to other southern states. Louisiana's grandfather clause, which denied the ballot to any man whose grandfather had been unable to vote in slavery days, was struck down by the U.S. Supreme Court. But in ***Williams v. Mississippi*** (1898), the Court allowed poll taxes and literacy tests to stand. By 1908, every southern state had adopted such measures.

The impact of disfranchisement can hardly be overstated (Map 19.3). Across the South, voter turnout plunged, from above 70 percent to 34 percent or even lower.



MAP 19.3 Disfranchisement in the New South

In the midst of the Populist challenge to Democratic one-party rule in the South, a movement to deprive blacks of the right to vote spread from Mississippi across the South. By 1910, every state in the region except Tennessee, Arkansas, Texas, and Florida had made constitutional changes designed to prevent blacks from voting, and these four states accomplished much the same result through poll taxes and other exclusionary methods. For the next half century, the political process in the South would be for whites only.

Not only blacks but also many poor whites ceased to vote. Since Democrats faced virtually no opposition, action shifted to the "white primaries," where Democratic candidates competed for nominations. Some former Populists joined the Democrats in openly advocating white supremacy. The racial climate hardened. Segregation laws proliferated. Lynchings of African Americans increasingly occurred in broad daylight, with crowds of thousands gathered to watch.

The convict lease system, which had begun to take hold during Reconstruction, also expanded. Blacks received harsh sentences for crimes such as "vagrancy," often when they were traveling to find work or if they could not produce a current employment contract. By the 1890s, Alabama depended on convict leasing for 6 percent of its total revenue. Prisoners were overwhelmingly black: a 1908 report showed that almost 90 percent of Georgia's leased convicts were black; out of a white population of 1.4 million, only 322 were in prison. Calling attention to the torture and deaths of prisoners, as well as the damaging economic effect of their unpaid labor, reformers, labor unions, and Populists protested the situation strenuously. But "reforms" simply replaced convict leasing with the chain gang, in which prisoners worked directly for the state on roadbuilding and other projects, under equally cruel conditions. All these developments depended on a political "Solid South" in which Democrats exercised almost complete control.

AP® PRACTICES & SKILLS

CHANGE OVER TIME

How did politics change in the South between the 1880s and the 1910s?

William Jennings Bryan This 1896 campaign poster emphasizes the youth of the thirty-six-year-old Nebraska Democrat and includes portraits of his wife Mary and their three young children. The full text of his famous "Cross of Gold" speech appears flanked by silver coins and overlaid with "16 to 1," representing the Chicago platform's proposal to mint U.S. silver coins at a 16-to-1 ratio with gold, increasing the money supply to stimulate the economy and aid borrowers. At the bottom stand a farmer and industrial workingman — primary bases of Democratic support. Many farmers and workers voted for McKinley, however, especially in the industrial heartland of the Northeast and Midwest. Though Bryan secured the electoral votes of the South and a substantial majority of western states, McKinley won the election. Library of Congress

The impact of the 1890s counterrevolution was dramatically illustrated in Grimes County, a cotton-growing area in east Texas where blacks comprised more than half of the population. African American voters kept the local Republican Party going after Reconstruction and regularly sent black representatives to the Texas legislature. Many local white Populists dismissed Democrats' taunts of "negro supremacy," and a Populist-Republican coalition swept the county elections in 1896 and 1898. But after their 1898 defeat, Democrats in Grimes County organized a secret brotherhood and forcibly prevented blacks from voting in town elections, shooting two in cold blood. The Populist sheriff proved unable to bring the murderers to justice. **Reconstituted** in 1900 as the White Man's Party, Democrats carried Grimes County by an overwhelming margin. Gunmen then laid siege to the Populist sheriff's office, killed his brother and a friend, and drove the wounded sheriff out of the county. The White Man's Party ruled Grimes County for the next fifty years.

New National Realities

While their southern racial policies were **abhorrent**, the national Democrats simultaneously amazed the country in 1896 by embracing parts of the Populists' radical farmer-labor program. They did so in defiance of President Cleveland, whose decisions continued to alienate him from his party's agrarian and labor base. Despite the worsening economic depression, collapsing prices, and a hemorrhage of gold to Europe, the president refused to budge from his defense of the gold standard. With gold reserves dwindling in 1895, he made a secret arrangement with a syndicate of bankers led by J. P. Morgan to arrange purchases to replenish the treasury. Morgan helped maintain America's gold supply — preserving the gold standard — and turned a tidy profit by earning interest on the bonds he provided. Cleveland's deal,

once discovered, enraged fellow Democrats. South Carolina governor Ben Tillman vowed to go to Washington and "poke old Grover with a pitchfork," earning the nickname "Pitchfork Ben."

In 1896, amid such outrage, Democrats rejected Cleveland and nominated a young Nebraska congressman, free silver advocate William Jennings Bryan, who passionately defended farmers and workers and attacked the gold standard. "Burn down your cities and leave our farms," Bryan declared in his famous convention speech, "and your cities will spring up again as if by magic; but destroy our farms and the grass will grow in the streets of every city in the country." He ended with a vow: "You shall not crucify mankind on a cross of gold." Cheering delegates endorsed a platform calling for free silver and a federal income tax on the wealthy that would replace tariffs as a source of revenue. Democrats, long defenders of limited government, were moving toward a more activist stance.

AP® EXAM TIP

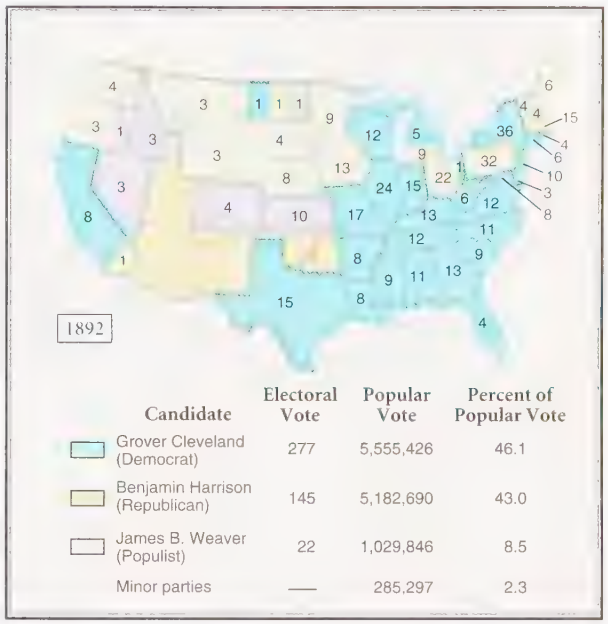
Analyze the impact of the election of 1896 on party politics and populism.

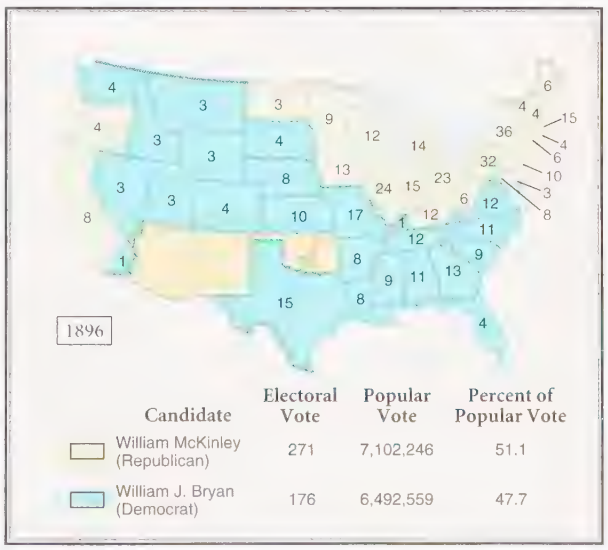
Populists, reeling from recent defeats, endorsed Bryan in the campaign, but their power was waning. Populist leader Tom Watson, who wanted a separate program that was more radical than Bryan's, observed that Democrats in 1896 had cast the Populists as "Jonah while they play whale." The People's Party never recovered from its electoral losses in 1894 and from Democrats' ruthless opposition in the South. By 1900, rural voters pursued reform elsewhere, particularly through the new Bryan wing of the Democratic Party.

Meanwhile, horrified Republicans denounced Bryan's platform as anarchistic. Their nominee, the Ohio congressman and tariff advocate William McKinley, chose a brilliant campaign manager, Ohio coal and shipping magnate Marcus Hanna, who orchestrated an unprecedented corporate fund-raising campaign. Under his guidance, the party backed away from moral issues such as prohibition of liquor and reached out to new immigrants. Though the popular vote was closer, McKinley won big: 271 electoral votes to Bryan's 176 (Map 19.4).

Nationwide, as in the South, the realignment of the 1890s prompted new measures to exclude voters. Influenced by classical liberals' denunciations of "unfit voters," many northern states imposed literacy tests and restrictions on immigrant voting. Leaders of both major parties, determined to prevent future Populist-style threats, made it more difficult for new parties to get candidates listed on the ballot. In the wake of such laws, voter turnout declined, and the electorate narrowed in ways that favored the native-born and wealthy.

Antidemocratic restrictions on voting helped, paradoxically, to foster certain democratic innovations. Having excluded or reduced the number of poor, African American, and immigrant voters, elite and middle-class reformers felt more comfortable increasing the power of the voters who remained. Both major parties increasingly turned to the direct primary, asking voters (in most states, registered party members) rather than party leaders to choose nominees. Another measure that enhanced democratic participation was the Seventeenth Amendment to the Constitution (1913), requiring that U.S. senators be chosen not by state legislatures, but by popular vote. Though many states had adopted the practice well before 1913, southern states had resisted, since Democrats feared that it might give more power to their political opponents. After disfranchisement, such objections





MAP 19.4 The Presidential Elections of 1892 and 1896
In the 1890s, the age of political stalemate came to an end. Compare the 1892 map with Map 19.1 (p. 589) and note especially Cleveland's breakthrough in the normally Republican states of the Upper Midwest. In 1896, the pendulum swung in the opposite direction, with McKinley's consolidation of Republican control over the Northeast and Midwest far overbalancing the Democratic advances in the thinly populated western states. The 1896 election marked the beginning of sixteen years of Republican dominance in national politics.

The U.S. Supreme Court, 1894 During the 1890s, the Supreme Court struck down a number of pieces of progressive legislation, including a progressive federal income tax that had been signed into law by Congress and the president. In the Knight Sugar Case (*United States v. E. C. Knight Co.*), the Court ruled that the federal government had limited power over interstate commerce when a company did most of its manufacturing in a single state. In another 1894 decision, *In re Debs*, manufacturers were allowed free use of injunctions to shut down strikes. Two years later, in *Plessy v. Ferguson*, the Court gave national sanction to racial segregation. In the front row, from left to right, are justices Horace Gray, Stephen J. Field, Chief Justice Melville W. Fuller, justices John Marshall Harlan I and David J. Brewer. Standing in the back row, left to right, are justices Howell Jackson, Henry B. Brown, George Shiras, and Edward Douglas White. Library of Congress

faded and the measure passed. Thus disfranchisement enhanced the power of remaining voters in multiple, complicated ways.

At the same time, the Supreme Court proved hostile to many proposed reforms. In 1895, for example, it struck down a recently adopted federal income tax on the wealthy. The Court ruled that unless this tax was calculated on a per-state basis, rather than by the wealth of individuals, it could not be levied without a constitutional amendment. It took progressives nineteen years to achieve that goal.

Labor organizations also suffered in the new political regime, as federal courts invalidated many regulatory laws passed to protect workers. As early as 1882, in the case of *In re Jacobs*, the New York State Court of Appeals struck down a public-health law that prohibited cigar manufacturing in tenements, arguing that such regulation exceeded the state's police powers. In ***Lochner v. New York*** (1905), the U.S. Supreme Court told New York State it could not limit bakers' workdays to ten hours because that violated bakers' rights to make contracts. Judges found support for such rulings in the due process clause of the Fourteenth Amendment, which prohibited states from depriving "any person of life, liberty, or property, without due process of law." Though the clause had been intended to protect former slaves, courts used it to shield contract rights, with judges arguing that they were protecting workers' freedom *from* government regulation. Interpreted in this way, the Fourteenth Amendment was a major obstacle to regulation of private business.

Farmer and labor advocates, along with urban progressives who called for more government regulation, disagreed with such rulings. They believed judges, not state legislators, were overreaching. While courts treated employers and employees as equal

parties, critics dismissed this as a legal fiction. "Modern industry has reduced 'freedom of contract' to a paper privilege," declared one labor advocate, "a mere figure of rhetoric." Supreme Court justice Oliver Wendell Holmes Jr., dissenting in the *Lochner* decision, agreed. If the choice was between working and starving, he observed, how could bakers "choose" their hours of work? Holmes's view, known as legal realism, eventually won judicial favor, but only after years of progressive and labor activism.

IN YOUR OWN WORDS How did the depression of the 1890s impact federal politics and policy?

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

What developments caused the percentage of Americans who voted to plunge after 1900, and what role did courts play in antidemocratic developments?

Reform Reshaped, 1901–1912

William McKinley, a powerful presence in the White House, was no reformer. His victory was widely understood as a triumph for business and especially for industrial titans who had contributed heavily to his campaign. But the depression of the 1890s, by subjecting millions to severe hardship, had dramatically illustrated the problems of industrialization. At the same time, the success of McKinley's campaign managers — who spent more than $3.5 million, versus Bryan's $300,000 — raised unsettling questions about corporate power. Once the crisis of the 1890s passed, many middle-class Americans proved ready to embrace progressive ideas. The rise of such ideas was aided by historical chance, when a shocking assassination put a reformer in the White House.

Theodore Roosevelt as President

On September 14, 1901, only six months after William McKinley won his second face-off against Democrat William Jennings Bryan, the president was shot as he attended the Pan-American Exposition in Buffalo, New York. He died eight days later. The murderer, Leon Czolgosz, was influenced by anarchists who had carried out recent assassinations in Europe. Though Czolgosz was American-born, many feared that McKinley's violent death was another warning of the threat posed by radical immigrants. As the nation mourned its third murdered president in less than four decades, Vice President Theodore Roosevelt was sworn into office.

Roosevelt, from a prominent family, had chosen an unconventional path. After graduating from Harvard, he plunged into politics, winning a seat as a Republican New York assemblyman. Disillusioned by his party's resistance to reform, he left politics in the mid-1880s and moved to a North Dakota ranch. But his cattle herd was wiped out in the blizzards of 1887. He returned east, winning appointments as a U.S. Civil Service commissioner, head of the New York City Police Commission, and McKinley's assistant secretary of the navy. An energetic presence in all these jobs, Roosevelt gained broad knowledge of the problems America faced at the municipal, state, and federal levels.

After serving in the War of 1898 (Chapter 20), Roosevelt was elected as New York's governor. In this job, he pushed through civil service reform and a tax on corporations. Seeking to neutralize this progressive and rather unpredictable political star, Republican bosses chose Roosevelt as McKinley's running mate in 1900, hoping the vice-presidency would be a political dead end. Instead, they suddenly found Roosevelt in the White House. The new president, who called for vigorous reform, represented a major shift for the Republicans.

Antitrust Legislation Roosevelt blended reform with the needs of private enterprise, but on occasion he challenged corporations in new ways. During a bitter 1902 coal strike, for example, he threatened to nationalize the big coal companies if their

AP® EXAM TIP

Evaluate Theodore Roosevelt's leadership in bringing Progressive Era reform to the federal government.

owners refused to negotiate with the miners' union. The owners hastily came to the table. Roosevelt also sought better enforcement of the Interstate Commerce Act and Sherman Antitrust Act. He pushed through the Elkins Act (1903), which prohibited discriminatory railway rates that favored powerful customers. That same year, he created the Bureau of Corporations, empowered to investigate business practices and bolster the Justice Department's capacity to mount antitrust suits. The department had already filed such a suit against the Northern Securities Company, arguing that this combination of northwestern railroads had created a monopoly in violation of the Sherman Antitrust Act. In a landmark decision in 1904, the Supreme Court ordered Northern Securities dissolved.

That year, calling for every American to get what he called a Square Deal, Roosevelt handily defeated Democratic candidate Alton B. Parker. Now president in his own right, Roosevelt stepped up his attack on trusts. He regarded large-scale enterprise as the natural tendency of modern industry, but he hoped to identify and punish "malefactors of great wealth" who abused their power. After much wrangling in Congress, Roosevelt won a major victory with the passage of the **Hepburn Act** (1906), which strengthened the Interstate Commerce Commission, authorizing it to set shipping rates when it found evidence of railroad **collusion** to fix prices.

At the time Roosevelt acted, trusts had partially protected themselves with the help of two friendly states, New Jersey and Delaware, whose legislatures had loosened regulations and invited trusts to incorporate under their new state laws. With its Northern Securities ruling, however, the Supreme Court began to recognize federal authority to dissolve the most egregious monopolies. Roosevelt left a powerful legacy to his successor, William Howard Taft. In its **Standard Oil decision** (1911), the Supreme Court agreed with Taft's Justice Department that John D. Rockefeller's massive oil monopoly should be broken up into several competing companies. After this ruling, Taft's attorney general undertook antitrust actions against other giant companies.

Environmental Conservation Roosevelt was an ardent outdoorsman and hunter. It was after the president went bear hunting in Mississippi in 1902, in fact, that a Russian Jewish immigrant couple in New York began to sell stuffed "Teddy's bears," which became an American childhood tradition. After John Muir gave Roosevelt a tour of Yosemite Valley, the president described the transcendent experience of camping in the open air under the giant sequoias. "The majestic trunks, beautiful in color and in symmetry," he wrote, "rose round us like the pillars of a mightier cathedral than ever was conceived."

AP® EXAM TIP

Identify the complementary as well as competing goals of conservationists and preservationists in the Progressive Era.

Roosevelt translated his love of nature into environmental action. By the end of his presidency, he had issued fifty-one executive orders creating wildlife refuges and signed a number of bills advocated by environmentalists. He also oversaw creation of three national parks, including Colorado's Mesa Verde, the first to "protect the works of man": American Indian archaeological sites. Also notable was his vigorous use of the Antiquities Act, through which he set aside such beautiful sites as Arizona's Grand Canyon and Washington's Mt. Olympus.

Some of Roosevelt's conservation policies, however, had a probusiness bent. He increased the amount of land held in federal forest reserves and turned their management over to the new, independent U.S. Forest Service, created in 1905. But his forestry chief, Gifford Pinchot, insisted on fire suppression to maximize logging potential. In addition, Roosevelt lent support to the **Newlands Reclamation Act** (1902), which had much in common with earlier Republican policies to promote economic development in the West. Under the act, the federal government sold public lands to raise money for irrigation projects that expanded agriculture on arid lands. The law, interestingly, fulfilled one of the demands of the unemployed men who had marched with Coxey's Army.

Roosevelt's Legacies Like the environmental laws enacted during his presidency, Theodore Roosevelt was full of contradictions. An unabashed believer in what he

called "Anglo-Saxon" superiority, Roosevelt nonetheless incurred the wrath of white supremacists by inviting Booker T. Washington to dine at the White House. Roosevelt called for elite "best men" to enter politics, but he also defended the dignity of labor.

In 1908, Roosevelt chose to retire, bequeathing the Republican nomination to talented administrator William Howard Taft. Taft portrayed himself as Roosevelt's man, though he maintained a closer relationship than his predecessor with probusiness Republicans in Congress. In 1908, Taft faced off against Democrat William Jennings Bryan, who, eloquent as ever, attacked Republicans as the party of "plutocrats": men who used their wealth to buy political influence. Bryan outdid Taft in urging tougher antitrust and prolabor legislation, but Taft won comfortably.

In the wake of Taft's victory, however, rising pressure for reform began to divide Republicans. Conservatives dug in, while militant progressives within the party thought Roosevelt and his successor had not gone far enough. Reconciling these conflicting forces was a daunting task. For Taft, it spelled disaster. Through various incidents, he found himself on the opposite side of progressive Republicans, who began to call themselves "Insurgents" and to plot their own path.

AP® PRACTICES & SKILLS

POINT OF VIEW

To what degree — and in what ways — were Roosevelt's policies progressive?

Diverse Progressive Goals

The revolt of Republican Insurgents signaled the strength of grassroots demands for change. No one described these emerging goals more eloquently than Jane Addams, who famously declared in *Democracy and Social Ethics* (1902), "The cure for the ills of Democracy is more Democracy." It was a poignant statement, given the sharply antidemocratic direction American politics had taken since the 1890s. What, now, should more democracy look like? Various groups of progressives — women, antipoverty reformers, African American advocates — often disagreed about priorities and goals. Some, frustrated by events in the United States, traveled abroad to study inspiring experiments in other nations, hoping to bring ideas home.

AP® EXAM TIP

Recognizing the role of local efforts and state governments in the Progressive Era is critical for success on the AP® exam.

States also served as seedbeds of change. Theodore Roosevelt dubbed Wisconsin a "laboratory of democracy" under energetic Republican governor Robert La Follette (1901–1905). La Follette promoted what he called the **Wisconsin Idea** — greater government intervention in the economy, with reliance on experts, particularly progressive economists, for policy recommendations. Like Addams, La Follette combined respect for expertise with commitment to "more Democracy." He won battles to restrict lobbying and to give Wisconsin citizens the right of recall — voting to remove unpopular politicians from office — and referendum — voting directly on a proposed law, rather than leaving it in the hands of legislators. Continuing his career in the U.S. Senate, La Follette, like Roosevelt, advocated increasingly aggressive measures to protect workers and rein in corporate power.

Robert M. La Follette La Follette became a political reformer when, in 1891, a Wisconsin Republican boss attempted to bribe him to influence a judge in a railway case. As he described it in his autobiography, "Out of this awful ordeal came understanding; and out of understanding came resolution. I determined that the power of this corrupt influence . . . should be broken." This photograph captures him at the top of his form in 1897, expounding his progressive vision to a rapt audience of Wisconsin citizens at an impromptu street gathering. Library of Congress

Protecting the Poor The urban settlement movement called attention to poverty in America's industrial cities. In the emerging social sciences, experts argued that unemployment and crowded slums were not caused by laziness and ignorance, as elite Americans had long believed. Instead, as journalist Robert Hunter wrote in his landmark study, *Poverty* (1904),

such problems resulted from "miserable and unjust social conditions." Charity work was at best a limited solution. "How vain to waste our energies on single cases of relief," declared one reformer, "when *society* should aim at removing the prolific sources of all the woe."

By the early twentieth century, reformers placed particular emphasis on labor conditions for women and children. The **National Child Labor Committee**, created in 1907, hired photographer Lewis Hine to record brutal conditions in mines and mills where children worked. (See one of Hine's photographs on p. 509 in Chapter 16.) Impressed by the committee's investigations, Theodore Roosevelt sponsored the first White House Conference on Dependent Children in 1909, bringing national attention to child welfare issues. In 1912, momentum from the conference resulted in creation of the Children's Bureau in the U.S. Labor Department.

Those seeking to protect working-class women scored a major triumph in 1908 with the Supreme Court's decision in ***Muller v. Oregon***, which upheld an Oregon law limiting women's workday to ten hours. Given the Court's ruling three years earlier in *Lochner v. New York*, it was a stunning victory. To win the case, the National Consumers' League (Chapter 18) recruited Louis Brandeis, a son of Jewish immigrants who was widely known as "the people's lawyer" for his eagerness to take on vested interests. Brandeis's legal brief in the *Muller* case devoted only two pages to the constitutional issue of state police powers. Instead, Brandeis rested his arguments on data gathered by the NCL describing the toll that long work hours took on women's health. The "Brandeis brief" cleared the way for use of social science research in court decisions. Sanctioning a more expansive role for state governments, the *Muller* decision encouraged women's organizations to lobby for further reforms. Their achievements included the first law providing public assistance for single mothers with dependent children (Illinois, 1911) and the first minimum wage law for women (Massachusetts, 1912).

Muller had drawbacks, however. Though men as well as women suffered from long work hours, the *Muller* case did not protect men. Brandeis's brief treated all women as potential mothers, focusing on the state's interest in protecting future children. Brandeis and his allies hoped this would open the door to broader regulation of working hours. The Supreme Court, however, seized on motherhood as the key issue, asserting that the female worker, because of her maternal function, was "in a class by herself, and legislation for her protection may be sustained, even when like legislation is not necessary for men." This conclusion dismayed labor advocates and divided female reformers for decades afterward.

To see a longer excerpt from the Supreme Court majority opinion in *Muller v. Oregon*, along with other primary sources from this period, see ***Sources for America's History***.

Male workers did benefit, however, from new workmen's compensation measures. Between 1910 and 1917, all the industrial states enacted insurance laws covering on-the-job accidents, so workers' families would not starve if a breadwinner was injured or killed. Some states also experimented with so-called **mothers' pensions**, providing state assistance after a breadwinner's desertion or death. Mothers, however, were subjected to home visits to determine whether they "deserved" government aid; injured workmen were not judged on this basis, a pattern of gender discrimination that reflected the broader impulse to protect women, while also holding them to different standards than men. Mothers' pensions reached relatively small numbers of women, but they laid foundations for the national program Aid to Families with Dependent Children, an important component of the Social Security Act of 1935.

While federalism gave the states considerable freedom to innovate, it hampered national reforms. In some states, for example, opponents of child labor won laws barring young children from factory work and strictly regulating hours and conditions for older children's labor. In the South, however, and in coal-mining states like Pennsylvania, companies fiercely resisted such laws — as did many working-class parents who relied on children's income to keep the family fed. A proposed U.S. constitutional amendment to abolish child labor never won ratification; only four states passed it. Tens of thousands of children continued to work in low-wage jobs, especially in the South. The

same decentralized power that permitted innovation in Wisconsin hampered the creation of national minimum standards for pay and job safety.

The Birth of Modern Civil Rights Reeling from disfranchisement and the sanction of racial segregation in the Supreme Court's 1896 *Plessy v. Ferguson* decision (Chapter 17), African American leaders faced distinctive challenges. Given the obvious deterioration of African American rights, a new generation of black leaders proposed bolder approaches than those popularized earlier by Booker T. Washington. Harvard-educated sociologist W. E. B. Du Bois called for a **talented tenth** of educated blacks to develop new strategies. "The policy of compromise has failed," declared William Monroe Trotter, pugnacious editor of the *Boston Guardian*. "The policy of resistance and aggression deserves a trial."

In 1905, Du Bois and Trotter called a meeting at Niagara Falls — on the Canadian side, because no hotel on the U.S. side would admit blacks. The resulting Niagara Principles called for full voting rights; an end to segregation; equal treatment in the justice system; and equal opportunity in education, jobs, health care, and military service. These principles, based on African American pride and an uncompromising demand for full equality, guided the civil rights movement throughout the twentieth century.

In 1908, a bloody race riot broke out in Springfield, Illinois. Appalled by the white mob's violence in the hometown of Abraham Lincoln, New York settlement worker Mary White Ovington called together a group of sympathetic progressives to formulate a response. Their meeting led in 1909 to creation of the **National Association for the Advancement of Colored People (NAACP)**. Most leaders of the Niagara Movement soon joined; W. E. B. Du Bois became editor of the NAACP journal, *The Crisis*. The fledgling group found allies in many African American women's clubs and churches. It also cooperated with the National Urban League (1911), a union of agencies that assisted black migrants in the North. Over the coming decades, these groups grew into a powerful force for racial justice.

Niagara Movement Leaders This superimposed image from 1905 shows some of the founders of the Niagara Movement in front of the famous waterfall near their meeting place. The men depicted came from Massachusetts, Minnesota, Kansas, Illinois, New York, Washington, D.C., and Georgia. W. E. B. DuBois, wearing a white hat and bow tie, is second from right in the middle row. The group's efforts eventually led to creation of the National Association for the Advancement of Colored People. What factors might have led Niagara leaders to include only men (and one boy, Norris B. Herndon, son of Alonzo F. Herndon of Georgia) in the photograph, though women played supportive roles in the Niagara meeting? How might we account for the dearth of participants from the South, where the majority of the nation's African American population lived? Library of Congress

AP® EXAM TIP

The role of W. E. B. Du Bois and the NAACP in challenging racial segregation and discrimination is a "must know" on the AP® exam.

The Problem of Labor Samuel Gompers and other leaders of the nation's dominant union, the American Federation of Labor, were slow to ally with progressives. They had long believed workers should improve their situation through strikes and direct negotiation with employers, not through politics. But by the 1910s, as progressive reformers came forward with solutions, labor leaders in state after state began to press for political action.

The nation also confronted a daring wave of radical labor militancy. In 1905, the Western Federation of Miners (WFM), led by fiery leaders such as William "Big Bill" Haywood, helped create a new movement, the **Industrial Workers of the World** (IWW). The Wobblies, as they were called, fervently supported the Marxist class struggle. As **syndicalists**, they believed that by resisting in the workplace and ultimately launching a general strike, workers could overthrow capitalism. A new society would emerge, run directly by workers. At its height, around 1916, the IWW had about 100,000 members. Though divided by internal conflicts, the group helped spark a number of local protests during the 1910s, including strikes of rail car builders in Pennsylvania, textile operatives in Massachusetts, rubber workers in Ohio, and miners in Minnesota.

The Ludlow Massacre, 1914 Like his drawings of Triangle Shirtwaist fire victims in New York (see p. 581), this cover illustration for the popular socialist magazine *The Masses* demonstrates John Sloan's outrage at social injustice in progressive America. The drawing memorializes a tragic episode during a coal miners' strike at Ludlow, Colorado — the asphyxiation of women and children when vigilantes torched the tent city of evicted miners — and the aftermath, an armed revolt by enraged miners. How did various grassroots reformers define "progressivism," and how did their views differ from Theodore Roosevelt's version of "progressivism"?

AP® EXAM TIP

Evaluate the election of 1912 as evidence of continuity and change in American politics as a result of the Progressive Era.

Meanwhile, after midnight on October 1, 1910, an explosion ripped through the *Los Angeles Times* headquarters, killing twenty employees and wrecking the building. It turned out that John J. McNamara, a high official of the American Federation of Labor's Bridge and Structural Iron Workers Union, had planned the bombing against the fiercely antiunion *Times*. McNamara's brother and another union member had carried out the attack. The bombing created a sensation, as did the terrible Triangle Shirtwaist fire (Chapter 18) and the IWW's high-profile strikes. What should be done? As the election of 1912 approached, labor issues moved high on the nation's agenda.

The Election of 1912

Retirement did not sit comfortably with Theodore Roosevelt. Returning from a year-long safari in Africa in 1910 and finding Taft wrangling with the Insurgents, Roosevelt itched to jump in. In a speech in Osawatomie, Kansas, in August 1910, he called for a **New Nationalism**. In modern America, he argued, private property had to be controlled "to whatever degree the public welfare may require it." He proposed a federal child labor law, more recognition of labor rights, and a national minimum wage for women. Pressed by friends like Jane Addams, Roosevelt also endorsed women's suffrage. Most radical was his attack on the legal system. Insisting that courts blocked reform, Roosevelt proposed sharp curbs on their powers.

Early in 1912, Roosevelt announced himself as a Republican candidate for president. A battle within the party ensued. Roosevelt won most states that held primary elections, but Taft controlled party caucuses elsewhere. Dominated by regulars, the Republican convention chose Taft. Roosevelt then led his followers into what became known as the Progressive Party, offering his New Nationalism directly to the people. Though Jane Addams harbored private doubts (especially about Roosevelt's mania for battleships), she seconded his nomination, calling the Progressive Party "the American exponent of a world-wide movement for juster social conditions." In a nod to Roosevelt's combative stance, party followers called themselves "Bull Mooses."

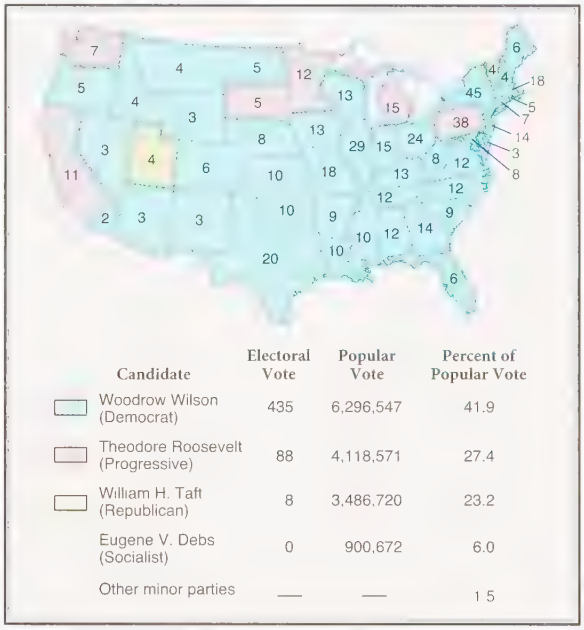
The Republicans Resist Roosevelt, August 7, 1912 This cartoon appeared in the political humor journal *Puck*, six weeks after the Republican convention nominated Taft and two days after the new Progressive Party nominated Theodore Roosevelt. The baptismal choir consists of men such as Gifford Pinchot, who helped Roosevelt form the new party. The G.O.P. elephant refuses to be baptized in "Teddyism," though Preacher Roosevelt insists, "Salvation is Free." President William Howard Taft, dressed in brown with a hat, pulls on the elephant's tail. Library of Congress

Roosevelt was not the only rebel on the ballot: the major parties also faced a challenge from charismatic socialist Eugene V. Debs. In the 1890s, Debs had founded the American Railway Union (ARU), a broad-based group that included both skilled and unskilled workers. In 1894, amid the upheavals of depression and popular protest, the ARU had boycotted luxury Pullman sleeping cars, in support of a strike by workers at the Pullman Company. Railroad managers, claiming the strike obstructed the U.S. mail, persuaded Grover Cleveland's administration to intervene against the union. The strike failed, and Debs served time in prison along with other ARU leaders. The experience radicalized him, and in 1901 he launched the Socialist Party of America. Debs translated socialism into an American idiom, emphasizing the democratic process as a means to defeat capitalism. By the early 1910s, his party had secured a minor but persistent role in politics. Both the Progressive and Socialist parties drew strength from the West, a region with vigorous urban reform movements and a legacy of farmer-labor activism.

Watching the rise of the Progressives and Socialists, Democrats were keen to build on dramatic gains they had made in the 1910 midterm election. Among their younger leaders was Virginia-born Woodrow Wilson, who as New Jersey's governor had compiled an impressive reform record, including passage of a direct primary, workers' compensation, and utility regulation. In 1912, he won the Democrats' nomination. Wilson possessed, to a fault, the moral certainty that characterized many elite progressives. He had much in common with Roosevelt. "The old time of individual competition is probably gone by," he admitted, agreeing for more federal measures to restrict big business. But his goals were less sweeping than Roosevelt's, and only gradually did he hammer out a reform program, calling it the New Freedom. "If America is not to have free enterprise," Wilson warned, "then she can have freedom of no sort whatever." He claimed Roosevelt's program represented collectivism, whereas the New Freedom would preserve political and economic liberty.

With four candidates in the field — Taft, Roosevelt, Wilson, and Debs — the 1912 campaign generated intense excitement. Democrats continued to have an enormous blind spot: their opposition to African American rights. But Republicans, despite plentiful opportunities, had also conspicuously failed to end segregation or pass antilynching laws. Though African American leaders had high hopes for the Progressive Party, they were crushed when the new party refused to seat southern black delegates or take a stand for racial equality. W. E. B. Du Bois considered voting for Debs, calling the Socialists the only party "which openly recognized Negro manhood." But he ultimately endorsed Wilson. Across the North, in a startling shift, thousands of African American men and women worked and voted for Wilson, hoping Democrats' reform energy would benefit Americans across racial lines. The change helped lay the foundations for Democrats' New Deal coalition of the 1930s.

Despite the intense campaign, Republicans' division between Taft and Roosevelt made the result fairly easy to predict. Wilson won, though he received only 42 percent of the popular vote and almost certainly would have lost if Roosevelt had not been in the race (Map 19.5). In comparison with Roosevelt and Debs, Wilson appeared to be a rather old-fashioned choice. But with labor protests cresting and progressives gaining support, Wilson faced intense pressure to act.



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Woodrow Wilson (Democrat)	435	6,296,547	41.9
Theodore Roosevelt (Progressive)	88	4,118,571	27.4
William H. Taft (Republican)	8	3,486,720	23.2
Eugene V. Debs (Socialist)	0	900,672	6.0
Other minor parties	—	—	1.5

MAP 19.5 The Presidential Election of 1912
The 1912 election reveals why the two-party system is so strongly rooted in American politics — especially in presidential elections. The Democrats, though a minority party, won an electoral landslide because the Republicans divided their vote between Roosevelt and Taft. This result indicates what is at stake when major parties splinter. The Socialist Party candidate, Eugene V. Debs, despite a record vote of 900,000, received no electoral votes.

COMPARE & CONTRAST
Why did the election of 1912 feature four candidates, and how did their platforms differ?

IN YOUR OWN WORDS What factors transformed national politics between 1900 and 1912?

Wilson and the New Freedom, 1913–1917

In his inaugural address, Wilson acknowledged that industrialization had precipitated a crisis. "There can be no equality of opportunity," he said, "if men and women and children be not shielded . . . from the consequences of great industrial and social processes which they cannot alter, control, or singly cope with." Wilson was a Democrat, and labor interests and farmers — some previously radicalized in the People's Party — were important components of his base. In the South, many of those voters also upheld strong support for white supremacy. Despite many northern African Americans' support for Wilson, his administration did little for those constituents. But he undertook bold economic reforms.

Economic Reforms

AP® EXAM TIP

Evaluate the efforts of progressives to regulate the economy and promote social change.

In an era of rising corporate power, many Democrats believed workers needed stronger government to intervene on their behalf, and they began to transform themselves into a modern, state-building party. The Wilson administration achieved a series of landmark measures — at least as significant as those enacted during earlier administrations, and perhaps more so (Table 19.1). The most enduring was the federal progressive income tax. "Progressive," by this definition, referred to the fact that it was not a flat tax but rose progressively toward the top of the income scale. The tax, passed in the 1890s but rejected by the Supreme Court, was reenacted as the Sixteenth Amendment to the Constitution, ratified by the states in February 1913. The next year, Congress used the new power to enact an income tax of 1 to 7 percent on Americans with annual incomes of $4,000 or more. At a time when white male wageworkers might expect to make $800 per year, the tax affected less than 5 percent of households.

Three years later, Congress followed this with an inheritance tax. These measures created an entirely new way to fund the federal government, replacing Republicans' high tariff as the chief source of revenue. Over subsequent decades, especially between the 1930s and the 1970s, the income tax system markedly reduced America's extremes of wealth and poverty.

Wilson also reorganized the financial system to address the absence of a central bank. At the time, the main function of national central banks was to back up commercial banks in case they could not meet their obligations. In the United States, the great private banks of New York (such as J. P. Morgan's) assumed this role; if they weakened, the entire system could collapse. This had nearly happened in 1907, when the Knickerbocker Trust Company failed, precipitating a panic. The **Federal Reserve Act** (1913) gave the nation a banking system more resistant to such crises. It created twelve district reserve banks funded and controlled by their member banks, with a central Federal Reserve Board to impose regulation. The Federal Reserve could issue currency — paper money based on assets held in the system — and set the interest rate that district reserve banks charged to their members. It thereby regulated the flow of credit to the general public. The act strengthened the banking system and, to a modest degree, discouraged risky speculation on Wall Street.

Wilson and the Democratic Congress turned next to the trusts. In doing so, Wilson relied heavily on Louis D. Brandeis, the celebrated people's lawyer. Brandeis denied that monopolies were efficient. On the contrary, he believed the best source of efficiency was vigorous competition in a free market. The trick was to prevent trusts from unfairly using their power to curb such competition. In the **Clayton Antitrust Act** (1914), which amended the Sherman Act, the definition of illegal practices was left flexible, subject to the test of whether an action "substantially lessen[ed] competition." The new Federal Trade Commission received broad powers to decide what was fair, investigating companies and issuing "cease and desist" orders against anticompetitive practices.

TABLE 19.1

Major Federal Progressive Measures, 1883–1921
Before 1900
Pendleton Civil Service Act (1883)
Hatch Act (1887; Chapter 16)
Interstate Commerce Act (1887; Chapter 16)
Sherman Antitrust Act (1890)
Federal income tax (1894; struck down by Supreme Court, 1895)
During Theodore Roosevelt's Presidency, 1901–1909
Newlands Reclamation Act for federal irrigation (1902)
Elkins Act (1903)
First National Wildlife Refuge (1903; Chapter 17)
Bureau of Corporations created to aid Justice Department antitrust work (1903)
U.S. Forest Service created (1905)
Antiquities Act (1906; Chapter 17)
Pure Food and Drug Act (1906; Chapter 18)
Hepburn Act (1906)
First White House Conference on Dependent Children (1909)
During William Howard Taft's Presidency, 1909–1913
Mann Act preventing interstate prostitution (1910; Chapter 18)
Children's Bureau created in the U.S. Labor Department (1912)
U.S. Commission on Industrial Relations appointed (1912)
During Woodrow Wilson's Presidency, 1913–1920
Sixteenth Amendment to the Constitution; federal income tax (1913)
Seventeenth Amendment to the Constitution; direct election of U.S. senators (1913)
Federal Reserve Act (1913)
Clayton Antitrust Act (1914)
Seamen's Act (1915)
Workmen's Compensation Act (1916)
Adamson Eight-Hour Act (1916)
National Park Service created (1916; Chapter 17)
Eighteenth Amendment to the Constitution; prohibition of liquor (1920; Chapter 21)
Nineteenth Amendment to the Constitution; women's suffrage (1920; Chapter 20)

Labor issues, meanwhile, received attention from a blue-ribbon U.S. Commission on Industrial Relations, appointed near the end of Taft's presidency and charged with investigating the conditions of labor. In its 1913 report, the commission summed up the impact of industrialization on low-skilled workers. Many earned $10 or less a week and endured regular episodes of unemployment; some faced long-term poverty and hardship. Workers held "an almost universal conviction" that they were "denied justice." The commission concluded that a major cause of industrial violence was the ruthless

Wilson Chases Big Business, 1913–1914 Robert Carter, cartoonist for the *New York Sun*, drew on images of earlier president Theodore Roosevelt carrying a "big stick" in foreign policy, to show Woodrow Wilson's domestic policy toward big business. Wilson, a former schoolteacher, carries a "big ruler" instead of a big stick. Backed by Democratic working-class and agrarian interests, Wilson found himself forced as president to fight corporate monopolies and extend new protections for labor. The Granger Coll... York

antiunionism of American employers. In its key recommendation, the report called for federal laws protecting workers' right to organize and engage in collective bargaining. Though such laws were, in 1915, too radical to win passage, the commission helped set a new national agenda that would come to fruition in the 1930s.

Guided by the commission's revelations, President Wilson warmed up to labor. In 1915 and 1916, he championed a host of bills to benefit American workers. They included the Adamson Act, which established an eight-hour day for railroad workers; the Seamen's Act, which eliminated age-old abuses of merchant sailors; and a workmen's compensation law for federal employees. Wilson, despite initial modest goals, presided over a major expansion of federal authority, perhaps the most significant since Reconstruction. The continued growth of U.S. government offices during Wilson's term reflected a reality that transcended party lines: corporations had grown in size and power, and Americans increasingly wanted federal authority to grow, too.

Wilson's reforms did not extend to the African Americans who had supported him in 1912. In fact, the president rolled back certain Republican policies, such as selected appointments of black postmasters. "I tried to help elect Wilson," W. E. B. Du Bois reflected gloomily, but "under Wilson came the worst attempt at Jim Crow legislation and discrimination in civil service that we had experienced since the Civil War." Wilson famously praised the film *Birth of a Nation* (1915), which depicted the Reconstruction-era Ku Klux Klan in heroic terms. In this way, Democratic control of the White House helped set the tone for the Klan's return in the 1920s.

Progressive Legacies

AP® PRACTICES & SKILLS

CHANGE OVER TIME

To what degree did reforms of the Wilson era fulfill goals that various agrarian-labor advocates and progressives had sought?

AP® EXAM TIP

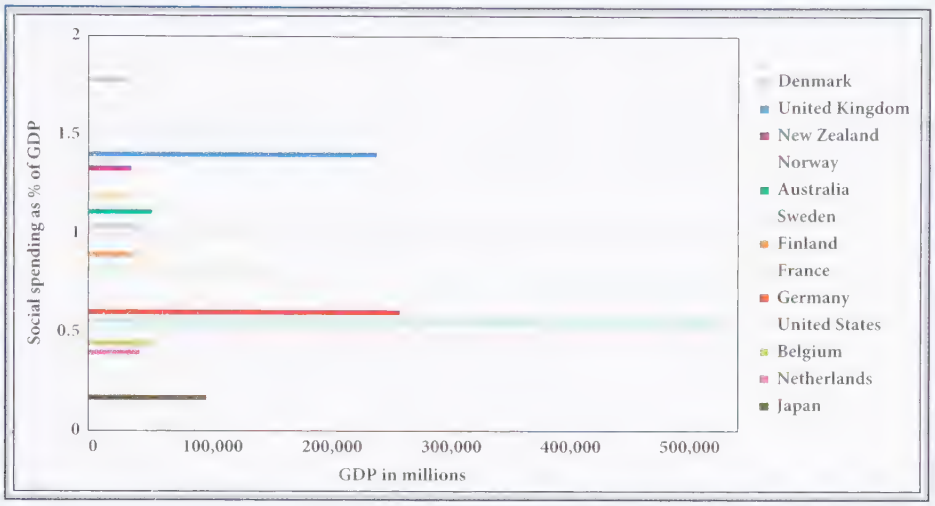
Recognizing the failure of the Progressive Era to address issues of civil rights for African Americans is a "must know" on the AP® exam.

In the industrial era, millions of Americans decided that their political system needed to adjust to new conditions. Whatever their specific goals — and whether they were rural, working-class, or middle-class — reformers faced fierce opposition from powerful business interests. When they managed to win key regulatory laws, they often found these struck down by hostile courts and were forced to try again by different means. Thus the Progressive Era in the United States should be understood partly by its limitations. Elitism and racial prejudice, embodied in new voting restrictions, limited working-class power at the polls; African Americans, their plight ignored by most white reformers, faced segregation and violence. Divided power in a federalist system blocked passage of uniform national policies on such key issues as child labor. Key social welfare programs that became popular in Europe during these decades, including national health insurance and old-age pensions, scarcely made it onto the American agenda until the 1930s (AP® America in the World).

An international perspective suggests several reasons for American resistance to such programs. Business interests in the United States were exceptionally successful and powerful, flush with recent expansion. At the time, also, voters in countries with older, more native-born populations tended to support government regulation and welfare spending to a greater extent than their counterparts in countries with younger populations and large numbers of immigrants. Younger voters, understandably, seem to have been less concerned than older voters about health insurance and old-age security. Divisions in the American working class also played a role. Black, immigrant, and native-born white laborers often viewed one another as enemies or strangers rather

Economic Output and Government Social Spending, 1913

This graph shows social spending—expenditures at all levels of government for health, housing, and assistance to the elderly and the poor—in thirteen industrialized nations in 1913. The horizontal axis shows the size of each nation's economy, measured by gross domestic product (GDP). The vertical axis estimates percentage of GDP devoted to social spending.



QUESTIONS FOR ANALYSIS

1. What similarities and differences does the graph show, in the size of each nation's economy and the amount of its spending on public social welfare?
2. Based on your reading of this textbook, what factors accounted for the United States's position on the graph?

than as members of a single class with common interests. This helps explain why the Socialist Party drew, at peak, less than 6 percent of the U.S. vote at a time when its counterparts in Finland, Germany, and France drew 40 percent or more. Lack of pressure from a strong, self-conscious workingmen's party contributed to more limited results in the United States.

But it would be wrong to underestimate progressive achievements. Over several decades, in this period, more and more prosperous Americans began to support stronger economic regulations. Even the most cautious, elite progressives recognized that the United States had entered a new era. Multinational corporations overshadowed small businesses; in vast cities, old support systems based on village and kinship melted away. Outdated political institutions — from the spoils system to urban machines — would no longer do. Walter Lippmann, founding editor of the progressive magazine *New Republic*, observed in 1914 that Americans had "no precedents to guide us, no wisdom that wasn't made for a simpler age." Progressives created new wisdom. By 1917, they had drawn blueprints for a modern American state, one whose powers more suited the needs of an industrial era.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

What factors explain the limits of progressive reform in the United States?

IN YOUR OWN WORDS What caused Woodrow Wilson to become a reformer once he entered the White House?

SUMMARY

The Progressive Era emerged from the political turmoil of the 1880s and 1890s. In the 1880s, despite the limits imposed by close elections, federal and state governments managed to achieve important administrative and economic reforms. After 1888, Republican leaders undertook more sweeping efforts, including the Sherman Antitrust Act, but failed in a quest to protect black voting rights. In the South and West, the People's Party called for much stronger government intervention in the economy, but its radical program drew bitter Republican and Democratic resistance.

The depression of the 1890s brought a wave of reaction. Labor unrest threw the nation into crisis, and Cleveland's intransigence over the gold standard cost the Democrats dearly in the 1894 and 1896 elections. While Republicans took over the federal government, southern Democrats restricted voting rights in the Solid South. Federal courts struck down regulatory laws and supported southern racial discrimination.

After McKinley's assassination, Roosevelt launched a program that balanced reform and private enterprise. At both the federal and state levels, progressive reformers made extensive use of elite expertise. At the grassroots, black reformers battled racial discrimination, women reformers worked on issues ranging from public health to women's working conditions, and labor activists tried to address the problems that fueled persistent labor unrest. The election of 1912 split the Republicans, giving victory to Woodrow Wilson, who launched a Democratic program of economic and labor reform. Despite the limits of the Progressive Era, the reforms of this period laid the foundation for a modern American state.

CHAPTER 19 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. How did the political goals of Populists differ from those of Democrats and Republicans?
2. How did the depression of the 1890s impact federal politics and policy?
3. What factors transformed national politics between 1900 and 1912?
4. What caused Woodrow Wilson to become a reformer once he entered the White House?
5. Look at the events on the thematic timeline on pages 494–495. Historians often call the later decades of this period (1890 to 1920) the Progressive Era. Given the limitations and new problems that emerged during this time, as well as the achievements of progressive policymaking, do you think the name is warranted? What other names might we suggest for this era?

AP® TERMS TO KNOW *Identify and explain the significance of each term below.*

Key Concepts and Events

Pendleton Act (p. 589)
Sherman Antitrust Act (p. 593)
Lodge Bill (p. 593)
Omaha Platform (p. 594)
free silver (p. 599)
Williams v. Mississippi (p. 599)
Lochner v. New York (p. 602)
Hepburn Act (p. 604)
Standard Oil decision (p. 604)
Newlands Reclamation Act (p. 604)
Wisconsin Idea (p. 605)
National Child Labor Committee (p. 606)
Muller v. Oregon (p. 606)
mothers' pensions (p. 606)
talented tenth (p. 607)
National Association for the Advancement of Colored People (NAACP) (p. 607)
Industrial Workers of the World (p. 607)
New Nationalism (p. 608)
Federal Reserve Act (p. 610)
Clayton Antitrust Act (p. 610)

Key People

Mary E. Lease (p. 586)
William Jennings Bryan (p. 601)
Theodore Roosevelt (p. 603)
Robert La Follette (p. 605)
Louis Brandeis (p. 606)
W. E. B. Du Bois (p. 607)
Eugene V. Debs (p. 609)

Key Academic Terms

reconstitute (p. 600)
abhor (p. 600)
collusion (p. 604)
syndicalism (p. 607)

MAKING CONNECTIONS *Recognize the larger developments and continuities within and across chapters by answering these questions.*

1. Returning to Chapter 16, review the strategies and goals of the labor and agrarian organizations that flourished in the 1870s and 1880s. The People's Party embodied many of those ideas. Imagine that you are a journalist interviewing a former People's Party leader in 1917. To what extent might he or she have said that progressives had, after 1900, fulfilled the agrarian-labor agenda? To what extent might he or she criticize progressives for failing to achieve important reforms? What do you conclude from this about the similarities and differences of populism and progressivism?
2. Compare the economic policies implemented by Republicans during the Civil War (Chapters 13 and 15) with the policies adopted in the Progressive Era. What were the main goals of legislators and presidents in each period? In what ways did those goals overlap? To what extent did progressive leaders seek to remedy limitations or problems that emerged as a result of the Civil War–era legislation?

KEY TURNING POINTS *Refer to the chapter chronology on page 588 for help in answering the questions below.*

Theodore Roosevelt and Woodrow Wilson both became president under unusual circumstances: Roosevelt after the assassination of William McKinley, and Wilson in a four-way race, in which the candidate of the previously dominant Republican Party came in third. How important was each man's arrival in the White House, based on events that occurred during their presidencies? Which events might have happened anyway, even if Roosevelt and Wilson had not served as chief executive? What does this suggest about the significance of the presidency during the Progressive Era?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS *Choose the correct answer for each question.*

Questions 1–3 refer to the excerpt below.

> "This is a nation of inconsistencies. . . . We fought England for our liberty and put chains on four million blacks. We wiped out slavery and by our tariff laws and national banks began a system of white wage slavery worse than the first.
>
> Wall Street owns the country. It is no longer a government of the people, by the people, and for the people, but a government of Wall Street, by Wall Street, and for Wall Street. . . .
>
> Tariff is not the paramount question. The main question is the money question. . . . Kansas now suffers from two great robbers, the Santa Fe Railroad and the loan companies. The common people are robbed to enrich their masters. . . .
>
> We want money, land and transportation. We want the abolition of national banks, and we want the power to make loans from the government. We want the accursed foreclosure system wiped out."
>
> Speech by Mary Elizabeth Lease, political activist, 1890

1. A supporter of the ideas Lease expressed in the excerpt would most likely also have supported
   - **a.** a stronger governmental role in regulating the American economic system.
   - **b.** ideas such as the Gospel of Wealth.
   - **c.** laissez-faire economic policies as pathways to growth in the long run.
   - **d.** increased sharecropping and tenant farming.
2. The ideas expressed in the excerpt had the most in common with the ideas of which of the following groups?
   - **a.** Social Darwinists in the late nineteenth century
   - **b.** The union movement of the 1930s
   - **c.** Conservatives in the 1980s
   - **d.** Jacksonian Democrats in the 1830s
3. The ideas expressed in the excerpt resulted most directly from
   - **a.** public debates over assimilation.
   - **b.** corporate consolidation in agricultural markets.
   - **c.** battles between labor and management over wages and working conditions.
   - **d.** the promotion of the idea of a "New South."

Questions 4–6 refer to the excerpt below.

> "The mechanism of modern business is so delicate that extreme care must be taken not to interfere with it in a spirit of rashness or ignorance. Many of those who have made it their vocation to denounce the great industrial combinations which are popularly . . . known as 'trusts' appeal precisely to hatred and fear. . . .
>
> . . . . [Y]et it is also true that there are real and grave evils . . . and a resolute and practical effort must be made to correct these evils.
>
> There is a widespread conviction in the minds of the American people that the great corporations known as trusts are in certain of their features and tendencies hurtful to the general welfare. This . . . is based upon sincere conviction that combination and concentration should be, not prohibited, but, supervised and within reasonable limits controlled; and in my judgment this conviction, is right."
>
> Theodore Roosevelt, Message to Congress, December 3, 1901

4. The Roosevelt administration most directly acted upon the beliefs expressed in the passage through
   - **a.** resolving the Anthracite Coal Strike.
   - **b.** creating the Federal Trade Commission.
   - **c.** supporting reduced federal rates.
   - **d.** approving the corporate merger that created the United States Steel Corporation.
5. The ideas Theodore Roosevelt expressed in the excerpt share the greatest similarity to the ideas used to
   - **a.** pass Federalist economic programs in the 1790s.
   - **b.** enact New Deal legislation in the 1930s.
   - **c.** support Great Society legislation in the 1960s.
   - **d.** endorse free-trade agreements in the 1990s.
6. The ideas Theodore Roosevelt expressed about regulation in the excerpt show the greatest extent of similarity to the ideas of
   - **a.** the Marshall Court of 1800 to the 1820s.
   - **b.** Whigs favoring the national bank in the 1830s.
   - **c.** laissez-faire economists in the 1880s.
   - **d.** the federal legislature in the 1890s.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

> " 'When was the Progressive Era exactly?' my students ask. Roughly during the first two decades of the twentieth century, I tell them. . . . Some historians still use 1900 as a starting date, although more recently 1890 has become popular. . . . From the perspective of women progressives, however, these boundaries need to be much more fluid. . . . The women who founded social settlements in the 1880s, along with the temperance and suffrage campaigners, comprise a group of American citizens active in conceptualizing progressive reform long before the presumed dawn of progressivism."
>
> Elisabeth Israels Perry, "Men Are from the Gilded Age, Women Are from the Progressive Era," 2002
>
> "Millions of freedmen, immigrants, students, workers, artists, intellectuals, and reformers believed that post–Civil War America offered a chance to start anew. . . . Many Americans worked energetically between 1865 and 1900 to purify politics, restrict the power of big business, and fight injustice. Those decades witnessed the first march on Washington, the first federal welfare programs, the first elections in which women and black men voted for president, and the first national park in the world. At the same time, problems that plagued the so-called Gilded Age continued and even intensified during the so-called Progressive Era."
>
> Rebecca Edwards, *New Spirits: Americans in the "Gilded Age," 1865–1905*, 2015

1. Using the two excerpts above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE major difference between Perry's and Edwards's historical interpretations of the late nineteenth and early twentieth centuries.
   - **b.** Briefly explain how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Perry's argument.
   - **c.** Briefly explain how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Edwards's argument.
2. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE important historical difference between economic reforms sought by the Populists and the Progressives.
   - **b.** Briefly explain ONE important similarity between the economic reforms sought by the Populists and the Progressives.
   - **c.** Briefly explain ONE important historical factor that accounts for the similarity OR difference between the economic reforms sought by the Populists and the Progressives.
3. Answer (a), (b), and (c).
   - **a.** Briefly explain why ONE of the following was the most significant factor contributing to political unrest between 1880 and 1917.
     - Monetary policy
     - Race relations
     - Economic inequality
   - **b.** Provide ONE specific historical example to support your argument in (a).
   - **c.** Provide specific evidence why ONE of the other options is a less significant factor contributing to political unrest between 1880 and 1917.

DOCUMENT-BASED QUESTION *Suggested reading period: 15 minutes. Suggested writing time: 45 minutes.*

DIRECTIONS: Question 1 is based on the accompanying documents. The documents have been edited for the purpose of this exercise.

1. Evaluate the extent to which the settlement of the American West changed the lives of peoples in the region between 1865 and 1900.

DOCUMENT 1

Source: Comanche Chief Ten Bears, Medicine Lodge Treaty Address, October 1867.

"I was born on the prairie where the wind blew free and there was nothing to break the light of the sun. I was born where there were no enclosures and where everything drew a free breath. I want to die there and not within walls. . . . When I was at Washington the Great Father told me that all the Comanche land was ours and that no one should hinder us in living upon it. So, why do you ask us to leave the rivers and the sun and the wind and live in houses? Do not ask us to give up the buffalo for the sheep. The young men have heard talk of this, and it has made them sad and angry. . . .

If the Texans had kept out of my country there might have been peace. But that which you now say we must live on is too small. The Texans have taken away the places where the grass grew the thickest and the timber was the best. Had we kept that we might have done the things you ask. But it is too late. The white man has the country which we loved, and we only wish to wander on the prairie until we die."

DOCUMENT 2

Source: Acts of the Wyoming Territorial Legislature, 1869 and 1870.

"AN ACT to confer to women all the rights of citizenship.

That every woman of the age of twenty-one years, residing in this territory, may, at every election . . . cast her vote. And her rights to the elective franchise, and to hold office, shall be the same under the election laws of the territory, as those electors.

AN ACT to protect married women in their separate property, and the enjoyment of their labor.

That all the property, both real and personal, belonging to any married woman as her sole and separate property . . . shall, notwithstanding her marriage, be and remain . . . her sole and separate property, under her sole control, and be held, owned, possessed and enjoyed by her, the same as though she were sole [single] and unmarried, and shall not be subject to the disposal, control or interference of her husband."

DOCUMENT 3

Source: A Remonstrance from the Chinese in California to the Congress of the United States, c. 1870.

"When we were first favored with the invitations of your ship-captains to emigrate to California, and heard the laudations [praises] which they published of the perfect and admirable character of your institutions, and were told of your exceeding respect and love toward the Chinese, we could hardly have calculated that we would now be the objects of your excessive hatred. . . .

If . . . you grant us, as formerly, to mine and trade here, then it is our request that you will give instructions to your courts that they shall again receive Chinese testimony; that they shall cease their incessant discussions about expelling the Chinese; that they shall quit their frequent agitations as to raising the license fees; that they shall allow the Chinese peace in the pursuit of their proper employments; and that they shall effectually repress the acts of violence common among the mountains, so that robbers shall not upon one pretext or another injure and plunder us."

DOCUMENT 4

Source: Letter from Uriah Oblinger, a Nebraska homesteader, to his wife, December 1872.

"I am confident that I can live when I have 160 [acres] of my own. . . .

[T]he longer I stay here the better I like it, there are but very few old families here. They are mostly young families just starting in life the same as we are and I find them very generous indeed. . . .

I think any one that is not able to own a farm in Indiana or any of the older states and make their living by farming are foolish for staying any longer than to just get enough to leave on. . . . It is going to be rough starting as I always told you but when started it will be ours. . . . Those that are here seem to be as happy as birds. They are all Homesteaders, yet there is not more than one in 25 that has a deed for their land yet."

DOCUMENT 5

Source: Interview of Nancy Guptil, a black migrant to Kansas, 1880.

"Came from Middle Tennessee. Heard neighbors talking of Kansas two or three years. We received two or three circulars that told about Kansas. . . . I find things here a heap better than I expected. We have forty acres. We came last May. We built our house in the fall. My husband finds enough work around here to support us. We had plenty of supplies to live on through the winter. . . . People treats us better here than they did there because they is willing to pay us what we work for. . . . I wouldn't go back for nothing. . . . All my people are mighty well satisfied here."

DOCUMENT 6

Source: Joseph Nimmo Jr., "The American Cowboy," *Harper's New Monthly Magazine*, November 1886.

"The Texas cowboys were frontiersmen, accustomed from their earliest childhood to the alarms and the struggles incident to forays of Indians of the most ferocious and warlike nature. The section of the State in which they lived was also for many years exposed to incursions of bandits from Mexico, who came with predatory intent upon the herds and the homes of the people of Texas.

The carrying of firearms and other deadly weapons was consequently a prevalent custom among them. And being scattered over vast areas, and beyond the efficient protection and restraints of civil law, they of necessity became a law unto themselves. It is not a strange thing that such an occupation and such environment should have developed a class of men whom persons accustomed to the usages of cultivated society would characterize as ruffians of the most pronounced type.

But among the better disposed of the Texas cowboys, who constitute, it is believed, much more than a majority of them, there were true and trusty men, in whom the dangers and fortunes of their lives developed generous and heroic traits of character. The same experiences, however, led the viciously inclined to give free vent to the worst passions. Upon slight provocation they would shoot down a fellow man with almost as little compunction as they fired upon the wild beasts."

LONG ESSAY QUESTIONS *Suggested writing time: 40 minutes.*

DIRECTIONS: Please choose one of the following three questions to answer.

2. **Evaluate the extent to which social reform movements between 1865 and 1900 changed American society.**

3. **Evaluate the extent to which urbanization changed politics in the United States between 1865 and 1900.**

4. **Evaluate the extent of difference between the effects of industrialization on the United States in the decades before the Civil War (1820–1860) to the effects in the decades after the Civil War (1865–1900).**

PART 7

CHAPTER 20
An Emerging World Power, 1890–1918

CHAPTER 21
Unsettled Prosperity: From War to Depression, 1919–1932

CHAPTER 22
Managing the Great Depression, Forging the New Deal, 1929–1938

CHAPTER 23
The World at War, 1937–1945

Domestic and Global Challenges

1890–1945

What should be the role of the United States in the world, and what is the proper relationship between government and society? If these seem like monumental questions, they are indeed. In Part 7, we show how these two pressing questions came to the fore in a tumultuous period of global warfare and domestic strife and reform. Globally, the United States expanded its empire overseas and fought on the winning side in two world wars. Domestically, the reform impulse retreated during and immediately after World War I but surged back to the center of national life during the crisis of the Great Depression, when Americans once more debated the responsibilities and limits of their government.

As the chapters in this part show, on the world stage the United States acted both in calculated self-interest and to protect democratic nations and institutions. By acquiring the Philippines, Hawaii, Guam, and Puerto Rico, the United States behaved as a traditional empire, securing important strategic assets and protecting American investments abroad. In joining its European allies in the two world wars, the United States embraced a broad international partnership against the threat of **autocracy** and fascism. In his famous speech in 1918 outlining his Fourteen Points for international peace, made amid the horrors of World War I, President Woodrow Wilson argued that as responsible global citizens Americans "cannot be separated in interest or divided in purpose."

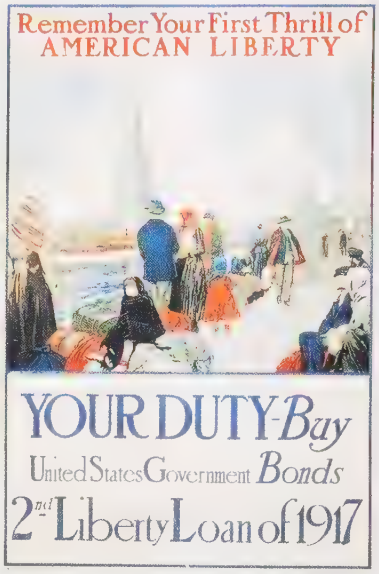
Fifteen years later, President Franklin Delano Roosevelt made a similar call for solidarity during the Great Depression. "We face the arduous days that lie before us," he said, "in the warm courage of national unity." During the crises of the depression and World War II, American voters called for — and got — what Roosevelt called "action and action now." We conclude Part 7 in 1945, when the United States emerged from World War II with unprecedented global power and the federal government with a broad mandate for sustaining the new welfare state, a major turning point in modern American history. ▶

AP® CONCEPT CONNECTIONS

America's Rise to World Power

The United States became a major international power beginning in the 1890s, first in the Western Hemisphere and by the 1940s across the world, renewing debates at home about America's global role. After the War of 1898, the United States claimed overseas colonies and asserted control over the Caribbean basin. And although President Wilson attempted to maintain neutrality at the start of World War I, trade ties and old alliances drew the U.S. into the conflict on the Allied side. Wilson sought to influence the peace, but Allied leaders ignored his proposals and the Senate rejected the Treaty of Versailles. By war's end, the U.S. position on the world stage remained uncertain.

The 1920s was an era of dollar diplomacy and U.S. business expansion abroad. In the 1930s, faced with isolationist sentiment at home and the rise of fascist powers in Europe and Japan, the Roosevelt administration steered a middle course. In the late 1930s, it began to send aid to its traditional ally Great Britain without committing U.S. forces to the conflict. When the United States entered World War II in 1941, it did so as part of an alliance with both England and the Soviet Union against Germany, Japan, and Italy. The United States emerged from the war as the dominant global power.



Library of Congre

Modernity and Its Discontents

World War I had a powerful domestic impact in the United States, producing a sharp political right turn in the postwar years. A Red Scare, rollback of labor and immigrant rights, race riots against African Americans, and a resurgent nationwide Ku Klux Klan marked the political scene between 1919 and the late 1920s. A full-blown modern consumer culture also emerged in the decade as radio, automobiles, and Hollywood movies transformed leisure pastimes. Prosperity did not prevent conflict over an emerging secular, diverse, and modern society, however, as Americans battled over immigration, race, and religion in the 1920s.

During the Great Depression, the U.S. government deported hundreds of thousands of people of Mexican descent, including American citizens. During World War II, the government temporarily imprisoned Japanese Americans in a mass relocation policy, turned away most Jewish refugees fleeing Hitler, and segregated African Americans in a Jim Crow military. Yet many Americans celebrated the New Deal and the war effort as evidence of what a united country could accomplish. These events, too, represented battles over what a diverse, modern nation would look like.

Creation of the Welfare State

Republican policymakers of the 1920s believed in hands-off government. Their policies likely helped trigger the Great Depression and deepened its impact after it arrived. President Franklin Roosevelt's New Deal programs (1933–1938) expanded federal responsibility for the welfare of ordinary citizens, breaking dramatically with the *laissez faire* individualism of the previous decade. Though the New Deal faced considerable challenges on the political right — especially from business and corporate leaders and a hostile Supreme Court — the popularity of its programs, such as Social Security, established a broad consensus that the United States needed a modern welfare state to regulate the economy and provide a basic safety net for the nation's citizens.

ihrv

AP® THEMATIC UNDERSTANDING

Domestic and Global Challenges 1890–1945

This timeline arranges some of the important events of this period into seven themes.

Consider the entries under each theme. What connections do you see between events on the world stage and developments within the United States? What impact did World War I, the Great Depression, and World War II have on American politics, society, and culture?

	AMERICAN AND NATIONAL IDENTITY	POLITICS AND POWER	WORK, EXCHANGE, AND TECHNOLOGY
1890	• "American exceptionalism" and rise of imperialism • Alfred Mahan, *The Influence of Sea Power upon History* (1890)	• Republicans sweep congressional elections after severe depression (1894) • Republican William McKinley elected president (1896)	• Depression of 1890s increases pressure to secure foreign markets
1900	• *Insular* cases establish non-citizenship status for new territories (1901) • California, Washington, and Hawaii limit rights for Asian immigrants	• McKinley reelected on pro-imperialist platform (1900) • McKinley assassinated; Theodore Roosevelt becomes president (1901)	• Root-Takahira Agreement affirms free oceanic commerce (1908) • Ford Motor Company introduces Model T
1910	• New Ku Klux Klan founded (1915) • Post–World War I race riots • Wartime pressure for "100 percent loyalty"; dissent suppressed	• Woodrow Wilson elected president (1912) • Red Scare (1919) • Wilson issues Fourteen Points (1919) • U.S. Senate rejects Treaty of Versailles (1919–1920)	• Assembly-line production of automobiles begins • U.S. Army Corps employs tens of thousands of workers to build Panama Canal
1920	• Harlem Renaissance artists emphasize black pride • National Origins Act limits immigration (1924)	• Nineteenth Amendment grants women's suffrage (1920) • Sheppard-Towner Federal Maternity and Infancy Act (1921) • Prohibition (1920–1933) • Teapot Dome scandal (1923) • Republican-associated state pro-business policies (1920–1932)	• Economic prosperity (1922–1929) • Labor gains rolled back • Era of welfare capitalism • Rise of automobile loans and consumer credit
1930	• Bonus Army (1932) • Indian Reorganization Act (1934) • Social Security created (1935)	• Hoover's Republican elected president (1932) • First New Deal (1933) • Second New Deal (1935) • Roosevelt attempts to reform Supreme Court (1937)	• Great Depression (1929–1941) • Rise of CIO and industrial unionism
1940	• Internment of Japanese Americans (1942) • Segregation in armed services until 1948	• Roosevelt elected to fourth term (1944) • Roosevelt dies (1945) • Harry Truman becomes president (1945)	• War spending ends depression • Rationing curbs consumer spending • Married women take war jobs

CULTURE AND SOCIETY	MIGRATION AND SETTLEMENT	GEOGRAPHY AND THE ENVIRONMENT	AMERICA IN THE WORLD	
• "Remember the *Maine*" campaign fuels surge in nationalism	• Josiah Strong encourages overseas Christian missionaries	• Americans debate overseas expansion and empire • Teller Amendment (1898)	• Congress funds construction of modern battleships • U.S.-backed planters overthrow Hawaii's queen (1892) • U.S. wins War of 1898 against Spain; claims Hawaii, Puerto Rico, Guam, and Philippines • John Hay proclaims "open door" policy in China	1890
• Social Darwinism used to justify U.S. imperialism (1898–1910s)	• Rising immigration from Southern and Eastern Europe • Gentleman's agreement bars Japanese immigration (1907)	• Congress authorizes funds to purchase land in Colombia for future canal	• U.S. war against Philippine revolutionaries (1899–1902) • Platt Amendment (1902) • Roosevelt Corollary to Monroe Doctrine (1904) • United States helps crush Boxer Rebellion in China (1900)	1900
• Moviemaking industry moves to southern California • *Birth of a Nation* glorifies the Reconstruction-era Klan (1915) • Radio Corporation of America created (1919)	• Great Migration brings African Americans to northern cities • St. Louis (1917) and Chicago (1919) race riots • Mexican Revolution causes surge in immigration from Mexico	• Panama Canal construction • Panama Canal opens (1914) and links Atlantic and Pacific Oceans	• Wilson intervenes in Mexico (1914) • Panama Canal opens (1914) • United States enters World War I (1917) • War ends; Wilson seeks to influence peace treaty negotiations (1918)	1910
• Rise of Hollywood • Harlem Renaissance • Popularity of jazz music • Scopes "monkey trial" (1925)	• Rise of nativism • National Origins Act (1924) imposes immigration restriction • Marcus Garvey's Universal Negro Improvement Association (UNIA) advocates return to Africa for African Americans	• Suburban housing boom • Popularity of automobile spurs highway construction, financed by state gasoline taxes • First suburban shopping center opens outside Kansas City, Missouri (1924)	• Rise of "dollar diplomacy" • U.S. occupation of Haiti and other Caribbean and Central American nations	1920
• Documentary impulse in arts • WPA assists artists • Federal Writers' Project established (1935)	• Migrants ("Okies") leave drought-struck Midwest for California • U.S. deports Mexican immigrants and Mexican Americans	• "Dust Bowl" drought strikes Midwest (1930–1941) • Civilian Conservation Corps constructs trails, roads, parks (1933–1942) • Tennessee Valley Authority (TVA) creates flood control, dams, electricity • Works Progress Administration builds parks, zoos, trails (1935–1943)	• Rise of European fascist powers • Japan invades China (1937)	1930
• Film industry aids war effort	• War production leads to migration to California and major cities • Bracero program increases immigration from Mexico	• Temporary encampments imprison Japanese and Japanese Americans in inland states (1942)	• United States enters World War II (1941) • Atomic bombing of Japan and end of World War II (1945) • United Nations founded (1945)	1940

AP® LEARNING FOCUS

As the United States became a major power on the world stage, what ideas and interests did policymakers promote in international affairs?

Accepting the Democratic presidential nomination in 1900, William Jennings Bryan delivered a famous speech denouncing U.S. military occupations overseas. "God Himself," Bryan declared, "placed in every human heart the love of liberty. . . . He never made a race of people so low in the scale of civilization or intelligence that it would welcome a foreign master." At the time, Republican president William McKinley was leading an ambitious and popular plan of overseas expansion. The United States had asserted control over the Caribbean, claimed Hawaii, and sought to annex the Philippines. Bryan failed to convince a majority of voters that imperialism—the exercise of military, political, and economic power overseas—was the wrong direction. He lost the election by a landslide.

By the 1910s, however, American enthusiasm for overseas involvement cooled. Despite efforts to stay neutral, the United States got caught up in the global catastrophe of World War I, which killed 8 million combatants, including over 50,000 U.S. soldiers. By the war's end, European powers' grip on their colonial empires was weakening. The United States also ceased acquiring overseas territories and pursued a different path. It did so in part because the war brought dramatic changes at home, leaving Americans a postwar legacy of economic upheaval and political disillusionment.

President Woodrow Wilson, who in 1913 appointed Bryan as his secretary of state, tried to steer a middle course between revolutionary socialism and European-style imperialism. In Wilson's phrase, America would "make the world safe for democracy" while unapologetically working to advance U.S. economic interests. The U.S. Senate, however, rejected the 1919 Treaty of Versailles and with it Wilson's vision, leaving the nation's foreign policy in doubt. Should the United States try to promote democracy abroad? If so, how? To what degree should the federal government seek to promote American business interests? Under what conditions was overseas military action justified? When, on the contrary, did it **impinge** on others' sovereignty, endanger U.S. soldiers, and invite disaster? Today's debates over foreign policy still center to a large degree on questions that Americans debated in the era of McKinley, Bryan, and Wilson, when the nation first asserted itself as a major world power.

The Great White Fleet The U.S. Navy's newest battle fleet, nicknamed the "Great White Fleet" and celebrated proudly by President Theodore Roosevelt, took a world tour between 1907 and 1909, demonstrating to the world that the U.S. now had naval power rivaling Britain and Germany. Here, the USS *Connecticut* leads the fleet of sixteen battleships on its way out of Hampton Roads, Virginia, at the start of the voyage. By 1900, global economic and military power brought the United States new prestige — and new problems. Bettmann/Getty Images

CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and then identify the links among related events.

- **1886** ▸ United States begins building modern battleships
- **1892** ▸ U.S.-backed planters overthrow Hawaii's Queen Liliuokalani
- **1895** ▸ United States arbitrates border dispute between Britain and Venezuela
  ▸ Guerrilla war against Spanish rule begins in Cuba
- **1898** ▸ War between United States and Spain
  ▸ United States annexes Hawaii, Puerto Rico, and Guam
- **1899–1902** ▸ U.S.-Philippine War, ending in U.S. occupation of Philippines
  ▸ United States pursues open door policy in China
- **1900** ▸ United States helps suppress nationalist rebellion in China ("Boxer Rebellion")
- **1901** ▸ Hay-Pauncefote Treaty
- **1902** ▸ Platt Amendment gives United States exclusive role in Cuba
- **1903** ▸ United States recognizes Panama's independence from Colombia
- **1905** ▸ Russo-Japanese War; Roosevelt mediates peace
- **1908** ▸ Root-Takahira Agreement
- **1914** ▸ Panama Canal opens
  ▸ U.S. military action in Veracruz, Mexico
  ▸ World War I begins in Europe
- **1916** ▸ Jones Act commits United States to future Philippine independence
- **1917** ▸ United States declares war on Germany and its allies, creates new agencies to mobilize economy and promote national unity
  ▸ Espionage Act
- **1918** ▸ Sedition Act
  ▸ World War I ends
  ▸ Beginning of two-year influenza pandemic that kills 50 million people worldwide
- **1919** ▸ *Schenck v. United States* and *Abrams v. United States*
  ▸ Wilson promotes Fourteen Points at Paris Peace Conference
  ▸ Senate rejects the Treaty of Versailles
- **1920** ▸ Nineteenth Amendment grants women suffrage

From Expansion to Imperialism

Historians used to describe turn-of-the-twentieth-century U.S. imperialism as something new and unprecedented. Now they stress continuities between foreign policy in this era and the nation's earlier, relentless expansion across North America. Wars against Native peoples had occurred almost continuously since the country's founding; in the 1840s, the United States had annexed a third of Mexico. The United States never administered a large colonial empire, as did European powers like Spain, England, and Germany, partly because it had a plentiful supply of natural resources in the American West. But policymakers undertook a determined quest for global markets. Events in the 1890s opened opportunities to pursue this goal in new ways.

Foundations of Empire

AP® EXAM TIP

Outline the arguments that caused the rise of imperialism in U.S. foreign policy.

American empire builders around 1900 fulfilled a vision laid out earlier by William Seward, secretary of state under presidents Abraham Lincoln and Andrew Johnson, who saw access to global markets as the key to power (Chapter 15). Seward's ideas had won only limited support at the time, but the severe economic depression of the 1890s brought Republicans into power and Seward's ideas back into vogue. Confronting high unemployment and mass protests, policymakers feared American workers would embrace socialism or Marxism. The alternative, they believed, was to create jobs and prosperity at home by selling U.S. products in overseas markets.

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

Intellectual trends also favored imperialism. As early as 1885, in his popular book *Our Country*, Congregationalist minister Josiah Strong urged Protestants to **proselytize** overseas. He predicted that the American "Anglo-Saxon race," which represented "the largest liberty, the purest Christianity, the highest civilization," would "spread itself over the earth." Such arguments were grounded in **American exceptionalism**, the idea that the United States had a unique destiny to foster democracy and civilization.

As Strong's exhortation suggested, imperialists also drew on the popular racial theory that people of "Anglo-Saxon" descent — English and often German — were superior to all others. "Anglo-Saxon" rule over foreign people of color made sense in an era when, at home, the United States denied most American Indians and Asian immigrants citizenship and southern states disfranchised blacks. Imperialists argued that "free land" on the western frontier was dwindling, and thus new outlets needed to be found for American energy and enterprise. Responding to critics of U.S. occupation of the Philippines, Theodore Roosevelt scoffed: if Filipinos should control their own islands, he declared, then America was "morally bound to return Arizona to the Apaches."

Imperialists also justified their views through racialized Social Darwinism (Chapter 17). Josiah Strong, for example, predicted that with the globe fully occupied, a "competition of races" would ensue, with victory based on "survival of the fittest." Fear of ruthless competition drove the United States, like European nations, to invest in the latest weapons. Policymakers saw that European powers were amassing steel-plated battleships and carving up Africa and Asia among themselves. In his book *The Influence of Sea Power upon History* (1890), U.S. naval officer Alfred Mahan urged the United States to enter the fray, observing that naval power had been essential to past empires. As early as 1886, Congress ordered construction of two steel-hulled battleships, the USS *Texas* and USS *Maine*; in 1890, it appropriated funds for three more, a program that expanded over the next two decades.

During Grover Cleveland's second term (1893–1897), his secretary of state, Richard Olney, turned to direct confrontation. He warned Europe to stay away from Latin America, which he saw as the United States's rightful sphere of influence. Without consulting the nation of Venezuela, Olney suddenly demanded in 1895 that Britain resolve a long-standing border dispute between Venezuela and Britain's neighboring colony, British Guiana. Invoking the Monroe Doctrine, which stated that the Western Hemisphere was off-limits to further European colonization, Olney warned that the United States would **brook** no challenge to its interests. Startled, Britain agreed to arbitrate. U.S. power was on the rise.

AP® PRACTICES & SKILLS

CHANGE OVER TIME

How did imperialism in the 1890s reflect both continuities and changes from earlier eras?

The War of 1898

Events in the Caribbean presented the United States with far greater opportunities. In 1895, Cuban patriots mounted a major guerrilla war against Spain, which had lost most of its other New World territories. The Spanish commander responded by rounding up Cuban civilians into concentration camps, where as many as 200,000 died of starvation, exposure, or dysentery. In the United States, "yellow journalists" such as William Randolph Hearst turned their plight into a cause célèbre. Hearst's coverage of Spanish atrocities fed a surge of nationalism, especially among those who feared that industrialization was causing American men to lose physical strength and valor. The government should not pass up this opportunity, said Indiana senator Albert Beveridge, to "manufacture manhood." Congress called for Cuban independence.

President Cleveland had no interest in supporting the Cuban rebellion but worried over Spain's failure to end it. The war disrupted trade and damaged American-owned sugar plantations on the island. Moreover, an unstable Cuba was incompatible with U.S. strategic interests, including a proposed canal whose Caribbean approaches had to be safeguarded. Taking office in 1897, President William McKinley took a tough stance. In September, a U.S. diplomat informed Spain that it must ensure an "early and certain peace" or the United States would step in. At first, this hard line seemed to work: Spain's conservative regime fell, and a liberal government, taking office in October 1897, offered Cuba limited self-rule. But Spanish loyalists in Havana rioted against this proposal, while Cuban rebels held out for full independence.

In February 1898, Hearst's *New York Journal* published a private letter in which a Spanish minister to the United States belittled McKinley. The minister, Dupuy de Lôme, resigned, but exposure of the de Lôme letter intensified Americans' indignation toward

Spain. The next week brought shocking news: the U.S. battle cruiser *Maine* had exploded and sunk in Havana harbor, with 260 seamen lost. "Whole Country Thrills with the War Fever," proclaimed the *New York Journal*. "Remember the *Maine*" became a national chant. Popular passions were now a major factor in the march toward war.

McKinley assumed the sinking of the *Maine* had been accidental. Improbably, though, a naval board of inquiry blamed an underwater mine, fueling public outrage. (Later investigators disagreed: the more likely cause was a faulty ship design that placed explosive munitions too close to coal bunkers, which were prone to fire.) No evidence linked Spain to the purported mine, but if a mine sank the *Maine*, then Spain was responsible for not protecting the ship.

Business leaders became impatient, believing war was preferable to an unending Cuban crisis. On March 27, McKinley cabled an ultimatum to Madrid: an immediate ceasefire in Cuba for six months and, with the United States mediating, peace negotiations with the rebels. Spain, while desperate to avoid war, balked at the added demand that mediation must result in Cuban independence. On April 11, McKinley asked Congress for authority to intervene in Cuba "in the name of civilization, [and] in behalf of endangered American interests."

AP® EXAM TIP

On the AP® exam, the War of 1898 is referred to as the Spanish-American War. Recognizing its impact on the U.S. is a "must know" on the AP® exam.

Historians long referred to the ensuing fight as the Spanish-American War, but because that name ignores the central role of Cuban revolutionaries, many historians now call the three-way conflict the War of 1898. Though Americans widely admired Cubans' aspirations for freedom, the McKinley administration defeated a congressional attempt to recognize the rebel government. In response, Senator Henry M. Teller of Colorado added an amendment to the war bill disclaiming any intention by the United States to occupy Cuba. The **Teller Amendment** reassured Americans that their country would uphold democracy abroad as well as at home. McKinley's expectations differed. He wrote privately, "We must keep all we get; when the war is over we must keep what we want."

On April 24, 1898, Spain declared war on the United States. The news provoked full-blown war fever. Across the country, young men enlisted for the fight. Theodore Roosevelt, serving in the War Department, resigned to become lieutenant colonel of a cavalry regiment. Recruits poured into makeshift bases around Tampa, Florida, where confusion reigned. Rifles failed to arrive; food was bad, sanitation worse. No provision had been made for getting troops to Cuba, so the government hastily collected a fleet of yachts and commercial boats. Fortunately, the regular army was a disciplined, professional force; its 28,000 seasoned troops provided a nucleus for 200,000 volunteers. The navy was in better shape: Spain had nothing to match America's seven battleships and armored cruisers. The Spanish admiral bitterly predicted that his fleet would "like Don Quixote go out to fight windmills and come back with a broken head."

The first, decisive military engagement took place in the Pacific. This was the handiwork of Theodore Roosevelt, who, in his government post, had gotten the intrepid Commodore George Dewey appointed commander of the Pacific fleet. In the event of war, Dewey had instructions to sail immediately for the Spanish-owned Philippines. When war was declared, Roosevelt confronted his surprised superior and pressured him into validating Dewey's instructions. On May 1, 1898, American ships cornered the Spanish fleet in Manila Bay and destroyed it. Manila, the Philippine capital, fell on August 13. "We must on no account let the [Philippines] go," declared Senator Henry Cabot Lodge. McKinley agreed. The United States now had a major foothold in the western Pacific.

Dewey's victory directed policymakers' attention to Hawaii. Nominally independent, these islands had long been subject to U.S. influence, including a horde of resident American sugarcane planters. An 1876 treaty between the United States and the island's monarch gave Hawaiian sugar free access to the American market, without tariff payments, and Hawaii pledged to sign no such agreement with any other power. When this treaty was renewed in 1887, Hawaii also granted a long-coveted lease for a U.S. naval base at Pearl Harbor. Four years later, succeeding her brother as Hawaii's monarch,

Queen Liliuokalani made known her frustration with these treaties. In response, an Annexation Club of U.S.-backed planters organized secretly and in 1892, with the help of U.S. Marines, overthrew the queen. They then negotiated a treaty of annexation, but Grover Cleveland rejected it when he entered office in 1893. Cleveland declared that it would violate America's "unbroken tradition" against acquiring territory overseas.

Dewey's victory in Manila, however, delivered what the planters wanted: Hawaii acquired strategic value as a halfway station to the Philippines. In July 1898, Congress voted for annexation, over the protests of Hawaii's deposed queen. "Oh, honest Americans," she pleaded, "as Christians hear me for my down-trodden people! Their form of government is as dear to them as yours is precious to you. Quite as warmly as you love your country, so they love theirs." But to the great powers, Hawaii was not a country. One congressman dismissed Hawaii's monarchy as "absurd, grotesque, tottering"; the "Aryan race," he declared, would "rescue" the islands from it.

Further U.S. annexations took on their own logic. The navy pressed for another coaling base in the central Pacific; that meant Guam, a Spanish island in the Marianas. A strategic base was needed in the Caribbean; that meant Puerto Rico. By early summer, before U.S. troops had fired a shot in Cuba, McKinley's broader war aims were crystallizing.

In Cuba, Spanish forces were depleted by the long guerrilla war. Though poorly trained and equipped, American forces had the advantages of a demoralized foe and knowledgeable Cuban allies. The main battle occurred on July 1 at San Juan Hill, near Santiago, where the Spanish fleet was anchored. Roosevelt's Rough Riders took the lead, but four African American regiments bore the brunt of the fighting. Observers credited much of the victory to the "superb gallantry" of these soldiers. Spanish troops retreated to a well-fortified second line, but U.S. forces were spared the test of a second assault. On July 3, the Spanish fleet in Santiago harbor tried a desperate run through the American blockade and was destroyed. Days later, Spanish forces surrendered. American combat casualties had been few; most U.S. soldiers' deaths had resulted from malaria and yellow fever.

Hawaii's Queen Hawaiian queen Liliuokalani (1838–1917) was the great-granddaughter of Keaweaheulu, founder of the Kamehameha dynasty that had ruled the islands since the late 1700s. Liliuokalani assumed the throne after her brother's death in 1891. As an outspoken critic, however, of treaties ceding power to U.S. economic interests, she was deposed three years later by a cabal of sugar planters who established a republic. When secret plans to revolt and restore the monarchy were discovered, the queen was imprisoned for a year in Iolani Palace. She lived the remainder of her life in Hawaii but never regained power. Fluent in English and influenced from childhood by Congregational missionaries, she used this background to advocate for her people; in her book *Hawaii's Story by Hawaii's Queen* (1898), she appealed for justice from fellow Christians. George Bacon Collection, Hawaii State Archive

To see a longer excerpt from Queen Liliuokalani's appeal, along with other primary sources from this period, see ***Sources for America's History***.

Spoils of War

The United States and Spain quickly signed a preliminary peace agreement in which Spain agreed to liberate Cuba and cede Puerto Rico and Guam to the United States. But what would happen to the Philippines, an immense **archipelago** that lay more than 5,000 miles from California? Initially, the United States aimed to keep only Manila, because of its fine harbor. Manila was not defensible, however, without the whole island of Luzon, on which it sat. After deliberating, McKinley found a justification for annexing all of the Philippines. He decided that "we could not leave [the Filipinos] to themselves — they were unfit for self-rule."

This declaration provoked heated debate. Under the Constitution, as Republican senator George F. Hoar argued, "no power is given to the Federal Government to acquire territory to be held and governed permanently as colonies" or "to conquer alien people and hold them in subjugation." Leading citizens and peace advocates, including Jane Addams and Mark Twain, enlisted in the anti-imperialist cause. Steel king Andrew Carnegie offered $20 million to purchase Philippine independence. Labor leader

AP® PRACTICES & SKILLS

CAUSATION

Why did the United States go to war against Spain in 1898, and what led to U.S. victory?

Philippine Exhibition at the St. Louis World's Fair, 1904 Anthropological displays were a popular feature of World's Fairs — scientific in purpose, but giving American and European tourists an opportunity to contrast their civilization, as they saw it, with various degrees of "barbarism" and "savagery." The Philippine Reservation in St. Louis was particularly controversial because it featured an array of peoples — many westernized, others traditionally tribal — from the United States' latest imperial possession. Here, Igorrote dancers rest after a performance. Some participants in such displays were lured with false promises of wealth and rapid return to their homelands; when promoters went bankrupt, some performers were stranded in the United States and never returned to their families and communities. Library of Congress

Samuel Gompers warned union members about the threat of competition from low-wage Filipino immigrants. Anti-imperialists, however, were a diverse lot. Some argued that Filipinos were perfectly capable of self-rule; others warned about the dangers of annexing eight million Filipinos of an "inferior race." "No matter whether they are fit to govern themselves or not," declared a Missouri congressman, "they are not fit to govern us."

Beginning in late 1898, anti-imperialist leagues sprang up around the country, but they never sparked a mass movement. On the contrary, McKinley's "splendid little war" proved immensely popular. Confronted with that reality, Democrats waffled. Their standard-bearer, William Jennings Bryan, decided not to stake Democrats' future on opposition to a policy that he believed to be irreversible. He threw his party into turmoil by declaring last-minute support for McKinley's proposed treaty. Having met military defeat, Spanish representatives had little choice. In the Treaty of Paris, Spain ceded the Philippines to the United States for $20 million.

Annexation was not as simple as U.S. policymakers had expected. On February 4, 1899, two days before the Senate ratified the treaty, fighting broke out between American and Filipino patrols on the edge of Manila. Confronted by annexation, rebel leader Emilio Aguinaldo asserted his nation's independence and turned his guns on occupying American forces. Though Aguinaldo found it difficult to organize a mass-based resistance movement, the ensuing conflict between Filipino nationalists and U.S. troops far exceeded in length and ferocity the war just concluded with Spain. Fighting tenacious guerrillas, the U.S. Army resorted to the same tactics Spain had employed in Cuba: burning crops and villages and rounding up civilians. Atrocities became commonplace on both sides. In three years of warfare, 4,200 Americans and an estimated 200,000 Filipinos died; many of the latter were dislocated civilians, particularly children, who succumbed to malnutrition and disease.

AP® EXAM TIP

Compare the arguments of the anti-imperialists who expressed opposition to the War of 1898 (Spanish-American War).

McKinley's convincing victory over William Jennings Bryan in 1900 suggested popular satisfaction with America's overseas adventures, even in the face of dogged Filipino resistance to U.S. rule. The fighting ended in 1902, and William Howard Taft, appointed as governor-general of the Philippines, sought to make the territory a model of road-building and sanitary engineering. Yet misgivings lingered as Americans confronted the brutality of the war (AP® Analyzing Voices). Philosopher William James noted that the United States had destroyed "these islanders by the thousands, their villages and cities. . . . Could there be any more damning indictment of that whole bloated ideal termed 'modern civilization'?"

Constitutional issues also remained unresolved. The treaty, while guaranteeing freedom of religion to inhabitants of ceded Spanish territories, withheld any promise of citizenship. It was up to Congress to decide Filipinos' "civil rights and political status." In 1901, the Supreme Court upheld this provision in a set of decisions known as the ***Insular Cases***. The Constitution, declared the Court, did not automatically extend citizenship to people in acquired territories; Congress could decide. Puerto Rico, Guam, and the Philippines were thus marked as colonies, not future states.

The next year, as a condition for withdrawing from Cuba, the United States forced the newly independent island to accept a proviso in its constitution called the **Platt Amendment** (1902). This blocked Cuba from making a treaty with any country except

the United States and gave the United States the right to intervene in Cuban affairs if it saw fit. Cuba also granted the United States a lease on Guantánamo Bay (still in effect), where the U.S. Navy built a large base. Cubans' hard-fought independence was limited; so was that of Filipinos. Eventually, the Jones Act of 1916 committed the United States to Philippine independence but set no date. (The Philippines at last achieved independence in 1946.) Though the war's carnage had rubbed off some of the moralizing gloss, America's global aspirations remained intact.

IN YOUR OWN WORDS **Explain the steps by which the late-nineteenth-century U.S. government began to exert military influence in different regions of the world.**

AP® PRACTICES & SKILLS

CAUSATION

What were the long-term results of the U.S. victory over Spain, in Hawaii, and in former Spanish possessions?

A Power Among Powers

No one appreciated America's emerging influence more than the man who, after William McKinley's assassination, became president in 1901. Theodore Roosevelt was an avid student of world affairs who called on "the civilized and orderly powers to insist on the proper policing of the world." He meant, in part, directing the affairs of "backward peoples." For Roosevelt, imperialism went hand in hand with domestic progressivism. He argued that a strong federal government, asserting itself both at home and abroad, would enhance economic stability and political order. Overseas, Roosevelt sought to arbitrate disputes and maintain a global balance of power, but he also asserted U.S. interests.

AP® EXAM TIP

Being able to describe imperialism's impact on U.S. foreign policy outside of the Western Hemisphere in this period is critical to success on the AP® exam.

The Open Door in Asia

U.S. officials and business leaders had a burning interest in East Asian markets, but they were entering a crowded field (Map 20.1). In the late 1890s, following Japan's victory in the Sino-Japanese War of 1894–1895, Japan, Russia, Germany, France, and Britain divided coastal China into spheres of influence. Fearful of being shut out, U.S. Secretary of State John Hay sent these powers a note in 1899, claiming the right of equal trade access—an "**open door**" **policy**—for all nations seeking to do business in China. The United States lacked leverage in Asia, and Hay's note elicited only noncommittal responses. But he chose to interpret this as acceptance of his position.

When a secret society of Chinese nationalists, known outside China as "Boxers" because of their pugnacious

MAP 20.1 The Great Powers in East Asia, 1898–1910

European powers established dominance over China by way of "treaty ports," where the powers based their naval forces, and through "spheres of influence" that extended from the ports into the hinterland. This map reveals why the United States had a weak hand: it lacked a presence on this colonized terrain. An uprising of Chinese nationalists in 1900 gave the United States a chance to insert itself on the Chinese mainland by sending an American expeditionary force. American diplomats made the most of the opportunity to defend U.S. commercial interests in China. As noted in the key, all place names in this map are those in use in 1910: Modern *Beijing*, for example, is shown as *Peking*.

Debating the Philippines

As President McKinley privately acknowledged in writing—"when the war is over we must keep what we want"—seizing the Philippines was an act of national self-interest. Of the alternatives, it was the one that seemed best calculated to serve America's strategic aims in Asia. But McKinley's geopolitical decision had unintended consequences. For one, it provoked a bloody insurrection. For another, it challenged the United States's democratic principles. As these consequences hit home, a divided Senate set up a special committee and held closed hearings. Congressional testimony is a source much prized by historians. Though some of it is prepared, once questioning begins, testimony becomes unscripted and can be especially revealing. The following documents are taken from the 1902 testimony before the Senate Committee on the Philippines.

Ideals

General Arthur MacArthur (1845–1912) was in on the action in the Philippines almost from the start. He commanded one of the first units to arrive there in 1898 and in 1900 was reassigned as the islands' military governor and general commander of the troops. His standing as a military man—holder of the Congressional Medal of Honor from the Civil War—was matched later by his more famous son, Douglas MacArthur, who fought in the Pacific during World War II. Here the elder MacArthur explains in prepared testimony his vision of America's mission to the Philippines.

SOURCE: From *Hearings Before the Committee on the Philippines of the United States Senate, April 10, 1902.* (Washington: Government Printing Office, 1902).

"At the time I returned to Manila [May 1900] to assume the supreme command it seemed to me that . . . our occupation of the island was simply one of the necessary consequences in logical sequence of our great prosperity, and to doubt the wisdom of [occupation] was simply to doubt the stability of our own institutions and in effect to declare that a self-governing nation was incapable of successfully resisting strains arising naturally from its own productive energy. It seemed to me that our conception of right, justice, freedom, and personal liberty was the precious fruit of centuries of strife . . . [and that] we must regard ourselves simply as the custodians of imperishable ideas held in trust for the general benefit of mankind. In other words, I felt that we had attained a moral and intellectual height from which we were bound to proclaim to all as the occasion arose the true message of humanity as embodied in the principles of our own institutions. . . .

All other governments that have gone to the East have simply planted trading establishments; they have not materially affected the conditions of the people. . . . There is not a single establishment, in my judgment, in Asia to-day that would survive five years if the original power which planted it was withdrawn therefrom.

The contrasting idea with our idea is this: In planting our ideas we plant something that can not be destroyed. To my mind the archipelago is a fertile soil upon which to plant republicanism. . . . We are planting the best traditions, the best characteristics of Americanism in such a way that they can never be removed from that soil. That in itself seems to me a most inspiring thought. It encouraged me during all my efforts in those lands, even when conditions seemed most disappointing, when the people themselves, not appreciating precisely what the remote consequences of our efforts were going to be, mistrusted us; but that fact was always before me—that going deep down into that fertile soil were the indispensable ideas of Americanism."

Skepticism

At this point, the general was interrupted by Colorado senator Thomas Patterson, a Populist-Democrat and a vocal anti-imperialist.

"Sen. Patterson: Do you mean that imperishable idea of which you speak is the right of self-government?

Gen. MacArthur: Precisely so; self-government regulated by law as I understand it in this Republic.

Sen. Patterson: Of course you do not mean self-government regulated by some foreign and superior power?

Gen. MacArthur: Well, that is a matter of evolution, Senator. We are putting these institutions there so they will evolve themselves just as here and everywhere else where freedom has flourished. . . .

Sen. Patterson [after the General concluded his statement]: Do I understand your claim of right and duty to retain the Philippine Islands is based upon the proposition

political stance, rebelled against foreign occupation in 1900, the United States sent 5,000 troops to join a multinational campaign to break the nationalists' siege of European offices in Beijing. Hay took this opportunity to assert a second open door principle: China must be preserved as a "territorial and administrative entity." As long as the legal fiction of an independent China survived, Americans could claim equal access to its market.

that they have come to us upon the basis of our morals, honorable dealing, and unassailable international integrity?

Gen. MacArthur: That proposition is not questioned by anybody in the world, excepting a few people in the United States. . . . We will be benefited, and the Filipino people will be benefited, and that is what I meant by the original proposition —

Sen. Patterson: Do you mean the Filipino people that are left alive?

Gen. MacArthur: I mean the Filipino people. . . .

Sen. Patterson: You mean those left alive after they have been subjugated?

Gen. MacArthur: I do not admit that there has been any unusual destruction of life in the Philippine Islands. The destruction is simply the incident of war, and of course it embraces only a very small percentage of the total population.

. . . I doubt if any war — either international or civil, any war on earth — has been conducted with as much humanity, with as much careful consideration, with as much self-restraint, as have been the American operations in the Philippine Archipelago. . . . ”

Realities

Brigadier General Robert P. Hughes, a military district commander, testified as follows.

“ *Q:* In burning towns, what would you do? Would the entire town be destroyed by fire or would only the offending portions of the town be burned?

Gen. Hughes: I do not know that we ever had a case of burning what you would call a town in this country, but probably a barrio or a sitio; probably half a dozen houses, native shacks, where the insurrectos would go in and be concealed, and if they caught a detachment passing they would kill some of them.

Q: What did I understand you to say would be the consequences of that?

Gen. Hughes: They usually burned the village.

Q: All of the houses in the village?

Gen. Hughes: Yes, every one of them.

Q: What would become of the inhabitants?

Gen. Hughes: That was their lookout.

Q: If these shacks were of no consequence what was the utility of their destruction?

Gen. Hughes: The destruction was as a punishment. They permitted these people to come in there and conceal themselves. . . .

Q: The punishment in that case would fall, not upon the men, who could go elsewhere, but mainly upon the women and little children.

Gen. Hughes: The women and children are part of the family, and where you wish to inflict a punishment you can punish the man probably worse in that way than in any other.

Q: But is that within the ordinary rules of civilized warfare? . . .

Gen. Hughes: These people are not civilized. ”

Cruelties

Daniel J. Evans, Twelfth Infantry, describes the “water cure.”

“ *Q:* The committee would like to hear . . . whether you were the witness to any cruelties inflicted upon the natives of the Philippine Islands; and if so, under what circumstances.

Evans: The case I had reference to was where they gave the water cure to a native in the Ilicano Province at Ilocos Norte . . . about the month of August 1900. There were two native scouts with the American forces. They went out and brought in a couple of insurgents. . . . They tried to get from this insurgent . . . where the rest of the insurgents were at that time. . . . The first thing one of the Americans — I mean one of the scouts for the Americans — grabbed one of the men by the head and jerked his head back, and then they took a tomato can and poured water down his throat until he could hold no more. . . . Then they forced a gag into his mouth; they stood him up . . . against a post and fastened him so that he could not move. Then one man, an American soldier, who was over six feet tall, and who was very strong, too, struck this native in the pit of the stomach as hard as he could. . . . They kept that operation up for quite a time, and finally I thought the fellow was about to die, but I don't believe he was as bad as that, because finally he told them he would tell, and from that day on he was taken away, and I saw no more of him. ”

QUESTIONS FOR ANALYSIS

1. The text of this chapter offers the U.S. reasons for holding on to the Philippines. In what ways does General MacArthur's testimony confirm, add to, or contradict the text account?
2. The chapter text also describes the anti-imperialist movement. What does Senator Patterson's cross-examination of General MacArthur reveal about the anti-imperialists' beliefs?
3. Does the clash of ideas in these excerpts remain relevant to our own time? How does it compare to what you might read or hear about in a news source today?

European and American plans were, however, unsettled by Japan's emergence as East Asia's dominant power. A decade after its victory over China, Japan responded to Russia's bids for control of both Korea and Manchuria, in northern China, by attacking Russia's fleet at its leased Chinese port. In a series of brilliant victories, the Japanese smashed the Russian forces. Westerners were shocked: for the first time, a European power had been defeated by a non-Western nation. Conveying both admiration and

alarm, American cartoonists sketched Japan as a martial artist knocking down the Russian giant. Roosevelt mediated a settlement to the war in 1905, receiving for his efforts the first Nobel Peace Prize awarded to an American.

Though he was contemptuous of other Asians, Roosevelt respected the Japanese, whom he called "a wonderful and civilized people." More important, he understood Japan's rising military might and aligned himself with the mighty. The United States approved Japan's "protectorate" over Korea in 1905 and, six years later, its seizure of full control. With Japan asserting harsh authority over Manchuria, energetic Chinese diplomat Yüan Shih-k'ai tried to encourage the United States to intervene. But Roosevelt reviewed America's weak position in the Pacific and declined. He conceded that Japan had "a paramount interest in what surrounds the Yellow Sea." In 1908, the United States and Japan signed the **Root-Takahira Agreement**, confirming principles of free oceanic commerce and recognizing Japan's authority over Manchuria.

William Howard Taft entered the White House in 1909 convinced that the United States had been shortchanged in Asia. He pressed for a larger role for American investors, especially in Chinese railroad construction. Eager to promote U.S. business interests abroad, he hoped that infusions of American capital would offset Japanese power. When the Chinese Revolution of 1911 toppled the Manchu dynasty, Taft supported the victorious Nationalists, who wanted to modernize their country and liberate it from Japanese domination. The United States had entangled itself in China and entered a long-term rivalry with Japan for power in the Pacific, a competition that would culminate thirty years later in World War II.

Panama Canal Workers, 1910 The 51-mile-long Panama Canal includes seven sets of locks that can raise and lower fifty large ships in a twenty-four-hour period. Building the canal took eight years and required tens of thousands of workers, including immigrants from Spain and Italy and many West Indians such as these men, who accomplished some of the worst-paid, most dangerous labor. Workers endured the horrors of rockslides, explosions, and a yellow fever epidemic that almost halted the project. But American observers hailed the canal as a triumph of modern science and engineering — especially in medical efforts to eradicate the yellow fever and malaria that had stymied earlier canal-building efforts. Theodore Roosevelt insisted on making a personal visit in November 1906. "He made the men that were building there feel like they were special people," recalled the descendant of one canal worker. "Give them pride of what they were doing for the United States." Library of Congress.

The United States and Latin America

Roosevelt famously argued that the United States should "speak softly and carry a big stick." By "big stick," he meant naval power, and rapid access to two oceans required a canal. European powers conceded the United States's "paramount interest" in the Caribbean. Freed by Britain's surrender of canal-building rights in the Hay-Pauncefote Treaty (1901), Roosevelt persuaded Congress to authorize $10 million, plus future payments of $250,000 per year, to purchase from Colombia a six-mile strip of land across Panama, a Colombian province.

Furious when Colombia rejected this proposal, Roosevelt contemplated outright seizure of Panama but settled on a more roundabout solution. Panamanians, long separated from Colombia by remote jungle, chafed under Colombian rule. The United States lent covert assistance to an independence movement, triggering a bloodless revolution. On November 6, 1903, the United States recognized the new nation of Panama; two weeks later, it obtained a perpetually renewable lease on a canal zone. Roosevelt never regretted the venture, though in 1922 the United States paid Colombia $25 million as a kind of conscience money.

MAP 20.2 Policeman of the Caribbean
After the War of 1898, the United States vigorously asserted its interest in the affairs of its neighbors to the south. As the record of interventions shows, the United States truly became the "policeman" of the Caribbean and Central America.

To build the canal, the U.S. Army Corps of Engineers hired 60,000 laborers, who came from many countries to clear vast swamps, excavate 240 million cubic yards of earth, and construct a series of immense locks. The project, a major engineering feat, took eight years and cost thousands of lives among the workers who built it. Opened in 1914, the **Panama Canal** gave the United States a commanding position in the Western Hemisphere.

Meanwhile, arguing that instability invited European intervention, Roosevelt announced in 1904 that the United States would police all of the Caribbean (Map 20.2). This so-called **Roosevelt Corollary** to the Monroe Doctrine actually turned that doctrine upside down: instead of guaranteeing that the United States would protect its neighbors from Europe and help preserve their independence, it asserted the United States's unrestricted right to regulate Caribbean affairs. The Roosevelt Corollary was not a treaty but a unilateral declaration sanctioned only by America's military and economic might. Citing it, the United States intervened regularly in Caribbean and Central American nations over the next three decades.

AP® EXAM TIP
The construction of the Panama Canal as an expression of American imperialism is a "must know" on the AP® exam.

Entering office in 1913, Democratic president Woodrow Wilson criticized his predecessors' foreign policy. He pledged that the United States would "never again seek one additional foot of territory by conquest." This stance appealed to anti-imperialists in the Democratic base, including longtime supporters of William Jennings Bryan. But the new president soon showed that, when American interests called for it, his actions were not so different from those of Roosevelt and Taft.

AP® EXAM TIP
Compare the foreign policies of Theodore Roosevelt, William Howard Taft, and Woodrow Wilson.

Since the 1870s, Mexican dictator Porfirio Díaz had created a friendly climate for American companies that purchased Mexican plantations, mines, and oil fields. By the early 1900s, however, Díaz feared the extraordinary power of these foreign interests and began to nationalize — reclaim — key resources. American investors who faced the loss of Mexican holdings began to back Francisco Madero, an advocate of constitutional government who was friendly to U.S. interests. In 1911, Madero forced Díaz to resign and proclaimed himself president. Thousands of poor Mexicans took this opportunity to mobilize rural armies and demand more radical change. Madero's position was weak, and several strongmen sought to overthrow him; in 1913, he was deposed and murdered by a leading general. Immediately, several other military men vied for control.

Wilson, fearing that the unrest threatened U.S. interests, decided to intervene in the emerging Mexican Revolution. On the pretext of a minor insult to the navy, he ordered

Captured at the Border, April 1916 After Mexican general Pancho Villa led a raid on Columbus, New Mexico, U.S. troops crossed the border in pursuit of him. These Mexican soldiers who fought with Villa were captured and jailed in Namiquipa, New Mexico, by some of the U.S. soldiers in the photograph. Corbis Historical/Getty Images

U.S. occupation of the port of Veracruz on April 21, 1914, at the cost of 19 American and 126 Mexican lives. Though the intervention helped Venustiano Carranza, the revolutionary leader whom Wilson most favored, Carranza protested it as illegitimate meddling in Mexican affairs. Carranza's forces, after nearly engaging the Americans themselves, entered Mexico City in triumph a few months later. Though Wilson had supported this outcome, his interference caused lasting mistrust.

Carranza's victory did not subdue revolutionary activity in Mexico. In 1916, General Francisco "Pancho" Villa—a thug to his enemies, but a heroic Robin Hood to many poor Mexicans—crossed the U.S.-Mexico border, killing sixteen American civilians and raiding the town of Columbus, New Mexico. Wilson sent 11,000 troops to pursue Villa, a force that soon resembled an army of occupation in northern Mexico. Mexican public opinion demanded withdrawal as armed clashes broke out between U.S. and Mexican troops. At the brink of war, both governments backed off and U.S. forces departed. But policymakers in Washington had shown their intention to police not only the Caribbean and Central America but also Mexico when they deemed it necessary.

IN YOUR OWN WORDS **Compare and contrast the factors that influenced U.S. actions in Asia and in Latin America in this period.**

The United States in World War I

While the United States staked claims around the globe, a war of unprecedented scale was brewing in Europe. The military buildup of Germany, a rising power, terrified its neighbors. To the east, the disintegrating Ottoman Empire was losing its grip on the Balkans. Out of these conflicts, two rival power blocs emerged: the Triple Alliance (Germany, Austria-Hungary, and Italy) and Triple Entente (Britain, France, and Russia). Within each alliance, national governments pursued their own interests but were bound to one another by both public and secret treaties.

Americans had no obvious stake in these developments. In 1905, when Germany suddenly challenged French control of Morocco, Theodore Roosevelt arranged an international conference to defuse the crisis. Germany got a few concessions, but France—with British backing—retained Morocco. Accomplished in the same year that Roosevelt brokered peace between Russia and Japan, the conference seemed another diplomatic triumph. One U.S. official boasted that America had kept peace by "the power of our detachment." It was not to last.

From Neutrality to War

The spark that ignited World War I came in the Balkans, where Austria-Hungary and Russia competed for control. Austria's 1908 seizure of Ottoman provinces, including

Bosnia, angered the nearby Slavic nation of Serbia and its ally, Russia. Serbian revolutionaries recruited Bosnian Slavs to resist Austrian rule. In June 1914, in the city of Sarajevo, university student Gavrilo Princip assassinated Archduke Franz Ferdinand, heir to the Austro-Hungarian throne.

Like dominos falling, the system of European alliances pushed all the powers into war. Austria-Hungary blamed Serbia for the assassination and declared war on July 28. Russia, tied by secret treaty to Serbia, mobilized against Austria-Hungary. This prompted Germany to declare war on Russia and its ally France. As a preparation for attacking France, Germany launched a brutal invasion of the neutral country of Belgium, which caused Great Britain to declare war on Germany. Within a week, most of Europe was at war, with the major Allies — Great Britain, France, and Russia — confronting the Central Powers of Germany and Austria-Hungary. Two military zones emerged. On the Western Front, Germany battled the British and French; on the Eastern Front, Germany and Austria-Hungary fought Russia. Because most of the warring nations held colonial empires, the conflict soon spread to the Middle East, Africa, and Asia.

The so-called Great War wreaked terrible devastation. New technology, some of it devised in the United States, made warfare deadlier than ever before. Every soldier carried a long-range, high-velocity rifle that could hit a target at 1,000 yards — a vast technical advancement over the 300-yard range of rifles used in the U.S. Civil War. The machine gun was even more lethal. Its American-born inventor, Hiram Maxim, had moved to Britain in the 1880s to follow a friend's advice: "If you want to make your fortune, invent something which will allow those fool Europeans to kill each other more quickly." Elaborate trenches, familiar from the Civil War era, were now enhanced with barbed wire to protect soldiers in defensive positions. Once advancing Germans ran into French fortifications, they stalled. Across a swath of Belgium and northeastern France, millions of soldiers on both sides hunkered down in fortified trenches. During 1916, repeatedly trying to break through French lines at Verdun, Germans suffered 450,000 casualties. The French fared even worse, with 550,000 dead or wounded. It was all to no avail. From 1914 to 1918, the Western Front barely moved.

At the war's outbreak, President Wilson called on Americans to be "neutral in fact as well as in name." If the United States remained out of the conflict, Wilson reasoned, he could influence the postwar settlement, much as Theodore Roosevelt had done after previous conflicts. Even if Wilson had wished to, it would have been nearly impossible in 1914 to unite Americans behind the Allies. Many Irish immigrants viewed Britain as an enemy — based on its continued occupation of Ireland — while millions of German Americans maintained ties to their homeland. Progressive-minded Republicans, such as Senator Robert La Follette of Wisconsin, vehemently opposed taking sides in a European fight, as did socialists, who condemned the war as a conflict among greedy capitalist empires. Two giants of American industry, Andrew Carnegie and Henry Ford, opposed the war. In December 1915, Ford sent a hundred men and women to Europe on a "peace ship" to urge an end to the war. "It would be folly," declared the *New York Sun*, "for the country to sacrifice itself to . . . the clash of ancient hatreds which is urging the Old World to destruction."

AP® EXAM TIP

Evaluate reactions in the U.S. to the start of World War I in Europe in 1914.

The Struggle to Remain Neutral The United States, wishing to trade with all the warring nations, might have remained neutral if Britain had not held commanding power at sea. In September 1914, the British imposed a naval blockade on the Central Powers to cut off vital supplies of food and military equipment. Though the Wilson administration protested this infringement of the rights of neutral carriers, commerce with the Allies more than made up for the economic loss. Trade with Britain and France grew fourfold over the next two years, to $3.2 billion in 1916; by 1917, U.S. banks had lent the Allies $2.5 billion. In contrast, American trade and loans to Germany stood then at a mere $56 million. This imbalance undercut U.S. neutrality. If Germany won and Britain and France defaulted on their debts, American companies would suffer catastrophic losses.

To challenge the British navy, Germany launched a devastating new weapon, the U-boat (short for *Unterseeboot*, "undersea boat," or submarine). In April 1915, Germany issued a warning that all ships flying flags of Britain or its allies were liable to destruction. A few weeks later, a U-boat torpedoed the British luxury liner *Lusitania* off the coast of Ireland, killing 1,198 people, including 128 Americans. The attack on the passenger ship (which was later revealed to have been carrying munitions) incensed Americans. The following year, in an agreement known as the Sussex pledge, Germany agreed not to target passenger liners or merchant ships unless an inspection showed the latter carried weapons. But the *Lusitania* sinking prompted Wilson to reconsider his options. After quietly trying to mediate in Europe but finding neither side interested in peace, he endorsed a $1 billion U.S. military buildup.

AP® PRACTICES & SKILLS

CAUSATION

What factors led the United States to enter World War I, despite the desire of so many Americans, including the president, to stay out of the war?

American public opinion still ran strongly against entering the war, a fact that shaped the election of 1916. Republicans rejected the belligerently prowar Theodore Roosevelt in favor of Supreme Court justice Charles Evans Hughes, a progressive former governor of New York. Democrats renominated Wilson, who campaigned on his domestic record and as the president who "kept us out of war." Wilson eked out a narrow victory; winning California by a mere 4,000 votes, he secured a slim majority in the electoral college.

America Enters the War Despite Wilson's campaign slogan, events pushed him toward war. In February 1917, Germany resumed unrestricted submarine warfare, a decision dictated by the impasse on the Western Front. In response, Wilson broke off diplomatic relations with Germany. A few weeks later, newspapers published an intercepted dispatch from German foreign secretary Arthur Zimmermann to his minister in Mexico. The **Zimmermann telegram** urged Mexico to join the Central Powers, promising that if the United States entered the war, Germany would help Mexico recover "the lost territory of Texas, New Mexico, and Arizona." With Pancho Villa's border raids still fresh in Americans' minds, this threat jolted public opinion. Meanwhile, German U-boats attacked U.S. ships without warning, sinking three on March 18 alone.

On April 2, 1917, Wilson asked Congress for a declaration of war. He argued that Germany had trampled on American rights and imperiled U.S. trade and citizens' lives. "We desire no conquest," Wilson declared, "no material compensation for the sacrifices we shall freely make." Reflecting his progressive idealism, Wilson promised that American involvement would make the world "safe for democracy." On April 6, the United States declared war on Germany. Reflecting the nation's divided views, the vote was far from unanimous. Six senators and fifty members of the House voted against entry, including Representative Jeannette Rankin of Montana, the first woman elected to Congress. "You can no more win a war than you can win an earthquake," Rankin said. "I want to stand by my country, but I cannot vote for war."

Flying Aces As millions of men suffered and died in the trenches during the Great War, a few hundred pilots did battle in the sky. America's best-known ace pilot was Eddie Rickenbacker (right) of the 94th Aero Pursuit Squadron — a pilot who was credited with shooting down twenty-six enemy aircraft. The 94th was known as the hat-in-the-ring squadron, after the American custom by which a combatant threw his hat into the ring as an invitation to fight. Note the hat insignia on the plane. Bettmann/Getty Image

"Over There"

To Americans, Europe seemed a great distance away. Many assumed the United States would simply provide munitions and economic aid. "Good Lord," exclaimed one U.S. senator to a Wilson administration official, "you're not going to send soldiers over there, are you?" But when General John J. Pershing asked how the United States could best support the Allies, the French

commander put it bluntly: "Men, men, and more men." Amid war fever, thousands of young men prepared to go "over there," in the words of George M. Cohan's popular song: "Make your Daddy glad to have had such a lad. / Tell your sweetheart not to pine, / To be proud her boy's in line."

AP EXAM TIP

Trace the events that led the U.S. to depart from its policy of neutrality and enter World War I in 1917.

Americans Join the War In 1917, the U.S. Army numbered fewer than 200,000 soldiers; needing more men, Congress instituted a military draft in May 1917. In contrast to the Civil War, when resistance was common, conscription went smoothly, partly because local, civilian-run draft boards played a central role in the new system. Still, draft registration demonstrated government's increasing power over ordinary citizens. On a single day — June 5, 1917 — more than 9.5 million men between the ages of twenty-one and thirty registered at local voting precincts for possible military service.

President Wilson chose General Pershing to head the American Expeditionary Force (AEF), which had to be trained, outfitted, and carried across the submarine-plagued Atlantic. This required safer shipping. When the United States entered the war, German U-boats were sinking 900,000 tons of Allied ships each month. By sending merchant and troop ships in armed convoys, the U.S. Navy cut that monthly rate to 400,000 tons by the end of 1917. With trench warfare grinding on, Allied commanders pleaded for American soldiers to fill their depleted units, but Pershing waited until the AEF reached full strength. As late as May 1918, the brunt of the fighting fell to the French and British.

AP EXAM TIP

Evaluate the role of the American Expeditionary Force in the victory of the Allies in World War I.

The Allies' burden increased when the Eastern Front collapsed following the Bolshevik (Communist) Revolution in Russia in November 1917. To consolidate power at home, the new Bolshevik government, led by Vladimir Lenin, sought peace with the Central Powers. In a 1918 treaty, Russia surrendered its claims over vast parts of its territories in exchange for peace. Released from war against Germany, the Bolsheviks turned their attention to a civil war at home. Terrified by communism, Japan and several Allied countries, including the United States, later sent troops to fight the Bolsheviks and aid forces loyal to the deposed tsar. But after a four-year civil war, Lenin's forces established full control over Russia and reclaimed Ukraine and other former possessions.

Peace with Russia freed Germany to launch a major offensive on the Western Front. By May 1918, German troops had advanced to within 50 miles of Paris. Pershing at last committed about 60,000 U.S. soldiers to support the French defense. With American soldiers engaged in massive numbers, Allied forces brought the Germans to a halt in July; by September, they forced a retreat. Pershing then pitted more than one million American soldiers against an outnumbered and exhausted German army in the Argonne forest. By early November, this attack broke German defenses at a crucial rail hub, Sedan. The cost was high: 26,000 Americans killed and 95,000 wounded (Map 20.3). But the flood of U.S. troops and supplies determined the outcome. Recognizing inevitable defeat and facing popular uprisings at home, Germany signed an armistice on November 11, 1918. The Great War was over.

MAP 20.3 U.S. Participation on the Western Front, 1918
When American troops reached the European front in significant numbers in 1918, the Allies and Central Powers had been fighting a deadly war of attrition for almost four years. The influx of American troops and supplies helped break the stalemate. Successful offensive maneuvers by the American Expeditionary Force included those at Belleau Wood and Château-Thierry and the Meuse-Argonne campaign.

Safe Sex, Vintage 1919 To teach young American men how to avoid venereal diseases, the War Department used posters, pep talks, and films. There were no effective treatments for venereal infections until 1928, when Alexander Fleming discovered penicillin, and so the army urged soldiers to refrain from visiting prostitutes or to use condoms. *Fit to Win* starred handsome Ray McKee, who had already appeared in eighty films, and was directed by E. H. Griffith, who would go on to direct sixty Hollywood films between 1920 and 1946. [illegible]

The American Fighting Force By the end of World War I, almost 4 million American men — popularly known as "doughboys" — wore U.S. uniforms, as did several thousand female nurses. The recruits reflected America's heterogeneity: one-fifth had been born outside the United States, and soldiers spoke forty-nine different languages. Though ethnic diversity worried some observers, most predicted that military service would promote Americanization.

Over 400,000 African American men enlisted, accounting for 13 percent of the armed forces. Their wartime experiences were often grim: serving in segregated units, they were given the most menial tasks. Racial discrimination hampered military efficiency and provoked violence at several camps. The worst incident occurred in August 1917, when, after suffering a string of racial attacks, black members of the 24th Infantry's Third Battalion rioted in Houston, killing 15 white civilians and police officers. The army tried 118 of the soldiers in military courts for mutiny and riot, hanged 19, and sentenced 63 to life in prison.

Unlike African Americans, American Indians served in integrated combat units. Racial stereotypes about Native Americans' prowess as warriors enhanced their military reputations, but it also prompted officers to assign them hazardous duties as scouts and snipers. About 13,000, or 25 percent, of the adult male American Indian population served during the war; roughly 5 percent died, compared to 2 percent for the military as a whole.

Most American soldiers escaped the horrors of sustained trench warfare. Still, during the brief period of U.S. participation, over 50,000 servicemen died in action; another 63,000 died from disease, mainly the devastating influenza **pandemic** that began early in 1918 and, over the next two years, killed 50 million people worldwide. The nation's military deaths, though substantial, were only a tenth as many as the 500,000 American civilians who died of this terrible epidemic — not to mention the staggering losses of Europeans in the war (AP® America in the World).

AP® PRACTICES & SKILLS

CAUSATION

How did U.S. military entry into World War I affect the course of the war?

War on the Home Front

In the United States, opponents of the war were a minority. Helping the Allies triggered an economic boom that benefitted farmers and working people. Many progressives also supported the war, hoping Wilson's ideals and wartime patriotism would renew Americans' attention to reform. But the war bitterly disappointed them. Rather than enhancing democracy, it chilled the political climate as government agencies tried to enforce "100 percent loyalty."

Mobilizing the Economy American businesses made big bucks from World War I. As grain, weapons, and manufactured goods flowed to Britain and France, the United States became a creditor nation. Moreover, as the war drained British financial reserves, U.S. banks provided capital for investments around the globe.

AP® EXAM TIP

Being able to explain the role of war in altering the power of government and the U.S. economy is critical for success on the AP® exam.

Government powers expanded during wartime, with new federal agencies overseeing almost every part of the economy. The **War Industries Board** (WIB), established in July 1917, directed military production. After a fumbling start that showed the limits of

The Human Cost of World War I

The United States played a crucial role in financing World War I. In its war-related expenditures, totaling $22.6 billion, the United States ranked fourth among all nations that participated, ranking behind only Germany ($37.7 billion), Britain ($35.3 billion), and France ($24.3 billion). In human terms, however, the U.S. role was different. Note that the figures below for military casualties are rough estimates. Civilian casualties are even more uncertain: the exact number of Russians, Italians, Romanians, Serbians, and others who died will never be known.

TABLE 20.1

World War I Casualties

Country	Total Population	Military Killed or Missing	Total Civilian Deaths
Germany	67,000,000	2,037,000	700,000
Russia	167,000,000	1,800,000	2,000,000
France	39,000,000	1,385,300	40,000
Austria-Hungary	49,900,000	1,016,200	unknown
United Kingdom	46,400,000	702,410	1,386
Italy	35,000,000	462,400	unknown
Turkey	21,300,000	236,000	2,000,000*
Romania	7,510,000	219,800	265,000–500,000
Serbia	5,000,000	127,500	600,000
Bulgaria	5,500,000	77,450	275,000

*Mostly Armenians

QUESTIONS FOR ANALYSIS

1. What does this data suggest about the comparative role of the United States in World War I? The experience of its soldiers? The war's impact on civilians in each nation?
2. Which other countries made contributions similar to that of the United States, and why?

voluntarism, the Wilson administration reorganized the board and placed Bernard Baruch, a Wall Street financier and superb administrator, at its head. Under his direction, the WIB allocated scarce resources among industries, ordered factories to convert to war production, set prices, and standardized procedures. Though he could compel compliance, Baruch preferred to win voluntary cooperation. A man of immense charm, he usually succeeded—helped by the lucrative military contracts at his disposal. Despite higher taxes, corporate profits soared, as military production sustained a boom that continued until 1920.

Some federal agencies took dramatic measures. The **National War Labor Board** (NWLB), formed in April 1918, established an eight-hour day for war workers with time-and-a-half pay for overtime, and it endorsed equal pay for women. In return for a

Selling Liberty Bonds: Two Appeals Once the United States entered the Great War, government officials sought to enlist all Americans in the battle against the Central Powers. They carefully crafted patriotic advertising campaigns that urged Americans to buy bonds, conserve food, enlist in the military, and support the war effort in many other ways. One of these posters appeals to recent immigrants, reminding them of their debt to American Liberty. The other shows the overtly anti-German prejudices of many war appeals: it depicts the "Hun," a slur for a German soldier, with bloody hands and bayonet. Libra

no-strike pledge, the NWLB also supported workers' right to organize—a major achievement for the labor movement. The Fuel Administration, meanwhile, introduced daylight saving time to conserve coal and oil. In December 1917, the Railroad Administration seized control of the nation's hodgepodge of private railroads, seeking to facilitate rapid movement of troops and equipment—an experiment that had, at best, mixed results.

Perhaps the most successful wartime agency was the Food Administration, created in August 1917 and led by engineer Herbert Hoover. With the slogan "Food will win the war," Hoover convinced farmers to nearly double their acreage of grain. This increase allowed a threefold rise in food exports to Europe. Among citizens, the Food Administration mobilized a "spirit of self-denial" rather than mandatory rationing. Female volunteers went from door to door to persuade housekeepers to observe "Wheatless" Mondays and "Porkless" Thursdays. Hoover, a Republican, emerged from the war as one of the nation's most admired public figures.

Promoting National Unity Suppressing wartime dissent became a near obsession for President Wilson. In April 1917, Wilson formed the Committee on Public Information (CPI), a government propaganda agency headed by journalist George Creel. Professing lofty goals—educating citizens about democracy, assimilating

immigrants, and ending the isolation of rural life — the committee set out to mold Americans into "one white-hot mass" of war patriotism. The CPI touched the lives of nearly all civilians. It distributed seventy-five million pieces of literature and enlisted thousands of volunteers — **Four-Minute Men** — to deliver short prowar speeches at movie theaters.

The CPI also pressured immigrant groups to become "One Hundred Percent Americans." German Americans bore the brunt of this campaign (AP® Thinking Like a Historian). With posters exhorting citizens to root out German spies, a spirit of conformity pervaded the home front. A quasi-vigilante group, the American Protective League, mobilized about 250,000 "agents," furnished them with badges issued by the Justice Department, and trained them to spy on neighbors and coworkers. In 1918, members of the league led violent raids against draft evaders and peace activists. Government propaganda helped rouse a nativist hysteria that lingered into the 1920s.

Congress also passed new laws to curb dissent. Among them was the **Sedition Act of 1918**, which prohibited any words or behavior that might "incite, provoke, or encourage resistance to the United States, or promote the cause of its enemies." Because this and an earlier Espionage Act (1917) defined treason loosely, they led to the conviction of more than a thousand people. The Justice Department prosecuted members of the Industrial Workers of the World, whose opposition to militarism threatened to disrupt war production of lumber and copper. When a Quaker pacifist teacher in New York City refused to teach a prowar curriculum, she was fired. Socialist Party leader Eugene V. Debs was sentenced to ten years in jail for the crime of arguing that wealthy capitalists had started the conflict and were forcing workers to fight.

Federal courts mostly supported the acts. In *Schenck v. United States* (1919), the Supreme Court upheld the conviction of a socialist who was jailed for circulating pamphlets that urged army draftees to resist induction. The justices followed this with a similar decision in *Abrams v. United States* (1919), ruling that authorities could prosecute speech they believed to pose "a clear and present danger to the safety of the country." In an important dissent, however, Justices Oliver Wendell Holmes Jr. and Louis Brandeis objected to the *Abrams* decision. Holmes's probing questions about the definition of "clear and present danger" helped launch twentieth-century legal battles over free speech and civil liberties.

Great Migrations World War I created tremendous economic opportunities at home. Jobs in war industries drew thousands of people to the cities. With so many men in uniform, jobs in heavy industry opened for the first time to African Americans, accelerating the pace of black migration from South to North. During World War I, more than 400,000 African Americans moved to such cities as St. Louis, Chicago, New York, and Detroit, in what became known as the **Great Migration**. The rewards were great, and taking war jobs could be a source of patriotic pride. "If it hadn't been for the negro," a Carnegie Steel manager later recalled, "we could hardly have carried on our operations."

Blacks in the North encountered discrimination in jobs, housing, and education. But in the first flush of opportunity, most celebrated their escape from the repressive racism and poverty of the South. "It is a matter of a dollar with me and I feel that God made the path and I am walking therein," one woman reported to her sister back home. "Tell your husband work is plentiful here." "I just begin to feel like a man," wrote another migrant to a friend in Mississippi. "My children

The Great Migration: Union Station, Jacksonville, Florida This photograph from 1921 shows a familiar sight across the South, especially after 1917 and 1918, when wartime jobs in Northern cities offered new opportunities for African Americans seeking to escape the Jim Crow South. Northern manufacturers, facing severe wartime labor shortages, sent labor agents to the South to recruit workers. These agents often arranged loans to pay for train fare and other travel expenses; once laborers were settled and employed in the North, they repaid the loans from their wages. In a typical pattern, some of the travelers in this photograph may have previously moved from rural parts of Florida to Jacksonville, before making the leap to the urban North. German Americans in World War I

Before 1917, Americans expressed diverse opinions about the war in Europe. After the United States joined the Allies, however, German Americans' loyalty became suspect. German immigrant men who were not U.S. citizens were required to register as "alien enemies," and government propaganda fueled fear of alleged German spies. In April 1918 in Collinsville, Illinois, a German-born socialist named Robert Prager — who had sought U.S. citizenship and tried to enlist in the navy — was lynched by drunken miners. The documents below shed light on German Americans' wartime experiences.

1. **Advertisement, *Fatherland*, 1915.** *This ad appeared in a political journal for German Americans. The translation of the songs offered on this recording are "Germany, Germany Above All" and "Precious Homeland."*

5. **James W. Gerard, radio address, 1917.** *Gerard was U.S. ambassador to Great Britain.*

   The great majority of American citizens of German descent have, in this great crisis in our history, shown themselves splendidly loyal to our flag. Everyone has a right to sympathize with any warring nation. But now that we are in the war there are only two sides, and the time has come when every citizen must declare himself American — or traitor!

   . . . The Foreign Minister of Germany once said to me ". . . we have in your country 500,000 German reservists who will rise in arms against your government if you dare to make a move against Germany." Well, I told him that that might be so, but that we had 500,001 lampposts in this country, and that that was where the reservists would be hanging the day after they tried to rise. And if there are any German-Americans here who are so ungrateful for all the benefits they have received that they are still for the Kaiser, there is only one thing to do with them. And that is to hog-tie them, give them back the wooden shoes and the rags they landed in, and ship

them back. . . . There is no animal that bites and kicks and squeals . . . equal to a fat German-American, if you commenced to tie him up and told him that he was on his way back to the Kaiser.

6. **Actions by New York liederkranz reported in *New Orleans Times-Picayune*, May 16, 1918.** *Liederkranz, or singing societies, played a vital role in German immigrant communities. Before World War I the city of Wheeling, West Virginia, counted eleven such societies, with names like Harmonie, Germania, and Mozart. By 1918 most liederkranz had vanished. New York City's was one of the few that did not.*

Members of the [New York] Liederkranz, an organization founded seventy-one years ago by Germans . . . met tonight and placed on record their unqualified Americanism.

. . . They declared English the official language of the organization, and for the first time in years the sound of an enemy tongue will not be heard in the club's halls. Likewise they reiterated their offer to turn the buildings over to the government as a hospital if it were necessary.

7. **Lola Gamble Clyde, 1976 interview on life in Idaho during World War I.** *In the 1970s, historians interviewed residents of rural Latah County, Idaho, about their experiences in World War I. Frank Brocke, a farmer, recalled that neighbors on their joint telephone line would slam down the phone when his mother or sister spoke German. "We had to be so careful," he said.*

I remember when they smashed out store windows at Uniontown that said [sauer]kraut. . . . Nobody would eat kraut. Throw the Kraut out, they were Germans. . . . Even the great Williamson store, he went in and gathered up everything that was made in Germany, and had a big bonfire out in the middle of the street, you know. Although he had many good German friends all over the county that had helped make him rich. . . . And if it was a German name — we'll just change our name. . . . There were some [German American] boys that got draft deferments. . . . Some of them said that their fathers were sick and dying, and their father had so much land they had to stay home and farm it for them. . . . [Local men] tarred and feathered some of them. Some of them as old men dying still resented and remembered.

ANALYZING THE EVIDENCE

1. How did conditions change for German Americans between 1915 and 1918?
2. According to these sources, what aspects of German American culture did other Americans find threatening? What forms did anti-German hostility take?
3. Compare the sources that offer a German American perspective (sources 1, 2, 6, and 7) to those that represent a threat to German Americans' way of life (3, 4, 5). How did German Americans respond to growing anti-German sentiment in this period?

AP® DBQ PRACTICE

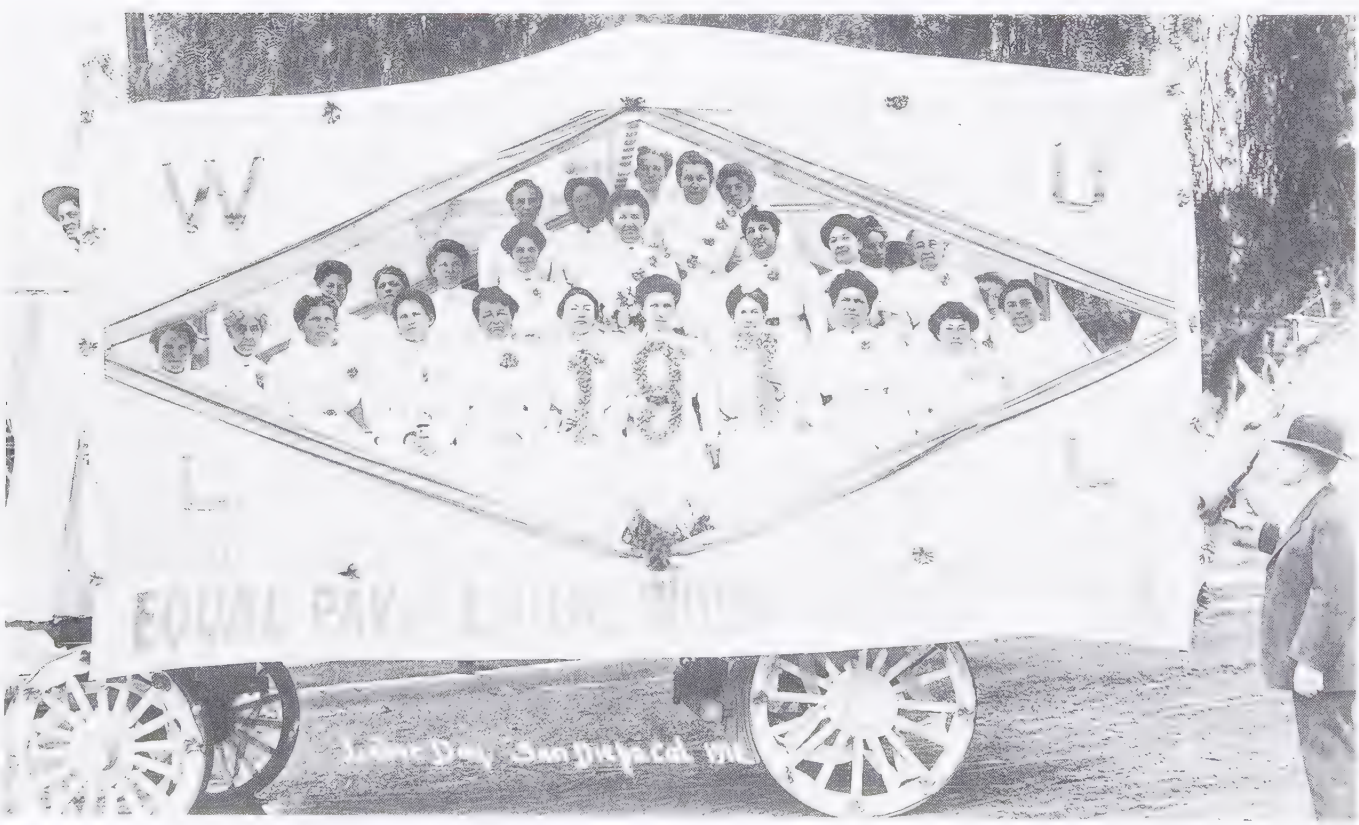
are going to the same school with the whites. . . . Will vote the next election and there isn't any 'yes sir' and 'no sir' — it's all yes and no and Sam and Bill."

Wartime labor shortages prompted Mexican Americans in the Southwest to leave farmwork for urban industrial jobs. Continued political instability in Mexico, combined with increased demand for farmworkers in the United States, also encouraged more Mexicans to move across the border. Between 1917 and 1920, at least 100,000 Mexicans entered the United States; despite discrimination, large numbers stayed. If asked why, many might have echoed the words of an African American man who left New Orleans for Chicago: they were going "north for a better chance." The same was true for Puerto Ricans such as Jésus Colón, who also confronted racism. "I came to New York to poor pay, long hours, terrible working conditions, discrimination even in the slums and in the poor paying factories," Colón recalled, "where the bosses very dexterously pitted Italians against Puerto Ricans and Puerto Ricans against American Negroes and Jews."

Women were the largest group to take advantage of wartime job opportunities. About 1 million women joined the paid labor force for the first time, while another 8 million gave up low-wage service jobs for higher-paying industrial work. Americans soon got used to the sight of female streetcar conductors, train engineers, and defense workers. Though most people expected these jobs to return to men in peacetime, the war created a new comfort level with women's employment outside the home — and with women's suffrage.

Women's Voting Rights The National American Woman Suffrage Association (NAWSA) threw the support of its 2 million members wholeheartedly into the war effort. Its president, Carrie Chapman Catt, declared that women had to prove their



Wagon Decorated for the Labor Day Parade, San Diego, California, 1910 As the woman suffrage movement grew stronger in the years before and during World War I, working-class women played increasingly prominent and visible roles in its leadership. This Labor Day parade float, created by the Women's Union Label League of San Diego, showed that activists championed equal pay for women in the workplace as well as women's voting rights. "Union Label Leagues" urged middle-class shoppers to purchase only clothing with a union label, certifying that the item had been manufactured under safe conditions and the workers who made it had received a fair wage. San Diego

patriotism to win the ballot. NAWSA members in thousands of communities promoted food conservation and distributed emergency relief through organizations such as the Red Cross.

Alice Paul and the **National Woman's Party** (NWP) took a more confrontational approach. Paul was a Quaker who had worked in the settlement movement and earned a PhD in political science. Finding as a NAWSA lobbyist that congressmen dismissed her, Paul founded the NWP in 1916. Inspired by militant British suffragists, the group began in July 1917 to picket the White House. Standing silently with their banners, Paul and other NWP activists faced arrest for obstructing traffic and were sentenced to seven months in jail. They protested by going on a hunger strike, which prison authorities met with forced feeding. Public shock at the women's treatment drew attention to the suffrage cause.

Impressed by NAWSA's patriotism and worried by the NWP's militancy, the anti-suffrage Wilson reversed his position. In January 1918, he urged support for woman suffrage as a "war measure." The constitutional amendment quickly passed the House of Representatives; it took eighteen months to get through the Senate and another year to win ratification by the states. On August 26, 1920, when Tennessee voted for ratification, the Nineteenth Amendment became law. The state thus joined Texas as one of two ex-Confederate states to ratify it. In most parts of the South, the measure meant that *white* women began to vote: in this Jim Crow era, African American women's voting rights remained restricted along with men's.

In explaining suffragists' victory, historians have debated the relative effectiveness of Catt's patriotic strategy and Paul's militant protests. Both played a role in persuading Wilson and Congress to act, but neither might have worked without the extraordinary impact of the Great War. Across the globe, before 1914, the only places where women had full suffrage were New Zealand, Australia, Finland, and Norway. After World War I, many nations moved to enfranchise women. The new Soviet Union acted first, in 1917, with Great Britain and Canada following in 1918; by 1920, the measure had passed in Germany, Austria, Poland, Czechoslovakia, and Hungary as well as the United States. (Major exceptions were France and Italy, where women did not gain voting rights until after World War II, and Switzerland, which held out until 1971.) Thus, while World War I introduced modern horrors on the battlefield — machine guns and poison gas — it brought some positive results at home: economic opportunity and women's political participation.

IN YOUR OWN WORDS What changes did U.S. participation in World War I bring about on the home front?

AP® EXAM TIP

The impact of war on the status of women in the U.S. is a "must know" on the AP® exam.

AP® PRACTICES & SKILLS

CAUSATION

What were the different effects of African Americans', Mexican Americans', and women's civilian mobilization during World War I?

Catastrophe at Versailles

The idealistic Wilson argued that no victor should be declared after World War I: only "peace among equals" could last. Having won at an incredible price, Britain and France showed zero interest in such a plan. But the devastation wrought by the war created popular pressure for a just and enduring outcome. At the peace conference held at Versailles, near Paris, in 1919, Wilson scored a diplomatic victory when the Allies chose to base the talks on his **Fourteen Points**, a blueprint for peace that he had presented a year earlier in a speech to Congress.

Wilson's Points embodied an important strand in progressivism. They called for open diplomacy; "absolute freedom of navigation upon the seas"; arms reduction; removal of trade barriers; and national self-determination for peoples in the Austro-Hungarian, Russian, and German empires. Essential to Wilson's vision was the creation of an international regulatory body — eventually called the **League of Nations** — that would guarantee each country's "independence and territorial integrity." The League

AP® INTERPRETING THE PAST

Was Wilson's Internationalism Successful?

President Woodrow Wilson won a hard-fought reelection in 1916 by maintaining American neutrality in the Great War then raging across Europe. Only a month after his second inauguration, however, he reluctantly abandoned his policy of "armed neutrality" after Germany resumed its unrestricted submarine warfare and sunk American ships.

In asking Congress for a declaration of war, Wilson envisioned a future peace based on the principles of democracy, the collective security of nations, and a system of international law to avert future wars. A League of Nations was at the center of his postwar vision, which he announced in his January 1918 "Fourteen Points" speech. But a number of factors frustrated Wilson's plans, with the result that the Republican-controlled Congress rejected the treaty Wilson had negotiated. Historians John Milton Cooper Jr. and Elizabeth McKillen offer contrasting views of Wilson's internationalism and the League of Nations proposal.

JOHN MILTON COOPER JR.

SOURCE: John Milton Cooper Jr., *Woodrow Wilson: A Biography* (New York: Alfred A. Knopf, 2009), 474–475.

[T]he substance of the Draft Covenant . . . [included the] guarantee of independence and territorial integrity . . . and asserted the right of the League of Nations to concern itself about "war or threat of war" anywhere in the world. Articles XII through XV established procedures for mediation and arbitration and called for a "Permanent Court of International Justice." Article XVI laid down the League's authority to impose economic boycotts and recommend the use of force. . . . [A]ll these features of Wilson's . . . were in the Draft Covenant. . . . It was a remarkable achievement, and the lion's share of the credit belonged to Wilson.

ELIZABETH MCKILLEN

SOURCE: Elizabeth McKillen, *Making the World Safe for Workers: Labor, the Left and Wilsonian Internationalism* (Urbana: University of Illinois Press, 2013), 243–244.

The U.S. and transnational labor and Left debate over the Versailles Treaty, League [of Nations] and ILO [International Labor Organization] exposed fundamental contradictions in Wilsonian internationalism. . . . [F]rom the perspective of Left activists, a League comprised of the same government elites who had caused World War I was unlikely to fundamentally alter the imperial status quo in ways that would advance the interests of the world's workers or ensure future peace and prosperity. . . . Socialist and labor activists unmasked the Wilson administration's tendencies toward . . . the belief that other nations could be immeasurably improved by reshaping them in an American mold.

AP® SHORT ANSWER PRACTICE

1. How do these historians differ in their assessment of Wilson's internationalism?
2. To what extent do these historians see the League of Nations as a solution to the international problems Wilson observed?
3. From these excerpts and the relevant sections of the chapter, identify at least two reasons why Wilson failed to win ratification of the Treaty of Versailles.

would mediate disputes, supervise arms reduction, and—according to its crucial Article X—curb aggressor nations through collective military action. Wilson hoped the League would "end all wars." But his ideals had marked limits, and in negotiations he confronted harsh realities (AP® Interpreting the Past).

The Fate of Wilson's Ideas

The peace conference included ten thousand representatives from around the globe, but leaders of France, Britain, and the United States dominated the proceedings. When the Japanese delegation proposed a declaration for equal treatment of all races, the Allies rejected it. Similarly, the Allies ignored a global Pan-African Congress, organized by W. E. B. Du Bois and other black leaders; they snubbed Arab representatives who had been military allies during the war. Even Italy's prime minister—included among the influential "Big Four" because in 1915 Italy had switched to the Allied side—withdrew

from the conference, aggrieved at the way British and French leaders marginalized him. The Allies excluded two key players: Russia, because they distrusted its communist leaders, and Germany, because they planned to dictate terms to their defeated foe. For Wilson's "peace among equals," it was a terrible start.

Prime Minister David Lloyd George of Britain and Premier Georges Clemenceau of France imposed harsh punishments on Germany. Unbeknownst to others at the time, they had already made secret agreements to divide up Germany's African colonies and take them as spoils of war. At Versailles, they also forced the defeated nation to pay $33 billion in reparations and surrender coal supplies, merchant ships, valuable patents, and even territory along the French border. These terms caused keen resentment and economic hardship in Germany, and over the following two decades they helped lead to World War II.

Given these conditions, it is remarkable that Wilson influenced the **Treaty of Versailles** as much as he did. He intervened repeatedly to soften conditions imposed on Germany. In accordance with the Fourteen Points, he worked with the other Allies to fashion nine new nations, stretching from the Baltic to the Mediterranean (Map 20.4 and Map 20.5). These were intended as a buffer to protect Western Europe from communist Russia; the plan also embodied Wilson's principle of self-determination for European states. Elsewhere in the world, the Allies dismantled their enemies' empires but did not create independent nations, keeping colonized people subordinate to European power. France, for example, refused to give up its long-standing occupation of Indochina; Clemenceau's snub of future Vietnamese leader Ho Chi Minh, who sought representation at Versailles, had grave long-term consequences for both France and the United States.

The establishment of a British mandate in Palestine (now Israel) also proved crucial. During the war, British foreign secretary Sir Arthur Balfour had stated that his country would work to establish there a "national home for the Jewish people," with the condition that "nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine." Under the British mandate, thousands of Jews moved to Palestine and purchased land, in some cases evicting Palestinian tenants. As early as 1920, riots erupted between Jews and Palestinians—a situation that, even before World War II, escalated beyond British control.

The Versailles treaty thus created conditions for horrific future bloodshed, and it must be judged one of history's great catastrophes. Balfour astutely described Clemenceau, Lloyd George, and Wilson as "all-powerful, all-ignorant men, sitting there and carving up continents." Wilson, however, remained optimistic as he returned home, even though his health was beginning to fail. The president hoped the new League of Nations, authorized by the treaty, would moderate the settlement and secure peaceful resolutions of other disputes. For this to occur, U.S. participation was crucial.

AP® EXAM TIP

Recognizing the impact of Woodrow Wilson's Fourteen Points in the post–World War I world is critical for success on the AP® exam.

AP® PRACTICES & SKILLS

CAUSATION

In what ways did the Treaty of Versailles embody—or fail to embody—Wilson's Fourteen Points?

"Peace and Future Cannon Fodder" This scathing cartoon, published in 1920, was drawn by Australian-born artist Will Dyson and published in a British magazine. It shows the "Big Four" power brokers at Versailles—from left to right, Vittorio Orlando of Italy, David Lloyd George of Britain, Georges Clemenceau of France, and Woodrow Wilson of the United States. Clemenceau, who was nicknamed "The Tiger," turns his head and comments on the crying child. Even at the time, astute observers such as Dyson argued that the treaty might have horrific consequences, particularly in the brutal conditions it imposed on Germany. Dyson sketched "1940 Class" over the head of the child. The young children of 1920 grew up to inherit the consequences of the Versailles treaty, which contributed to the rise of fascism, Nazism, and World War II.

Congress Rejects the Treaty

The outlook for U.S. ratification was not promising. Though major opinion makers and religious denominations supported the treaty, openly hostile Republicans held a majority in the Senate. One group, called the "irreconcilables," consisted of western progressive Republicans such as Hiram Johnson of California and Robert La Follette of Wisconsin, who opposed U.S. involvement in

MAP 20.4 AND MAP 20.5 Europe and the Middle East Before and After World War I

World War I and its aftermath dramatically altered the landscape of Europe and the Middle East. Before the war, the most powerful nations belonged to two alliances: the Central Powers (Germany, Austria-Hungary, and Italy) and the Entente (Great Britain, France, and Russia). The latter's victory, along with the 1917 communist revolution in Russia, dramatically reshaped power relations. Collapse of the German, Austro-Hungarian, and Russian empires allowed reconstitution of Poland and creation of a string of new states along the Baltic Sea and in Eastern Europe, based on the principle of national (ethnic) self-determination. The demise of the Ottoman Empire prompted creation of four quasi-independent territories, or "mandates": Iraq, Syria, Lebanon, and Palestine. The League of Nations stipulated that their affairs would be supervised by one of the victorious Allied powers.

European affairs. Another group, led by Senator Henry Cabot Lodge of Massachusetts, worried that Article X—the provision for collective security—would prevent the United States from pursuing an independent foreign policy. Was the nation, Lodge asked, "willing to have the youth of America ordered to war" by an international body? Wilson refused to accept any amendments, especially to placate Lodge, a hated rival. "I shall consent to nothing," the president told the French ambassador. "The Senate must take its medicine."

To mobilize support, Wilson embarked on an exhausting speaking tour. His impassioned defense of the League of Nations brought audiences to tears, but the strain proved too much for the president. While visiting Colorado in September 1919, Wilson collapsed. A week later, back in Washington, he suffered a stroke that left one side of his body paralyzed. Wilson still urged Democratic senators to reject all Republican amendments. When the treaty came up for a vote in November 1919, it failed to win the required two-thirds majority. A second attempt, in March 1920, fell seven votes short.

The treaty was dead, and so was Wilson's leadership. The president never fully recovered from his stroke. During the last eighteen months of his administration, the government drifted as Wilson's physician, his wife, and various cabinet heads secretly took charge. The United States never ratified the Versailles treaty or joined the League of Nations. In turn, the League was weak. When Wilson died in 1924, his dream of a just and peaceful international order lay in ruins.

AP® EXAM TIP

Evaluate the causes and effects of the failure of the U.S. Senate to ratify the Treaty of Versailles.

The impact of World War I can hardly be overstated. Despite bids for power by Britain and France, Europe's hold on its colonial empires never recovered. The United States, now a major world power, appeared to turn its back on the world when it rejected the Versailles treaty. But in laying claim to Hawaii and the Philippines, asserting power in Latin America, and intervening in Asia, the United States had entangled itself deeply in global politics. By 1918, the nation had gained too much diplomatic clout—and was too dependent on overseas trade—for isolation to be a realistic long-term option.

On the home front, the effects of World War I were no less dramatic. Wartime jobs and prosperity ushered in an era of exuberant consumerism, while the achievements of women's voting rights seemed to presage a new progressive era. But as peace returned, it became clear that the war had not advanced reform. Rather than embracing government activism, Americans of the 1920s proved eager to relinquish it.

IN YOUR OWN WORDS **What arguments did U.S. political leaders make for and against ratification of the Versailles treaty?**

SUMMARY

Between 1877 and 1918, the United States rose as a major economic and military power. Justifications for overseas expansion emphasized access to global markets, the importance of sea power, and the need to police international misconduct and trade. These justifications shaped U.S. policy toward European powers in Latin America, and victory in the War of 1898 enabled the United States to take control of former Spanish colonies in the Caribbean and Pacific. Victory, however, also led to bloody conflict in the Philippines as the United States struggled to suppress Filipino resistance to American rule.

After 1899, the United States aggressively asserted its interests in Asia and Latin America. In China, the United States used the so-called Boxer Rebellion to make good its claim to an "open door" to Chinese markets. Later, President Theodore Roosevelt strengthened relations with Japan, and his successor, William Howard Taft, supported U.S. business interests in China. In the Caribbean, the United States constructed the Panama Canal and regularly exercised the right, claimed under the Roosevelt Corollary,

to intervene in the affairs of states in the region. President Woodrow Wilson publicly disparaged the imperialism of his predecessors but repeatedly used the U.S. military to "police" Mexico.

At the outbreak of World War I, the United States asserted neutrality, but its economic ties to the Allies rapidly undercut that claim. In 1917, German submarine attacks drew the United States into the war on the side of Britain and France. Involvement in the war profoundly transformed the economy, politics, and society of the nation, resulting in an economic boom, mass migrations of workers to industrial centers, and the achievement of national voting rights. At the Paris Peace Conference, Wilson attempted to implement his Fourteen Points. However, the designs of the Allies in Europe undermined the Treaty of Versailles, while Republican resistance at home prevented ratification of the treaty. Although Wilson's dream of a just international order failed, the United States had taken its place as a major world power.

CHAPTER 20 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. Explain the steps by which the late-nineteenth-century U.S. government began to exert military influence in different regions of the world.
2. Compare and contrast the factors that influenced U.S. actions in Asia and in Latin America in this period.
3. What changes did U.S. participation in World War I bring about on the home front?
4. What arguments did U.S. political leaders make for and against ratification of the Versailles treaty?
5. Review the events listed under "America in the World" on the thematic timeline on page 619. By the end of World War I, what influence did the United States exercise in European affairs and in the Caribbean, Latin America, the Pacific, and China? How, and to what extent, had its power in each region expanded over the previous four decades? Compare and contrast the role of the United States to the roles of other powers in each region.

AP® TERMS TO KNOW

Identify and explain the significance of each term below.

Key Concepts and Events

American exceptionalism (p. 622)
Teller Amendment (p. 624)
Insular Cases (p. 626)
Platt Amendment (p. 626)
"open door" policy (p. 627)
Root-Takahira Agreement (p. 630)
Panama Canal (p. 631)
Roosevelt Corollary (p. 631)
Zimmermann telegram (p. 634)
War Industries Board (p. 636)
National War Labor Board (p. 637)
Four-Minute Men (p. 639)
Sedition Act of 1918 (p. 639)
Great Migration (p. 639)
National Woman's Party (p. 643)
Fourteen Points (p. 643)
League of Nations (p. 643)
Treaty of Versailles (p. 645)

Key People

Theodore Roosevelt (p. 623)
Alfred Mahan (p. 623)
Queen Liliuokalani (p. 625)
Emilio Aguinaldo (p. 626)
Woodrow Wilson (p. 631)
Porfirio Díaz (p. 631)
Herbert Hoover (p. 638)
Alice Paul (p. 643)

Key Academic Terms

autocracy (p. 616)
impinge (p. 620)
proselytize (p. 622)
brook (p. 623)
archipelago (p. 625)
pandemic (p. 636)

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. Read again the documents from "Representing Indians" in Chapter 15 (Thinking Like a Historian, pp. 484–485). In what ways might ideas about Native Americans have informed attitudes toward Hawaiians, Filipinos, and other people of color overseas? How might this explain which peoples Woodrow Wilson included and excluded in his ideal of "national self-determination"? Write a short essay in which you explain how Americans' policies and attitudes toward Native peoples within North America shaped U.S. foreign policy between 1898 and 1918.
2. Review the images on pages 625, 639, and 642. What do they tell us about the opportunities and risks that World War I posed for different groups of Americans? What constraints might young men and women of different ethnic backgrounds have faced, and what factors might they have considered, when deciding what wartime activities to pursue?

KEY TURNING POINTS

Refer to the chapter chronology on page 622 for help in answering the question below.

Identify at least five events from the chapter chronology that demonstrate the rising global power of the United States. Compare their consequences. How might an observer from another country have interpreted the United States's actions in each case?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS

Choose the correct answer for each question.

Questions 1–3 refer to the excerpt below.

> "It will be our wish that the processes of peace, when they are begun, shall be absolutely open and that they shall involve and permit henceforth no secret understandings of any kind. The day of conquest and aggrandizement has gone by; so is the day of secret covenants entered into in the interest of particular governments and likely at some unlooked-for moment to upset the peace of the world. . . .
>
> We entered this war because violations of right had occurred which touched us to the quick and made the life of our own people impossible unless they were corrected and the world secure once for all against their recurrence. What we demand in this war, therefore, is nothing peculiar to ourselves. It is that the world be made fit and safe to live in. . . . All the peoples of the world are in effect partners in this interest and for our own part we see very clearly that unless justice be done to others it will not be done to us."
>
> Woodrow Wilson, Address to Congress, January 8, 1918

1. Which of the following issues of the period was Wilson most likely concerned with in the excerpt?
   a. The defense of humanitarian and democratic principles
   b. The pursuit of a unilateral American foreign policy
   c. The rise of fascism and totalitarianism
   d. The economic opportunities presented by imperialism
2. Based on the excerpt at left, which of the following would Wilson most likely NOT have supported?
   a. The Washington Naval Conference
   b. The Selective Service Act
   c. The Kellogg-Briand Pact
   d. Unrestricted submarine warfare
3. In the decades following Wilson's speech, significant divisions emerged within the United States over all of the following issues EXCEPT the
   a. ratification of the Treaty of Versailles.
   b. aggression of Nazi Germany.
   c. foreign policy tradition of noninvolvement in European affairs.
   d. appropriate national response to the Japanese attack on Pearl Harbor.

Questions 4–6 refer to the excerpt below.

> "[The nation] is of age and it can do what it pleases; it can spurn the traditions of the past; it can repudiate the principles upon which the nation rests; it can employ force instead of reason; it can substitute might for right . . . but it cannot repeal the moral law or escape the punishment decreed for the violation of human rights. . . .
>
> Some argue that American rule in the Philippine Islands will result in the better education of the Filipinos. Be not deceived. If we expect to maintain a colonial policy, we shall not find it to our advantage to educate the people. The educated Filipinos are now in revolt against us, and the most ignorant ones have made the least resistance to our domination. If we are to govern them without their consent and give them no voice in determining the taxes which they must pay, we dare not educate them, lest they learn to read the Declaration of Independence and Constitution of the United States and mock us for our inconsistency."
>
> Speech by William Jennings Bryan, presidential candidate, at the Democratic National Convention, August 8, 1900

4. In highlighting how the nation could "spurn the traditions of the past," Bryan was referring most directly to
   a. ideas articulated in George Washington's Farewell Address.
   b. the use of government power in the confining of American Indians to reservations.
   c. government policies promoting the assimilation of immigrants.
   d. increased barriers to Asian migration.

5. Based on the excerpt at left, Bryan most likely supported which of the following?
   a. Platt Amendment
   b. Roosevelt Corollary to the Monroe Doctrine
   c. Teller Amendment
   d. Writings of Alfred Mahan

6. The excerpt best reflects which of the following?
   a. Heightened public debates over America's role in the world
   b. The moral obligation of the wealthy to help the less fortunate
   c. The use of Social Darwinism to justify the success of nations
   d. The perception that the Western frontier was "closed"

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

"[T]he substance of the Draft Covenant . . . [included the] guarantee of independence and territorial integrity . . . and asserted the right of the League of Nations to concern itself about 'war or threat of war' anywhere in the world. Articles XII through XV established procedures for mediation and arbitration and called for a 'Permanent Court of International Justice.' Article XVI laid down the League's authority to impose economic boycotts and recommend the use of force. . . . [A]ll these features of Wilson's . . . were in the Draft Covenant. . . . It was a remarkable achievement, and the lion's share of the credit belonged to Wilson."

John Milton Cooper Jr., *Woodrow Wilson: A Biography*, 2009

"The U.S. and transnational labor and Left debate over the Versailles Treaty, League [of Nations] and ILO [International Labor Organization] exposed fundamental contradictions in Wilsonian internationalism. . . . [F]rom the perspective of Left activists, a League comprised of the same government elites who had caused World War I was unlikely to fundamentally alter the imperial status quo in ways that would advance the interests of the world's workers or ensure future peace and prosperity. . . . Socialist and labor activists unmasked the Wilson administration's tendencies toward . . . the belief that other nations could be immeasurably improved by reshaping them in an American mold."

Elizabeth McKillen, *Making the World Safe for Workers: Labor, the Left and Wilsonian Internationalism*, 2013

1. Using the two excerpts above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE major difference between Cooper's and McKillen's historical interpretations of the effectiveness of American foreign policy in the immediate aftermath of the First World War.
   - **b.** Briefly explain how ONE specific historical event or development in the period 1918 to 1922 not directly mentioned in the excerpts could be used to support Cooper's argument.
   - **c.** Briefly explain how ONE specific historical event or development in the period 1918 to 1922 not directly mentioned in the excerpts could be used to support McKillen's argument.
2. Answer (a), (b), and (c).
   - **a.** Briefly explain why ONE of the following developments was the most significant factor contributing to American involvement in World War I.
     - German submarine policy
     - Cultural ties between the United States and the Allies
     - Financial and commercial interests
   - **b.** Provide ONE historical example to support your argument in (a).
   - **c.** Provide specific evidence why ONE of the other options was a less influential factor contributing to American involvement in the war.
3. Answer (a), (b), and (c).
   - **a.** Briefly explain why ONE of the following developments was the most significant change in the United States that resulted from American involvement in World War I.
     - Restrictions on civil liberties
     - Advances for womens' rights
     - A postwar rejection of foreign commitments
   - **b.** Provide ONE specific historical event or development to support your argument in (a).
   - **c.** Provide specific evidence why ONE of the other developments represented a less significant change in the United States that resulted from American involvement in World War I.

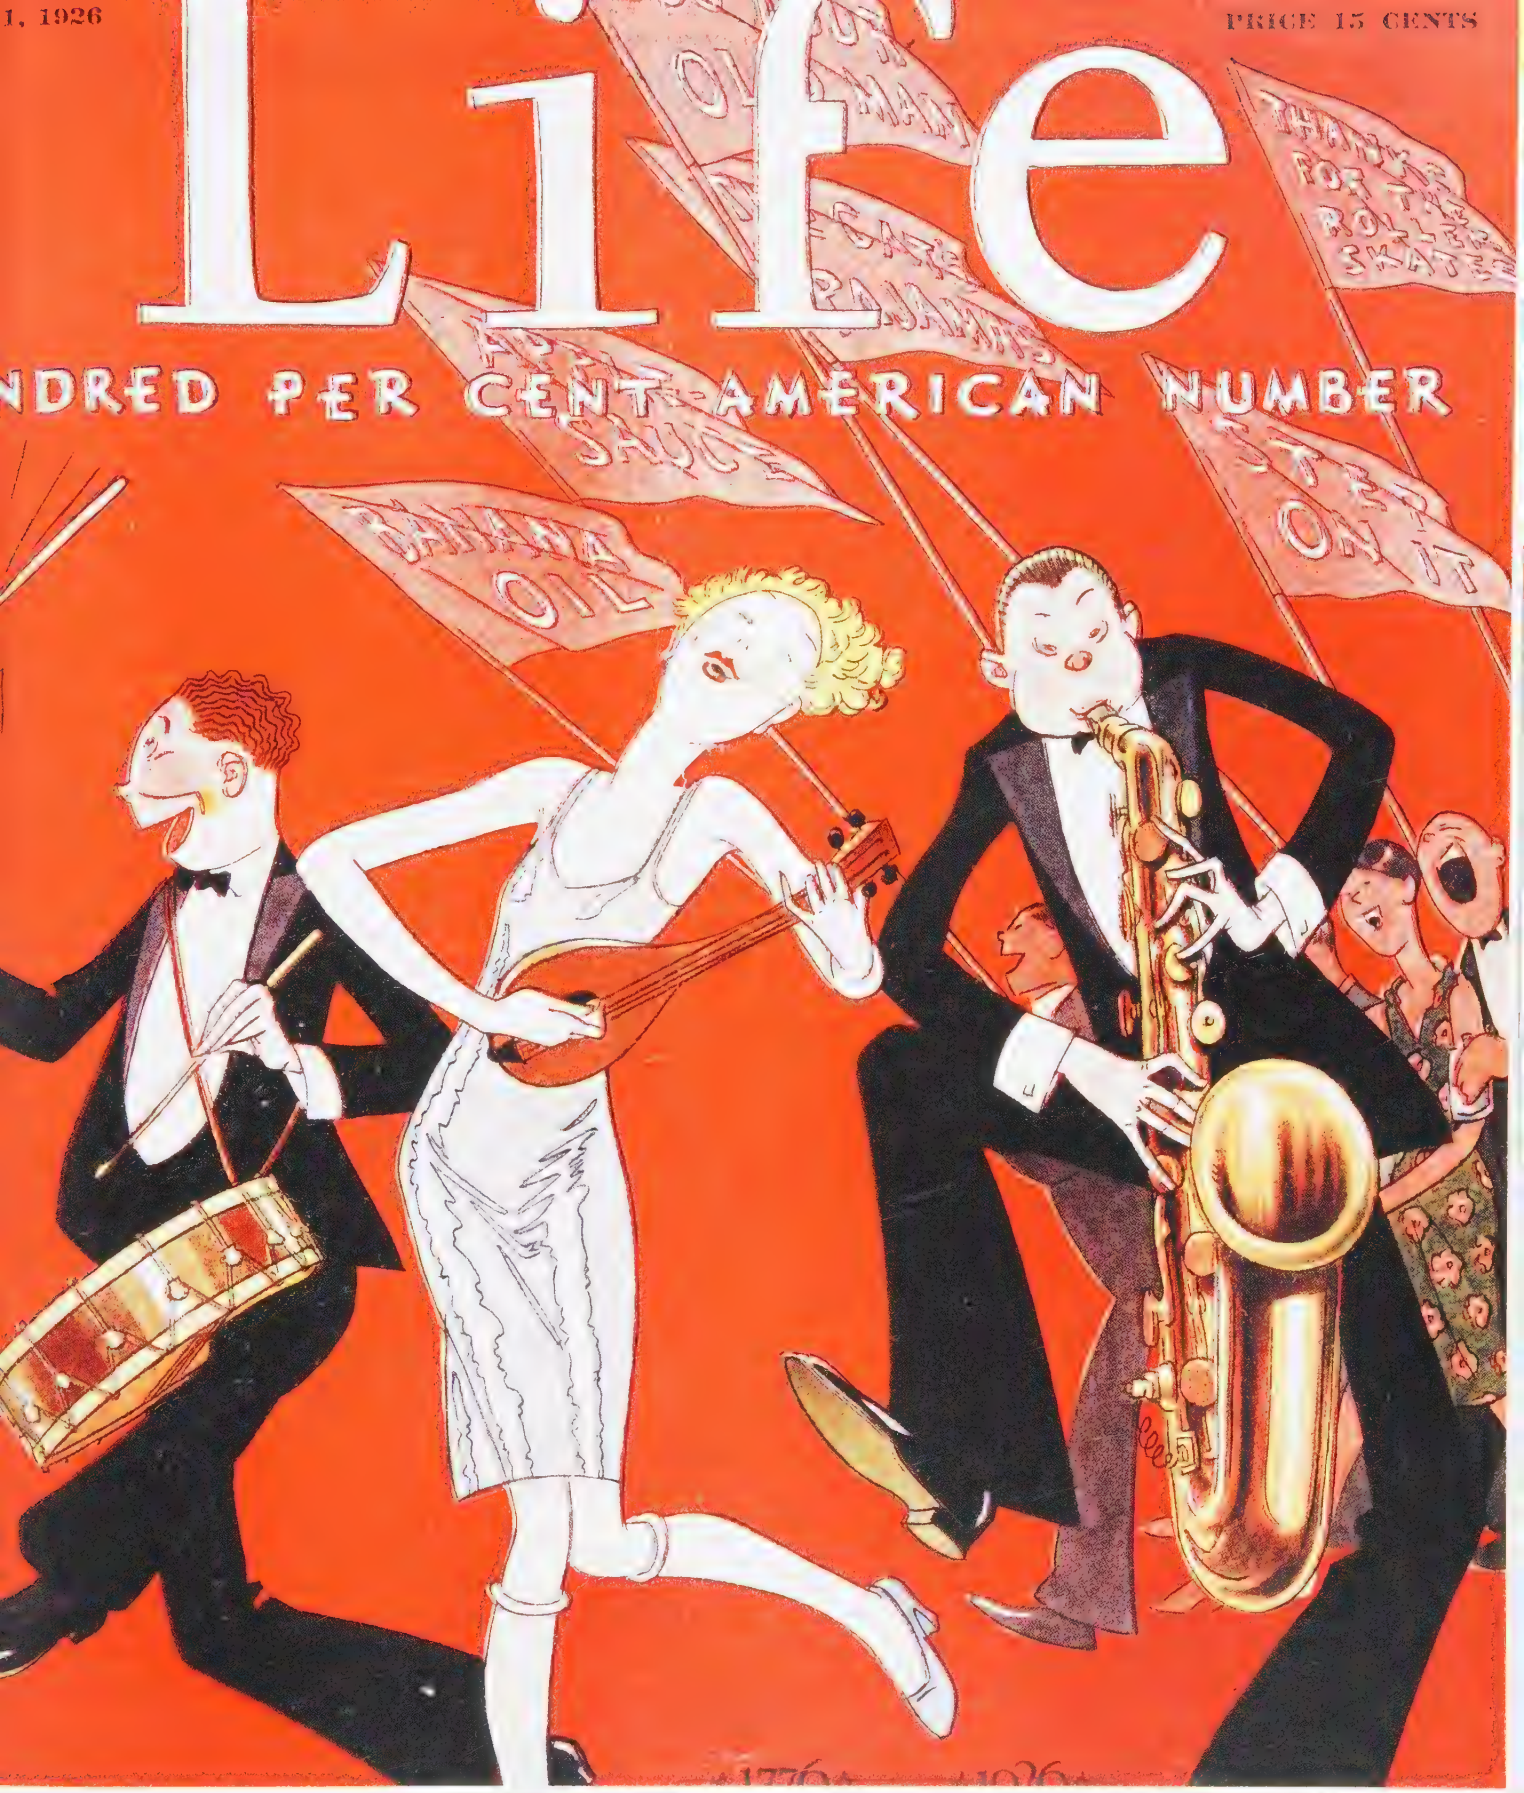
AP LEARNING FOCUS

What conflicts in culture and politics arose in the 1920s, and how did economic developments in that decade help cause the Great Depression?

For the United States, World War I was neither the ghastly and devastating experience that it was for Europe nor the profoundly disillusioning one it was in many other parts of the world. Yet the war years marked a crucial historical divide for Americans, and the country entered a distinctly new era after 1919. Progressivism flagged and gave way to a business-centered philosophy of government. The manufacturing economy surged and delivered a cornucopia of consumer goods to a growing middle class. In the halls of government and in the streets, Americans clashed over what a pluralist, modern society should look like — who got to define what it meant to be "American"? In the complex and turbulent years between World War I and the coming of a new era of reform in 1933, these were the defining themes: limited government, consumerism, and cultural warfare.

In this decade and a half, economic growth and cultural conflict revealed patterns in American life that would hold for the remainder of the twentieth century. The nation had become urban. Mass media and Hollywood shaped popular culture. The automobile became an affordable mass commodity, even a necessity, changing forever the way people lived. Many Americans celebrated the dawning of what they called a "new era," defined by freer individual lifestyles, convenient consumer technologies, and "modern" ways of thinking. Others saw this emerging modernity as a threat to their own social and cultural influence. Groups of native-born, Protestant Americans, for instance, battled with immigrants to define the meaning of race, religion, and national belonging. Many white Americans lashed out at black Americans — in often deadly ways — over economic opportunity. And Catholic, Protestant, Jewish, and secular Americans clashed over everything from the prohibition of alcohol to the teaching of evolution.

By the end of the 1920s, political and cultural divides had hardened, and economic abundance proved short-lived, as the nation slid from consumer boom to Great Depression bust in 1929. The United States had grown more affluent, but it was an unsettled affluence. If the question in the decades of populist and progressive insurgent movements had been "whose government?" in the 1920s the question took on a broader cast: "whose country?"



Celebrating the Fourth of July, 1926 This *Life* magazine cover celebrates two famous symbols of the 1920s: jazz music and the "flapper," in her droopy leggings and scandalously short skirt, who loves to dance to its rhythms. The flags at the top record the latest slang expressions, including "so's your old man" and "step on it" ("it" being the accelerator of an automobile, in a decade when cars were America's hottest commodity). Americans embraced new and exuberant forms of consumption and material well being in the 1920s, but in an age of alcohol prohibition and the rise of the Ku Klux Klan, they also fought with one another over deeply held beliefs and values.

CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and identify the links among related events.

- **1915** New Ku Klux Klan founded; United States occupies Haiti
- **1916** United States occupies Dominican Republic
- **1917** Race riot in East St. Louis, Illinois
- **1919** Race riot in Chicago; Boston police strike; Palmer raids
- **1920** Height of Red Scare; Eighteenth Amendment (prohibition) takes effect; Warren Harding wins presidency
- **1921** Race riot in Tulsa, Oklahoma; Sheppard-Towner Federal Maternity and Infancy Act
- **1923** President Harding dies; Calvin Coolidge assumes presidency; Race riot in Rosewood, Florida; Teapot Dome scandal; Equal Rights Amendment first introduced in Congress
- **1924** National Origins Act; Coolidge wins presidential election against Democrats and La Follette's Progressive Party; First suburban shopping center opens outside Kansas City, Missouri
- **1925** Scopes "monkey trial"; Alain Locke's *The New Negro*
- **1927** Sacco and Vanzetti executed
- **1928** Herbert Hoover wins presidency
- **1929** Stock market crashes precipitate Great Depression

Resurgent Conservatism

World War I brought an end to the long period of reform stretching from the 1880s to the 1910s (Chapter 19). A resurgent political conservatism emerged in the war's aftermath. Progressivism survived, but limited government was the dominant motif of national political life from 1919 to the election of Franklin D. Roosevelt in 1932. In place of progressives' call for economic regulation, business priorities now came to the fore. President Calvin Coolidge declared, "The man who builds a factory builds a temple. The man who works there worships there." The same theme prevailed in continued U.S. foreign policy: American business needs were the top priority. The single year of 1919 set the tone for this resurgent conservatism. An antiradical Red Scare, a massive strike wave, and white violence against African Americans together roiled the country and slowed the pace of social change.

The Red Scare

The war effort, overseen by a Democratic administration sympathetic to organized labor, had increased the size and power of labor unions. Membership in the American Federation of Labor (AFL) grew by a third during World War I, reaching more than 3 million by war's end. Workers' expectations also rose as the war economy brought higher pay and better working conditions. To extend these gains, in the first year after the armistice, 1919, more than 4 million wage laborers — one in every five — went on strike, a proportion never since equaled. A walkout of shipyard workers in Seattle sparked a general strike that shut down the entire city. Another strike disrupted the steel industry, as 350,000 workers demanded union recognition and an end to twelve-hour shifts. Most strikes were about basic economic issues — pay and hours — rather than revolution, but the bold exercise of worker power fueled dire warnings of rising radicalism from labor's opponents.

That same year, when the Soviet Union's new Bolshevik leaders founded the Third International with the intent to foster revolutions abroad, some Americans raised fears that the U.S. harbored dangerous radicals. Wartime hatred of Germans was replaced by hostility toward Bolsheviks (labeled "Reds," after the color of communist flags). In a telling example, Ole Hanson, Seattle's mayor during the general strike, wrote a book called *Americanism Versus Bolshevism* and toured the country lecturing about the

threat of revolution. Under the banner of "one hundred percent Americanism," groups such as the newly formed American Legion decried socialists, communists, and the Industrial Workers of the World (IWW) as un-American. Ironically, American communists remained few in number and had little political influence. Of the 63 million adults in the United States in 1920, no more than 13,000 belonged to either the fledgling U.S. Communist Party or the Communist Labor Party.

The strike wave combined with anti-Bolshevism to create fertile conditions for repression. When alert postal workers discovered thirty-four mail bombs addressed to government officials in April 1919, and in June a bomb detonated outside the Washington town house of Attorney General A. Mitchell Palmer, the repression came. Palmer escaped unharmed, but he used the incident to fan public fears, precipitating a convulsive **Red Scare**. He set up an antiradicalism division in the Justice Department and appointed his assistant J. Edgar Hoover to direct it; in 1935, it became the Federal Bureau of Investigation (FBI). In November, Palmer's agents stormed the headquarters of radical organizations. The dragnet captured thousands of immigrants who had committed no crimes but who held anarchist or revolutionary beliefs. Lacking the protection of U.S. citizenship, many were deported without indictment or trial. The **Palmer raids** peaked on a notorious night in January 1920, when federal agents invaded homes and meeting halls, arrested six thousand citizens and aliens (immigrants without U.S. citizenship), and denied the prisoners access to legal counsel.

The Red Scare's fusion of antiradicalism and anti-immigrant sentiment had dire consequences in the case of Sacco and Vanzetti. In May 1920, at the height of the Red Scare, police arrested Nicola Sacco, a shoemaker, and Bartolomeo Vanzetti, a fish peddler, for the murder of two men during a robbery of a shoe company in South Braintree, Massachusetts. Sacco and Vanzetti were Italian immigrants and self-proclaimed anarchists who had evaded the draft. Convicted of the murders, Sacco and Vanzetti sat in jail for six years while supporters appealed their verdicts. In 1927, Judge Webster Thayer denied a motion for a new trial and sentenced them to death. Scholars still debate their guilt or innocence. But the case was clearly biased by prosecutors' emphasis on their ties to radical groups and perhaps on their foreign birth. The execution of Sacco and Vanzetti was one of the ugly scars left by the hostilities of the Red Scare.

Fear of "Bolshevism," 1919 This cartoon from the *Cleveland Plain Dealer* in Cleveland, Ohio, reflects nationwide panic over the general strike by 110 unions that paralyzed Seattle in February 1919. Opponents of radical labor unrest had a deeper fear: the Bolshevik Revolution in Russia, resulting in creation of the USSR, had brought into existence the world's first enduring communist state. By crushing unions in Seattle with a club of "Law and Order," this image suggests that Uncle Sam could beat back the global communist threat. This aspect of the 1919 Red Scare prefigured, at an early date, the anxieties of the Cold War era. Ohio Historical Society Red Dawn RD

AP® EXAM TIP

Explain the relationship between fear of radicalism and the Red Scare.

Racial Backlash

Other forms of repression escalated during and after World War I. The Great Migration drew hundreds of thousands of African Americans from the South to northern and midwestern industrial cities, where they secured wartime jobs and found they could vote and use their new economic clout to build community institutions and work for racial justice. The arrival of these southern migrants during the war deepened existing racial tensions, as African Americans competed with whites — including recent immigrants from Europe — for jobs and scarce housing.

Racism turned such conflicts into violent confrontations during the war. One of the deadliest riots in American history occurred in 1917 in East St. Louis, Illinois, where rampaging whites burned more than 300 black homes and murdered between 50 and 150 black men, women, and children (the exact death toll remains unknown). "This is

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

Chicago Race Riot Racial violence exploded in Chicago during the summer of 1919. The riot was sparked when a black teenager, who had violated the unofficial segregation of the city's beaches, was stoned to death by a group of white youths. A week of violent rioting led to 15 white and 23 black deaths and the destruction of more than 1,000 black residences. In this photograph taken during the rioting, white children cheer outside an African American home that the mob had set on fire. Bettmann/Getty Images

a crime against the laws of humanity," said Marcus Garvey, the influential black leader of the Universal Negro Improvement Association.

Tensions also increased after the war because African Americans emerged from the conflict determined to achieve citizenship rights. Millions had loyally supported the war effort, and 370,000 had served in uniform. Returning veterans, empowered by their military service, often refused to accept second-class treatment at the hands of whites, whether North or South. The black man, one observer wrote, "realized that he was part and parcel of the great army of democracy. . . . With this realization came the consciousness of pride in himself as a man, and an American citizen."

These developments sparked white violence. In what became known as **Red Summer** because of bloody battles in more than twenty-four cities, Chicago endured five days of rioting in July 1919 after white youths stoned a black teenager to death on a Lake Michigan beach. By September, the national death toll from racial violence that year reached 120. There were also 78 lynchings in 1919, up from 48 in 1917. That number included several murders of returning black soldiers in uniform.

AP® EXAM TIP

Evaluate the impact of violent racial confrontations on African American communities in the early twentieth century.

Attacks on African Americans continued after 1919. The oil boomtown of Tulsa, Oklahoma, was the site of a horrific incident in June 1921. Sensational, false reports of an alleged rape helped incite white mobs who resented growing black prosperity. Anger focused on the 8,000 residents of Tulsa's prosperous Greenwood district, locally known as "the black Wall Street." The mobs — helped by National Guardsmen, who arrested African Americans who resisted — burned thirty-five blocks of Greenwood and killed several dozen people. The city's leading paper acknowledged that "semi-organized bands of white men systematically applied the torch, while others shot on sight men of color." It took a decade for black residents to rebuild Greenwood. And in the January 1923 Rosewood Massacre, mobs of furious whites in a small Florida town torched houses and hunted down African Americans, killing at least six. Police and state authorities refused to intervene, and the town of Rosewood vanished from the map.

The Business of America

African Americans were not the only ones who faced challenges to their hard-won gains. So did labor unions. Following the strike wave of 1919, business leaders and their political allies fought back against organized labor, which entered a decade of decline. Across the country, employers advocated what they called the **American Plan** of employment — refusing to negotiate with unions. Facing a strike of Boston's police force, Massachusetts governor Calvin Coolidge illustrated this defiant approach by declaring, "There is no right to strike against the public safety by anybody, anywhere, anytime." A majority of the public supported the governor, and Republicans rewarded Coolidge by nominating him for the vice-presidency in 1920.

Decisions by the Supreme Court were an additional factor in organized labor's decline. In *Coronado Coal Company v. United Mine Workers of America* (1925), the Court ruled that a striking union could be penalized for illegal restraint of trade. Such

decisions, along with the aggressive antiunion campaigns under the American Plan, caused membership in labor unions to fall from 5.1 million in 1920 to 3.6 million in 1929—just 10 percent of the nonagricultural workforce. Labor's long-sought goal of organizing the nation's workforce retreated further from realization.

In place of unions, the 1920s marked the heyday of **welfare capitalism**, a system of labor relations that stressed a company's responsibility for its employees' well-being. Employers hoped this would build a loyal workforce and head off labor unrest. Automaker Henry Ford, among others, pioneered this system before World War I, famously paying $5 a day. Ford also offered a profit-sharing plan to employees who met the standards of its Sociological Department, which investigated to ensure that workers' private lives met the company's moral standards. At a time when government unemployment compensation and Social Security did not exist, General Electric and U.S. Steel provided health insurance and old-age pensions. Other employers built athletic facilities and selectively offered paid vacations. Such plans covered only about 5 percent of the industrial workforce, however, and when faced with new financial pressures in the late 1920s, even Henry Ford cut back his $5 day. In the tangible benefits it offered workers, welfare capitalism had distinct limitations.

AP® PRACTICES & SKILLS

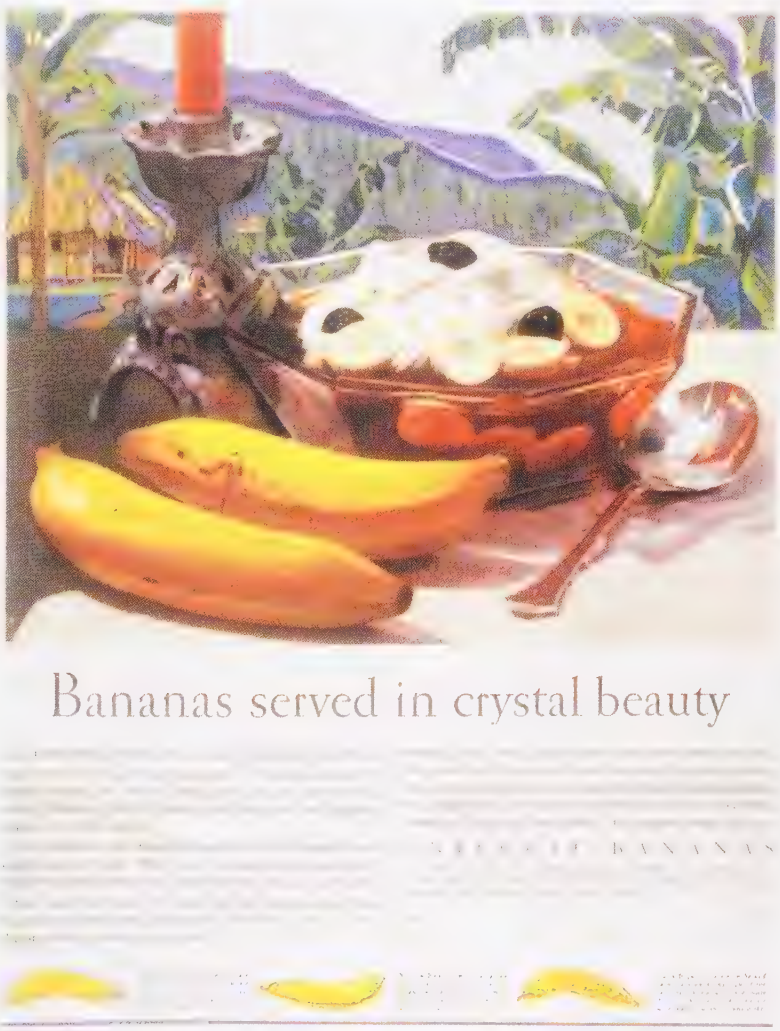
CONTEXTUALIZATION

What role did World War I play in the Red Scare, antiblack violence, and labor defeats, and what connections might we draw among these events?

Dollar Diplomacy American business interests shaped foreign affairs as well. The thrust of U.S. foreign policy after World War I continued to be in Latin America. There, under a policy initiated by Taft and continued under Wilson, presidents worked to advance U.S. business interests, especially by encouraging private banks to make foreign loans. Policymakers hoped loans would stimulate growth and increase demand for U.S. products in developing markets. Bankers, for their part, wanted government guarantees of repayment in countries they perceived as weak or unstable.

Officials provided such assurance. In 1922, for example, when American banks offered an immense loan to Bolivia (at a hefty profit), State Department officials pressured the South American nation to accept it. A similar arrangement was reached with El Salvador's government in 1923. In other cases, the United States intervened militarily, often to force repayment of debt. To implement such policies, the U.S. Marines occupied Nicaragua almost continuously from 1912 to 1933, the Dominican Republic from 1916 to 1924, and Haiti from 1915 to 1934. White Americans viewed these nations through demeaning racial stereotypes. They regarded Haitians as primitive savages or childlike people who needed U.S. guidance and supervision. One commander testified that his troops saw themselves as "trustees of a huge estate that belonged to minors. . . . The Haitians were our wards."

At home, critics denounced loan guarantees and military interventions as **dollar diplomacy**. The term was coined in 1924 by Samuel



American Companies Abroad In the 1920s, U.S. foreign policy was increasingly devoted to protecting the overseas investments of American companies. United Fruit was one of the many American companies that found opportunities for investment in South America in the 1920s and that introduced tropical foods to the United States consumer market ("From the Tropics to Your Table"). The company used elaborate and informative color advertisements to sell its products. Bananas were sufficiently new to that market that the ads explained to consumers how to store them and how to tell when bananas were ripe ("Just watch for flecks of brown on the golden skin"). Image courtesy of The Advertising Archives

Guy Inman, a Disciples of Christ missionary who toured U.S.-occupied Haiti and the Dominican Republic. "The United States," Inman declared, "cannot go on destroying with **impunity** the sovereignty of other peoples, however weak." African American leaders also denounced the Haitian occupation. On behalf of the International Council of Women of the Darker Races and the Women's International League for Peace and Freedom, a delegation conducted a fact-finding tour of Haiti in 1926. Their report exposed, among other things, the sexual exploitation of Haitian women by U.S. soldiers.

AP® EXAM TIP

Discuss why the concept of "dollar diplomacy" was so controversial.

Inman and other critics put dollar diplomacy on the defensive by the late 1920s. The poor results spoke for themselves. Loans got repaid, securing bankers' profits, but the proceeds often ended up in the pockets of local elites; U.S. policies failed to build broad-based prosperity overseas. Military intervention had even worse results. In Haiti, for example, the marines crushed peasant protests and helped the Haitian elite consolidate power. U.S. occupation thus contributed to the harsh dictatorships that Haitians endured through the rest of the twentieth century. President Franklin Roosevelt initiated the "Good Neighbor" policy with respect to Latin America in 1933 in an effort to reverse these ill effects.

AP® PRACTICES & SKILLS

CAUSATION

What were the economic goals of U.S. foreign policymakers in the 1920s, and what were their outcomes?

Dollar diplomacy guided U.S. interests in Latin America, but behind the scenes many diplomats considered East Asia more critical to long-term American foreign policy. To ease growing tensions there, the United States signed a major treaty in 1922, known as the Four Powers Act, with Japan, Great Britain, and France, limiting naval strength in the Pacific. A diplomatic triumph for President Harding, the treaty failed to address underlying East-West international rivalries because it reinforced European and American naval superiority over Japan. That island nation would gradually come to see the United States, not the traditional European powers, as its principal **adversary** for dominance in Asia.

Politics of Normalcy

The postwar conservative turn was particularly evident in national politics. With President Woodrow Wilson ailing from a stroke, in 1920 Democrats nominated Ohio governor James M. Cox for president, on a platform calling for U.S. participation in the League of Nations and continuation of Wilson's progressivism. Republicans, led by their probusiness wing, tapped genial Ohio senator Warren G. Harding. In a dig at Wilson's idealism, Harding promised "not **nostrums** but normalcy." On election day, he won in a landslide, beginning an era of Republican political dominance that lasted until 1932.

AP® EXAM TIP

Compare the associated state to the idea of government activism supported by Progressives.

Harding's most energetic appointee was Secretary of Commerce Herbert Hoover, well known as head of the wartime Food Administration. Under Hoover's direction, the Commerce Department helped create two thousand trade associations representing companies in almost every major industry. Government officials worked closely with the associations, providing statistical research, suggesting industry-wide standards, and promoting stable prices and wages. Hoover hoped that through voluntary business cooperation with government — an **associated state** — he could achieve what progressives had sought through governmental regulation.

Other changes were afoot in Washington, D.C. The practice of lobbying Congress was a long-standing tradition among businesses, trade unions, and other organized interests. That practice grew in scale and became more formal and systematic in the 1920s. Noting the change, one observer joked that "the lobbyists were so thick they were constantly falling over one another." Hundreds of groups set up offices to lobby members of Congress — from religious and civic organizations to the Anti-Saloon League — but business took the lead. The National Association of Manufacturers, the Chamber of Commerce, and public utilities (water and electric companies), among many other business organizations, assumed an ever-larger role in the legislative process.

More malign links between government and corporate interests were soon revealed. When President Harding died suddenly of a heart attack in August 1923, evidence was

just emerging that parts of his administration were riddled with corruption. The worst scandal concerned secret leasing of government oil reserves in **Teapot Dome**, Wyoming, and Elk Hills, California, to private companies. Secretary of the Interior Albert Fall was eventually convicted of taking over $300,000 in bribes and became the first cabinet officer in U.S. history to serve a prison sentence.

Vice President Calvin Coolidge became president upon Harding's death. He maintained Republican dominance, calling for limited government and tax cuts for business while campaigning for election in his own right in 1924. Rural and urban Democrats, deeply divided over such issues as prohibition and immigration restriction, deadlocked at their national convention; after 102 ballots, delegates finally nominated John W. Davis, a Wall Street lawyer. Coolidge easily defeated Davis and staved off a challenge from Senator Robert M. La Follette of Wisconsin, who tried to resuscitate the Progressive Party. The 1924 Progressive platform called for stronger government regulation at home and international efforts to reduce weapons production and prevent war. "Free men of every generation," La Follette had once declared in a speech, "must combat the renewed efforts of organized force and greed." In the end, Coolidge received 15.7 million votes to Davis's 8.4 million and La Follette's 4.9 million.

As the progressive reform ethos faded and a conservative impulse grew stronger, the formative period between 1919 and 1932 revealed important tendencies in national political life. Antiradicalism became more pervasive. Business and government became more cooperative. Lobbying surged as a feature of the legislative process. Each development would remain important throughout the remainder of the twentieth century.

IN YOUR OWN WORDS How and why did the United States take a conservative turn in the 1920s?

To see a longer excerpt of the Progressive Party platform, along with other primary sources from this period, see ***Sources for America's History***.

AP® PRACTICES & SKILLS

CAUSATION

In what ways did business and government become more closely linked following World War I?

Making a Modern Consumer Economy

Spurred by rapid expansion during the war, and benefitting from earlier innovations in mass production such as the assembly line, American business thrived in the 1920s. Corporations expanded more and more into overseas markets, while at home a truly national consumer culture — emphasizing convenience, leisure, and fun — took shape. The years between 1922 and 1929 mark a crucial turning point in the emergence of a mass consumer economy in the United States.

AP® EXAM TIP

The rise of mass-produced consumer culture in the 1920s is a "must know" for the AP® exam.

Postwar Abundance

Productivity proved to be the key. Manufacturing efficiencies accumulated since the turn of the century — the assembly line, mechanization, electrification — made possible enormous increases in productivity. If an American worker who made 6 toasters a day in 1920 fell asleep and woke up in 1929, she or he could now make 10 toasters a day — an incredible 66 percent more. Also, national per capita income rose an impressive 24 percent in that period. Productivity gains and rising incomes, especially among the middle class, meant an explosion of consumer goods. From toasters and radios to telephones, vacuum cleaners, and automobiles, a vast array of consumer products became more affordable. Americans bought them in droves, spurring an economic boom that lasted until the onset of the Great Depression in 1929.

Large-scale corporations continued to replace small business in many sectors of the economy. By 1929, through successive waves of consolidation, the two hundred largest businesses had come to control almost half of the country's nonbanking corporate wealth. The greatest number of mergers occurred in rising industries such as chemicals (with DuPont in the lead) and electrical appliances (General Electric), as well as among

Wall Street banks. Aided by Washington's dollar diplomats, U.S. companies exercised growing global power. Seeking cheaper livestock, giant American meatpackers opened plants in Argentina; the United Fruit Company developed plantations in Costa Rica, Honduras, and Guatemala; General Electric set up production facilities in Latin America, Asia, and Australia.

Despite the boom, the U.S. economy had areas of significant weakness throughout the 1920s. Agriculture, which still employed one-fourth of all American workers, never fully recovered from the postwar recession. Once Europe's economy revived, its farmers flooded world markets with grain and other farm products, causing agricultural prices to fall. Other industries, including coal and textiles, languished for similar reasons. As a consequence, many rural Americans shared little of the decade's prosperity. The bottom 40 percent of American families earned an average annual income of only $725 (about $10,000 today). Many, especially rural tenants and sharecroppers, languished in poverty and malnutrition.

Consumer Culture

In middle-class homes, Americans of the 1920s embraced a consumer ethos. They sat down to a breakfast of Kellogg's corn flakes before getting into Ford Model T's to drive to work or shop at Safeway. On weekends, they might head to the local theater to see the newest Charlie Chaplin film. By 1929, electric refrigerators and vacuum cleaners came into use in affluent homes; 40 percent of American households owned a radio. The advertising industry reached new levels of ambition, entering what one historian calls the era of the "aggressive hard sell." The 1920s gave birth, for example, to fashion modeling and style consulting. "Sell them their dreams," one radio announcer urged advertisers in 1923. "People don't buy things to have things. . . . They buy hope — hope of what your merchandise will do for them."

Many poor and affluent families shared one thing in common: they stretched their incomes, small or large, through new forms of borrowing such as auto loans and installment plans. "Buy now, pay later," said the ads, and millions did. Anyone, no matter how rich, could get into debt, but **consumer credit** was particularly perilous for those living on the economic margins. In Chicago, one Lithuanian man described his neighbor's situation: "She ain't got no money. Sure she buys on credit, clothes for the children and everything." Such borrowing brought consumer merchandise within reach of more and more Americans, but the accumulated debt also turned out to be a factor in the bust of 1929.

Hollywood The American actress Marion Davies, playing a part in which she impersonates her male cousin to defeat a nefarious plot, in the 1926 silent film, *Beverly of Grasustark*. In the decade of the 1920s, Hollywood became the center of moviemaking in the world, and stars like Davies, Charlie Chaplin, Mary Pickford, Rudolph Valentino, and many others achieved both national and global popularity. Sound films were first introduced in the late 1920s and once the technology was perfected, they quickly became standard in the industry.

Hollywood Movies became a centerpiece of consumer culture. In the 1910s, the moviemaking industry had begun relocating to southern California to take advantage of cheap land, sunshine, and varied scenery within easy reach. The large studios — United Artists, Paramount, and Metro-Goldwyn-Mayer — were run mainly by Eastern European Jewish immigrants like Adolph Zukor, who arrived from Hungary in the 1880s. Starting with fur sales, Zukor and a partner then set up five-cent theaters in Manhattan. "I spent a good deal of time watching the faces of the audience," Zukor recalled. "With a little experience I could see, hear, and 'feel' the reaction to each melodrama and comedy." Founding Paramount Pictures, Zukor signed emerging stars and produced successful feature-length films.

By 1920, **Hollywood** reigned as the world's movie capital, producing nearly 90 percent of all films. Large, ornate movie palaces attracted both middle-class and working-class audiences. Idols such as Rudolph Valentino, Mary Pickford, and Douglas Fairbanks set national trends in style. Thousands of young women followed the lead of actress Clara Bow, Hollywood's famous **flapper**, who flaunted her boyish figure. Decked out in knee-length skirts, flappers shocked the older generation by smoking and wearing makeup. They represented only a tiny minority of women, but thanks to the movies and advertising, flappers became influential symbols of women's sexual and social emancipation. In cities, young immigrant women eagerly bought makeup and the latest flapper fashions.

Hollywood in Europe

European film studios struggled after World War I to reach audiences who had fallen in love with American movies. Working-class Europeans, in particular, preferred Hollywood's offerings to the films produced in Europe. In this 1928 article from a cinematography journal, German expressionist filmmaker Erich Pommer suggested new strategies for expanding an audience for European films. Expressionists, influenced by romanticism and modernism, explored dark themes such as spiritual crisis and insanity. (A famous example of expressionist painting is Edvard Munch's *The Scream*.) Pommer worked for American studios and later fled to the United States after the rise of Hitler.

The towering importance of the American motion picture on the world's markets cannot be safely explained by the unlimited financial resources at the disposal of the American producers. . . . Its main reason is the mentality of the American picture, which, notwithstanding all attacks and claims to the contrary, apparently comes nearest to the taste of international cinema audiences.

. . . The specific and unique element of the American film is the fact of its being absolutely uncomplicated. Being what is called "naïve" it knows no problems. . . .

Universal Appeal. It is really preferable to have a picture too light rather than too heavy, because in the latter case there is a danger that the public will not understand the story. This is the worst thing that can happen with a picture. . . .

Spectacular Appeal. The international appeal of a picture has its foundation in a story. It is totally independent of the capital invested and of the splendor and luxury used in its production. The fact that in most cases the supers and monumental pictures have proved to be such international successes, does not disprove this claim. Such productions always have a simple story of universal appeal, because it is simply impossible to use spiritual thoughts and impressions of the soul in a picture deluxe. The splendour in such production is not merely created for decoration — it is its outstanding purpose. . . . But splendour means show, and a show is always and everywhere easy to understand. . . .

SOURCE: Excerpt from "The International Picture: A Lesson on Simplicity," by Erich Pommer, from *"Film Europe" and "Film America": Cinema, Commerce and Cultural Exchange 1920–1939*, edited by Andrew Higson and Richard Maltby, 1999, ISBN: 978-0-85989-546-0. Used by permission of Exeter University Press.

QUESTIONS FOR ANALYSIS

1. How does Pommer characterize the attraction of popular American films for European audiences? What does he mean when he calls those films "naïve"?
2. How does Pommer propose to produce German films that will compete with Hollywood? What constraints and challenges did he face?

Jazz stars helped popularize the style among working-class African Americans. Mexican American teenagers joined the trend in major cities such as San Antonio and Los Angeles.

Politicians quickly grasped the publicity value of American radio and film to foreign relations. In 1919, with government support, General Electric spearheaded the creation of Radio Corporation of America (RCA) to expand U.S. presence in foreign radio markets. RCA — which had a federal appointee on its board of directors — emerged as a major provider of radio transmission in Latin America and East Asia. Meanwhile, by 1925, American films made up 95 percent of the movies screened in Britain, 80 percent in Latin America, and 70 percent in France (AP® America in the World). The United States was experimenting with what historians call **soft power** — the exercise of popular cultural influence — as radio and film exported the American standard of consumption to the world.

AP® EXAM TIP

Analyze the influence of mass media on the rise of a national culture in the 1920s.

The Automobile and Suburbanization

No possession proved more popular than the automobile, a showpiece of modern consumer capitalism that revolutionized American life. The Ford Motor Company introduced the first widely affordable automobile, the Model T, in 1908, but the industry experienced its most dramatic growth in the 1920s. Car sales played a major role in the decade's economic boom: in one year, 1929, Americans spent $2.58 billion on

Automobiles Michigan Boulevard in Chicago in 1930. In a single generation, automobiles transformed American cities and the countryside alike. As more and more Americans made cars their primary form of transportation, auto travel created a booming business in gas stations, roadside motels, campgrounds, and sightseeing destinations. But cars also choked city streets that were once the province of horse-drawn carriages and electric trains. Cities needed new roads, traffic signs, and rules governing traffic, and the booming automobile industry stimulated highway construction across the country. The automobile was a technology but also a consumer item that changed virtually every aspect of American life. ullstein bild/Getty Images.

automobiles. By the end of the decade, they owned 26 million cars—about 80 percent of the world's automobiles—or an average of one for every five people (it was one for every forty in France). The number of cars on American roads tripled in ten years.

The auto industry's exuberant expansion rippled through the economy. It stimulated steel, petroleum, chemical, rubber, and glass production and, directly or indirectly, created 3.7 million jobs. Highway construction became a billion-dollar-a-year enterprise, financed by federal subsidies and state gasoline taxes. Car ownership spurred urban sprawl and, in 1924, the first suburban shopping center: Country Club Plaza outside Kansas City, Missouri. But cars were expensive, and most Americans bought them on credit. Alfred Sloan, the president of General Motors and Henry Ford's primary competitor, founded the first national consumer credit agency to help Americans buy more Chevrolets. Other car companies followed. Amid the boom of the 1920s, few worried whether purchasing such expensive items on credit was a good idea. When asked why her family purchased a car before installing indoor plumbing, one woman replied simply, "Why, you can't go to town in a bathtub."

AP® EXAM TIP

Recognizing the impact of the automobile on American cultural, social, and economic life is critical to success on the AP® exam.

Cars changed the way Americans spent their leisure time, as proud drivers took their machines on the road. An infrastructure of gas stations, motels, and drive-in restaurants soon catered to drivers. Railroad travel faltered. The American Automobile Association, founded in 1902, estimated that by 1929 almost a third of the population took vacations by car. "I had a few days after I got my wheat cut," reported one Kansas farmer, "so I just loaded my family . . . and lit out." An elite Californian complained that automobile travel was no longer "aristocratic." "The clerks and their wives and sweethearts," observed a reporter, "driving through the Wisconsin lake country, camping at Niagara, scattering tin cans and pop bottles over the Rockies, made those places taboo for bankers."

Rising middle-class incomes, new forms of borrowing, and the automobile combined powerfully in the 1920s to produce a major suburban housing boom. Cars were key. The nineteenth-century "streetcar suburbs" allowed the nation's affluent to live outside central cities, but in communities narrowly built along the tracks. After World War I, automobile suburbs grew like the crabgrass of suburban lawns—fast and everywhere. "Cities are spreading out," *National Geographic* announced in a 1923 special feature. Long Island's Nassau County, a major suburb of New York City, tripled in population, and the fifteen fastest-growing towns in Connecticut were all suburbs.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

How did the radio, Hollywood movies, and the automobile exemplify the opportunities and the risks of 1920s consumer culture?

Spreading out happened everywhere—from New York to Chicago, St. Louis to Seattle—but the growth of Los Angeles epitomized the new role of automobiles in American cities. Housing subdivisions opened monthly across a vast expanse of southern California, and the automobile gave birth to an explosive metropolis. Its population more than doubled in the 1920s alone, and Los Angeles went from the tenth largest American city to the fifth in just ten years. Southern California became identified with what historians call "automobility," and Los Angeles led the way in defining American car culture.

IN YOUR OWN WORDS What were the primary characteristics of the American economy in the 1920s?

The Politics and Culture of a Diversifying Nation

At the dawn of the 1920s, public life in the United States had grown immeasurably more diverse. Women could now vote. More than 24 million immigrants — hailing primarily from Europe but also from Latin America and East Asia — called the country home. They spoke different languages, practiced a variety of religions, and followed unique cultural traditions (AP® Interpreting the Past). The Great Migration brought more than one million African Americans from all parts of the South to northern cities such as Chicago, New York, and Philadelphia. Cities grew at the expense of rural areas. Such dramatic changes led to social tensions and pronounced conflict over how the nation would be defined.

Women in a New Age

At the start of the 1920s, many progressives hoped the attainment of women's voting rights would offer new leverage to tackle poverty. They created organizations like the Women's Joint Congressional Committee, a Washington-based advocacy group. The committee's greatest accomplishment was the first federally funded health-care legislation, the **Sheppard-Towner Federal Maternity and Infancy Act** (1921). Sheppard-Towner provided federal funds for medical clinics, prenatal education programs, and visiting nurses, improving health care for the poor and significantly lowering infant mortality rates. It also marked the first time that Congress designated federal funds for the states to encourage them to administer a social-welfare program. But other reforms stalled, and the decade proved not to be a watershed of welfare legislation.

Other activist women focused on securing legal equality with men. In 1923, Alice Paul, founder of the National Woman's Party, persuaded congressional allies to consider an Equal Rights Amendment (ERA) to the U.S. Constitution. It stated simply that "men and women shall have equal rights throughout the United States." Advocates were hopeful; Wisconsin had passed a similar law two years earlier, and it helped women fight gender discrimination. But opponents pointed out that the ERA would threaten recent labor laws that protected women from workplace abuses. Such laws recognized women's vulnerable place in a heavily sex-segregated labor market. Would a theoretical statement of "equality" help poor and working women more than existing protections did? This question divided women's rights advocates. Introduced repeatedly in Congress over the next five decades, the ERA was debated again and again until the bitter ratification struggle of the 1970s (Chapter 28).

African American Women African American women had distinct priorities. Groups such as the National Association of Colored Women (NACW) fought for suffrage in the 1910s, just as white women had. But the constitutional right of black women to vote was meaningless in the South, where disfranchisement was law. Black women sought racial, not just gender, equality. When Addie Hunton, field secretary of the National Association for the Advancement of Colored People, and sixty black women from the NACW urged the National Woman's Party to take up their cause, Paul refused, declaring disfranchisement to be a racial not a gender injustice. Hunton countered that "five million women in the United States cannot be denied their rights without all women of

The League of Women Voters The League of Women Voters was the brainchild of Carrie Chapman Catt, president of the National American Woman Suffrage Association. Formed in 1920, as the Nineteenth Amendment was about to give women the vote, the league undertook to educate Americans in responsible citizenship and to win enactment of legislation favorable to women. The league helped secure passage of the Sheppard-Towner Act of 1921, which provided federal aid for maternal and child-care programs. In the 1930s, members campaigned for the enactment of Social Security and other social-welfare legislation.

AP INTERPRETING THE PAST

How Did Immigrants Experience America at the Turn of the Century?

From the half century between the Civil War and World War I, more than 24 million people migrated to the United States. Many of these people came from Europe, but others left Asia, Latin America, and Africa in search of better opportunities or refuge in the United States. This turn-of-the-century migration included people from regions of southern and central Europe who had not previously come to the United States in such large numbers. Their presence in America's urban centers changed those places, but those immigrants were also changed. The extent to which migration from the Old to the New World affected these millions of people has, however, been a topic of debate among historians.

Oscar Handlin's classic history of the immigrant experience, *The Uprooted* (1951), defined the way historians thought about the topic for a generation. John Bodnar, writing three decades later, offered a different interpretation in *The Transplanted*. To what extent do the titles of their books hint at the argument each makes?

OSCAR HANDLIN

SOURCE: Oscar Handlin, *The Uprooted: The Epic Story of the Great Migrations That Made the American People* (New York: Grosset & Dunlap, 1951), 144.

Settlement in America had snipped the continuity of the immigrants' work and ideas, of their religious life . . . newcomers pushed their roots into many different soils. Along the city's unyielding asphalt streets, beside the rutted roads of mill or mining towns, amidst the exciting prairie acres, they established the homes of the New World. But . . . nowhere could they transplant the European village. . . . The pressure of that strangeness exerted a deep influence upon the character of resettlement, upon the usual forms of behavior, and upon the modes of communal action that emerged as the immigrants became Americans. . . . The old conditions of living could not survive in the new conditions of space.

JOHN BODNAR

SOURCE: John Bodnar, *The Transplanted: A History of Immigrants in Urban America* (Bloomington: Indiana University Press, 1985), 83–84.

Kin and friends were free to assist each other in entering America by providing access to jobs and homes and supplying important information of labor market conditions. New arrivals were adept at determining where they might enter a very large economy. The immigrant family economy survived and flourished among most newcomers in industrial America because new economic structures actually reinforced traditional ways of ordering life. . . . [I]ndividual inclinations were muted and the household . . . superseded all other goals and objectives. . . . Members of nearly all groups received indoctrination in the need to remain loyal to the familial and household unit. . . . [I]n the movement to a capitalist world and in the initial decades of settlement, familial and communal networks abounded.

AP SHORT ANSWER PRACTICE

1. How does Handlin's argument about immigrants as "uprooted" people differ from Bodnar's description of them as "transplanted"?
2. According to each author, what role did family and community play in the immigrant experience?
3. Which point of view — Handlin's or Bodnar's — is better supported by the chapter narrative? Give specific examples to support your argument.

the United States feeling the effect of that denial. No women are free until all women are free."

Other challenges remained. Women proved to be effective lobbyists for a variety of causes, but the Republican and Democratic parties endured as largely male domains. Finding that women did not vote as a bloc, politicians in both parties began to accord their votes less weight. New reforms failed to gain support, and others were rolled back. Many congressmen, for example, had supported the Sheppard-Towner Act because they feared the voting power of women, but Congress ended the program in the late 1920s.

New Woman Magazines, advertisements, and Hollywood movies crafted an idealized image of the American "new woman" in the 1920s. She had thrown off Victorian

modesty and claimed a place for herself alongside men in a new culture of consumption and fun. Such images, used primarily to sell products to the middle class, exaggerated reality. But that did not mean women's lives remained unchanged. The nineteenth-century notion of separate spheres for men and women had eroded considerably by 1930. More women attended college than ever before. Female athletes such as the golfer Glenna Collett, adventurers such as the celebrated pilot Amelia Earhart, and performers such as the brilliant jazz singer Josephine Baker carved out new, more liberated roles for women in public life.

Social change takes time, however, and for the majority of American women in the 1920s ordinary life was far less glamorous. In some professions, such as medicine, women actually declined as a percentage of the workforce: only 3 percent of lawyers and 4 percent of physicians were women in the decade. Women's wages lagged far behind those of men, and women remained confined to strictly gendered occupations: sales clerks in the new department stores, secretaries in the growing corporate world, and low-paid assembly-line workers in industry, alongside their traditional roles as domestic servants. African American and Latino women could not even get jobs as clerks and secretaries. Thus although American women in this era, especially the young, left behind the Victorian prescriptions of feminine modesty and confinement to a female-only separate sphere, they had yet to fully transform women's second-class standing.

AP® EXAM TIP

Identify the causes of and reactions to the rise of women as a political and cultural force in the 1920s.

AP® PRACTICES & SKILLS

CAUSATION

Explain why American women might have been more politically united prior to achieving the vote than afterward.

Culture Wars

By 1929, ninety-three U.S. cities had populations of more than 100,000. New York City's population exceeded 7 million; Los Angeles's had exploded to 1.2 million. The 1920 census marked the first time there were more urban than rural Americans. The lives and beliefs of urban Americans, however, often differed dramatically from those in small towns and farming areas. One sharp critic, the writer Sinclair Lewis, wrote three satirical novels—*Main Street* (1920), *Babbitt* (1922), and *Elmer Gantry* (1927)—that mocked small-town life for its religiosity and, as Lewis saw it, hypocrisy and lack of sophistication (AP® Analyzing Voices).

In a decade of conflict between traditional and modern worldviews, the urban-rural split embodied by Lewis represented one line of conflict among many. Others that came to the fore included Protestant versus Catholic and Jewish; religious versus secular; native born versus immigrant; and white versus black. A series of cultural battles in the 1920s revealed a stark conflict over the kinds of values, beliefs, and even people deemed "American."

AP® EXAM TIP

As you read through this section, compare the cultural controversies prevalent in the 1920s over alcohol, education, and immigration.

Prohibition Rural and native-born Protestants started the decade with the achievement of a longtime goal: national prohibition of liquor (Chapter 17). The two principal antialcohol organizations, the Woman's Christian Temperance Union and the Anti-Saloon League, had long hailed temperance as good for health and Christian virtue. In the 1910s, some progressives joined the campaign, convinced that alcohol kept immigrant workers in poverty and the saloon was a source of political corruption. World War I, too, spurred the cause. Mobilizing the economy for war, Congress limited brewers' and distillers' use of barley and other scarce grains, causing consumption to decline. Moreover, anti-German hysteria identified the many German breweries in American cities, like Pabst and Anheuser-Busch, with the wartime enemy. The decades-long prohibition campaign culminated with Congress's passage of the **Eighteenth Amendment** in 1917. Ratified over the next two years by nearly every state and taking effect in January 1920, the amendment prohibited "manufacture, sale, or transportation of intoxicating liquors" anywhere in the United States. It was enforced by the federal government under the 1920 **Volstead Act**.

Defenders of prohibition, especially native-born Protestants in small towns, celebrated prohibition as a victory over sin and vice. In urban areas, though, thousands

Urban Writers Describe Small-Town America

In the early twentieth century, the United States was becoming an urban society. By 1920, life outside the metropolis seemed sufficiently remarkable to warrant sociological investigation — or at least, city people thought so. Presented here are three views of rural and small-town America, all published during the 1920s. Though cities had become the wellspring of American intellectual life, urban writers juxtaposed their own experiences with those of people they thought of as living in "Middletown, U.S.A."

SINCLAIR LEWIS
Main Street

In his novel *Main Street* (1920), Sinclair Lewis portrayed the fictional midwestern town of Gopher Prairie. In the excerpts below, Lewis's narrator describes the reactions of young, urban Carol Kennicott, wife of the town's new doctor, and Bea Sorenson, a Swedish American farm girl.

SOURCE: Sinclair Lewis, *Main Street* (New York: Harcourt, Brace, and Co., 1920), 33–40.

"When Carol had walked for thirty-two minutes she had completely covered the town, east and west, north and south; and she stood at the corner of Main Street and Washington Avenue and despaired.

Main Street with its two-story brick shops, its story-and-a-half wooden residences, its muddy expanse from concrete walk to walk, its huddle of Fords and lumber-wagons, was too small to absorb her. The broad, straight, unenticing gashes of the streets let in the grasping prairie on every side. She realized the vastness and the emptiness of the land. The skeleton iron windmill on the farm a few blocks away, at the north end of Main Street, was like the ribs of a dead cow. She thought of the coming of the Northern winter, when the unprotected houses would crouch together in terror of storms galloping out of that wild waste. They were so small and weak, the little brown houses. They were shelters for sparrows. . . .

She wanted to run, fleeing from the encroaching prairie, demanding the security of a great city. Her dreams of creating a beautiful town were ludicrous. Oozing out from every drab wall, she felt a forbidding spirit which she could never conquer.

She trailed down the street on one side, back on the other, glancing into the cross streets. It was a private Seeing Main Street tour. She was within ten minutes beholding not only the heart of a place called Gopher Prairie, but ten thousand towns from Albany to San Diego.

Dyer's Drug Store, a corner building of regular and unreal blocks of artificial stone. Inside the store, a greasy marble soda-fountain with an electric lamp of red and green and curdled-yellow mosaic shade. Pawed-over heaps of toothbrushes and combs and packages of shaving-soap. Shelves of soap-cartons, teething-rings, garden-seeds, and patent medicines in yellow packages — nostrums for consumption, for 'women's diseases' — notorious mixtures of opium and alcohol, in the very shop to which her husband sent patients for the filling of prescriptions.

The train which brought Carol to Gopher Prairie also brought Miss Bea Sorenson.

Miss Bea was a stalwart, corn-colored, laughing young woman, and she was bored by farm-work. She desired the excitements of city-life, and the way to enjoy city-life was, she had decided, to 'go get a yob as a hired girl in Gopher Prairie.' . . .

Bea had never before been in a town larger than Scandia Crossing, which has sixty-seven inhabitants.

As she marched up the street she was meditating that it didn't hardly seem like it was possible there could be so many folks all in one place at the same time. My! It would take years to get acquainted with them all. And swell people, too! A fine big gentleman in a new pink shirt with a diamond, and not no washed-out blue denim working-shirt. A lovely lady in a longery dress (but it must be an awful hard dress to wash). And the stores! . . . A drug store with a soda fountain that was just huge, awful long, and all lovely marble . . . and the soda spouts, they were silver, and they came right out of the bottom of the lamp-stand! Behind the fountain there were glass shelves, and bottles of new kinds of soft drinks, that nobody ever heard of. Suppose a fella took you *there*!"

ANZIA YEZIERSKA
Bread Givers

A child of Jewish immigrants from Eastern Europe, Anzia Yezierska grew up on the Lower East Side of New York City. In her

flagrantly ignored the law, many mocking prohibition as old-fashioned Puritanism. Patrons flocked to urban speakeasies, or illegal drinking sites, which flourished in almost every major city; one raid on a Chicago speakeasy yielded 200,000 gallons of alcohol. Profits from the secret clubs enriched notorious gangsters such as Chicago's Al Capone and New York's Jack Diamond. Immigrants saw prohibition as an attack on the working-class saloon and also resisted the ban, but as the price of alcohol soared on the illegal market it often proved out of reach for the laboring classes. Prohibition's most

autobiographical novel *Bread Givers* (1925), Yezierska described her arrival in the Ohio town where she attended college.

SOURCE: From *Bread Givers* by Anzia Yezierska. Copyright © 1970 by Louise Levitas Henriksen. Reprinted by permission of Persea Books, Inc., New York. All rights reserved.

"Before this, New York was all of America to me. But now I came to a town of quiet streets, shaded with green trees. No crowds, no tenements. No hurrying noise to beat the race of the hours. Only a leisured quietness whispered in the air: Peace. . . .

Each house had its own green grass in front, its own free space all around, and it faced the street with the calm security of being owned for generations, and not rented by the month from a landlord. In the early twilight, it was like a picture out of fairyland to see people sitting on their porches, lazily swinging in their hammocks, or watering their own growing flowers.

So these are the real Americans, I thought, thrilled by the lean, straight bearing of the passers-by. They had none of that terrible fight for bread and rent that I always saw in the New York people's eyes. . . . All the young people I had ever seen were shut up in factories. But here were young girls and young men enjoying life, free from the worry for a living. . . . The spick-and-span cleanliness of these people! It smelled from them, the soap and the bathing. Their fingernails so white and pink. . . . What a feast of happenings each day of college was to those other students. Societies, dances, letters from home, packages of food, midnight spreads and even birthday parties. I never knew that there were people glad enough of life to celebrate the day they were born."

ROBERT S. LYND AND HELEN MERRELL LYND

Middletown

In 1929, sociologists Robert S. Lynd and Helen Merrell Lynd published *Middletown*, a study of life in a small midwestern city. Middletown was not a single community but a composite of several communities studied by the Lynds.

SOURCE: Excerpt from *Middletown: A Study in American Culture*, by Robert S. Lynd and Helen M. Lynd. Copyright © 1929 by Harcourt, Inc. and renewed 1957 by Robert S. and Helen M. Lynd. Reprinted by permission of Houghton Mifflin Harcourt Publishing Company. All rights reserved.

"The first real automobile appeared in Middletown in 1900. . . . At the close of 1923 there were 6,221 passenger cars in the city, one for every 6.1 persons, or roughly two for every three families. . . . As, at the turn of the century, business class people began to feel apologetic if they did not have a telephone, so ownership of an automobile has now reached the point of being an accepted essential of normal living. . . .

According to an officer of a Middletown automobile financing company, 75 to 90 percent of the cars purchased locally are bought on time payment, and a working man earning $35.00 a week frequently plans to use one week's pay each month as payment for his car. The automobile has apparently unsettled the habit of careful saving for some families. . . . 'I'll go without food before I'll see us give up the car,' said one woman emphatically. . . .

Many families feel that an automobile is justified as an agency holding the family group together. . . . [But] the fact that 348 boys and 382 girls in the three upper years of the high school placed 'use of the automobile' fifth and fourth respectively in a list of twelve possible sources of disagreement between them and their parents suggests that this may be an increasing decentralizing agent. . . .

If the automobile touches the rest of Middletown's living at many points, it has revolutionized its leisure . . . making leisure-time enjoyment a regularly expected part of every day and week rather than an occasional event. . . . The frequency of movie attendance of high school boys and girls is about equal, business class families tend to go more often than do working class families, and children of both groups attend more often without their parents than do all the individuals or combinations of family members put together. . . . It is probable that time formerly spent in lodges, saloons, and unions is now being spent in part at the movies, at least occasionally with other members of the family. Like the automobile and radio, the movies [break] up leisure time into an individual, family, or small group affair."

QUESTIONS FOR ANALYSIS

1. What attitudes toward the small town and big city does *Main Street* represent? Why do you think Lewis includes views as different as Carol's and Bea's?
2. How does the urban experience of Yezierska's narrator shape her reaction to life in an Ohio town? How might small-town residents have reacted to her description of them as "the real Americans"? How might Lewis have responded to Yezierska's description?
3. How do the two novelists (Lewis and Yezierska) differ from the sociologists (the Lynds) in the issues they emphasize, and in their tone and point of view? What features of small-town life does each text emphasize?

ardent supporters were native-born, small-town Protestants, and its greatest opponents were middle-class urbanites and immigrants.

The national ban on alcohol was a prolonged social experiment that fizzled. Alcohol consumption declined in 1921 and 1922 but then began climbing again — though it did not reach pre-1920 levels until after repeal in 1933. Among the middle class, which could afford higher prices, alcohol consumption declined hardly at all in these years. The fact that only the *sale* and not the *possession* of alcohol was

Wine in the Gutters, Brooklyn This photograph captures America's cultural conflicts over prohibition. When the law went into effect, federal agents seized and destroyed supplies of alcohol, often dumping it in the streets. Here, working-class children in Brooklyn race to scoop it up in buckets before it drains away. In tenement neighborhoods, children eager to earn a nickel often toted buckets of beer, wine, and homemade liquor for their parents or neighbors. How might a rural temperance advocate have responded to this photograph? How about a working-class man in Chicago, Atlanta, Seattle, or New York? N.Y. Daily News / Archive Photos/Getty Images

illegal made prohibition exceedingly difficult to enforce. And yet the Eighteenth Amendment's most important legacy might well have been the growing influence of the Federal Bureau of Investigation (FBI), the federal agency tasked with enforcing the Volstead Act. Under the shrewd direction of J. Edgar Hoover, the FBI used the Red Scare and prohibition to increase its resources, enlarge its investigative domain, and become a fixture of federal police power. Difficult to enforce, associated with organized crime, and increasingly politically unpopular, prohibition was repealed in 1933.

Evolution in the Schools In another episode of the clash between modern and traditionalist worldviews, controversy erupted as fundamentalist Protestants sought to mandate school curricula based on the biblical account of creation. In 1925, Tennessee's legislature outlawed the teaching of "any theory that denies the story of the Divine creation of man as taught in the Bible, [and teaches] instead that man has descended from a lower order of animals." The **American Civil Liberties Union** (ACLU), formed during the Red Scare to protect free speech rights, challenged the law's constitutionality. The ACLU intervened in the trial of John T. Scopes, a high school biology teacher who taught the theory of evolution to his class and faced a jail sentence for doing so. The case attracted national attention because Clarence Darrow, a famous criminal lawyer, defended Scopes, while William Jennings Bryan, the three-time Democratic presidential candidate, spoke for the prosecution.

Journalists dubbed the **Scopes trial** "the monkey trial." This label referred both to Darwin's argument that human beings and other primates share a common ancestor and to the circus atmosphere at the trial, which was broadcast live over a Chicago radio station. (Proving that urbanites had their own prejudices, **acerbic** critic H. L. Mencken dismissed antievolutionists as "gaping primates of the upland valleys," implying that they had not evolved.) The jury took only eight minutes to deliver its verdict: guilty. Though the Tennessee Supreme Court later overturned Scopes's conviction, the law remained on the books for more than thirty years.

AP® EXAM TIP

Evaluate the Scopes trial as an expression of the battle between modernism and fundamentalism in American society.

Nativism Some native-born Protestants pointed to immigration as the primary cause of what they saw as America's moral decline. A nation of 105 million people had added more than 24 million immigrants over the previous four decades; the newcomers included many Catholics and Jews from Southern and Eastern Europe, whom one Maryland congressman referred to as "indigestible lumps" in the "national stomach." Such attitudes recalled hostility toward Irish and Germans in the 1840s and 1850s. In this case, they fueled a momentous shift in immigration policy.

"America must be kept American," President Coolidge declared in 1924. Congress had banned Chinese immigration in 1882, and Theodore Roosevelt had negotiated a so-called gentleman's agreement that limited Japanese immigration in 1907. Now nativists charged that there were also too many European arrivals, some of whom, they claimed, undermined Protestantism and imported anarchism, socialism, and other radical doctrines. Responding to this pressure, Congress passed emergency

immigration restrictions in 1921 and a permanent measure three years later. The **National Origins Act** (1924) used backdated census data to establish a baseline: in the future, annual immigration from each country could not exceed 2 percent of that nationality's percentage of the U.S. population as it had stood in 1890. Since only small numbers of Italians, Greeks, Poles, Russians, and other Southern and Eastern European immigrants had arrived before 1890, the law drastically limited immigration from those places. In 1929, Congress imposed even more restrictive quotas, setting a cap of 150,000 immigrants per year from Europe and continuing to ban most immigrants from Asia.

AP® EXAM TIP

Being able to explain the discriminatory nature of immigration restrictions in the 1920s is a "must know" on the AP® exam.

The new law, however, permitted unrestricted immigration from the Western Hemisphere. As a result, Latin Americans arrived in increasing numbers, finding jobs that had gone to other immigrants before exclusion. More than 1 million Mexicans entered the United States between 1900 and 1930, including many fleeing the instability caused by the Mexican Revolution. Nativists lobbied Congress to cut this flow; so did labor leaders, who argued that impoverished migrants lowered wages for other American workers. But Congress heeded the pleas of employers, especially farmers in Texas and California, who wanted cheap labor.

Other anti-immigrant measures emerged at the state level. In 1913, by an overwhelming majority, California's legislature had passed a law declaring that "aliens ineligible to citizenship" could not own "real property." The aim was to prevent Asians, especially Japanese immigrants, from owning land, though some had lived in the state for decades and built up prosperous farms. In the wake of World War I, California tightened these laws, making it increasingly difficult for Asian families to establish themselves. California, Washington, and Hawaii also severely restricted any school that taught Japanese language, history, or culture. Denied both citizenship and land rights, Japanese Americans would be in a vulnerable position at the outbreak of World War II, when anti-Japanese hysteria swept the United States.

The U.S. Border Patrol, Laredo, Texas, 1926 In 1926, San Antonio photographer Eugene O. Goldbeck took this photograph of U.S. Border Patrol officers in Laredo. Since 1917, Mexicans, like other immigrants, had been subject to a head tax and literacy test. The U.S. government had not enforced these provisions, however, because of pressure from southwestern employers eager for cheap Mexican labor. Following passage of the National Origins Act in 1924, the United States established the Border Patrol. Its increasing efforts to police the border slowed the casual movement of Mexican workers in and out of the United States. Why do you think the Border Patrol posed in this way for Goldbeck's picture? Notice that some of the officers depicted here were dressed as civilians. What might this signify? Photography Collection, Harry Ransom Center, The University of Texas at Austin

AP® EXAM TIP

Compare the KKK that developed in the 1920s to the KKK that originated in the Reconstruction era.

The National Klan The 1920s brought a nationwide resurgence of the **Ku Klux Klan** (KKK), the white supremacist group formed in the post–Civil War South. Soon after the premiere of *Birth of a Nation* (1915), a popular film glorifying the Reconstruction-era Klan, a group of southerners gathered on Georgia's Stone Mountain to revive the organization. With its blunt motto, "Native, white, Protestant supremacy," the Klan recruited supporters across the country (AP® Thinking Like a Historian). KKK members did not limit their harassment to African Americans but targeted immigrants, Catholics, and Jews as well, with physical intimidation, arson, and economic boycotts.

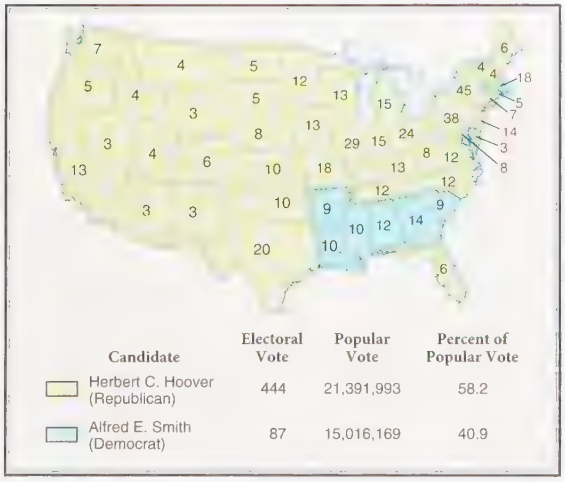
At the height of its influence in the early 1920s, the Klan counted more than 3 million members and wielded considerable political clout, particularly at the local level. A typical example was the small town of Monticello, Arkansas, where in the first half of the decade the mayor, city marshall, half the city council, the sheriff, the county clerk, tax assessor, and treasurer, and eleven of fifteen male teachers were all Klan members. From small-town mayors to President Woodrow Wilson, who effusively praised *Birth of a Nation*, the Klan enjoyed broad support among native-born white Protestant Americans for a decade. Klan activism lent a menacing cast to political issues, as its members defined "one hundred percent Americanism" to include white racial purity, Protestantism, prohibition of alcohol, conservative sexual mores, and immigration restriction—the Klan avidly supported both the Eighteenth Amendment and the Immigration Act of 1924.

AP® PRACTICES & SKILLS

POINT OF VIEW

How would you describe the view of those Americans who supported prohibition, the teaching of evolution in public schools, and immigration restriction? How would you describe their opponents' views? Can you understand the perspectives of each?

The Klan declined rapidly after 1925, but its rise was part of an ugly trend that began before World War I and extended into subsequent decades. The rise of the national Klan helped prepare the way for white supremacist movements of the 1930s, such as the Los Angeles–based Silver Legion, a fringe paramilitary group aligned with Hitler's Nazis. Far more influential were major figures such as industrialist Henry Ford, whose *Dearborn Independent* railed against immigrants and warned that members of "the proud Gentile race" must arm themselves against a Jewish conspiracy aimed at world domination. Challenged by critics, Ford issued an apology in 1927 and admitted that his allegations had been based on "gross forgeries." But with his paper's editorials widely circulated by the Klan and other groups, considerable long-term damage had been done.

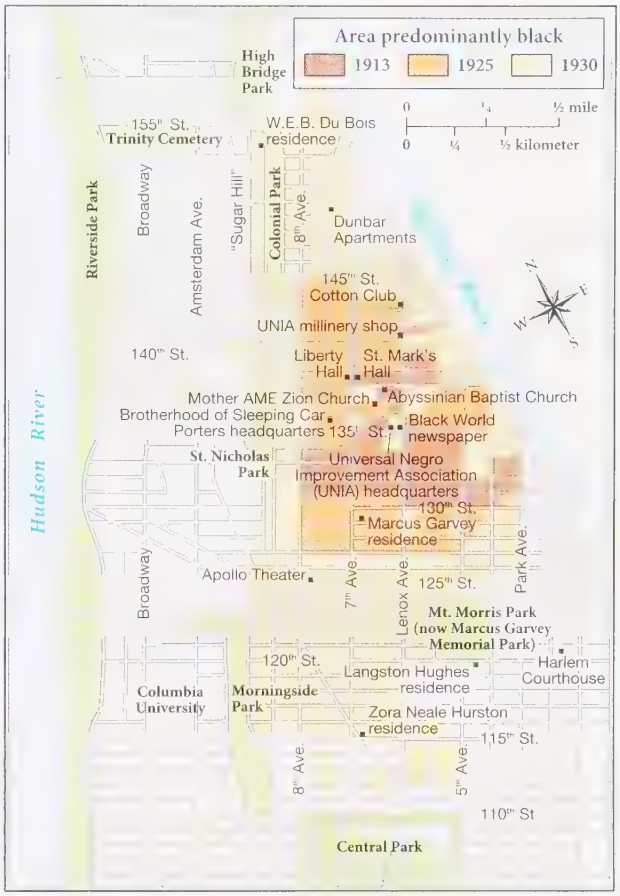


MAP 21.1 The Presidential Election of 1928
Historians still debate the extent to which 1928 was a critical election—an election that produced a significant realignment in voting behavior. Although Republican Herbert Hoover swept the popular and the electoral votes, Democrat Alfred E. Smith won majorities not only in the South, his party's traditional stronghold, but also in Rhode Island, Massachusetts, and (although it is not evident on this map) all of the large cities of the North and Midwest. In subsequent elections, the Democrats won even more votes among African Americans and European ethnic groups and, until 1980, were the nation's dominant political party.

The Election of 1928 Conflicts over race, religion, and ethnicity created the climate for a stormy presidential election in 1928. Democrats had traditionally drawn strength from white voters in the South and immigrants in the North: groups that divided over prohibition, immigration restriction, and the Klan. By 1928, the northern urban wing gained firm control. Democrats nominated Governor Al Smith of New York, the first presidential candidate to reflect the aspirations of the urban working class. A grandson of Irish peasants, Smith had risen through New York City's Democratic machine to become a dynamic reformer. But he offended many small-town and rural Americans with his heavy New York accent and brown derby hat, which highlighted his ethnic working-class origins. Middle-class reformers questioned his ties to Tammany Hall; temperance advocates opposed him as a "wet." But the governor's greatest handicap was his religion. Although Smith insisted that his Catholic beliefs would not affect his duties as president, many Protestants opposed him. "No Governor can kiss the papal ring and get within gunshot of the White House," vowed one Methodist bishop.

Smith proved no match for the Republican nominee, Secretary of Commerce Herbert Hoover, who embodied the technological promise of the modern age. An organizational genius and a dedicated public servant, Hoover won fame during World War I for successfully managing huge food relief and refugee projects before energizing and reorganizing the Treasury Department as secretary of commerce

MAP 21.2 Harlem, 1913–1930
African Americans had lived in New York City since its founding in 1624 as part of the Dutch settlement of New Amsterdam. A small number lived in Harlem, in the northern part of Manhattan Island until the early 1900s. Then in 1904, a subway line connecting 145th Street in Harlem to lower Manhattan and Brooklyn opened, and black tenants and homeowners began to come in larger numbers. During and after World War I, large numbers of southern migrants joined established black families there, bringing with them the food, music, and folkways of the South, and Harlem increasingly became a center of black life in New York City. By 1930, 165,000 African Americans, almost 75 percent of Manhattan's black population, were concentrated in Harlem.

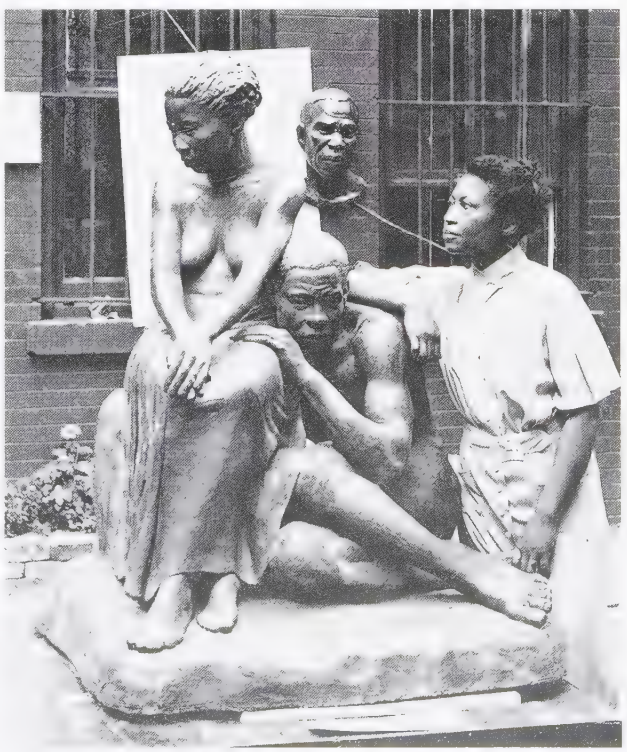


under President Harding. Riding on eight years of Republican prosperity, Hoover credited business with the country's rising affluence and embraced, updated for a more technocratic age, the American tradition of individualism. He won overwhelmingly, with 444 electoral votes to Smith's 87 (Map 21.1). Because many southern Protestants refused to vote for a Catholic, Hoover carried five ex-Confederate states, breaking the Democratic "Solid South" for the first time since Reconstruction. Smith, though, carried industrialized Massachusetts and Rhode Island as well as the nation's twelve largest cities, suggesting that urban voters were moving into the Democrats' camp.

The Harlem Renaissance

Amidst these clashes over religion, morality, and Americanism, black artists and intellectuals claimed a voice for themselves. They questioned long-standing assumptions about civilization, progress, and the alleged superiority of Western cultures over so-called primitive people. Based in New York City, where the Great Migration had tripled the black population in the decade after 1910 (Map 21.2), a vibrant new black cultural movement took shape. Harlem stood as "the symbol of liberty and the Promised Land to Negroes everywhere," as one minister put it. Talented African Americans flocked to the district, where they created bold new art forms and asserted ties to Africa.

Black Writers and Artists Poet Langston Hughes captured the upbeat spirit of the **Harlem Renaissance** when he asserted, "I am a Negro—and beautiful." Other writers and artists also championed race pride. Claude McKay and Jean Toomer represented in fiction what philosopher Alain Locke called, in an influential 1925 book, the "New Negro." Painter Jacob Lawrence, who had grown up in crowded tenement districts of the urban North, used bold shapes and vivid colors to portray the daily life, aspirations, and suppressed anger of African Americans.



Augusta Fells Savage, African American Sculptor Born in Florida in 1892, Augusta Fells Savage arrived in New York in 1921 to study and remained to take part in the Harlem Renaissance. Widowed at a young age and struggling to support her parents and young daughter, Savage faced both racism and poverty. Much of her work has been lost because she sculpted in clay and could not afford to cast in bronze. Savage began to speak out for racial justice after she was denied, on the basis of her race, a fellowship to study in Paris. In 1923, she married a close associate of UNIA leader Marcus Garvey. Augusta Savage with her sculpture *Realization*, c. 1938/Andrew Herman photographer. Who Joined the Ku Klux Klan?

Asked why a person would join the Klan, you might cite racism and religious bigotry. But the story is complicated: many whites with strong prejudices did not join the Klan in the 1920s, while others did. Why?

1. **Klan wedding in Washington, D.C., 1925.**

FPG/Getty Images

2. **Poem read at a meeting of KKK Grand Dragons, North Carolina, 1923.**

God Give Us Men! The Invisible Empire demands strong
Minds, great hearts, true faith and ready hands . . .
Men who possess opinions and a will;
Men who have honor; men who will not lie;
Men who can stand before a demagogue and damn his treacherous flattering without winking! . . .
Men of dependable character; men of sterling worth;
Then wrongs will be redressed, and right will rule the earth.

3. **"95% of Bootleggers Jews," editorial, *Dearborn Independent*, Michigan, 1922.**

Violation and evasion of the Prohibition laws has had a deep Jewish complexion from the very beginning. . . . This does not mean, of course, that every bootlegger is a Jew. Unless you live in Chicago, New York or other large cities, an actual meeting with the Jew in this minor capacity will not be frequent. The Jew is the possessor of the wholesale stocks; . . . But notwithstanding all this carefulness, the bulk of the arrests made in the United States have been among Jews. . . . The maintenance of *the idea of drink* in the minds of the people is due to Jewish propaganda. . . . *The idea of drink* will be maintained by means of the Jewish stage, Jewish jazz, and the Jewish comics, until somebody comes down hard upon it.

4. **Report on a Klan gathering in Birmingham, Alabama, 1923.**

Edgewood Park was crowded by noon. Klansmen and their wives and families enjoyed a great barbecue, went swimming, dancing, and picknicking. There were airplane stunts during the day with band concerts thrown in for good measure. At night there was a wonderful display of fireworks following the initiation and the address of the Imperial Wizard.

5. **Klansmen in Buffalo, New York, 1924.** *Data based on historical research into a Klan membership list of almost 2,000 men in the Buffalo area.*

TABLE 21.1

Klansmen in Buffalo, New York, 1924

Occupational Group	Percentage of KKK Members	Percentage of Total Native White Male Workers in Buffalo
Professional (predominantly clergy, doctors, engineers, pharmacists)	6.1	4.7
Business (small businessmen, managers, inspectors, accountants)	18.5	10.4
Low nonmanual (salesmen, clerks, foremen)	27.7	22.6
Skilled (machinists, electricians, railroad engineers, construction trades)	30.6	25.3
Semiskilled and service (factory and rail workers, deliverymen, policemen, repairmen)	16.4	30.2
Unskilled (laborers, gardeners)	0.5	14.5

6. **Interviews conducted in the 1980s with Indiana Klanswomen about Klan life in the 1920s.** *Seeking truthful accounts, the interviewer allowed the women to remain anonymous.*

Anonymous

For [the Klan] to say, we want to get rid of the niggers, we want to get rid of the Catholics, it didn't mean a thing to us. . . . I can remember quite well the stories that you hear sitting on the porch. . . . They'd talk about religion, and they'd talk about Catholics. . . . The Catholics were considered horrible people. . . .

Anonymous

Kelly had a grocery store. Well, it hurt their business terribly because people wouldn't go in there, because the Klan would tell you not to. . . . If you had a empty house . . . , why you were told not to rent it to a Catholic.

Some Klan leader said that the Pope was coming to take over the country, and he said he might be on the next train that went through North Manchester. You know, just trying to make it specific. So, about a thousand people went out to the train station and stopped the train. It only had . . . one passenger on it. They took him off, and he finally convinced them that he wasn't the Pope. He was a carpet salesman. And so they put him on the next train and he went on to Chicago.

7. **Editorial by National Imperial Wizard Hiram Wesley Evans in the KKK periodical *Dawn: A Journal for True American Patriots*, November 10, 1923.**

Humanity has become a commodity. For mercenary motives, our importers of it want the most inferior grade. Industry desires cheap labor. Therefore, we have had this recent flood of 5 and 10-cent citizenship. Take any map which shows the concentration of the South and Eastern European type of immigrant and you will see [that] wherever manufacturing and mining and lumbering predominate, there the hordes of unskilled labor have overwhelmingly been assembled. . . .

The present and recent flood of inferior foreigners has vastly increased our illiteracy, vitally lowered the health level and visibly menaced America by inheritable mental and moral deficiencies. . . . [Farms are] the only legitimate and justifiable excuse for cheap labor, yet that class is moving irresistibly cityward to swell the slums and multiply immorality. For example, throughout the south the colored race . . . is migrating to the North — not to its rural districts, but to its industrial centers.

8. **"Program for America," in the KKK newspaper *American Standard*, April 15, 1925.**

- Laws to require the reading of the Holy Bible in every American public school.
- Recognition of the fact . . . that Romanism is working here to undermine Americanism. . . . Since Roman Catholics give first allegiance to an alien political potentate, the pope . . . their claim to citizenship, to the ballot, and to public office in this Protestant country is illegitimate, and must be forbidden by law. . . .
- A law to destroy the alien influence of the foreign language press [by] requiring that the English language be used exclusively.
- . . . Recognition of the tendency toward moral disintegration, resulting from the activities . . . of the anti-Christian Jews, in our theaters, our motion pictures, and in American business circles; the discontinuance of these anti-Christian activities, and the exclusion of Jews of this character from America.
- The return of the Negroes to their homeland of Africa, under the protection and with the help of the United States Government.
- Strict adherence to the Constitution of the United States, including the Prohibition Amendment, by every citizen.

Baker, *Gospel According to the Klan* (Lawrence: University Press of Kansas, 2011), 119; (3) *Dearborn Independent* editorial reprinted in *Aspects of Jewish Power in the United States* (Dearborn, MI: Dearborn Publishing, 1922), 34–40; (4) Rory McVeigh, *The Rise of the Ku Klux Klan* (Minneapolis: University of Minnesota Press, 2009), 150; (5) Shawn Lay, *Hooded Knights on the Niagara* (New York: New York University Press, 1995), chapter 4 (esp. 87); (6) Kathleen M. Blee, *Women in the Klan* (Berkeley and Los Angeles: University of California Press, 1991), 78–79, 149–151; (7) McVeigh, 64–65; (8) *American Standard*, April 15, 1925, 172.

ANALYZING THE EVIDENCE

1. Based on the documents above, identify factors that made the KKK appealing to some Americans in the 1920s.
2. Which groups in source 5 were over- and underrepresented in the Klan? The same historian found that at least 34 percent of local Klan members were German American. Review the Thinking Like a Historian feature in Chapter 20, pages 640–641. Why might Germans have been especially likely to join the Klan in this period?
3. What are the advantages and limitations of source 6?
4. Imagine that Republican president Calvin Coolidge had set up a federal agency to discourage KKK activity (an action he did NOT take). He put you in charge of the effort and gave you a generous budget. How would you have spent the funds? Explain why you believe your strategy might have been effective.

AP® DBQ PRACTICE

Using your knowledge of Chapter 21, and drawing on evidence from the documents above, write a brief essay explaining how the rise of the KKK in the 1920s reflected larger patterns in American society and politics.

AP® EXAM TIP
Evaluate the Harlem Renaissance as an expression of African American identity.

No one embodied the energy and optimism of the Harlem Renaissance more than Zora Neale Hurston. Born in the prosperous black community of Eatonville, Florida, Hurston had been surrounded as a child by examples of achievement, though she struggled later with poverty and isolation. In contrast to some other black thinkers, Hurston believed African American culture could be understood without heavy emphasis on the impact of white oppression. After enrolling at Barnard College and studying with anthropologist Franz Boas, Hurston traveled through the South and the Caribbean for a decade, documenting folklore, songs, and religious beliefs. She incorporated this material into her short stories and novels, celebrating the humor and spiritual strength of ordinary black men and women. Like other work of the Harlem Renaissance, Hurston's stories and novels sought to articulate what it meant, as black intellectual W. E. B. Du Bois wrote, "to be both a Negro and an American."

Jazz To millions of Americans, the most famous product of the Harlem Renaissance was **jazz**. Though the origins of the word are unclear, many historians believe it was a slang term for sex—an **etymology** that makes sense, given the music's early association with urban vice districts. As a musical form, jazz coalesced in New Orleans and other parts of the South before World War I. Borrowing from blues, ragtime, and other popular forms, jazz musicians developed an ensemble style in which performers,

Archibald Motley, *Blues*, 1929 Painter Archibald Motley (1891–1981) was born in New Orleans but arrived in Chicago as a small child, when his family—like thousands of other African Americans—moved north in search of opportunity. Motley was able to study at the Art Institute of Chicago and by the 1920s also showed his work in New York City. Many of his paintings depicted life in the predominantly African American neighborhood on Chicago's South Side that was widely known as the Black Belt. This piece, *Blues*, was painted when Motley was living in Paris. It shows the powerful impact jazz had on European listeners. Private Collection / Valerie Gerard [illegible] Chicago History Museum

keeping a rapid ragtime beat, improvised around a basic melodic line. The majority of early jazz musicians were black, but white performers, some of whom had more formal training, injected elements of European concert music.

In the 1920s, as jazz spread nationwide, musicians developed its signature mode, the improvised solo. The key figure in this development was trumpeter Louis Armstrong. A native of New Orleans, Armstrong learned his craft playing in the saloons and brothels of the city's vice district. Like tens of thousands of other African Americans, he moved north, settling in Chicago in 1922. Armstrong showed an inexhaustible capacity for melodic invention, and his dazzling solos inspired other musicians. By the late 1920s, soloists became the celebrities of jazz, thrilling audiences with their improvisational skill.

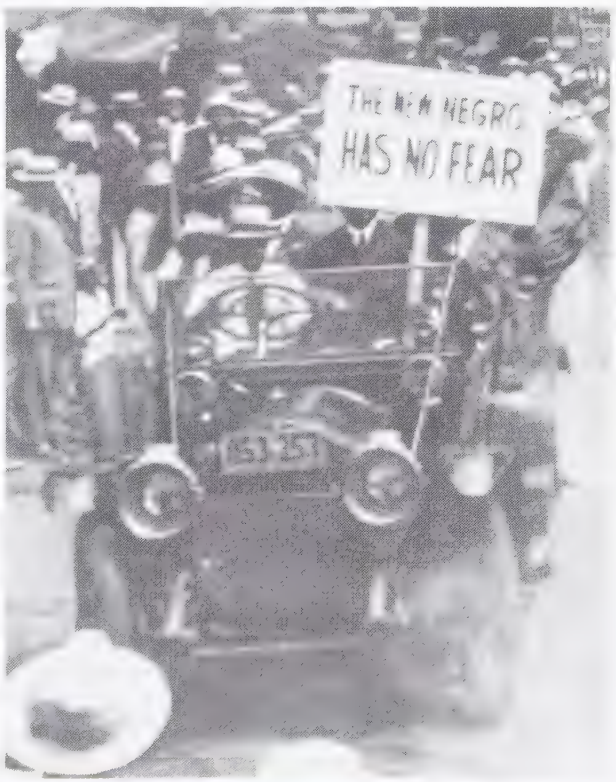
As jazz spread, it followed the routes of the Great Migration from the South to northern and midwestern cities, where it met consumers primed to receive it. Most cities had plentiful dance halls where jazz could be featured. Radio also helped popularize jazz, with the emerging record industry marketing the latest tunes. As white listeners flocked to ballrooms and clubs to hear Duke Ellington and other stars, Harlem became the hub of this commercially lucrative jazz. Those who hailed "primitive" black music, however, rarely suspended their racial condescension: visiting a mixed-race club became known as "slumming."

The recording industry soon developed so-called race records specifically aimed at urban working-class African Americans. The breakthrough came in 1920, when Otto K. E. Heinemann, a producer who sold immigrant records in Yiddish, Swedish, and other languages, recorded singer Mamie Smith performing "Crazy Blues." This smash hit prompted big recording labels like Columbia and Paramount to copy Heinemann's approach. Yet, while its marketing reflected the segregation of American society, jazz brought black music to the center stage of American culture. It became the era's signature music, so much so that novelist F. Scott Fitzgerald dubbed the 1920s the "Jazz Age."

Marcus Garvey and the UNIA Harlem's creative energy generated broad political aspirations. The Harlem-based **Universal Negro Improvement Association** (UNIA), led by charismatic Jamaican-born Marcus Garvey, arose in the 1920s to mobilize African American workers and champion black nationalism. Garvey urged followers to move to Africa, arguing that people of African descent would never be treated justly in white-run countries.

The UNIA soon claimed 4 million followers, including many recent migrants to northern cities. It published a newspaper, *Negro World*, and solicited funds for the Black Star steamship company, which Garvey created as an enterprise that would foster trade with the West Indies and carry black Americans to Africa. But the UNIA declined as quickly as it had risen. In 1925, Garvey was imprisoned for mail fraud because of his solicitations for the Black Star Line. President Coolidge commuted his sentence but ordered his deportation to Jamaica. Without Garvey's leadership, the movement collapsed.

However, the UNIA left a legacy of activism, especially among the working class. Garvey and his followers represented an emerging **pan-Africanism**. They argued that people of African descent, in all parts of the world, had a common destiny and should cooperate in political action. Several developments contributed to this ideal: black men's military service in Europe during World War I, the Pan-African Congress that had sought representation at the Versailles treaty table, and protests against U.S. occupation of Haiti. One African American historian



UNIA Parade in Harlem, Early 1920s This photo, taken at 138th Street in Harlem, shows the collective pride fostered by Marcus Garvey's Universal Negro Improvement Association. What types of people do you see in the crowd? How are they dressed? Note the slogan carried by a rider in the automobile: "The New Negro Has No Fear." From The New York Public Library.

AP® PRACTICES & SKILLS

CAUSATION

How did the Great Migration lead to flourishing African American culture, politics, and intellectual life, and what form did these activities take?

wrote in 1927, "The grandiose schemes of Marcus Garvey gave to the race a consciousness such as it had never possessed before. The dream of a united Africa, not less than a trip to France, challenged the imagination."

IN YOUR OWN WORDS What were the main causes of cultural conflict in the 1920s?

The Coming of the Great Depression

By 1927, strains on the economy showed that the mass consumer society that had emerged after World War I was in trouble. Americans of all sorts were **overleveraged**—that is, sinking in debt. Consumer lending had become the tenth largest business in the country, topping $7 billion that year. Millions of farmers were, like their nineteenth-century forebears, trapped in an annual cycle of debt. Increasing numbers of Americans bought into the stock market, often with borrowed money ("on margin") and usually with unrealistic expectations. An investor might, for example, spend $20 of his own money and borrow $80 to buy a $100 share of stock, expecting to pay back the loan as the stock rose quickly in value. This worked as long as the economy grew and the stock market climbed.

But those conditions did not last. Americans who worried over the rapid economic growth and easy credit that fueled the Roaring Twenties proved right: the "Roar" ended in the Great Depression. Taking into account the recession of 1921, the economic boom lasted only a brief seven years, from 1922 to 1929.

From Boom to Bust

AP® EXAM TIP

Connect the causes that led to the Great Depression to the economic and political developments of the 1920s.

When the stock market fell, in a series of plunges between October 25 and November 13, 1929, few onlookers understood the magnitude of the crisis. Cyclical downturns had been a familiar part of the industrializing economy since the panic of the 1830s; they tended to follow periods of rapid growth and speculation. The market rose again in late 1929 and early 1930, and while a great deal of money had been lost, most Americans hoped the aftermath of the crash would be brief. In fact, the nation had entered the Great Depression, the most severe economic downturn to that point in the nation's history. Over the next four years, industrial production fell 37 percent. Construction plunged 78 percent. Prices for crops and other raw materials, already low, fell by half. By 1932, unemployment had reached a staggering 24 percent (Figure 21.1).

A precipitous drop in consumer spending deepened the crisis. Facing hard times and unemployment, Americans cut back dramatically, creating a vicious cycle of falling demand and forfeited loans. If buying homes, cars, and appliances on credit seemed like a good deal in 1925, by 1930 the deal turned sour. That year, several major banks went under, victims of overextended credit and reckless management. The following year, as industrial production slowed, a much larger wave of bank failures occurred, causing an even greater shock. Since the government did not insure bank deposits, accounts in failed banks simply vanished. Some people who had had steady jobs and comfortable savings found themselves broke and out of work.

Early Depression Years

Not all Americans were devastated by the depression; the middle class did not disappear and the rich lived in accustomed luxury. But incomes plummeted even among workers who kept their jobs. Salt Lake City went bankrupt in 1931. Barter systems developed, as barbers traded haircuts for onions and potatoes and laborers worked for payment in eggs or pork. "We do not dare to use even a little soap," reported one jobless Oregonian, "when it will pay for an extra egg, a few more carrots for our children."

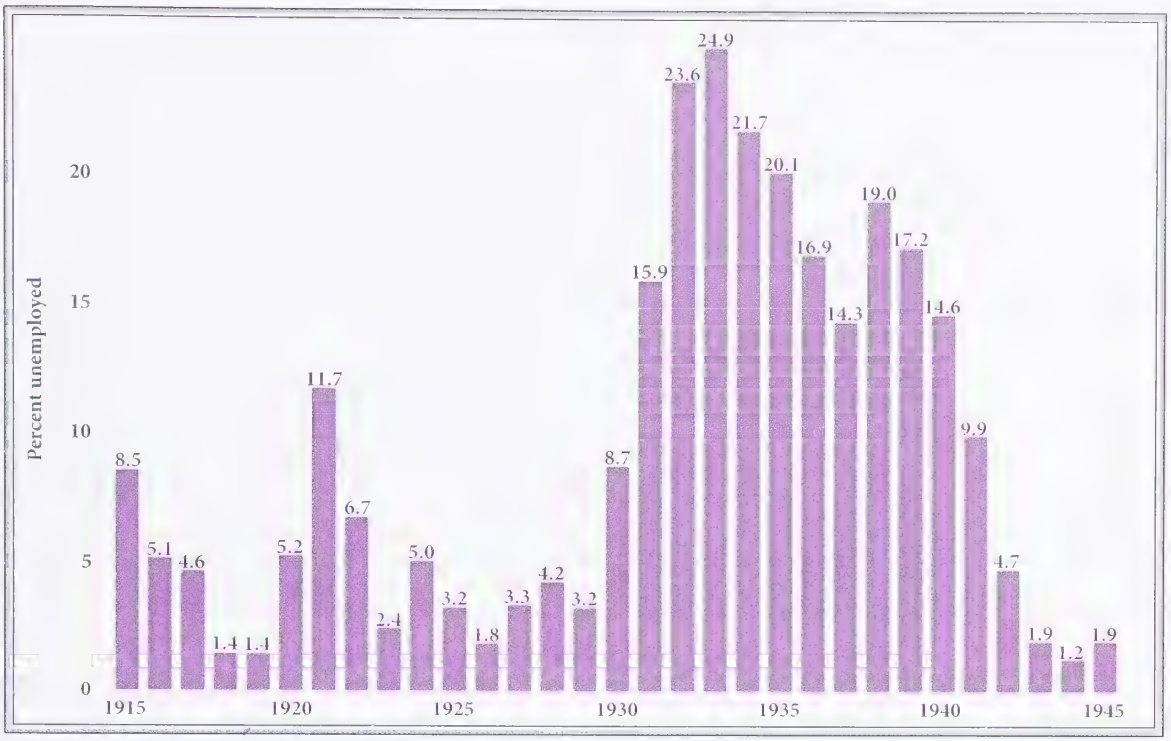


FIGURE 21.1 Unemployment, 1915–1945
During the 1920s, business prosperity and low rates of immigration resulted in historically low unemployment levels. The Great Depression threw millions of people out of work; by 1933, one in four American workers was unemployed, and the rate remained high until 1941, when the nation mobilized for World War II.

"I would be only too glad to dig ditches to keep my family from going hungry," wrote a North Carolina man.

Where did desperate people turn for aid? Their first hope lay in private charity, especially churches and synagogues. But by the winter of 1931, these institutions were overwhelmed, unable to keep pace with the extraordinary need. Only eight states provided even minimal unemployment insurance. There was no public support for the elderly, statistically among the poorest citizens. Few Americans had any retirement savings, and many who had saved watched their accounts erased by failing banks.

Even those who were not wiped out had to adapt to depression conditions. Couples delayed marriage and reduced the number of children they conceived. As a result, the marriage rate fell to a historical low, and by 1933 the birthrate dropped from 97 births per 1,000 women to 75. Often the responsibility for birth control fell to women. It was "one of the worst problems of women whose husbands were out of work," a Californian told a reporter. Campaigns against hiring married women were common, on the theory that available jobs should go to male breadwinners. Three-quarters of the nation's school districts banned married women from working as teachers—ignoring the fact that many husbands were less able to earn than ever before. Despite restrictions, female employment increased, as women expanded their financial contributions to their families in hard times.

The depression crossed regional boundaries, though its severity varied from place to place. Bank failures clustered heavily in the Midwest and plains, while areas dependent on timber, mining, and other extractive industries suffered catastrophic declines. Although southern states endured less unemployment because of their smaller manufacturing base, farm wages plunged. In many parts of the country, unemployment rates among black men stood at double that of white men; joblessness among African American women was triple that of white women.

By 1932, comprehending the magnitude of the crisis, Americans went to the ballot box and decisively rejected the probusiness, antiregulatory policies of the 1920s. A few years earlier, with business booming, politics had been so placid that people chuckled

Minnesota Potato Farmers The prosperity and consumer pleasures of the 1920s hardly extended to all Americans. This Minnesota family had horses, not a tractor; many of the women's clothes were probably made by hand. Rural and working-class Americans, who often struggled in the 1920s, found conditions even harsher after 1929. On the other hand, farmers had resources to fall back on that city folks did not: they could grow their own food, and they had long experience in "making do." Minnesota Historical Society.

when President Coolidge disappeared on extended fishing trips. Now, Americans wanted bold action in Washington. Faced with the **cataclysm** of the Great Depression, Americans would transform their government and create a modern welfare state.

IN YOUR OWN WORDS What domestic economic factors helped cause the Great Depression?

SUMMARY

Involvement in World War I strengthened the United States economically and diplomatically, but it left the nation profoundly unsettled. Racial tensions exploded after the war as African Americans pursued new opportunities and asserted their rights. Meanwhile, labor unrest grew as employers cut wages and sought to break unions, while anxieties over radicalism and immigration prompted a nationwide Red Scare.

The politics of the 1920s brought a backlash against prewar progressivism and a series of clashes over religion, morality, and national belonging. The agenda of women reformers met very limited success. Republican administrations pursued probusiness "normalcy" at home and "dollar diplomacy" abroad. Prohibition and the Scopes trial demonstrated the influence religion could exert on public policy, while rising nativism fueled a resurgent Ku Klux Klan and led to sweeping new restrictions on immigration. Meanwhile, black artists and intellectuals of the Harlem Renaissance, including many inspired by pan-African ideas, explored the complexities of African American life.

Business thrived and a booming consumer culture, exemplified by the radio, the automobile, and Hollywood films, created new forms of leisure, influencing daily life and challenging older sexual norms. However, the risky speculation and easy credit of the 1920s undermined the foundations of the economy. After the 1929 crash, these factors, along with a range of interconnected global conditions to be discussed in Chapter 22, plunged the United States into the Great Depression.

CHAPTER 21 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. How and why did the United States take a conservative turn in the 1920s?
2. What were the primary characteristics of the American economy in the 1920s?
3. What caused the cultural conflict of the 1920s?
4. What domestic and global factors helped cause the Great Depression?
5. Between 1917 and 1945, the "Roaring Twenties" were the only years when the United States did not face a major economic or international crisis. Review the categories of "America in the World," "Politics and Power," and "American and National Identity" on the thematic timeline on pages 618–619. In what ways do they suggest that the prosperous 1920s were a politically distinctive era? What continuities do you see in politics and foreign policy?

AP® TERMS TO KNOW

Identify and explain the significance of each term below.

Key Concepts and Events

Red Scare (p. 653)
Palmer raids (p. 653)
Red Summer (p. 654)
American Plan (p. 654)
welfare capitalism (p. 655)
dollar diplomacy (p. 655)

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. The Ku Klux Klan of the Reconstruction era (Chapter 14) emerged in a specific political and social context; while the Klan of the 1920s built on its predecessor, its goals and scope were different. Using material from Chapters 14 and 21, imagine that you are investigating a series of Klan meetings in each era (1870s and 1920s). Where would you conduct your investigation? How might you explain, to the public, the Klan's membership and activities? How would you compare the two Klans?
2. Along what lines did Americans find themselves divided in the 1920s? How were those conflicts expressed in politics? In culture and intellectual life?
3. What factors contributed to the economic boom of the 1920s and the crash that followed?

KEY TURNING POINTS

Refer to the chronology on page 652 for helping in answering the questions below.

American politics underwent two shifts in the period covered in this chapter: one in the aftermath of World War I, and another in 1932. What caused each turning point? What factors in American society, economics, and culture help explain each moment of political change?

AP® PRACTICE QUESTIONS

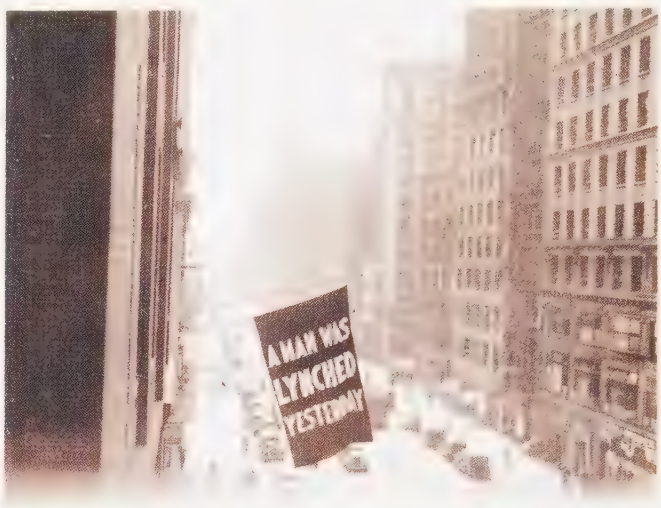
MULTIPLE CHOICE QUESTIONS *Choose the correct answer for each question.*

Questions 1–4 refer to the excerpt below.

> "We should stop immigration entirely until such a time as we can amend our immigration laws. . . .
>
> It is time that we act now, because within a few short years the damage will have been done. The endless tide of immigration will have filled our country with a foreign and unsympathetic element. Those who are out of sympathy with our Constitution and the spirit of our Government will be here in large numbers, and the true spirit of Americanism left us by our fathers will gradually become poisoned by this uncertain element."
>
> Representative Lucien Parrish, Congressional Debate, April 1921

1. All of the following factors contributed directly to the views expressed in the excerpt EXCEPT
   a. large-scale immigration before and after World War I.
   b. fears that radical ideas such as socialism or communism might spread.
   c. cultural controversies arising in rapidly growing urban areas.
   d. widespread support for the continuing of an imperialist foreign policy.
2. Which of the following most likely supported similar ideas as those expressed by Parrish in the excerpt?
   a. Democrats in the 1840s and 1850s
   b. Nativists in the 1840s and 1850s
   c. Business leaders in the 1890s and 1900s
   d. Preservationists in the 1890s and 1900s
3. The most direct result from the sentiments expressed in the excerpt was
   a. a shortage of laborers leading to a sustained economic downturn.
   b. a declaration by the Census Bureau that the frontier was "closed."
   c. quotas limiting European immigration.
   d. a ban on immigration from Mexico and South America.
4. Supporters of the views expressed in the excerpt would have been LEAST likely to also support political movements seeking to
   a. promote traditional moral values.
   b. limit the free speech of radicals.
   c. arrest and deport suspected radicals.
   d. repeal Prohibition.

Questions 5–6 refer to the c. 1920 New York City photograph below.



Library of Congress

5. Which of the following developments most directly resulted from the context captured in the image?
   a. Increased migration of African Americans to northern cities
   b. Passage of federal anti-lynching legislation
   c. Growth of militant civil rights movements for black power
   d. Emergence of new groups promoting political violence
6. The African American community resisted segregation and discrimination in the first half of the twentieth century in all of the following ways EXCEPT by
   a. launching a series of legal challenges.
   b. developing new forms of art and literature.
   c. demanding financial reparations.
   d. appealing for greater equality in the military.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

"Settlement in America had snipped the continuity of the immigrants' work and ideas, of their religious life . . . newcomers pushed their roots into many different soils. Along the city's unyielding asphalt streets, beside the rutted roads of mill or mining towns, amidst the exciting prairie acres, they established the homes of the New World. But . . . nowhere could they transplant the European village. . . . The pressure of that strangeness exerted a deep influence upon the character of resettlement, upon the usual forms of behavior, and upon the modes of communal action that emerged as the immigrants became Americans. . . . The old conditions of living could not survive in the new conditions of space."

Oscar Handlin, *The Uprooted: The Epic Story of the Great Migrations That Made the American People*, 1951

"Kin and friends were free to assist each other in entering America by providing access to jobs and homes and supplying important information of labor market conditions. New arrivals were adept at determining where they might enter a very large economy. The immigrant family economy survived and flourished among most newcomers in industrial America because new economic structures actually reinforced traditional ways of ordering life. . . . [I]ndividual inclinations were muted and the household . . . superseded all other goals and objectives. . . . Members of nearly all groups received indoctrination in the need to remain loyal to the familial and household unit. . . . [I]n the movement to a capitalist world and in the initial decades of settlement, familial and communal networks abounded."

John Bodnar, *The Transplanted: A History of Immigrants in Urban America*, 1985

1. Using the two excerpts above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE major difference between Handlin's and Bodnar's historical interpretations of immigration to the United States.
   - **b.** Briefly explain how ONE specific historical event or development from the period 1900 to 1930 that is not explicitly mentioned in the excerpts could be used to support Handlin's interpretation.
   - **c.** Briefly explain how ONE specific historical event or development from the period 1900 to 1930 that is not explicitly mentioned in the excerpts could be used to support Bodnar's interpretation.

Population Change, 1920–1930

2. Using the map above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE specific historical event or development that caused a population trend illustrated in the map.
   - **b.** Briefly explain ONE specific historical event or development that caused a population trend different from what you explained in (a).
   - **c.** Briefly explain ONE significant historical result of the change you explained in (a) OR (b).
3. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE specific historical similarity between the causes of the Great Depression (1929–1939) and the causes of an earlier economic recession or depression in the United States.
   - **b.** Briefly explain ONE specific historical difference in the causes of the Great Depression (1929–1939) from the causes of an earlier economic recession or depression in the United States.
   - **c.** Briefly explain how ONE specific historical event or development demonstrates a change in the United States caused by the Great Depression (1929–1939).

AP® LEARNING FOCUS

What new roles did the American government take on during the New Deal, and how did these roles shape the economy and society?

In his inaugural address in March 1933, President Franklin Delano Roosevelt did not hide the country's precarious condition. "A host of unemployed citizens face the grim problem of existence," he said, "and an equally great number toil with little return. Only a foolish optimist can deny the dark realities of the moment." Roosevelt, his demeanor sincere and purposeful, saw both despair and determination in the nation's citizens. "This nation asks for action, and action now." From Congress he would request "broad Executive power to wage a war against the emergency, as great as the power that would be given to me if we were in fact invaded by a foreign foe." With these words, Roosevelt launched a program of federal activism — which he called the New Deal — that would change the nature of American government.

The New Deal represented a new form of liberalism, a fresh interpretation of the ideology of individual rights that had long shaped the character of American society and politics. Classical nineteenth-century liberals believed that, to protect those rights, government should be small and relatively weak. However, the progressives of the early twentieth century believed individual freedom and opportunity were best safeguarded by strengthening state and federal control over large businesses and monopolies. New Deal activists went much further: their social-welfare liberalism expanded individual rights to include economic security. Beginning in the 1930s and continuing through the 1960s, they increased the responsibility of the national government for the welfare of ordinary citizens. Their efforts did not go unchallenged. Conservative critics of the New Deal charged that its "big government" programs were paternalistic and dangerous, undermining individual responsibility and constraining personal freedom. This division between the advocates and the critics of the New Deal shaped American politics for the next half century.

Before Roosevelt was elected president, between the onset of the depression in 1929 and November 1932, the "dark realities of the moment" wore down American society. Rising unemployment, shuttered businesses, failing banks, and home foreclosures tore at the nation's social fabric. As crisis piled upon crisis and the federal government's initiatives under President Hoover proved ineffectual, Americans had to reconsider more than the role of government in economic life: they had to rethink many of the principles of individualism and free enterprise that had guided so much of the nation's history.

Early Responses to the Depression, 1929–1932

To see a longer excerpt of Roosevelt's inaugural address, mentioned in the chapter introduction, along with other primary sources from this period, see ***Sources for America's History***.

The American economy collapsed between 1929 and 1932, by virtually any measurement. U.S. gross domestic product fell almost by half, from $103 billion to $58 billion. Consumption dropped by 18 percent, construction by 78 percent, and private investment by 88 percent. Nearly 9,000 banks closed their doors, and 100,000 businesses failed. Corporate profits fell from $10 billion to $1 billion. Unemployment rose to 25 percent. Fifteen million people were out of work by 1933. "Hoover made a souphound outa me!" sang jobless harvest hands in the Southwest.

The depression respected no national boundaries. Germany had preceded the United States into economic contraction in 1928, and its economy, burdened by heavy World War I reparations payments, was brought to its knees by 1929. France, Britain, Argentina, Brazil, Poland, and Canada were hard hit as well. Recovery proved difficult because the international gold standard constrained economic policymaking. The United States and most European nations had tied the value of their currencies to the price of gold, and the amount of gold held in reserves, since the late nineteenth century. This system had worked fairly well for a few decades, but it was vulnerable during economic downturns, when large financiers withdrew their investments and demanded gold payments. The gold standard rendered the international monetary system inflexible at precisely the moment when maximum flexibility was needed.

Enter Herbert Hoover

President Herbert Hoover and Congress responded to the downturn by drawing on two influential American traditions. The first was the belief that economic outcomes were the product of individual character: people's fate was in their own hands, and success went to those who deserved it. The second tradition held that through voluntary action, the business community could right itself and recover from economic downturns without relying on government assistance or, worse, submitting to government regulation. Following these principles, Hoover asked Americans to tighten their belts and work hard. After the stock market crash, he cut federal taxes in an attempt to boost private spending and corporate investment. "Any lack of confidence in the economic future or the strength of business in the United States is foolish,"

Hoover assured the country in late 1929. Treasury secretary Andrew Mellon suggested that the downturn would help Americans "work harder" and "live a more moral life."

While many factors caused the Great Depression, Hoover's adherence to the gold standard was a major reason for its length and severity in the United States. Faced with economic catastrophe, both Britain and Germany abandoned the gold standard in 1931; when they did so, their economies recovered modestly. But the Hoover administration feared that such a move would weaken the value of the dollar. In reality, an inflexible money supply discouraged investment and therefore prevented growth. The Roosevelt administration would ultimately remove the United States from the burdens of the gold standard in 1933. By that time, however, the crisis had achieved catastrophic dimensions. Billions had been lost in business and bank failures, and the economy had stalled completely.

Along with adherence to the gold standard, Hoover and many congressional Republicans believed in another piece of economic orthodoxy that had protected American manufacturing in good economic times but that proved damaging during the downturn: high tariffs (taxes on imported goods designed to stimulate American manufacturing). In 1930, Republicans enacted the **Smoot-Hawley Tariff**. Despite receiving a letter from more than a thousand economists urging him to veto it, Hoover approved the legislation. What served American interests in earlier eras now undermined them. Smoot-Hawley triggered retaliatory tariffs in other countries, which further hindered global trade and worsened economic contraction throughout the industrialized world.

The president recognized that individual initiative, business voluntarism, and high tariffs might not be enough, given the depth of the crisis, so he proposed government action as well. He called on state and local governments to provide jobs by investing in public projects. And in 1931, he secured an unprecedented increase of $700 million in federal spending for public works. Hoover's most innovative program was the Reconstruction Finance Corporation (RFC), which provided federal loans to railroads, banks, and other businesses. But the RFC lent money too cautiously, and by the end of 1932 it had loaned out only 20 percent of its $1.5 billion in funds. Like most federal initiatives under Hoover, the RFC was not nearly aggressive enough given the severity of the depression.

Few chief executives could have survived the downward economic spiral of 1929–1932, but Hoover's reluctance to break with the philosophy of limited government and his insistence that recovery was just around the corner contributed to his unpopularity. By 1932, Americans perceived Hoover as insensitive to the depth of economic suffering. The nation had come a long way since the depressions of the 1870s and 1890s, when no one except the most radical figures, such as Jacob Coxey, called for direct federal aid to the unemployed (Chapter 19). Compared with previous chief executives — and in contrast to his popular image as a "do-nothing" president — Hoover had responded to the national emergency with unprecedented government action. But the nation's needs were even more unprecedented, and Hoover's programs failed to meet them (Map 22.1).

AP® EXAM TIP

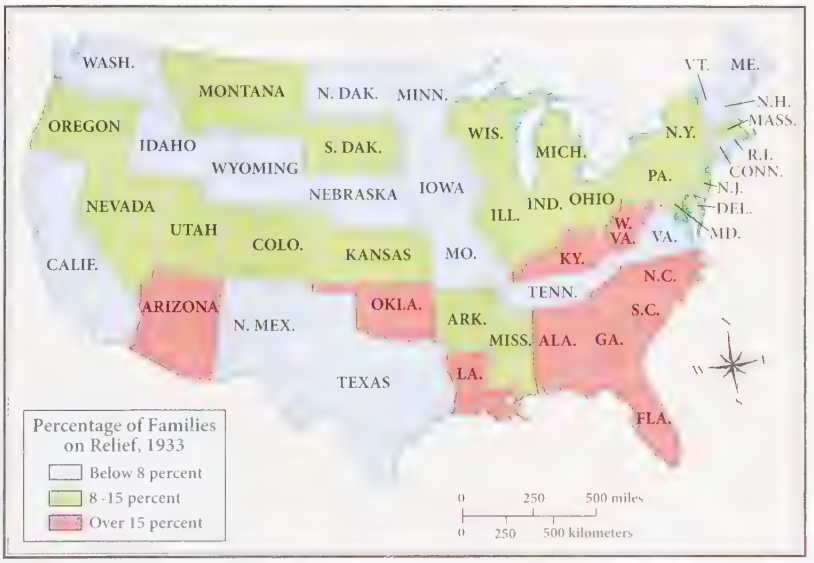
Evaluate the impact of Hoover's economic policies as contributing factors to the Great Depression.

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

What economic principles guided President Hoover and Congress in their response to the Great Depression?



MAP 22.1 The Great Depression: Families on Relief

Although the Great Depression was a nationwide crisis, some regions were hit harder than others. Economic hardship was widespread in the agricultural South, the rural Appalachian states, and the industrial states of the Northeast and Midwest. As the depression worsened in 1931 and 1932, local and state governments, as well as charitable organizations, could not keep up with the demand for relief. After Franklin D. Roosevelt assumed the presidency in 1933, the national government began a massive program of aid through the Federal Emergency Relief Administration (FERA).

Rising Discontent

As the depression deepened, the American vocabulary now included the terms *Hoovervilles* (**shantytowns** where people lived in packing crates) and *Hoover blankets* (newspapers). Bankrupt farmers banded together to resist the bank agents and sheriffs who tried to evict them from their land. To protest low prices for their goods, in the spring of 1932 thousands of midwestern farmers joined the Farmers' Holiday Association, which cut off supplies to urban areas by barricading roads and dumping milk, vegetables, and other foodstuffs onto the roadways. Agricultural prices were so low that the group advocated a government-supported farm program — drawing on Populist ideas from the 1890s (Chapter 19).

In the industrial sector, layoffs and wage cuts led to violent strikes. When coal miners in Harlan County, Kentucky, went on strike over a 10 percent wage cut in 1931, the mine owners called in the state's National Guard, which crushed the union. A 1932 confrontation between workers and security forces at the Ford Motor Company's giant River Rouge factory outside Detroit left five workers dead and fifty with serious injuries. A news photographer had his camera shot from his hands, and fifteen policemen were beaten. Whether on farms or in factories, those who produced the nation's food and goods had begun to agitate, protest, and organize in the face of mounting economic troubles.

AP® EXAM TIP

Recognize the Bonus Army as an expression of popular action in the Great Depression.

Veterans staged the most publicized — and most tragic — protest. In the summer of 1932, the **Bonus Army**, a determined group of between fifteen thousand and twenty thousand unemployed World War I veterans, piled into cars, hitchhiked, and even walked to Washington to demand immediate payment of pension awards that were due

Hooverville The depression cast hundreds of thousands of Americans out of their homes. Most found shelter with relatives, but those with little choice had to make do as they could. Encampments such as this one south of downtown Seattle, Washington — places where the homeless crafted makeshift lodging out of whatever materials were at hand — became known as Hoovervilles. The name reflected Americans' attitudes toward President Hoover, whose popularity plummeted as the depression deepened. AP Photo

to be paid in 1945. "We were heroes in 1917, but we're bums now," one veteran complained bitterly. While their leaders unsuccessfully lobbied Congress, the Bonus Army set up camps near the Capitol building. Hoover deployed regular army troops under the command of General Douglas MacArthur, who forcefully evicted the marchers and burned their encampment to the ground. When newsreel footage showing the U.S. Army attacking and injuring veterans reached movie theaters across the nation, Hoover's popularity plunged even further. In another measure of how the country had changed since the 1890s, what Americans had applauded when done to Coxey in 1894 was condemned in 1932.

AP® PRACTICES & SKILLS

POINT OF VIEW

What experiences led groups of farmers, industrial workers, and veterans to protest in the early 1930s?

The 1932 Election

Amidst rising discontent as the 1932 election approached, most Americans believed that something altogether new had to be tried—whatever that might be. The Republicans, reluctant to dump an **incumbent** president, unenthusiastically renominated Hoover. The Democrats turned to New York governor Franklin Delano Roosevelt, whose state had initiated innovative relief and unemployment programs.

Roosevelt, born into a wealthy New York family, was a distant cousin to former president Theodore Roosevelt, whose career he emulated. After attending Harvard College and Columbia University, Franklin Roosevelt served as assistant secretary of the navy during World War I (as Theodore Roosevelt had done before the War of 1898). Then, in 1921, a crippling attack of polio left both of his legs permanently paralyzed. Supported by his wife, Eleanor, he slowly returned to public life and campaigned successfully for the governorship of New York in 1928 and again in 1930. Running for the presidency in 1932, Roosevelt pledged vigorous action but gave no indication what that action might be, arguing simply that "the country needs and, unless I mistake its temper, the country demands bold, persistent experimentation." He won easily, receiving 22.8 million votes to Hoover's 15.7 million.

Elected in November, Roosevelt would not begin his presidency until March 1933. (The Twentieth Amendment, ratified in 1933, set subsequent inaugurations for January 20.) Meanwhile, Americans suffered through the worst winter of the depression. Unemployment continued to climb nationwide. In a measure of the depth of woe, in three major industrial cities in Ohio, the jobless rate shot to staggering levels: 50 percent in Cleveland, 60 percent in Akron, and 80 percent in Toledo. Private charities and public relief agencies reached only a fraction of the needy. The nation's banking system was so close to collapse that many state governors closed banks temporarily to avoid further withdrawals. Several states were approaching bankruptcy, their tax revenues too low to pay for basic services. By March 1933, the nation had hit rock bottom.

IN YOUR OWN WORDS **How did Americans, from ordinary citizens to political leaders, respond to the Great Depression?**

The New Deal Arrives, 1933–1935

The ideological differences between Herbert Hoover and Franklin Roosevelt were not vast. Both leaders wished to maintain the nation's economic institutions and preserve its social structure, to save capitalism while easing its worst downturns. Both believed in a balanced government budget and extolled the values of hard work, cooperation, and sacrifice. But Roosevelt's personal charm, political savvy, and willingness to experiment made him far more effective and popular than Hoover. Most Americans felt a kinship with their new president, calling him simply FDR. His New Deal would put people to work and restore hope in the nation's future.

Ordinary People Respond to the New Deal

Franklin Roosevelt's fireside chats and his relief programs prompted thousands of ordinary Americans to write directly to the president and his wife, Eleanor. Taken together, their letters offer a vivid portrait of depression-era America that includes popular support for, as well as opposition to, the New Deal.

"June 14, 1934
Dear Mrs. Roosevelt:
I know you are overburdened with requests for help and if my plea cannot be recognized, I'll understand it is because you have so many others, all of them worthy. . . .

My husband and I are a young couple of very simple, almost poor families. We married eight years ago on the proverbial shoe-string but with a wealth of love. . . . We managed to build our home and furnish it comfortably. . . . Then came the depression. My work has continued and my salary alone has just been sufficient to make our monthly payments on the house and keep our bills paid. . . . But with the exception of two and one-half months work with the U.S. Coast and Geodetic Survey under the C.W.A. [Civil Works Administration], my husband has not had work since August, 1932.

My salary could continue to keep us going, but I am to have a baby. . . . I can get a leave of absence from my job for a year. But can't you, won't you do something so my husband can have a job, at least during that year? . . .

As I said before, if it were only ourselves, or if there were something we could do about it, we would never ask for help.

We have always stood on our own feet and been proud and happy. But you are a mother and you'll understand this crisis.

Very sincerely yours,
Mrs. M. H. A."

UNSIGNED LETTER

This unsigned letter came from a factory worker in Paris, Texas.

We who have tried to be diligent in our support of this most wonderful nation of ours boath social and other wise, we in our younger days tried to do our duty without complaining. . . .

And now a great calamity has come upon us and seemingly no cause of our own it has swept away what little savings we had accumulated and we are left in a condition that is imposible for us to correct, for two very prominent reasons if no more.

First we have grown to what is termed Old Age, this befalls every man.

Second, . . . we are confronted on every hand with the young generation, taking our places, this of corse is what we have looked forward to in training our children. But with the extra ordinary crisese which left us helpless and placed us in the position that our fathers did not have to contend with. . . .

We have been honorable citizens all along our journey, calamity and old age has forced its self upon us please do not send us to the Poor Farm but instead allow us the small pension of $40.00 per month. . . .

Mrs. Roosevelt I am asking a personal favor of you as it seems to be the only means through which I may be able to reach the President, some evening very soon, as you and Mr. Roosevelt are having dinner together privately will you ask him to read this. And we American citizens will ever remember your kindness.

Yours very truly.

R. A. ”

“ December 14, 1937

Mrs. Roosevelt:

I suppose from your point of view the work relief, old age pensions, slum clearance and all the rest seems like a perfect remedy for all the ills of this country, but I would like for you to see the results, as the other half see them.

We have always had a shiftless, never-do-well class of people whose one and only aim in life is to live without work. I have been rubbing elbows with this class for nearly sixty years and have tried to help some of the most promising and have seen others try to help them, but it can't be done. We cannot help those who will not try to help themselves and if they do try a square deal is all they need, . . . let each one paddle their own canoe, or sink. . . .

I live alone on a farm and have not raised any crops for the last two years as there was no help to be had. I am feeding the stock and have been cutting the wood to keep my home fires burning. There are several reliefers around here now who have been kicked off relief but they refuse to work unless they can get relief hours and wages, but they are so worthless no one can afford to hire them. . . . They are just a fair sample of the class of people on whom so much of our hard earned tax-money is being squandered and on whom so much sympathy is being wasted. . . .

You people who have plenty of this worlds goods and whose money comes easy have no idea of the heart-breaking toil and self-denial which is the lot of the working people who are trying to make an honest living, and then to have to shoulder all these unjust burdens seems like the last straw. . . . No one should have the right to vote theirself a living at the expense of the tax payers. . . .

M. A. H. ”

QUESTIONS FOR ANALYSIS

1. How do you explain the personal, almost intimate, tone of these letters to the Roosevelts?
2. How have specific New Deal programs helped or hurt the authors of these letters?
3. What are the basic values of the authors? Do the values of those who support the New Deal differ from the values of those who oppose it?

evening radio addresses to the American public known as **fireside chats**, made him an intimate presence in people's lives. Thousands of citizens felt a personal relationship with FDR, saying, "He gave me a job" or "He saved my home" (AP® Analyzing Voices).

Citing the national economic emergency, Roosevelt further expanded the presidential powers that Theodore Roosevelt and Woodrow Wilson had increased previously.

To draft legislation and policy, he relied heavily on financier Bernard Baruch and a "Brains Trust" of professors from Columbia, Harvard, and other leading universities. Roosevelt also turned to his talented cabinet, which included Harold L. Ickes, secretary of the interior; Frances Perkins at the Labor Department; Henry A. Wallace at Agriculture; and Henry Morgenthau Jr., secretary of the treasury. These intellectuals and administrators attracted hundreds of highly qualified recruits to Washington. Inspired by New Deal idealism, many of them would devote their lives to public service and the principles of social-welfare liberalism.

Roosevelt could have done little, however, without a sympathetic Congress. The 1932 election had swept Democratic majorities into both the House and Senate, giving the new president the lawmaking allies he needed. The first months of FDR's administration produced a whirlwind of activity on Capitol Hill. In a legendary session, known as the **Hundred Days**, Congress enacted fifteen major bills that focused primarily on four problems: banking failures, agricultural overproduction, the business slump, and soaring unemployment. Derided by some as an "alphabet soup" because of their many abbreviations (CCC, WPA, AAA, etc.), the new policies and agencies represented the emergence of a new American state.

AP® EXAM TIP
Compare the goals and effectiveness of New Deal programs established in the first "Hundred Days."

Banking Reform

The collapsing banking system hobbled the entire economy, curtailing consumer spending and business investment. Widespread bank failures had reduced the savings of nearly nine million families, and panicked account holders raced to withdraw their funds. On March 5, 1933, the day after his inauguration, FDR declared a national "bank holiday" — closing all the banks — and called Congress into special session. Four days later, Congress passed the Emergency Banking Act, which permitted banks to reopen if a Treasury Department inspection showed they had sufficient cash reserves.

AP® EXAM TIP
Explain the expansion of the federal government's regulatory role as a result of the Great Depression.

In his first Sunday night fireside chat, to a radio audience of sixty million, the president reassured citizens that their money was safe. When the banks reopened on March 13, calm prevailed and deposits exceeded withdrawals, restoring stability to the nation's basic financial institutions. "Capitalism was saved in eight days," quipped Roosevelt's advisor Raymond Moley. Four thousand banks had failed in the months prior to Roosevelt's inauguration; only sixty-one closed their doors in all of 1934 (Table 22.1). A second banking law, the **Glass-Steagall Act**, further restored public confidence by creating the Federal Deposit Insurance Corporation (FDIC), which insured deposits up to $2,500 (and now insures them up to $250,000). The act also prohibited banks from making risky, unsecured investments with the deposits of ordinary people. And in a profoundly important economic and symbolic gesture, Roosevelt removed the U.S. Treasury from the gold standard in June 1933, which allowed the

TABLE 22.1

American Banks and Bank Failures, 1920–1940

Year	Total Number of Banks	Total Assets ($ billion)	Bank Failures
1920	30,909	53.1	168
1929	25,568	72.3	659
1931	22,242	70.1	2,294
1933	14,771	51.4	4,004

Federal Reserve to lower interest rates; since 1931, it had been raising rates, which had only deepened the downturn.

Agriculture and Manufacturing Roosevelt and the New Deal Congress next turned to agriculture and manufacturing. In those sectors, a seeming paradox was evident: the depression led to overproduction in agriculture and underproduction in manufacturing. Reversing both problematic trends was critical. The **Agricultural Adjustment Act** (AAA) began direct governmental regulation of the farm economy for the first time. To solve the problem of overproduction, which lowered prices, the AAA provided cash subsidies to farmers who cut production of seven major commodities: wheat, cotton, corn, hogs, rice, tobacco, and dairy products. Policymakers hoped that farm prices would rise as production fell.

By dumping cash in farmers' hands, the AAA briefly stabilized the farm economy. But the act's benefits were not evenly distributed. Subsidies went primarily to the owners of large and medium-sized farms, who often cut production by reducing the amount of land they rented to tenants and sharecroppers. In Mississippi, one plantation owner received $26,000 from the federal government, while thousands of black sharecroppers living in the same county received only a few dollars in relief payments.

In manufacturing, the New Deal attacked declining production with the National Industrial Recovery Act. A new government agency, the **National Recovery Administration** (NRA), set up separate self-governing private associations in six hundred industries. Each industry — ranging from large corporations producing coal, cotton textiles, and steel to small businesses making pet food and costume jewelry — regulated itself by agreeing on prices and production quotas.

The AAA and the NRA were designed to rescue the nation's productive industries and stabilize the economy. The measures had positive effects in some regions, but most historians agree that, overall, they did little to end the depression.

Unemployment Relief The Roosevelt administration next addressed the massive unemployment problem. By 1933, local governments and private charities had exhausted their resources and were looking to Washington for assistance. Although Roosevelt wanted to avoid a budget deficit, he asked Congress to provide relief for millions of unemployed Americans. In May, Congress established the Federal Emergency Relief Administration (FERA). Directed by Harry Hopkins, a hard-driving social worker from New York, the FERA provided federal funds for state relief programs.

Roosevelt and Hopkins had strong reservations about the "dole," the nickname for government welfare payments. As Hopkins put it, "I don't think anybody can go year after year, month after month, accepting relief without affecting his character." To support the traditional values of individualism, the New Deal put people to work. Early in 1933, Congress established the **Public Works Administration** (PWA), a construction program, and several months later, Roosevelt created the Civil Works Administration (CWA) and named Hopkins its head. At its peak in 1934, the CWA provided jobs for 4 million Americans, repairing bridges, building highways, and constructing public buildings. A stopgap measure to get the country through the winter of 1933–1934, the CWA lapsed in the spring, when Republican opposition compelled New Dealers to abandon it. A longer-term program, the **Civilian Conservation Corps** (CCC), mobilized 250,000 young men to do **reforestation**

Selling the NRA in Chinatown To mobilize support for its program, the National Recovery Administration (NRA) distributed millions of posters to businesses and families, urging them to display its symbol, the Blue Eagle, in shops, factories, and homes. Here Constance King and Mae Chinn of the Chinese YMCA affix a poster (and a Chinese translation) to a shop in San Francisco that is complying with the NRA codes. Bettmann/Getty Images

and conservation work. Over the course of the 1930s, the "CCC boys" built thousands of bridges, roads, trails, and other structures in state and national parks, bolstering the national infrastructure (Map 22.2).

Housing Crisis Millions of Americans also faced the devastating prospect of losing their homes. The economic expansion of the 1920s had produced the largest inflationary housing bubble in American history to that point, a scenario in which home prices rose rapidly, fueled by widespread borrowing. In the early 1930s, home prices collapsed, banks closed, and the jobless could not afford mortgage payments. More than half a million Americans lost their homes between 1930 and 1932. In response, Congress created the Home Owners Loan Corporation (HOLC) to refinance home mortgages. In just two years, the HOLC helped more than a million Americans retain their homes. The Federal Housing Act of 1934 would extend this program under a new agency, the **Federal Housing Administration** (FHA). Together, the HOLC, the FHA, and the subsequent Housing Act of 1937 permanently changed the mortgage system and set the foundation for the broad expansion of home ownership in the post-World War II decades (Chapter 24).

When an exhausted Congress recessed in June 1933, at the end of the Hundred Days, it had enacted Roosevelt's agenda: banking reform, recovery programs for agriculture and industry, public works, and unemployment relief. Few presidents had won the passage of so many measures in so short a time. The new federal agencies were far

MAP 22.2 Civilian Conservation Corps Camps
The Civilian Conservation Corps (CCC) gave hope to unemployed young men during the Great Depression. The first camp opened in Big Meadows, Virginia, in July 1933, and by the end of the decade CCC camps had appeared across the length of the country, located in rural, mountainous, and forested regions alike. Young men constructed bridges and roads, built hiking trails, erected public campgrounds, and performed other improvements. By the early 1940s, the CCC had planted three billion trees, among its many other contributions to the national infrastructure.

from perfect and had their critics on both the radical left and the conservative right. But the vigorous actions taken by Roosevelt and Congress had halted the downward economic spiral of the Hoover years, stabilized the financial sector, and sent a message of hope from the nation's political leaders. For all that, however, the New Deal did not break the grip of the depression.

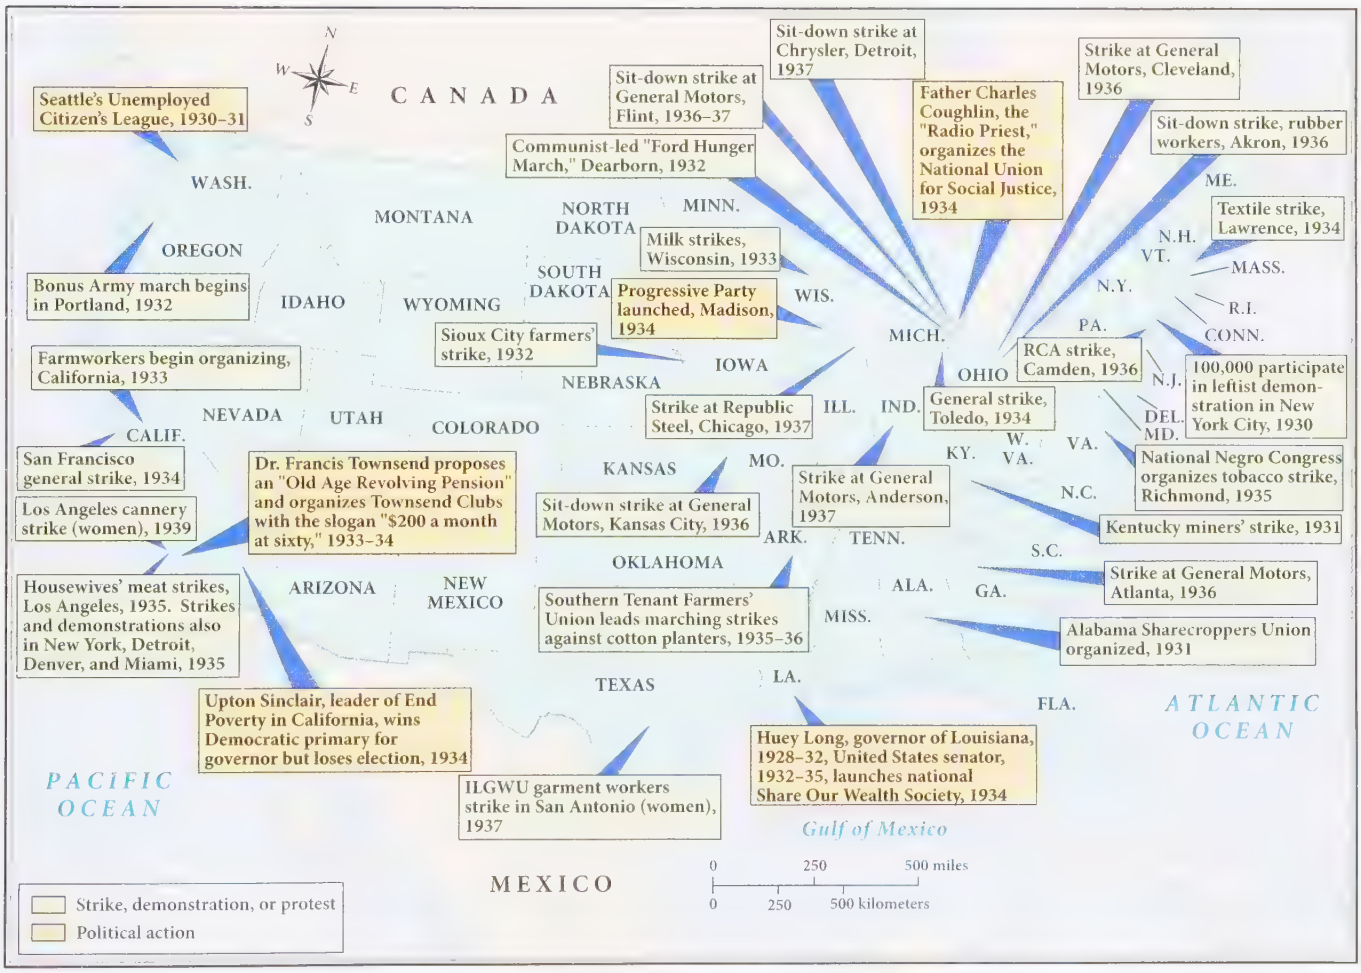
AP® PRACTICES & SKILLS

CAUSATION

What specific new roles did the American government take up as a result of the legislation passed during the first Hundred Days?

The New Deal Under Attack

As New Dealers waited anxiously for the economy to revive, Roosevelt turned his attention to the reform of Wall Street, where reckless speculation and overleveraged buying of stocks had helped trigger the financial panic of 1929. In 1934, Congress established the **Securities and Exchange Commission** (SEC) to regulate the stock market. The commission had broad powers to determine how stocks and bonds were sold to the public, to set rules for margin (credit) transactions, and to prevent stock sales by those with inside information about corporate plans. The Banking Act of 1935



MAP 22.3 Popular Protest in the Great Depression, 1933–1939

The depression forced Americans to look closely at their society, and many of them did not like what they saw. Some citizens expressed their discontent through popular movements, and this map suggests the geography of discontent. The industrial Midwest witnessed union movements, strikes, and "Radio Priest" Charles Coughlin's demands for social reform. Simultaneously, farmers' movements — tenants in the South, smallholders in the agricultural Midwest — engaged in strikes and dumping campaigns and rallied behind the ideas of progressives in Wisconsin and Huey Long in the South. Protests took diverse forms in California, which was home to strikes by farmworkers, women, and — in San Francisco — all wageworkers. The West was also the seedbed of two important reform proposals: Upton Sinclair's End Poverty in California (EPIC) movement and Francis Townsend's Old Age Revolving Pension clubs.

authorized the president to appoint a new Board of Governors of the Federal Reserve System, placing control of interest rates and other money-market policies in a federal agency based in Washington rather than in the hands of private bankers around the country.

AP® EXAM TIP
Evaluate the impact of criticism from the right and the left on New Deal programs.

Critics on the Right Such measures exposed the New Deal to attack from economic conservatives—also known as the political right. A man of wealth, Roosevelt saw himself as the savior of American capitalism, declaring simply, "To preserve we had to reform." Many bankers and business executives disagreed. To them, FDR became "That Man," a traitor to his class. In 1934, Republican business leaders joined with conservative Democrats in the **American Liberty League** to fight what they called the "reckless spending" and "socialist" reforms of the New Deal. Herbert Hoover condemned the NRA as "tyranny, not liberalism."

The **National Association of Manufacturers** (NAM) was a more lasting opponent of the New Deal—its influence stretched far into the post–World War II decades. Sparked by a new generation of corporate leaders who launched a probusiness publicity campaign to "serve the purposes of business salvation," the NAM promoted free enterprise and unfettered capitalism. In response to what many conservatives perceived as Roosevelt's antibusiness policies, the NAM produced radio programs, motion pictures, billboards, and direct mail campaigns carrying its message. After World War II, the NAM emerged as a staunch critic of liberalism and forged alliances with influential conservative politicians such as Barry Goldwater and Ronald Reagan.

Based on conservative legal doctrine dating to the late nineteenth century, the Supreme Court repudiated several cornerstones of the early New Deal. In May 1935, in *Schechter v. United States*, the Court unanimously ruled the National Industrial Recovery Act unconstitutional because it delegated Congress's lawmaking power to the executive branch and extended federal authority to intrastate (in contrast to interstate) commerce. Roosevelt protested but watched helplessly as the Court struck down more New Deal legislation: the Agricultural Adjustment Act, the Railroad Retirement Act, and a debt-relief law known as the Frazier-Lemke Act.

Father Coughlin One of the foremost critics of the New Deal was the "Radio Priest," Father Charles E. Coughlin. Coughlin believed that Roosevelt and the Democratic Party had not gone far enough in their efforts to ensure the social welfare of all citizens. For instance, he and his organization, the National Union for Social Justice, urged Roosevelt to nationalize the banks. Coughlin's radio audience reached 30 million, and he was one of the most recognizable religious leaders in the country. Unfortunately, his remarks in the early 1930s were often laced with anti-Semitism (anti-Jewish sentiment), a common feature of that era. Bettmann/Getty Image

Critics on the Populist Left If business leaders and the Supreme Court thought that the New Deal had gone too far, other Americans believed it had not gone far enough. Among these were public figures who, in the tradition of American populism, sought to place government on the side of ordinary citizens against corporations and the wealthy. Francis Townsend, a doctor from Long Beach, California, spoke for the nation's elderly, most of whom had no pensions and feared poverty. In 1933, Townsend proposed the Old Age Revolving Pension Plan, which would give $200 a month (about $3,600 today) to citizens over the age of sixty. To receive payments, the elderly would have to retire and open their positions to younger workers. Townsend Clubs sprang up across the country in support of the **Townsend Plan**, mobilizing mass support for old-age pensions.

The most direct political threat to Roosevelt came from Louisiana senator Huey Long. As the Democratic governor of

Louisiana from 1928 to 1932, the flamboyant Long had achieved stunning popularity. He increased taxes on corporations, lowered the utility bills of consumers, and built new highways, hospitals, and schools. To push through these measures, Long seized almost dictatorial control of the state government. A U.S. senator by 1934, Long broke with the New Deal and, like Townsend, established a national movement. According to his Share Our Wealth Society, inequalities in the distribution of wealth prohibited millions of ordinary families from buying the goods that kept factories humming. Long's society advocated a tax of 100 percent on all income over $1 million and on all inheritances over $5 million. He hoped that this populist program would carry him into the White House. Roosevelt himself feared that Long and Townsend, along with the popular "Radio Priest," Father Charles Coughlin, might join forces to form a third party. He had to respond or risk the political unity of the country's liberal forces (Map 22.3).

IN YOUR OWN WORDS What were the major components of the Hundred Days, and what was their purpose?

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

How did critics on the right and left represent different kinds of challenges to Roosevelt and the New Deal?

The Second New Deal and the Redefining of Liberalism, 1935–1938

As attacks on the New Deal proliferated, Roosevelt and his advisors moved politically to the left. Historians have labeled this shift in policy the Second New Deal. Roosevelt now openly criticized the "money classes," proudly stating, "We have earned the hatred of entrenched greed." He also decisively countered the rising popularity of Townsend, Long, and Coughlin by adopting parts of their programs. The administration's Revenue Act of 1935 proposed a substantial tax increase on corporate profits and higher income and estate taxes on the wealthy. When conservatives attacked this legislation as an attempt to "soak the rich," Congress moderated its taxation rates. But FDR was satisfied. He had met the Share Our Wealth Society's proposal with a tax plan of his own.

The Welfare State Comes into Being

The Revenue Act symbolized the administration's new outlook. Unlike the First New Deal, which focused on economic recovery, the Second New Deal emphasized social justice and the creation of a safety net: the use of the federal government to assist working people and to provide economic security for the old, the disabled, and the unemployed. The resulting **welfare state**—a term applied to industrial democracies that adopted various government-guaranteed social-welfare programs—fundamentally changed American society.

The Wagner Act and Social Security The first beneficiary of Roosevelt's Second New Deal was the labor movement. Section 7(a) of the National Industrial Recovery Act (NIRA) had given workers the right to organize unions, producing a dramatic growth in rank-and-file militancy and leading to a strike wave in 1934. When the Supreme Court voided the NIRA in 1935, labor unions called for new legislation that would allow workers to organize and bargain collectively with employers. Named for its sponsor, Senator Robert F. Wagner of New York, the **Wagner Act** (1935) established the right of industrial workers to join unions. The act outlawed many practices that employers had used to suppress unions, such as firing workers for organizing activities. A new federal agency, the National Labor Relations Board (NLRB), had the authority to protect workers from employer coercion and would guarantee collective bargaining.

AP® EXAM TIP

Recognize the significance of the Social Security system as the foundation of the American welfare system.

A second initiative, the **Social Security Act** of 1935, had an equally widespread impact. Other industrialized societies, such as Germany and Britain, had created national old-age pension systems at the turn of the century, but American reformers had failed to secure a similar program. The Townsend and Long movements now pressed Roosevelt to act, giving political leverage to pension **proponents** within the administration. Children's welfare advocates, concerned about the fate of fatherless families, also pressured the president. The resulting Social Security Act had three main provisions: old-age pensions for workers; a joint federal-state system of compensation for unemployed workers; and a program of payments to widowed mothers and the blind, deaf, and disabled. Roosevelt, however, limited the reach of the legislation. Knowing that compulsory pension and unemployment legislation alone would be controversial, he dropped a provision for national health insurance, fearing it would doom the entire bill.

The Social Security Act was a milestone in the creation of an American welfare state. Never before had the federal government assumed such responsibility for the well-being of so many citizens. Social Security, as old-age pensions were known, became one of the most popular government programs in American history. On the other hand, the assistance program for widows and children known as Aid to Dependent Children (ADC) became one of its most controversial measures. ADC covered only 700,000 youngsters in 1939; by 1994, its successor, Aid to Families with Dependent Children (AFDC), enrolled 14.1 million Americans. A minor program during the New Deal, AFDC grew enormously in the 1960s and remained an often maligned cornerstone of the welfare state until it was eliminated under President Bill Clinton in 1996.

New Deal Liberalism The Second New Deal created what historians call New Deal liberalism. **Classical liberalism** held individual liberty to be the foundation of a democratic society, and the word *liberal* had traditionally denoted support for free-market policies and weak government. Roosevelt and his advisors, along with intellectuals such as British economist John Maynard Keynes, disagreed. They countered that, to preserve individual liberty, government must assist the needy and guarantee the basic welfare of citizens. This liberal welfare state was opposed by inheritors of the nineteenth-century ideology of *laissez faire* capitalism, who gradually became known as conservatives. These two visions of liberty and government — with liberals on one side and conservatives on the other — would shape American politics for the remainder of the twentieth century.

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

How did the Second New Deal differ from the first?

From Reform to Stalemate

Roosevelt's first term had seen an extraordinary expansion of the federal state. The great burst of government action between 1933 and 1935 was unequaled in the nation's history, though Congress and President Lyndon Johnson nearly matched it in 1965 and 1966 (Chapter 27). Roosevelt's second term, however, was characterized by a series of political entanglements and economic bad news that stifled further reform.

The 1936 Election FDR was never enthusiastic about public relief programs. But with the election of 1936 on the horizon and 10 million Americans still out of work, he won funding for the **Works Progress Administration** (WPA). Under the energetic direction of Harry Hopkins, the WPA employed 8.5 million Americans between 1935, when it was established, and 1943. The agency's workers constructed or repaired 651,087 miles of road, 124,087 bridges, 125,110 public buildings, 8,192 parks, and 853 airports. The WPA was an extravagant operation by 1930s standards, yet it reached only about one-third of the nation's unemployed.

As the 1936 election approached, new voters joined the Democratic Party. Many had personally benefitted from New Deal programs such as the WPA or knew people

who had (Table 22.2). One was Jack Reagan, a down-on-his-luck shoe salesman (and the father of future president Ronald Reagan), who took a job as a federal relief administrator in Dixon, Illinois, and became a strong supporter of the New Deal. In addition to voters such as Reagan, Roosevelt could count on a powerful coalition of organized labor, midwestern farmers, white ethnic groups, northern African Americans, and middle-class families concerned about unemployment and old-age security. He also commanded the support of intellectuals and progressive Republicans. With difficulty, the Democrats held on to the votes of their white southern constituency as well.

Republicans recognized that the New Deal was too popular to oppose directly, so they chose as their candidate the progressive governor of Kansas, Alfred M. Landon. Landon accepted the legitimacy of many New Deal programs but criticized their inefficiency and expense. He also pointed to authoritarian regimes in Italy and Germany and hinted that FDR harbored similar dictatorial ambitions. These charges fell on deaf ears. Roosevelt's victory in 1936 was one of the most lopsided in American history. The assassination of Huey Long by a Louisiana political rival in September 1935 had eliminated the threat of a serious third-party challenge. Roosevelt received 60 percent of the popular vote and carried every state except Maine and Vermont. The *New Republic*, a liberal publication, boasted that "it was the greatest revolution in our political history."

"I see one-third of a nation ill-housed, ill-clad, ill-nourished," the president declared in his second inaugural address in January 1937, pointing to the depression's persistent social costs. But any hopes that FDR had for expanding the liberal welfare state were quickly dashed. Within a year, staunch opposition to Roosevelt's initiatives arose in Congress, and a sharp recession undermined confidence in his economic leadership.

TABLE 22.2

Major New Deal Legislation

Agriculture	
1933	Agricultural Adjustment Act (AAA)
1935	Resettlement Administration (RA) Rural Electrification Administration (REA)
1937	Farm Security Administration (FSA)
1938	Agricultural Adjustment Act of 1938
Finance and Industry	
1933	Emergency Banking Act Glass-Steagall Act (created the FDIC) National Industrial Recovery Act (NIRA)

1937	National Housing Act
1938	Fair Labor Standards Act (FLSA)
Relief and Reconstruction	
1933	Federal Emergency Relief Administration (FERA) Civil Works Administration (CWA) Public Works Administration (PWA)
1935	Works Progress Administration (WPA) National Youth Administration (NYA)

Court Battle and Economic Recession Roosevelt's first setback in 1937 came when he surprised the nation by seeking fundamental changes to the Supreme Court. In 1935, the Court had struck down a series of New Deal measures by the narrow margin of 5 to 4. With the Wagner Act, the Tennessee Valley Authority, and Social Security all slated to come before the Court, the future of the New Deal rested in the hands of a few elderly, conservative-minded judges. To diminish their influence, the president proposed adding a new justice to the Court for every member over the age of seventy, a scheme that would have brought six new judges to the bench at the time the legislation was proposed. Roosevelt's opponents protested that he was trying to "pack" the Court. After a bitter, months-long debate, Congress rejected this blatant attempt to alter the judiciary to the president's advantage.

If Roosevelt lost the battle, he went on to win the war. Swayed in part by the president's overwhelming electoral victory in the 1936 election, the Court upheld the Wagner and Social Security Acts. Moreover, a series of timely resignations allowed Roosevelt to reshape the Supreme Court after all. His new appointees — who included the liberal-leaning and generally pro–New Deal Hugo Black, Felix Frankfurter, and William O. Douglas — viewed the Constitution as a "living document" that had to be interpreted in the light of present conditions.

AP® EXAM TIP

Evaluate the causes and effects of FDR's Court-packing plan.

The so-called **Roosevelt recession** of 1937–1938 dealt another blow to the president. From 1933 to 1937, gross domestic product had grown at a yearly rate of about

Was the New Deal a Reform or a Revolution?

The 1930s Great Depression left a deep imprint on the lives of the millions of Americans who suffered the economic consequences of financial collapse. The familiar images of farm foreclosures, soup lines, and dusty migrants heading west with only a fading faith in the future to keep them moving tell a story of personal and national despair. Many of these disheartened Americans brightened at the 1932 election of President Franklin Roosevelt, whose New Deal programs gave them hope that, as his campaign said, "happy days are here again."

Happier days dawned for some, but not for others. The New Deal did not solve every problem. Commentators at the time and historians ever since have tried to understand exactly what the New Deal accomplished. Did Roosevelt's New Deal reform the relationship between the federal government and the economy, or revolutionize it? Two historians, Carl Degler and Alan Brinkley, pick up this theme and offer competing interpretations of the New Deal and its legacy.

CARL N. DEGLER

SOURCE: Carl N. Degler, *Out of Our Past: The Forces That Shaped Modern America* (New York: Harper & Row, 1959), 414–415.

[T]he guarantor state . . . under the New Deal was . . . a vigorous and dynamic force in the society, energizing and . . . supplanting private enterprise when the general welfare required it. . . . When social and economic problems . . . were ignored or shirked by private enterprise, then the federal government undertook to do the job. [If] private enterprise failed to provide adequate and sufficient housing for a minimum standard of welfare for the people, then the government would build houses. . . . Few areas of American life were beyond the touch of the experimenting fingers of the New Deal. . . . The New Deal Revolution has become so much a part of the American Way that no political party which aspires to high office dares now to repudiate it.

ALAN BRINKLEY

SOURCE: Alan Brinkley, *The End of Reform: New Deal Liberalism in Recession and War* (New York: Alfred A. Knopf, 1995), 6–7.

The critique of modern capitalism that had been so important in the early 1930s . . . was largely gone. . . . In its place was a set of liberal ideas essentially reconciled to the existing structure of the economy and committed to using the state to compensate for capitalism's inevitable flaws. . . . When liberals spoke now of government's responsibility to protect the health of the industrial world, they defined that responsibility less as a commitment to restructure the economy than as an effort to stabilize it and help it to grow. They were no longer much concerned about controlling or punishing "plutocrats" and "economic royalists," an impulse central to New Deal rhetoric in the mid-1930s. Instead, they spoke of their commitment to providing a healthy environment in which the corporate world could flourish and in which the economy could sustain "full employment."

AP SHORT ANSWER PRACTICE

1. Identify the major difference in the interpretations of the New Deal offered by Degler and Brinkley.
2. What does each historian see as the impact of New Deal policies on America's system of capitalism and private enterprise?
3. What two pieces of evidence from the chapter can you identify to make an argument for or against the revolutionary impact of the New Deal?

10 percent, bringing industrial output back to 1929 levels. Unemployment had declined from 25 percent to 14 percent. "The emergency has passed," declared Senator James F. Byrnes of South Carolina. Acting on this assumption, Roosevelt slashed the federal budget. Following the president's lead, Congress cut the WPA's funding in half, causing layoffs of about 1.5 million workers, and the Federal Reserve, fearing inflation, raised interest rates. These measures halted recovery. The stock market dropped sharply, and unemployment jumped to 19 percent. Quickly reversing course, Roosevelt began once again to spend his way out of the recession by boosting funding for the WPA and resuming public works projects.

Although improvised, this spending program accorded with the theories of John Maynard Keynes, a visionary British economist. Keynes transformed economic

Economic Nationalism in the United States and Mexico

President Franklin Roosevelt's New Deal sought to regulate the economy and provide a degree of economic security to American citizens while maintaining the structures of capitalism. In Mexico, President Lázaro Cárdenas (1934–1940) also hoped to achieve economic security for his country's citizens, but he took different steps than Roosevelt. His most famous action was to *nationalize* the oil industry — that is, the government took ownership of the industry away from private companies, most of which were based in Europe and the United States. In what follows, compare how each leader describes his new policies.

FRANKLIN ROOSEVELT

"Annual Message to Congress," 1936

SOURCE: Deborah Kalb, Gerhard D. Peters, and John Turner Woolley, eds., *State of the Union: Presidential Rhetoric from Woodrow Wilson to George W. Bush* (Washington, D.C.: CQ Press, 2007), 267.

In March, 1933, I appealed to the Congress of the United States and to the people of the United States in a new effort to restore power to those to whom it rightfully belonged. The response to that appeal resulted in the writing of a new chapter in the history of popular government. You, the members of the Legislative branch, and I, the Executive, contended for and established a new relationship between Government and people.

What were the terms of that new relationship? They were an appeal from the clamor of many private and selfish interests, yes, an appeal from the clamor of partisan interest, to the ideal of the public interest. Government became the representative and the trustee of the public interest. Our aim was to build upon essentially democratic institutions, seeking all the while the adjustment of burdens, the help of the needy, the protection of the weak, the liberation of the exploited and the genuine protection of the people's property. . . .

To be sure, in so doing, we have invited battle. We have earned the hatred of entrenched greed.

LÁZARO CÁRDENAS

"Speech to the Nation," 1938

SOURCE: Nora E. Jaffary, Edward Osowski, and Susie S. Porter, eds., *Mexican History: A Primary Source Reader* (Boulder, CO: Westview Press, 2010), 348–349.

It has been repeated *ad nauseam* that the oil industry has brought additional capital for the development and progress of the country. This assertion is an exaggeration. For many years throughout the major period of their existence, oil companies have enjoyed great privileges for development and expansion, including customs and tax exemptions and innumerable prerogatives; it is these factors of special privilege, together with the prodigious productivity of the oil deposits granted them by the Nation often against public will and law, that represent almost the total amount of this so-called capital.

Potential wealth of the Nation; miserably underpaid Native labor; tax exemptions; economic privileges; governmental tolerance — these are the factors of the boom of the Mexican oil industry.

. . . it was therefore necessary to adopt a definite and legal measure to end this permanent state of affairs in which the country sees its industrial progress held back by those who hold in their hands the power to erect obstacles as well as the motive power of all activity and who, instead of using it to high and worthy purposes, abuse their economic strength to the point of jeopardizing the very life of a Nation endeavoring to bring about the elevation of its people through its own laws, its own resources, and the free management of its own destinies.

QUESTIONS FOR ANALYSIS

1. What does Roosevelt mean by "a new relationship between Government and people"?
2. What were the "economic privileges" that Cárdenas opposes? How did his goal differ from Roosevelt's?

thinking in capitalist societies in the 1920s by arguing that government intervention could smooth out the highs and lows of the business cycle through deficit spending and the manipulation of interest rates, which determined the money supply. This view was sharply criticized by Republicans and conservative Democrats in the 1930s, who opposed government management of the economy. But **Keynesian economics** gradually won wider acceptance as World War II defense spending finally ended the Great Depression.

AP® EXAM TIP

Compare classical liberalism and Keynesian economics.

In the midst of boosting WPA spending, Roosevelt achieved a final legislative victory for the New Deal. In 1938, Congress passed the **Fair Labor Standards Act**, which outlawed child labor, made the 40-hour workweek the national standard, mandated overtime pay, and established a federal minimum wage. FDR considered it nearly as important as the Social Security Act because of its implications for how Americans worked and what they earned. But it would be the last major reform of his presidency.

A reformer rather than a revolutionary, Roosevelt had preserved capitalism and liberal individualism—even as he transformed them in significant ways (AP® Interpreting the Past). But the president stopped well short of more radical measures, such as the seizure of private property, that some world leaders considered (AP® America in the World). At the same time, conservatives had reclaimed a measure of power in Congress, and those who believed the New Deal had created an intrusive federal bureaucracy kept reform in check after 1938. Throughout Roosevelt's second term, a conservative coalition of southern Democrats, rural Republicans, and industrial interests in both parties worked to block or impede social legislation. By 1938, the era of change was over.

IN YOUR OWN WORDS How did the Second New Deal reshape American government, and what political differences did it highlight?

The New Deal and American Society

Whatever its limits, the New Deal had a tremendous impact on American society. Its ideology of social-welfare liberalism fundamentally altered Americans' relationship to their government and provided assistance to a wide range of ordinary people: the unemployed, the elderly, workers, and the poor. In doing so, New Dealers created a sizable federal bureaucracy: the number of civilian federal employees increased by 80 percent between 1929 and 1940, reaching a total of 1 million. The expenditures—and deficits—of the federal government grew at an even faster rate. In 1930, the Hoover administration spent $3.1 billion and had a surplus of almost $1 billion; in 1939, New Dealers expended $9.4 billion and ran a deficit of nearly $3 billion (still small by later standards). But the New Deal represented more than figures on a balance sheet. Across the country, it inspired new visions of democracy among ordinary citizens (AP® Thinking Like a Historian).

A People's Democracy

In 1939, writer John La Touche and musician Earl Robinson produced the patriotic song "Ballad for Americans." The lyrics called for uniting "everybody who's nobody . . . Irish, Negro, Jewish, Italian, French, and English, Spanish, Russian, Chinese, Polish, Scotch, Hungarian, Litvak, Swedish, Finnish, Canadian, Greek, and Turk, and Czech and double Czech American." The song captured the democratic aspirations that the New Deal had awakened. Millions of ordinary people believed that the nation could, and should, become more egalitarian, and Americans from all walks of life seized the chance to work toward that goal.

Organized Labor Demoralized and shrinking during the 1920s, labor unions increased their numbers and clout during the New Deal, thanks to the Wagner Act. "The era of privilege and predatory individuals is over," the fiery and outspoken labor leader John L. Lewis declared. By the end of the decade, the number of unionized workers had more than doubled to an unprecedented 23 percent of the nonagricultural workforce. A new union movement, led by the Congress of Industrial Organizations (CIO), promoted "industrial unionism"—organizing all the workers in an industry, from skilled machinists to unskilled janitors, into a single union. The American

Federation of Labor (AFL), representing the other major group of unions, favored organizing workers on a craft-by-craft basis. Both federations dramatically increased their membership in the second half of the 1930s.

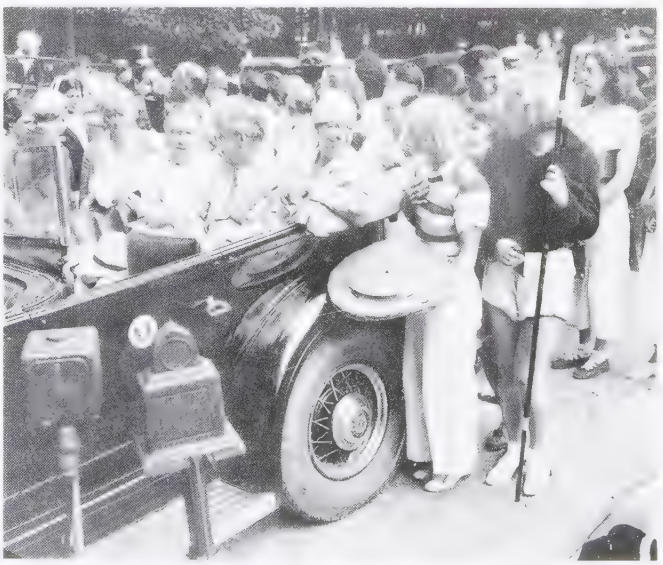
Labor's new vitality translated into political action and a long-lasting alliance with the Democratic Party. The CIO backed Democratic candidates in 1936, and its political action committee became a major Democratic ally during the 1940s. These successes were real but limited. Unions never enrolled a majority of American wageworkers, and antiunion employer groups such as the National Association of Manufacturers and the Chamber of Commerce remained powerful forces in American business life. After a decade of gains, organized labor remained an important, but still secondary, force in American industry.

United Auto Workers Strike Trade unions were among the most active and vocal organizations of the 1930s. Organized labor led a number of major strikes between 1934 and 1937 in various industries. None was more important to the future of trade unions than the sit-down strikes at major automobile plants, including General Motors and Chevrolet in Flint, Michigan, in 1936 and 1937. These strikes, in which workers stopped the assembly lines but refused to leave the factories, compelled GM to recognize the United Auto Workers (UAW), which became one of the strongest trade unions in American history. Bettmann/Getty Images

Women and the New Deal Because policymakers saw the depression primarily as a crisis of male breadwinners, the New Deal did not directly challenge gender inequities. New Deal measures generally enhanced women's welfare, but few addressed their specific needs and concerns. However, Roosevelt welcomed women into the ranks of government in greater numbers than any previous president. Frances Perkins, the first woman named to a cabinet post, served as secretary of labor throughout Roosevelt's presidency. Josephine Roche was FDR's assistant secretary of the treasury, and the president appointed female ambassadors and the first women to the U.S. Court of Appeals. While still relatively few, female appointees often worked to open up other opportunities in government for other talented women.

The most prominent woman in American politics was the president's wife, Eleanor Roosevelt. In the 1920s, she had worked to expand positions for women in political parties, labor unions, and education. A tireless advocate for women's rights, during her years in the White House Mrs. Roosevelt emerged as an independent public figure and the most influential First Lady in the nation's history. Descending into coal mines to view working conditions, meeting with African Americans seeking antilynching laws, and talking to people on breadlines, she became the conscience of the New Deal, pushing her husband to do more for the disadvantaged. "I sometimes acted as a spur," Mrs. Roosevelt later reflected, "even though the spurring was not always wanted or welcome."

Without the intervention of Eleanor Roosevelt, Frances Perkins, and other prominent women, New Deal policymakers



Roosevelts Visit Camp Tara Franklin Roosevelt was a wealthy patrician, but one of his great political skills was the ability to connect with ordinary Americans. His wife, Eleanor, shared a similar gift, perhaps to an even greater degree. In an era when staged photographs had become an important part of a politician's image-making, Roosevelt made certain to appear frequently in settings in which he mingled with the public. Here, he and Eleanor visit a vocational training camp for jobless women in 1934; FDR is seated on the far left while Eleanor greets two women standing beside the car. AP Photo

The New Deal and Public Works

More than half a dozen New Deal programs were devoted to building up the physical and cultural infrastructure of the country. The former included roads, bridges, dams, trails, and national parks. The latter included artwork, murals, plays, and other forms of literary expression. Examine the following documents and use them collectively to analyze the New Deal's relationship to infrastructure, art, culture, and politics.

1. Harold L. Ickes, secretary of the interior, *The New Democracy*, 1934.

Our Government is no longer a laissez-faire Government, exercising traditional and more or less impersonal powers. There exists in Washington a sense of responsibility for the health, safety, and well-being of the people. . . . I believe that we are at the dawn of a day when the average man, woman, and child in the United States will have an opportunity for a happier and richer life. And it is just and desirable that this should be so. . . . We are not here merely to endure a purgatorial existence in anticipation of a beatific eternity after the grave closes on us. We are here with hopes and aspirations and legitimate desires that we are entitled to have satisfied to at least a reasonable degree. Nor will such a social program as we are discussing cause a strain on our economic system.

2. Herbert Johnson cartoon, *Saturday Evening Post*, 1935.

urce: The Granger Collection, New York

3. Federal Writers' Project interview with a WPA draftsman, Newburyport, Massachusetts, June 25, 1939.

One reason people here don't like the WPA is because they don't understand it's not all bums and drunks and aliens! Nobody ever explains to them that they'd never have had the new High School they're so [. . .] proud of if it hadn't been for the WPA. They don't stop to figure that new brick sidewalks wouldn't be there, the shade trees wouldn't be all dressed up to look at along High Street and all around town, if it weren't for WPA projects. To most in this town, and I guess it's not much different in this, than any other New England place, WPA's just a racket, set up to give a bunch of loafers and drunks steady pay to indulge in their vices! They don't stop to consider that on WPA are men and women who have traveled places and seen things, been educated and found their jobs folded up and nothing to replace them with.

4. Ben Shahn, WPA mural, 1938. *This is part of a three-panel mural commissioned by the Works Progress Administration (WPA) and painted at a public school in Roosevelt, New Jersey, by the well-known artist Ben Shahn.*

SOURCE: Picture Research Consultants & Archives

5. David E. Lilienthal, *TVA: Democracy on the March*, 1944. *Written by the former chairman of the Tennessee Valley Authority.*

I believe men may learn to work in harmony with the forces of nature, neither despoiling what God has given nor helpless to put them to use. I believe in the great potentialities for well-being of the machine and technology and science; and though they do hold a real threat of enslavement and frustration for the human spirit, I believe those dangers can be averted. I believe that through the practice of democracy the world of technology holds out the greatest opportunity in all history for the development of the individual, according to his own talents, aspirations, and willingness to carry the responsibilities of a free man. . . .

Such are the things that have happened in the Tennessee Valley. Here men and science and organizational skills applied to the resources of waters, land, forests, and minerals have yielded great benefits for the people. And it is just such fruits of technology and resources that people all over the world will, more and more, demand for themselves. That people believe these things can be theirs — this it is that constitutes the real revolution of our time, the dominant political fact of the generation that lies ahead.

SOURCES: (1) Harold L. Ickes, *The New Democracy* (New York: W. W. Norton & Company Inc., 1934), 60–61; (3) Federal Writers' Project Life Histories, Library of Congress, lcweb2.loc.gov/ammem/wpaintro/wpahome.html; (5) David E. Lilienthal, *TVA: Democracy on the March* (New York: Harper & Row Publishers, 1944), xxii, 3.

ANALYZING THE EVIDENCE

1. What sorts of reasons do the authors of sources 1 and 5 give for supporting New Deal programs? What does the "good life" look like in their view, and how is it connected to the New Deal?
2. What do sources 2 and 3 suggest about possible opposition to New Deal programs? What sorts of public burdens do New Deal opponents envision?
3. Consider source 4. What can we learn from a mural about the spirit of the New Deal? Identity specific elements of the mural and think about what they might signify about the society the muralist envisioned. What kind of faith in the federal government does the mural reveal?

AP® DBQ PRACTICE

Using evidence from the sources in this feature, alongside material from the chapter and from your knowledge of the period, write an essay in which you analyze Americans' attitudes toward New Deal public works projects. If they were positive or optimistic, what was the basis of their optimism? If they were critical, what was the basis of their criticism? From these sources, can you identify a governing spirit of New Deal reform?

would have largely ignored the needs of women. A fourth of the National Recovery Act's employment rules set a lower minimum wage for women than for men performing the same jobs, and only 7 percent of the workers hired by the Civil Works Administration were female. The Civilian Conservation Corps excluded women entirely. Women fared better under the Works Progress Administration; at its peak, 440,000 women were on the payroll. Most Americans agreed with such policies. When Gallup pollsters in 1936 asked people whether wives should work outside the home when their husbands had jobs, 82 percent said no. Such sentiment reflected a persistent belief in women's subordinate status in American economic life.

African Americans and the New Deal Across the nation, but especially in the South, African Americans held the lowest-paying jobs and faced harsh social and political discrimination. Though FDR did not fundamentally change this fact, he was the most popular president among African Americans since Abraham Lincoln. African Americans held 18 percent of WPA jobs, although they constituted 10 percent of the population. The Resettlement Administration, established in 1935 to help small farmers and tenants buy land, actively protected the rights of black tenant farmers. Black involvement in the New Deal, however, could not undo centuries of racial subordination, nor could it change the disproportionate power of segregationist southern whites in the Democratic Party.

AP® EXAM TIP

Being able to explain the political realignment of African Americans to the Democratic Party is critical to success on the AP® exam.

Nevertheless, black Americans received significant benefits from New Deal relief programs and believed that the White House cared about their plight, which caused a momentous shift in their political allegiance. Since the Civil War, black voters had staunchly supported the Republican Party, the party of Lincoln, who was known as the Great Emancipator. Even in the depression year of 1932, they overwhelmingly supported Republican candidates. But in 1936, as part of the tidal wave of national support for FDR, northern African Americans gave Roosevelt 71 percent of their votes and have remained solidly Democratic ever since.

African Americans supported the New Deal partly because the Roosevelt administration appointed a number of black people to federal office, and an informal "black cabinet" of prominent black intellectuals advised New Deal agencies. Among the most important appointees was Mary McLeod Bethune. Born in 1875 in South Carolina to former slaves, Bethune founded Bethune-Cookman College and served during the 1920s as president of the National Association of Colored Women. She joined the New Deal in 1935, confiding to a friend that she "believed in the democratic and humane program" of FDR. Americans, Bethune observed, had to become "accustomed to seeing Negroes in high places." Bethune had access to the White House and pushed continually for New Deal programs to help African Americans.

But the New Deal was limited in its approach to race. Roosevelt did not go further in support of black rights, because of both his own racial conservatism and his need for the votes of the white southern Democrats in Congress — including powerful southern senators, many of whom held influential committee posts in Congress. Most New Deal programs reflected prevailing racial attitudes. Civilian Conservation Corps camps segregated blacks, and most NRA rules did not protect black workers from discrimination. Both Social Security and the Wagner Act explicitly excluded the domestic and agricultural jobs held by most African Americans in the 1930s. Roosevelt also refused to support legislation making lynching a federal crime, which was one of the most pressing demands of African Americans in the 1930s. Between 1882 and 1930, more than 2,500 African Americans were lynched by white mobs in the southern states, which means that statistically, one man, woman, or child was murdered every week for fifty years. But despite pleas from black leaders, and from Mrs. Roosevelt herself, FDR feared that southern white Democrats would block his other reforms in retaliation for such legislation.

If lynching embodied southern lawlessness, southern law was often not much better. In an infamous 1931 case in Scottsboro, Alabama, nine young black men were accused of rape by two white women hitching a ride on a freight train. The women's stories contained many inconsistencies, but within weeks a white jury had convicted all

nine defendants; eight received the death sentence. After the U.S. Supreme Court overturned the sentences because the defendants had been denied adequate legal counsel, five of the men were again convicted and sentenced to long prison terms. Across the country, the Scottsboro Boys, as they were known, inspired solidarity within African American communities. Among whites, the Communist Party took the lead in publicizing the case — and was one of the only white organizations to do so — helping to support the Scottsboro Defense Committee, which raised money for legal efforts on the defendants' behalf.

In southern agriculture, where many sharecroppers were black while landowners and government administrators were white, the Agricultural Adjustment Act hurt rather than helped the poorest African Americans. White landowners collected government subsidy checks but refused to distribute payments to their sharecroppers. Such practices forced 200,000 black families off the land. Some black farmers tried to protect themselves by joining the Southern Tenant Farmers Union (STFU), a biracial organization founded in 1934. "The same chain that holds you holds my people, too," an elderly black farmer reminded his white neighbors. But landowners had such economic power and such support from local sheriffs that the STFU could do little.

African Americans and the New Deal A Federal Theater Project production of *Battle Hymn* in New York City in the mid-1930s. *Battle Hymn* dramatized the life of the radical abolitionist John Brown, who led a bloody and ill-fated insurrection against slavery in 1859. The New Deal's record of improving the lives of African Americans was mixed, but many artists, writers, and playwrights, such as those behind *Battle Hymn*, wrote about racial injustice alongside economic injustice during the Great Depression. New Deal programs like the Federal Theater Project fostered socially conscious artistic expression in which the improvement of society was an explicit objective.

A generation of African American leaders came of age inspired by the New Deal's democratic promise. But it remained just a promise. From the outset, New Dealers wrestled with potentially fatal racial politics. Roosevelt and the Democratic Party depended heavily on white voters in the South, who wished to maintain racial segregation and white supremacy. But many Democrats in the North and West — centers of New Deal liberalism — would come to oppose racial discrimination. This meant, ironically, that the nation's most liberal political forces and some of its most conservative political forces existed side by side in the same political party. Another thirty years would pass before black Americans would gain an opportunity to reform U.S. racial laws and practices.

Indian Policy New Deal reformers seized the opportunity to implement their vision for the future of Native Americans, with mixed results. Indian peoples had long been one of the nation's most disadvantaged and powerless groups. In 1934, the average individual Indian income was only $48 per year, and the Native American unemployment rate was three times the national average. The plight of Native Americans won the attention of the progressive commissioner of the Bureau of Indian Affairs (BIA), John Collier, a critic of past BIA practices. Collier understood what Native Americans had long known: that the government's decades-long policy of forced assimilation, prohibition of Indian religions, and confiscation of Indian lands had left most tribes poor, isolated, and without basic self-determination.

Collier helped to write and push through Congress the **Indian Reorganization Act** of 1934, sometimes called the Indian New Deal. On the positive side, the law reversed the Dawes Act of 1887 (Chapter 15) by promoting Indian self-government through formal constitutions and democratically elected tribal councils. A majority of Indian peoples — some 181 tribes — accepted the reorganization policy, but 77 declined to participate, primarily because they preferred the traditional way of making decisions by

AP EXAM TIP

Evaluate changes in federal policy toward Native Americans during the New Deal.

consensus rather than by majority vote. Through the new law, Indians won a degree of religious freedom, and tribal governments regained their status as semisovereign dependent nations. When the latter policy was upheld by the courts, Indian people gained a measure of leverage that would have major implications for Native rights in the second half of the twentieth century.

Like so many other federal Indian policies, however, the "Indian New Deal" was a mixed blessing. For some peoples, the act imposed a model of self-government that proved incompatible with tribal traditions and languages. The Papagos of southern Arizona, for instance, had no words for *budget* or *representative*, and they made no linguistic distinctions among *law*, *rule*, *charter*, and *constitution*. In another case, the nation's largest tribe, the Navajos, rejected the BIA's new policy, largely because the government was simultaneously reducing Navajo livestock to make room for the Boulder Dam project. In theory, the new policy gave Indians a much greater degree of self-determination. In practice, however, although some tribes did benefit, the BIA and Congress continued to interfere in internal Indian affairs and retained financial control over reservation governments.

Struggles in the West By the 1920s, agriculture in California had become a big business — intensive, diversified, and export-oriented. Large-scale corporate-owned farms produced specialty crops — lettuce, tomatoes, peaches, grapes, and cotton — whose staggered harvests allowed the use of transient laborers. Thousands of workers, immigrants from Mexico and Asia and white migrants from the midwestern states, trooped from farm to farm and from crop to crop during the long picking season. Some migrants settled in the rapidly growing cities along the West Coast, especially the sprawling metropolis of Los Angeles. Under both Hoover and FDR, the federal government

Indian New Deal Commissioner of Indian Affairs John Collier poses with chiefs of the Blackfoot Indian tribe in 1934. Collier helped reform the way the U.S. federal government treated Native Americans. As part of what many called the Indian New Deal, Collier lobbied Congress to pass the Indian Reorganization Act. The act gave Indian tribes greater control over their own affairs and ended many of the most atrocious federal practices, such as forcing Indian children into white-run boarding schools and dividing up and selling reservation land. The legislation's long-term results were mixed, but it signaled the beginning of greater autonomy for Indian tribes across the country. Bettmann/Getty Image

promoted the "repatriation" of Mexican citizens—their deportation to Mexico. Between 1929 and 1937, approximately half a million people of Mexican descent were deported. But historians estimate that more than 60 percent of these were legal U.S. citizens, making the government's actions constitutionally questionable.

Despite the deportations, many Mexican Americans benefitted from the New Deal and generally held Roosevelt and the Democratic Party in high regard. People of Mexican descent, like other Americans, took jobs with the WPA and the CCC, or received relief in the worst years of the depression. The National Youth Administration (NYA), which employed young people from families on relief and sponsored a variety of school programs, was especially important among Mexican Americans in southwestern cities. Even though New Deal programs did not fundamentally improve the migrant farm labor system under which so many people of Mexican descent labored, the New Deal coalition attracted Mexican Americans in large numbers because of the Democrats' commitment to ordinary people. "Franklin D. Roosevelt's name was the spark that started thousands of Spanish-speaking persons to the polls," noted one Los Angeles activist.

Men and women of Asian descent—mostly from China, Japan, and the Philippines—formed a small minority of the American population but were a significant presence in some West Coast cities. Immigrants from Japan and China had long faced discrimination. A 1913 California law prohibited them from owning land. Japanese farmers, who specialized in fruit and vegetable crops, circumvented this restriction by putting land titles in the names of their American-born children. As the depression cut farm prices and racial discrimination excluded young Japanese Americans from nonfarm jobs, about 20 percent of the immigrants returned to Japan.

AP® EXAM TIP

Identify the role of the New Deal in realigning ethnic groups with the Democratic Party.

Mexican American Farm Workers Among the most hard-pressed workers during the Great Depression were those who labored in the nation's agricultural field, orchards, and processing plants. Agriculture was a big-time corporate business by the 1930s, and in California and other parts of the Southwest it employed hundreds of thousands of poor Mexican Americans and Mexican immigrants. Seizing on the spirit of social protest sweeping the country in the early 1930s, many of these workers went on strike for better wages and working conditions. Here, women from Mexican American communities are heading to the cotton fields near Corcoran, California, to urge workers to join a major strike of cotton pickers. Though the workers in Corcoran won some wage improvements in this 1933 strike, the fierce battle between employers and workers in American agriculture was far from over and continues to this day. Photo12/UIG via Getty Images

Chinese Americans were less prosperous than their Japanese American counterparts. Only 3 percent of Chinese Americans worked in professional and technical positions, and discrimination barred them from most industrial jobs. In San Francisco, the majority of Chinese worked in small businesses: restaurants, laundries, and firms that imported textiles and ceramics. During the depression, they turned for assistance to Chinese social organizations such as *huiguan* (district associations) and to the city government; in 1931, about one-sixth of San Francisco's Chinese population was receiving public aid. But few Chinese benefitted from the New Deal. Until the repeal of the Exclusion Act in 1943, Chinese immigrants were classified as "aliens ineligible for citizenship" and therefore were excluded from most federal programs.

Because Filipino immigrants came from a U.S. territory, they were not affected by the ban on Asian immigration enacted in 1924. During the 1920s, their numbers swelled to about 50,000, many of whom worked as laborers on large corporate-owned farms. As the depression cut wages, Filipino immigration slowed to a trickle, and it was virtually cut off by the **Tydings-McDuffie Act** of 1934. The act granted independence to the Philippines (which since 1898 had been an American colony), classified all Filipinos in the United States as aliens, and restricted immigration from the Philippines to fifty people per year.

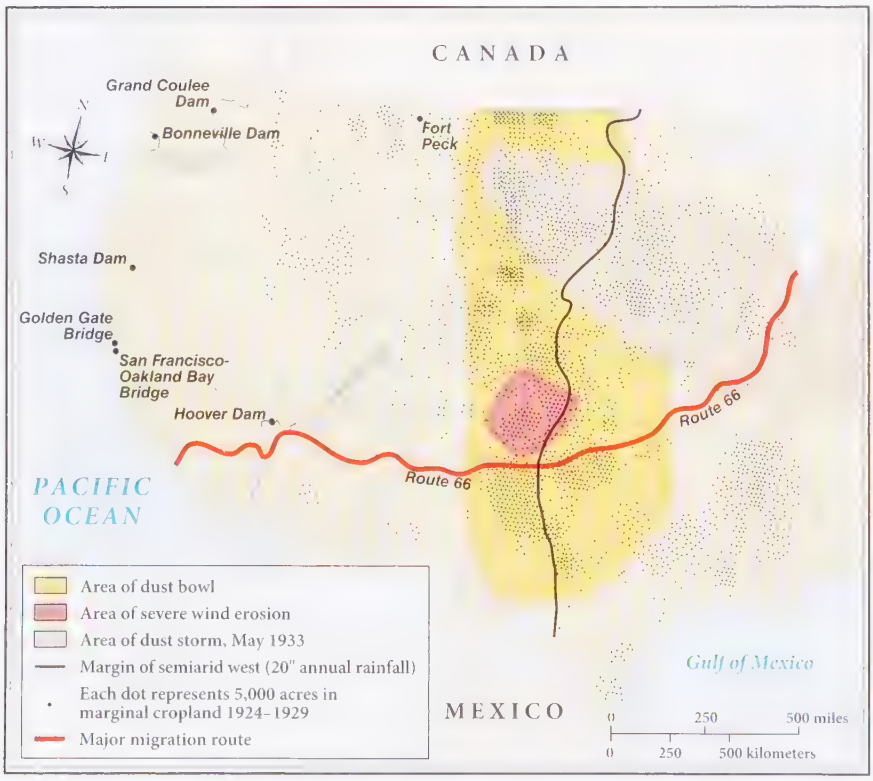
AP PRACTICES & SKILLS

COMPARE & CONTRAST

In what ways did the New Deal assist nonwhite Americans, and in what ways did it hinder their equal standing?

Reshaping the Environment

Attention to natural resources was a consistent theme of the New Deal, and the shaping of the landscape was among its most visible legacies. Franklin Roosevelt and Interior Secretary Harold Ickes saw themselves as conservationists in the tradition of FDR's cousin, Theodore Roosevelt. In an era before environmentalism, FDR practiced what he called the "gospel of conservation." The president cared primarily about making the land—and other natural resources, such as trees and water—better serve human needs. National policy stressed scientific land management and ecological balance. Under Roosevelt, the federal government both responded to environmental crises and reshaped the use of natural resources, especially water, in the United States.

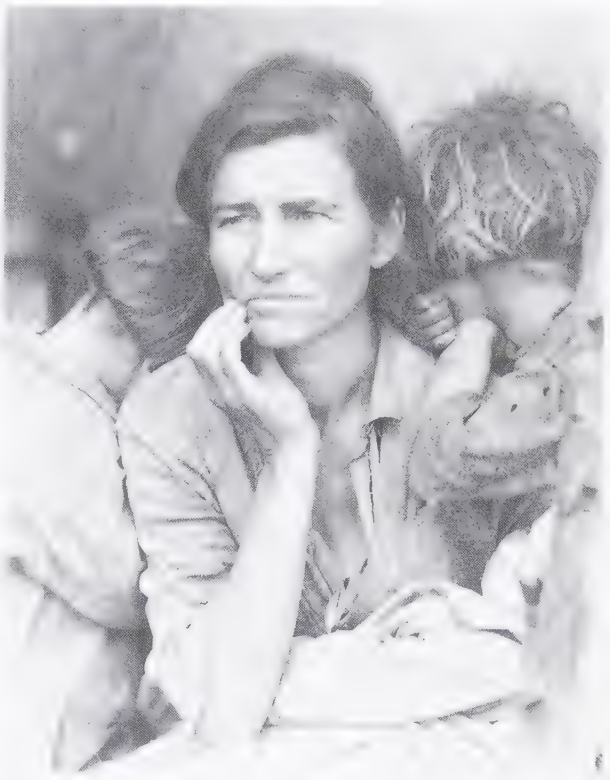


MAP 22.4 The Dust Bowl and Federal Building Projects in the West, 1930–1941
A U.S. Weather Bureau scientist called the drought of the 1930s "the worst in the climatological history of the country." Conditions were especially severe in the southern plains, where farming on marginal land threatened the environment even before the drought struck. As farm families migrated west on U.S. Route 66, the federal government began a series of massive building projects that provided flood control, irrigation, electric power, and transportation facilities to residents of the states of the Far West.

The Dust Bowl Among the most hard-pressed citizens during the depression were farmers fleeing the "**dust bowl**" of the Great Plains. Between 1930 and 1941, a severe drought afflicted the semiarid states of Oklahoma, Texas, New Mexico, Colorado, Arkansas, and Kansas. Farmers in these areas had stripped the land of its native vegetation, which destroyed the delicate ecology of the plains. To grow wheat and other crops, they had pushed agriculture beyond the natural limits of the soil, making their land vulnerable, in times of drought, to wind erosion of the topsoil (Map 22.4). When the winds came, huge clouds of thick dust rolled over the

land, turning the day into night. This ecological disaster prompted a mass exodus. At least 350,000 "Okies" (so called whether or not they were from Oklahoma) loaded their belongings into cars and trucks and headed to California. John Steinbeck's novel *The Grapes of Wrath* (1939) immortalized them, and New Deal photographer Dorothea Lange's haunting images of California migrant camps made them the public face of the depression's human toll.

Roosevelt and Ickes believed that poor land practices made for poor people. Under their direction, government agencies tackled the dust bowl's human causes. Agents from the newly created Soil Conservation Service, for instance, taught farmers to prevent soil erosion by tilling hillsides along the contours of the land. They also encouraged (and sometimes paid) farmers to take certain commercial crops out of production and plant soil-preserving grasses instead. One of the U.S. Forest Service's most widely publicized programs was the Shelterbelts, the planting of 220 million trees running north along the 99th meridian from Abilene, Texas, to the Canadian border. Planted as a windbreak, the trees also prevented soil erosion. A variety of government agencies, from the CCC to the U.S. Department of Agriculture, lent their expertise to establishing sound farming practices in the plains.



The Human Face of the Great Depression *Migrant Mother* by Dorothea Lange is one of the most famous documentary photographs of the 1930s. On assignment for the Resettlement Administration, Lange spent only ten minutes in a pea-pickers' camp in Nipomo, California. There she captured this image (though not the name) of the woman whose despair and resignation she so powerfully recorded. In the 1970s the woman was identified as Florence Thompson, a native Cherokee from Oklahoma, who disagreed with Lange's recollections of the circumstances of the taking of the photograph. Thompson and her family had left Nipomo, however, by the time the publication of this image sparked a large relief effort directed at the camp's migrant workers. Library of Congress

Tennessee Valley Authority The most extensive New Deal environmental undertaking was the **Tennessee Valley Authority** (TVA), which Roosevelt saw as the first step in modernizing the South. Funded by Congress in 1933, the TVA integrated flood control, reforestation, electricity generation, and agricultural and industrial development. The dams and their hydroelectric plants provided cheap electric power for homes and factories as well as ample recreational opportunities for the valley's residents. The massive project won praise around the world (Map 22.5).

The TVA was an integral part of the Roosevelt administration's effort to keep farmers on the land by enhancing the quality of rural life. The **Rural Electrification Administration** (REA), established in 1935, was also central to that goal. Fewer than one-tenth of the nation's 6.8 million farms had electricity. The REA addressed this problem by promoting nonprofit farm cooperatives that offered loans to farmers to install power lines. By 1940, 40 percent of the nation's farms had electricity; a decade later, 90 percent did. Electricity brought relief from the drudgery and isolation of farm life. Electric irons, vacuum cleaners, and washing machines eased women's burdens, and radios brightened the lives of the entire family. Along with the automobile and the movies, electricity broke down the barriers between urban and rural life.

AP® EXAM TIP

Compare the environmental policies of Franklin Roosevelt's New Deal and Theodore Roosevelt's Square Deal.

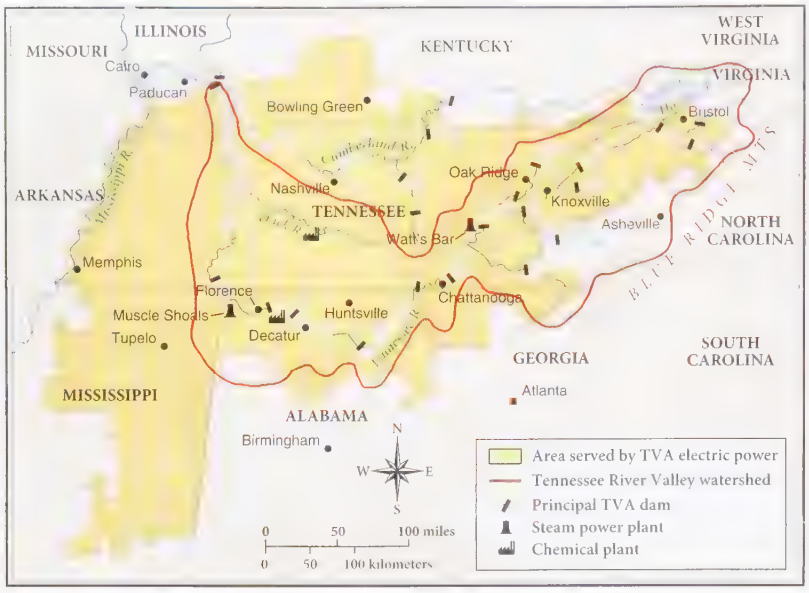
Grand Coulee As the nation's least populated but fastest-growing region, the West benefitted enormously from the New Deal's attention to the environment. With the largest number of state and federal parks in the country, the West gained countless trails, bridges, cabins, and other recreational facilities, laying the groundwork for the post–World War II expansion of western tourism. On the Colorado River, Boulder Dam (later renamed Hoover Dam) was completed in 1935 with Public Works Administration funds; the dam generated power for the region's growing cities such as Las Vegas, Los Angeles, and Phoenix.

The largest project in the West, however, took shape in an obscure corner of Washington State, where the PWA and the Bureau of Reclamation built the Grand Coulee Dam on the Columbia River. When it was completed in 1941, Grand Coulee was the largest electricity-producing structure in the world, and its 150-mile lake

AP® PRACTICES & SKILLS

CAUSATION

Why did the natural environment receive so much attention under New Deal programs, and with what result?



MAP 22.5 The Tennessee Valley Authority, 1933–1952
The Tennessee Valley Authority was one of the New Deal's most far-reaching environmental projects. Between 1933 and 1952, the TVA built twenty dams and improved five others, taming the flood-prone Tennessee River and its main tributaries. The cheap hydroelectric power generated by the dams brought electricity to industries as well as hundreds of thousands of area residents, and artificial lakes provided extensive recreational facilities. Widely praised at the time, the TVA came under attack in the 1970s for its practice of strip mining and the pollution caused by its power plants and chemical factories.

provided irrigation for the state's major crops: apples, cherries, pears, potatoes, and wheat. Inspired by the dam and the modernizing spirit of the New Deal, folk singer Woody Guthrie wrote a song about the Columbia. "Your power is turning our darkness to dawn," he sang, "so roll on, Columbia, roll on!"

New Deal projects that enhanced people's enjoyment of the natural environment can be seen today throughout the country. CCC and WPA workers built the famous Blue Ridge Parkway, which connects the Shenandoah National Park in Virginia with the Great Smoky Mountains National Park in North Carolina. In the West, government workers built the San Francisco Zoo, Berkeley's Tilden Park, and the canals of San Antonio. The Civilian Conservation Corps helped to complete the East Coast's Appalachian Trail and the West Coast's Pacific Crest Trail through the Sierra Nevada. In state parks across the country, cabins, shelters, picnic areas, lodges, and observation towers stand as monuments to the New Deal ethos of recreation coexisting with nature.

The New Deal and the Arts

In response to the Great Depression, many American writers and artists redefined their relationship to society. Never had there been a decade, critic Malcolm Cowley suggested in 1939, "when literary events followed so closely on the flying coat-tails of social events." New Deal administrators encouraged artists to create projects that would be of interest to the entire community, not just the cultured elite. Encouraged by the popular New Deal slogan "art for the millions," artists painted murals in hundreds of public buildings. The WPA's Federal Art Project gave work to many young artists who would become the twentieth century's leading painters, muralists, and sculptors. Jackson Pollock, Alice Neel, Willem de Kooning, and Louise Nevelson all received support. The Federal Music Project and **Federal Writers' Project** (FWP) employed 15,000 musicians and 5,000 writers, respectively. Among the latter were Saul Bellow, Ralph Ellison, and John Cheever, who became great American writers. The FWP also collected oral histories, including two thousand narratives by former slaves. The black folklorist and novelist Zora Neale Hurston finished three novels while in the Florida FWP, among them her best-known work, *Their Eyes Were Watching God* (1937). Richard Wright won the 1938 *Story* magazine prize for the best tale by a WPA writer and went on to complete *Native Son* (1940), a searing novel about white racism. Similarly, the Federal Theatre Project (FTP) nurtured such talented directors, actors, and playwrights as Orson Welles, John Huston, and Arthur Miller.

The Legacies of the New Deal

The New Deal addressed the Great Depression by restoring hope and promising security. FDR and Congress created a powerful social-welfare state that took unprecedented responsibility for the well-being of American citizens. During the 1930s, millions of people began to pay taxes directly to the Social Security Administration, and more than

one-third of the population received direct government assistance from federal programs. New legislation regulated the stock market, reformed the Federal Reserve System, and subjected business corporations to federal regulation. The New Deal's pattern of government involvement in social life would persist for the rest of the twentieth century. In the 1960s, Lyndon Johnson and the "Great Society" Congress dramatically expanded social-welfare programs—by creating Medicare and Medicaid, for instance—most of which remained intact in the wake of the "Reagan Revolution" of the 1980s (Chapter 29).

Like all other major social transformations, the New Deal was criticized both by those who thought it did too much and by those who believed it did too little. Conservatives, who prioritized limited government and individual freedom, pointed out that the New Deal state intruded deeply into the personal and financial lives of citizens and the affairs of business. Conversely, advocates of social-welfare liberalism complained that the New Deal's safety net had too many holes: no national health-care system, welfare programs that excluded domestic workers and farm laborers, and state governments that often limited the benefits distributed under New Deal programs.

Whatever the merits of its critics, the New Deal unquestionably transformed the American political landscape. From 1896 to 1932, the Republican Party had commanded the votes of a majority of Americans. That changed as Franklin Roosevelt's magnetic personality and innovative programs brought millions of voters into the Democratic fold. Democratic recruits included first- and second-generation immigrants from southern and central Europe—Italians, Poles, Russians, and Slavs, among others, most of them Catholic or Jewish—as well as African American migrants to northern cities. Organized labor aligned itself with a Democratic administration that had recognized unions as a legitimate force in modern industrial life. The elderly and the unemployed, assisted by the Social Security Act, likewise supported FDR. This New Deal coalition of ethnic groups, city dwellers, organized labor, African Americans, and a cross section of the middle class formed the nucleus of the northern Democratic Party and supported additional liberal reforms in the decades to come.

Grand Coulee Dam This extraordinary photo from a *Life* magazine essay shows workers hitching a ride on a 13-ton conduit as it is lowered into place on the Grand Coulee Dam in Washington State. Dozens of dams were constructed across the country under the auspices of various New Deal programs, but none were more majestic than two in the West: Boulder Dam (renamed Hoover Dam in 1947) and Grand Coulee. Built to harness the awesome power of the Columbia River as it rushed to the Pacific, Grand Coulee would ultimately provide electric power to Seattle, Portland, and other West Coast cities and new irrigation waters for Washington's apple and cherry orchards, among many other crops. Library of Congre

AP® PRACTICES & SKILLS

CAUSATION

What was the New Deal's long-term legacy?

IN YOUR OWN WORDS In what ways did the New Deal promote change in American society? In what ways did it not?

SUMMARY

We have seen how Franklin Delano Roosevelt's First New Deal focused on stimulating recovery, providing relief to the unemployed, and regulating banks and other financial institutions. The Second New Deal was different. Influenced by the persistence of the depression and the growing popularity of Huey Long's Share Our Wealth proposals,

Roosevelt promoted social-welfare legislation that provided Americans with economic security.

We also explored the impact of the New Deal on various groups of citizens, especially African Americans, women, and unionized workers. Our survey paid particular attention to the lives of the Mexicans, Asians, and Okies who worked in the farms and factories of California. Because of New Deal assistance, the members of those groups gravitated toward the Democratic Party. The party's coalition of ethnic workers, African Americans, farmers, parts of the middle classes, and white southerners gave FDR and other Democrats a landslide victory in 1936.

Finally, we examined the accomplishments of the New Deal. In 1933, New Deal programs resolved the banking crisis while preserving capitalist institutions. Subsequently, these programs expanded the federal government and, through the Social Security system, farm subsidy programs, and public works projects, launched federal policies that were important to nearly every American. Great dams and electricity projects sponsored by the Tennessee Valley Authority, the Works Progress Administration in the West, and the Rural Electrification Administration permanently improved the quality of life for the nation's citizens.

CHAPTER 22 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. How did Americans, from ordinary citizens to political leaders, respond to the Great Depression?
2. What were the major components of the Hundred Days, and what was their purpose?
3. How did the Second New Deal reshape American government, and what political differences did it highlight?
4. In what ways did the New Deal promote change in American society? In what ways did it not?
5. Review the events listed under "American and National Identity," "Politics and Power," and "Culture and Society" on the thematic timeline on pages 618–619. Some historians have seen the New Deal as a natural evolution of progressive reforms from earlier in the century. Others have argued that it represented a revolution in social values and government institutions. Do you view the New Deal as an extension of progressivism, or a radical break with the past? Provide evidence for your argument.

AP® TERMS TO KNOW

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. People often view the New Deal as a set of government programs and policies enacted by President Roosevelt and Congress. In this version, change comes from above. Yet there is also evidence that ordinary Americans played an important role in inspiring and championing aspects of the New Deal. Find several specific examples of this, and think about the possible connections between the struggles, protests, and actions of ordinary people and the programs of the New Deal.
2. How did the lives of women, workers, and historically underrepresented racial and ethnic groups change during the Great Depression? What role did the New Deal play in helping those groups of Americans?

KEY TURNING POINTS

Refer to the chapter chronology on page 680 for help in answering the question below.

Identify two critical turning points between 1934 and 1937 when the New Deal faced specific challenges.

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS

Choose the correct answer for each question.

Questions 1–3 refer to the excerpt below.

> "We have to limit fortunes. . . . It may be necessary, in working out of the plans, that no man's fortune would be more than $10,000,000 or $15,000,000. But be that as it may, it will still be more than any one man, or any one man and his children and their children, will be able to spend in their lifetimes; and it is not necessary or reasonable to have wealth piled up beyond that point where we cannot prevent poverty among the masses. . . . .
>
> Those are the things we propose to do. "Every Man a King." Every man to eat when there is something to eat; all to wear something when there is something to wear. That makes us all a sovereign.
>
> You cannot solve these things through these various and sundry alphabetical codes. . . . You know what the trouble is. . . . Now my friends, we have got to hit the root with the ax. Centralized power in the hands of a few, with centralized credit in the hands of a few, is the trouble."
>
> Huey Long, United States Senator, "Every Man a King" speech, 1934

1. Huey Long's ideas expressed in the excerpt participate in the 1930s trend in the United States of increasing
   a. conservative attempts to limit the scope of the economic change.
   b. populist-style political movements seeking change in the United States economic system.
   c. calls for totalitarianism to solve economic crises.
   d. state and local efforts aimed at ending the Great Depression.
2. In highlighting "these various and sundry alphabetical codes," Long referred most directly to
   a. New Deal programs.
   b. United States espionage against Japan.
   c. efforts for industrial efficiency emphasized by Progressive reformers.
   d. union movements pushing for more extensive economic change.
3. The ideas of Huey Long, as expressed in the excerpt, had most in common with the ideas of the
   a. Social Darwinists of the 1880s.
   b. critics of the status quo in the 1890s.
   c. government reformers after 1900.
   d. advocates of civil rights in the 1950s.

Questions 4–5 refer to the excerpt below.

> "Sec. 2. It is hereby declared to be the policy of Congress—
>
> 1) To establish and maintain such balance between the production and consumption of agricultural commodities . . . as will reestablish prices to farmers at a level that will give agricultural commodities a purchasing power with respect to articles that farmers buy, equivalent to the purchasing power of agricultural commodities in the base period. The base period in the case of all commodities . . . shall be the prewar period. . . .
>
> 2) To approach such equality of purchasing power by gradual correction of the present inequalities therein at as rapid a rate as is deemed feasible in view of the current consumptive demand in domestic and foreign markets."
>
> The Agricultural Adjustment Act, 1933

4. The challenges faced by the agricultural sector of the economy in the 1930s were driven primarily by
   a. federal deregulation of agricultural markets.
   b. improvements in mechanization increasing productivity.
   c. changes in regional cultures.
   d. patterns of mass migration.
5. The legislation in the excerpt emerged most directly from the context of
   a. Franklin Roosevelt's attempts to stimulate the economy.
   b. debates over the best means to maintain traditional cultural values.
   c. movement of the majority of the United States population to urban centers.
   d. the expansion of popular participation in government.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

> "The guarantor state . . . under the New Deal was . . . a vigorous and dynamic force in society, energizing and . . . supplanting private enterprise when the general welfare required it. . . . When social and economic problems . . . were ignored or shirked by private enterprise, then the federal government undertook to do the job. [If] private enterprise failed to provide adequate and sufficient housing for a minimum standard of welfare for the people, then the government would build houses. . . . Few areas of American life were beyond the touch of the experimenting fingers of the New Deal. . . . The New Deal Revolution has become so much a part of the American Way that no political party which aspires to high office dares now to repudiate it."
>
> Carl N. Degler, *Out of Our Past: The Forces That Shaped Modern America*, 1959
>
> "The critique of modern capitalism that had been so important in the early 1930s . . . was largely gone. . . . In its place was a set of liberal ideas essentially reconciled to the existing structure of the economy and committed to using the state to compensate for capitalism's inevitable flaws. . . . When liberals spoke now of government's responsibility to protect the health of the industrial world, they defined that responsibility less as a commitment to restructure the economy than as an effort to stabilize it and help it grow. They were no longer much concerned about controlling or punishing 'plutocrats' and 'economic royalists,' an impulse central to New Deal rhetoric in the mid 1930s. Instead, they spoke of their commitment to providing a healthy environment in which the corporate world could flourish and in which the economy could sustain 'full employment.'"
>
> Alan Brinkley, *The End of Reform: New Deal Liberalism in Recession and War*, 1995

1. Using the two excerpts at left, answer (a), (b), and (c).
   a. Briefly explain ONE major difference between Degler's and Brinkley's historical interpretations of the New Deal.
   b. Briefly explain how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Degler's argument.
   c. Briefly explain how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Brinkley's argument.
2. Answer (a), (b), and (c).
   a. Briefly explain ONE important difference between the goals of the First and Second New Deals.
   b. Briefly explain ONE important similarity between the goals of the First and Second New Deals.
   c. Briefly explain ONE important historical factor that accounts for the similarity or difference between the goals of the First and Second New Deals.
3. Answer (a), (b), and (c).
   a. Briefly present an argument why ONE of the following developments was the most significant factor contributing to greater environmental conservation in the United States in the 1930s.
      - The establishment of the Civilian Conservation Corps
      - The creation of the Tennessee Valley Authority
      - The onset of the Dust Bowl
   b. Explain ONE specific historical event or development to support your argument in (a).
   c. Explain why ONE of the other options is less convincing as the most significant factor contributing to greater environmental conservationism.

AP LEARNING FOCUS

How did World War II transform the United States domestically and change its relationship with the world?

The Second World War was the defining international event of the twentieth century. Battles raged across three continents and all of the world's oceans. It killed between 50 and 80 million people and wounded hundreds of millions more. When it was over, the industrial economies and much of the infrastructure of Europe and East Asia lay in ruins. Waged with both technologically advanced weapons and massive armies, the war involved every industrialized power in Europe, North America, and Asia, as well as dozens of other nations, many of them colonies of the industrialized countries.

The military conflict began on two continents: in Asia with Japan's 1937 invasion of China across the Sea of Japan, and in Europe with the 1939 blitzkrieg (lightning war) by Germany against Poland. It ended in 1945 after American planes dropped two atomic bombs, the product of stunning yet ominous scientific breakthroughs, on the Japanese cities of Hiroshima and Nagasaki. In between these demonstrations of technological prowess and devastating power, huge armies confronted and destroyed one another in the fields of France, the forests and steppes of Russia, the river valleys of China, the volcanic islands of the Pacific, and the deserts of North Africa.

"Armed defense of democratic existence is now being gallantly waged in four continents," President Franklin Delano Roosevelt told the nation in January 1941. After remaining neutral for several years, the United States would commit to that "armed defense." Both FDR and British prime minister Winston Churchill came to see the war as a defense of democratic values from the threat posed by German, Italian, and Japanese fascism. For them, the brutal conflict was the "good war." When the grim reality of the Jewish Holocaust came to light, U.S. participation in the war seemed even more just. But as much as it represented a struggle between democracy and fascism, it was also inescapably a war to maintain British, French, and Dutch control of colonies in Africa, India, the Middle East, and Southeast Asia. By 1945, democracy in the industrialized world had been preserved, and a new alliance between Western Europe and the United States had taken hold; the future of the vast European colonial empires, however, remained unresolved.

On the U.S. domestic front, World War II ended the Great Depression, hastened profound social changes, and expanded the scope and authority of the federal government. Racial politics and gender roles shifted under the weight of wartime migration and labor shortages. The pace of urbanization increased as millions of Americans uprooted themselves and moved hundreds or thousands of miles to join the military or to take a war job. A stronger, more robust federal government, the product of a long, hard-fought war, would remain in place to fight an even longer, more expensive, and potentially more dangerous Cold War in the ensuing years. These developments, which accelerated transformations already under way, would have **repercussions** far into the postwar decades.

Black Pilots in Tuskegee, Alabama World War II was a "total war," fought on three continents by hundreds of millions of people and massive national armies. Though a late arrival to the conflict, the United States played a critical role in defeating the Axis powers. Here, African American pilots in Tuskegee, Alabama, read a map in preparation for a training flight. Afro American Newspapers/Gado/Getty Images

The Road to War

The Great Depression disrupted economic life around the world and led to the collapse of traditional political institutions. In response, an antidemocratic movement known as fascism, which had originated in Italy during the 1920s, developed in Germany, Spain, and Japan. By the mid-1930s, these nations had instituted authoritarian, militaristic governments led by powerful dictators: Benito Mussolini in Italy, Adolf Hitler in Nazi Germany, Francisco Franco in Spain, and, after 1940, Hideki Tojo in Japan. As early as 1936, President Roosevelt warned that other nations had "sold their heritage of freedom" and urged Americans to work for "the survival of democracy" both at home and abroad. Constrained by strong isolationist sentiment, by 1940 FDR was cautiously leading the nation toward war against the fascist powers.

The Rise of Fascism

World War II had its roots in the settlement of World War I. Germany struggled under the harsh terms of the Treaty of Versailles, and Japan and Italy had their desire for overseas empires thwarted by the treaty makers. Faced with the expansive ambitions and nationalist resentments of those countries, the League of Nations, the collective security system established at Versailles, proved unable to maintain the existing international order.

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

AP® EXAM TIP

Evaluate the reasons why the rise of fascism concerned Americans in the 1930s.

Fascism, as instituted in Germany by Hitler, combined a centralized, authoritarian state, a doctrine of Aryan racial supremacy, and fervent nationalism in a call for the spiritual reawakening of the German people. Fascist leaders worldwide disparaged parliamentary government, independent labor movements, and individual rights. They opposed both the economic collectivism of the Soviet Union—where, in theory, the state managed the economy to ensure social equality—and the competitive capitalist economies of the United States and Western Europe. Fascist movements arose around the world in the 1930s but managed to achieve power in only a handful of countries. Those countries were at the center of global war making in that decade.

Japan and Italy The first challenge came from Japan. To become an industrial power, Japan required raw materials and overseas markets. Like the Western European

powers and the United States before it, Japan embraced an expansionary foreign policy in pursuit of colonial possessions and overseas influence. In 1931, its troops occupied Manchuria, an industrialized province in northern China, and in 1937 the Japanese launched a full-scale invasion of China. In both instances, the League of Nations condemned Japan's actions but did nothing to stop them.

Japan's defiance of the League encouraged a fascist leader half a world away: Italy's Benito Mussolini, who had come to power in 1922. Il Duce (The Leader), as Mussolini was known, had long denounced the Versailles treaty, which denied Italy's colonial claims in Africa and the Middle East after World War I. As in Japan, the Italian fascists desired overseas colonies for raw materials, markets, and national prestige. In 1935, Mussolini invaded Ethiopia, one of the few remaining independent countries in Africa. Ethiopian emperor Haile Selassie appealed to the League of Nations, but the League's verbal condemnation and limited sanctions, its only real leverage, did not stop Italy from taking control of Ethiopia in 1936.

Hitler's Germany Germany, however, posed the gravest threat to the existing world order. Huge World War I reparation payments, economic depression, fear of communism, labor unrest, and rising unemployment fueled the ascent of Adolf Hitler and his **National Socialist (Nazi) Party**. When Hitler became chancellor of Germany in 1933, the Reichstag (the German legislature) granted him dictatorial powers to deal with the economic crisis. Hitler promptly outlawed other political parties, arrested many of his political rivals, and declared himself führer (leader). Under Nazi control, the Reichstag invested all legislative power in Hitler's hands.

Hitler's goal was nothing short of European domination and world power, as he had made clear in his 1925 book *Mein Kampf* (*My Struggle*). The book outlined his plans to overturn the territorial settlements of the Versailles treaty, unite Germans living throughout central Europe in a great German fatherland, and annex large areas of Eastern Europe. The "inferior races" who lived in these regions — Jews, Gypsies, and Slavs — would be removed or subordinated to the German "master race." These territories would provide Germany with what Hitler called "lebensraum" (living space) — a new region of settlement and farming and a source of natural resources. A virulent anti-Semite, Hitler had long blamed Jews for Germany's problems. Once in power, he began a sustained and brutal persecution of Jews, which expanded into a campaign of extermination in the early 1940s.

In 1935, Hitler began to rearm Germany, in violation of the Versailles treaty. No nation stopped him. In 1936, he sent troops into the Rhineland, a demilitarized zone under the terms of Versailles. Again, France and Britain took no action. Later that year, Hitler and Mussolini formed the **Rome-Berlin Axis**, a political and military alliance between the two fascist nations. Also in 1936, Germany signed a pact to create a military alliance with Japan against the Soviet Union. With these alliances in place, and with France and Great Britain reluctant to oppose him, Hitler had seized the military advantage in Europe by 1937.

AP® PRACTICES & SKILLS

CAUSATION

What motivated Japanese, Italian, and German expansionism?

War Approaches

As Hitler pushed his initiatives in Europe, which was as deeply mired in economic depression as the United States, the Roosevelt administration faced widespread isolationist sentiment among Americans. In part, this desire to avoid European entanglements reflected disillusion with American participation in World War I. In 1934, Gerald P. Nye, a progressive Republican senator from North Dakota, launched an investigation into the profits of munitions makers during that war. Nye's committee alleged that arms manufacturers (popularly labeled "merchants of death") had maneuvered President Wilson into World War I.

Although Nye's committee failed to prove its charge against weapon makers, its factual findings prompted an isolationist-minded Congress to pass a series of acts to

Charles Lindbergh Cartoon Charles Lindbergh, the first person to fly solo nonstop across the Atlantic Ocean, was an American hero in the 1930s. In 1941, he had become the public face of the America First Committee, which was determined to keep the United States from entering the wars raging in Europe and Asia. In this political cartoon from October 1941, Lindbergh is shown standing on a soapbox labeled "Fascism," looking up at the figure of "Democracy." The implication is that Lindbergh had been fooled by German propaganda into taking its side. Less than two months after the cartoon appeared, Japan attacked Pearl Harbor, and isolationist sentiment all but disappeared in the United States. Library [illegible]

prevent the nation from being drawn into another overseas war. The **Neutrality Act of 1935** imposed an embargo on selling arms to warring countries and declared that Americans traveling on the ships of belligerent nations did so at their own risk. In two subsequent Neutrality Acts, Congress banned loans to belligerents (1936), and then, in 1937, imposed a "cash-and-carry" requirement: if a warring country wanted to purchase nonmilitary goods from the United States, it had to pay cash and carry them in its own ships, keeping the United States out of potentially dangerous naval warfare (a fourth Neutrality Act, in 1939, permitted military goods to be purchased under the same terms).

Americans for the most part had little enthusiasm for war, and a wide variety of groups and individuals espoused isolationism. Many isolationists looked to Republican Ohio senator Robert Taft, who distrusted both Roosevelt and European nations with equal conviction, or to the aviator hero Charles A. Lindbergh, who delivered impassioned speeches against intervention in Europe. Some isolationists, such as the conservative National Legion of Mothers of America, combined anticommunism, Christian morality, and even anti-Semitism. Isolationists were primarily conservatives, but a contingent of progressives (or liberals) opposed America's involvement in the war on pacifist or moral grounds. Whatever their philosophies, ardent isolationists forced Roosevelt to approach the brewing war cautiously.

The Popular Front Other Americans responded to the rise of European fascism by advocating U.S. intervention. Some of the most prominent Americans pushing for greater involvement in Europe, even if it meant war, were affiliated with the **Popular Front**. Wary of German and Japanese aggression, the Soviet Union instructed Communists in Western Europe and the United States to join with liberals in a broad coalition opposing fascism. In the United States, the Popular Front drew from a wide range of social groups, including the American Communist Party (which had increased its membership to between fifty and seventy thousand), African American civil rights activists, trade unionists, left-wing writers and intellectuals, and even a few New Deal administrators. Many supporters in the United States grew uneasy with the Popular Front because of the brutal political repression in the Soviet Union under Joseph Stalin. Nevertheless, Popular Front activists were among a small but vocal group of Americans encouraging Roosevelt to take a stronger stand against European fascism.

The Failure of Appeasement Encouraged by the weak worldwide response to the invasions of China, Ethiopia, and the Rhineland, and emboldened by British and French neutrality during the Spanish Civil War, Hitler grew more aggressive in 1938. He sent troops to annex German-speaking Austria while making clear his intention to seize part of Czechoslovakia. Because Czechoslovakia had an alliance with France, war seemed imminent. But at the **Munich Conference** in September 1938, Britain and France capitulated, agreeing to let Germany annex the Sudetenland — a German-speaking border area of Czechoslovakia — in return for Hitler's pledge to seek no more territory. The agreement, declared British prime minister Neville Chamberlain, guaranteed "peace for our time." Hitler drew a different conclusion, telling his generals: "Our enemies are small fry. I saw them in Munich."

Within six months, Hitler's forces had overrun the rest of Czechoslovakia and were threatening to march into Poland. Realizing that their policy of appeasement — capitulating to Hitler's demands — had been disastrous, Britain and France warned Hitler that further aggression meant war. Then, in August 1939, Hitler and Stalin shocked the world by signing a mutual nonaggression pact. For Hitler, this pact was crucial, as it meant that Germany would not have to wage a two-front war against Britain and France in the west and the Soviet Union in the east. On September 1, 1939, Hitler launched a blitzkrieg against Poland. Two days later, Britain and France declared war on Germany. World War II had officially begun.

Two days after the European war started, the United States declared its neutrality. But President Roosevelt made no secret of his sympathies. When war broke out in 1914, Woodrow Wilson had told Americans to be neutral "in thought as well as in action." FDR, by contrast, now said: "This nation will remain a neutral nation, but I cannot ask that every American remain neutral in thought as well." The overwhelming majority of Americans — some 84 percent, according to a poll in 1939 — supported Britain and France rather than Germany, but most wanted America to avoid another European war.

At first, the need for U.S. intervention seemed remote. After Germany conquered Poland in September 1939, calm settled over Europe. Then, on April 9, 1940, German forces invaded Denmark and Norway. In May, the Netherlands, Belgium, and Luxembourg fell to the swift German army. The final shock came in mid-June, when France too surrendered. Britain now stood alone against Hitler's plans for domination of Europe.

Isolationists and Interventionists What *Time* magazine would later call America's "thousand-step road to war" had already begun. After a bitter battle in Congress in 1939, Roosevelt won a change in the neutrality laws to allow the Allies to buy arms as well as nonmilitary goods on a cash-and-carry basis. Interventionists, led by journalist William Allen White and his **Committee to Defend America by Aiding the Allies**, became increasingly vocal in 1940 as war escalated in Europe. In response, isolationists formed the **America First Committee** (AFC), with well-respected figures such as Lindbergh and Senator Nye urging the nation to stay out of the war. The AFC held rallies across the United States, and its posters, brochures, and broadsides warning against American involvement in Europe suffused many parts of the country, especially the Midwest.

Because of the America Firsters' efforts, Roosevelt proceeded cautiously in 1940 as he moved the United States closer to involvement. The president did not want war, but he believed that most Americans "greatly underestimate the serious implications to our own future," as he confided to White. In May, Roosevelt created the National Defense Advisory Commission and brought two prominent Republicans, Henry Stimson and Frank Knox, into his cabinet as secretaries of war and the navy, respectively. During the summer, the president traded fifty World War I destroyers to Great Britain in exchange for the right to build military bases on British possessions in the Atlantic, circumventing neutrality laws by using an executive order to complete the deal. In October 1940, a bipartisan vote in Congress approved a large increase in defense spending and instituted the first peacetime draft in American history. "We must be the great arsenal of democracy," FDR declared.

As the war in Europe and the Pacific expanded, the United States was preparing for the 1940 presidential election. The crisis had convinced Roosevelt to seek an unprecedented third term. The Republicans nominated Wendell Willkie of Indiana, a former Democrat who supported many New Deal policies. The two parties' platforms differed only slightly. Both pledged aid to the Allies, and both candidates promised not to "send an American boy into the shambles of a European war," as Willkie put it. Willkie's spirited campaign resulted in a closer election than that of 1932 or 1936. Nonetheless, Roosevelt won 55 percent of the popular vote.

AP® EXAM TIP

Recognize the impact of FDR's interventionist philosophy in outlining America's role in the war.

Having been reelected, Roosevelt now undertook to persuade Congress to increase aid to Britain, whose survival he viewed as key to American security. In January 1941, he delivered one of the most important speeches of his career. Defining "four essential human freedoms" — freedom of speech, freedom of religion, freedom from want, and freedom from fear — Roosevelt cast the war as a noble defense of democratic societies. He then linked the fate of democracy in Western Europe with the new welfare state at home. Sounding a decidedly New Deal note, Roosevelt pledged to end "special privileges for the few" and to preserve "civil liberties for all." Like President Wilson's speech championing national self-determination at the close of World War I, Roosevelt's "**Four Freedoms**" speech outlined a liberal international order with appeal well beyond its intended European and American audiences.

Two months later, in March 1941, with Britain no longer able to pay cash for arms, Roosevelt persuaded Congress to pass the **Lend-Lease Act**. The legislation authorized the president to "lease, lend, or otherwise dispose of" arms and equipment to Britain or any other country whose defense was considered vital to the security of the United States. When Hitler abandoned his nonaggression pact with Stalin and invaded the Soviet Union in June 1941, the United States extended lend-lease to the Soviets. The implementation of lend-lease marked the unofficial entrance of the United States into the European war.

To see a longer excerpt of the "Four Freedoms" speech, along with other primary sources from this period, see ***Sources for America's History***.

Roosevelt underlined his support for the Allied cause by meeting in August 1941 with British prime minister Winston Churchill (who had succeeded Chamberlain in 1940). Their joint press release, which became known as the **Atlantic Charter**, provided the ideological foundation of the Western cause. Drawing from Wilson's Fourteen Points and Roosevelt's Four Freedoms, the charter called for economic cooperation, national self-determination, and guarantees of political stability after the war to ensure "that all men in all the lands may live out their lives in freedom from fear and want." It would become the basis for a new American-led transatlantic alliance after the war's conclusion. Its promise of national self-determination, however, set up potential conflict in Asia and Africa, where European powers would be reluctant to abandon their colonial holdings.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

How did Roosevelt use the Four Freedoms speech and the Atlantic Charter to define the war for Americans?

In the fall of 1941, the reality of U.S. involvement in the war drew closer. By September, Nazi U-boats and the American navy were exchanging fire in the Atlantic. With isolationists still a potent force, Roosevelt hesitated to declare war and insisted that the United States would defend itself only against a direct attack. But behind the scenes, the president and his close advisors considered war inevitable.

The Attack on Pearl Harbor

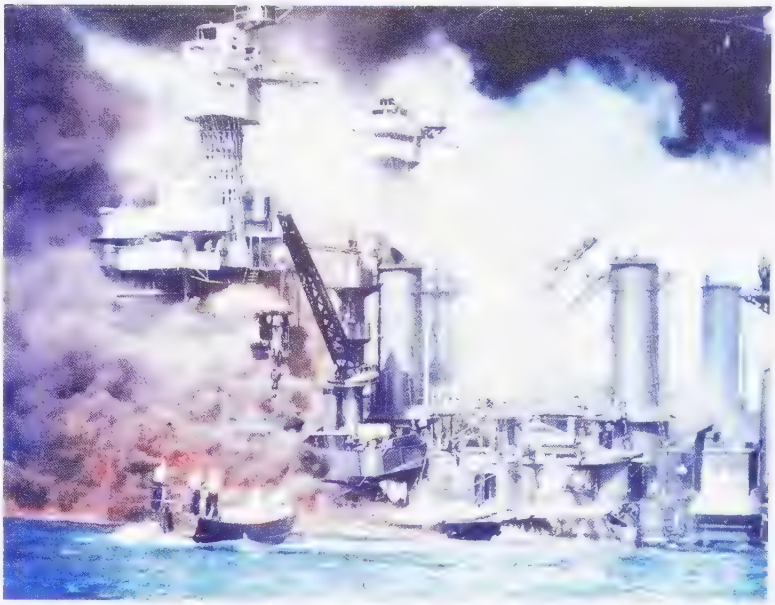
The crucial provocation came not from Germany but from Japan. After Japan invaded China in 1937, Roosevelt had denounced "the present reign of terror and international lawlessness" and suggested that aggressors be "quarantined" by peaceful nations. Despite such rhetoric, the United States refused to intervene later that year when Japanese troops sacked the city of Nanjing, massacred 300,000 Chinese residents, and raped thousands of women.

With China weakened as a counterweight, Japan's military and imperial ambitions expanded. In 1940, General Hideki Tojo became war minister. After concluding a formal military alliance with Germany and Italy that year, Tojo dispatched Japanese troops to occupy the northern part of the French colony of Indochina (present-day Vietnam, Cambodia, and Laos). Tojo's goal, supported by Emperor Hirohito, was to create a "Greater East Asia Co-Prosperity Sphere" under Japan's control, stretching from the Korean Peninsula south to Indonesia. Like Germany and Italy, Japan sought to match the overseas empires of Britain, France, Holland, and the United States.

When Japanese troops staged a full-scale invasion of Indochina in July 1941, Roosevelt froze Japanese assets in the United States and stopped all trade with Japan. This included vital oil shipments that accounted for almost 80 percent of Japanese consumption. In October 1941, General Tojo became prime minister and accelerated

secret preparations for war against the United States. By November, American military intelligence knew that Japan was planning an attack but did not know where it would occur.

Early on Sunday morning, December 7, 1941, Japanese bombers attacked **Pearl Harbor** in Hawaii, killing more than 2,400 Americans. They destroyed or heavily damaged eight battleships, three cruisers, three destroyers, and almost two hundred airplanes. Although the assault was devastating, it united the American people. Calling December 7th "a date which will live in infamy," President Roosevelt asked Congress for a declaration of war against Japan. The Senate voted unanimously for war, and the House concurred by a vote of 388 to 1. The lone dissenter was Jeannette Rankin of Montana, a committed pacifist — she also voted against entry into World War I — and the first female member of Congress. Three days later, Germany and Italy declared war on the United States, which in turn declared war on the Axis powers. The long shadows of two wars, one in Europe and one in Asia, had at long last converged over the United States.



Pearl Harbor, December 7, 1941 On the morning of December 7, 1941, a surprise Japanese attack on the U.S. naval fleet in Pearl Harbor (Hawaii Territory) produced destruction and chaos. Having significantly damaged American forces in the Pacific, Japan quickly overtook virtually all of Southeast Asia. But within sixteen months, the United States had turned the tide and begun to drive the Japanese back toward their home islands. National Archives photo no. 12009

IN YOUR OWN WORDS **Explain the steps by which the United States became involved in World War II.**

Organizing for a Global War

The task of fighting on a global scale dramatically increased the power of the federal government. Shifting from civilian to military production, raising an army, and assembling the necessary workforce required a massive expansion in government authority. When Congress passed the **War Powers Act** in December 1941, it gave President Roosevelt unprecedented control over all aspects of the war effort. Necessary to fight the war, this act marked the beginning of what some historians call the imperial presidency: the far-reaching use (and sometimes abuse) of executive authority during the second half of the twentieth century.

Financing the War

Defense mobilization, not the New Deal of the 1930s, ended the Great Depression. Between 1940 and 1945, the annual gross national product doubled, and after-tax profits of American businesses nearly doubled (AP® America in the World). Federal spending on war production powered this advance. By late 1943, two-thirds of the economy was directly involved in the war effort, and war-related production jumped from just 2 percent of GNP to 40 percent (Figure 23.1). The government paid for these military expenditures by raising taxes and borrowing money. The **Revenue Act** of 1942 expanded the number of people paying income taxes from 3.9 million to 42.6 million. Taxes on personal incomes and business profits paid half the cost of the war. The government borrowed the rest, both from wealthy Americans and from ordinary citizens, who invested in treasury bonds (war bonds).

AP® EXAM TIP

Recognizing the role of World War II in ending the Great Depression is essential for the AP® exam.

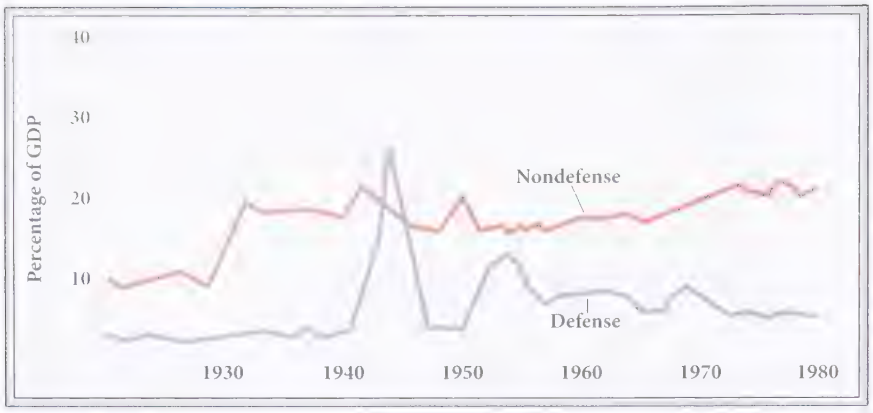


FIGURE 23.1 Government Military and Civilian Spending as a Percentage of GDP, 1920–1980

Government military spending was about 3 percent of the gross domestic product (GDP) in the 1920s and 1930s, but it ballooned to more than 25 percent during World War II, to 13 percent during the Korean War, and to nearly 10 percent during the Vietnam War. Federal government spending for civilian purposes doubled during the New Deal and has remained at about 17 to 20 percent of GDP ever since.

Financing and coordinating the war effort required far-reaching cooperation between government and private business. The number of civilians employed by the government increased almost fourfold, to 3.8 million — a far higher rate of growth than that during the New Deal. The powerful War Production Board (WPB) awarded defense contracts, allocated scarce resources — such as rubber, copper, and oil — for military uses, and persuaded businesses to convert to military production. For example, it encouraged Ford and General Motors to build tanks rather than cars by granting generous tax advantages for re-equipping existing factories and building new ones. In other instances, the board approved "cost-plus" contracts, which guaranteed corporations a profit and allowed them to keep new steel mills, factories, and shipyards after the war. Such government subsidies of defense industries would intensify during the Cold War and continue to this day. These corporations would form the core of what became known as the nation's "military-industrial complex" during the Cold War (Chapter 24).

To secure maximum production, the WPB preferred to deal with major enterprises rather than with small businesses. The nation's fifty-six largest corporations received three-fourths of the war contracts; the top ten received one-third. The best-known contractor was Henry J. Kaiser. Already highly successful from building roads in California and the Hoover and Grand Coulee dams, Kaiser went from government construction work to navy shipbuilding. At his shipyard in Richmond, California, he revolutionized ship construction by applying Henry Ford's techniques of mass production. To meet wartime production schedules, Kaiser broke the work process down into small, specialized tasks that newly trained workers could do easily. Soon, each of his work crews was building a "Liberty Ship," a large vessel to carry cargo and troops to the war zone, every two weeks. The press dubbed him the Miracle Man.

Central to Kaiser's success were his close ties to federal agencies. The government financed the great dams that he built during the depression, and the Reconstruction Finance Corporation lent him $300 million to build shipyards and manufacturing plants during the war. Working together in this way, American business and government turned out a prodigious supply of military hardware: 86,000 tanks; 296,000 airplanes; 15 million rifles and machine guns; 64,000 landing craft; and 6,500 cargo ships and naval vessels. The American way of war, wrote the Scottish historian D. W. Brogan in 1944, was "mechanized like the American farm and kitchen." America's industrial might, as much as or more than its troops, proved the decisive factor in winning World War II.

AP® PRACTICES & SKILLS

CHANGE OVER TIME

How did the war affect the relationship between private corporations and the federal government?

Mobilizing the American Fighting Force

The expanding federal bureaucracy also had a human face. To fight the war, the government mobilized tens of millions of soldiers, civilians, and workers — coordinated on a scale unprecedented in U.S. history. During World War II, the armed forces of the United States enlisted more than sixteen million men and women. In no other military conflict have so many American citizens served in the armed services. They came from every region and economic station: black sharecroppers from Alabama; white farmers from the Midwest; the sons and daughters of European, Mexican, and Caribbean

The Scales of War: Losses and Gains During World War II

World War II saw an extraordinary loss of life. Worldwide, at least 50 million people perished between 1939 and 1945 from war-related causes. The majority of those who died were civilians, though many millions of soldiers perished in battle as well. For most countries, we have reasonable estimates rather than precise figures. The chart below compares the United States with other major combatants and nations caught in this global struggle.

On the other side of the scale, the war fueled tremendous economic growth, at least in the United States, which was spared the physical devastation of Europe and East Asia. Military production for World War II lifted the United States out of the Great Depression. Gross domestic product (GDP) nearly doubled between 1938 and 1945. Economic production in other combatant nations, as shown in the second figure, grew little if at all.

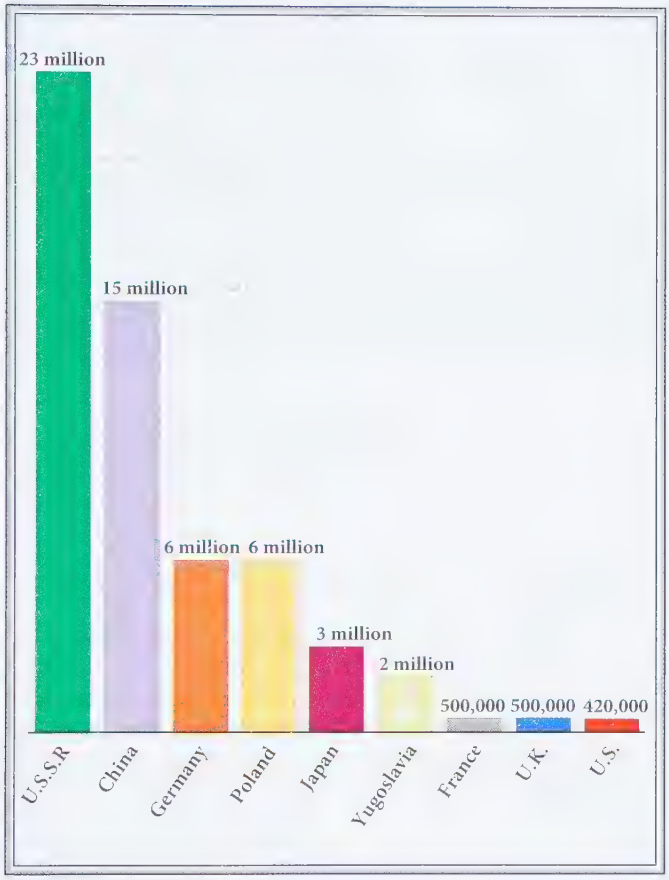

FIGURE 23.2 World War II Military and Civilian Deaths, 1939–1945

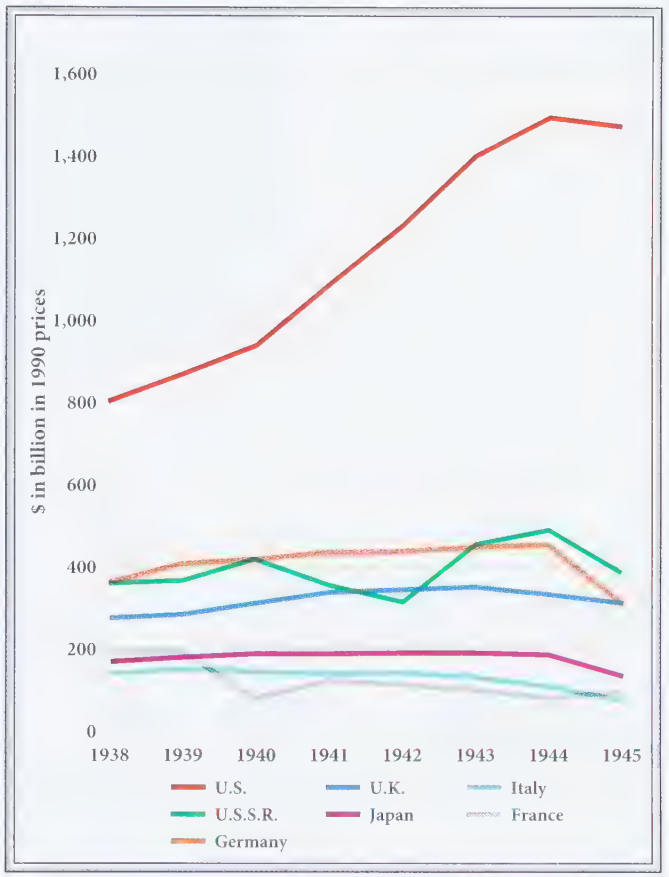

FIGURE 23.3 Gross Domestic Product Rates Worldwide, 1938–1945

QUESTIONS FOR ANALYSIS

1. Why did the United States experience so many fewer deaths than other nations? Why were there so many deaths in Eastern Europe and the Soviet Union?
2. Note the relative position of U.S. GDP to other industrial nations in 1938 and in 1945. How were some of the key domestic changes discussed in the chapter, such as rural-urban migration, racial conflict, and women's employment, linked to this economic growth?
3. How might you use these comparisons to add to your understanding of key wartime developments, such as the Holocaust, Stalin's demand for a second front, or the entry of the United States into the war?

Shipyards in Wartime The shipyard workers shown here are laying the keel of the *Joseph N. Teal*, a 10,500-ton "Liberty" freighter bound for the war in the Pacific in 1942. Amidst scaffolding, tools, and wires, these workers at Henry J. Kaiser's shipyard in Portland, Oregon, constructed the entire ship in just ten days after the keel was laid, to shatter all previous shipbuilding records. Kaiser was the king of shipbuilding on the West Coast, with massive yards in Portland and the San Francisco Bay area. In all, Kaiser's workers built nearly 1,500 ships in three years, one-quarter of the total constructed during the war. Bettmann/Getty Images

AP® EXAM TIP

Identifying the opportunities and challenges faced by women and minorities who served in World War II is a "must know" for the AP® exam.

immigrants; Native men from Navajo and Choctaw reservations and other tribal communities; women from every state in the nation; even Hollywood celebrities. From urban, rural, and suburban areas, from working-class and middle-class backgrounds — they all served in the military.

In contrast to its otherwise democratic character, the American army segregated the nearly one million African Americans in uniform. The National Association for the Advancement of Colored People (NAACP) and other civil rights groups reprimanded the government, saying, "A Jim Crow army cannot fight for a free world," but the military continued to separate black soldiers and assign them menial duties. The poet Langston Hughes observed the irony: "We are elevator boys, janitors, red caps, maids — a race in uniform." The military uniform, Hughes implied, was not assigned to African Americans so readily. Native Americans and Mexican Americans, on the other hand, were never officially segregated; they rubbed elbows with the sons of European immigrants and native-born soldiers from all regions of the country.

Among the most instrumental soldiers were the Native American "**code talkers**." In the Pacific theater, native Navajo speakers communicated orders to fleet commanders. Japanese intelligence could not decipher the code because it was based on the Navajo language, which fewer than fifty non-Navajos in the world understood. At the battle of Iwo Jima, for instance — one of the war's fiercest — Navajo code talkers, working around the clock, sent and received more than eight hundred messages without error. In the European theater, army commanders used Comanche, Choctaw, and Cherokee speakers to thwart the Nazis and exchange crucial military commands on the battlefield. No Axis nation ever broke these Native American codes.

Approximately 350,000 American women enlisted in the military. About 140,000 served in the Women's Army Corps (WAC), and 100,000 served in the navy's Women Accepted for Volunteer Emergency Service (WAVES). One-third of the nation's registered nurses, almost 75,000 overall, volunteered for military duty. In addition, about 1,000 Women's Airforce Service Pilots (WASPs) ferried planes and supplies in noncombat areas. The armed forces limited the duties assigned to women, however. Female officers could not command men, and WACs and WAVES were barred from combat duty, although nurses of both sexes served close to the front lines, risking capture or death. Most of the jobs that women did in the military — clerical work, communications, and health care — resembled women's jobs in civilian life.

Historians still debate how to characterize the World War II American military. As an army of "citizen-soldiers," it represented a wide stratum of society. Military service gave a generation of men a noble purpose, following a decade of economic depression. And its ethic of patriotism further advanced the children of immigrants into mainstream American life. Yet the military embodied the tensions and contradictions of American society as well. The draft revealed appalling levels of health, fitness, and education among millions of Americans, spurring reformers to call for improved literacy and nutrition. Women's integration into the military was marked by deep anxieties about the threat to "womanhood" allegedly posed by service. The American army was like the nation itself. United in wartime purpose, the military reflected the strengths and weaknesses of a diverse, fractious society.

Workers and the War Effort

As millions of working-age citizens joined the military, the nation faced a critical labor shortage. Consequently, many women and African Americans joined the industrial workforce, taking jobs unavailable to them before the conflict. Unions, benefitting from the demand for labor, negotiated higher wages and improved conditions for America's workers. By 1943, with the economy operating at full capacity, the breadlines and double-digit unemployment of the 1930s were a memory.

Rosie the Riveter Government officials and corporate recruiters urged women to take jobs in defense industries, creating a new image of working women. "Longing won't bring him back sooner . . . GET A WAR JOB!" one poster urged, while artist Norman Rockwell's famous "Rosie the Riveter" illustration beckoned to women from the cover of the *Saturday Evening Post*. The government directed its publicity at housewives, but many working women gladly abandoned low-paying "women's jobs" as domestic servants or secretaries for higher-paying work in the defense industry. Suddenly, the nation's factories were full of women working as airplane riveters, ship welders, and drill-press operators (AP® Analyzing Voices). Women made up 36 percent of the labor force in 1945,

Rosie the Riveter Women workers install fixtures and assemblies to a tail fuselage section of a B-17 bomber at the Douglas Aircraft Company plant in Long Beach, California. To entice women to become war workers, the War Manpower Commission created the image of "Rosie the Riveter," later immortalized in posters and by a Norman Rockwell illustration on the cover of the *Saturday Evening Post*. A popular 1942 song celebrating Rosie went: "Rosie's got a boyfriend, Charlie / Charlie, he's a marine / Rosie is protecting Charlie / Working overtime on the riveting machine." Even as women joined the industrial workforce in huge numbers (half a million in the aircraft industry alone), they were understood as fulfilling a nurturing, protective role.

Women in the Wartime Workplace

During World War II, millions of men served in the armed forces and millions of women worked in war-related industries. A generation later, some of these women workers recounted their wartime experiences to historians in oral interviews.

EVELYN GOTZION

Becoming a Union Activist

Evelyn Gotzion went to work at Rayovac, a battery company in Madison, Wisconsin, in 1935; she retired in 1978. While at Rayovac, Gotzion and her working husband raised three children.

"I had all kinds of jobs. [During the war] we had one line, a big line, where you'd work ten hours and you'd stand in one spot or sit in one spot. It got terrible, all day long. So I suggested to my foreman, the general foreman, that we take turns of learning everybody's job and switching every half hour. Well, they [the management] didn't like it, but we were on the side, every once in a while, learning each other's job and learning how to do it, so eventually most all of us got so we could do all the jobs, [of] which there were probably fifteen or twenty on the line. We could do every job so we could go up and down the line and rotate. And then they found out that that was really a pretty good thing to do because it made the people happier. . . .

One day I was the steward, and they wouldn't listen to me. They cut our rates, so I shut off the line, and the boss came up and he said, 'What are you doing?' I said, 'Well, I have asked everybody that I know why we have gotten a cut in pay and why we're doing exactly the same amount of work as we did.' . . . So, anyhow, we wrote up a big grievance and they all signed it and then I called the president of the union and then we had a meeting. . . . At that point the president decided that I should be added to the bargaining committee so that I would go in and argue our case, because I could do it better than any of the rest of them because I knew what it was. . . . We finally got it straightened out, and we got our back pay, too. From then on I was on the bargaining committee all the years that I worked at Rayovac."

DONNA JEAN HARVEY

Wartime Challenges and New Experiences

During the war Harvey raised her first child while working as a riveter and radio installer at a plant in Cheyenne, Wyoming.

SOURCE: National Park Service, *Rosie the Riveter: Women Working During World War II*, nps. gov/pwro/collection/website/donna.htm.

"I graduated from Cheyenne High School in 1940. I married Lewis Early Harvey in January 1941. He was drafted when the war broke out and was sent to the Aleutian Islands, and from there he transferred to the Paratroopers. In October I gave birth to my first son, Lewis Early Jr.

Labor force was critical at that time so I went to United Modification Plant and learned how to rivet, do installations of various kinds and etc. When the 'new' radar system was implemented, I asked to be put on that crew. The F.B.I. investigated me and found me to be worthy and I proceeded to install radar along with my riveting duties, while waiting for the next shipment of planes to come in. . . . I was awarded the Army-Navy E Award and was presented with a pin. I've always been very proud of that!!! I certainly got educated in more ways than I ever expected, being a very young girl. But looking back I wouldn't trade my experiences for anything.

My feeling about the war in most instances was a conglomerate of mixed emotions. I had lived a fairly sheltered life, but I listened and learned and managed to survive, but I must admit, it left a scar on my memory that can never be erased.

I was living in one of my parent's apartments during the war and since they were both retired, they baby-sat my young son. My mother decided after a while that she too would like to do something in some little way to help. So she applied for maintenance and between my father and the girl next door, I managed to have a baby-sitter available at all times. The government was asking for rubber donations so

AP EXAM TIP

Evaluate the impact of mass mobilization in World War II on women who served in the military or entered the workforce.

compared with 24 percent at the beginning of the war. War work did not free women from traditional expectations and limitations, however. Women often faced sexual harassment on the job and usually received lower wages than men did. In shipyards, women with the most seniority and responsibility earned $6.95 a day, whereas the top men made as much as $22.

Wartime work was thus bittersweet for women, because it combined new opportunities with old constraints. The majority labored in low-wage service jobs. Child care was often unavailable, despite the largest government-sponsored child-care program in history. When the men returned from war, Rosie the Riveter was usually out of a job. Government propaganda now encouraged women back into the home — where, it was

my mother and I gave them our rubber girdles!! We liked to think that our girdles helped win the war!!!

My life took on a totally new perspective the longer I worked there. I saw many tragic accidents, none of which I care to talk about which haunt me to this day.

I couldn't do much socializing as I had a small infant at home to care for when off work and besides I was really pooped. Those midnight shifts were 'killers.' I hope I never have to do that again!! I tried to write weekly letters to my husband in between my other duties. . . .

Our community gathered together and collected scrap metals and such to help in the war effort and thanks to a good neighbor, who was growing a victory garden; we managed to get gifts of potatoes and lettuce etc. The government issued coupon books that allowed us two bananas a week, one pound of sugar and so many gallons of gas. We traded back and forth depending on our individual needs. I had a 1934 Ford and fortunately, it wasn't a gas eater and it managed to get me where I was going when I needed it. . . .

There were no unions there at that time and no baby sitting service provided. The single people formed a club and they entertained themselves after work but I was a married person with a child and so I didn't participate in any of their activities. . . .

After the war was over, most people went back to their previous jobs. I opened a beauty salon and when my husband returned home from the service he got a job with the Frontier Refinery. ❞

FANNY CHRISTINA (TINA) HILL

War Work: Social and Racial Mobility

After migrating to California from Texas and working as a domestic servant, Tina Hill, an African American, got a wartime job at North American Aircraft. After time off for a pregnancy in 1945, Hill worked there until 1980.

SOURCE: *Rosie the Riveter Revisited*, by Sherna B. Gluck (Boston: G.K. Hall & Co., 1987). Used by permission of Susan Berger Gluck.

❝ Most of the men was gone, and . . . most of the women was in my bracket, five or six years younger or older. I was twenty-four. There was a black girl that hired in with me. I went to work the next day, sixty cents an hour. . . . I could see where they made a difference in placing you in certain jobs. They had fifteen or twenty departments, but all the Negroes went to Department 17 because there was nothing but shooting and bucking rivets. You stood on one side of the panel and your partner stood on this side and he would shoot the rivets with a gun and you'd buck them with the bar. That was about the size of it. I just didn't like it . . . went over to the union and they told me what to do. I went back inside and they sent me to another department where you did bench work and I liked that much better. . . .

Some weeks I brought home twenty-six dollars . . . then it gradually went up to thirty dollars [about $420 in 2010]. . . . Whatever you make you're supposed to save some. I was also getting that fifty dollars a month from my husband and that was just saved right away. I was planning on buying a home and a car. . . . My husband came back [from the war, and] . . . looked for a job in the cleaning and pressing place, which was just plentiful. . . . That's why he didn't bother to go out to North American. But what we both weren't thinking about was that they [North American] have better benefits because they did have an insurance plan and a union to back you up. Later he did come to work there, in 1951 or 1952. . . .

When North American called me back [after I left to have a baby,] was I a happy soul! . . . It made me live better. It really did.We always say that Lincoln took the bale off of the Negroes. I think there is a statue up there in Washington, D.C., where he's lifting something off the Negro. Well, my sister always said — that's why you can't interview her because she's so radical — 'Hitler was the one that got us out of the white folks' kitchen.' ❞

ANALYZING THE EVIDENCE

1. How did the war change the lives of these women?
2. Consider how the themes of identity and work, technology, and economic change connect to the lives of these two women. How was their experience of the wartime industrial workplace tied to their class and gender identities? How did labor unions affect their conditions of employment?
3. These interviews occurred long after the events they describe. How might that long interval have affected the women's accounts of those years?

implied, their true calling lay in raising families. But many married women refused, or could not afford, to put on aprons and stay home. Women's participation in the paid labor force rebounded by the late 1940s and continued to rise over the rest of the twentieth century, bringing major changes in family life (Chapter 25).

Wartime Civil Rights Among African Americans, a new militancy emerged during the war. Pointing to parallels between anti-Semitism in Germany and racial discrimination in the United States, black leaders waged the Double V campaign: calling for victory over Nazism abroad and racism at home. "This is a war for freedom. Whose freedom?" the renowned black leader W. E. B. Du Bois asked. If it meant "the freedom

AP® EXAM TIP

Explaining the role of World War II in generating debates over civil rights in the U.S. is essential for the AP® exam.

of Negroes in the Southern United States," Du Bois answered, "my gun is on my shoulder."

Even before Pearl Harbor, black activism was on the rise. In 1940, only 240 of the nation's 100,000 aircraft workers were black, and most of them were janitors. African American leaders demanded that the government require defense contractors to hire more black workers. When the Roosevelt administration took no action, A. Philip Randolph, head of the Brotherhood of Sleeping Car Porters, the largest black labor union in the country, announced plans for a march on Washington in the summer of 1941.

Roosevelt was not a strong supporter of African American equality, but he wanted to avoid public protest and a disruption of the nation's war preparations. So the president made a deal: he issued **Executive Order 8802**, and in June 1941 Randolph canceled the march. The order prohibited "discrimination in the employment of workers in defense industries or government because of race, creed, color, or national origin" and established the Fair Employment Practice Committee (FEPC). Mary McLeod Bethune called the wartime FEPC "a refreshing shower in a thirsty land." This federal commitment to black employment rights was unprecedented but limited: it did not affect segregation in the armed forces, and the FEPC could not enforce compliance with its orders.

Nevertheless, wartime developments laid the groundwork for the civil rights revolution of the 1950s and 1960s. The NAACP grew ninefold, to 450,000 members, by 1945. In Chicago, James Farmer helped to found the Congress of Racial Equality (CORE) in 1942, a group that would become known nationwide in the 1960s for its direct action protests such as sit-ins. The FEPC inspired black organizing against employment discrimination in hundreds of cities and workplaces. Behind this combination of government action and black militancy, the civil rights movement would advance on multiple fronts in the postwar years.

Wartime Civil Rights Fighting fascism abroad while battling racism at home was the approach taken by black communities across the country during World War II. Securing democracy in Europe and Asia while not enjoying it in the United States did not seem just. Jobs were plentiful as the wartime economy hummed along at a fevered pitch. But when employers and unions kept Jim Crow hiring policies in place, African Americans did not hesitate to protest. Here picketers rally for defense jobs outside the Glenn Martin Plant in Omaha, Nebraska, in the early 1940s. Schomburg Center for Research in Black Culture, New York Public Library/Art Resource, NY

Mexican Americans, too, challenged long-standing practices of discrimination and exclusion. Throughout much of the Southwest, it was still common for signs to read "No Mexicans Allowed," and Mexican American workers were confined to menial, low-paying jobs. Several organizations, including the League of United Latin American Citizens (LULAC) and the Spanish-Speaking People's Congress, pressed the government and private employers to end anti-Mexican discrimination. Mexican American workers themselves, often in Congress of Industrial Organizations (CIO) unions such as the Cannery Workers and Shipyard Workers, also led efforts to enforce the FEPC's equal employment mandate.

Exploitation persisted, however. To meet wartime labor demands, the U.S. government brought tens of thousands of Mexican contract laborers into the United States under the **Bracero Program**. Paid little and treated poorly, the braceros (who took their name from the Spanish *brazo*, "arm") highlighted the oppressive conditions of farm labor in the United States. After the war, the federal government continued to participate in labor exploitation, bringing hundreds of thousands of Mexicans into the country to perform low-wage agricultural work. Future Mexican American civil rights leaders Dolores Huerta and Cesar Chavez began to fight this labor system in the 1950s.

AP® PRACTICES & SKILLS

POINT OF VIEW

How does the slogan "A Jim Crow army cannot fight for a free world" connect the war abroad with the civil rights struggle at home?

Organized Labor During the war, unions solidified their position as the most powerful national voice for American workers and extended gains made during the New Deal. By 1945, almost 15 million workers belonged to a union, up from 9 million in 1939. Representatives of the major unions made a no-strike pledge for the duration of the war, and Roosevelt rewarded them by creating the National War Labor Board (NWLB), composed of representatives of labor, management, and the public. The NWLB established wages, hours, and working conditions and had the authority to seize manufacturing plants that did not comply.

Despite these arrangements, unions faced a sometimes hostile Congress. Frustrated with limits on wage increases and the no-strike pledge, in 1943 more than half a million United Mine Workers went out on strike, demanding a higher wage increase than that recommended by the NWLB. Congress responded by passing (over Roosevelt's veto) the Smith-Connally Labor Act of 1943, which allowed the president to prohibit strikes in defense industries and forbade political contributions by unions. Although organized labor would emerge from World War II more powerful than at any time in U.S. history, its business and corporate opponents, too, would emerge from the war with new strength.

Politics in Wartime

In his 1944 State of the Union address, FDR called for a second Bill of Rights, one that would guarantee all Americans access to education and jobs, adequate food and clothing, and decent housing and medical care. Like his Four Freedoms speech, this was a call to extend the New Deal by broadening the rights to individual security and welfare guaranteed by the government. The answer to his call, however, would have to wait for the war's conclusion. Congress created new government benefits only for military veterans, known as GIs (short for "government issue"). The **Servicemen's Readjustment Act** (1944), an extraordinarily influential program popularly known as the "GI Bill of Rights," provided education, job training, medical care, pensions, and home loans for men and women who had served in the armed forces (Chapter 25).

The president's call for social legislation sought to reinvigorate the New Deal political coalition. In the election of 1944, Roosevelt again headed the Democratic ticket. But party leaders, aware of FDR's health problems and fearing that Vice President Henry Wallace's outspoken support for labor and civil rights would alienate moderate voters, dropped him from the ticket. In his place, they chose Senator Harry S. Truman of Missouri, a plain-spoken — some even thought drab — politician with little national experience. The Republicans nominated Governor Thomas E. Dewey of New York.

Dewey, who accepted the general principles of welfare-state liberalism domestically and favored internationalism in foreign affairs, attracted some of Roosevelt's supporters. But a majority of voters preferred political continuity, and Roosevelt was reelected with 53.5 percent of the nationwide vote. The Democratic coalition retained its hold on government power, and the era of Republican political dominance (1896–1932) slipped further into the past.

IN YOUR OWN WORDS What aspects of the economy and American society were affected by mobilization for war?

Life on the Home Front

The United States escaped the physical devastation that ravaged Europe and East Asia, but the war profoundly changed the country. Americans welcomed wartime prosperity but shuddered when they saw a Western Union boy on his bicycle, fearing that he carried a War Department telegram reporting the death of someone's son, husband, or father. Citizens also grumbled about annoying wartime regulations and rationing but accepted that their lives would be different "for the duration."

"For the Duration"

Spurred by both government propaganda and a desire to serve the war cause, people on the home front took on wartime responsibilities. They worked on civilian defense committees, recycled old newspapers and scrap metal, and served on local rationing and draft boards. About twenty million backyard "victory gardens" produced 40 percent of the nation's vegetables. Various federal agencies encouraged these efforts, especially the Office of War Information (OWI), which disseminated news and promoted patriotism. The OWI urged advertising agencies to link their clients' products to the war effort, arguing that patriotic ads would not only sell goods but also "invigorate, instruct and inspire" citizens (AP® Thinking Like a Historian).

A Family Effort After migrating from the Midwest to Portland, Oregon, fifteen members of the family of John R. Brauckmiller (sixth from left) found jobs at Henry Kaiser's Swan Island shipyard. From 1943 to 1945, the shipyard turned out 152 T-2 Tankers, mostly for use by the U.S. Navy to carry fuel oil. A local newspaper pronounced the Brauckmillers as "the shipbuildingest family in America," and because of the importance of shipbuilding to the war effort, *Life* magazine featured the family in its issue of August 16, 1943. Ralph Vincent, *The Journal*, Portland, Oregon/Picture Research Consultants &

Popular culture, especially the movies, reinforced connections between the home front and the war effort. Hollywood producers, directors, and actors offered their talents to the War Department. Director Frank Capra created a documentary series titled *Why We Fight* to explain war aims to conscripted soldiers. Movie stars such as John Wayne and Spencer Tracy portrayed heroic American fighting men in numerous films, such as *Guadalcanal Diary* (1943) and *Thirty Seconds over Tokyo* (1944). In this pretelevision era, newsreels accompanying the feature films kept the public up-to-date

on the war, as did on-the-spot radio broadcasts by Edward R. Murrow and Mary Marvin Breckenridge, the first female radio correspondent for CBS.

For many Americans, the major inconvenience during the war years was the shortage of consumer goods. Beginning in 1942, federal agencies subjected almost everything Americans ate, wore, or used to rationing or regulation. The first major scarcity was rubber. The Japanese conquest of Malaysia and Dutch Indonesia cut off 97 percent of America's imports of that essential raw material. To conserve rubber for the war effort, the government rationed tires, so many of the nation's 30 million car owners put their cars in storage. As more people walked, they wore out their shoes. In 1944, shoes were rationed to two pairs per person a year. By 1943, the government was rationing meat, butter, sugar, and other foods. Most citizens cooperated with the complicated rationing system, but at least one-quarter of the population bought items on the black market, especially meat, gasoline, cigarettes, and nylon stockings.

Migration and the Wartime City

AP® EXAM TIP

Describe the causes and effects of migration from rural to urban areas in World War II.

The war determined where people lived. When men entered the armed services, their families often followed them to military bases or points of debarkation. Civilians moved to take high-paying defense jobs. About 15 million Americans changed residences during the war years, half of them moving to another state. One of them was Peggy Terry, who grew up in Paducah, Kentucky; worked in a shell-loading plant in nearby Viola; and then moved to a defense plant in Michigan. There, she recalled, "I met all those wonderful Polacks [Polish Americans]. They were the first people I'd ever known that were any different from me. A whole new world just opened up."

As the center of defense production for the Pacific war, California experienced the largest share of wartime migration. The state welcomed 2.5 million new residents and grew by 35 percent during the war. "The Second Gold Rush Hits the West," announced the *San Francisco Chronicle* in 1943. One-tenth of all federal dollars spent on the war flowed into California, and the state's factories turned out one-sixth of all war materials. People went where the defense jobs were: to Los Angeles, San Diego, and cities around San Francisco Bay. Some towns grew practically overnight; within two years of the opening of the Kaiser Corporation shipyard in Richmond, California, the town's population quadrupled. Other industrial states — notably New York, Illinois, Michigan, and Ohio — also attracted both federal dollars and migrants on a large scale.

The growth of war industries accelerated patterns of rural-urban migration. Cities grew dramatically, as factories, shipyards, and other defense plants drew millions of citizens from small towns and rural areas. This new mobility, coupled with people's distance from their hometowns, loosened the authority of traditional institutions and made wartime cities vibrant and lively. Around-the-clock work shifts kept people on the streets night and day, and bars, jazz clubs, dance halls, and movie theaters proliferated, fed by the ready cash of war workers.

AP® PRACTICES & SKILLS

CAUSATION

What effects did wartime migration have on the United States?

Racial Conflict Migration and more fluid social boundaries meant that people of different races and ethnicities mixed in the booming cities. Over one million African Americans left the rural South for California, Illinois, Michigan, Ohio, and Pennsylvania — a continuation of the Great Migration earlier in the century (Chapters 20 and 21). In a repeat of the events of World War I, as blacks and whites competed for jobs and housing, racial conflicts broke out in more than a hundred cities in 1943. Detroit saw the worst violence. In June 1943, a riot incited by southern-born whites and Polish Americans against African Americans left thirty-four people dead and hundreds injured.

Racial conflict struck the West as well. In Los Angeles, male Mexican American teenagers formed *pachuco* (youth) gangs. Many dressed in "**zoot suits**" — broad-brimmed felt hats, thigh-length jackets with wide lapels and padded shoulders, pegged trousers, and clunky shoes. Pachucas (young women) favored long coats, huarache sandals, and

Mobilizing the Home Front

The U.S. Office of War Information (OWI) promoted everything from food rationing to carpooling during World War II, and the U.S. Treasury encouraged millions of Americans to buy war bonds. More than 20 million victory gardens were planted by ordinary Americans. By 1944 they were producing more than 40 percent of all vegetables grown in the United States. Through these and other measures, those on the home front were encouraged to see themselves as part of the war effort.

1. U.S. government advertisement from the *Minneapolis Star Journal*, 1943.

TIN IS SAVED NOW IN THE MAKING OF TIN CANS
HUNDREDS OF MILLIONS OF CANS WILL NOW BE MADE BY THE NEW HIGHLY MECHANIZED ELECTROLYTIC PROCESS. BY THIS ELECTROLYTIC METHOD TIN CAN BE MADE TO COVER STEEL FOR NEARLY 3 TIMES AS MANY CANS AS UNDER THE CONVENTIONAL "HOT DIP" METHOD.
SAVE 'EM·WASH 'EM·CLEAN 'EM·SQUASH 'EM
THESE ARE THE FOUR STEPS IN THE AMERICAN HOUSEWIFE'S JOB TO HELP SALVAGE STEEL AND TIN BY SENDING TIN CANS BACK TO THE SCRAP HEAP
SALVAGED TIN CANS GO INTO MANY WAR ITEMS...
THERE IS ENOUGH TIN IN 3 SALVAGED CANS TO MAKE A HAND GRENADE..
ONE TIN CAN YIELDS ENOUGH TIN FOR A PAIR OF BINOCULARS...
A FAMILY OF FOUR SAVING ITS CANS FOR TWO WEEKS WILL SAVE SUFFICIENT TIN TO SUPPLY THIS METAL FOR A PORTABLE FLAME THROWER...
A MONTH'S SAVING OF CANS WILL MAKE THE BUSHINGS FOR 3 MACHINE GUNS
Keep the tin cans rolling into the salvage heap. This plea to housewives is more urgent than ever, since rationing has resulted in less buying of food in cans. Tin is used in many items used by our soldiers on war fronts, so save it and help win the war.

5. Oral histories about life during the war.

Tessie Hickam Wilson, a young woman from Oklahoma.
It was a hard time, but we felt like we were doing our part, and all the people we knew were doing their part. We had rationing. Sugar, coffee, gasoline and meat were some of the items that were hard to come by. We had ration books every so often, and we had to use them sparingly. We bought savings bonds to help in the war effort.

We also had radios and record players, and when we could afford it, we went to the movies. And even though there were hard times, we did what we could in the war effort, and I will always be glad I was part of it.

Virginia J. Bondra, a student and clothing worker from Ohio.
The only newsreel footage we saw was in the theaters when we went to a movie. And we used to bring scrap metal or cans, and we'd get in the movies free. They needed scrap metal and they — the USA needed scrap fat. My mother used to scrap fat, you know, in a can. She'd save it, and we'd bring it to a certain place. Sugar was rationed. Each member of the family would get one pound of sugar a week. And I always had time to bake because we had sugar. . . .

Different things were rationed. We couldn't buy nylons because it was needed . . . for parachutes. So we'd — we'd — my older sisters would paint their legs with a certain makeup that came out in place of nylons. . . . It was makeup for legs.

They painted a eyebrow pencil line down the back of their leg so it would look like real nylons. And we would write V-mail. I had brother — brothers-in-law in the service. We — we'd write V-mail to them. It was called V-mail. Victory mail. . . . We couldn't put their address on because they were moved around a lot and we didn't want the enemy to know. There were a lot of secrets. They would say "zip your lip was the" — was the word of the days then. "Zip your lip" because we didn't want the enemy to get information.

ANALYZING THE EVIDENCE

1. Examine sources 1, 2, and 3. Who created these sources, and what does this suggest about the context and purpose of these documents? Can you tell from their content who the intended audience was?
2. Study the photograph (source 4). Who is depicted? What does this suggest about the victory garden program as well as war efforts on the home front more broadly?
3. How do the oral histories in source 5 add to your understanding of home front involvement in the war effort? Does their testimony force you to question the other documents in any way, and if so, how?

AP® DBQ PRACTICE

Analyze some of the ways the U.S. government encouraged ordinary citizens to participate in the war effort, and evaluate the objectives and results of these efforts.

Zoot-Suit Youth in Los Angeles During a four-day riot in June 1943, servicemen in Los Angeles attacked young Latino men wearing distinctive zoot suits, which were widely viewed as emblems of gang membership and a delinquent youth culture. The police response was to arrest scores of zoot-suiters. Here, a group of arrested youth pose for a photographer in a jail cell. What became known as the "zoot suit riot" was emblematic of racial tensions on the homefront, even as the U.S. fought a war against fascism abroad. Bettmann/Getty Image

pompadour hairdos. Other working-class teenagers in Los Angeles and elsewhere took up the zoot-suit style to emphasize their rejection of middle-class values. To many adults, the zoot suit symbolized juvenile delinquency. Rumors circulating in Los Angeles in June 1943 that a pachuco gang had beaten an Anglo (white) sailor set off a four-day riot in which hundreds of Anglo servicemen roamed through Mexican American neighborhoods and attacked zoot-suiters, taking special pleasure in slashing their pegged pants. In a stinging display of bias, Los Angeles police officers arrested only Mexican American youth, and the City Council passed an ordinance outlawing the wearing of the zoot suit.

Gay and Lesbian Communities Wartime migration to urban centers created new opportunities for gay men and women to establish communities. Religious and social conventions against gays and lesbians kept the majority of them silent about their sexuality. During the war, however, cities such as New York, San Francisco, Los Angeles, Chicago, and even Kansas City, Buffalo, and Dallas developed vibrant gay neighborhoods, sustained by a sudden influx of migrants and the relatively open wartime atmosphere. These communities became centers of the gay rights movement of the 1960s and 1970s (Chapter 28).

The military tried to screen out homosexuals but had limited success. Once in the service, homosexuals found opportunities to participate in a gay culture often more extensive than that in civilian life. In the last twenty years, historians have documented thriving communities of gay and lesbian soldiers in the World War II military. Some "came out under fire," as one historian put it, but most kept their sexuality hidden from authorities because army officers, doctors, and psychiatrists treated homosexuality as a psychological disorder that was grounds for dishonorable discharge.

Japanese Removal

Unlike World War I, which evoked widespread harassment of German Americans, World War II produced relatively little condemnation of European Americans. Despite the presence of small but vocal groups of Nazi sympathizers and Mussolini supporters, German American and Italian American communities were largely left in peace during the war; federal officials held only about five thousand potentially dangerous German and Italian aliens. The relocation and temporary imprisonment of Japanese immigrants and Japanese American citizens was a glaring exception to this otherwise tolerant policy. Immediately after the attack on Pearl Harbor, the West Coast remained calm. Then, as residents began to fear spies, sabotage, and further attacks, California's long history of racial animosity toward Asian immigrants surfaced. Local politicians and newspapers whipped up hysteria against Japanese Americans, who numbered only about 112,000, had no political power, and lived primarily in small enclaves in the Pacific coast states.

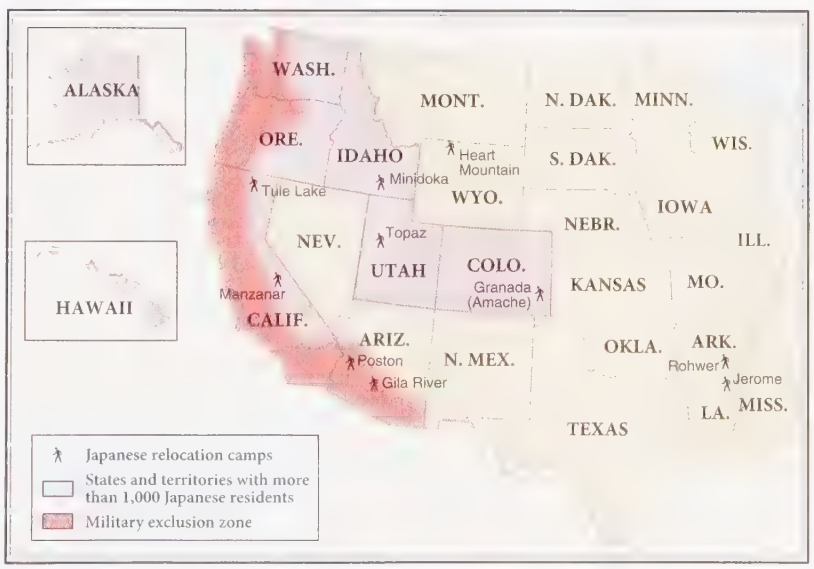
Early in 1942, President Roosevelt responded to anti-Japanese fears by issuing **Executive Order 9066**, which authorized the War Department to force Japanese Americans from their West Coast homes and hold them in relocation camps for the duration of the war. Although there was no disloyal or seditious activity among the evacuees, few public leaders opposed the plan. "A Jap's a Jap," snapped General John DeWitt, the officer charged with defense of the West Coast. "It makes no difference whether he is an American citizen or not."

New Urban Communities Folk singer Pete Seeger performs at the opening of the Washington, D.C., labor canteen in 1944, sponsored by the Congress of Industrial Organizations (CIO). Wartime migration brought people from across the country to centers of industry and military operations, opening new possibilities for urban communities. African American neighborhoods grew dramatically; urban populations grew younger and more mobile; and gay and lesbian communities began to flourish and become more visible. The Granger Collection, New York

The relocation plan shocked Japanese Americans, more than two-thirds of whom were Nisei; that is, their parents were immigrants (Isei), but they were native-born American citizens. Army officials gave families only a few days to dispose of their property. Businesses that had taken a lifetime to build were liquidated overnight. The War Relocation Authority moved the prisoners to hastily built camps in desolate areas in California, Arizona, Utah, Colorado, Wyoming, Idaho, and Arkansas (Map 23.1). Ironically, the Japanese Americans who made up one-third of the population of Hawaii, and presumably posed a greater threat because of their proximity to Japan, were not imprisoned. They provided much of the unskilled labor in the island territory, and the Hawaiian economy could not have functioned without them.

Cracks soon appeared in the relocation policy. An agricultural labor shortage led the government to **furlough** seasonal farmworkers from the camps as early as 1942. About 4,300 students were allowed to attend colleges outside the West Coast military zone. Other internees were permitted to join the armed services. The 442nd Regimental Combat Team, a unit composed almost entirely of Nisei volunteers, served with distinction in Europe.

Gordon Hirabayashi was among the Nisei who actively resisted incarceration. A student at the University of Washington, Hirabayashi



MAP 23.1 Japanese Relocation Camps
In 1942, the government ordered 112,000 Japanese Americans living on the West Coast into internment camps in the nation's interior because of their supposed threat to public safety. Some of the camps were as far away as Arkansas. The federal government rescinded the mass evacuation order in December 1944, but 44,000 people still remained in the camps when the war ended in August 1945.

Behind Barbed Wire As part of the forced relocation of 112,000 Japanese Americans, Los Angeles photographer Toyo Miyatake and his family were sent to Manzanar, a camp in the California desert east of the Sierra Nevada. Miyatake secretly began shooting photographs of the camp with a handmade camera. Eventually, Miyatake received permission from the authorities to document life in the camp — its births, weddings, deaths, and high school graduations. To communicate the injustice of internment, he also took staged photographs, such as this image of three young boys behind barbed wire with a watchtower in the distance. For Miyatake, the image gave new meaning to the phrase "prisoners of war." *The Denver Post* via Getty Images

was a religious pacifist who had registered with his draft board as a conscientious objector. He refused to report for evacuation and turned himself in to the FBI. "I wanted to uphold the principles of the Constitution," Hirabayashi later stated, "and the curfew and evacuation orders which singled out a group on the basis of ethnicity violated them." Tried and convicted in 1942, he appealed his case to the Supreme Court in *Hirabayashi v. United States* (1943). In that case and in *Korematsu v. United States* (1944), the Court allowed the removal of Japanese Americans from the West Coast on the basis of "military necessity" but avoided ruling on the constitutionality of the incarceration program. The Court's decision underscored the fragility of civil liberties in wartime. Congress issued a public apology in 1988 and awarded $20,000 to each of the eighty-two thousand surviving Japanese Americans who had once been internees.

IN YOUR OWN WORDS **Describe both the short-term and the lasting domestic social changes the war produced.**

CAUSATION

Why were Japanese Americans treated differently than German and Italian Americans during the war?

Fighting and Winning the War

AP® EXAM TIP

Recognize the role of Allied cooperation in the military victory of the U.S. in World War II.

World War II was a war for control of the world. Had the Axis powers triumphed, Germany would have dominated, either directly or indirectly, all of Europe and much of Africa and the Middle East; Japan would have controlled most of East and Southeast Asia. To prevent this outcome, which would have crippled democracy in Europe and restricted American power to the Western Hemisphere, the Roosevelt administration took the United States to war. The combination of American intervention, the perseverance of Britain, and the profound civilian and military sacrifices of the Soviet Union decided the outcome of the conflict and shaped the character of the postwar world.

Wartime Aims and Tensions

Great Britain, the United States, and the Soviet Union were the key actors in the Allied coalition. China, France, and other nations played crucial but smaller roles. The leaders who became known as the Big Three — Prime Minister Winston Churchill of Great Britain, President Franklin Roosevelt, and Premier Joseph Stalin of the Soviet Union — set military strategy. However, Stalin was not a party to the Atlantic Charter, which Churchill and Roosevelt had signed in August 1941, and disagreed fundamentally with some of its precepts, such as a capitalist international trading system. The Allies also disagreed about military strategy and timing. The Big Three made defeating Germany (rather than Japan) the top military priority, but they differed over how best to do it. In 1941, a massive German force had invaded the Soviet Union and reached the outskirts of Leningrad, Moscow, and Stalingrad before being halted in early 1942 by hard-pressed Russian troops. To relieve pressure on the Soviet army, Stalin wanted the British and Americans to open a second front with a major invasion of Germany through France.

Roosevelt informally assured Stalin that the Allies would comply in 1942, but Churchill opposed an early invasion, and American war production was not yet sufficient to support it. For eighteen months, Stalin's pleas went unanswered, and the Soviet Union bore the brunt of the fighting; in the 1943 Battle of Kursk alone, the Soviet army suffered 860,000 casualties, several times what the Allies would suffer for the first two months of the European campaign after D-Day. Then, at a conference of the Big Three in Tehran, Iran, in November 1943, Churchill and Roosevelt agreed to open a second front in France within six months in return for Stalin's promise to join the fight against Japan. Both sides adhered to this agreement, but the long delay angered Stalin, who became increasingly suspicious of American and British intentions.

AP® PRACTICES & SKILLS

POINT OF VIEW

How did the Allies disagree over military strategy?

The War in Europe

Throughout 1942, the Allies suffered one defeat after another. German armies pushed deep into Soviet territory, advancing through the wheat farms of the Ukraine and the rich oil region of the Caucasus. Simultaneously, German forces began an offensive in North Africa aimed at seizing the Suez Canal. In the Atlantic, U-boats devastated American convoys carrying oil and other vital supplies to Britain and the Soviet Union.

Over the winter of 1942–1943, however, the tide began to turn in favor of the Allies. In the epic Battle of Stalingrad, Soviet forces halted the German advance, and by early 1944 Stalin's troops had driven the German army out of the Soviet Union (Map 23.2).

MAP 23.2 World War II in Europe and North Africa, 1941–1943

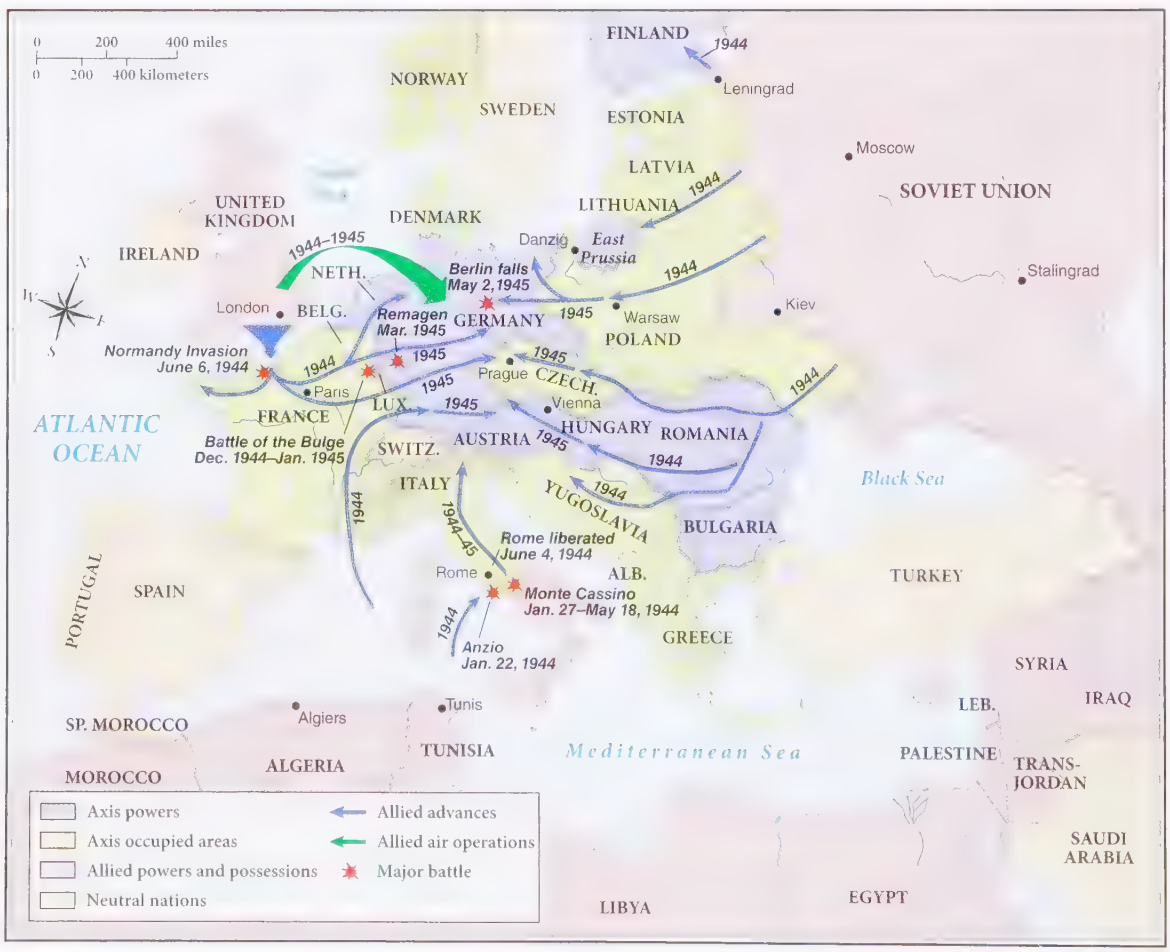
Hitler's Germany reached its greatest extent in 1942, by which time Nazi forces had occupied Norway, France, North Africa, central Europe, and much of western Russia. The tide of battle turned in late 1942 when the German advance stalled at Leningrad and Stalingrad. By early 1943, the Soviet army had launched a massive counterattack at Stalingrad, and Allied forces had driven the Germans from North Africa and launched an invasion of Sicily and the Italian mainland.

Meanwhile, as Churchill's temporary substitute for a second front in France, the Allies launched a counteroffensive in North Africa. Between November 1942 and May 1943, Allied troops under the leadership of General Dwight D. Eisenhower and General George S. Patton defeated the German Afrika Korps, led by General Erwin Rommel.

From Africa, the Allied command followed Churchill's strategy of attacking the Axis through its "soft underbelly": the Italian peninsula. Faced with an Allied invasion, the Italian king ousted Mussolini's fascist regime in July 1943. But German troops, who far outmatched the Allies in skill and organization, took control of Italy and strenuously resisted the Allied invasion. American and British divisions took Rome only in June 1944 and were still fighting German forces in northern Italy when the European war ended in May 1945 (Map 23.3). Churchill's southern strategy proved a time-consuming and costly mistake.

AP® EXAM TIP
Explain how D-Day was a turning point in World War II.

D-Day The long-promised invasion of France came on **D-Day**, June 6, 1944. That morning, the largest armada ever assembled moved across the English Channel under the command of General Eisenhower. When American, British, and Canadian soldiers hit the beaches of Normandy, they suffered terrible casualties but secured a beachhead. Over the next few weeks, more than 1.5 million soldiers and thousands of tons of military supplies and equipment flowed into France. Much to the Allies'



MAP 23.3 World War II in Europe, 1944–1945
By the end of 1943, the Russian army had nearly pushed the Germans out of the Soviet Union, and by June 1944, when the British and Americans finally invaded France, the Russians had liberated eastern Poland and most of southeastern Europe. By the end of 1944, British and American forces were ready to invade Germany from the west, and the Russians were poised to do the same from the east. Germany surrendered on May 7, 1945.

Hitting the Beach at Normandy These U.S. soldiers were among the 156,000 Allied troops who stormed the beaches of Normandy on D-Day, June 6, 1944: on that day alone, more than 10,000 were killed or wounded. Within a month, 1 million Allied troops had come ashore. Most Americans learned of the invasion at 3:30 A.M. Eastern Time, when Edward R. Murrow, the well-known radio journalist whose reports from war-torn London had gripped the nation in 1940, read General Eisenhower's statement to the troops. "The eyes of the world are upon you," Eisenhower told the men as they prepared to invade the European mainland. Library of Congress

advantage, they never faced more than one-third of Hitler's Wehrmacht (armed forces), because the Soviet Union continued to hold down the Germans on the Eastern Front. In August, Allied troops liberated Paris; by September, they had driven the Germans out of most of France and Belgium. Meanwhile, long-range Allied bombers attacked German cities such as Hamburg and Dresden as well as military and industrial targets. The air campaign killed some 305,000 civilians and soldiers and injured another 780,000 — a grisly reminder of the war's brutality.

The Germans were not yet ready to give up, however. In December 1944, they mounted a final offensive in Belgium, the so-called Battle of the Bulge, before being pushed back across the Rhine River into Germany. American and British troops drove toward Berlin from the west, while Soviet troops advanced east through Poland. On April 30, 1945, as Russian troops massed outside Berlin, Hitler committed suicide; on May 7, Germany formally surrendered.

The Holocaust When Allied troops advanced into Poland and Germany in the spring of 1945, they came face-to-face with Hitler's "final solution" for the Jewish population of Germany and the German-occupied countries: the extermination camps in which 6 million Jews had been put to death, along with another 6 million Poles, Slavs, Gypsies, homosexuals, and other "undesirables." Photographs of the Nazi death camps at Buchenwald, Dachau, and Auschwitz showed bodies stacked like cordwood and survivors so **emaciated** that they were barely alive. Published in *Life* and other mass-circulation magazines, the photographs of the **Holocaust** horrified the American public and the world.

AP® EXAM TIP

Evaluate the impact of discovery of the Holocaust on Americans' views of the war as a fight to protect freedom and democracy.

The Nazi persecution of German Jews in the 1930s was widely known in the United States. But when Jews had begun to flee Europe, the United States refused to relax its strict immigration laws to take them in. In 1939, when the SS *St. Louis*, a German ocean liner carrying nearly a thousand Jewish refugees, sought permission from President Roosevelt to dock at an American port, FDR had refused. Its passengers' futures uncertain, the *St. Louis* was forced to return to Europe, where many would later be deported to Auschwitz and other extermination camps. American officials, along with those of most other nations, continued this exclusionist policy during World War II as the Nazi regime extended its control over millions of Eastern European Jews.

Various factors inhibited American action, but the most important was widespread anti-Semitism: in the State Department, Christian churches, and the public at large. The legacy of the immigration restriction legislation of the 1920s and the isolationist attitudes of the 1930s also discouraged policymakers from assuming responsibility for the fate of the refugees. Taking a narrow view of the national interest, the State Department allowed only 21,000 Jewish refugees to enter the United States during the war. But the War Refugee Board, which President Roosevelt established in 1944 at the behest of Secretary of the Treasury Henry Morgenthau, helped move 200,000 European Jews to safe havens in other countries.

The War in the Pacific

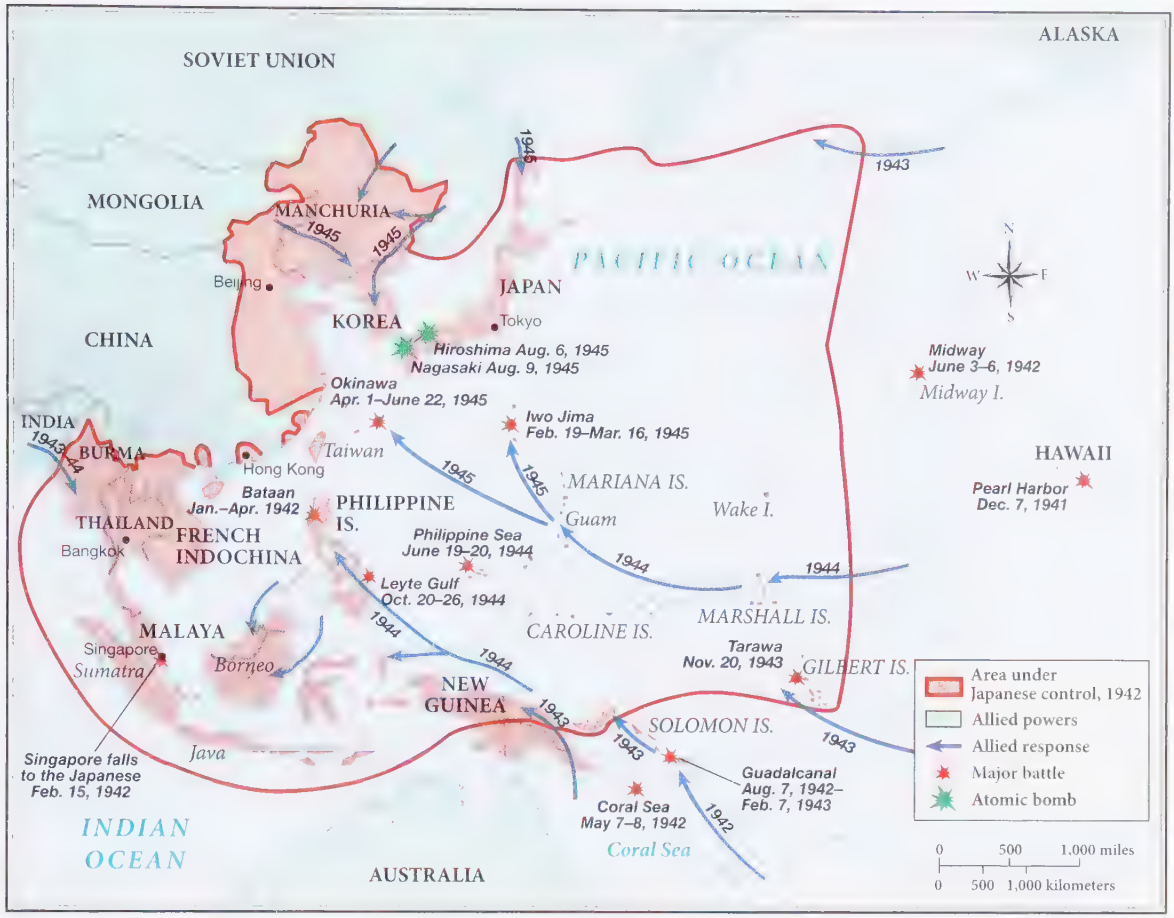
Waging the war against Japan was every bit as arduous as the campaign against Germany. After crippling the American battle fleet at Pearl Harbor, the Japanese quickly expanded into the South Pacific, with seaborne invasions of Hong Kong, Wake Island, and Guam. Japanese forces then advanced into Southeast Asia, conquering the Solomon Islands, Burma, and Malaya and threatening Australia and India. By May 1942, they had forced the surrender of U.S. forces in the Philippine Islands.

At that dire moment, American naval forces scored two crucial victories. These were possible because the attack on Pearl Harbor had destroyed several American battleships but left all aircraft carriers unscathed. In the Battle of the Coral Sea, off southern New Guinea in May 1942, they halted the Japanese offensive against Australia. Then, in June, at the Battle of Midway Island, the American navy severely damaged the Japanese fleet. In both battles, planes launched from American aircraft carriers provided the margin of victory. The U.S. military command, led by General Douglas MacArthur and Admiral Chester W. Nimitz, now took the offensive in the Pacific. For the next eighteen months, American forces advanced slowly toward Japan, taking one island after another in the face of determined Japanese resistance. In October 1944, MacArthur and Nimitz began the reconquest of the Philippines by winning the Battle of Leyte Gulf, a massive naval encounter in which the Japanese lost practically their entire fleet (Map 23.4).

AP® EXAM TIP
Identify the impact of "island hopping" on the military defeat of Japan.

By early 1945, victory over Japan was in sight. Japanese military forces had suffered devastating losses, and American bombing of the Japanese homeland had killed somewhere between 300,000 and 900,000 civilians and crippled the nation's economy. The bloodletting on both sides was horrendous. On the small islands of Iwo Jima and Okinawa, tens of thousands of Japanese soldiers fought to the death, killing 13,000 U.S. Marines and wounding 46,000 more. Desperate to halt the American advance and short on ammunition, Japanese pilots flew suicidal **kamikaze** missions, crashing their bomb-laden planes into American ships.

Among the grim realities of war in the Pacific was the conflict's racial overtones. The attack on Pearl Harbor reawakened the long tradition of anti-Asian sentiment in the United States. In the eyes of many Americans, the Japanese were "yellow monkeys," an inferior race whose humanity deserved minimal respect. Racism was evident among the Japanese as well. Their brutal attacks on China (including the rape of Nanjing), their forcing of Korean "comfort women" to have sex with Japanese soldiers, and their treatment of American prisoners in the Philippines flowed from their own sense of



MAP 23.4 World War II in the Pacific

After the attacks on Pearl Harbor in December 1941, the Japanese rapidly extended their domination in the Pacific. The Japanese flag soon flew as far east as the Marshall and Gilbert islands and as far south as the Solomon Islands and parts of New Guinea. Japan also controlled the Philippines, much of Southeast Asia, and parts of China, including Hong Kong. By mid-1942, American naval victories at the Coral Sea and Midway stopped further Japanese expansion. Allied forces retook the islands of the central Pacific in 1943 and 1944 and ousted the Japanese from the Philippines early in 1945. Carrier-launched planes had started bombing Japan itself in 1942, but the capture of these islands gave U.S. bombers more bases from which to strike Japanese targets. As the Soviet army invaded Japanese-occupied Manchuria in August 1945, U.S. planes took off from one of the newly captured Mariana Islands to drop the atomic bombs on Hiroshima and Nagasaki. The Japanese offered to surrender on August 10.

racial superiority. Anti-Japanese attitudes in the United States would subside in the 1950s as the island nation became a trusted ally. But racism would again play a major role in the U.S. war in Vietnam in the 1960s.

As the American navy advanced on Japan in the winter of 1945, President Roosevelt returned to the United States from the Yalta Conference, a major meeting of the Big Three at Yalta, a resort town on the Black Sea (Chapter 24). The sixty-three-year-old president was a sick man, visibly exhausted by his 14,000-mile trip and suffering from heart failure and high blood pressure. On April 12, 1945, during a short visit to his vacation home in Warm Springs, Georgia, Roosevelt suffered a cerebral hemorrhage and died.

The Atomic Bomb and the End of the War

When Harry Truman assumed the presidency, he learned for the first time about the top-secret **Manhattan Project**, which was on the verge of testing a new weapon: the

The Big Three at Yalta With victory in Europe at hand, Roosevelt journeyed in February 1945 to Yalta, on the Black Sea, and met for what would be the final time with Churchill and Stalin. The leaders discussed the important and controversial issues of the treatment of Germany, the status of Poland, the creation of the United Nations, and Russian entry into the war against Japan. The Yalta agreements mirrored a new balance of power and set the stage for the Cold War. Franklin D

atomic bomb. Working at the University of Chicago in December 1942, Enrico Fermi and Leo Szilard, refugees from fascist Italy and Nazi Germany, produced the first controlled atomic chain reaction using highly processed uranium. With the aid of German-born refugee Albert Einstein, the greatest theorist of modern physics and a scholar at Princeton, they persuaded Franklin Roosevelt to develop an atomic weapon, warning that German scientists were also working on such nuclear reactions.

The Manhattan Project cost $2 billion, employed 120,000 people, and involved the construction of thirty-seven installations in nineteen states—with all of its activity hidden from Congress, the American people, and even Vice President Truman. Directed by Lieutenant General Leslie R. Groves Jr. and scientist J. Robert Oppenheimer, the nation's top physicists assembled the first bomb in Los Alamos, New Mexico, and successfully tested it on July 16, 1945. Overwhelmed by its frightening power, as he witnessed the first mushroom cloud, Oppenheimer recalled the words from the Bhagavad Gita, one of the great texts of Hindu scripture: "I am become Death, the Destroyer of Worlds."

AP® EXAM TIP

Explain the debate created regarding the use of atomic weapons despite their success in bringing a quicker end to World War II.

Three weeks later, President Truman ordered the dropping of atomic bombs on two Japanese cities: Hiroshima on August 6 and Nagasaki on August 9. Truman's rationale for this order—and the implications of his decision—have long been the subject of scholarly and popular debate (AP® Interpreting the Past). The principal justification was straightforward: Truman and his American advisors, including Secretary of War Henry Stimson and Army Chief of Staff General George Marshall, believed that Japan's military leaders would never surrender unless their country faced national ruin. Moreover, at the Potsdam Conference on the outskirts of Berlin in

Why Did the United States Drop the Atomic Bomb on Japan?

No president has made a more fateful decision than Harry Truman to drop the atomic bomb on Japan. The cost in human lives was staggering: nearly a third of Hiroshima's 350,000 residents died instantly. Another 60,000 died at Nagasaki three days later. This overpowering demonstration of America's war-making capacity led to Japanese surrender and the end of World War II. At the time and in the decades since, many saw Truman's decision as an unfortunate but necessary one: in the wartime calculus, saving the lives of American soldiers, who may have been called upon to undertake an invasion of Japan had the war dragged on, counted for more than the loss of Japanese lives in these two blast zones.

But was Truman's decision as straightforward as that? For several decades, scholars have been debating Truman's decision. Some scholars have agreed that Truman had few options given Japan's willingness to keep fighting. Others have suggested that Truman's use of atomic weapons was motivated by other geopolitical (some have suggested racist) motivations. Two scholars, Robert P. Newman and Tsuyoshi Hasegawa, wade into this debate with conflicting interpretations of Truman's decision.

ROBERT P. NEWMAN

SOURCE: Robert P. Newman, *Rhetoric & Public Affairs: Truman and the Hiroshima Cult* (East Lansing: Michigan State University Press, 1995), 12–13.

Truman read the [Japanese] intercepts. They were very clear. They did not show a Japan ready to surrender. They show an *elite* ready to negotiate an armistice . . . but . . . [t]he truth is that peace would have been available only had the peace party . . . been in control. They were not. . . . [Those in control in Japan] *never* favored surrender, not after Saipan was lost, not after Iwo Jima was lost, not after the Philippines were lost, not after Okinawa, not even after two atom bombs and a Soviet Declaration of War. They all supported fighting the decisive battle in the homeland during which the American invaders would take such heavy casualties that the Allies would negotiate an armistice.

TSUYOSHI HASEGAWA

SOURCE: Tsuyoshi Hasegawa, *Racing the Enemy: Stalin, Truman, and the Surrender of Japan* (Cambridge: Harvard University Press, 2009), 183.

Soviet entry played an important part in the American decision to speed up the dropping of the atomic bombs. Truman was in a hurry. He was aware that the race was on between the atomic bomb and Soviet entry into the war. That was why he concocted the story of Japan's "prompt rejection" of the Potsdam Proclamation as the justification for the atomic bomb, and that was also the reason he was ecstatic to receive the news of the Hiroshima bomb. The atomic bomb represented to Truman a solution to all the dilemmas he faced: unconditional surrender, the cost of Japan's homeland invasion, and Soviet entry into the war. He was jubilant at news of the atomic bomb on Hiroshima, not because of a perverted joy in killing the Japanese, but because of the satisfaction that everything had gone as he had planned.

AP SHORT ANSWER PRACTICE

1. How do Newman and Hasegawa differ in their interpretation of Truman's decision to use atomic weapons in Japan?
2. How does each scholar weigh moral and strategic concerns in accounting for Truman's decision to bomb Hiroshima and Nagasaki?
3. Based on Chapter 23's discussion of World War II, which of these two interpretations is most compelling as a decisive factor in shaping Truman's decision to use the atomic bomb to end the war with Japan?

July 1945, the Allies had agreed that only the "unconditional surrender" of Japan was acceptable — the same terms under which Germany and Italy had been defeated. To win such a surrender, an invasion of Japan itself seemed necessary. Stimson and Marshall told Truman that such an invasion would produce between half a million and a million Allied casualties.

Before giving the order to drop the atomic bomb, Truman considered other options. His military advisors rejected the most obvious alternative: a nonlethal demonstration of the bomb's awesome power, perhaps on a remote Pacific island. If the demonstration

Hiroshima, March 1946 Though the atomic bomb had been dropped on the port city of Hiroshima six months previous to this photo being taken, the devastation is still apparent. The U.S. Army report on the bombing described the immediate effects of the blast: "At 8:15 A.M., the bomb exploded with a blinding flash in the sky, and a great rush of air and a loud rumble of noise extended for many miles around the city; the first blast was soon followed by the sounds of falling buildings and of growing fires, and a great cloud of dust and smoke began to cast a pall of darkness over the city." The only buildings not leveled were those with concrete reinforcement, meant to withstand earthquakes. The human toll of this weapon was unprecedented: of the estimated population of 350,000, 100,000 were likely killed by the explosion, and many tens of thousands more died slowly of the effects of radiation poisoning. U.S. Air Force

failed—not out of the question, as the bomb had been tested only once—it would embolden Japan further. A detailed advance warning designed to scare Japan into surrender was also rejected. Given Japan's tenacious fighting in the Pacific, the Americans believed that only massive devastation or a successful invasion would lead Japan's military leadership to surrender. After all, the deaths of more than 100,000 Japanese civilians in the U.S. firebombing of Tokyo and other cities in the spring of 1945 had brought Japan no closer to surrender.

In any event, the atomic bombs achieved the immediate goal. The deaths of 100,000 people at Hiroshima and 60,000 at Nagasaki prompted the Japanese government to surrender unconditionally on August 15 and to sign a formal agreement on September 2, 1945. Fascism had been defeated, thanks to a fragile alliance between the capitalist nations of the West and the communist government of the Soviet Union. The coming of peace would strain and then destroy the victorious coalition. Even as the global war came to an end, the early signs of the coming Cold War were apparent, as were the stirrings of independence in the European colonies.

AP® PRACTICES & SKILLS

CAUSATION

What factors influenced Truman's decision to use atomic weapons against Japan?

The Toll of the War

After the battle of Iwo Jima, one of the fiercest and bloodiest of the Pacific war, a rabbi chaplain in the Marine Corps delivered the **eulogy** for the fallen. "This shall not be in vain," he said, surveying a battlefield that witnessed the deaths of nearly 30,000 American and Japanese soldiers. Speaking of American losses, he said, "from the suffering and sorrow of those who mourn this, will come — we promise — the birth of a new freedom for the sons of man everywhere." The toll of "suffering and sorrow" from World War II was enormous. Worldwide, more than 50 million soldiers and civilians were killed, nearly 2.5 percent of the globe's population. The Holocaust took the lives of 6 million European Jews, 2.6 million from Poland alone. Nearly 100 million additional soldiers and civilians were wounded, and 30 million people across the globe were rendered homeless. It was one of the most wrenching, disruptive, and terrible wars in human history.

Alongside the human toll stood profound economic and political transformations. Hundreds of cities in Europe and Asia had been bombed. Some of them, like Dresden, Warsaw, Hamburg, and Hiroshima, had been simply obliterated. Much of the industrial infrastructure of Germany and Japan, two of the world's most important industrial economies before the war, lay in ruins. Moreover, despite emerging as one of the victors, Britain was no longer a global power. The independence movement in India was only the most obvious sign of its waning influence. Indeed, throughout the colonized world in Asia and Africa, people had taken the Atlantic Charter, and FDR's insistence that this was a war for *democracy*, seriously. For them, resumption of European imperialism was unacceptable, and the war represented a step toward national self-determination.

In the United States, too, the toll of war was great. More than 400,000 lives were lost, and nearly 300,000 American soldiers were wounded. Yet millions returned home, and in the coming decades veterans would play a central role in national life. Incredibly, in 1950 World War II veterans made up one-third of all American men over the age of nineteen. Only the Civil War involved a comparable commitment of military service from a generation. Americans paid dearly for that commitment — though not, it must be noted, as dearly as other peoples in Europe and Asia — and the legacies of the war shaped families, politics, and foreign policy for the remainder of the century.

IN YOUR OWN WORDS How did Allied strategy against the Axis powers evolve between 1941 and 1945?

SUMMARY

The rise of fascism in Germany, Italy, and Japan led to the outbreak of World War II. Initially, the American public opposed U.S. intervention. But by 1940, President Roosevelt was mobilizing support for the military and preparing the country for war. The Japanese attack on Pearl Harbor in December 1941 brought the nation fully into the conflict. War mobilization dramatically expanded the federal government and led to substantial economic growth. It also boosted geographical and social mobility as women, rural whites, and southern blacks found employment in new defense plants across the country. Government rules assisted both the labor movement and the African American campaign for civil rights. However, religious and racial animosity caused the exclusion of Jewish refugees and the internment of 112,000 Japanese Americans.

By 1942, Germany and Japan seemed to be winning the war. But in 1943, the Allies took the offensive — with advances by the Soviet army in Europe and the American

navy in the Pacific — and by the end of 1944, Allied victory was all but certain. Germany finally surrendered in May 1945, and Japan surrendered in August, after the atomic bombing of the Japanese cities Hiroshima and Nagasaki. The United States emerged from the war with an undamaged homeland, sole possession of the atomic bomb, and a set of unresolved diplomatic disputes with the Soviet Union that would soon lead to the four-decade-long Cold War. Federal laws and practices established during the war — the universal income tax, a huge military establishment, and multibillion-dollar budgets, to name but a few — became part of American life. So, too, did the active participation of the United States in international politics and alliances, an engagement intensified by the unresolved issues of the wartime alliance with the Soviet Union and the postwar fate of colonized nations.

CHAPTER 23 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. Explain the steps by which the United States became involved in World War II.
2. What aspects of the economy and American society were affected by mobilization for war?
3. Describe both the short-term and the lasting domestic social changes the war produced.
4. How did Allied strategy against the Axis powers evolve between 1941 and 1945?
5. Review the events listed under "America in the World" on the thematic timeline on page 619. How did World War II change the relationship between the United States and the rest of the world in the first half of the twentieth century?

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. For the United States, the period between World War I (1914–1918) and World War II (1937–1945) was a prolonged series of conflicts and crises, both domestically and internationally. What connections can be drawn between World War I, the Great Depression, and World War II? Did this "long" conflict draw the United States and Europe closer together or drive them further apart? How did American attitudes toward involvement in European affairs change over this period?
2. How did the following developments of World War II change the relationship of the United States to other nations in the world: the Atlantic Charter; fighting a two-front war in Europe and the Pacific; the Manhattan Project and the bombing of Hiroshima and Nagasaki?
3. World War II has popularly been called the "good war." Do you agree with this assessment? Why do you think it earned that nickname?
4. Overall, what effects — positive or negative — did World War II have on social change in the United States, particularly among women and historically marginalized groups?

KEY TURNING POINTS

Refer to the chapter chronology on page 712 for help in answering the question below.

Identify the key turning points for the Allies in the European and Pacific campaigns.

MULTIPLE CHOICE QUESTIONS

Choose the correct answer for each question.

Questions 1–3 are based on the excerpt below.

> "The lend-lease policy, translated into legislative form, stunned a Congress and a nation wholly sympathetic to the cause of Great Britain. . . . It warranted my worst fears for the future of America, and it definitely stamps the President as war-minded.
>
> The lend-lease program is the New Deal's Triple-A policy; it will plow under every fourth American boy. . . .
>
> Approval of this legislation means war, open and complete warfare. I, therefore, ask the American people before they supinely accept it, Was the last World War worthwhile?"
>
> Speech. Burton K. Wheeler, Senator from Montana, January 12, 1941

1. Wheeler based his appeal most directly upon the precedent of
   a. Woodrow Wilson's efforts to preserve humanitarian principles through the League of Nations.
   b. bi-partisan political enthusiasm for interventionism.
   c. popular support for isolationism after World War I.
   d. the United States' tradition of anti-imperialism.
2. Wheeler's views expressed in the excerpt best reflect the United States citizens'
   a. commitment to resist totalitarianism.
   b. preference for a unilateral foreign policy.
   c. popular view of World War II as a fight for democracy.
   d. opposition to genocide.
3. The ideas of Wheeler, as expressed in the excerpt, show the greatest difference from the ideas of
   a. the Federalist Party in 1810.
   b. anti-imperialists in the 1890s.
   c. antiwar protesters in the 1960s.
   d. the Republican Party in the 1980s.

Questions 4–6 refer to the excerpt below.

> "We have built an enormous portion of our vast war plant within close range of big industries where expert management and skilled labor were at hand. Baltimore, Indianapolis, Buffalo, Hartford, St. Louis, Detroit, Los Angeles, Portland, Seattle, and numerous other cities find their manufacturing plants expanding at a rate that seemed impossible in peacetime. . . .
>
> The meaning of these social and economic upheavals is plain. . . . The consequences will be far reaching. For in this . . . there is no chance to maintain the status quo. If strategy and geography do not thrust a community into the maelstrom of war activity, its resources will be drained into other areas where they can better serve the national interest. So the whole pattern of our economic and social life is undergoing kaleidoscopic changes, without so much as a bomb being dropped on our shores."
>
> Merlo J. Pusey, "The Revolution at Home," *South Atlantic Quarterly*, Volume 42, pp. 207–219. Copyright 1943, Duke University Press. All rights reserved. Republished by permission of the copyright holder, Duke University Press. www.dukepress.edu

4. Which of the following most directly resulted from the changes described in the excerpt?
   a. New economic opportunities for African Americans and women
   b. The establishment of increased barriers to immigration
   c. A reversal of the World War I Great Migration
   d. The emergence of new forms of mass media
5. Pusey's observations in the excerpt most directly reflect which of the following developments?
   a. The end of the Great Depression
   b. Challenges to civil liberties at home
   c. A decline in public confidence in government's ability to solve economic problems
   d. An increase in laissez-faire policies that promoted economic growth
6. The trend described by Pusey in the excerpt was most strongly reversed in the 1990s by
   a. increasing suburbanization.
   b. United States international peacekeeping operations.
   c. the National Interstate and Defense Highways Act.
   d. free-trade agreements.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

"Truman read the intercepts [from the Japanese]. They were very clear. They did not show a Japan ready to surrender. They show an elite ready to negotiate an armistice . . . but . . . [t]he truth is that peace would have been available only had the peace party . . . been in control. They were not. . . . [Those in control in Japan] never favored surrender, not after Saipan was lost, not after Iwo Jima was lost, not after the Philippines were lost, not after Okinawa, not even after two atoms bombs and a Soviet Declaration of War. They all supported fighting the decisive battle in the homeland during which the American invaders would take such heavy casualties that the Allies would negotiate an armistice."

Robert P. Newman, *Rhetoric & Public Affairs: Truman and the Hiroshima Cult*, 1995

"Soviet entry played an important part in the American decision to speed up the dropping of the atomic bombs. Truman was in a hurry. He was aware that the race was on between the atomic bomb and Soviet entry into the war. That was why he concocted the story of Japan's 'prompt rejection' of the Potsdam Proclamation as the justification for the atomic bomb, and that was also the reason he was ecstatic to receive the news of the Hiroshima bomb. The atomic bomb represented to Truman a solution to all the dilemmas he faced: unconditional surrender, the cost of Japan's homeland invasion, and Soviet entry into the war. He was jubilant at news of the atomic bomb on Hiroshima, not because of a perverted joy in killing the Japanese, but because of the satisfaction that everything had gone as he had planned."

Tsuyoshi Hasegawa, *Racing the Enemy: Stalin, Truman, and the Surrender of Japan*, 2009

1. Using the two excerpts at left, answer (a), (b), and (c).
   a. Briefly explain ONE major difference between Newman's and Hasegawa's historical interpretations of President Truman's decision to use the atom bomb.
   b. Briefly explain how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Newman's argument.
   c. Briefly explain how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Hasegawa's argument.
2. Answer (a), (b), and (c).
   a. Briefly explain why ONE of the following developments was the most significant factor contributing to military victory for the United States in the Second World War.
      - Technological and scientific advances
      - Mass mobilization of American society
      - Allied cooperation
   b. Explain ONE specific historical example to support your argument in (a).
   c. Explain why ONE of the other options exerted a lesser influence leading to the United States' victory.
3. Answer (a), (b), and (c).
   a. Briefly explain ONE important historical difference in the United States' strategy in Europe from that in the Pacific during World War II.
   b. Briefly explain ONE important historical similarity in United States strategy in Europe to the United States strategy in the Pacific during World War II.
   c. Briefly explain ONE important historical factor that accounts for EITHER the similarity in the United States' strategy in Europe to that in the Pacific OR difference in the United States strategy in Europe from that in the Pacific during World War II.

DOCUMENT-BASED QUESTION

Suggested reading period: 15 minutes. Suggested writing time: 45 minutes.

DIRECTIONS: Question 1 is based on the accompanying documents. The documents have been edited for the purpose of this exercise.

1. Evaluate the extent of continuity in the experiences of women in the United States from 1890 to 1940.

DOCUMENT 1

Source: *Ladies' Home Journal,* January 1890.

"Reforms in women's apparel are again being discussed, and public interest is once more awakened on this oft-mooted question. That some of the present style of dress adopted by American women are, to some extent, physically injurious and inconsistent with good taste, can scarcely be denied. But the radical reforms suggested, as, for example the substitution of the trousers for the petticoat, and similar departures from modern customs, are not destined to bring about the looked-for result . . . to advise a young woman to dress herself with any such serious departure from the prevailing fashion of her day and class is to ask her to incur a penalty that will invariably follow such an innovation.

'God has implanted in the minds of all, but especially in the female breast, the love of beauty. . . . It is a duty which every woman owes to herself, to her family, and to her society to dress tastefully, and as well as her means shall allow. It is woman's instinct to admire pretty dresses, and it is right that she should. . . .

In this matter of women's dress, then, when we sum it all up, the fact is plain that, as the love of dress in inherent in all true women, it would be as unwise as it would be useless to strive against it by any radical suggestiveness of reform."

DOCUMENT 2

Source: Labor activist Rose Schneiderman, from a speech delivered at a memorial meeting at the Metropolitan Opera House in New York City, April 2, 1911.

"I would be a traitor to those poor burned bodies if I were to come here to ask good fellowship. We have tried you good people of the public — and we have found you wanting.

The old Inquisition had its rack and its thumb screws and its instruments of torture with iron teeth. We know what these things are today: the iron teeth are our necessities, the thumbscrews are the high-powered and swift machinery close to which we must work, and the rack is here in the firetrap structures that will destroy us the minute they catch fire.

This is not the first time girls have been burned alive in this city. Every week I learn of the untimely death of one of my sister workers. Every year thousands of us are maimed. The life of men and women is so cheap and property is so sacred! There are so many of us for one job, it matters little if 140-odd are burned to death. . . .

Public officials have only words of warning for us — warning that we must be intensely orderly and must be intensely peaceable, and they have the work-house [prison] just back of all their warnings. The strong hand of the law beats us back when we rise — back into conditions that make life unbearable.

I can't talk fellowship to you who are gathered here. Too much blood has been spilled. I know from experience it is up to the working people to save themselves. And the only way is through a strong working-class movement."

DOCUMENT 3

Source: Miss N. H. Burroughs, Secretary of the Women's Auxiliary to the National Baptist Convention, "Black Women and Reform," published in *The Crisis*, August 1915.

"I was asked by a Southern white woman who is an enthusiastic worker for 'votes for (white) women,' 'What can the Negro woman do with the ballot?' I asked her, 'What can she do without it?' When the ballot is put into the hands of the American woman the world is going to get a correct estimate of the Negro woman. She is a tower of strength of which poets have never sung, orators have never spoken, and scholars have never written.

. . . The Negro woman, therefore, needs the ballot to get back, by the wise *use* of it, what the Negro man has lost by *misuse* of it. A fact worthy of note is that in every reform in which the Negro woman has taken part, during the last fifty years, she has been as aggressive, progressive, and dependable as those who inspired the reform or led it. The world has yet to learn that the Negro woman is quite superior in bearing moral responsibility. A comparison with the men of her race, in moral issues, is odious. She carries the burdens of the Church, and of the school and bears a great deal more than her economic share in the home.

The ballot, wisely used, will bring to her the respect and protection that she needs. It is her weapon of moral defence. Under present conditions, when she appears in court in defence of her virtue, she is looked upon with amused contempt. She needs the ballot to reckon with men who place no value upon her virtue, and to mould healthy public sentiment in favor of her own protection."

DOCUMENT 4

Source: Margaret Sanger, *Woman and the New Race*, 1920.

"The basic freedom of the world is woman's freedom. A free race cannot be born of slave mothers. A woman enchained cannot choose but give a measure of that bondage to her sons and daughters. No woman can call herself free who does not own and control her body. No woman can call herself free until she can choose consciously whether she will or will not be a mother. . . .

Woman must have her freedom; the fundamental freedom of choosing whether or not she shall be a mother and how many children she will have. Regardless of what man's attitude may be, that problem is hers; and before it can be his, it is hers alone.

She goes through the vale of death alone, each time a babe is born. As it is the right neither of man nor the state to coerce her into this ordeal, so it is her right to decide whether she will endure it. That right to decide imposes upon her the duty of clearing the way to knowledge by which she may make and carry out the decision.

Birth control is woman's problem. The quicker she accepts it as hers and hers alone, the quicker will society respect motherhood. The quicker, too, will the world be made a fit place for her children to live."

DOCUMENT 5

Source: Advertisement, *Good Housekeeping Magazine*, November 1924.

Her habit of measuring time in terms of dollars gives the woman in business keen insight into the true value of a Ford closed car for her personal use.

This car enables her to conserve minutes, to expedite her affairs, to widen the scope of her activities. Its low first cost, long life and inexpensive operation and upkeep convince her that it is a sound investment value.

And it is such a pleasant car to drive that it transforms the business call which might be an interruption into an enjoyable episode of her busy day.

DOCUMENT 6

Source: Norman Cousins, "Will Women Lose Their Jobs?" *Current History* (New York). Reprinted with permission from *Current History* magazine 51:1, Sept. 1939. © 2017 Current History, Inc.

"There are approximately 10,000,000 people out of work in the United States today. There are also 10,000,000 or more women, married and single, who are job-holders. Simply fire the women, who shouldn't be working anyway, and hire the men. Presto! No Unemployment. No relief rolls. No depression.

This is the general idea behind the greatest assault on women's rights in two decades. . . . Of such concern is this trend that it has been called the greatest single issue to affect women since their victorious fight for suffrage. . . .

Fundamentally, the unemployment of men is not caused by women who hold jobs but by the infirmities of the economic structure itself. Nor is the depression an affliction visited exclusively upon the male; the woman must bear her part in the burden, as more than 2,000,000 unemployed women can attest. . . .

But even outside the economic sphere, arguments against the working wife reveal weakness. There is much talk about the mother's place in the home, very little about the fact that the home has changed. Housekeeping for the average family is no longer a full-time job. . . .

This change is reflected not only in employment of married women but in the growth of social and church work, and the spread of adult education, of culture and entertainment groups."

The Modern State and the Age of Liberalism

1945–1980

Between 1945 and 1980, the United States became the world's leading economic and military power. The dates we've chosen to bookend the period reflect two turning points. In 1945, the United States and its allies emerged victorious from World War II. In 1980, American voters turned away from the robust liberalism of the postwar years and elected a president, Ronald Reagan, backed by a conservative political movement. Each turning point, one international and the other domestic, marked the rise of new developments in American history—and thus our periodization endeavors to capture in these decades a narrative of global power and expanding political liberalism.

Internationally, after 1945 a prolonged period of tension and conflict known as the Cold War drew the United States into an engagement in world affairs unprecedented in the nation's history. Domestically, three decades of sustained economic growth, whose benefits were widely, though imperfectly, distributed, expanded the middle class and brought into being a mass consumer society. These international and domestic developments were intertwined with the predominance of liberalism in American politics and public policy. One might think of an "age of liberalism" in this era, encompassing the social-welfare liberalism that was a legacy of the New Deal and the rights liberalism of the 1960s.

Global leadership abroad and economic prosperity at home were conditioned on further expansions in government power. How that power was used proved controversial. Following World War II, a national security state emerged to investigate so-called subversives in the United States and to destabilize foreign governments abroad. Meanwhile, American troops went to war in Korea and Vietnam. At home, African Americans, women, the poor, and other social groups called for greater equality and sought new government initiatives to make that equality a reality. Here, in brief, are the three key dimensions of this convulsive, turbulent era. ▶

AP® CONCEPT CONNECTIONS

Global Leadership and the Cold War

When the United States officially joined the combatants of World War II, it entered into an alliance with England and the Soviet Union. That alliance proved impossible to sustain after 1945, as the U.S. and the Soviet Union became competitors to shape postwar Europe, East Asia, and the developing world. The resulting Cold War lasted four decades, during which the U.S. extended its political and military reach onto every continent. Under Harry S. Truman, American officials developed the policy of containment — a combination of economic, diplomatic, and military actions to limit the expansion of communism — that subsequent presidents embraced and expanded.

Intervention abroad was a hallmark of the Cold War. Most American interventions took place in developing countries and in recently independent, decolonized nations. In the name of preventing the spread of communism, the U.S. intervened directly or indirectly in China, Iran, Guatemala, Cuba, Indonesia, and the Dominican Republic, among many other nations, and fought major wars in Korea and Vietnam. This new global role for the U.S. inspired support but also spurred detractors.

National Archives

The Age of Liberalism

In response to the Great Depression, the New Deal expanded federal responsibility for the social welfare of ordinary citizens. Legislators from both parties embraced liberal ideas about the role of government and undertook such measures as the GI Bill, subsidies for home ownership, and investment in infrastructure and education. Poverty, however, affected one-third of Americans in the 1960s, and discrimination denied millions of nonwhites full citizenship. Lack of opportunity became a driving force in the civil rights movement and in the Great Society under Lyndon Johnson.

Inspired by African American civil rights, other social movements sought equality based on gender, sexuality, and ethnicity. If "New Deal liberalism" had focused on social welfare, this "rights liberalism" focused on protecting people from discrimination and ensuring equal citizenship. These struggles resulted in new laws, such as the Civil Rights Act of 1964 and the Voting Rights Act of 1965. Conservative opponents, however, mobilized in the 1960s against what they saw as the excesses of liberal activism. The resulting conflict began to reshape politics in the 1970s and laid the groundwork for a new conservative movement.

Mass Consumption and the Middle Class

The postwar American economy was driven by mass consumption and suburbanization. Rising wages and increased access to higher education raised living standards and allowed more Americans to afford consumer goods. Suburbs and the Sunbelt led the nation in population growth. But the new prosperity had mixed results. Cities declined and new racial and ethnic ghettos formed. Mass consumption raised concerns that the nation's rivers, streams, air, and open land were being damaged, and an environmental movement arose in response. And prosperity itself proved short-lived. By the 1970s, deindustrialization had eroded much of the nation's once prosperous industrial base.

A defining characteristic of the postwar decades was the growth of the American middle class predicated on numerous demographic changes. Women worked more outside the home and spurred a new feminism. Children enjoyed more purchasing power, and a "teen culture" arose on television, in popular music, and in film. The family became politicized, too, and by the late 1970s, liberals and conservatives were divided over how best to address the nation's family life.

AP® THEMATIC UNDERSTANDING

The Modern State and the Age of Liberalism 1945–1980

This timeline arranges some of the important events of this period into seven themes.

Consider the entries under "America in the World" and "Politics and Power" across all four decades. What connections were there between international developments and domestic politics in this era of the Cold War? Looking at the entries under "American and National Identity" and "Culture and Society," consider how the civil rights movement shaped these decades.

	AMERICAN AND NATIONAL IDENTITY	POLITICS AND POWER	WORK, EXCHANGE, AND TECHNOLOGY
1940	• "To Secure These Rights" (1947) • Desegregation of armed services (1948) • *Shelley v. Kraemer* (1948)	• GI Bill (1944) • Loyalty-Security Program (1947) • Taft-Hartley Act (1947) • Truman reelected (1948) • Truman's Fair Deal (1949)	• Bretton Woods system established: World Bank, International Monetary Fund (1944) • Baby boom establishes new consumer generation
1950	• *Brown v. Board of Education* (1954) • Montgomery Bus Boycott (1955) • Little Rock Central High School desegregation battle (1957) • Southern Christian Leadership Conference founded (1957)	• Cold War liberalism • McCarthyism and Red Scare • Eisenhower's presidency (1953–1961)	• Labor-Management Accord struck in major industries (1950s) • Military-industrial complex begins to rise • National Defense Education Act (1958) spurs development of technology
1960	• Greensboro sit-ins (1960) • *The Feminine Mystique* (1963) • Civil Rights and Voting Rights Acts (1964–1965) • National Organization for Women founded (1966) • Alcatraz occupation (1969) • Black Power (1966) • Student and antiwar activism	• John F. Kennedy's New Frontier • John F. Kennedy assassinated (1963) • Lyndon B. Johnson's landslide victory (1964) • War on Poverty; Great Society • Riots at Democratic National Convention (1968)	• Economic boom • Government spending on Vietnam and Great Society • Medicare and Medicaid created (1965)
1970	• Equal Rights Amendment (1972) • *Roe v. Wade* (1973) • Siege at Wounded Knee (1973) • *Bakke v. University of California* (1978) • Harvey Milk assassinated (1978)	• Richard Nixon's landslide victory (1972) • Watergate scandal; Nixon resigns (1974) • Jimmy Carter elected president (1976) • Moral Majority founded (1979)	• Energy crisis (1973) • Inflation surges, while economy stagnates (stagflation) • Deindustrialization • Tax revolt in California (1978)

CULTURE AND SOCIETY	MIGRATION AND SETTLEMENT	GEOGRAPHY AND THE ENVIRONMENT	AMERICA IN THE WORLD	
• World War II migrations produce vibrant, diverse cities • Bebop jazz • Red Scare and anticommunism suppress dissent (1947–1950s) • Advent of television changes entertainment (1940s–1950s)	• War production and expansion of military reshape the Sunbelt • Wartime southern migration (black and white) to northern and western cities • First Levittown opens (1947)	• Continued South-North migration of African Americans • First Levittown opens (1947) • FHA and VA subsidize suburbanization	• Truman Doctrine • Israel created (1947) • Marshall Plan (1948) • Containment strategy emerges • NATO created; West Germany created (1949)	1940
• Emergence of rock 'n' roll and youth culture • Disneyland opens (1955) • McDonald's restaurants lead emergence of fast food • Beat culture flourishes in New York and San Francisco	• Bracero program revived (1951) • Surging middle-class migration to suburbs • Patterns of racial segregation in cities and suburbs reinforced • Migration to Sunbelt (1950s–1970s) • McCarran-Walter Act (1952) • Puerto Rican "great migration" to New York	• Disneyland opens (1955) • National Interstate and Defense Highways Act (1956) • Growth of suburbia and Sunbelt • Atomic bomb testing in Nevada and Pacific Ocean	• Permanent mobilization as a result of NSC-68 • Korean War (1950–1953) • Geneva Accords regarding Vietnam (1954)	1950
• Civil rights movement merges protest and gospel music • Major antiwar protests (1965–1969) • Counterculture • Black Arts movement • Stonewall Inn riot (1969)	• Immigration and Nationality Act of 1965 • Reflecting the new law, immigration from Asia, Latin America, and Africa increases (1960s–1990s) • Rustbelt begins to lose population	• Great Society environmental initiatives • Urban riots (1964–1968) • Kerner Commission Report (1968)	• Cuban missile crisis (1962) • Gulf of Tonkin Resolution (1964) • Johnson sends ground troops to Vietnam; war escalates (1965) • Tet offensive (1968); peace talks begin	1960
• Women's and gay rights movements flourish • Cultural and political conflict over the nuclear family • Evangelical Christian resurgence	• After 1975, Vietnamese refugees fleeing communist regime arrive in U.S. • Rustbelt population decline and Sunbelt population growth produce regional realignment in congressional power (1970s–1990s)	• First Earth Day (1970) • Environmental Protection Agency established (1970) • Endangered Species Act (1973) • Three Mile Island accident (1979)	• Nixon invades Cambodia (1970) • Paris Accords end Vietnam War (1973) • Camp David Accords between Egypt and Israel (1978) • Iranian Revolution (1979) and hostage crisis (1979–1981)	1970

AP® LEARNING FOCUS

In the first two decades of the Cold War, how did competition on the international stage and a climate of fear at home affect politics, society, and culture in the United States?

In the autumn of 1950, a little-known California congressman running for the Senate named Richard M. Nixon stood before reporters in Los Angeles. His opponent, Helen Gahagan Douglas, was a Hollywood actress and a New Deal Democrat. Nixon told the gathered reporters that Douglas had cast "Communist-leaning" votes and that she was "pink right down to her underwear." Gahagan's voting record was not much different from Nixon's. But tarring her with communism made her seem un-American, and Nixon defeated the "pink lady" (meaning nearly *red*, or communist) with nearly 60 percent of the vote.

A few months earlier, U.S. tanks and planes had arrived in French Indochina. A French colony since the nineteenth century, Indochina (present-day Vietnam, Laos, and Cambodia) was home to an independence movement led by Ho Chi Minh and supported by the Soviet Union and China. In the summer of 1950, President Harry S. Truman authorized $15 million worth of military supplies to aid France, which was fighting Ho's army to keep possession of its Indochinese empire. "Neither national independence nor democratic evolution exists in any area dominated by Soviet imperialism," Secretary of State Dean Acheson warned ominously as he announced U.S. support for French imperialism.

Connecting these coincidental historical moments, one domestic and the other international, was a decades-old force in American life that gained renewed strength after World War II: anticommunism. The events in Los Angeles and Vietnam, however different on the surface, were part of the Cold War: the global geopolitical struggle between the capitalist, democratic United States and the communist, authoritarian Soviet Union. Beginning in Europe as World War II ended and extending to Asia, Latin America, the Middle East, and Africa by the mid-1950s, the Cold War reshaped international relations and dominated global politics for more than forty years (AP® Interpreting the Past).

In the United States, the Cold War fostered suspicion of "subversives" in government, education, and the media. The arms race that developed between the two superpowers prompted Congress to boost military expenditures. The resulting military-industrial complex enhanced the power of the corporations that built planes, munitions, and electronic devices. In politics, the Cold War stifled liberal initiatives as the New Deal coalition tried to advance its domestic agenda in the shadow of anti-communism. In these ways, the line between the international and the domestic blurred — and that blurred line was another enduring legacy of the Cold War.

The Perils of the Cold War Americans, like much of the world, lived under the threat of nuclear warfare during the tense years of the Cold War between the United States and the Soviet Union. This 1951 civil defense poster, with the message "It *can* happen Here," suggests that Americans should be prepared for such a dire outcome.

CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and identify the links among related events.

1945
- End of World War II; Yalta and Potsdam conferences
- Senate approves U.S. participation in United Nations

1946
- George F. Kennan outlines containment policy
- U.S. sides with French in war between French and Vietminh over control of Vietnam

1947
- Truman Doctrine
- House Un-American Activities Committee (HUAC) investigates film industry

1948
- Communist coup in Czechoslovakia
- Marshall Plan aids economic recovery in Europe
- State of Israel created
- Stalin blockades West Berlin; Berlin Airlift begins

1949
- North Atlantic Treaty Organization (NATO) founded
- Soviet Union detonates atomic bomb
- Mao Zedong establishes People's Republic of China

1950–1953
- Korean War

1950
- NSC-68 leads to nuclear buildup
- Joseph McCarthy announces "list" of Communists in government

1952
- Dwight D. Eisenhower elected president

1954
- Army-McCarthy hearings on army subversion
- Geneva Accords partition Vietnam

1956
- Nikita Khrushchev emerges as Stalin's successor
- Suez Canal crisis

1960
- John F. Kennedy elected president

1961
- Kennedy orders the first contingent of Special Forces ("Green Berets") to Vietnam

1963
- Ngo Dinh Diem assassinated in South Vietnam

Containment in a Divided Global Order

The Cold War began on the heels of World War II and ended in 1991 with the dissolution of the Soviet Union. While it lasted, this conflict placed two far-reaching questions at the center of global history: Would capitalism or communism shape the nations of Europe and Asia? And how would the European colonies in Asia, the Middle East, and Africa gain their independence and take their places on the world stage? Cold War rivalry framed the possible answers to both questions as it drew the United States into a prolonged engagement with world affairs unprecedented in the nation's history.

Origins of the Cold War

World War II set the basic conditions for the Cold War. With Germany and Japan defeated and Britain and France weakened by years of war, only two geopolitical powers remained standing in 1945. Even had nothing divided them, the United States and the Soviet Union would have jostled each other as they moved to fill the postwar power vacuum. But, of course, the two countries were divided — by geography, history, ideology, and strategic interest. Little united them other than their commitment to defeating the Axis powers. President Franklin Roosevelt understood that maintaining the U.S.-Soviet alliance was essential for postwar global stability. But he also believed that permanent peace and long-term U.S. interests depended on the Wilsonian principles of collective security, self-determination, and free trade (Chapter 20).

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

Yalta At the **Yalta Conference** of February 1945, Wilsonian principles yielded to U.S.-Soviet power realities. As Allied forces neared victory in Europe and advanced toward Japan in the Pacific, Roosevelt, Churchill, and Stalin met in Yalta, a resort on the Black Sea in southern Ukraine. Roosevelt focused on maintaining Allied unity and securing Joseph Stalin's commitment to enter the war against Japan. But the fate of Eastern Europe divided the Big Three. Stalin insisted that Russian national security required pro-Soviet governments in Eastern European nations. Roosevelt pressed for an agreement, the "Declaration on Liberated Europe," that guaranteed self-determination and democratic elections in Poland and neighboring countries, such as Romania and Hungary. However, given the presence of Soviet troops in those nations, FDR had to accept a lesser pledge from Stalin: to hold "free and unfettered elections" at a future time. The three leaders

AP® EXAM TIP

Evaluating the role of the Yalta Conference in undermining wartime cooperation among the Allied powers is essential for the AP® exam.

Why Was There a Cold War?

During World War II, the United States and the Soviet Union forged a "Grand Alliance" with Great Britain to defeat Hitler's Nazi Germany. In the wake of victory, however, this marriage of necessity quickly dissolved, leaving the Americans and Soviets to face each other in a Cold War that lasted until the dissolution of the Soviet Union (USSR) in 1991. For decades, these superpowers viewed each other's intentions with suspicion and, while avoiding direct and open conflict, waged proxy wars around the globe to advance the security interests they believed the other threatened. But what caused the Cold War, and why was there such hostility between the two nations?

Historians continue to debate these questions. Stephen Ambrose's account of postwar America's rise to global dominance offers a traditional explanation of the Cold War. His argument differs from that of Odd Westad, who shifts the geographical focus of the Cold War rivalry from Europe to the Global South.

STEPHEN AMBROSE

SOURCE: Stephen E. Ambrose, *Rise to Globalism: American Foreign Policy Since 1938* (Baltimore: Penguin Books, 1971), 102–103.

Whatever date is chosen to mark the declaration of [the Cold War], it is certain that the issue that sparked it, gave it life and shaped its early course, was East Europe. For centuries East and West have struggled . . . for control of the huge area running from the Baltic to the Balkans, an area rich in human and industrial resources and one that is strategically vital to both sides. . . . Neither the West nor the East has been willing to allow East Europe to be strong, independent, or neutral. Russia and the West each have wanted the area to be aligned with them and open for their own economic exploitation. . . . [During World War II], the West made no significant contribution to the liberation of East Europe and when the end came the Red Army was in sole possession of the area. . . . This crucial result of World War II destroyed the Grand Alliance and gave birth to the Cold War.

ODD WESTAD

SOURCE: Odd Arne Westad, *The Global Cold War: Third World Interventions and the Making of Our Times* (Cambridge: Cambridge University Press, 2005), 3–5.

[T]he argument that the Cold War conceptually and analytically does not belong in the south [i.e., Africa, South Asia, and Latin America] is wrong. . . . US and Soviet interventionisms . . . shaped both the international and the domestic framework within which political, social, and cultural changes in Third World countries took place. . . . The United States and the Soviet Union were driven to intervene in the Third World by the ideologies inherent in their politics. . . . Washington and Moscow needed to change the world in order to prove the universal applicability of their ideologies, and the elites of the newly independent [Third World] states proved fertile ground for their competition. . . . [B]oth powers saw themselves as assisting natural trends in world history and as defending their own security at the same time. Both saw a specific mission in and for the Third World that only their own state could carry out and which without their involvement would flounder in local hands.

AP SHORT ANSWER PRACTICE

1. Identify the major difference in these two scholars' understanding of the Cold War's geographical focus.
2. To what extent do these scholars agree on the factors driving the Cold War rivalry between the United States and the Soviet Union?
3. Which interpretation of the origins of the Cold War does the narrative in Chapter 24 seem to support?

also formalized their commitment to divide Germany into four zones, each controlled by one of the four Allied powers (including France), and to similarly partition the capital city, Berlin, which was located in the Soviet zone.

At Yalta, the Big Three also agreed to establish an international body to replace the discredited League of Nations. Based on plans drawn up at the 1944 Dumbarton Oaks conference in Washington, D.C., the new organization, to be known as the **United Nations**, would have both a General Assembly, in which all nations would be represented, and a Security Council composed of the five major Allied powers — the United States, Britain, France, China, and the Soviet Union — and seven other nations elected on a rotating basis. The Big Three determined that the five permanent members of the

East Meets West Soviet soldiers celebrate with U.S. soldiers from the First Army near the Elbe River in Torgau, Germany, on April 25, 1945. Soviet and American forces had converged on Hitler's Germany from opposite directions, finally meeting in Torgau. The meeting symbolized the Grand Alliance, in which U.S.-Soviet cooperation was essential, that secured victory over the Axis Powers in World War II. However, as these ordinary infantrymen optimistically toast one another and look forward to the end of fighting, Germany was already being divided in two: between a western sector held by the Allies and an eastern sector held by the Soviet Union. Within a few years, the division of Germany between "East" and "West" would stand at the center of a split in the entire European continent at the dawn of the Cold War.

Security Council should have veto power over decisions of the General Assembly. They announced that the United Nations would convene for the first time in San Francisco on April 25, 1945.

Potsdam Following the Yalta Conference, developments over the ensuing year further hardened relations between the Soviets on one side and the Americans and British on the other. At the **Potsdam Conference** outside Berlin in July 1945, Harry Truman replaced the deceased Roosevelt. Inexperienced in world affairs and thrown into enormously complicated negotiations, Truman's instinct was to stand up to Stalin. "Unless Russia is faced with an iron fist and strong language," he said, "another war is in the making." But Truman was in no position to shape events in Eastern Europe, where Soviet-imposed governments in Poland, Hungary, and Romania were backed by the Red Army and could not be eliminated by Truman's bluster. In Poland and Romania, in particular, Stalin was determined to establish communist governments, punish wartime Nazi collaborators, and win boundary concessions that augmented Soviet territory.

Yalta and Potsdam thus set the stage for communist rule to descend over Eastern Europe. The elections called for at Yalta eventually took place in Finland, Hungary, Bulgaria, and Czechoslovakia, with varying degrees of democratic openness. Nevertheless, Stalin got the client regimes he desired in those countries and would soon exert

near-complete control over their governments. Stalin's unwillingness to honor self-determination for nations in Eastern Europe was, from the American point of view, the precipitating event of the Cold War.

Germany represented the biggest challenge of all. American officials at Potsdam believed that a revived German economy was essential to ensuring the prosperity of democratic regimes throughout Western Europe — and to keeping ordinary Germans from turning again to Nazism. In contrast, Stalin hoped merely to extract reparations from Germany in the form of industrial machines and goods. In exchange for American recognition of a new German-Polish border, Truman and Secretary of State James Byrnes convinced the Soviet leader to accept German reparations only from the Soviet zone, which was largely rural and promised little wealth or German industry to plunder. The Yalta and Potsdam agreements paved the way for the division of Germany into East and West (Map 24.1).

Yalta and Potsdam demonstrated that in private negotiations the United States and the Soviet Union had starkly different objectives. Public utterances only intensified those differences. In February 1946, Stalin delivered a speech in which he insisted that, according to Marxist-Leninist principles, "the unevenness of development of the capitalist countries" was likely to produce "violent disturbance" and even another war. He seemed to blame any future war on the capitalist West. Churchill responded in kind a month later. While visiting Truman in Missouri to be honored for his wartime

MAP 24.1 Cold War in Europe, 1955
This map vividly shows the Cold War division of Europe. The NATO countries (colored green) are allies of the United States; the Warsaw Pact countries (in purple) are allied to the USSR. In 1955, West Germany had just been admitted to NATO, completing Europe's stabilization into two rival camps. But Berlin remained divided, and one can see from its location deep in East Germany why the former capital was always a flash point in Cold War controversies.

leadership, Churchill accused Stalin of raising an "iron curtain" around Eastern Europe and allowing "police government" to rule its people. He went further, claiming that "a fraternal association of English-speaking peoples," and not Russians, ought to set the terms of the postwar world.

The cities and fields of Europe had thus barely ceased to run with the blood of World War II before they were menaced again by the tense standoff between the Soviet Union and the United States. With Stalin intent on establishing client states in Eastern Europe and the United States equally intent on reviving Germany and ensuring collective security throughout Europe, the points of agreement were few and far between. Among the Allies, anxiety about a Nazi victory in World War II had been quickly replaced by fear of a potentially more cataclysmic war with the Soviet Union.

POINT OF VIEW

How did American and Soviet viewpoints differ over the postwar fate of Europe?

The Containment Strategy

AP® EXAM TIP

Being able to explain the policy of containment is critical to success on the AP® exam.

In the late 1940s, American officials developed a clear strategy toward the Soviet Union that would become known as **containment**. Convinced that the USSR was methodically expanding its reach, the United States would counter by limiting Soviet influence to Eastern Europe while reconstituting democratic governments in Western Europe. In 1946–1947, three specific issues worried Truman and his advisors. First, the Soviet Union was pressing Iran for access to oil and Turkey for access to the Mediterranean. Second, a civil war was roiling in Greece, between monarchists backed by England and insurgents supported by the Greek and Yugoslavian Communist parties. Third, as European nations suffered through terrible **privation** in 1946 and 1947, Communist parties gained strength, particularly in France and Italy. All three developments, as seen from the United States, threatened to expand the influence of the Soviet Union beyond Eastern Europe.

Toward an Uneasy Peace In this anxious context, the strategy of containment emerged in a series of incremental steps between 1946 and 1949. In February 1946, American diplomat George F. Kennan first proposed the idea in an 8,000-word cable — a confidential message within the U.S. State Department — from his post at the U.S. embassy in Moscow. Kennan argued that the Soviet Union was an "Oriental despotism" and that communism was merely the "fig leaf" justifying Soviet aggression. A year after writing this cable (dubbed the Long Telegram), he published an influential *Foreign Affairs* article, arguing that the West's only recourse was to meet the Soviets "with unalterable counter-force at every point where they show signs of encroaching upon the interests of a peaceful and stable world." Kennan called for "long-term, patient but firm and vigilant containment of Russian expansive tendencies." *Containment*, the key word, came to define America's evolving strategic stance toward the Soviet Union.

To see an excerpt from the Long Telegram, along with other primary sources from this period, see ***Sources for America's History***.

Kennan contended that the Soviet system was unstable and would eventually collapse. Containment would work, he reasoned, as long as the United States and its allies opposed Soviet expansion anywhere in the world. Kennan's attentive readers included Stalin himself, who quickly obtained a copy of the classified Long Telegram. The Soviet leader saw the United States as an imperialist aggressor determined to replace Great Britain as the world's dominant capitalist power. Just as Kennan thought that the Soviet system was despotic and unsustainable, Stalin believed that the West suffered from its own fatal weaknesses. Neither side completely understood or trusted the other, and each projected its worst fears onto the other.

In fact, Britain's influence in the world was declining. Exhausted by the war, facing budget deficits and a collapsing economy at home, and confronted with growing independence movements throughout its empire, particularly in India led by Mohandas Gandhi, Britain was waning as a global power. "The reins of world leadership are fast slipping from Britain's competent but now very weak hands," read a U.S. State Department report. "These reins will be picked up either by the United States or by Russia." The United States was wedded to the notion — dating to the Wilson administration — that

communism and capitalism were incompatible on the world stage. With Britain faltering, American officials saw little choice but to fill its shoes.

It did not take long for the reality of Britain's decline to resonate across the Atlantic. In February 1947, London informed Washington that it could no longer afford to support the anticommunists in the Greek civil war. Truman worried that a communist victory in Greece would lead to Soviet domination of the eastern Mediterranean and embolden Communist parties in France and Italy. In response, the president announced what became known as the **Truman Doctrine**. In a speech on March 12, he asserted an American responsibility "to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures." To that end, Truman proposed large-scale assistance for Greece and Turkey (then involved in a dispute with the Soviet Union over the Dardanelles, a strait connecting the Aegean Sea and the Sea of Marmara). "If we falter in our leadership, we may endanger the peace of the world," Truman declared (AP® Thinking Like a Historian). Congress quickly approved Truman's request for $300 million in aid to Greece and $100 million for Turkey.

AP® EXAM TIP

Describe how the use of international aid impacted the policy of containment.

Soviet expansionism was but one part of a larger story. Europe was sliding into economic chaos. Already devastated by the war, in 1947 the continent suffered the worst winter in memory. People were starving, wages were stagnant, and the consumer market had collapsed. For both humanitarian and practical reasons, Truman's advisors believed something had to be done. A global depression might ensue if the European economy, the largest foreign market for American goods, did not recover. Worse, unemployed and dispirited Western Europeans might fill the ranks of the Communist Party, threatening political stability. Secretary of State George C. Marshall came up with a remarkable proposal: a massive infusion of American capital to rebuild the European economy. In a June 1947 speech, Marshall urged the nations of Europe to work out a comprehensive recovery program based on U.S. aid.

This pledge of financial assistance required approval by Congress, where the plan ran into opposition. Republicans castigated the **Marshall Plan** as a huge "international WPA." But in the midst of the congressional stalemate, on February 25, 1948, Stalin supported a communist-led coup in Czechoslovakia. Congress rallied and voted overwhelmingly to approve the Marshall Plan. Over the next four years, the United States contributed nearly $13 billion to a highly successful recovery effort that benefitted both Western Europe and the United States. European industrial production increased by 64 percent, and the appeal of Communist parties waned in the West. Markets for American goods grew stronger and fostered economic interdependence between Europe and the United States. Notably, however, the Marshall Plan intensified Cold War tensions. U.S. officials invited the Soviets to participate but insisted on restrictions that virtually guaranteed Stalin's refusal. An embittered Stalin rejected participation and ordered Soviet client states to do so as well.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

Why did the United States enact the Marshall Plan, and how did the program illustrate America's new role in the world?

East and West in the New Europe The flash point for a hot war remained Germany, the most important industrial economy and the key strategic nation in Europe. When no agreement could be reached with the Soviet Union to unify the four zones of occupation into a single state, the Western allies consolidated their three zones in 1947. They then prepared to establish an independent federal German republic. Marshall Plan funds would jump-start economic recovery. Some of those funds were slated for West Berlin, in hopes of making the city a capitalist showplace 100 miles inside the Soviet zone.

Stung by the West's intention to create a German republic, in June 1948 Stalin blockaded all traffic to West Berlin. Instead of yielding, as Stalin had expected, Truman and the British were resolute. "We are going to stay, period," Truman said plainly. Over the next year, American and British pilots improvised the Berlin Airlift, which flew 2.5 million tons of food and fuel into the Western zones of the city — nearly a ton for each resident. General Lucius D. Clay, the American commander in Berlin, was nervous and on edge, "drawn as tight as a steel spring," according to U.S. officials. But after a prolonged stalemate, Stalin backed down: on May 12, 1949, he lifted the blockade.

The Global Cold War

Until 1950, the U.S. policy of containment was confined to economic measures, such as financial assistance to Greece and Turkey and the Marshall Plan, and focused on Europe. That changed between 1950 and 1954. In those years, containment became militarized, and its scope was expanded to include Asia and Latin America. What had begun as a limited policy to contain Soviet influence in war-torn Europe had by the mid-1950s become a global campaign against communism and social revolution.

1. **President Harry S. Truman, address before joint session of Congress, March 12, 1947.** *Known as the Truman Doctrine, this speech outlined Truman's plan to give large-scale assistance to Greece and Turkey as part of a broader anticommunist policy.*

To ensure the peaceful development of nations, free from coercion, the United States has taken a leading part in establishing the United Nations. The United Nations is designed to make possible lasting freedom and independence for all its members. We shall not realize our objectives, however, unless we are willing to help free peoples to maintain their free institutions and their national integrity against aggressive movements that seek to impose upon them totalitarian regimes. . . .

At the present moment in world history nearly every nation must choose between alternative ways of life. The choice is too often not a free one.

One way of life is based upon the will of the majority, and is distinguished by free institutions, representative government, free elections, guarantees of individual liberty, freedom of speech and religion, and freedom from political oppression.

The second way of life is based upon the will of a minority forcibly imposed upon the majority. It relies upon terror and oppression, a controlled press and radio; fixed elections, and the suppression of personal freedoms.

I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures.

I believe that we must assist free peoples to work out their own destinies in their own way.

I believe that our help should be primarily through economic and financial aid which is essential to economic stability and orderly political processes.

2. **Syngman Rhee, president of South Korea, criticizing U.S. policy in 1950.** *The Korean War, 1950–1953, represented the militarization of the Truman Doctrine.*

A few days ago one American friend said that if the U.S. gave weapons to South Korea, she feared that South Korea would invade North Korea. This is a useless worry of some Americans, who do not know South Korea. Our present war is not a Cold War, but a real shooting war. Our troops will take all possible countermeasures. . . . In South Korea the U.S. has one foot in South Korea and one foot outside so that in case of an unfavorable situation it could pull out of the country. I daresay that if the U.S. wants to aid our country, it should not be only lip-service.

3. **Secretary of State Dean Acheson's testimony before the Senate Armed Forces and Foreign Relations Committee, 1951.**

The attack on Korea was . . . a challenge to the whole system of collective security, not only in the Far East, but everywhere in the world. It was a threat to all nations newly arrived at independence. . . .

This was a test which would decide whether our collective security system would survive or would crumble. It would determine whether other nations would be intimidated by this show of force. . . .

As a people we condemn aggression of any kind. We reject appeasement of any kind. If we stood with our arms folded while Korea was swallowed up, it would have meant abandoning our principles, and it would have meant the defeat of the collective security system on which our own safety ultimately depends.

4. **Shigeru Yoshida, prime minister of Japan, speech before the Japanese Diet (parliament), July 14, 1950.**

It is heartening . . . that America and so many members of the United Nations have gone to the rescue of an invaded country regardless of the heavy sacrifices involved. In case a war breaks out on an extensive scale how would Japan's security be preserved [since we are disarmed]? . . . This has been hotly discussed. However, the measures taken by the United Nations have done much to stabilize our people's minds.

5. **John Foster Dulles, secretary of state (1953–1959), June 30, 1954, radio and television address to the American people.** *In 1951, Jacobo Arbenz Guzmán was elected president of Guatemala. Arbenz Guzmán pursued reform policies that threatened large landholders, including the United Fruit Company. In 1954, the United States CIA engineered a coup that overthrew Arbenz Guzmán and replaced him with Carlos Castillo Armas, a colonel in the Guatemalan military.*

Tonight I should like to speak with you about Guatemala. It is the scene of dramatic events. They expose the evil purpose of the Kremlin to destroy the inter-American system, and they test the ability of the American States to maintain the peaceful integrity of the hemisphere.

For several years international communism has been probing here and there for nesting places in the Americas. It finally chose Guatemala as a spot which it could turn into an official base from which to breed subversion which would extend to other American Republics.

This intrusion of Soviet despotism was, of course, a direct challenge to our Monroe Doctrine, the first and most fundamental of our foreign policies.

6. **Guillermo Toriello, Guatemalan foreign minister, speech to delegates at the Tenth Inter-American Conference of the Organization of American States in Caracas, Venezuela, March 5, 1954.**

What is the real and effective reason for describing our government as communist? From what sources comes the accusation that we threaten continental solidarity and security? Why do they [United States] wish to intervene in Guatemala?

The answers are simple and evident. The plan of national liberation being carried out with firmness by my government has necessarily affected the privileges of the foreign enterprises that are impeding the progress and the economic development of the country. . . . With construction of publically owned ports and docks, we are putting an end to the monopoly of the United Fruit Company. . . .

They wanted to find a ready expedient to maintain the economic dependence of the American Republics and suppress the legitimate desires of their peoples, cataloguing as "communism" every manifestation of nationalism or economic independence, any desire for social progress, any intellectual curiosity, and any interest in progressive and liberal reforms.

7. **Herblock cartoon from the *Washington Post*, February 11, 1962.** *Many Latin American countries were beset by a wide gap between a small wealthy elite and the mass of ordinary, much poorer citizens. American officials worried that this made social revolution an attractive alternative for those at the bottom.*

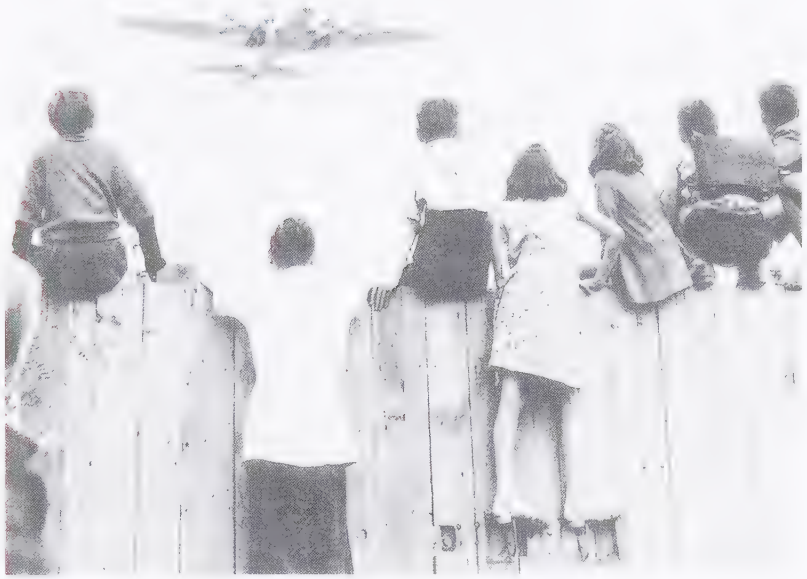
ANALYZING THE EVIDENCE

1. In source 1, Truman presents the choice facing the world in stark terms: totalitarianism or democracy. Why would he frame matters in this way in 1947? How did Truman anticipate the militarization of American foreign policy?
2. Analyze the audience, purpose, and point of view presented in the documents dealing with the war in Korea (sources 2–4). What does Acheson mean by "collective security"? Why is Yoshida thankful for the UN intervention? What can you infer about U.S. involvement in world affairs during the postwar period based on these documents?
3. In document 6, how does Toriello characterize accusations that the elected Guatemalan government is communist? What are his accusations of the United States?
4. How does source 7 express one of the obstacles to democracy in developing nations?

AP® DBQ PRACTICE

Using these documents, and based on what you have learned in class and in this chapter, write an essay in which you analyze the goals of American foreign policy during the early years of the Cold War.



The Berlin Airlift For 321 days U.S. planes like this one flew missions to bring food and other supplies to Berlin after the Soviet Union had blocked all surface routes into the former German capital. The blockade was finally lifted on May 12, 1949, after the Soviets conceded that it had been a failure. AP Photo

Until the Cuban missile crisis in 1962, the Berlin crisis was the closest the two sides came to actual war, and West Berlin became a symbol of resistance to communism.

The crisis in Berlin persuaded Western European nations to forge a collective security pact with the United States. In April 1949, for the first time since the end of the American Revolution, the United States entered into a peacetime military alliance, the **North Atlantic Treaty Organization (NATO)**. Under the NATO pact, twelve nations — Belgium, Canada, Denmark, France, Great Britain, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, and the United States — agreed that "an armed attack against one or more of them in Europe or North America shall be considered an attack against them all." In May 1949, those nations also agreed to the creation of the Federal Republic of Germany (West Germany), which eventually joined NATO in 1955. In response, the Soviet Union established the German Democratic Republic (East Germany); the Council for Mutual Economic Assistance (COMECON); and, in 1955, the **Warsaw Pact**, a military alliance for Eastern Europe that included Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania, and the Soviet Union. In these parallel steps, the two superpowers formalized the Cold War through a massive division of the continent.

By the early 1950s, West and East were the stark markers of the new Europe. As Churchill had observed in 1946, the line dividing the two stretched "from Stettin in the Baltic to Trieste in the Adriatic," cutting off tens of millions of Eastern Europeans from the rest of the continent. Stalin's tactics had often been ruthless, but they were not without reason. The Soviet Union acted out of the sort of self-interest that had long defined powerful nations — ensuring a defensive perimeter of allies, seeking access to raw materials, and pressing the advantage that victory in war allowed.

AP® EXAM TIP

Summarize the debates over increasing reliance on nuclear weapons and the power of the military-industrial complex.

NSC-68 Atomic developments, too, played a critical role in the emergence of the Cold War. As the sole nuclear power at the end of World War II, the United States entertained the possibility of international control of nuclear technology but did not wish to lose its advantage over the Soviet Union. When the American Bernard Baruch proposed United Nations oversight of atomic energy in 1946, for instance, the plan assured the United States of near-total control of the technology, which further increased Cold War tensions. America's brief tenure as sole nuclear power ended in September 1949, however, when the Soviet Union detonated an atomic bomb. Truman then turned to the U.S. National Security Council (NSC), established by the National Security Act of 1947, for a strategic reassessment.

In April 1950, the NSC delivered its report, known as **NSC-68**. Bristling with alarmist rhetoric, the document marked a decisive turning point in the U.S. approach to the Cold War. The report's authors described the Soviet Union not as a typical great power but as one with a "fanatic faith" that seeks to "impose its absolute authority." Going beyond even the stern language used by George Kennan, NSC-68 cast Soviet ambitions as nothing short of "the domination of the Eurasian landmass."

To prevent that outcome, the report proposed "a bold and massive program of rebuilding the West's defensive potential to surpass that of the Soviet world" (AP® America in the World). This included the development of a hydrogen bomb, a **thermonuclear** device that would be a thousand times more destructive than the

Arming for the Cold War

To fight the Cold War, the United States and the Soviet Union increased overall military spending and assembled massive arsenals of nuclear weapons.

QUESTIONS FOR ANALYSIS

1. Do you see evidence of the effects of NSC-68 in this table? What kinds of changes did NSC-68 bring about?
2. In what ways does the data in this table suggest the emergence of two "superpowers" after World War II?

atomic bombs dropped on Japan, as well as dramatic increases in conventional military forces. Critically, NSC-68 called for Americans to pay higher taxes to support the new military program and to accept whatever sacrifices were necessary to achieve national unity of purpose against the Soviet enemy. Many historians see the report as having "militarized" the American approach to the Cold War, which had to that point relied largely on economic measures such as aid to Greece and the Marshall Plan. Truman was reluctant to commit to a major defense buildup, fearing that it would overburden the national budget. But shortly after NSC-68 was completed, events in Asia led him to reverse course.

Containment in Asia

As with Germany, American officials believed at the conclusion of World War II that restoring Japan's economy, while limiting its military influence, would ensure prosperity and contain communism in East Asia. After dismantling Japan's military, American occupation forces under General Douglas MacArthur drafted a democratic constitution and paved the way for the restoration of Japanese sovereignty in 1951. Considering the scorched-earth war that had just ended, this was a remarkable achievement, thanks partly to the imperious MacArthur but mainly to the Japanese, who embraced peace and accepted U.S. military protection. However, events on the mainland of Asia proved much more difficult for the United States to shape to its advantage.

Civil War in China A civil war had been raging in China since the 1930s as Communist forces led by Mao Zedong (Mao Tse-tung) fought Nationalist forces under Jiang Jieshi (Chiang Kai-shek). Fearing a Communist victory, between 1945 and 1949 the United

Communist China Chinese Communists carry placards with pictures of Joseph Stalin, premier of the Soviet Union and self-proclaimed leader of global communism. Under the leadership of General Mao Zedong, the Communist Party of China defeated its rivals in a civil war and founded the People's Republic of China in 1949. Mao's victory meant that from East Germany to the Pacific Ocean, much of the Eurasian landmass (including Eastern Europe, the Soviet Union, and China) was ruled by Communist governments. Library of Congress Corbis / VCG via Getty Images

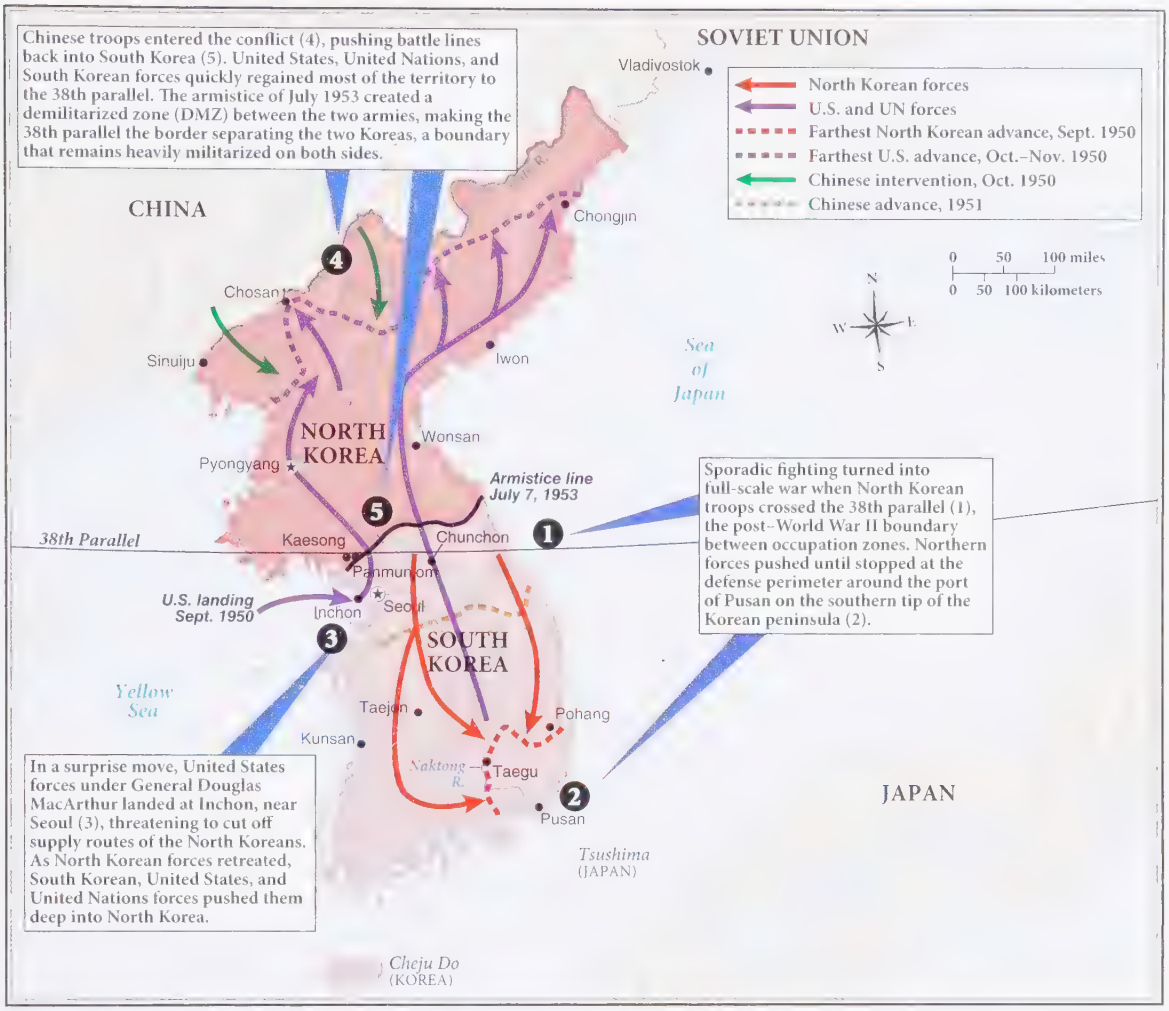
States provided $2 billion to Jiang's army. Pressing Truman to "save" China, conservative Republican Ohio senator Robert A. Taft predicted that "the Far East is ultimately even more important to our future peace than is Europe." By 1949, Mao's forces held the advantage. Truman reasoned that to save Jiang, the United States would have to intervene militarily. Unwilling to do so, he cut off aid and left the Nationalists to their fate. The People's Republic of China was formally established under Mao on October 1, 1949, and the remnants of Jiang's forces fled to Taiwan.

Truman expected Mao to take an independent line, as the Communist leader Tito had just done in Yugoslavia. The new Chinese leader, however, aligned himself with the Soviet Union, partly out of fear that the United States would re-arm the Nationalists and invade the mainland. As attitudes hardened, many Americans viewed Mao's success as a defeat for the United States. The pro-Nationalist "China lobby" held Truman's State Department responsible for the "loss" of China. Sensitive to these charges, the Truman administration refused to recognize "Red China" and blocked China's admission to the United Nations. But the United States pointedly declined to guarantee Taiwan's independence, and in fact accepted the outcome on the mainland. (Since 1982, however, the United States has recognized Taiwanese sovereignty.)

The Korean War The United States took a stronger stance in Korea. Truman and Stalin had agreed at the close of World War II to occupy the Korean peninsula jointly, temporarily dividing the former Japanese colony at the 38th parallel. As tensions rose in Europe, the 38th parallel hardened into a permanent **demarcation** line. The Soviets supported a Communist government, led by Kim Il Sung, in North Korea; the United States backed a right-wing Nationalist, Syngman Rhee, in South Korea. The two sides had waged low-level war since 1945, and both leaders were spoiling for a more definitive fight. However, neither Kim nor Rhee could launch an all-out offensive without the backing of his sponsor. Washington repeatedly said no, and so did Moscow. But Kim continued to press Stalin to permit him to reunify the nation. Convinced by the North Koreans that victory would be swift, the Soviet leader finally relented in the late spring of 1950.

The Korean War As a result of President Truman's 1948 Executive Order 9981, for the first time in the nation's history all troops in the Korean War served in racially integrated combat units. This photo taken during the Battle of Ch'ongch'on in 1950 shows a sergeant and his men of the 2nd Infantry Division. National Archives

On June 25, 1950, the North Koreans launched a surprise attack across the 38th parallel (Map 24.2). Truman immediately asked the



Chinese troops entered the conflict (4), pushing battle lines back into South Korea (5). United States, United Nations, and South Korean forces quickly regained most of the territory to the 38th parallel. The armistice of July 1953 created a demilitarized zone (DMZ) between the two armies, making the 38th parallel the border separating the two Koreas, a boundary that remains heavily militarized on both sides.

Sporadic fighting turned into full-scale war when North Korean troops crossed the 38th parallel (1), the post–World War II boundary between occupation zones. Northern forces pushed until stopped at the defense perimeter around the port of Pusan on the southern tip of the Korean peninsula (2).
In a surprise move, United States forces under General Douglas MacArthur landed at Inchon, near Seoul (3), threatening to cut off supply routes of the North Koreans. As North Korean forces retreated, South Korean, United States, and United Nations forces pushed them deep into North Korea.

MAP 24.2 The Korean War, 1950–1953

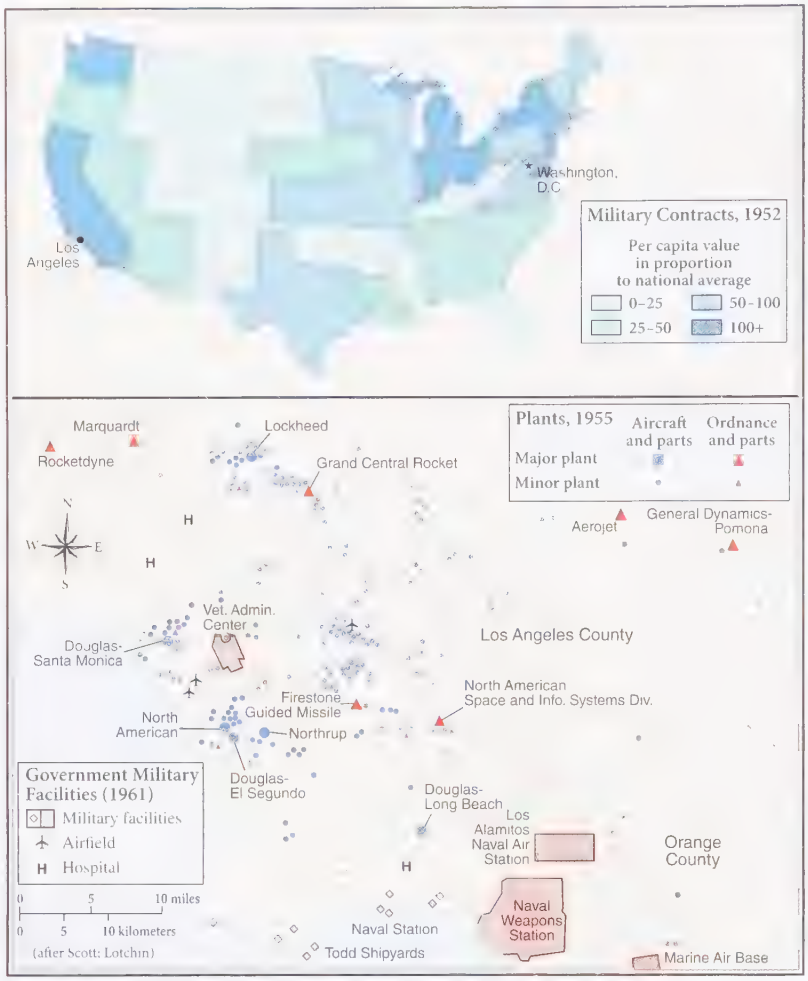
The Korean War, which the United Nations officially deemed a "police action," lasted three years and cost the lives of more than 36,000 U.S. troops. South and North Korean deaths were estimated at more than 900,000. Although hostilities ceased in 1953, the South Korean Military (with U.S. military assistance) and the North Korean Army continue to face each other across the demilitarized zone, more than sixty years later.

UN Security Council to authorize a "police action" against the invaders. The Soviet Union was boycotting the Security Council to protest China's exclusion from the United Nations and therefore could not veto the request. With the Security Council's approval of a "peacekeeping force," Truman ordered U.S. troops to Korea. The rapidly assembled UN army in Korea was overwhelmingly American, with General Douglas MacArthur in command. At first, the North Koreans held a distinct advantage, but MacArthur's surprise **amphibious** attack at Inchon gave the UN forces control of Seoul, the South Korean capital, and almost all the territory up to the 38th parallel.

The impetuous MacArthur then ordered his troops across the 38th parallel and led them all the way to the Chinese border at the Yalu River. It was a major blunder, certain to draw China into the war. Sure enough, a massive Chinese counterattack forced UN forces into headlong retreat back down the Korean peninsula. Then stalemate set in. With weak public support for the war in the United States, Truman and his advisors decided to work for a negotiated peace. MacArthur disagreed and denounced the Korean stalemate, declaring, "There is no substitute for victory." On April 11, 1951, Truman relieved MacArthur of his command. Truman's decision was highly unpopular,

AP® EXAM TIP

Recognizing the Korean War as an expression of containment policy through military action is a "must know" for the AP® exam.



MAP 24.3 The Military-Industrial Complex
Defense spending gave a big boost to the Cold War economy, but, as the upper map suggests, the benefits were by no means equally distributed. The big winners were the Middle Atlantic states, the industrialized Upper Midwest, Washington State (with its aircraft and nuclear plants), and California. The epicenter of California's military-industrial complex was Los Angeles, which, as is evident in the lower map, was studded with military facilities and major defense contractors like Douglas Aircraft, Lockheed, and General Dynamics. There was work aplenty for engineers and rocket scientists.

especially among conservative Republicans, but he had likely saved the nation from years of costly warfare with China.

Notwithstanding MacArthur's dismissal, the war dragged on for more than two years. An armistice in July 1953, pushed by the newly elected president, Dwight D. Eisenhower, left Korea divided at the original demarcation line. North Korea remained firmly allied with the Soviet Union; South Korea signed a mutual defense treaty with the United States. It had been the first major proxy war between the Soviet Union and United States, in which they took sides in a civil conflict without directly confronting one another militarily. It would not be the last.

The Korean War had far-reaching consequences. Truman's decision to commit troops without congressional approval set a precedent for future undeclared wars. His refusal to unleash atomic bombs, even when American forces were reeling under a massive Chinese attack, set ground rules for Cold War conflict. The war also expanded American involvement in Asia, transforming containment into a truly global policy. Finally, the Korean War ended Truman's resistance to a major military buildup (Map 24.3). Defense expenditures grew from $13 billion in 1950, roughly one-third of the federal budget, to $50 billion in 1953, nearly two-thirds of the budget (Figure 24.1). American foreign policy had become more global, more militarized, and more expensive. Even in times of peace, the United States now functioned in a state of permanent military mobilization.

The Munich Analogy Behind much of U.S. foreign policy in the first two decades of the Cold War lay the memory of appeasement (Chapter 23). The generation of politicians and officials who designed the containment strategy had come of age in the era of Munich, the conference in 1938 at which the Western democracies had appeased Hitler by offering him part of Czechoslovakia, paving the road to World War II. Applying the lessons of Munich, American presidents believed that "appeasing" Stalin (and subsequent Soviet rulers Nikita Khrushchev and Leonid Brezhnev) would have the same result: wider war. Thus in Germany, Greece, and Korea, and later in Iran, Guatemala, and Vietnam, the United States staunchly resisted the Soviets — or what it perceived as Soviet

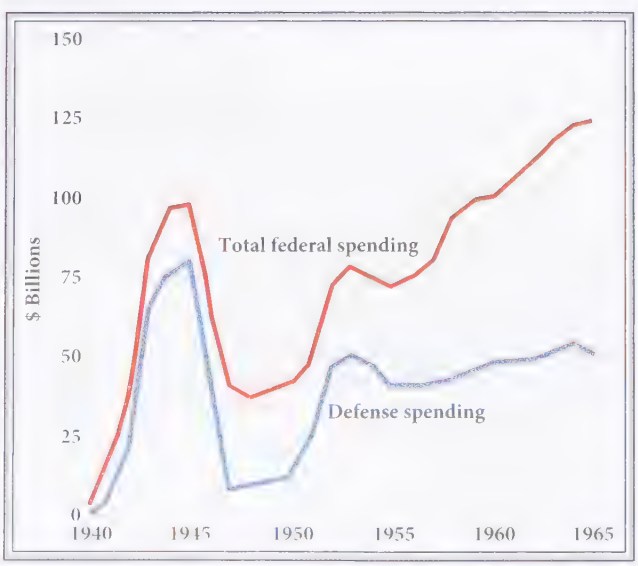


FIGURE 24.1 National Defense Spending, 1940–1965
In 1950, the U.S. defense budget was $13 billion, less than a third of total federal outlays. In 1961, U.S. defense spending reached $47 billion, fully half of the federal budget and almost 10 percent of the gross domestic product.

influence. The Munich analogy strengthened the U.S. position in a number of strategic conflicts, particularly over the fate of Germany. But it also drew Americans into armed conflicts — and convinced them to support repressive, right-wing regimes — that compromised, as much as supported, stated American principles.

IN YOUR OWN WORDS What primary factors caused the Cold War?

AP® PRACTICES & SKILLS
COMPARE & CONTRAST
How did U.S. containment strategy in Asia compare to containment in Europe?

Cold War Liberalism

As president, Harry Truman cast himself in the mold of his predecessor, Franklin Roosevelt, and hoped to seize the possibilities afforded by victory in World War II to expand the New Deal at home. But the crises in postwar Europe and Asia, combined with the swift rise of anticommunism in the United States, forced him to take a different path. In the end, Truman went down in history as a Cold Warrior rather than a New Dealer. The Cold War consensus that he ultimately embraced — the notion that resisting communism at home and abroad represented America's most important postwar objective — shaped the nation's life and politics for decades to come.

Truman and the End of Reform

Truman and the Democratic Party of the late 1940s and early 1950s forged what historians call **Cold War liberalism**. They preserved the core programs of the New Deal welfare state, developed the containment policy to oppose Soviet influence throughout the world, and fought so-called subversives at home. But there would be no second act for the New Deal. The Democrats adopted this combination of moderate liberal policies and anticommunism — Cold War liberalism — partly by choice and partly out of necessity. A few high-level **espionage** scandals and the Communist victories in Eastern Europe and China reenergized the Republican Party, which forced Truman and the Democrats to retreat to what historian Arthur Schlesinger called the "vital center" of American politics. However, Americans on both the progressive left and the conservative right accepted this development only reluctantly. Cold War liberalism was a practical centrist program for a turbulent era. But it would not last.

AP® EXAM TIP
Identify the forces that limited the expansion of New Deal policies following World War II.

Organized labor remained a key force in the Democratic Party and played a central role in championing Cold War liberalism. Stronger than ever, union membership swelled to more than 14 million by 1945. Determined to make up for their wartime sacrifices, unionized workers made aggressive demands and mounted major strikes in the automobile, steel, and coal industries after the war, as they had after World War I. Republicans responded. They gained control of the House in a sweeping repudiation of Democrats in 1946 and promptly passed — over Truman's veto — the **Taft-Hartley Act** (1947), an overhaul of the 1935 National Labor Relations Act.

Taft-Hartley brought changes in procedures and language that, over time, weakened the right of workers to organize and engage in collective bargaining. Unions especially disliked Section 14b, which allowed states to pass "right-to-work" laws prohibiting the union shop. Additionally, the law forced unions to purge communists, who had been among the most successful labor organizers in the 1930s, from their ranks. Trade unions would continue to support the Democratic Party, but the labor movement would not crack the largely non-union South and would not penetrate the many American industries that remained unorganized. In that sense, Taft-Hartley effectively "contained" the labor movement.

COMPARE & CONTRAST
Compare the years immediately following World War I (Chapter 21) and World War II. In what ways were they similar, especially with respect to politics, reform, radicalism, and organized labor?

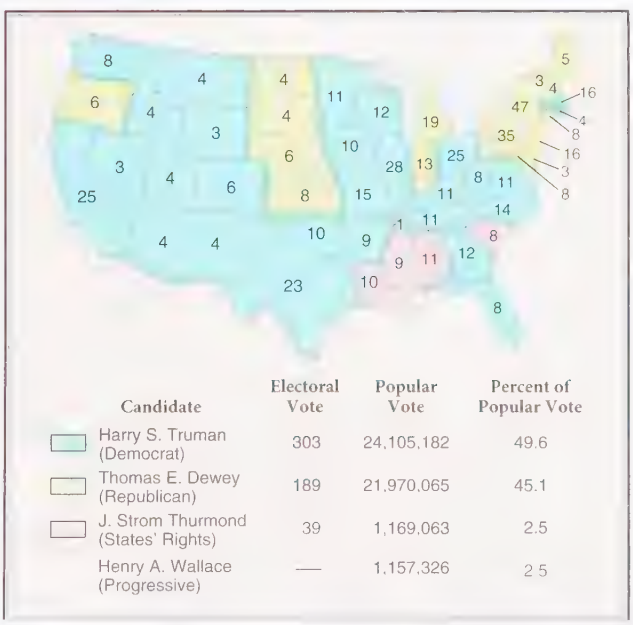
The 1948 Election Democrats would have dumped Truman in 1948 had they found a better candidate. But the party fell into disarray. The left wing split off and

Truman Triumphant In one of the most famous photographs in U.S. political history, Harry S. Truman gloats over an erroneous headline in the November 3 *Chicago Daily Tribune*. Pollsters had predicted an easy victory for Thomas E. Dewey. Their polling techniques, however, missed the dramatic surge in support for Truman during the last days of the campaign. Bettmann/Getty Images

formed the Progressive Party, nominating Henry A. Wallace, an avid New Dealer whom Truman had fired as secretary of commerce in 1946 because Wallace opposed America's actions in the Cold War. A right-wing challenge came from the South. When northern liberals such as Mayor Hubert H. Humphrey of Minneapolis pushed through a strong civil rights platform at the Democratic convention, the southern delegations bolted and, calling themselves Dixiecrats, nominated for president South Carolina governor Strom Thurmond, an ardent supporter of racial segregation. The Republicans meanwhile renominated Thomas E. Dewey, the politically moderate governor of New York who had run a strong campaign against FDR in 1944.

Truman surprised everyone. He launched a strenuous cross-country speaking tour and hammered away at the Republicans for opposing progressive legislation and, in general, for running a "do-nothing" Congress. By combining these issues with attacks on the Soviet menace abroad, Truman began to salvage his troubled campaign. At his rallies, enthusiastic listeners shouted, "Give 'em hell, Harry!" Truman won, receiving 49.6 percent of the vote to Dewey's 45.1 percent (Map 24.4).

This remarkable election foreshadowed coming political turmoil. Truman occupied the center of FDR's sprawling New Deal coalition. On his left were progressives, civil rights advocates, and peace activists critical of the Cold War. On his right were segregationist southerners, who opposed civil rights and were allied with Republicans on many economic and foreign policy issues. In 1948, Truman performed a delicate balancing act, largely retaining the support of Jewish and Catholic voters in the big cities, black voters in the North, and union voters across the country. But Thurmond's strong showing — he carried four states in the Deep South — demonstrated the fragility of the Democratic coalition and prefigured the revolt of the party's southern wing in the 1960s. As he tried to manage contending forces in his own party, Truman faced mounting pressure from Republicans to denounce radicals at home and to take a tough stand against the Soviet Union.



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Harry S. Truman (Democrat)	303	24,105,182	49.6
Thomas E. Dewey (Republican)	189	21,970,065	45.1
J. Strom Thurmond (States' Rights)	39	1,169,063	2.5
Henry A. Wallace (Progressive)	—	1,157,326	2.5

MAP 24.4 The Presidential Election of 1948
Truman's electoral strategy in 1948 was to concentrate his campaign in areas where the Democrats had their greatest strength. In an election with a low turnout, Truman held on to enough support from Roosevelt's New Deal coalition of blacks, union members, and farmers to defeat Dewey by more than 2 million votes.

The Fair Deal Despite having to perform a balancing act, Truman and progressive Democrats forged ahead. In 1949, reaching ambitiously to extend the New Deal, Truman proposed the **Fair Deal**: national health insurance, civil rights legislation, aid to education, a housing program, expansion of Social Security, a higher minimum wage, and a new agricultural program. In its attention to civil rights, the Fair Deal reflected the growing influence of African Americans in the Democratic Party. Congress, however, remained a huge stumbling block, and the Fair Deal fared poorly. The same conservative coalition that had blocked Roosevelt's initiatives in his second term stymied Truman's as well. Cold War pressure shaped political arguments about domestic social programs, while the nation's growing paranoia over internal subversion weakened support for bold extensions of the welfare state.

Truman's proposal for national health insurance, for instance, was a popular idea, with strong backing from organized labor. But it was denounced as "socialized medicine" by the American Medical Association and the insurance industry. In the end, the Fair Deal's only significant breakthrough, other than improvements to the minimum wage and Social Security, was the National Housing Act of 1949, which authorized the construction of 810,000 low-income units.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

How was the Democratic Party divided in 1948, and what were its primary constituencies?

Red Scare: The Hunt for Communists

Cold War liberalism was premised on the grave domestic threat posed, many believed, by Communists and Communist sympathizers. Was there significant Soviet penetration of the American government? Records opened after the 1991 disintegration of the Soviet Union, including the Venona Papers made available in 1995 by the National Security Agency, indicate that there was. Among American suppliers of information to Moscow were FDR's assistant secretary of the treasury, Harry Dexter White; FDR's administrative aide Laughlin Currie; a strategically placed midlevel group in the State Department; key scientists and technicians working on the Manhattan Project; and several hundred more, some identified only by code name, working in a range of government departments and agencies.

How are we to explain this? Many of these enlistees in the Soviet cause had been bright young New Dealers in the mid-1930s, when the Soviet-backed Popular Front suggested that the lines separating liberalism, progressivism, and communism were permeable (Chapter 23). At that time, the United States was not at war and never expected to be. And when war did come, the Soviet Union was an American ally. For critics of the informants, however, there remained the time between the Nazi-Soviet Pact and the German invasion of the Soviet Union, a nearly two-year period during which cooperation with the Soviet Union could be seen in a less positive light. Moreover, passing secrets to another country, even a wartime ally, was simply indefensible to many Americans — particularly when it came to atomic secrets. The lines between U.S. and Soviet interests blurred for some; for others, they remained clear and definite.

After World War II, however, most suppliers of information to the Soviets apparently ceased spying. For one thing, the professional apparatus of Soviet spying in the United States was disrupted by American counterintelligence work. For another, most of the well-connected amateur spies moved on to other careers. Historians have thus developed a healthy skepticism that there was much Soviet espionage in the United States after 1947, but this was not how many Americans saw it at the time. Legitimate suspicions and real fears, along with political opportunism, combined to fuel the national Red Scare, which was longer and more far-reaching than the one that followed World War I (Chapter 21).

Loyalty-Security Program To insulate his administration against charges of Communist infiltration, Truman issued Executive Order 9835 on March 21, 1947, which created the **Loyalty-Security Program**. The order permitted officials to investigate any employee of the federal government (some 2.5 million people) for "subversive" activities. Representing a profound centralization of power, the order sent shock waves through every federal agency. Truman intended the order to apply principally to actions designed to harm the United States (sabotage, treason, etc.), but it was broad enough to allow anyone to be accused of subversion for the slightest reason — for marching in a Communist-led demonstration in the 1930s, for instance, or signing a petition endorsing public housing. Along with suspected political subversives, more than a thousand gay men and lesbians were dismissed from federal employment in the 1950s, victims of an obsessive search for anyone deemed "unfit" for government work.

AP® EXAM TIP

Evaluate the debates over the methods and policies related to exposing Communist spies in the 1950s.

Following Truman's lead, many state and local governments, universities, political organizations, churches, and businesses undertook their own antisubversion campaigns,

which often included loyalty oaths. In the labor movement, charges of Communist domination led to the expulsion of a number of unions by the Congress of Industrial Organizations (CIO) in 1949. Civil rights organizations such as the National Association for the Advancement of Colored People (NAACP) and the National Urban League also expelled Communists and "fellow travelers," or Communist sympathizers. Thus the Red Scare spread from the federal government to the farthest reaches of American organizational, economic, and cultural life.

HUAC The Truman administration had legitimized the vague and malleable concept of "disloyalty." Others proved willing to stretch the concept even further, beginning with the **House Un-American Activities Committee (HUAC)**, which Congressman Martin Dies of Texas and other conservatives had launched in 1938. In 1947, HUAC helped spark the Red Scare by holding widely publicized hearings on alleged Communist infiltration in the movie industry. A group of writers and directors dubbed the Hollywood Ten went to jail for contempt of Congress after they refused to testify about their past associations. Hundreds of other actors, directors, and writers whose names had been mentioned in the HUAC investigation were unable to get work, victims of an unacknowledged but very real blacklist honored by industry executives.

Other HUAC investigations had greater legitimacy. One that intensified the anticommunist crusade in 1948 involved Alger Hiss, a former New Dealer and State Department official who had accompanied Franklin Roosevelt to Yalta. A former Communist, Whitaker Chambers, claimed that Hiss was a member of a secret Communist cell operating in the government and had passed him classified documents in the 1930s. Hiss denied the allegations, but California Republican congressman Richard Nixon doggedly pursued the case against him. In early 1950, Hiss was found guilty not of spying but of lying to Congress about his Communist affiliations and was sentenced to five years in federal prison. Many Americans doubted at the time that Hiss was a spy. But the Venona transcripts in the 1990s corroborated a great deal of Chambers's testimony, and though no definitive proof has emerged, many historians now recognize the strong circumstantial evidence against Hiss.

McCarthyism The meteoric career of Senator Joseph McCarthy of Wisconsin marked first the apex and then the finale of the Red Scare. In February 1950, McCarthy delivered a bombshell during a speech in Wheeling, West Virginia: "I have here in my hand a list of 205 . . . a list of names that were made known to the Secretary of State as being members of the Communist Party and who nevertheless are still working and shaping policy in the State Department." McCarthy later reduced his numbers, gave different figures in different speeches, and never released any names or proof. But he had gained the attention he sought (AP® Analyzing Voices).

For the next four years, from his position as chair of the Senate Permanent Subcommittee on Investigations, McCarthy waged a virulent smear campaign. Critics who disagreed with him exposed themselves to charges of being "soft" on communism. Truman called McCarthy's charges "slander, lies, [and] character assassination" but could do nothing to curb him. Republicans, for their part, refrained from publicly challenging their most outspoken senator and, on the whole, were content to reap the political benefits. McCarthy's charges almost always targeted Democrats.

Despite McCarthy's failure to identify a single Communist in government, several national developments gave his charges credibility with the public. The dramatic 1951 espionage trial of Julius and Ethel Rosenberg, followed around the world, fueled McCarthy's allegations. Convicted of passing atomic secrets to the Soviet Union, the Rosenbergs were executed in 1953. As in the Hiss case, documents released decades later provided some evidence of Julius Rosenberg's guilt, though not Ethel's. Their execution nevertheless remains controversial—in part because some felt that anti-Semitism played a role in their sentencing. Also fueling McCarthy's charges were a

The Army-McCarthy Hearings These 1954 hearings contributed to the downfall of Senator Joseph McCarthy by exposing his reckless accusations and bullying tactics to the huge television audience that tuned in each day. Some of the most heated exchanges took place between McCarthy (center) and Joseph Welch (seated, left), the lawyer representing the army. When the gentlemanly Welch finally asked, "Have you no sense of decency sir, at long last? Have you left no sense of decency?" he fatally punctured McCarthy's armor. The audience broke into applause because someone had finally had the courage to stand up to the senator from Wisconsin. Bettmann, Getty Image

series of trials of American Communists between 1949 and 1955 for violation of the 1940 Smith Act, which prohibited Americans from advocating the violent overthrow of the government. Though civil **libertarians** and two Supreme Court justices vigorously objected, dozens of Communist Party members were convicted. McCarthy was not involved in either the Rosenberg trial or the Smith Act convictions, but these sensational events gave his wild charges some credence.

In early 1954, McCarthy overreached by launching an investigation into subversive activities in the U.S. Army. When lengthy hearings—the first of their kind broadcast on the new medium of television—brought McCarthy's tactics into the nation's living rooms, support for him plummeted. In December 1954, the Senate voted 67 to 22 to censure McCarthy for unbecoming conduct. He died from an alcohol-related illness three years later at the age of forty-eight, his name forever attached to a period of political repression of which he was only the most flagrant manifestation.

AP® PRACTICES & SKILLS

CAUSATION

What factors led to the postwar Red Scare, and what were its ramifications for civil liberties in the United States?

The Politics of Cold War Liberalism

As election day 1952 approached, the nation was embroiled in the tense Cold War with the Soviet Union and fighting a "hot" war in Korea. Though Americans gave the Republicans victory, radical change was not in the offing. The new president, Dwight D. Eisenhower, embraced what his supporters called modern Republicanism, an updated GOP approach

Hunting Communists: The Case of Paul Robeson

The Cold War campaigns against American communists and other radicals reached their peak between 1949 and 1954. Anticommunists searched for signs of "disloyalty" to the United States, especially among public figures such as politicians, artists, athletes, and actors. Few Americans came under greater suspicion than the black athlete, singer, civil rights advocate, and political radical Paul Robeson. Having traveled the world as a successful actor and vocalist in the 1930s, Robeson often spoke positively about the Soviet Union, where he was celebrated as a great artist. He was an outspoken advocate for black equality in the United States and a fierce critic of American political leaders for doing little to end Jim Crow and other forms of racial discrimination and racial violence after World War II.

In 1949, while speaking at a peace conference in Paris, Robeson was misquoted in the United States as having said that African Americans ("Negroes" in the standard usage of the period) would not fight in a potential war against the Soviet Union. On his return to the United States, the House Un-American Activities Committee (HUAC) held hearings at which prominent African Americans were encouraged to denounce Robeson. Among them was Jackie Robinson, the black baseball star who had integrated Major League Baseball in 1947. Branded as disloyal, Robeson fought back, insisting that HUAC was disloyal for ignoring white violence and continued systematic discrimination against African Americans. This Cold War episode from 1949 shows how civil rights and anticommunism collided, with black leaders pressured by HUAC and others to choose sides.

THOMAS YOUNG

Testimony before House Committee on Un-American Activities, July 13, 1949

SOURCE: *Hearings Regarding Communist Infiltration of Minority Groups - Part 1: Hearings Before the House Committee on Un-American Activities*, July 13, 14, and 18, 1949 (Washington, DC: Government Printing Office, 1949), 453.

"I am happy to accept the invitation extended to me to appear before this committee because I feel very strongly the need for bringing into proper perspective some of the opinions that have been expressed publicly concerning the loyalty of the American Negro. . . .

Please bear this in mind, that there is no evidence on record of the disloyalty of their country on the part of Negroes generally [sic]. It has not been charged, even, that there have been overt acts by Negroes on which suspicion of disloyalty could be predicated. On the other hand, the entire record of the American Negro's service to his country, from the Revolutionary War, in which Crispus Attucks, a Boston Negro, was among the first to shed blood for this nation's independence, down to the recent World War II, in which members of this group played important and heroic roles on every front, is a satisfactory refutation of such charges. . . .

What basis, if any, is there for believing Paul Robeson when he says that in the event of a war with Russia the Negro would not fight for his country against the Soviets? . . .

The plain truth about the matter is that in his Paris declaration Mr. Robeson has done a great disservice to his race — far greater than that done to his country. And if Mr. Robeson does not recognize the injury he has done to the cause of the Negro in this country, then that underscores his disqualification as a representative of the race."

MANNING JOHNSON

Testimony before House Committee on Un-American Activities, July 14, 1949

SOURCE: *Hearings Regarding Communist Infiltration of Minority Groups: Hearings Before the House Committee on Un-American Activities*, July 14, 1949 (Washington, DC: Government Printing Office, 1949), 505.

"I have met Paul Robeson a number of times in the headquarters of the national committee of the Communist Party, going to and coming from conferences with Earl Browder, Jack Stachel, and J. Peters [high-ranking officials of the Communist Party USA in the 1940s]. During the time I was a member of the Communist Party, Paul Robeson was a member of the Communist Party. . . . In the Negro commission of the national committee of the Communist Party we were told, under threat of expulsion, never to reveal that Paul Robeson was a member of the Communist Party, because Paul Robeson's assignment was highly confidential and secret. . . .

that aimed at moderating, not dismantling, the New Deal. Eisenhower Republicans were as much successors of FDR as of Herbert Hoover. Foreign policy revealed a similar continuity. Like their predecessors, Republicans saw the world in Cold War polarities.

Despite Eisenhower's popularity as the former commander of Allied forces in Europe, divisions in the party persisted. Conservative party activists preferred Robert A. Taft of

Paul's assignment was to work among the intellectuals, the professionals, and artists that the party was seeking to penetrate and influence along Communist lines. . . .

Of course Paul Robeson has, by background and international connections developed a complex. You recall the role he played, the role of Emperor Jones. He has delusions of grandeur. He wants to be the Black Stalin among Negroes. The Communist Party is encouraging that desire, because the Communist Party can very effectively use Robeson to further their penetration among Negroes. ”

JACK "JACKIE" ROBINSON

Testimony before House Committee on Un-American Activities, July 18, 1949

SOURCE: *Hearings Regarding Communist Infiltration of Minority Groups: Hearings Before the House Committee on Un-American Activities*, July 18, 1949 (Washington, DC: Government Printing Office, 1949), 481.

“ We're going to make progress in other American fields besides baseball if we can get rid of some of the misunderstanding and confusion that the public still suffers from. I know I have a great desire and I think that I have some responsibility for helping to clear up that confusion. As I see it there has been a terrific lot of misunderstanding on this subject of Communism among the Negroes in this country, and it's bound to hurt my people's cause unless it is cleared up.

The white public should start toward real understanding by appreciating that every single Negro who is worth his salt is going to resent any kind of slurs and discrimination because of his race, and he is going to use every bit of intelligence such as he has to stop it. This has got absolutely nothing to do with what Communists may or may not be trying to do.

. . . I've been asked to express my views on Paul Robeson's statement in Paris to the effect that American Negroes would refuse to fight in any war against Russia because they love Russia so much. I haven't any comment to make on that statement except that if Mr. Robeson actually made it, it sounds very silly to me. But he has a right to his personal views. . . . ”

PAUL ROBESON

News Release Commenting on House Un-American Activities Committee, July 20, 1949

SOURCE: Paul Robeson, "Statement on Un American Activities Committee," in *Paul Robeson Speaks: Writings, Speeches, Interviews, 1918–1974*, ed. Philip S. Foner (New York: Brunner/Mazel, 1978), 218.

“ Quite clearly America faces a crisis in race relations. The Un-American Activities Committee moves now to transform the Government's cold war policy against the Negro people into a hot war. Its action incites the Ku Klux Klan, that openly terrorist organization, to a reign of mob violence against my people in Florida and elsewhere. This Committee attempts to divide the Negro people from one another in order to prevent us from winning jobs, security and justice under the banner of peace.

The loyalty of the Negro people is not a subject for debate. I challenge the loyalty of the Un-American Activities Committee. This committee maintains an ominous silence in the face of the lynchings of Maceo Snipes, Robert Mallard, the two Negro veterans and their wives in Monroe, Georgia, and the violence and unpunished murders of scores of Negro veterans by white supremacists since V-J Day. . . . Every pro-war fascist-minded group in the country regards the Committee's silence as license to proceed against my people, unchecked by Government authorities and unchallenged by the courts.

Our fight for peace in America is a fight for human dignity, and an end to ghetto life. It is the fight for constitutional liberties, the civil and human rights of every American. This struggle is the decisive struggle with which my people are today concerned. . . .

It is not the Soviet Union that threatens the life, liberty and the property and the citizenship rights of Negro Americans. The threat comes from within. To destroy this threat our people need the aid of every honest American, Communist and non-Communist alike. Those who menace our lives proceed unchallenged by the Un-American Activities Committee. I shall not be drawn into any conflict dividing me from my brother victim of this terror. I am wholly committed to the struggle for peace and democratic rights of free Americans. ”

QUESTIONS FOR ANALYSIS

1. What do you think Young means by "a great disservice to his race"? What is the basis of Jackie Robinson's testimony? Why do you think Robinson insists that black resistance to discrimination has nothing to do with communism?
2. What is Johnson's intention in identifying Robeson as a Communist? What would have been the effect of such charges in 1949?
3. How does Robeson challenge the meaning of "disloyal" in his statement? How would you compare his version of disloyalty with HUAC's?

Ohio, the Republican leader in the Senate who was an outspoken opponent of the New Deal. As a close friend of business, he opposed labor unions. Though an ardent anti-communist, the isolationist-minded Taft criticized Truman's aggressive containment policy and opposed U.S. participation in NATO. Taft ran for president three times, and though he was never the Republican nominee, he won the loyalty of conservative

Dwight Eisenhower In this photo taken during the 1952 presidential campaign, Dwight D. Eisenhower acknowledges cheers from supporters in Chicago. "Ike," as he was universally known, had been a popular five-star general in World War II (also serving as supreme allied commander in the European theater) and turned to politics in the early 1950s as a member of the Republican Party. However, Eisenhower was a centrist who did little to disrupt the liberal social policies that Democrats had pursued since the 1930s.
Bettmann/Getty Image

Americans who saw the welfare state as wasteful spending and international affairs as dangerous foreign entanglements.

In contrast, moderate Republicans looked to Eisenhower and even to more liberal-minded party leaders like Nelson Rockefeller, who supported international initiatives such as the Marshall Plan and NATO and were willing to tolerate labor unions and the welfare state. Eisenhower was a man without a political past. Believing that democracy required the military to stand aside, he had never voted. Rockefeller, the scion of one of the richest families in America, was a Cold War internationalist. He served in a variety of capacities under Eisenhower, including as an advisor on foreign affairs. Having made his political name, Rockefeller was elected the governor of New York in 1959 and became the de facto leader of the liberal wing of the Republican Party.

For eight years, between 1952 and 1960, Eisenhower steered a precarious course from the middle of the party, with conservative Taft Republicans on one side and liberal Rockefeller Republicans on the other. His popularity temporarily kept the two sides at bay, though more ardent conservatives considered him a closet New Dealer. "Ike," as he was widely known, proved willing to work with the mostly Democratic-controlled Congresses of those years. Eisenhower signed bills increasing federal outlays for veterans' benefits, housing, highway construction (Chapter 25), and Social Security, and he increased the minimum wage from 75 cents an hour to $1. Like Truman, Eisenhower accepted some government responsibility for the economic security of individuals, part of a broad consensus in American politics in these years.

America Under Eisenhower The global power realities that had called forth containment guided Eisenhower's foreign policy. New developments, however, altered the tone of the Cold War. Stalin's death in March 1953 precipitated an intraparty struggle in the Soviet Union that lasted until 1956, when Nikita Khrushchev emerged as Stalin's successor. Khrushchev soon startled communists around the world by denouncing Stalin and detailing his crimes and blunders. He also surprised many Americans by calling for "peaceful coexistence" with the West. But the new Soviet leader had his limits, and when Hungarians rose up in 1956 to demand independence from Moscow, Khrushchev crushed the incipient revolution.

AP® EXAM TIP
Compare the foreign policies of Harry Truman and Dwight Eisenhower.

With no end to the Cold War in sight, Eisenhower focused on limiting the cost of containment. The president hoped to economize by relying on a nuclear arsenal and deemphasizing expensive conventional forces. Under this "**New Look**" defense policy, the Eisenhower administration stepped up production of the hydrogen bomb and developed long-range bombing capabilities. The Soviets, however, matched the United States weapon for weapon. By 1958, both nations had intercontinental ballistic missiles. When an American nuclear submarine launched an atomic-tipped Polaris missile in 1960, Soviet engineers raced to produce an equivalent weapon. This arms race was another critical feature of the Cold War. American officials believed the best deterrent to Soviet aggression was the threat of an all-out nuclear response by the United States, which was dubbed "massive retaliation" by Secretary of State Dulles.

Although confident in the international arena, Eisenhower started out as a novice in domestic affairs. Doing his best to set a less confrontational tone after the **rancorous** Truman years, he was reluctant to speak out against Joe McCarthy, and he was not a leader on civil rights. Democrats meanwhile maintained a strong presence in Congress but proved weak in presidential elections in the 1950s. In the two presidential contests of the decade, 1952 and 1956, Eisenhower defeated the admired but politically

ineffectual liberal Adlai Stevenson. In the 1952 election, Stevenson was hampered by the unpopularity of the Truman administration. The deadlocked Korean War and a series of scandals that Republicans dubbed "the mess in Washington" combined to give the war-hero general an easy victory. In 1956, Ike won an even more impressive victory over Stevenson, an eloquent and sophisticated spokesman for liberalism but no match for Eisenhower's popularity with the public.

During Eisenhower's presidency, new political forces on both the right and the left had begun to stir. But they had not yet fully transformed the party system itself. Particularly at the national level, Democrats and Republicans seemed in broad agreement about the realities of the Cold War and the demands of a modern, industrial economy and welfare state. Indeed, respected commentators in the 1950s declared "the end of ideology" and wondered if the great political clashes that had wracked the 1930s were gone forever. Below the apparent calm of national party politics, however, lay profound differences among Americans over the direction of the nation. Those differences would starkly divide the country in the 1960s and bring an end to the brief and fragile Cold War consensus (Chapters 26 and 27).

IN YOUR OWN WORDS What were the components of Cold War liberalism, and why did the Democratic Party embrace them?

Containment in the Postcolonial World

As the Cold War took shape, the world scene was changing at a furious pace. New nations were emerging across Asia, Africa, and the Middle East, created in the wake of successful anticolonial movements whose origins dated to before World War II. Between 1947 and 1962, the British, French, Dutch, and Belgian empires all but disintegrated in a momentous collapse of European global power. FDR had favored the idea of national self-determination, often to the fury of his British and French allies. He expected emerging democracies to be new partners in an American-led, free-market world system. But colonial revolts produced many independent- or socialist-minded regimes in the so-called Third World, as well. *Third World* was a term that came into usage after World War II to describe developing or ex-colonial nations in Asia, Africa, Latin America, and the Middle East that were not aligned with the Western capitalist countries led by the United States or the socialist states of Eastern Europe led by the Soviet Union.

The Cold War and Colonial Independence

AP® EXAM TIP

Describe the goals and methods of the U.S. in seeking alliances among new nations after decolonization.

Insisting that all nations had to choose sides in the Cold War, the United States drew as many countries as possible into collective security agreements, with the NATO alliance in Europe as a model. Secretary of State John Foster Dulles orchestrated the creation of the Southeast Asia Treaty Organization (SEATO), which in 1954 linked the United States and its major European allies with Australia, New Zealand, Pakistan, the Philippines, and Thailand. An extensive system of defense alliances eventually tied the United States to more than forty other countries (Map 24.5). The United States also sponsored a strategically instrumental alliance between Iraq and Iran, on the southern flank of the Soviet Union.

Despite American rhetoric, the United States was often concerned less with democracy than with stability. The Truman and Eisenhower administrations tended to support governments, no matter how repressive, that were overtly anticommunist. Some of America's staunchest allies — the Philippines, South Korea, Iran, Cuba, South Vietnam, and Nicaragua — were governed by dictatorships or right-wing regimes that lacked broad-based support. Moreover, Eisenhower's secretary of state Dulles often resorted to

MAP 24.5 American Global Defense Treaties in the Cold War Era

The advent of the Cold War led to a major shift in American foreign policy — the signing of mutual defense treaties. Dating back to George Washington's call "to steer clear of permanent alliances with any portion of the foreign world," the United States had avoided treaty obligations that entailed the defense of other nations. As late as 1919, the U.S. Senate had rejected the principle of "collective security," the centerpiece of the League of Nations established by the Treaty of Versailles that ended World War I. But after World War II, in response to fears of Soviet global expansion, the United States entered defense alliances with much of the non-Communist world.

covert operations against governments that, in his opinion, were too closely aligned with the Soviets.

For these covert tasks, Dulles turned to the newly created (1947) Central Intelligence Agency (CIA), run by his brother, Allen Dulles. When Iran's democratically elected nationalist premier, Mohammad Mossadegh, seized British oil properties in 1953, CIA agents helped depose him and installed the young Mohammad Reza Pahlavi as shah of Iran. Iranian resentment of the coup, followed by twenty-five years of U.S. support for the shah, provided fuel for the 1979 Iranian Revolution (Chapter 29). In 1954, the CIA also engineered a coup in Guatemala against the democratically elected president, Jacobo Arbenz Guzmán, who had seized land owned by the American-owned United Fruit Company. Arbenz Guzmán offered to pay United Fruit the declared value of the land, but the company rejected the offer and sought help from the U.S. government. Eisenhower specifically approved those CIA efforts and expanded the agency's mandate from gathering intelligence to intervening in the affairs of sovereign states.

Vietnam But when covert operations failed or proved impractical, the American approach to emerging nations could entangle the United States in deeper, more intractable conflicts. One example was already unfolding on a distant stage, in a small country unknown to most Americans: Vietnam. In August 1945, at the close of World War II, the Japanese occupiers of Vietnam surrendered to China in the north of the country and to Britain in the south. The Vietminh, the nationalist movement that had led the resistance against the Japanese (and the French, prior to 1940), seized control in the north. But their leader, Ho Chi Minh, was a Communist, and this single fact outweighed American and British commitment to self-determination. When France moved to restore its control over the country, the United States and Britain sided with their European ally. President Truman rejected Ho's plea to support the Vietnamese struggle for nationhood, and France rejected Ho's offer of a negotiated independence. Shortly after France returned, in late 1946, the Vietminh resumed their war of national liberation.

AP® EXAM TIP

Evaluating U.S. policy in Vietnam as a commitment to containment policy is essential for the AP® exam.

Eisenhower picked up where Truman left off. If the French failed, Eisenhower argued, all non-Communist governments in the region would fall like dominoes. This so-called **domino theory**—which represented an extension of the containment doctrine—guided U.S. policy in Southeast Asia for the next twenty years. The United States eventually provided most of the financing for the French war, but money was not enough to defeat the determined Vietminh, who were fighting for the liberation of their country. After a fifty-six-day siege in early 1954, the French were defeated at the huge fortress of Dien Bien Phu. The result was the 1954 Geneva Accords, which partitioned Vietnam temporarily at the 17th parallel and called for elections within two years to unify the strife-torn nation.

The United States rejected the Geneva Accords and set about undermining them. With the help of the CIA, a pro-American government took power in South Vietnam in June 1954. Ngo Dinh Diem, an anticommunist Catholic living in exile in the United States, returned to Vietnam as premier. The next year, in a rigged election, Diem became president of an independent South Vietnam. Facing certain defeat by the popular Ho Chi Minh, Diem called off the scheduled reunification elections. The Eisenhower administration propped up Diem with an average of $200 million a year in aid and a contingent of 675 American military advisors. This support was just the beginning.

The Middle East If Vietnam was still of minor concern, the same could not be said of the Middle East, an area rich in oil and political complexity. The most volatile area was Palestine, populated by Arabs but also historically the ancient land of Israel and coveted by the Zionist movement as a Jewish national homeland. After World War II, many survivors of the Nazi extermination camps resettled in Palestine, which was still controlled by Britain under a World War I mandate. On November 29, 1947, the UN General Assembly voted to partition Palestine between Jewish and Arab sectors. When the British mandate ended in 1948, Palestinian leaders rejected the partition as a violation of their right to self-determination. When Zionist leaders proclaimed the state of Israel, a coalition of Arab nations known as the Arab League invaded, but Israel survived. Many Palestinians fled or were driven from their homes during the fighting. The Arab defeat left these people permanently stranded in refugee camps. President Truman recognized the new state immediately, which won him crucial support from Jewish voters in the 1948 election but alienated the Arab world.

AP® EXAM TIP

Recognize the impact of U.S. policy on nationalist movements in the Middle East.

Southeast of Palestine, Egypt began to assert its presence in the region. Having gained independence from Britain several decades earlier, Egypt remained a monarchy until 1952, when Gamal Abdel Nasser led a military coup that established a constitutional republic. Caught between the Soviet Union and the United States, Nasser sought an independent route: a pan-Arab socialism designed to end the Middle East's colonial relationship with the West. When negotiations with the United States over Nasser's plan to build a massive hydroelectric dam on the Nile broke down in 1956, he nationalized the Suez Canal, which was the lifeline for Western Europe's oil. Britain and France, in alliance with Israel, attacked Egypt and seized the canal. Concerned that the invasion

would encourage Egypt to turn to the Soviets for help, Eisenhower urged France and Britain to pull back and applied additional pressure through the UN General Assembly. When the Western nations backed down, however, Egypt reclaimed the Suez Canal and built the Aswan Dam on the Nile with Soviet support. Eisenhower had likely avoided a larger war, but the West lost a potential ally in Nasser.

In early 1957, concerned about Soviet influence in the Middle East, the president announced the **Eisenhower Doctrine**, which stated that American forces would assist any nation in the region that required aid "against overt armed aggression from any nation controlled by International Communism." Invoking the doctrine later that year, Eisenhower helped King Hussein of Jordan put down a Nasser-backed revolt and propped up a pro-American government in Lebanon. The Eisenhower Doctrine was further evidence that the United States had extended the global reach of containment, in this instance accentuated by the strategic objective of protecting the West's access to steady supplies of oil.

AP® PRACTICES & SKILLS

CAUSATION

How did the Cold War between the United States and the Soviet Union affect disparate regions such as the Middle East and Southeast Asia?

John F. Kennedy and the Cold War

Charisma, style, and personality — these, more than platforms and issues, defined a new brand of politics in the early 1960s. This was John F. Kennedy's natural environment. Kennedy, a Harvard alumnus, World War II hero, and senator from Massachusetts, had inherited his love of politics from his grandfathers — colorful, and often ruthless, Irish Catholic politicians in Boston. Ambitious and deeply aware of style, the forty-three-year-old Kennedy made use of his many advantages to become, as novelist Norman Mailer put it, "our leading man." His one disadvantage — that he was Catholic in a country that had never elected a Catholic president — he masterfully neutralized. And thanks to both media advisors and his youthful attractiveness, Kennedy projected a superb television image.

At heart, Kennedy was a Cold Warrior who had come of age politically in the era of Munich, Yalta, and McCarthyism. He projected an air of idealism, but his years in the Senate (1953–1960) had proved him to be a conventional Cold War politician. Once elected president, Kennedy would shape the nation's foreign policy by drawing both on his ingenuity and on old-style Cold War power politics.

The Kennedy Magnetism John F. Kennedy, the 1960 Democratic candidate for president, used his youth and personality (and those of his equally personable and stylish wife) to attract voters. Here the Massachusetts senator draws an enthusiastic crowd on a campaign stop in Elgin, Illinois. AP Photo

The Election of 1960 and the New Frontier

Kennedy's Republican opponent in the 1960 presidential election, Eisenhower's vice president, Richard Nixon, was a seasoned politician and Cold Warrior himself. The great innovation of the 1960 campaign was a series of four nationally televised debates. Nixon, less photogenic than Kennedy, looked sallow and unshaven under the intense studio lights. Voters who heard the first debate on the radio concluded that Nixon had won, but those who viewed it on television favored Kennedy. Despite the edge Kennedy enjoyed in the debates, he won only the narrowest of electoral victories, receiving 49.7 percent of the popular vote to Nixon's 49.5 percent. Kennedy attracted Catholics, African Americans, and the labor vote; his vice-presidential running mate, Texas senator Lyndon Baines Johnson, helped bring

in southern Democrats. Yet only 120,000 votes separated the two candidates, and a shift of a few thousand votes in key states would have reversed the outcome.

Kennedy brought to Washington a cadre of young, ambitious newcomers, including Robert McNamara, a renowned systems analyst and former head of Ford Motor Company, as secretary of defense. A host of trusted advisors and academics flocked to Washington to join the New Frontier — Kennedy's term for the challenges the country faced. Included on the team as attorney general was Kennedy's younger brother Robert, who had made a name as a hard-hitting investigator of organized crime. Relying on an old American trope, Kennedy's New Frontier suggested masculine toughness and adventurism and encouraged Americans to again think of themselves as exploring uncharted terrain. That terrain proved treacherous, however, as the new administration immediately faced a crisis.

Crises in Cuba and Berlin In January 1961, the Soviet Union announced that it intended to support "wars of national liberation" wherever in the world they occurred. Kennedy took Soviet premier Khrushchev at his word, especially regarding Cuba, where in 1959 Fidel Castro had overthrown the right-wing dictator Fulgencio Batista and declared a revolution. Determined to keep Cuba out of the Soviet orbit, Kennedy followed through on Eisenhower administration plans to dispatch Cuban exiles to launch an anti-Castro uprising. The invaders, trained by the CIA, were ill-prepared for their task. On landing at Cuba's **Bay of Pigs** on April 17, 1961, the force of 1,400 was crushed by Castro's troops. Kennedy prudently rejected CIA pleas for a U.S. air strike. Accepting defeat, Kennedy went before the American people and took full responsibility for the fiasco (Map 24.6).

MAP 24.6 The United States and Cuba, 1961–1962

Fidel Castro's 1959 Communist takeover of Cuba brought Cold War tensions to the Caribbean. In 1961, the United States tried unsuccessfully to overthrow Castro's regime by sponsoring the Bay of Pigs invasion of Cuban exiles launched from Nicaragua and other points in the Caribbean. In 1962, the United States confronted the Soviet Union over Soviet construction of nuclear missile sites in Cuba. After President Kennedy ordered a naval blockade of the island, the Soviets backed down from the tense standoff and removed the missiles. Despite the 1991 dissolution of the Soviet Union and the official end of the Cold War, the United States continued to view Cuba, governed by Raúl Castro, Fidel's brother, since 2008, as an enemy nation until 2016, when President Barack Obama began the process of normalizing relations between the two countries.

Already strained by the Bay of Pigs incident, U.S.-Soviet relations deteriorated further in June 1961 when Khrushchev stopped movement between Communist-controlled East Berlin and the city's Western sector. Kennedy responded by dispatching 40,000 more troops to Europe. In mid-August, to stop the exodus of East Germans fleeing to the West, the Communist regime began constructing the Berlin Wall, policed by border guards under shoot-to-kill orders. Kennedy again responded, though this time rhetorically, by delivering a speech in Berlin criticizing the wall in June 1963. Until the 12-foot-high concrete barrier came down in 1989, it served as the supreme symbol of the Cold War.

AP® EXAM TIP

The role of the U.S. in Latin America during the Cold War is a "must know" on the AP® exam.

Perhaps the most perilous Cold War confrontation came in October 1962. In a somber televised address on October 22, Kennedy revealed that U.S. **reconnaissance** planes had spotted Soviet-built bases for intermediate-range ballistic missiles in Cuba. Some of those weapons had already been installed, and more were on the way. Kennedy announced that the United States would impose a "quarantine on all offensive military equipment" bound for Cuba. As the world held its breath waiting to see if the conflict would escalate into war, on October 25 ships carrying Soviet missiles turned back. After a week of tense negotiations, both sides made concessions: Kennedy pledged not to invade Cuba, and Khrushchev promised to dismantle the missile bases. Kennedy also secretly ordered U.S. missiles to be removed from Turkey, at Khrushchev's insistence. The risk of nuclear war, greater during the **Cuban missile crisis** than at any other time in the Cold War, prompted a slight thaw in U.S.-Soviet relations. As National Security Advisor McGeorge Bundy put it, both sides were **chastened** by "having come so close to the edge."

The Berlin Wall A West Berlin resident walks alongside a section of the Berlin Wall in August 1962, a year after its construction. Note the two border guards on the East Berlin side, plus the numerous loudspeakers, which East German Communists used to broadcast propaganda over the barricade that divided the city. Bettmann/Corbis

Kennedy and the World Kennedy also launched a series of bold nonmilitary initiatives. One was the **Peace Corps**, which embodied a call to public service put forth in his inaugural address ("Ask not what your country can do for you, but what you can do for your country"). Thousands of men and women agreed to devote two or more years as volunteers for projects such as teaching English to Filipino schoolchildren or helping African villagers obtain clean water. Exhibiting the idealism of the early 1960s, the Peace Corps was also a low-cost Cold War weapon — and an extension of American "soft power" (Chapter 21) — intended to show the developing world that there was an alternative to communism. Kennedy championed space exploration, as well. In a 1962 speech, he proposed that the nation commit itself to landing a man on the moon within the decade. The Soviets had already beaten the United States into space with the 1957 *Sputnik* satellite and the 1961 flight of cosmonaut Yuri Gagarin. Capitalizing on America's fascination with space, Kennedy persuaded Congress to increase funding for the government's space agency, the National Aeronautics and Space Administration (NASA), enabling the United States to pull ahead of the Soviet Union. Kennedy's ambition was realized when U.S. astronauts arrived on the moon in 1969.

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

How was Kennedy's approach to the Cold War similar to and different from Eisenhower's and Truman's?

Making a Commitment in Vietnam

When Kennedy became president, he inherited Eisenhower's commitment in Vietnam, which he saw in Cold War terms. But rather than practicing brinksmanship — threatening nuclear war to stop communism — Kennedy sought what at the time seemed a more intelligent and realistic, if nevertheless interventionist, approach. In 1961, he increased military aid to the South Vietnamese and expanded the role of U.S. Special Forces ("Green Berets"), who would train the South Vietnamese army in unconventional, small-group warfare tactics.

South Vietnam's corrupt and repressive Diem regime, propped up by Eisenhower since 1954, was losing ground in spite of American aid. By 1961, Diem's opponents, with backing from North Vietnam, had formed a revolutionary movement known as the National Liberation Front (NLF). NLF guerrilla forces — the Vietcong — found allies among peasants alienated by Diem's "strategic hamlet" program, which had uprooted entire villages and moved villagers into barbed-wire compounds. Furthermore, Buddhists charged Diem, a Catholic, with religious persecution. Starting in May 1963, militant Buddhists staged dramatic demonstrations, including self-immolations (burning to death) recorded by reporters covering the activities of the 16,000 U.S. military personnel then in Vietnam.

The self-immolations, broadcast on television to a shocked global audience, powerfully illustrated the dilemmas of American policy in Vietnam. To ensure a stable southern government and prevent victory for Ho Chi Minh and the North, the United States had to support Diem's authoritarian regime. But the regime's repression of its political opponents made Diem more unpopular. He was assassinated on November 3, 1963. Whether one supported U.S. involvement in Vietnam or not, the elemental paradox remained unchanged: in its efforts to achieve victory over the North, the United States brought defeat ever closer.

IN YOUR OWN WORDS **What objectives guided U.S. foreign policy in the so-called Third World during the Cold War?**

SUMMARY

The Cold War began as a conflict between the United States and the Soviet Union over Eastern Europe and the fate of post–World War II Germany. Early in the conflict, the United States adopted a strategy of containment, which quickly expanded to Asia after

China became a communist state under Mao Zedong. The first effect of that expansion was the Korean War, after which, under Dwight D. Eisenhower, containment of communism became America's guiding principle across the developing world—often called the Third World. Cold War tensions relaxed in the late 1950s but erupted again under John F. Kennedy with the Cuban missile crisis, the building of the Berlin Wall, and major increases in American military assistance to South Vietnam. Cold War imperatives between 1945 and the early 1960s meant a major military buildup, a massive nuclear arms race, and unprecedented entanglements across the globe.

On the domestic front, Harry S. Truman started out with high hopes for an expanded New Deal, only to be confounded by resistance from Congress and the competing demands of the Cold War. The greatest Cold War–inspired development was a climate of fear over internal subversion by Communists that gave rise to McCarthyism. Truman's successor, Eisenhower, brought the Republicans back into power. Although personally conservative, Eisenhower actually proved a New Dealer in disguise. When Eisenhower left office and Kennedy became president, it seemed that a "liberal consensus" prevailed, with old-fashioned, *laissez faire* conservatism mostly marginalized in American political life.

CHAPTER 24 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. What primary factors caused the Cold War?
2. What were the components of Cold War liberalism, and why did the Democratic Party embrace them?
3. What objectives guided U.S. foreign policy in the so-called Third World during the Cold War?
4. Review the events listed under "Politics and Power" and "American and National Identity" on the thematic timelines on pages 618 and 746. Radicalism played a significant role in American history between 1890 and 1945. What radical politics took root in the United States during this time, and how did the government, the business community, and different social groups respond to that radicalism?

AP® TERMS TO KNOW

Identify and explain the significance of each term below.

Key Concepts and Events

Yalta Conference (p. 750)
United Nations (p. 751)
Potsdam Conference (p. 752)
containment (p. 754)
Truman Doctrine (p. 755)
Marshall Plan (p. 755)

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. How was America's Cold War foreign policy an extension of principles and policies from earlier eras, and in what ways was it a break with those traditions? Was the Cold War inevitable? Why or why not?
2. Look at the map of the military-industrial complex (Map 24.3) on page 762 and the map of population changes (Chapter 25, Map 25.2) on page 805. Where were the majority of military weapons manufactured? What were the connections between weapons and geography? How did those connections affect population distribution in the United States and within individual metropolitan areas?

KEY TURNING POINTS

Refer to the chapter chronology on page 750 for help in answering the question below.

What turning points and crises defined American containment policy between 1946 and 1953? Explain your answer with evidence from the timeline and chapter.

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS

Choose the correct answer for each question.

Questions 1–4 refer to the excerpt below.

> "I am convinced that there would be far less hysterical anti-Sovietism in our country today if the realities of this situation were better understood by our people. There is nothing as dangerous or as terrifying as the unknown. . . .
>
> World communism is like a malignant parasite which feeds only on diseased tissue. This is the point at which domestic and foreign policies meet. Every courageous and incisive measure to solve the internal problems of our own society . . . is a diplomatic victory over Moscow. . . .
>
> Many foreign peoples, in Europe at least, are tired and frightened by experiences of the past, and are less interested in abstract freedom than in security. They are seeking guidance rather than responsibilities. We should be better able than Russians to give them this. And unless we do, the Russians certainly will."
>
> George Kennan, United States diplomat in Moscow, "Long Telegram" to the Secretary of State, February 1946

1. The arguments expressed in the excerpt are best understood in the context of the
   a. U.S. military involvement in the Korean and Vietnam wars.
   b. fluctuation between confrontation and coexistence with the Soviet Union.
   c. emergence of nationalist movements across the globe after World War II.
   d. end of the wartime alliance between the United States and the Soviet Union.
2. The "hysteria" referenced by Kennan in the excerpt refers most directly to
   a. widespread public protests against the draft.
   b. growing scientific concern about environmental dangers of a nuclear war.
   c. a domestic search for communists working in the government or mass media.
   d. legislation restricting free speech and limiting criticism of U.S. foreign policy.
3. Kennan's arguments expressed in the excerpt most directly supported a foreign policy of
   a. détente.
   b. containment.
   c. isolationism.
   d. imperialism.
4. The most direct result of Kennan's ideas expressed in the excerpt was the
   a. establishment of the United Nations.
   b. spread of Cold War competition to Latin America.
   c. North Atlantic Treaty Organization.
   d. growth of a large military-industrial complex in the United States.

Questions 5–6 refer to the excerpt below.

> "In Korea the Government forces, which were armed to prevent border raids and to preserve internal security, were attacked by invading forces from North Korea. The Security Council of the United Nations called upon the invading troops to cease hostilities and to withdraw to the 38th parallel. This they have not done, but on the contrary have pressed the attack. The Security Council called upon all members of the United Nations to render every assistance to the United Nations in the execution of this resolution. In these circumstances I have ordered United States air and sea forces to give the Korean Government troops cover and support.
>
> The attack upon Korea makes it plain beyond all doubt that communism has passed beyond the use of subversion to conquer independent nations and will now use armed invasion and war."
>
> President Truman, Statement on the Situation in Korea, June 1950

5. The sentiments expressed in the excerpt share the greatest similarity to those who used to support U.S. entry into which of the following conflicts?
   a. War of 1898
   b. World War II
   c. Vietnam War
   d. Persian Gulf War
6. The events described in the excerpt most immediately led to
   a. growing power of the executive branch to conduct foreign policy.
   b. the rise of independence movements in the former colonies of European countries.
   c. a New Left movement challenging United States military interventionism.
   d. the increasing immigration to the United States from countries in Asia.

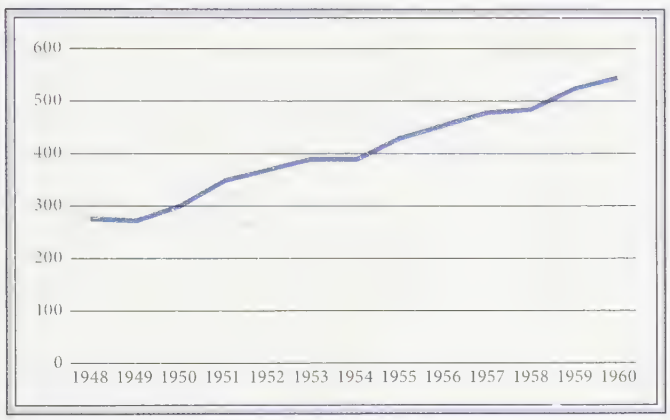
SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

> "Whatever date is chosen to mark the declaration of [the Cold War], it is certain that the issue that sparked it, gave it life and shaped its early course, was East Europe. For centuries East and West have struggled . . . for control of the huge area running from the Baltic to the Balkans, an area rich in human and industrial resources and one that is strategically vital to both sides. . . . Neither the West nor the East has been willing to allow East Europe to be strong, independent, or neutral. Russia and the West each have wanted the area to be aligned with them and open for their own economic exploitation. . . . [During World War II], the West made no significant contribution to the liberation of East Europe and when the end came the Red Army was in sole possession of the area. . . . This crucial result of World War II destroyed the Grand Alliance and gave birth to the Cold War."
>
> Stephen E. Ambrose, *Rise to Globalism: American Foreign Policy Since 1938*, 1971

> "[T]he argument that the Cold War conceptually and analytically does not belong in the south [i.e., Africa, South Asia, and Latin America] is wrong. . . . US and Soviet interventionisms . . . shaped both the international and the domestic framework within which political, social, and cultural changes in Third World countries took place. . . . The United States and the Soviet Union were driven to intervene in the Third World by the ideologies inherent in their politics. . . . Washington and Moscow needed to change the world in order to prove the universal applicability of their ideologies, and the elites of the newly independent [Third World] states proved fertile ground for their competition. . . . [B]oth powers saw themselves as assisting natural trends in world history and as defending their own security at the same time. Both saw a specific mission in and for the Third World that only their own state could carry out and which without their involvement would flounder in local hands."
>
> Odd Arne Westad, *The Global Cold War: Third World Interventions and the Making of Our Times*, 2005

1. Using the two excerpts at the bottom of the previous page, answer (a), (b), and (c).
   a. Briefly explain ONE major difference between Ambrose's and Westad's historical interpretations of the Cold War.
   b. Briefly explain how ONE specific historical event or development from the period 1945 to 1980 that is not explicitly mentioned in the excerpts could be used to support Ambrose's interpretation.
   c. Briefly explain how ONE specific historical event or development from the period 1945 to 1980 that is not explicitly mentioned in the excerpts could be used to support Westad's interpretation.



Government Military Expenditures (In Billions of Dollars)

2. Using the graph at left, answer (a), (b), and (c).
   a. Briefly explain ONE specific historical event or development that caused the trend depicted in the graph.
   b. Briefly explain ANOTHER specific historical event or development that caused the trend depicted in the graph.
   c. Briefly explain ONE specific historical effect in United States society of the change depicted in the graph.
3. Answer (a), (b), and (c).
   a. Briefly explain ONE specific historical difference between U.S. foreign policy in the period 1920–1940 from U. S. foreign policy in the period 1945–1963.
   b. Briefly explain ONE specific historical similarity between U.S. foreign policy in the period 1920–1940 to U. S. foreign policy in the period 1945–1963.
   c. Briefly explain ONE specific historical effect on U.S. society of the nation's foreign policy in the period 1920–1940 OR in the period 1945–1963.

AP LEARNING FOCUS

Why did consumer culture become such a fixture of American life in the postwar decades, and how did it affect politics and society?

At the height of the Cold War, in 1959, U.S. vice president Richard Nixon debated Soviet premier Nikita Khrushchev on the merits of Pepsi-Cola, TV dinners, and electric ovens. Face-to-face at the opening of an American exhibition in Moscow, Nixon and Khrushchev strolled through a model American home, assembled to demonstrate the consumer products available to the typical citizen of the United States. Nixon explained to Khrushchev that although the Soviet Union may have superior rockets, the United States was ahead in other areas, such as color television.

This was Cold War politics by other means—a symbolic contest over which country's standard of living was higher. What was so striking about the so-called **kitchen debate** was Nixon's insistence, to a disbelieving Khrushchev, that a modern home filled with shiny new toasters, televisions, and other consumer products was accessible to the average American worker. "Any steelworker could buy this house," Nixon told the Soviet leader. The kitchen debate settled little in the geopolitical rivalry between the United States and the Soviet Union. But it speaks to us across the decades because it reveals how Americans had come to see themselves by the late 1950s: as home owners and consumers, as a people for whom the middle-class American Dream was a commercial aspiration.

The real story of the postwar period was the growing number of Americans who embraced that aspiration. In the two decades following the end of World War II, a new middle class was born in the United States. *Fortune* magazine estimated that in the 1950s, the middle class—which *Fortune* defined as families with more than $5,000 in annual earnings after taxes (about $45,000 today)—was increasing at the rate of 1.1 million people per year. Riding a wave of rising incomes, American dominance in the global economy, and Cold War federal spending, the postwar middle class enjoyed the highest standard of living in the world.

However, the success of the middle class could not hide deeper troubles. This was an era of neither universal conformity nor diminishing social strife. Jim Crow laws, contradictions in women's lives, a rebellious youth culture, and changing sexual mores were only the most obvious sources of social tension. Suburban growth came at the expense of cities, hastening urban decay and **exacerbating** racial segregation. Nor was prosperity ever as widespread as the Moscow exhibit implied. The suburban lifestyle was beyond the reach of the working poor, the elderly, immigrants, Mexican Americans, and most African Americans—indeed, the majority of the country. Such contradictions were felt acutely by many Americans but largely ignored by the majority of the country. Not until the 1960s did uneven prosperity become the subject of national debate.

The Middle-Class Family Ideal A family eats breakfast at a campground in Zion National Park, Utah. Americans embraced a middle-class, nuclear family ideal in the postwar decades.

Postwar Prosperity and the Affluent Society

The United States enjoyed enormous economic advantages at the close of World War II. While the Europeans and Japanese were still clearing the war's rubble, America stood poised to enter a postwar boom. As the only major industrial nation not devastated by war, the United States enjoyed an unprecedented global position. The American economy also benefitted from an expanding internal market and heavy investment in research and development. Two additional factors stood out: First, for the first time in the nation's history, employers generally accepted collective bargaining, which for workers translated into rising wages, expanding benefits, and an increasing rate of home ownership. Second, the federal government's outlays for military and domestic programs gave a huge boost to the economy.

The Kitchen Debate At the American National Exhibition in Moscow in 1959, the United States put on display the technological wonders of American home life. When Vice President Richard Nixon visited, he and Soviet premier Nikita Khrushchev got into a heated debate over the relative merits of their rival systems, with the up-to-date American kitchen as a case in point. This photograph shows the debate in progress. Khrushchev is the bald man pointing his finger. To Nixon's left stands Leonid Brezhnev, who would be Khrushchev's successor.

Economy: From Recovery to Dominance

Life magazine publisher Henry Luce was so confident in the nation's growing power that during World War II he had predicted the dawning of the "American century." In economic terms, Luce envisioned U.S. corporations, banks, and manufacturers dominating global markets. That vision came to pass after the war. The preponderance of American economic muscle in the postwar decades, however, was not simply an artifact of the world war—it was not an inevitable development. Several key elements came together, internationally and at home, to propel three decades of unprecedented economic growth.

The Bretton Woods System American global supremacy rested partly on the economic institutions created at an international conference in **Bretton Woods**, New Hampshire, in

July 1944. The first of those institutions was the **World Bank**, founded to provide loans for the reconstruction of war-torn Europe as well as for the development of former colonized nations — the so-called Third World or developing world. A second institution, the **International Monetary Fund (IMF)**, was set up to stabilize currencies and provide a predictable monetary environment for trade, with the U.S. dollar serving as the benchmark. The World Bank and the IMF formed the cornerstones of the Bretton Woods system, which guided the global economy after the war. The chief idea of the Bretton Woods system was to make American capital available, on cheap terms, to nations that adopted free-trade capitalist economies.

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

The Bretton Woods system was joined in 1947 by the first General Agreement on Tariffs and Trade (GATT), which established an international framework for overseeing trade rules and practices. Together, the Bretton Woods system and GATT served America's conception of an open-market global economy and complemented the nation's ambitious diplomatic aims in the Cold War. Critics charged, rightly, that Bretton Woods and GATT favored the United States at the expense of recently independent countries, because the United States could dictate lending and trading terms and stood to benefit as nations purchased more American goods. But the system provided needed economic stability.

The Military-Industrial Complex A second engine of postwar prosperity was defense spending. In his final address to the nation in 1961, President Dwight D. Eisenhower spoke about the power of what he called the **military-industrial complex**, which by then employed 3.5 million Americans. Even though his administration had fostered this defense establishment, Eisenhower feared its implications: "We must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex," he warned. This complex had its roots in the business-government partnerships of World War II (Chapter 23). After 1945, though the country was nominally at peace, the economy and the government operated in a state of perpetual readiness for war.

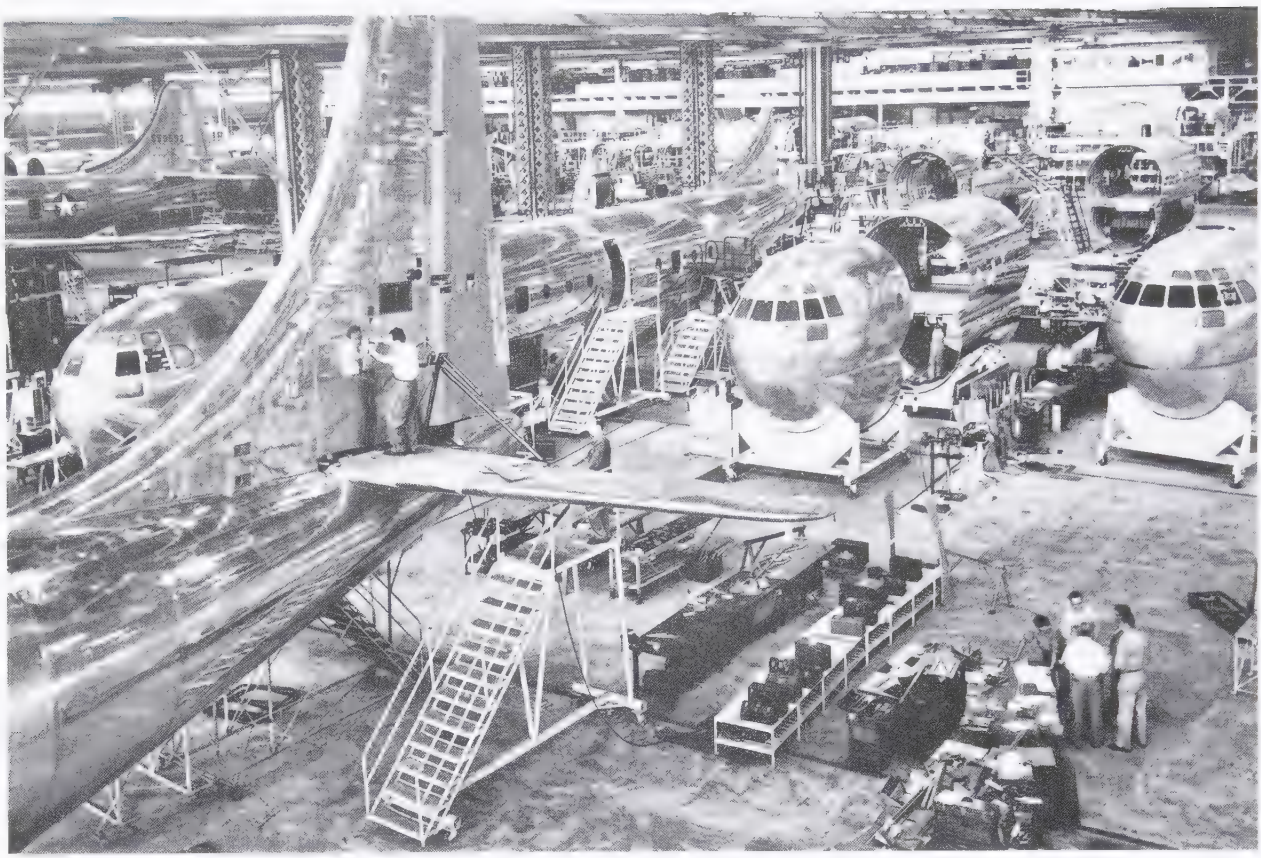
AP® EXAM TIP

Evaluate the role of federal spending and the private sector in generating postwar economic growth.

Based at the sprawling Pentagon in Arlington, Virginia, the Defense Department evolved into a massive bureaucracy. In the name of national security, defense-related industries entered into long-term relationships with the Pentagon. Some companies did so much business with the government that they in effect became private divisions of the Defense Department. Over 60 percent of the income of Boeing, General Dynamics, and Raytheon, for instance, came from military contracts, and the percentages were even higher for Lockheed and Republic Aviation. In previous peacetime years, military spending had constituted only 1 percent of gross domestic product (GDP); now it represented 10 percent. Economic growth was increasingly dependent on a robust defense sector.

As permanent mobilization took hold, science, industry, and government became intertwined. Cold War competition for military supremacy spawned both an arms race and a space race as the United States and the Soviet Union each sought to develop more explosive bombs and more powerful rockets. Federal spending underwrote 90 percent of the cost of research for aviation and space, 65 percent for electricity and electronics, 42 percent for scientific instruments, and even 24 percent for automobiles. With the government footing the bill, corporations lost little time in transforming new technology into useful products. Backed by the Pentagon, for instance, IBM and Sperry Rand pressed ahead with research on integrated circuits, which later spawned the computer revolution.

When the Soviet Union launched the world's first satellite, ***Sputnik***, in 1957, the startled United States went into high gear to catch up in the Cold War space competition. Alarmed that the United States was falling behind in science and technology, Eisenhower persuaded Congress to appropriate additional money for college scholarships and university research. The **National Defense Education Act** of 1958 funneled millions of dollars into American universities, helping institutions such as the University



The Military-Industrial Complex Often, technology developed for military purposes, such as the complex design of jet airplanes, was easily transferred to the consumer market. The Boeing Aircraft Company — its Seattle plant is pictured here in the mid-1950s — became one of the leading commercial airplane manufacturers in the world in the 1960s, boosted in part by tax dollar–financed military contracts. Major American corporations — such as Boeing, McDonnell Douglas, General Electric, General Dynamics, and dozens of others — benefitted enormously from military contracts from the Department of Defense in the years after World War II. Bettmann/Getty Images

of California at Berkeley, Stanford University, the Massachusetts Institute of Technology, and the University of Michigan become the leading research centers in the world.

Corporate Power Despite its massive size, the defense industry was only one part of the nation's economy. For over half a century, the consolidation of economic power into large corporate firms had characterized American capitalism. In the postwar decades, that tendency accelerated. By 1970, the top four U.S. automakers produced 91 percent of all motor vehicles sold in the country; the top four firms in tires produced 72 percent; those in cigarettes, 84 percent; and those in detergents, 70 percent. Eric Johnston, former president of the American Chamber of Commerce, declared that "we have entered a period of accelerating bigness in all aspects of American life." Expansion into foreign markets also spurred corporate growth. During the 1950s, U.S. exports nearly doubled, giving the nation a trade surplus of close to $5 billion in 1960. By the 1970s, such firms as Coca-Cola, Gillette, IBM, and Mobil made more than half their profits abroad.

To staff their bureaucracies, the postwar corporate giants required a huge white-collar army. A new generation of corporate chieftains emerged, operating in a complex environment that demanded long-range forecasting. Postwar corporate culture inspired numerous critics, who argued that the obedience demanded of white-collar workers was stifling creativity and blighting lives. The sociologist William Whyte painted a somber picture of "organization men" who left the home "spiritually as well as physically to take the vows of organization life." Andrew Hacker, in *The Corporation*

Take-Over (1964), warned that a small handful of such organization men "can draw up an investment program calling for the expenditure of several billions of dollars" and thereby "determine the quality of life for substantial segments of society."

Many of these "investment programs" relied on mechanization, or automation—another important factor in the postwar boom. From 1947 to 1975, worker productivity more than doubled across the whole of the economy. American factories replaced manpower with machines, substituting cheap fossil energy for human muscle. As industries mechanized, they could turn out products more efficiently and at lower cost. Mechanization did not come without social costs, however. Over the course of the postwar decades, millions of high-wage manufacturing jobs were lost as machines replaced workers, affecting entire cities and regions. Corporate leaders approved, but workers and their union representatives were less enthusiastic. "How are you going to sell cars to all of these machines?" wondered Walter Reuther, president of the United Auto Workers (UAW).

The Economic Record The American economy produced an extraordinary postwar record. Annual GDP jumped from $213 billion in 1945 to more than $500 billion in 1960; by 1970, it exceeded $1 trillion (Figure 25.1). This sustained economic growth helped produce a 25 percent rise in real income for ordinary Americans between 1946 and 1959. Even better, the new prosperity featured low inflation. After a burst of high prices in the immediate postwar period, inflation slowed to 2 to 3 percent annually, and it stayed low until the escalation of the Vietnam War in the mid-1960s. Feeling secure about the future, Americans were eager to spend and rightly felt that they were better off than ever before. In 1940, 43 percent of American families owned their homes; by 1960, 62 percent did. In that period, moreover, income inequality dropped sharply. The share of total income going to the top tenth—the richest Americans—declined by nearly one-third from the 45 percent it had been in 1940. American society had become not only more prosperous but also more egalitarian.

However, the picture was not as rosy at the bottom, where tenacious poverty accompanied the economic boom. In ***The Affluent Society*** (1958), which analyzed the nation's successful, "affluent" middle class, economist John Kenneth Galbraith argued that the poor were only an "afterthought" in the minds of economists and politicians, who largely celebrated the new growth. As Galbraith noted, one in thirteen families at the time earned less than $1,000 a year (about $8,300 in today's dollars). Four years later, in ***The Other America*** (1962), the left-wing social critic Michael Harrington chronicled "the economic underworld of American life," and a U.S. government study, echoing a well-known sentence from Franklin Roosevelt's second inaugural address ("I see one-third of a nation ill-housed, ill-clad, ill-nourished"), declared "one-third of the nation" to be poorly paid, poorly educated, and poorly housed. It appeared that in economic terms, as the top and the middle converged, the bottom remained far behind.

AP® EXAM TIP

Summarize the arguments on the left that criticized government for not addressing continuing economic problems in the U.S.

AP® PRACTICES & SKILLS

CAUSATION

What primary factors led to the growth of the American economy after World War II?

A Nation of Consumers

The most breathtaking development in the postwar American economy was the dramatic expansion of the domestic consumer market. The sheer quantity of consumer goods available to the average person was without precedent. In some respects, the postwar decades seemed like the 1920s all over again, with an abundance of new gadgets and appliances, a craze for automobiles, and new types of mass media. Yet there was a significant difference: in the 1950s, consumption became associated with citizenship. Buying things, once a sign of personal indulgence, now meant participating fully in American society and, moreover, fulfilling a social responsibility. What the suburban family consumed, asserted *Life* magazine in a photo essay,

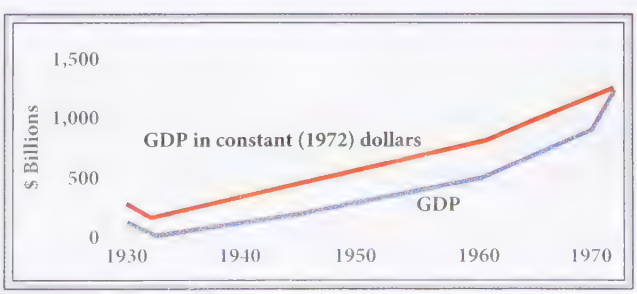


FIGURE 25.1 Gross Domestic Product, 1930–1972
After a sharp dip during the Great Depression, the GDP rose steadily in both real and constant dollars in the postwar period.

would help to ensure "full employment and improved living standards for the rest of the nation."

AP® EXAM TIP

Identify and explain the role of the GI Bill and the baby boom in generating economic growth in the postwar years.

The GI Bill The new ethic of consumption appealed to the postwar middle class, the driving force behind the expanding domestic market. Middle-class status was more accessible than ever before because of the Servicemen's Readjustment Act of 1944, popularly known as the GI Bill. In the immediate postwar years, more than half of all U.S. college students were veterans attending class on the government's dime. By the middle of the 1950s, 2.2 million veterans had attended college and another 5.6 million had attended trade school with government financing. Before the GI Bill, commented one veteran, "I looked upon college education as likely as my owning a Rolls-Royce with a chauffeur."

Government financing of education helped make the U.S. workforce the best educated in the world in the 1950s and 1960s. American colleges, universities, and trade schools grew by leaps and bounds to accommodate the flood of students—and expanded again when the children of those students, the baby boomers, reached college age in the 1960s. At Rutgers University, enrollment went from 7,000 before the war to 16,000 in 1947; at the University of Minnesota, from 15,000 to more than 27,000. The GI Bill trained nearly half a million engineers; 200,000 doctors, dentists, and nurses; and 150,000 scientists (among many other professions). Better education meant higher earning power, and higher earning power translated into the consumer spending that drove the postwar economy. One observer of the GI Bill was so impressed with its achievements that he declared it responsible for "the most important educational and social transformation in American history."

The GI Bill stimulated the economy and expanded the middle class in another way: by increasing home ownership. Between the end of World War II and 1966, one of every five single-family homes built in the United States was financed through a GI Bill mortgage—2.5 million new homes in all. In cities and suburbs across the country, the **Veterans Administration** (VA), which helped former soldiers purchase new homes with no down payment, sparked a building boom that created jobs in the construction industry and fueled consumer spending in home appliances and automobiles. Education and home ownership were more than personal triumphs for the families of World War II veterans (and Korean and Vietnam War veterans, after a new GI Bill was passed in 1952). They were financial *assets* that helped lift more Americans than ever before into a mass-consumption-oriented middle class.

The GI Bill World War II veterans in New York State sign up for a variety of educational courses in 1951 under the GI Bill. From college and university education to vocational and industrial skill training, the federal government paid for hundreds of thousands of military veterans to receive education in the decade after World War II. As one of the largest social programs ever undertaken by the national government, the GI Bill helped forge a new middle class. College and university enrollments surged in these years, and the American workforce was among the best educated in the world. Bettmann/Getty Images

Trade Unions Organized labor also expanded the ranks of the middle class. For the first time ever, trade unions and **collective bargaining** became major factors in the nation's economic life. In the past, organized labor had been confined to a narrow band of craft trades and a few industries, primarily coal mining, railroading, and the building and metal trades. The power balance shifted during the Great Depression, and by the time the dust settled after World War II, labor unions overwhelmingly represented America's industrial workforce (Figure 25.2). By the beginning of the 1950s, the nation's major industries, including auto, steel, clothing, chemicals, and virtually

all consumer product manufacturing, were operating with union contracts.

That outcome did not arrive without a battle. Unions staged major strikes in nearly all American industries in 1945 and 1946, much as they had done after World War I. Head of the UAW Walter Reuther and CIO president Philip Murray declared that employers could afford a 30 percent wage increase, which would fuel postwar consumption. When employers, led by the giant General Motors, balked at that demand, the two sides seemed set for a long struggle. Between 1947 and 1950, however, a broad "labor-management accord" gradually emerged across most industries. This was not industrial peace — the country still experienced many strikes — but a general acceptance of collective bargaining as the method for setting the terms of employment. The result was rising real income. The average worker with three dependents gained 18 percent in spendable real income in the 1950s.

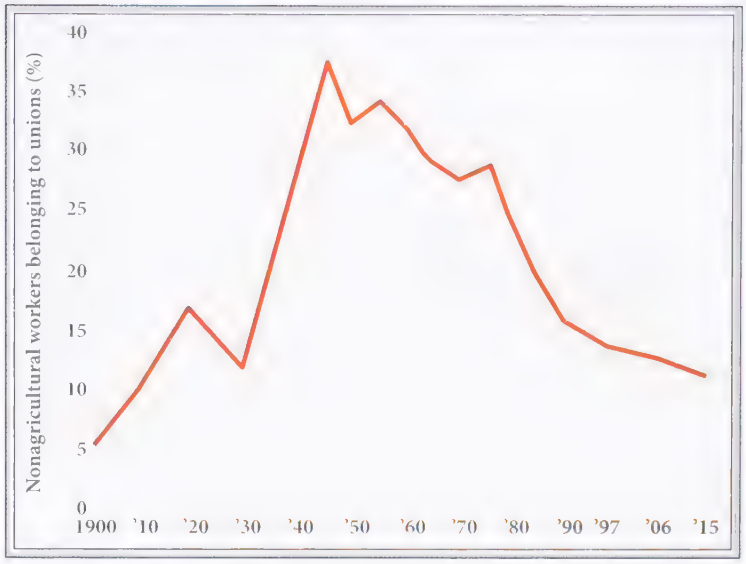

FIGURE 25.2 Labor Union Strength, 1900–2015
Labor unions reached their peak strength immediately after World War II, when they represented close to 40 percent of the nonfarm workforce. Although there was some decline after the mid-1950s, unions still represented nearly 30 percent in 1973. Thereafter, between the 1970s and the 2010s, their decline was precipitous.
AFL-CIO Information Bureau, Washington, D.C.

In addition, unions delivered greater leisure (more paid holidays and longer vacations) and, in a startling departure, a social safety net. In postwar Europe, America's allies were constructing welfare states. But having lost the bruising battle in Washington for national health care during Truman's presidency, American unions turned to the bargaining table. By the end of the 1950s, union contracts commonly provided pension plans and company-paid health insurance. Collective bargaining, the process of trade unions and employers negotiating workplace contracts, had become, in effect, the American alternative to the European welfare state and, as Reuther boasted, the passport into the middle class.

This impressive labor-management accord, however, was never as durable or universal as it seemed. Vulnerabilities lurked. For one thing, the sheltered domestic markets — the essential condition for generous contracts, because without competition firms were not pressured to lower wages — were quite fragile. In certain industries, the lead firms were already losing market share. Second, generally overlooked were the many unorganized workers with no middle-class passport — those **consigned** to unorganized industries, casual labor, or low-wage jobs in the service sector. A final vulnerability was the most basic: the abiding antiunionism of American employers. At heart, business regarded the labor-management accord as a negotiated truce, not a permanent peace. The postwar labor-management accord turned out to be a transitory event, not a permanent condition of American economic life.

Houses, Cars, and Children Increased educational levels, growing home ownership, and higher wages all enabled more Americans than ever before to become members of what one historian has called a "consumer republic." But what did they buy? The postwar emphasis on nuclear families and suburbs provides the answer. In the emerging suburban nation, three elements came together to create patterns of consumption that would endure for decades: houses, cars, and children.

A feature in a 1949 issue of *McCall's*, a magazine targeting middle-class women, illustrates the connections. "I now have three working centers," a typical housewife explains. "The baby center, a baking center and a cleaning center." Accompanying illustrations reveal the interior of the brand-new house, stocked with the latest consumer products: accessories for the baby's room; a new stove, oven, and refrigerator; and a washer and dryer, along with cleaning products and other household goods. The article

does not mention automobiles, but the photo of the house's exterior makes the point clear: father drives home from work in a new car.

Consumption for the home, including automobiles, drove the postwar American economy as much as, or more than, the military-industrial complex did. If we think like advertisers and manufacturers, we can see why. Between 1945 and 1970, more than 25 million new houses were built in the United States. Each required its own supply of new appliances, from refrigerators to lawn mowers. In 1955 alone, Americans purchased 4 million new refrigerators, and between 1940 and 1951 the sale of power mowers increased from 35,000 per year to more than 1 million. Moreover, as American industry discovered planned obsolescence — the encouragement of consumers to replace appliances and cars every few years — the home became a site of perpetual consumer desire.

AP® PRACTICES & SKILLS

CAUSATION

How did the tastes and values of the postwar middle class affect the country?

Children also encouraged consumption. The baby boomers born between World War II and the late 1950s have consistently, throughout every phase of their lives, been the darlings of American advertising and consumption. When they were infants, companies focused on developing new baby products, from disposable diapers to instant formula. When they were toddlers and young children, new television programs, board games, fast food, TV dinners, and thousands of different kinds of toys came to market to supply the rambunctious youth. When they were teenagers, rock music, Hollywood films, and a constantly marketed "teen culture" — with its appropriate clothing, music, hairstyles, and other accessories — bombarded them. Remarkably, in 1956, middle-class American teenagers on average had a weekly income of more than $10, close to the weekly disposable income of an entire family a generation earlier.

Advertising in the TV Age Aggressive advertising of new products such as the color television helped fuel the surge in consumer spending during the 1950s. Marketing experts emphasized television's role in promoting family togetherness, while interior designers offered decorating tips that placed the television at the focal point of living rooms and the increasingly popular "family rooms." In this 1951 magazine advertisement, the family is watching a variety program starring singer Dinah Shore, who was the television spokeswoman for Chevrolet cars. Every American probably could hum the tune of the little song she sang in praise of the Chevy. Picture Research Consultants & Archives

Television The emergence of commercial television in the United States was swift and overwhelming. In the realm of technology, only the automobile and the personal computer were its equal in transforming everyday life in the twentieth century. In 1947, there were 7,000 TV sets in American homes. A year later, the CBS and NBC radio networks began offering regular programming, and by 1950 Americans owned 7.3 million sets. Ten years later, 87 percent of American homes had at least one television set. Having conquered the home, television would soon become the principal mediator between the consumer and the marketplace.

Television advertisers mastered the art of manufacturing consumer desire. TV stations, like radio stations before them, depended entirely on advertising for profits. The first television executives understood that as long as they sold viewers to advertisers they would stay on the air. Early corporate-sponsored shows (such as *General Electric Theater* and *U.S. Steel Hour*) and simple product jingles (such as "No

matter what the time or place, let's keep up with that happy pace. 7-Up your thirst away!") gave way by the early 1960s to slick advertising campaigns that used popular music, movie stars, sports figures, and stimulating graphics to captivate viewers.

By creating powerful visual narratives of comfort and plenty, television revolutionized advertising and changed forever how products were sold to American, and global, consumers. On *Queen for a Day*, a show popular in the mid-1950s, women competed to see who could tell the most heartrending story of tragedy and loss. The winner was lavished with household products: refrigerators, toasters, ovens, and the like. In a groundbreaking advertisement for Anacin aspirin, a tiny hammer pounded inside the skull of a headache sufferer. Almost overnight, sales of Anacin increased by 50 percent.

AP® EXAM TIP

Evaluate the degree to which television represented American culture in the postwar years.

By the late 1950s, what Americans saw on television, both in the omnipresent commercials and in the programming, was an overwhelmingly white, Anglo-Saxon, Protestant world of nuclear families, suburban homes, and middle-class life. A typical show was *Father Knows Best*, starring Robert Young and Jane Wyatt. Father left home each morning wearing a suit and carrying a briefcase. Mother was a stereotypical full-time housewife, prone to bad driving and tears. *Leave It to Beaver*, another immensely popular series about suburban family life, embodied similar late-fifties themes. Earlier in the decade, however, television featured grittier realities. *The Honeymooners*, starring Jackie Gleason as a Brooklyn bus driver, and *The Life of Riley*, a situation comedy featuring a California aircraft worker, treated working-class lives. Two other early-fifties television series, *Beulah*, starring Ethel Waters and then Louise Beavers as an African American maid, and the comedic *Amos 'n' Andy*, were the only shows featuring black actors in major roles. Television was never a showcase for the breadth of American society, but in the second half of the 1950s broadcasting lost much of its ethnic, racial, and class diversity and became a vehicle for the transmission of a narrow range of middle-class tastes and values.

Youth Culture

One of the most striking developments in American life in the postwar decades was the emergence of the **teenager** as a cultural phenomenon. In 1956, only partly in jest, the CBS radio commentator Eric Sevareid questioned "whether the teenagers will take over the United States lock, stock, living room, and garage." Sevareid was grumbling about American youth culture, a phenomenon first noticed in the 1920s and with its roots in the lengthening years of education, the role of peer groups, and the consumer tastes of young people. Market research revealed a distinct teen market to be exploited. *Newsweek* noted with awe in 1951 that the aggregate of the weekly spending money of teenagers was enough to buy 190 million candy bars, 130 million soft drinks, and 230 million sticks of gum. Increasingly, advertisers targeted the young, both to capture their spending money and to exploit their influence on family purchases.

Hollywood movies played a large role in fostering a teenage culture. Young people made up the largest

Teenagers These teenage girls and boys are being restrained by police outside an Elvis Presley concert in Florida in 1956. Elvis, who was instrumental in popularizing rock 'n' roll music among white middle-class teenagers in the mid-1950s, was one example of a broader phenomenon: the creation of the "teenager" as a distinct demographic, cultural category and, perhaps most significantly, consumer group. Beginning in the 1950s, middle-class teenagers had money to spend, and advertisers and other entrepreneurs — such as the music executives who marketed Elvis or the Hollywood executives who invented the "teen film" — sought ways to win their allegiance and their dollars. Charles Trainor/The LIFE Images Collection/Getty Image

audience for motion pictures, and Hollywood studios learned over the course of the 1950s to cater to them. The success of films such as *The Wild One* (1953), starring Marlon Brando; *Blackboard Jungle* (1955), with Sidney Poitier; and *Rebel Without a Cause* (1955), starring James Dean, convinced movie executives that films directed at teenagers were worthy investments. "What are you rebelling against?" Brando is asked in *The Wild One*. "Whattaya got?" he replies. By the early 1960s, Hollywood had retooled its business model, shifting emphasis away from adults and families, the industry's primary audience since its rise in the 1920s, to teenagers. The "teenpic" soon included multiple genres: horror, rock 'n' roll, dangerous youth, and beach party, among others.

AP® EXAM TIP

Recognize the ways that artists, intellectuals, and teenagers rejected conformity in American culture.

Rock 'n' Roll What really defined the youth culture, however, was its music. Rejecting the romantic ballads of the 1940s, teenagers discovered rock 'n' roll, which originated in African American rhythm and blues. The Cleveland disc jockey Alan Freed took the lead in introducing white America to the black-created sound by playing what were called "race" records. "If I could find a white man who had the Negro sound and the Negro feel, I could make a billion dollars," a record company owner is quoted as saying. The performer who fit that bill was Elvis Presley, who rocketed into instant celebrity in 1956 with his hit records "Hound Dog" and "Heartbreak Hotel," covers of songs originally recorded by black artists such as Big Mama Thornton. Between 1953 and 1959, record sales increased from $213 million to $603 million, with rock 'n' roll as the driving force.

Many unhappy adults saw in rock 'n' roll music an invitation to interracial dating, rebellion, and a more flagrant sexuality. The media featured hundreds of stories on problem teens, and denunciations of the new music poured forth from many corners. Such condemnation only deflected off the new youth culture or, if anything, increased its popularity. Both Hollywood and the music industry had learned that youth rebellion sold tickets (AP® Interpreting the Past).

Motown Mary Wilson, Diana Ross, and Florence Ballard (from left to right) were the founding members of the Motown singing group the Supremes (shown here in concert in 1964), which produced twelve number-one singles. Motown, a record label owned by African American entrepreneur Berry Gordy, specialized in so-called crossover acts: black singers who sold records to white audiences. In the era of Jim Crow, Motown represented a small but noteworthy step toward a less racially segregated American culture. [illegible]

Cultural Dissenters Youth rebellion was only one aspect of a broader discontent with the sometimes **saccharine** consumer culture of the postwar years. Many artists, writers, and jazz musicians embarked on powerful new experimental projects in a remarkable flowering of intensely personal, introspective art forms. During and just after World War II, black musicians developed a hard-driving improvisational style known as bebop. Whether the "hot" bebop of saxophonist Charlie Parker or the more subdued "cool" sound of the influential trumpeter Miles Davis, postwar jazz was cerebral, intimate, and individualistic. As such, it stood in stark contrast to the commercialized, dance-oriented "swing" bands of the 1930s and 1940s.

Black jazz musicians found eager fans not only in the African American community but also among young white **Beats**, a group of writers and poets centered in New York and San Francisco who disdained middle-class materialism. In his poem "Howl" (1956), which became a manifesto of the Beat generation, Allen Ginsberg lamented: "I saw the best minds of my generation destroyed

AP INTERPRETING THE PAST

Was Rock 'n' Roll an Agent of Social Change?

Many parents of midcentury teens objected to the subversive qualities of rock 'n' roll music: its rebellious lyrics, its overt sexuality, and its origins in an African American rhythm and blues tradition—the latter a concern largely of white parents. Many believed that rock 'n' roll undermined authority and even stoked civil rights agitation. But did this new form of music have the social and political impact parents feared?

In the excerpts included here, two historians address the contradictory impact of rock 'n' roll, particularly as a factor in shaping civil rights. In the first excerpt, historian Suzanne E. Smith discusses the history of Motown, a Detroit-based African American record label that produced a series of hits by black artists, many of whom reached a national white listening audience. In the second excerpt, historian Matthew Delmont assesses the popularity of *American Bandstand*, a nationally broadcast television show originating in Philadelphia that featured mostly white teens dancing to popular rock songs. From the perspective of these historians, did rock 'n' roll have the socially destabilizing impact parents feared?

SUZANNE E. SMITH

SOURCE: Suzanne E. Smith, *Dancing in the Street: Motown and the Cultural Politics of Detroit* (Cambridge: Harvard University Press, 1999), 17–18.

Motown's commercial success put the record company in a unique position to promote a wide range of black cultural expression . . . [but its] . . . role as a producer of black culture and its ambitions in the business world did not coexist without conflict and contradiction. . . . [Its] commercial concerns about the marketability of a recording often stalled and sometimes canceled projects that management deemed too politically controversial. . . . [T]he company wavered between willingness and caution when asked to produce recordings . . . that involved overt political or racial messages. . . . [However] popular music audiences, local activists, and national civil rights leaders . . . had their own ideas and disagreements about the meanings of Motown's music and commercial success. . . . Motown could not avoid becoming a contested symbol of racial progress. Motown's music symbolized the possibility of amicable racial integration through popular culture.

MATTHEW F. DELMONT

SOURCE: Matthew F. Delmont, *The Nicest Kids in Town: American Bandstand, Rock 'n' Roll, and the Struggle for Civil Rights in 1950s Philadelphia* (Berkeley: University of California Press, 2012), 5–6.

American Bandstand encouraged the show's viewers, advertisers, and television affiliates to see it as the thread that stitched together different teenagers in different parts of the country into a coherent and recognizable national youth culture. . . . *American Bandstand* invited viewers to consume the sponsors' snacks and soft drinks along with the latest music and dances. . . . The central problem facing *American Bandstand*'s producers was that their show's marketability depended on both the creative energies of black performers and the erasure of black teenagers. . . . [T]he image of youth culture *American Bandstand* presented to its national audience bore little resemblance to the interracial makeup of Philadelphia's rock and roll scene. As the television program that did the most to define the image of youth in the late 1950s and early 1960s, the exclusionary racial practices of *American Bandstand* marginalized black teens from this imagined national youth culture.

AP SHORT ANSWER PRACTICE

1. To what extent do these historians agree on the impact of rock 'n' roll on America's race relations? What specific passages provide evidence for your answer?
2. According to each historian, how important a factor was the commercial side of rock 'n' roll in promoting or limiting its impact as an agent of social change?
3. Identify two examples from Chapter 25's discussion of midcentury middle-class youth culture that support or challenge the argument for rock 'n' roll as a factor in the American civil rights movement.

by madness, starving hysterical naked, dragging themselves through the negro streets at dawn looking for an angry fix." In works such as Jack Kerouac's novel *On the Road* (1957), the Beats glorified spontaneity, sexual adventurism, drug use, and spirituality. The Beats were apolitical, but their cultural rebellion would, in the 1960s, inspire a new generation of young rebels disenchanted with both the political and cultural status quo.

AP PRACTICES & SKILLS

POINT OF VIEW

How did rebellion become an integral part of consumer culture in the postwar period?

Billy Graham Charismatic and inspiring, Billy Graham wore down shoe leather to bring Christian conversion to hundreds of thousands of Americans in the 1940s and 1950s, preaching to large crowds such as this one in Columbia, South Carolina. He also migrated onto the radio and television airwaves, using technology to reach even wider audiences. Graham used the Cold War to sharpen his message, telling Americans that "godless communism" was an inferior system, but that democracy in America required belief in God and a constant struggle against "sin." John Dominis/The LIFE Images Collection/Getty Image

Religion and the Middle Class

In an age of anxiety about nuclear annihilation and the spread of "godless communism," Americans yearned for a reaffirmation of faith. Church membership jumped from 49 percent of the population in 1940 to 70 percent in 1960. People flocked to the evangelical Protestant denominations, beneficiaries of a remarkable new crop of preachers. Most eloquent was the young Reverend Billy Graham, who made brilliant use of television, radio, and advertising. Hundreds of thousands of Americans attended his massive 1949 revival in Los Angeles and his 1957 crusade at Madison Square Garden in New York, establishing Graham as the nation's leading evangelical.

Rather than clashing with the new middle-class ethic of consumption, the religious reawakening was designed to mesh with it. Preachers such as Graham told Americans that so long as they lived moral lives, they deserved the material blessings of modern life. No one was more influential in this regard than the minister and author Norman Vincent Peale, whose best-selling book *The Power of Positive Thinking* (1952) embodied the therapeutic use of religion as an antidote to life's trials and tribulations. Peale taught that with faith in God and "positive thinking," anyone could overcome obstacles and become a success. Graham, Peale, and other 1950s evangelicals laid the foundation for the rise of the televangelists, who created popular television ministries in the 1970s.

The postwar purveyors of religious faith cast Americans as a righteous people opposed to communist atheism. When Julius and Ethel Rosenberg were sentenced to death in 1953, the judge criticized them for "devoting themselves to the Russian ideology of denial of God." Cold War imperatives drew Catholics, Protestants, and Jews into an influential **ecumenical** movement that downplayed doctrinal differences. The phrase "under God" was inserted into the Pledge of Allegiance in 1954, and U.S. coins carried the words "In God We Trust" after 1956. These religious initiatives struck a distinctly moderate tone, however, in comparison with the politicized evangelism that emerged in the 1960s and 1970s (Chapter 28).

IN YOUR OWN WORDS What explains the growth of the American economy after World War II?

The American Family in the Era of Containment

Marriage, family structure, and gender roles had been undergoing significant changes since the turn of the twentieth century (Chapter 17). Beginning in the nineteenth century, middle-class Americans increasingly saw marriage as "companionate," that is, based on romantic love and a lifetime of shared friendship. *Companionate* did not mean *equal*. In the mid-twentieth century, family life remained governed by notions of gender inequality, in which men provided economic support and controlled the family's financial resources, while women cared for children and occupied a secondary position in public life.

The resurgent postwar American middle class was preoccupied with the virtues of this paternalist, or patriarchal, vision of family life. Everyone from professional psychologists to television advertisers and every organization from schools to the popular

press celebrated nuclear families. Children were prized, and women's caregiving roles were valorized. This view of family life, and especially its emphasis on female "domesticity," was bolstered by Cold War politics. Americans who deviated from prevailing gender and familial norms were not only viewed with scorn but were also sometimes thought to be subversive and politically dangerous.

Yet the model of domesticity so highly esteemed in the postwar middle class hid deeper, longer-term changes in the way marriage, gender roles, women's work, and even sex were understood. To comprehend the postwar decades, we have to keep in mind that while domesticity remained the ideal, in people's daily lives a sometimes different reality held true.

The Baby Boom

A popular 1945 song was called "Gotta Make Up for Lost Time," and Americans did just that. Two things were noteworthy about the families they formed after World War II: First, marriages were remarkably stable. Not until the mid-1960s did the divorce rate begin to rise sharply. Second, married couples were intent on having babies. Everyone expected to have several children — it was part of adulthood, almost a citizen's responsibility. After a century and a half of decline, the birthrate shot up. More babies were born in the six years between 1948 and 1953 than in the previous thirty years (Figure 25.3). Far from "normal," all these developments were **anomalies**, temporary reversals of long-standing demographic trends. From the perspective of the whole of the twentieth century, the 1950s and early 1960s stand out as exceptions to declining birthrates, rising divorce rates, and the steadily rising marriage age.

One of the reasons for the **baby boom** was a drop in the average marriage age — down to twenty-two for men and twenty for women. Younger parents meant a bumper crop of children. Women who came of age in the 1930s averaged 2.4 children; their counterparts in the 1950s averaged 3.2 children. Such a dramatic turnaround reflected couples' decisions during the Great Depression to limit childbearing and couples' contrasting decisions in the postwar years to have more children. The baby boom peaked in 1957 and remained at a high level until the early 1960s. The passage of time revealed the ever-widening impact of the baby boom. When baby boomers competed for jobs during the 1970s, the labor market became tight. When career-oriented baby boomers belatedly began having children in the 1980s, the birthrate jumped. And in our own time, as baby boomers begin retiring, huge funding problems threaten to engulf Social Security and Medicare. The intimate decisions of so many couples after World War II continued to shape American life well into the twenty-first century.

Baby boom children benefitted from a host of important advances in public health and medical practice in the postwar years. Formerly serious illnesses became merely routine after the introduction of such "miracle drugs" as penicillin (introduced in 1943), streptomycin (1945), and cortisone (1946). When Dr. Jonas Salk perfected a polio vaccine in 1954, he became a national hero. The free distribution of Salk's vaccine in the nation's schools, followed in 1961 by Dr. Albert Sabin's oral polio vaccine, demonstrated the potential of government-sponsored public health programs.

Dr. Benjamin Spock To keep baby boom children healthy and happy, middle-class parents increasingly relied on the advice of experts. Dr. Benjamin Spock's *Common Sense Book of Baby and Child Care* sold 1 million copies every year after its publication in 1946. Spock urged mothers to abandon the rigid feeding and baby-care schedules of an earlier generation.

FIGURE 25.3 The American Birthrate, 1860–1980
When birthrates are viewed over more than a century, the postwar baby boom is clearly only a temporary reversal of the long-term downward trend in the American birthrate.

New mothers found Spock's commonsense approach liberating. "Your little paperback is still in my cupboard, with loose pages, rather worn from use because I brought up two babies using it as my 'Bible,' " a California housewife wrote to Spock.

Despite his commonsense approach to child rearing, Spock was part of a generation of psychological experts whose advice often failed to reassure women. If mothers were too protective, Spock and others argued, they might hamper their children's preparation for adult life. On the other hand, mothers who wanted to work outside the home felt guilty because Spock recommended that they be constantly available for their children. As American mothers aimed for the perfection demanded of them seemingly at every turn, many began to question these mixed messages. Some of them would be inspired by the resurgence of feminism in the 1960s.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

Why was there an increase in births in the decades after World War II, and what were some of the effects of this baby boom?

AP® EXAM TIP

Compare expectations of women in the postwar years to the Cult of Domesticity popularized in the nineteenth century.

Women, Work, and Family

Two powerful forces shaped women's relationships to work and family life in the postwar decades. One was the middle-class domestic ideal, in which women were expected to raise children, attend to other duties in the home, and devote themselves to their husbands' happiness. So powerful was this ideal that in 1957 the *Ladies' Home Journal* entitled an article, "Is College Education Wasted on Women?" The second force was the job market. Most working-class women had to earn a paycheck to help their family. And despite their education, middle-class women found that jobs in the professions and business were dominated by men and often closed to them. For both groups, the market offered mostly "women's jobs"—in teaching, nursing, and other areas of the growing service sector—and little room for advancement (AP® Analyzing Voices).

Women at Work Middle-class women's lives grew increasingly complicated in the postwar decades. They may have dreamed of a suburban home with a brand-new kitchen, but laboring all day over children, dirty dishes, and a hot stove proved dissatisfying to many. Betty Friedan called the confinement of women's identities to motherhood the "feminine mystique," but did the working woman have it much better? Hardly. Most women in the 1950s and 1960s were confined to low-level secretarial work (as pictured), waitressing, and other service-sector work—or, worse, factory or domestic labor. By the end of the 1960s, women had begun to crack the "glass ceiling" and enter the professions in larger numbers. But regardless of their occupation, the majority of working women performed the "double day": a full day at work and a full day at home. Such were the expectations and double bind women faced. Inge Morath • The Inge Morath Foundation/Magnum Photos

The idea that a woman's place was in the home was, of course, not new. The postwar obsession with femininity and motherhood bore a remarkable similarity to the nineteenth century's notion of domesticity. The updated version drew on new elements of twentieth-century science and culture. Psychologists equated motherhood with "normal" female identity and suggested that career-minded mothers needed therapy. "A mother who runs out on her children to work—except in cases of absolute necessity—betrays a deep dissatisfaction with motherhood or with her marriage," wrote one leading psychiatrist. Television shows and movies depicted career women as social misfits. The postwar consumer culture also emphasized women's domestic role as purchasing agents for home and family. "Can a woman ever feel right cooking on a dirty range?" asked one advertisement.

Despite the postwar domestic ideal, financial necessity increasingly took women outside their homes and into the workforce. In 1954, married women made up half of all women workers. Six years later, the 1960 census reported a stunning fact: the number of mothers who worked had increased four times, and over one-third of these women had children between the ages of six and seventeen. In that same year, 30 percent of wives worked, and by 1970, it was 40 percent. For working-class women, in particular, the economic needs of their families demanded that they work outside the home. Contrary to stereotypes, women's paid work often helped lift many families into the middle class.

Despite rising employment rates, occupational segmentation still haunted women. Until 1964, the classified sections of newspapers separated employment ads into "Help Wanted Male" and "Help Wanted Female." More than 80 percent of all employed women did stereotypical women's work as sales clerks, health-care technicians, waitresses, stewardesses, domestic servants, receptionists, telephone operators, and secretaries. In 1960, only 3 percent of lawyers and 6 percent of physicians were women; on the flip side, 97 percent of nurses and 85 percent of librarians were women. Along with women's jobs went women's pay, which averaged 60 percent of men's pay in 1963.

American society steadfastly upheld the domestic ideal even as so many women entered the workforce. When mothers took jobs outside the home, they still bore full responsibility for child care and household management, contributing to the "double day" of paid work and family work. As one overburdened woman noted, she now had "two full-time jobs instead of just one—underpaid clerical worker and unpaid housekeeper." Meanwhile, the pressures of the Cold War made strong nuclear families with breadwinning fathers and domesticated mothers symbols of a healthy nation. Americans wanted to believe they upheld the domestic ideal even if it did not perfectly describe the reality of their lives.

Middle Class Domesticity The nuclear family, meaning a married couple plus children, stood at the heart of middle-class American culture in the postwar years. The "domestic ideal" held that men worked for wages and women labored in the home. A new generation of Americans, including many African Americans, aspired to this cultural ideal, which came within reach for many for the first time. Here a couple and their children look over blueprints of their new home in the early 1960s. Classic Stock.com/Superstock

AP® PRACTICES & SKILLS

CHANGE OVER TIME

What transformations in women's economic role took place in the 1950s and 1960s?

Challenging Middle-Class Morality

In many ways, the two decades between 1945 and 1965 were a period of cultural conservatism that reflected the values of domesticity. At the dawn of the 1960s, going steady as a prelude to marriage was the fad in high school. College women had curfews and needed permission to see a male visitor. Americans married young; more than half of those who married in 1963 were under the age of twenty-one. After the birth control pill came on the market in 1960, few doctors prescribed it to unmarried women, and even married women did not enjoy unfettered access to contraception until the Supreme Court ruled it a "privacy" right in the 1965 decision *Griswold v. Connecticut*.

Alfred Kinsey Beneath the surface of middle-class morality, Americans were less repressed than confused. They struggled to reconcile new freedoms with older moral traditions. This was especially true with regard to sex. Two controversial studies by an unassuming Indiana University zoologist named Alfred Kinsey forced

The Kinsey Reports Like the woman on the cover of this lighthearted 1953 book of photographs, many Americans reacted with surprise when Alfred Kinsey revealed the country's sexual habits. In his 1948 book about men and his 1953 book about women, Kinsey wrote about American sexual practices in the detached language of science. But it still made for salacious reading. Evangelical minister Billy Graham (p. 792) warned: "It is impossible to estimate the damage this book will do to the already deteriorated morals of America." Picture Research Consultants & Archive

Coming of Age in the Postwar Years

At the dawn of the postwar era, Americans faced new opportunities and new anxieties. Many former soldiers attended college and purchased new homes on the GI Bill, which forever changed their lives. Women faced new pressures to realize the ideal role of housewife and mother. On the horizon, both in reality and in the American imagination, lurked communism, which Americans feared but little understood. And racial segregation continued to shape the ordinary lives of Americans. Recorded here are several different reactions to these postwar tensions, distinct experiences of coming of age in the 1940s and 1950s.

ART BUCHWALD

Studying on the GI Bill

Art Buchwald was one of the best-known humorists in American journalism. But in 1946, he was an ordinary ex-serviceman using the GI Bill to go to college.

SOURCE: From *Leaving Home: A Memoir*, by Art Buchwald (New York: G. P. Putnam's Sons, 1993). Used by permission of Joel Buchwald.

"It was time to face up to whether I was serious about attending school. My decision was to go down to the University of Southern California and find out what I should study at night to get into the place. There were at least 4,000 ex-GIs waiting to register. I stood in line with them. Hours later, I arrived at the counter and said, 'I would like to . . .' The clerk said, 'Fill this out.'

Having been accepted as a full-time student under the G.I. Bill, I was entitled to seventy-five dollars a month plus tuition, books, and supplies. Meanwhile, I found a boardinghouse a few blocks from campus, run by a cheery woman who was like a mother to her thirteen boarders. . . . At the time, just after the Second World War had ended, an undeclared class war was going on at USC. The G.I.s returning home had little use for the fraternity men, since most of the frat boys were not only much younger, but considered very immature.

The G.I.s were intent on getting their educations and starting new lives."

BETTY FRIEDAN

Living the Feminine Mystique

Like Buchwald, Betty Friedan would one day become famous as a writer—author of one of the most widely read books of the 1960s, *The Feminine Mystique*. In the late 1940s, Friedan was not yet a feminist, but she was deeply engaged in the politics of the era.

SOURCE: From *"It Changed My Life": Writings on the Women's Movement*, by Betty Friedan (Cambridge, MA: Harvard University Press, 1976). Copyright © 1963 by Betty Friedan. Reprinted by permission of Curtis Brown, Ltd.

"And then the boys our age had come back from the war. I was bumped from my job on a small labor news service by a returning veteran, and it wasn't so easy to find another job I really liked. I filled out the applications for *Time-Life* researcher, which I'd always scorned before. All the girls I knew had jobs like that, but it was official policy that no matter how good, researchers, who were women, could never become writers or editors. They could write the whole article, but the men they were working with would always get the by-line as writer. I was certainly not a feminist then—none of us were a bit interested in women's rights. But I could never bring myself to take that kind of job.

After the war, I had been very political, very involved, consciously radical. Not about women, for heaven's sake! If you were a radical in 1949, you were concerned about the Negroes, and the working class, and World War III, and the Un-American Activities Committee and McCarthy and loyalty oaths, and Communist splits and schisms, Russia, China and the UN, but you certainly didn't think about being a woman, politically."

SUSAN ALLEN TOTH

Learning About Communism

Toth is a writer who grew up in Ames, Iowa, surrounded by cornfields. She writes here about her experience learning just how anxious people could become in the 1950s when the issue of communism was raised.

SOURCE: From Susan Allen Toth, "Boyfriend" from *Blooming: A Small-Town Girlhood*. Reprinted by permission of Molly Friedrich on behalf of the author.

"Of course, we all knew there was Communism. As early as sixth grade our teacher warned us about its dangers. I listened

questions about sexuality into the open. Kinsey and his research team published *Sexual Behavior in the Human Male* in 1948 and followed it up in 1953 with *Sexual Behavior in the Human Female*—an 842-page book that sold 270,000 copies in the first month after its publication. Taking a scientific, rather than moralistic, approach, Kinsey, who became known as "the sex doctor," documented the full range of sexual experiences of thousands of Americans. He broke numerous taboos, discussing such topics as homosexuality and marital infidelity in the detached language of science.

carefully to Mr. Casper describe what Communists wanted, which sounded terrible. World domination. Enslavement. Destruction of our way of life. I hung around school one afternoon hoping to catch Mr. Casper, whom I secretly adored, to ask him why Communism was so bad. He stayed in another teacher's room so late I finally scrawled my question on our blackboard: 'Dear Mr. Casper, why is Communism so bad . . . Sue Allen' and went home. Next morning the message was still there. Like a warning from heaven it had galvanized Mr. Casper. He began class with a stern lecture, repeating everything he had said about dangerous Russians and painting a vivid picture of how we would all suffer if the Russians took over the city government in Ames. We certainly wouldn't be able to attend a school like this, he said, where free expression of opinion was allowed. At recess that day one of the boys asked me if I was a 'dirty Commie': two of my best friends shied away from me on the playground; I saw Mr. Casper talking low to another teacher and pointing at me. I cried all the way home from school and resolved never to commit myself publicly with a question like that again. ”

MELBA PATILLO BEALS

Encountering Segregation

Melba Patillo Beals was one of the "Little Rock Nine," the high school students who desegregated Central High School in Little Rock, Arkansas, in 1957. Here she recounts an experience documenting what it was like to come of age as a black southerner under Jim Crow.

Source: Reprinted with permission of Atria Publishing Group, a Division of Simon & Schuster, Inc. *Warriors Don't Cry: A Searing Memoir of the Battle to Integrate Little Rock* by Melba Patillo Beals. Copyright © 1994, 1995 by Melba Beals. All rights reserved.

“ An experience I endured on a December morning would forever affect any decision I made to go 'potty' in a public place. We were Christmas shopping when I felt the twinge of emergency. I convinced Mother and Grandmother that I knew the way to restroom by myself. I was moving as fast as I could when suddenly I knew I wasn't going to make it all the way down those stairs and across the warehouse walkway to the 'Colored Ladies' toilet. So I pushed open the door marked 'White Ladies' and, taking a deep breath, I crossed the threshold. It was just as bright and pretty as I had imagined it to be. . . . Across the room, other white ladies sat on a couch reading the newspaper. Suddenly realizing I was there, two of them looked at me in astonishment. Unless I was the maid, they said, I was in the wrong place. While they shouted at me to 'get out,' my throbbing bladder consumed my attention as I frantically headed for the unoccupied stall. They kept shouting 'Good lord, do something.' I was doing something by that time, seated comfortably on the toilet, listening to the hysteria building outside my locked stall. One woman even knelt down to peep beneath the door to make certain that I didn't put my bottom on the toilet seat. She ordered me not to pee. ”

DAVID BEERS

California Suburbia

David Beers grew up in the suburbs of California, in what would eventually become known as Silicon Valley. In his memoir, he recalls the ritual of buying a house.

Source: David Beers, *Blue Sky Dream: A Memoir of America's Fall from Grace* (New York: Harcourt, Brace, & Company, 1996), 31, 39.

“ 'We never looked at a used house,' my father remembers of those days in the early 1960s when he and my mother went shopping for a home of their own in the Valley of Heart's Delight. 'A used house did not interest us.' Instead, they roved in search of balloons and bunting and the many billboards advertising *Low Interest! No Money Down!* to military veterans like my father. They would follow the signs to the model homes standing in empty fields and tour the empty floor plans and leave with notes carefully made about square footage and closet space. 'We shopped for a new house,' my father says, 'the way you shopped for a car.' . . . We were blithe conquerors, my tribe. When we chose a new homeland, invaded a place, settled it, and made it over in our image, we did so with a smiling sense of our own inevitability. . . . We were drawn to the promise of a blank page inviting *our* design upon it. ”

QUESTIONS FOR ANALYSIS

1. What do you think Buchwald meant by "an undeclared class war"? Why would the influx of GI Bill veterans into colleges create conflict?
2. Why do you think Friedan "didn't think about being a woman, politically" in the 1940s and 1950s? Why do you think she was "bumped from" her job by a "returning veteran"?
3. What does Toth's experience as a young student suggest about American anxieties during the Cold War? Why would her question cause embarrassment and ridicule?
4. What does Beals's experience suggest about the indignities faced by young people on the front lines of challenging racial segregation? Does it help explain why youth were so important in breaking racial barriers?
5. What do you think Beers means by "our tribe"? What was the "blank page"?

Both studies confirmed that a sexual revolution, although a largely hidden one, had already begun to transform American society by the early 1950s. Kinsey estimated that 85 percent of men had had sex prior to marriage and that more than 25 percent of married women had had sex outside of marriage by the age of forty. These were shocking public admissions in the late 1940s and early 1950s, and "hotter than the Kinsey report" became a national figure of speech. Kinsey was criticized by statisticians — because his samples were not randomly selected — and condemned even more fervently by

religious leaders, who charged him with encouraging promiscuity and adultery. But his research opened a national conversation that helped Americans learn to talk more openly about sex.

The Homophile Movement Among the most controversial of Kinsey's claims was that homosexuality was far more prevalent than most Americans believed. Although the American Psychiatric Association officially defined homosexuality as a mental illness, Kinsey's research found that 37 percent of men had engaged in some form of homosexual activity by early adulthood, as had 13 percent of women. Even more important, Kinsey claimed that 10 percent of American men were *exclusively* homosexual. These claims came as little surprise, but great encouragement, to a group of gay and lesbian activists who called themselves "homophiles." Organized primarily in the Mattachine Society (the first gay rights organization in the country, founded in 1951) and the Daughters of Bilitis (a lesbian organization founded in 1955), homophiles were a small but determined collection of activists who sought equal rights for gays and lesbians. "The lesbian is a woman endowed with all the attributes of any other woman," wrote the pioneer lesbian activist Del Martin in 1956. "The salvation of the lesbian lies in her acceptance of herself without guilt or anxiety."

Building on the urban gay and lesbian communities that had coalesced during World War II, homophiles sought to change American attitudes about same-sex love. They faced daunting obstacles, since same-sex sexual relations were illegal in every state and scorned, or feared, by most Americans. To combat prejudice and change the laws, homophile organizations cultivated a respectable, middle-class image. Members were encouraged to avoid bars and nightclubs, to dress in conservative shirts and ties (for men) and modest skirts and blouses (for women), and to seek out professional psychologists who would attest to their "normalcy." Only in the 1960s did homophiles begin to talk about the "homophile vote" and their "rights as citizens," laying the groundwork for the gay rights movement of the 1970s.

Media and Morality The homophile movement remained unknown to most Americans. But other challenges to traditional morality received national media attention, and the media themselves became a controversial source of these challenges. Concerned that excessive crime, violence, and sex in comic books were encouraging juvenile delinquency, the U.S. Senate held nationally televised hearings in 1954. The Senate's final report, written largely by the Tennessee Democrat Estes Kefauver, complained of the "scantily clad women" and "penchant for violent death" common in comic books aimed at teenagers. Kefauver's report forced the comics industry to tame its wildest practices but did little to slow the growing frankness about both sex and violence in the nation's print media and films.

To see an excerpt from the Senate's report on comic books and juvenile delinquency, along with other primary sources from this period, see ***Sources for America's History***.

A magazine entrepreneur from Chicago named Hugh Hefner played a leading role in that growing frankness. Hefner founded *Playboy* magazine in 1953, in which he created a countermorality to domesticity: a fictional world populated by "hip" bachelor men and sexually available women. Hefner's imagined bachelors condemned marriage and lived in sophisticated apartments filled with the latest stereo equipment and other consumer products. While domesticated fathers bought lawn mowers and patio furniture, Hefner's magazine encouraged men to spend money on clothing and jazz albums for themselves, and for the "scantily clad women" that filled its pages. Hefner and his numerous imitators became powerful purveyors of sex in the media. But Hefner was the exception that proved the rule: marriage, not swinging bachelorhood, remained the destination for the vast majority of men. Millions of men read *Playboy*, but few adopted its fantasy lifestyle.

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

What were the contradictions in postwar domesticity and middle-class morality?

IN YOUR OWN WORDS **What was the domestic ideal, and how did Americans embrace it in the postwar decades?**

A Suburban Nation

Prosperity — how much an economy produces, how much people earn — is more easily measured than is quality of life. During the 1950s, however, the American definition of the good life emerged with exceptional distinctness: a high value on consumption, a devotion to family and domesticity, and a preference for suburban living. In this section, we consider the third dimension of that definition: suburbanization. What drove the nation to abandon its cities for the suburbs, and what social and political consequences did this shift have?

The Postwar Housing Boom

Migration to the suburbs had been going on for a hundred years, but never before on the scale that the country experienced after World War II. Within a decade, farmland on the outskirts of cities filled up with tract housing and shopping malls. Entire counties that had once been rural — such as San Mateo, south of San Francisco, or Passaic and Bergen in New Jersey, west of Manhattan — went suburban. By 1960, one-third of Americans lived in suburbs. Home construction, having ground to a halt during the Great Depression, surged after the war. One-fourth of the country's entire housing stock in 1960 had not even existed a decade earlier.

AP® EXAM TIP

The causes and effects of the migration of the middle class to the suburbs is a "must know" for the AP® exam.

William J. Levitt and the FHA Two unique postwar developments remade the national housing market and gave it a distinctly suburban shape. First, an innovative Long Island building contractor, William J. Levitt, revolutionized suburban housing by applying mass-production techniques and turning out new homes at a dizzying speed. Levitt's basic four-room house, complete with kitchen appliances, was priced at $7,990 when homes in the first Levittown went on sale in 1947 (about $86,000 today). Levitt did not need to advertise; word of mouth brought buyers flocking to his developments (all called Levittown) in New York, Pennsylvania, and New Jersey. Dozens of other developers were soon snapping up cheap farmland and building subdivisions around the country.

Even at $7,990, Levitt's homes would have been beyond the means of most young families had the traditional home-financing standard — a down payment of half the full price and ten years to pay off the balance — still prevailed. That is where the second postwar development came in. The Federal Housing Administration (FHA) and the Veterans Administration (VA) — that is, the federal government — brought the home mortgage market within the reach of a broader range of Americans than ever before. After the war, the FHA insured thirty-year mortgages with as little as 5 percent down and interest at 2 or 3 percent. The VA was even more generous, requiring only a token $1 down for qualified ex-GIs. FHA and VA mortgages best explain why, after hovering around 45 percent for the previous half century, home ownership jumped to 60 percent by 1960.

What purchasers of suburban houses got, in addition to a good deal, were homogeneous communities. Levitt's houses came with restrictive covenants prohibiting occupancy "by members of other than the Caucasian Race." (Restrictive covenants often applied to Jews and, in California, Asian Americans as well.) Levittowns were hardly alone. Suburban developments from coast to coast exhibited the same age, class, and racial homogeneity (AP® Thinking Like a Historian). In ***Shelley v. Kraemer*** (1948), the Supreme Court outlawed restrictive covenants, but racial discrimination in housing changed little. The practice persisted long after *Shelley*, because the FHA and VA continued the policy of redlining: refusing mortgages to African Americans and members of other minority groups seeking to buy in white neighborhoods. Indeed, no federal law — or even Court decisions like *Shelley* — actually prohibited racial discrimination in housing until Congress passed the Fair Housing Act in 1968.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

Place postwar suburbanization in the context of the growing size and influence of the federal government. How did the national government encourage suburbanization?

The Suburban Landscape of Cold War America

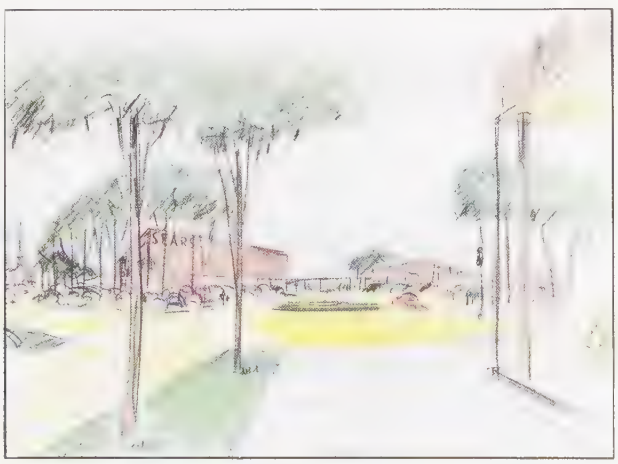
Between the end of World War II and the 1980s, Americans built and moved into suburban homes in an unprecedented wave of construction and migration that changed the nation forever. New home loan rules, and government backing under the Federal Housing Administration and Veterans Administration, made new suburban houses cheaper and brought home ownership within reach of a larger number of Americans than ever before. Commentators cheered these developments as a boon to ordinary citizens, but by the 1960s a generation of urban critics, led by journalist Jane Jacobs, had begun to find fault with the nation's suburban obsession. The following documents provide the historian with evidence of how these new suburban communities arose and how they began to transform American culture.

1. *Life* magazine, "A *Life* Round Table on Housing," January 31, 1949.

The most aggressive member of *Life*'s Round Table, whether as builder or debater, was William J. Levitt, president of Levitt and Sons, Inc. of Manhasset, NY. He feels that he has started a revolution, the essence of which is size. Builders in his estimation are a poor and puny lot, too small to put pressure on materials manufacturers or the local czars of the building codes or the bankers or labor. A builder ought to be a manufacturer, he said, and to this end must be big. He himself is a nonunion operator.

The Levitt prescription for cheaper houses may be summarized as follows: 1) take infinite pains with infinite details; 2) be aggressive; 3) be big enough to throw your weight around; 4) buy at wholesale; and 5) build houses in concentrated developments where mass-production methods can be used on the site.

2. Site plan sketch for Park Forest, Illinois, 1946.



Source: The Park Forest Historical Society.

3. William H. Whyte Jr., *The Organization Man*, 1956. *Whyte, a prominent journalist, wrote about the decline of individualism and the rise of a national class of interchangeable white-collar workers.*

And is this not the whole drift of our society? We are not interchangeable in the sense of being people without differences, but in the externals of existence we are united by a culture increasingly national. And this is part of the momentum of mobility. The more people move about, the more similar American environments become, and the more similar they become, the easier it is to move about.

More and more, the young couples who move do so only physically. With each transfer the décor, the architecture, the faces, and the names may change; the people, the conversation, and the values do not — and sometimes the décor and architecture don't either. . . .

Suburban residents like to maintain that their suburbia not only looks classless but is classless. That is, they are apt to add on second thought, there are no extremes, and if the place isn't exactly without class, it is at least a one-class society — identified as the middle or upper middle, according to the inclination of the residents. "We are all," they say, "in the same boat."

4. Jane Jacobs, *The Death and Life of Great American Cities*, 1961. *A classic celebration of vibrant urban neighborhoods by a New York writer and architectural critic.*

Although it is hard to believe, while looking at dull gray areas, or at housing projects or at civic centers, the fact is that big cities are natural generators of diversity and prolific incubators of new enterprises and ideas of all kinds. . . .

This is because city populations are large enough to support wide ranges of variety and choice in these

Interstate Highways Without automobiles, suburban growth on such a massive scale would have been impossible. Planners laid out subdivisions on the assumption that everybody would drive. And they did — to get to work, to take the children to Little League, to shop. With gas plentiful and cheap (15 cents a gallon), no one cared about the fuel efficiency of their V-8 engines or seemed to mind the elaborate tail fins and chrome that weighed down their cars. In 1945, Americans owned twenty-five

things. And again we find that bigness has all the advantages in smaller settlements. Towns and suburbs, for instance, are natural homes for huge supermarkets and for little else in the way of groceries, for standard movie houses or drive-ins and for little else in the way of theater. There are simply not enough people to support further variety, although there may be people (too few of them) who would draw upon it were it there. Cities, however, are the natural homes of supermarkets and standard movie houses plus delicatessens, Viennese bakeries, foreign groceries, art movies, and so on. . . .

The diversity, of whatever kind, that is generated by cities rests on the fact that in cities so many people are so close together, and among them contain so many different tastes, skills, needs, supplies, and bees in their bonnets.

5. Crowded supermarket, early 1960s.

Source: John Dominis/Time Life Pictures/Getty Images.

6. Herbert J. Gans, *The Levittowners*, 1967. *One of the first sociological studies of the new postwar suburbs and their residents.*

The strengths and weakness of Levittown are those of many American communities, and the Levittowners closely resemble other young middle class Americans. They are not America, for they are not a numerical majority of the population, but they represent the major constituency of the latest and more powerful economic and political institutions in American society — the favored customers and voters whom these seek to attract and satisfy. . . .

Although they are citizens of a national polity and their lives are shaped by national economic, social, and political forces, Levittowners deceive themselves into thinking that the community, or rather the home, is the single most important unit of their lives. . . .

In viewing their homes as the center of life, Levittowners are still using a societal model that fit the rural America of self-sufficient farmers and the feudal Europe of self-isolating extended families.

Whyte Jr., *The Organization Man* (New York: Simon and Schuster, 1956), 276, 299; (5) Jane Jacobs, *The Death and Life of Great American Cities* (Westminster, MD: Vintage, 1992), 145–147; (6) Herbert J. Gans, *The Levittowners* (New York: Columbia University Press, 1982), 417–418.

ANALYZING THE EVIDENCE

1. Compare sources 3, 4, and 5. How do they reinforce or contradict one another?
2. In source 3, what does Whyte mean by "classless"? Why would suburbanites wish to think of their communities as not beset by class inequality? Were they right in this point of view?
3. Do you see evidence in source 1 of the ways the postwar housing market was transformed? How does Levitt's vision of the home-building industry relate to other kinds of American industries?
4. In source 4, what advantages does Jacobs see in large cities over suburbs? Can you interpret sources 2 and 5 from the perspective that Jacobs outlines?

AP® DBQ PRACTICE

Write an essay in which you use the knowledge you've gained from this chapter and the documents provided above to explore postwar suburbanization. What did it mean to the American economy? To ordinary Americans? What flaws did its critics see?

million cars; by 1965, just two decades later, the number had tripled to seventy-five million (AP® America in the World). American oil consumption followed course, tripling as well between 1949 and 1972.

More cars required more highways, and the federal government obliged. In 1956, in a move that drastically altered America's landscape and driving habits, the **National Interstate and Defense Highways Act** authorized $26 billion over a ten-year period for

Hanoch Bartov: Everyone Has a Car

One of Israel's foremost writers and journalists, Hanoch Bartov spent two years in the United States working as a correspondent for the newspaper *Lamerchav*. As a newcomer to Los Angeles in the early 1960s, he was both fascinated and appalled by Americans' love affair with the automobile.

Our immediate decision to buy a car sprang from healthy instincts. Only later did I learn from bitter experience that in California, death was preferable to living without one. Neither the views from the plane nor the weird excursion that first evening hinted at what I would go through that first week.

Very simple — the nearest supermarket was about half a kilometer south of our apartment, the regional primary school two kilometers east, and my son's kindergarten even farther away. A trip to the post office — an undertaking, to the bank — an ordeal, to work — an impossibility. . . .

There are no tramways. No one thought of a subway. Railroads — not now and not in the future. Why? Because everyone has a car. A man invited me to his house, saying, "We are neighbors, within ten minutes of each other." After walking for an hour and a half I realized what he meant — "ten minute drive within the speed limit." Simply put, he never thought I might interpret his remark to refer to the walking distance. The moment a baby sees the light of day in Los Angeles, a car is registered in his name in Detroit. . . .

At first perhaps people relished the freedom and independence a car provided. You get in, sit down, and grab the steering wheel, your mobility exceeding that of any other generation. No wonder people refuse to live downtown, where they can hear their neighbors, smell their cooking, and suffer frayed nerves as trains pass by bedroom windows. Instead, they get a piece of the desert, far from town, at half price, drag a water hose, grow grass, flowers, and trees, and build their dream house.

The result? A widely scattered city, its houses far apart, its streets stretched in all directions. Olympic Boulevard from west to east, forty kilometers. Sepulveda Boulevard, from Long Beach in the south to the edge of the desert, forty kilometers. Altogether covering 1,200 square kilometers. As of now.

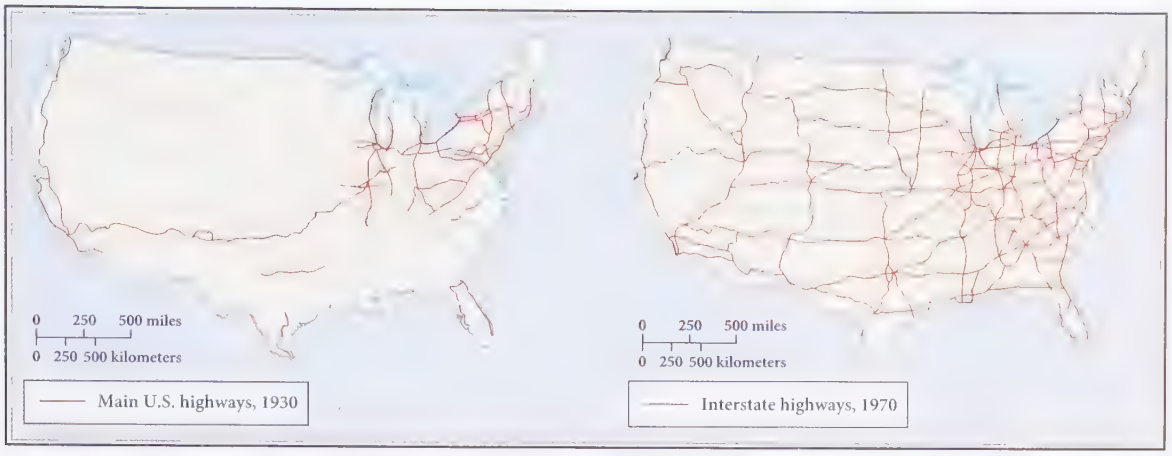
QUESTIONS FOR ANALYSIS

1. From Bartov's observations, what are the pluses and minuses of America's car culture? In what ways was the automobile changing American society?
2. Why did Bartov find that owning a car was necessary, especially in southern California?
3. How would suburbanization have contributed to the construction of new highways in the United States? How would highway construction have facilitated suburbanization?

the construction of a nationally integrated highway system — 42,500 miles (Map 25.1). Cast as a Cold War necessity because broad highways made evacuating crowded cities easier in the event of a nuclear attack, the law changed American cities forever. An enormous public works program surpassing anything undertaken during the New Deal, and enthusiastically endorsed by the Republican president, Dwight Eisenhower, federal highways made possible the massive suburbanization of the nation in the 1960s. Interstate highways rerouted traffic away from small towns, bypassed well-traveled main roads such as the cross-country Route 66, and cut wide swaths through old neighborhoods in the cities.

Fast Food and Shopping Malls Americans did not simply fill their new suburban homes with the latest appliances and gadgets; they also pioneered entirely new forms of consumption. Through World War II, downtowns had remained the center of retail sales and restaurant dining with their grand department stores, elegant eateries, and low-cost diners. As suburbanites abandoned big-city centers in the 1950s, ambitious entrepreneurs invented two new commercial forms that would profoundly shape the rest of the century: the shopping mall and the fast-food restaurant.



MAP 25.1 Connecting the Nation: The Interstate Highway System, 1930 and 1970
The 1956 National Interstate and Defense Highways Act paved the way for an extensive network of federal highways throughout the nation. The act not only pleased American drivers and enhanced their love affair with the automobile but also benefitted the petroleum, construction, trucking, real estate, and tourist industries. The new highway system promoted the nation's economic integration, facilitated the growth of suburbs, and contributed to the erosion of America's distinct regional identities.

By the late 1950s, the suburban shopping center had become as much a part of the American landscape as the Levittowns and their imitators. A major developer of shopping malls in the Northeast called them "today's village green," and noted that "the fountain in the mall has replaced the downtown department clock as the gathering place for young and old alike." By centralizing the otherwise dispersed world of suburban consumption, shopping malls brought "the market to the people instead of people to the market," commented the *New York Times*. In 1939, the suburban share of total metropolitan retail trade in the United States was a paltry 4 percent. By 1961, it was an astonishing 60 percent in the nation's ten largest metropolitan regions.

No one was more influential in creating suburban patterns of consumption than a Chicago-born son of Czech immigrants named Ray Kroc. A former jazz musician and traveling salesman, Kroc found his calling in 1954 when he acquired a single franchise of the little-known McDonald's Restaurant, based in San Bernardino, California. In 1956, Kroc invested in twelve more franchises and by 1958 owned seventy-nine. Three years later, Kroc bought the company from the McDonald brothers and proceeded to turn it into the largest chain of restaurants in the world. Based on inexpensive, quickly served hamburgers that hungry families could eat in the restaurant, in their cars, or at home, Kroc's vision transformed the way Americans consumed food. "Drive-in" or "fast" food became a staple of the American diet in the subsequent decades. By the year 2000, fast food was a $100 billion industry, and more children recognized Ronald McDonald, the clown in McDonald's television commercials, than Santa Claus.

Rise of the Sunbelt

Suburban living, although a nationwide phenomenon, was most at home in the **Sunbelt** (the southern and southwestern states), where taxes were low, the climate was mild, and open space allowed for sprawling subdivisions (Map 25.2). Florida added 3.5 million people, many of them retired, between 1940 and 1970. Texas profited from expanding petrochemical and defense industries. Most dramatic was California's growth, spurred especially by the state's booming defense-related aircraft and electronics industries. By 1970, California contained one-tenth of the nation's population and surpassed New York as the most populous state. By the end of the century, if California had been a nation its economy would have ranked among the top ten largest in the world.

AP® EXAM TIP
Recognize the reasons for the growth of the Sunbelt in the postwar years.

Fast Food, 1949 The sign atop this suburban Los Angeles restaurant says it all. Suburbanization laid the foundation for a unique postwar phenomenon that would forever change American life: the rise of fast food. Cheap, convenient, and "fast," the food served in the new restaurants, modeled after the industry's pioneer, McDonald's, was not necessarily nutritious, but its chief advantage was portability. Loomis Dean/The LIFE Picture Collection/Getty Images

A distinctive feature of Sunbelt suburbanization was its close relationship to the military-industrial complex. Building on World War II expansion, military bases proliferated in the South and Southwest in the postwar decades, especially in Florida, Texas, and California. In some instances, entire metropolitan regions — such as San Diego County, California, and the Houston area in Texas — expanded in tandem with nearby military outposts. Moreover, the aerospace, defense, and electronics industries were based largely in Sunbelt metropolitan regions. With government contracts fueling the economy and military bases providing thousands of jobs, Sunbelt politicians had every incentive to support vigorous defense spending by the federal government.

Sunbelt suburbanization was best exemplified by Orange County, California. Southwest of Los Angeles, Orange County was until the 1940s mostly just that — a land of oranges, groves of them. But during World War II, boosters attracted new bases and training facilities for the marines, navy, and air force (at the time the army air corps). Cold War militarization and the Korean War kept those bases humming, and Hughes Aircraft, Ford Aeronautics, and other defense-related manufacturers built new plants in the sunny, sprawling groves. So did subdivision developers, who built so many new homes that the population of the county jumped from 130,760 in 1940 to 703,925 in 1960. Casting his eye on all this development in the early 1950s, an entrepreneurial filmmaker and cartoonist named Walt Disney chose Anaheim in Orange County as the place for a massive new amusement park. Disneyland was to the new generation of suburbanites what Coney Island had been to an earlier generation of urbanites.

Two Societies: Urban and Suburban

While middle-class whites flocked to the suburbs, an opposite stream of working-class migrants, many of them southern African Americans, moved into the cities. In the 1950s, the nation's twelve largest cities lost 3.6 million whites while gaining 4.5 million

MAP 25.2 Shifting Population Patterns, 1950–1980
This map shows the two major, somewhat overlapping, patterns of population movement between 1950 and 1980. Most striking is the rapid growth of the Sunbelt states. All the states experiencing increases of over 100 percent in that period are in the Southwest, plus Florida. The second pattern involves the growth of metropolitan areas, defined as a central city or urban area and its suburbs. The central cities were themselves mostly not growing, however. The metropolitan growth shown in this map was accounted for by the expanding suburbs. And because Sunbelt growth was primarily suburban growth, that's where we see the most rapid metropolitan growth, with Los Angeles the clear leader.

nonwhites. These urban newcomers inherited a declining economy and a decaying infrastructure. To those enjoying prosperity, the "other America," as the social critic Michael Harrington called it, remained largely invisible. In 1968, however, a report by the National Advisory Commission on Civil Disorders (informally known as the **Kerner Commission** and formed by the president to investigate the causes of the 1967 urban riots), delivered to President Lyndon Johnson, warned that "our nation is moving toward two societies, one black, one white, separate and unequal."

American cities had long been the home of poverty, slum housing, and the hardships and cultural dislocations brought on by immigration from overseas or migration from rural areas. But postwar American cities, especially those in the industrial Northeast and Midwest, experienced these problems with new intensity. By the 1950s, the manufacturing sector was contracting, and mechanization was eliminating thousands upon thousands of unskilled and semiskilled jobs, the kind traditionally taken up by new urban residents. The disappearing jobs were the ones "in which [African Americans] are disproportionately concentrated," noted the civil rights activist Bayard Rustin.

AP® EXAM TIP
Compare the Great Migration of the 1920s and 1930s to the movement of African Americans in the 1950s.

The Urban Crisis The intensification of poverty, the deterioration of older housing stock, and the persistence of racial segregation produced what many at the time called the urban crisis. Unwelcome in the shiny new suburbs built by men such as William J. Levitt, African Americans found low-paying jobs in the city and lived in

Urban Crisis In this photo of a Chicago neighborhood from 1963, a middle-class, high-rise apartment building looms over an older, low-income district. The contrast is emblematic of what many commentators in the 1960s came to call the "urban crisis," the shift of investment, commerce, good jobs, and the middle class away from central cities to either neighboring suburbs or high-rent apartment districts. Racial segregation and continued racial discrimination played a significant role in limiting the economic options available to the black working class. That reality became a major spark to the black freedom struggle in many American cities. Charles F. Knoblock, AP Image

aging, slumlike apartment buildings. Despite a thriving black middle class — indeed, larger than ever before — for those without resources, upward mobility remained elusive. Racism in institutional forms frustrated African Americans at every turn: housing restrictions, increasingly segregated schools, and an urban infrastructure that stood underfunded and decaying as whites left for the suburbs.

Housing and job discrimination were compounded by the frenzy of urban renewal that hit black neighborhoods in the 1950s and early 1960s. Seeking to revitalize declining city centers, politicians and real estate developers proposed razing blighted neighborhoods to make way for modern construction projects that would appeal to the fleeing middle class. In Boston, almost one-third of the old city — including the historic West End, a long-established Italian neighborhood — was demolished to make way for a new highway, high-rise housing, and government and commercial buildings. In San Francisco, some 4,000 residents of the Western Addition, a predominantly black neighborhood, lost out to an urban renewal program that built luxury housing, a shopping center, and an express boulevard. Between 1949 and 1967, urban renewal nationwide demolished almost 400,000 buildings and displaced 1.4 million people.

The urban experts believed they knew what to do with the dislocated: relocate them to federally funded housing projects, an outgrowth of New Deal housing policy, now

much expanded. However well intended, these grim projects too often took the form of cheap high-rises that isolated their inhabitants from surrounding neighborhoods. The impact was felt especially strongly among African Americans, who often found that public housing increased racial segregation and concentrated the poor. The Robert Taylor Homes in Chicago, with twenty-eight buildings of sixteen stories each, housed 20,000 residents, almost all of them black. Despite the planners' wish to build decent affordable apartments, the huge complex became a notorious breeding ground for crime and hopelessness.

Urban Immigrants Despite the evident urban crisis, cities continued to attract immigrants from abroad. Since the passage of the National Origins Act of 1924 (Chapter 21), U.S. immigration policy had aimed mainly at keeping foreigners out. But World War II and the Cold War began slowly to change American policy. The Displaced Persons Act of 1948 permitted the entry of approximately 415,000 Europeans, many of them Jewish refugees. In a gesture to an important war ally, the Chinese Exclusion Act was repealed in 1943. More far-reaching was the 1952 McCarran-Walter Act, which ended the exclusion of Japanese, Koreans, and Southeast Asians.

AP® EXAM TIP

Compare the policies of the federal government toward immigrants before and after World War II.

After the national-origins quota system went into effect in 1924, Mexico replaced Eastern and Southern Europe as the nation's labor reservoir. During World War II, the federal government introduced the Bracero Program to ease wartime labor shortages (Chapter 23) and then revived it in 1951, during the Korean War. The federal government's ability to force workers to return to Mexico, however, was strictly limited. The Mexican immigrant population continued to grow, and by the time the Bracero Program ended in 1964, many of that group — an estimated 350,000 — had settled permanently in the United States. Braceros were joined by other Mexicans from small towns and villages, who immigrated to the United States to escape poverty or to earn money to return home and purchase land for farming.

As generations of immigrants had before them, Mexicans gravitated to major cities. Mostly, they settled in Los Angeles, Long Beach, San Jose, El Paso, and other southwestern cities. But many also went north, augmenting well-established Mexican American communities in Chicago, Detroit, Kansas City, and Denver. Although still important to American agriculture, Mexican Americans were employed in substantial numbers as industrial and service workers by 1960.

Another major group of Spanish-speaking migrants came from Puerto Rico. American citizens since 1917, Puerto Ricans enjoyed an unrestricted right to move to the mainland United States. Migration increased dramatically after World War II, when mechanization of the island's sugarcane agriculture left many Puerto Ricans jobless. Airlines began to offer cheap direct flights between San Juan and New York City. With the fare at about $50 (two weeks' wages), Puerto Ricans became America's first immigrants to arrive en masse by air. Most Puerto Ricans went to New York, where they settled first in East ("Spanish") Harlem and then scattered in neighborhoods across the city's five boroughs. This massive migration, which increased the Puerto Rican population to 613,000 by 1960, transformed the ethnic composition of the city. More Puerto Ricans now lived in New York City than in San Juan.

Cuban refugees constituted the third largest group of Spanish-speaking immigrants. In the six years after Fidel Castro's seizure of power in 1959 (Chapter 24), an estimated 180,000 people fled Cuba for the United States. The Cuban refugee community grew so quickly that it turned Miami into a **cosmopolitan,** bilingual city almost overnight. Unlike other urban migrants, Miami's Cubans quickly prospered, in large part because they had arrived with money and middle-class skills.

Spanish-speaking immigrants — whether Mexican, Puerto Rican, or Cuban — created huge barrios in major American cities, where bilingualism flourished, the Catholic Church shaped religious life, and families sought to join the economic mainstream. Though distinct from one another, these Spanish-speaking communities remained

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

In what sense was the United States becoming, in the language of the Kerner Commission report, "two societies"?

largely segregated from white, or Anglo, neighborhoods and suburbs as well as from African American districts.

IN YOUR OWN WORDS What were the major forces that contributed to postwar suburbanization?

SUMMARY

We have explored how, at the same time it became mired in the Cold War, the United States entered an unparalleled era of prosperity in which a new middle class came into being. Indeed, the Cold War was one of the engines of prosperity. The postwar economy was marked by the dominance of big corporations and defense spending.

After years of depression and war-induced insecurity, Americans turned inward toward religion, home, and family. Postwar couples married young, had several children, and — if they were white and middle class — raised their children in a climate of suburban comfort and consumerism. The profamily orientation of the 1950s celebrated traditional gender roles, even though millions of women entered the workforce in those years. Not everyone, however, shared in the postwar prosperity. Postwar cities increasingly became places of last resort for the nation's poor. Black migrants, unlike earlier immigrants, encountered an urban economy that had little use for them. Without opportunity, and faced with pervasive racism, many of them were on their way to becoming an American underclass, even as sparkling new suburbs emerged outside cities to house the new middle class. Many of the smoldering contradictions of the postwar period — Cold War anxiety in the midst of suburban domesticity, tensions in women's lives, economic and racial inequality — helped spur the protest movements of the 1960s.

CHAPTER 25 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. What explains the growth of the American economy after World War II?
2. What was the domestic ideal, and how did Americans embrace it in the postwar decades?
3. What were the major forces that contributed to postwar suburbanization?
4. Review the events listed under "America in the World" and "Work, Exchange, and Technology" for the periods 1930–1945 and 1945–1960 on the thematic timelines on pages 618–619 and 746–747, respectively. Explain how the United States began the 1930s in deep depression with unemployment near 25 percent and ended the 1950s with an expanded middle class and a consumption-driven economy.

AP® TERMS TO KNOW

Identify and explain the significance of each term below.

Key Concepts and Events

kitchen debate (p. 780)
Bretton Woods (p. 782)
World Bank (p. 783)
International Monetary Fund (IMF) (p. 783)
military-industrial complex (p. 783)
Sputnik (p. 783)
National Defense Education Act (p. 783)
The Affluent Society (p. 785)

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. Think back to earlier chapters that discussed gender roles, marriage, and American family life in the late nineteenth and early twentieth centuries (Chapters 17, 18, 21, 23). How had the American family changed by the 1950s? What aspects of family life remained similar across many decades? For example, how did the working-class immigrant family of the 1890s differ from the middle-class family of the 1950s?
2. Examine the Motorola TV advertisement featured on page 788. What different types of appeals does this advertisement make, and what do they suggest about family and gender roles in this period? How many distinct themes from the chapter can you explain using this image?

KEY TURNING POINTS

Refer to the chapter chronology on page 782 for help in answering the question below.

What were the major turning points in the creation of postwar suburbia?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS

Choose the correct answer for each question.

Questions 1–3 refer to the following excerpt.

> "In order that you may enjoy your house, and derive the utmost pleasure from it, we have undertaken to prepare this handbook so that you may better understand our position and your responsibilities. . . .
>
> No single feature . . . o much to the charm and beauty of the individual home and locality as well-kept lawns. Stabilization of values, yes, increase in values, will most often be found in those neighborhoods where lawns show as green carpets, and trees and shrubbery join to impart the sense of residential elegance. Where lawns and landscape material are neglected the neighborhood soon amasses a sub-standard or blighted appearance and is naturally shunned by the public. Your investment in your garden is large at the beginning, but will grow larger and larger as the years go by. For while furniture, houses, and most material things tend to depreciate with the years, your lawn, trees, and shrubs become more valuable both esthetically and monetarily."
>
> Informational Handbook, "Homeowners Guide: Some Information for Residents of Levittown to Help Them Enjoy Their Homes," Levittown, Pennsylvania, 1957

1. The excerpt from the "Homeowner's Guide" could best be used by a historian to prove that after World War II (1945–1960) the United States experienced which of the following trends?
   a. Increasing numbers of immigrants seeking access to economic opportunities
   b. The rapid growth of evangelical Christian churches and organizations
   c. The introduction of greater informality into U.S. culture
   d. The migration of the middle class to the suburbs
2. The excerpt from the "Homeowner's Guide" was most likely intended to
   a. promote an increasingly homogeneous culture in the postwar years.
   b. challenge the Sunbelt as a significant political and economic force.
   c. inspire critiques of conformity by artists and intellectuals.
   d. advocate a link between home ownership and social mobility.

3. After World War II (1945–1960) Levittown grew most directly as a result of
   a. the baby boom.
   b. growing power of political machine organizations.
   c. changes in sexual norms.
   d. passage of new immigration laws.

Questions 4–5 refer to the song lyrics below.

Little boxes on the hillside,
Little boxes made of ticky tacky,
Little boxes on the hillside,
Little boxes all the same.
There's a green one and a pink one
And a blue one and a yellow one,
And they're all made out of ticky tacky,
And they all look just the same.
And the people in the houses
All went to the university,
Where they were put in boxes
And they came out all the same,
And there's doctors and lawyers,
And business executives,
And they're all made out of ticky tacky,
And they all look just the same.
And they all play on the golf course
And drink their martinis dry,
And they all have pretty children
And the children go to school,
And the children go to summer camp,
And then to the university
Where they are put in boxes
And they come out all the same.
And the boys go into business
And marry and raise a family
In boxes made of ticky tacky
And they all look just the same.
There's a green one and a pink one
And a blue one and a yellow one,
And they're all made out of ticky tacky
And they all look just the same.

From the song, "Little Boxes." Words and music by Malvina Reynolds. Copyright © 1962 Schroder Music Co. (ASCAP) Renewed 1990. Used by permission. All rights reserved.

4. The lyrics in the excerpt most directly reflect which of the following developments during the middle of the twentieth century?
   a. The widening of the gap between the rich and the poor
   b. The expansion of higher education opportunities
   c. The decrease in child labor
   d. Technological developments spurring economic growth
5. Which of the following issues of the period was the songwriter most likely concerned with?
   a. The increasingly homogenous mass culture of the postwar years
   b. The counterculture's rejection of the social and economic values of their parents' generation
   c. The persistence of poverty as a national problem despite an overall affluence
   d. The baby boom

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

> "Motown's commercial success put the record company in a unique position to promote a wide range of black cultural expression . . . [but its] . . . role as a producer of black culture and its ambitions in the business world did not coexist without conflict and contradiction. . . . [C]ommercial concerns about the marketability of a recording often stalled and sometimes cancelled projects that management deemed too politically controversial. . . . [T]he company wavered between willingness and caution when asked to produce recordings . . . that involved overt political or racial messages. . . . [P]opular music audiences, local activists, and national civil rights leaders . . . had their own ideas and disagreements about the meanings of Motown's music and commercial success. . . . Motown could not avoid becoming a contested symbol of racial progress. Motown's music symbolized the possibility of amicable racial integration through popular culture."
>
> Suzanne E. Smith, *Dancing in the Street: Motown and the Cultural Politics of Detroit*, 1999

> "American Bandstand encouraged the show's viewers, advertisers, and television affiliates to see it as the thread that stitched together different teenagers in different parts of the country into a coherent and recognizable national youth culture. . . . American Bandstand invited viewers to consume the sponsors' snacks and soft drinks along with the latest music and dances. . . . The central problem facing American Bandstand's producers was that their show's marketability depended on both the creative energies of black performers and the erasure of black teenagers . . . . [T]he image of youth culture American Bandstand presented to its national audiences bore little resemblance to the interracial makeup of Philadelphia's rock and roll scene. As the television program that did the most to define the image of youth in the late 1950's and early 1960's, the exclusionary racial practices of American Bandstand marginalized black teens from this imagined national youth culture."
>

1. Using the two excerpts above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE major difference between Smith's and Delmot's historical interpretations of the United States music industry's influence on social change in the postwar period.
   - **b.** Briefly explain how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Smith's argument.
   - **c.** Briefly explain how ONE specific historical event or development not directly mentioned in the excerpts could be used to support Delmot's argument.
2. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE important historical similarity between the United States consumer culture in the 1920s to that in the 1950s.
   - **b.** Briefly explain ONE important historical difference between the United States' consumer culture in the 1920s from that in the 1950s.
   - **c.** Briefly explain ONE important historical factor that accounts for the similarity OR difference between the United States consumer culture in the 1920s and the United States consumer culture in the 1950s.
3. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE specific historical cause of suburban growth in the U.S. after World War II.
   - **b.** Briefly explain ANOTHER specific historical cause of suburban growth in the U.S. after World War II.
   - **c.** Briefly explain ONE specific historical effect or consequence of suburban growth in the U.S. after World War II.

AP® LEARNING FOCUS

How did the civil rights movement evolve over time, and how did competing ideas and political alliances affect its growth and that of other social movements?

In June 1945, as World War II was coming to an end, Democratic senator James O. Eastland of Mississippi stood on the floor of the U.S. Senate and brashly proclaimed that "the Negro race is an inferior race." Raising his arms, his tie askew from vigorous gesturing, Eastland ridiculed black troops. "The Negro soldier was an utter and dismal failure in combat," he said.

Eastland's assertions were untrue. Black soldiers had served honorably; many won medals for bravery in combat. All-black units, such as the 761st "Black Panther" Tank Battalion and the famous Tuskegee Airmen, were widely praised by military commanders. But segregationists like Eastland were a nearly unassailable force in Congress, able to block civil rights legislation and shape national opinion.

In the 1940s, two generations after W. E. B. Du Bois famously wrote that "the problem of the twentieth century is the problem of the color line," few white Americans believed wholeheartedly in racial equality. Racial segregation remained entrenched across the country. Much of the Deep South, like Eastland's Mississippi, was a "closed society": black people had no political rights and lived on the margins of white society, impoverished and exploited. Northern cities proved more hospitable to African Americans, but schools, neighborhoods, public amenities like swimming pools, and many businesses remained segregated and unequal in the North as well.

Across the nation, however, winds of change were gathering. Between World War II and the 1970s, slowly at first, and then with greater urgency in the 1960s, the civil rights movement swept aside systematic racial segregation. It could not sweep away racial inequality in its entirety, but the movement constituted a "second Reconstruction" in which black activism reshaped the nation's laws and practices. Civil rights was the paradigmatic social movement of the twentieth century. Its model of nonviolent protest and its calls for self-determination inspired the New Left, feminism, the Chicano movement, the gay rights movement, the American Indian movement, and many others.

The black-led civil rights movement, joined at key moments by Latinos, Asian Americans, and Native Americans, redefined American *liberalism*. In the 1930s, New Deal liberalism had established a welfare state to protect citizens from economic hardship. The civil rights movement forged a new **rights liberalism**: the idea that individuals deserve state protection from discrimination. This version of liberalism focused on identities — such as race or gender, and eventually sexuality — rather than general social welfare. Rights liberalism proved to be both a necessary expansion of the nation's ideals and a wellspring of political backlash. Indeed, the quest for racial justice would contribute to a crisis of liberalism itself.

The March from Selma to Montgomery, 1965 Leading a throng of 25,000 people, Martin Luther King Jr. and his wife, Coretta Scott King, marched from Selma, Alabama, to Montgomery, the state capitol, in March of 1965.

The Emerging Civil Rights Struggle, 1941–1957

As it took shape during World War II and the early Cold War, the campaign against racial injustice proceeded along two tracks: at the grass roots and in government institutions (federal courts, state legislatures, and ultimately the U.S. Congress). Labor unions, churches, and organizations such as the Congress of Racial Equality (CORE) inspired hundreds of thousands of ordinary citizens to join the movement. But grassroots protest was not African Americans' only weapon. They also had the Bill of Rights and the Reconstruction amendments to the Constitution. Civil rights lived in those documents—especially in the Fourteenth Amendment, which guaranteed equal protection under the law to all U.S. citizens, and in the Fifteenth, which guaranteed the right to vote regardless of "race, color, or previous condition of servitude"—but had been ignored or violated for nearly a century. The task was to restore the Constitution's legal force. Neither track, grassroots or legal, was entirely independent of the other. Together, they were the foundation of the fight for racial equality in the postwar decades.

Life Under Jim Crow

Racial segregation and economic exploitation defined the lives of the majority of African Americans in the postwar decades. Numbering 15 million in 1950, African Americans were approximately 10 percent of the U.S. population. In the South, however, they constituted between 30 and 50 percent of the population of several states, such as South Carolina and Mississippi. Segregation, commonly known as Jim Crow (Chapter 17), prevailed in every aspect of life in the southern states, where two-thirds of all African Americans lived in 1950. African Americans could not eat in restaurants patronized by whites or use the same waiting rooms at bus stations. All forms of public transportation were rigidly segregated by custom or by law. Public parks and libraries were segregated. Even drinking fountains were labeled "White" and "Colored."

This system of segregation underlay economic and political structures that further marginalized and disempowered black citizens. Virtually no African Americans were allowed to work for city or state government, and the best jobs in the private sector were

reserved for whites. Black workers labored "in the back," cleaning, cooking, stocking shelves, and loading trucks for the lowest wages. Rural African Americans labored in a sharecropping system that kept them stuck in poverty, often prevented them from obtaining an education, and offered no avenue of escape. Politically, less than 20 percent of eligible black voters were allowed to vote, the result of poll taxes, literacy tests, intimidation, fraud, and the "white primary" (elections in which only whites could vote). This near-total disfranchisement gave whites power disproportionate to their numbers — black people were one-third of the residents of Mississippi, South Carolina, and Georgia but had basically no political voice in those states.

Segregation in Virginia, 1962 As the law of the land in most southern states, racial segregation (known as Jim Crow) required the complete separation of blacks and whites in most public spaces. The "white only" sign on a restaurant door shown in this 1962 photograph in Hampton, Virginia, was typical. Everything from restaurants, drinking fountains, public waiting areas to libraries, public parks, schools, restrooms, and even cola vending machines was subject to strict racial segregation. · Bruce Davidson/Magnum Photos

In the North, racial segregation in everyday life was less acute but just as tangible. Northern segregation took the form of a spatial system in which whites increasingly lived in suburbs or on the outskirts of cities, while African Americans were concentrated in declining downtown neighborhoods. The result was what many called ghettos: all-black districts characterized by high rents, low wages, and inadequate city services. Employment discrimination and their exclusion from job training left many African Americans without any means of support. Few jobs other than the most menial were open to African Americans; journalists, accountants, engineers, and other highly educated men from all-black colleges and universities often labored as railroad porters or cooks because jobs **commensurate** with their skills remained for whites only. These conditions produced a self-perpetuating cycle that kept far too many black citizens trapped on the social margins.

To be certain, African Americans found a measure of freedom in the North and West compared to the South. They could vote, participate in politics, and, at least after the early 1960s, enjoy equal access to public accommodations. But we err in thinking that racial segregation was only a southern condition or that poverty and racial discrimination were not also deeply entrenched in the North and West. In northern cities such as Detroit, Chicago, and Philadelphia, for instance, white home owners in the 1950s used various tactics — from police harassment to thrown bricks, burning crosses, bombs, and mob violence — to keep African Americans from living near them. Moreover, as we saw in Chapter 25, Federal Housing Administration (FHA) and bank redlining excluded African American home buyers from the all-white suburbs emerging around major cities. Racial segregation was a national, not regional, problem.

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

Origins of the Civil Rights Movement

Since racial injustice had been part of American life for hundreds of years, why did the civil rights movement arise when it did? After all, the National Association for the Advancement of Colored People (NAACP), founded in 1909, had begun challenging racial segregation in a series of court cases in the 1930s. And other organizations, such as Marcus Garvey's Universal Negro Improvement Association in the 1920s, had attracted significant popular support (Chapter 21). These precedents were important, but several factors came together in the middle of the twentieth century to make a broad movement possible.

AP EXAM TIP

Recognize the impact of World War II on the growth of the civil rights movement.

TABLE 26.1

African American College Enrollment

Year	Number of African Americans Enrolled (rounded to nearest thousand)
1940	60,000
1950	110,000
1960	185,000
1970	430,000
1980	1.4 million
1990	3.6 million

An important influence was World War II. "The Jewish people and the Negro people both know the meaning of Nordic supremacy," wrote the African American poet Langston Hughes in 1945. In the war against fascism, the Allies sought to discredit racist Nazi ideology. Committed to fighting racism abroad, Americans increasingly condemned racism at home. The Cold War placed added pressure on U.S. officials. "More and more we are learning how closely our democracy is under observation," President Harry S. Truman commented in 1947. To inspire other nations in the global standoff with the Soviet Union, Truman explained, "we must correct the remaining imperfections in our practice of democracy."

Among the most consequential factors was the growth of the black middle class. Historically small, the black middle class experienced robust growth after World War II. Its ranks produced most of the civil rights leaders: ministers, teachers, trade unionists, attorneys, and other professionals. Churches, for centuries a sanctuary for black Americans, were especially important. Moreover, in the 1960s African American college students — part of the largest expansion of college enrollment in U.S. history — joined the movement, adding new energy and fresh ideas (Table 26.1). With access to education and media, this new middle class had more resources than ever before. Less dependent on white patronage, and therefore less vulnerable to white retaliation, middle-class African Americans were in a position to lead a movement for change.

Still other influences assisted the movement. White labor leaders were generally more equality-minded than the rank and file, but the United Auto Workers, the United Steelworkers, and the Communications Workers of America, among many other progressive trade unions, were reliable allies at the national level. The new medium of television, too, played a crucial role. When television networks covered early desegregation struggles — at Little Rock High School in 1957, for instance — Americans across the country saw the violence of white supremacy firsthand. None of these factors alone was decisive. None ensured an easy path. The civil rights movement faced enormous resistance and required dauntless courage and sacrifice from thousands upon thousands of activists for more than three decades. Ultimately, however, the movement changed the nation for the better and improved the lives of millions of Americans.

AP® PRACTICES & SKILLS

CAUSATION

How did the growth of the black middle class assist the civil rights movement?

World War II: The Beginnings

During the war fought "to make the world safe for democracy," the United States was far from ready to extend full equality to its own black citizens. Black workers faced discrimination in wartime employment, and the more than 1 million black troops who served in World War II were placed in segregated units commanded solely by whites. Both at home and abroad, World War II "immeasurably magnified the Negro's awareness of the disparity between the American profession and practice of democracy," NAACP president Walter White observed.

AP® EXAM TIP

Evaluate the impact of World War II in bringing change and continuity for African Americans.

Executive Order 8802 On the home front, activists pushed two strategies. First, A. Philip Randolph, whose **Brotherhood of Sleeping Car Porters** was the most prominent black trade union, called for a march on Washington in early 1941. Randolph planned to bring 100,000 protesters to the nation's capital to call for equal opportunity for black workers in war jobs — then just beginning to expand with President Franklin Roosevelt's pledge to supply the Allies with **materiel**. To avoid a divisive protest, FDR issued Executive Order 8802 in June of that year, prohibiting racial discrimination in defense industries, and Randolph agreed to cancel the march. The resulting Fair Employment Practice Committee (FEPC) had few enforcement powers, but it set an important precedent: federal action. Randolph's efforts showed that white leaders and

institutions could be swayed by concerted African American pressure. It would be a critical lesson for the movement.

The Double V Campaign A second strategy jumped from the pages of the *Pittsburgh Courier*, one of the foremost African American newspapers of the era. It was the brainchild of an ordinary cafeteria worker from Kansas. In a 1942 letter to the editor, James G. Thompson urged that "colored Americans adopt the double VV for a double victory" — victory over fascism abroad and victory over racism at home. Edgar Rouzeau, editor of the paper's New York office, agreed: "Black America must fight two wars and win in both." Instantly dubbed the Double V Campaign, Thompson's notion, with Rouzeau's backing, spread like wildfire through black communities across the country. African Americans would demonstrate their loyalty and citizenship by fighting the Axis powers. But they would also demand, peacefully but emphatically, the defeat of racism at home. "The suffering and privation may be great," Rouzeau told his readers, "but the rewards loom even greater."

The Double V met considerable resistance. In war industries, factories periodically shut down in Chicago, Baltimore, Philadelphia, and other cities because of "hate strikes": the refusal of white workers to labor alongside black workers. Detroit was especially tense. Referring to the potential for racial strife, *Life* magazine reported in 1942 that "Detroit is Dynamite. . . . It can either blow up Hitler or blow up America." In 1943, it nearly did the latter. On a hot summer day, whites from the city's ethnic European neighborhoods taunted and beat African Americans in a local park. Three days of rioting ensued in which thirty-four people were killed, twenty-five of them black. Federal troops were called in to restore order.

Wartime Workers During World War II, hundreds of thousands of black migrants left the South, bound for large cities in the North and West. There they found jobs such as the welding work done by these African American women at the Landers, Frary, and Clark plant in New Britain, Connecticut. Fighting employment discrimination during the war represented one of the earliest phases in the long struggle against racial segregation in the United States. Library of C

Despite such incidents, and to some degree because of them, a generation was spurred into action during the war years. In New York City, employment discrimination on the city's transit lines prompted one of the first bus boycotts in the nation's history, led in 1941 by Harlem minister Adam Clayton Powell Jr. In Chicago, James Farmer and three other members of the Fellowship of Reconciliation (FOR), a nonviolent peace organization, founded the **Congress of Racial Equality (CORE)** in 1942. FOR and CORE embraced the philosophy of nonviolent direct action espoused by Mahatma Gandhi of India. Another FOR member in New York and proponent of direct action, Bayard Rustin, led one of the earliest challenges to southern segregation, the 1947 Journey of Reconciliation. Meanwhile, after the war, hundreds of thousands of African American veterans used the GI Bill to go to college, trade school, or graduate school, placing themselves in a position to push against segregation. At the war's end, Powell affirmed that "the black man . . . is ready to throw himself into the struggle to make the dream of America become flesh and blood, bread and butter."

AP® PRACTICES & SKILLS

CAUSATION

Why did World War II play such a critical role in the civil rights movement?

Cold War Civil Rights

Demands for justice persisted in the early years of the Cold War. African American efforts were propelled by symbolic victories — as when Jackie Robinson broke through the color line in major league baseball by joining the Brooklyn Dodgers in 1947 — but the growing black vote in northern cities proved more consequential. During World War II, more than a million African Americans migrated to northern and western cities, where they joined the Democratic Party of Franklin Roosevelt and the New Deal (Map 26.1). This newfound political leverage awakened northern liberals, many of

MAP 26.1 Internal Migrations
The migration of African Americans from the South to other regions of the country produced one of the most remarkable demographic shifts of the mid-twentieth century. Between World War I — which marked the start of the Great Migration — and the 1970s, more than 6 million African Americans left the South. Where they settled in the North and West, they helped change the politics of entire cities and even states. Seeking black votes, which had become a key to victory in major cities, liberal Democrats and Republicans alike in New York, Illinois, California, and Pennsylvania, for instance, increasingly made civil rights part of their platform. In this way, migration advanced the political cause of black equality.

whom became allies of civil rights advocates. Ultimately, however, the Cold War produced mixed results, as the nation's growing anticommunism opened some avenues for civil rights while closing others.

Civil Rights and the New Deal Coalition African American leaders were uncertain what to expect from President Truman, inheritor of the New Deal coalition but not opposed to using racist language himself. Though he did not immediately support social equality for African Americans, Truman supported civil rights because he believed in equality before the law. Moreover, he understood the growing importance of the small but often decisive black vote in key northern states such as New York, Illinois, Pennsylvania, and Michigan. Civil rights activists Randolph and Powell — along with vocal white liberals such as Hubert Humphrey, the mayor of Minneapolis, and members of Americans for Democratic Action (ADA), a liberal organization — pressed Truman to act.

AP® EXAM TIP
Evaluate the impact of executive actions in supporting racial equality.

With no support for civil rights in Congress, Truman turned to executive action. In 1946, he appointed the Presidential Committee on Civil Rights, whose 1947 report, "**To Secure These Rights**," called for robust federal action to ensure black equality. With the report's recommendations in mind, in 1948 Truman issued an executive order

desegregating employment in federal agencies and, under pressure from Randolph's Committee Against Jim Crow in Military Service, desegregated the armed forces. Truman then sent a message to Congress asking that every one of the report's recommendations—including the abolition of poll taxes and the restoration of the Fair Employment Practice Committee—be made into law. It was the most aggressive and politically bold call for racial equality by the leader of a major political party since Reconstruction.

Truman's boldness was too much for southern Democrats. Under the leadership of Strom Thurmond, governor of South Carolina, white Democrats from the South formed the **States' Rights Democratic Party**, known popularly as the Dixiecrats, for the 1948 election (Chapter 24). This brought into focus an internal struggle developing within the Democratic Party and its still-formidable New Deal coalition. Would the civil rights aims of the party's liberal wing alienate southern white Democrats, as well as many suburban whites in the North? It was the first hint of the discord that would eventually divide the Democratic Party in the 1960s.

Race and Anticommunism The Cold War both helped and impeded the civil rights movement. In a time of growing fear of communist expansionism, Truman worried about America's image in the world. He reminded Americans that when whites and blacks "fail to live together in peace," that failure harmed "the cause of democracy itself in the whole world." Indeed, the Soviet Union used American racism to discredit the United States abroad: "We cannot escape the fact that our civil rights record has been an issue in world politics," the Committee on Civil Rights wrote. International tensions between the United States and the Soviet Union thus appeared to strengthen the hand of civil rights leaders, because America needed to demonstrate to the rest of the world that its racial climate was improving (AP® America in the World).

However, the Cold War, McCarthyism, and the hunt for subversives at home also held the civil rights movement back. Civil rights opponents charged that racial integration was "communistic," and the NAACP was banned in many southern states as an "anti-American" organization. Black Americans who spoke favorably of the Soviet Union, such as the actor and singer Paul Robeson, or had been "fellow travelers" in the 1930s, such as the pacifist Rustin, were persecuted. Robeson, whose career was destroyed by such accusations, told House Un-American Activities Committee (HUAC) interrogators, "My father was a slave, and my people died to build this country, and I am going to . . . have a part of it just like you." The fate of people like Robeson showed that the Cold War could work *against* the civil rights cause just as easily as for it.

AP® PRACTICES & SKILLS

POINT OF VIEW

How did the Cold War work in the favor of civil rights? How did it work against the movement?

Mexican Americans and Japanese Americans

African Americans were the most prominent, but not the only, group in American society to organize against racial injustice in the 1940s. In the Southwest, from Texas to California, Mexican immigrants and Mexican Americans endured a "caste" system not unlike the Jim Crow system in the South. In Texas, for instance, poll taxes kept most Mexican American citizens from voting. Decades of discrimination by employers in agriculture and manufacturing—made possible by the constant supply of cheap labor from across the border—suppressed wages and kept the majority of Mexican Americans barely above poverty. Many lived in *colonias* or barrios, neighborhoods separated from Anglos and often lacking sidewalks, reliable electricity and water, and public transportation.

Japanese American Citizens League Members of the Japanese American Citizens League (JACL) meet in Denver, Colorado, for their biennial conference in 1951. The JACL was one of a number of organizations, like the Mexican American organization known as the American GI Forum, that advocated for civil rights in the decades after World War II. Along with the larger and better-known NAACP, groups like the JACL and GI Forum expanded the boundaries of citizenship in these years by presenting legal challenges to discrimination against non-whites.

Freedom in the United States and Africa

HAILOU WOLDE-GIORGHIS

Hailou Wolde-Giorghis was an Ethiopian student who visited the United States at the invitation of the State Department in the early 1960s.

SOURCE: Hailou Wolde-Giorghis, "My Encounters with Racism in the United States," in *Views of America*, ed. Alan F. Westin et al. (New York: Harcourt, Brace, and World, 1966), 228-231.

"Negroes are dirty," say the whites, but in nearly all restaurants I saw Negro waiters and cooks. "They're lazy": I noticed that it is the Negro who does the hardest manual work. They are said to be uncultivated and are therefore denied access to culture. As George Bernard Shaw said, "The haughty American nation makes the Negro shine its shoes, and then demonstrates his physical and mental inferiority by the fact that he is a shoe-cleaner." . . .

What is known as integration in the South is the ability of a Negro to enter a shop and buy a record, or the fact that, of ten thousand students enrolled in a university, two of them are Negroes. "A miracle!" they cry. Real integration, however, does not exist, not even in the North, and by real integration I mean interracial communication, complete equality in the strict sense of the word. Still another example drawn from the South: the manager of a television studio told me in frigid terms that he would not hire Negroes; there would be a scandal and all his sponsors would protest.

MARTIN LUTHER KING JR.

Here, the American civil rights leader celebrates the independence of the African nation of Ghana in 1957.

SOURCE: Martin Luther King Jr., "The Birth of a New Nation," *Liberation* 28 (April 1957).

And it's a beautiful thing, isn't it that . . . [Ghana] is now free and is free without rising up with arms and ammunition. It is free through nonviolent means. Because of that the British Empire will not have the bitterness for Ghana that she has for China, so to speak. Because of that when the British Empire leaves Ghana she leaves with a different attitude than she would have left with if she had been driven out by armies. We've got to revolt in such a way that after revolt is over we can live with people as their brothers and sisters.

KWAME NKRUMAH

Kwame Nkrumah was the first president of the independent nation of Ghana. In the 1930s and 1940s, Nkrumah studied in the United States, earning degrees at Lincoln University and the University of Pennsylvania.

SOURCE: Kwame Nkrumah, *I Speak of Freedom: A Statement of African Ideology* (New York: Praeger, 1961), ix.

The "wind of change" has become a raging hurricane, sweeping away the old colonialist Africa. The year 1960 was Africa's year. In that year alone, seventeen African States emerged as proud and independent sovereign nations. Now the ultimate freedom of the whole of Africa can no more be in doubt.

For centuries, Europeans dominated the African continent. The white man arrogated to himself the right to rule and to be obeyed by the non-white. . . .

All this makes a sad story, but now we must be prepared to bury the past with its unpleasant memories and look to the future. All we ask of the former colonial powers is their goodwill and cooperation to remedy past mistakes and injustices and to grant independence to the colonies in Africa.

QUESTIONS FOR ANALYSIS

1. Wolde-Giorghis is especially critical of southern "integration." As an African, what kind of perspective would he bring to this question?
2. What values and goals do King and Nkrumah seem to share? How were their circumstances and goals different?
3. Compare the circumstances of African Americans in the United States and Africans in nations colonized by Europeans. What were the similarities and differences?

Developments within the Mexican American community set the stage for fresh challenges to these conditions in the 1940s. Labor activism, especially in Congress of Industrial Organizations (CIO) unions with large numbers of Mexican Americans, improved wages and working conditions in some industries and produced a new generation of leaders. More than 400,000 Mexican Americans also served in World

War II. Having fought for their country, many returned to the United States determined to challenge their second-class citizenship. Additionally, a new Mexican American middle class began to take shape in major cities such as Los Angeles, San Antonio, El Paso, and Chicago, which, like the African American middle class, gave leaders and resources to the cause.

In Texas and California, Mexican Americans created new civil rights organizations in the postwar years. In Corpus Christi, Texas, World War II veterans founded the **American GI Forum** in 1948 to protest the poor treatment of Mexican American soldiers and veterans. Activists in Los Angeles created the **Community Services Organization (CSO)** the same year. Both groups arose to address specific local injustices (such as the segregation of military cemeteries), but they quickly broadened their scope to encompass political and economic justice for the larger community. Among the first young activists to work for the CSO were Cesar Chavez and Dolores Huerta, who would later found the United Farm Workers (UFW) and inspire the Chicano movement of the 1960s.

AP® EXAM TIP

Explain the origins of civil rights organizations in supporting immigrant groups.

Activists also pushed for legal change. In 1947, five Mexican American fathers in California sued a local school district for placing their children in separate "Mexican" schools. The case, *Mendez v. Westminster School District*, never made it to the U.S. Supreme Court. But the Ninth Circuit Court ruled such segregation unconstitutional, laying the legal groundwork for broader challenges to racial inequality. Among those filing briefs in the case was the NAACP's Thurgood Marshall, who was then developing the legal strategy to strike at racial segregation in the South. In another significant legal victory, the Supreme Court ruled in 1954—just two weeks before the landmark *Brown v. Board of Education* decision—that Mexican Americans constituted a "distinct class" that could claim constitutional protection from discrimination.

Also on the West Coast, Japanese Americans accelerated their legal challenge to discrimination. Undeterred by rulings in the *Hirabayashi* (1943) and *Korematsu* (1944) cases upholding wartime imprisonment (Chapter 23), the Japanese American Citizens League (JACL) filed lawsuits in the late 1940s to regain property lost during the war. The JACL also challenged the constitutionality of California's Alien Land Law, which prohibited Japanese immigrants from owning land, and successfully lobbied Congress to enable those same immigrants to become citizens—a right they were denied for fifty years. These efforts by Mexican and Japanese Americans enlarged the sphere of civil rights and laid the foundation for a broader notion of racial equality in the postwar years.

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

How were the circumstances facing Mexican and Japanese Americans similar to those facing African Americans? How were they different?

Fighting for Equality Before the Law

With civil rights legislation blocked in Congress by southern Democrats throughout the 1950s, activists looked in two different directions for a breakthrough: to northern state legislatures and to the federal courts. School segregation remained a stubborn problem in northern states, but the biggest obstacle to black progress there was persistent job and housing discrimination. The states with the largest African American populations, and hence the largest share of black Democratic Party voters, became testing grounds for state legislation to end such discriminatory practices.

Winning antidiscrimination legislation depended on coalition politics. African American activists forged alliances with trade unions and liberal organizations such as the American Friends Service Committee (a Quaker group), among many others. Progress was slow and often occurred only after long periods of unglamorous struggle to win votes in state capitals such as Albany, New York; Springfield, Illinois; and Lansing, Michigan. The first fair employment laws had come in New York and New Jersey in 1945. A decade passed, however, before other states with significant black populations passed similar legislation. Antidiscrimination laws in housing were even more difficult to pass, with most progress not coming until the 1960s. These legislative campaigns in northern states received little national attention, but they were instrumental in laying the groundwork for legal equality outside the South.

Thurgood Marshall Because the vast majority of southern African Americans were prohibited from voting, state legislatures there were closed to the kind of organized political pressure possible in the North. Thus activists looked to federal courts for leverage. In the late 1930s, NAACP lawyers Thurgood Marshall, Charles Hamilton Houston, and William Hastie had begun preparing the legal ground in a series of cases challenging racial discrimination. The key was prodding the U.S. Supreme Court to use the Fourteenth Amendment's "equal protection" clause to overturn its 1896 ruling in *Plessy v. Ferguson*, which upheld racial segregation under the "separate but equal" doctrine.

Marshall was the great-grandson of slaves. Of modest origins, his parents instilled in him a faith in law and the Constitution. After his 1930 graduation from Lincoln University, a prestigious African American institution near Philadelphia, Marshall applied to the University of Maryland Law School. Denied admission because the school did not accept black applicants, he enrolled at all-black Howard University. There Marshall met Houston, a law school dean, and the two forged a friendship and intellectual partnership that would change the face of American legal history. Marshall, with Houston's and Hastie's critical strategic input, would argue most of the NAACP's landmark cases. (In 1967, President Johnson appointed Marshall to the Supreme Court — the first African American to have that honor.)

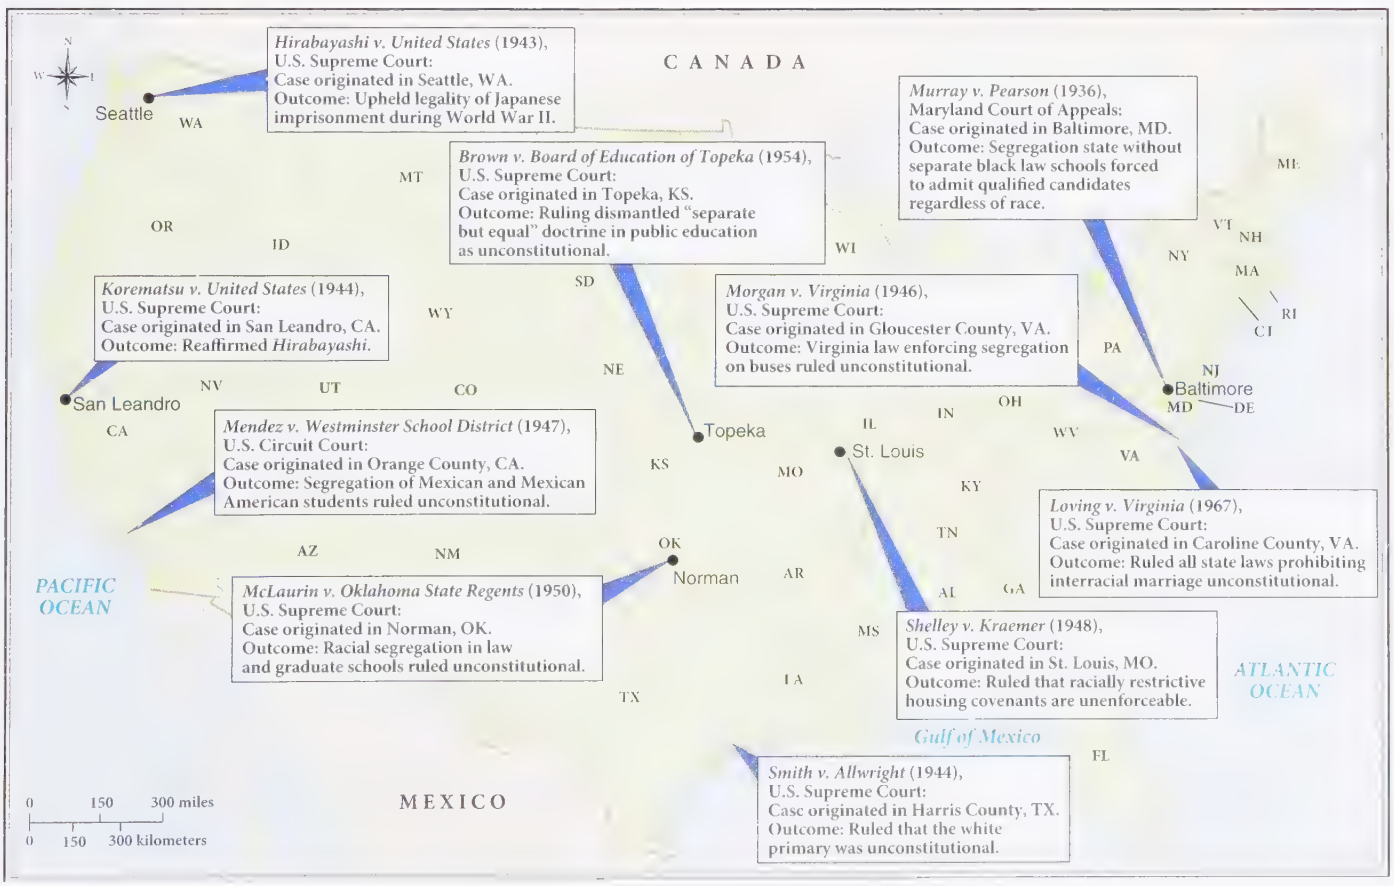
Thurgood Marshall and Daisy Bates Thurgood Marshall was one of the most influential legal thinkers of the twentieth century. As director of the NAACP Legal Defense Fund during the 1940s and 1950s, he helped dismantle the legal underpinnings of racial discrimination and segregation — he argued the *Brown* case, among dozens of others, for the NAACP. In 1967, he was appointed by President Johnson to the U.S. Supreme Court. Daisy Bates was a journalist and black freedom activist whose reporting in the black press in the 1950s was widely read and influential. She headed the Arkansas NAACP and played a prominent role on the national NAACP board. Here, Marshall and Bates sit on the steps of the Supreme Court in 1958 with some of the "Little Rock Nine," the young men and women who risked their lives to desegregate public schools in Arkansas. Bettmann/Getty Image

Marshall, Houston, Hastie, and six other attorneys filed suit after suit, deliberately selecting each case from dozens of possibilities. The strategy was slow and time-consuming, but progress came. In 1936, Marshall and Houston won a state case that forced the University of Maryland Law School to admit qualified African Americans — a ruling of obvious significance to Marshall. Eight years later, in *Smith v. Allwright* (1944), Marshall convinced the U.S. Supreme Court that all-white primaries were unconstitutional. In 1950, with Marshall once again arguing the case, the Supreme Court ruled in *McLaurin v. Oklahoma* that universities could not segregate black students from others on campus. None of these cases produced swift changes in the daily lives of most African Americans, but they confirmed that civil rights attorneys were on the right track.

AP® EXAM TIP

Describe the role of the Supreme Court in supporting greater racial equality in the U.S.

Brown v. Board of Education The NAACP's legal strategy achieved its ultimate validation in a case involving Linda Brown, a black pupil in Topeka, Kansas, who had been forced to attend a distant segregated school rather than the nearby white elementary school. In his argument before the court in ***Brown v. Board of Education of Topeka*** (1954), Marshall contended that such segregation was unconstitutional because it denied Linda Brown the "equal protection of the laws" guaranteed by the Fourteenth Amendment (Map 26.2). In a unanimous decision on May 17, 1954, the Supreme Court agreed, overturning the "separate but equal" doctrine at last. Writing for the Court, the new chief justice, Earl Warren, wrote: "We conclude that in the field of



Hirabayashi v. United States (1943), U.S. Supreme Court: Case originated in Seattle, WA. Outcome: Upheld legality of Japanese imprisonment during World War II.
Brown v. Board of Education of Topeka (1954), U.S. Supreme Court: Case originated in Topeka, KS. Outcome: Ruling dismantled "separate but equal" doctrine in public education as unconstitutional.
Murray v. Pearson (1936), Maryland Court of Appeals: Case originated in Baltimore, MD. Outcome: Segregation state without separate black law schools forced to admit qualified candidates regardless of race.
Korematsu v. United States (1944), U.S. Supreme Court: Case originated in San Leandro, CA. Outcome: Reaffirmed *Hirabayashi*.
Morgan v. Virginia (1946), U.S. Supreme Court: Case originated in Gloucester County, VA. Outcome: Virginia law enforcing segregation on buses ruled unconstitutional.
Mendez v. Westminster School District (1947), U.S. Circuit Court: Case originated in Orange County, CA. Outcome: Segregation of Mexican and Mexican American students ruled unconstitutional.
Loving v. Virginia (1967), U.S. Supreme Court: Case originated in Caroline County, VA. Outcome: Ruled all state laws prohibiting interracial marriage unconstitutional.
McLaurin v. Oklahoma State Regents (1950), U.S. Supreme Court: Case originated in Norman, OK. Outcome: Racial segregation in law and graduate schools ruled unconstitutional.
Shelley v. Kraemer (1948), U.S. Supreme Court: Case originated in St. Louis, MO. Outcome: Ruled that racially restrictive housing covenants are unenforceable.
Smith v. Allwright (1944), U.S. Supreme Court: Case originated in Harris County, TX. Outcome: Ruled that the white primary was unconstitutional.

MAP 26.2 Desegregation Court Cases

Desegregation court battles were not limited to the South. Note the important California cases regarding Mexican Americans and Japanese Americans. Two seminal decisions, the 1948 housing decision in *Shelley v. Kraemer* and the 1954 school decision in *Brown v. Board of Education*, originated in Missouri and Kansas, respectively. This map helps show that racial segregation and discrimination were a national, not simply a southern, problem.

public education the doctrine of 'separate but equal' has no place. Separate educational facilities are inherently unequal." In an implementing 1955 decision known as *Brown II*, the Court declared that desegregation should proceed "with all deliberate speed."

In the South, however, Virginia senator Harry F. Byrd issued a call for "massive resistance." Calling May 17 "Black Monday," the Mississippi segregationist Tom P. Brady invoked the language of the Cold War to discredit the decision, assailing the "totalitarian government" that had rendered the decision in the name of "socialism and communism." That year, half a million southerners joined White Citizens' Councils dedicated to blocking school integration. Some whites revived the old tactics of violence and intimidation, swelling the ranks of the Ku Klux Klan to levels not seen since the 1920s. The "Southern Manifesto," signed in 1956 by 101 members of Congress, denounced the *Brown* decision as "a clear abuse of judicial power" and encouraged local officials to defy it. The white South had declared all-out war on *Brown*.

Enforcement of the Supreme Court's decision was complicated further by Dwight Eisenhower's presence in the White House—the president was no champion of civil rights. Eisenhower accepted the *Brown* decision as the law of the land, but he thought it a mistake. Ike was especially unhappy about the prospect of committing federal power to enforce the decision. A crisis in Little Rock, Arkansas, forced his hand. In September 1957, when nine black students attempted to enroll at the all-white Central High School, Governor Orval Faubus called out the National Guard to bar them. Angry white mobs appeared daily to taunt the students, chanting "Go back to the jungle." As the vicious scenes played out on television night after night, Eisenhower finally acted. He sent 1,000 federal troops to Little Rock and nationalized the Arkansas National

AP® PRACTICES & SKILLS

CHANGE OVER TIME

How did the NAACP develop a legal strategy to attack racial segregation?

School Desegregation in Little Rock, Arkansas Less well known than the crisis at Little Rock's Central High School the same year, the circumstances at North Little Rock were nonetheless strikingly similar: white resistance to the enrollment of a handful of black students. In this photograph, white students block the doors of North Little Rock High School, preventing six African American students from entering on September 9, 1957. This photograph is noteworthy because it shows a striking new feature of southern racial politics: the presence of film and television cameras that broadcast these images to the nation and the world. AP Photo/William P. Straeter

Guard, ordering them to protect the black students. Eisenhower thus became the first president since Reconstruction to use federal troops to enforce the rights of African Americans. But Little Rock also showed that southern officials had more loyalty to local custom than to the law — a repeated problem in the post-*Brown* era.

IN YOUR OWN WORDS **What factors best explain why and how the civil rights movement developed between 1941 and 1954?**

Forging a Protest Movement, 1955–1965

By declaring racial segregation integral to the South's "habits, traditions, and way of life," the Southern Manifesto signaled that many whites would not readily accept black equality. As the battle over desegregating Little Rock High School had shown, the unwillingness of local officials to enforce *Brown* could render the decision invalid in practice. If legal victories would not be enough, citizens themselves, black and white, would have to take to the streets and demand justice. Following the *Brown* decision, they did just that, forging a protest movement unique in the history of the United States.

Nonviolent Direct Action

Brown had been the law of the land for barely a year when a single act of violence struck at the heart of black America. A fourteen-year-old African American from the South Side of Chicago, Emmett Till, was visiting relatives in Mississippi in the summer of 1955. Seen talking to a white woman in a grocery store, Till was tortured and murdered under cover of night. His mutilated body was found at the bottom of a river, tied with barbed wire to a heavy steel cotton gin fan. Photos of Till's body in *Jet* magazine brought national attention to the **heinous** crime.

Two white men were arrested for Till's murder. During the trial, followed closely in black communities across the country, the lone witness to Till's kidnapping — his uncle, Mose Wright — identified both killers. Feeling "the blood boil in hundreds of white people as they sat glaring in the courtroom," Wright said, "it was the first time in my life I had the courage to accuse a white man of a crime." Despite Wright's eyewitness testimony, the all-white jury found the defendants innocent. This miscarriage of justice — later, the killers even admitted their guilt in a *Look* magazine article — galvanized an entire generation of African Americans; no one who lived through the Till incident ever forgot it.

Montgomery Bus Boycott In the wake of the Till murder, civil rights advocates needed some good news. They received it three months later, as southern black leaders embraced an old tactic put to new ends: nonviolent direct action. On December 1, 1955, Rosa Parks, a civil rights activist in Montgomery, Alabama, refused to give up her seat on a bus to a white man. She was arrested and charged with violating a local segregation ordinance. Parks's act was not the spur-of-the-moment decision that it seemed: a longtime NAACP member, she and other female civil rights activists in Montgomery had been contemplating such an act for some time. Parks's arrest became the focal point for the black community's challenge against segregated buses, which were a powerful symbol of the city's racial hierarchy.

Soon after Parks's arrest, the black community turned for leadership to the Reverend Martin Luther King Jr., the recently appointed pastor of Montgomery's Dexter Street Baptist Church. The son of a prominent Atlanta minister, King embraced the teachings of Mahatma Gandhi. Working closely, but behind the scenes, with Bayard Rustin, King deepened his investment in nonviolent philosophy and the practice of direct action, which Rustin and others in the Fellowship of Reconciliation had first used in the 1940s.

King and other black ministers endorsed a plan proposed by a local black women's organization to boycott Montgomery's bus system. The **Montgomery Bus Boycott** was inspired by similar boycotts that had taken place in Harlem in 1941 and Baton Rouge, Louisiana, in 1953.

For the next 381 days, Montgomery's African Americans formed car pools or walked to work. "Darling, it's empty!" Coretta Scott King exclaimed to her husband as a bus normally filled with black riders rolled by their living room window on the first day of the boycott. The transit company neared bankruptcy, and downtown stores complained about the loss of business. But only after the Supreme Court ruled in November 1956 that bus segregation was unconstitutional did the city of Montgomery finally comply. "My feets is tired, but my soul is rested," said one woman boycotter.

The Montgomery Bus Boycott catapulted King to national prominence. In 1957, along with the Reverend Ralph Abernathy and dozens of black ministers from across the South, he founded the **Southern Christian Leadership Conference (SCLC)** in Atlanta. The black church, long the center of African American social and cultural life, now lent its moral and organizational strength to the civil rights movement. Black churchwomen were a tower of strength, transferring the skills they had honed during years of church work to the fight for civil rights. The SCLC quickly joined the NAACP at the leading edge of the movement for racial justice.

Greensboro Sit-Ins

The battle for civil rights entered a new phase in Greensboro, North Carolina, on February 1, 1960, when four black college students took seats at the whites-only lunch counter at the local Woolworth's drugstore, which had a diner-style lunch counter, as most southern drugstores in that era did. This simple act was entirely the brainchild of the four students, who had discussed it in their dorm rooms over several preceding nights. A New York–based spokesman for Woolworth's said the chain would "abide by local custom," which meant refusing to serve African Americans at the lunch counter. The students were determined to "sit in" until they were served. For three weeks, hundreds of students inspired by the original foursome took turns sitting at the counters, quietly eating, doing homework, or reading. Taunted and beaten by groups of whites, pelted with food and other debris, the black students — often occupying more than sixty of the sixty-six seats — held strong. Although many were arrested, the tactic worked: the Woolworth's lunch counter was desegregated, and sit-ins quickly spread to other southern cities (AP® Analyzing Voices).

Ella Baker Born in Virginia and educated at Shaw University in Raleigh, North Carolina, Ella Baker was one of the foremost theorists of grassroots, participatory democracy in the United States. Active all her life in the black freedom movement, in 1960 Baker cofounded the Student Nonviolent Coordinating Committee (SNCC). Her advocacy of leadership by ordinary, nonelite people often led her to disagree with the top-down movement strategy of Martin Luther King Jr. and other ministers of the Southern Christian Leadership Conference (SCLC). AP Photo / Jack Harris

Ella Baker and SNCC

Inspired by the developments in Greensboro and elsewhere, Ella Baker, an administrator with the SCLC, helped organize the **Student Nonviolent Coordinating Committee** (**SNCC**, pronounced "Snick") in 1960 to facilitate student sit-ins. Rolling like a great wave across the Upper South, from North Carolina into Virginia, Maryland, and Tennessee, sit-ins had been launched by students in 126 cities by the end of the year. More than 50,000 people participated, and 3,600 went to jail. The sit-ins drew black college students into the movement in significant numbers for the first time. Northern students formed solidarity committees and raised money for bail. SNCC quickly emerged as the most important student protest organization in the country and inspired a generation of students on college campuses across the nation.

Baker took a special interest in these students because she found them receptive to her notion of participatory democracy

(AP® Interpreting the Past). The granddaughter of slaves, Baker had moved to Harlem in the 1930s, where she worked for New Deal agencies and then the NAACP. She believed in nurturing leaders from the grass roots, encouraging ordinary people to stand up for their rights rather than depend on charismatic figureheads. "My theory is, strong people don't need strong leaders," she once said. Nonetheless, Baker nurtured a generation of young activists in SNCC, including Stokely Carmichael, Anne Moody, John Lewis, and Diane Nash, who went on to become some of the most important civil rights leaders in the United States.

AP® EXAM TIP

Compare the methods and goals of civil rights leaders in the 1960s.

Freedom Rides Emboldened by SNCC's sit-in tactics, in 1961 the Congress of Racial Equality (CORE) organized a series of what were called Freedom Rides on interstate bus lines throughout the South. The aim was to call attention to blatant violations of recent Supreme Court rulings that had declared segregation in interstate commerce unconstitutional. The activists who signed on — mostly young, both black and white — knew that they were taking their lives in their hands. They found courage in song, as civil rights activists had begun to do across the country, with lyrics such as "I'm taking a ride on the Greyhound bus line. . . . Hallelujah, I'm traveling down freedom's main line!"

Courage they needed. Club-wielding Klansmen attacked the buses when they stopped in small towns. Outside Anniston, Alabama, one bus was firebombed; the Freedom Riders escaped only moments before it exploded. Some riders were then brutally beaten. Freedom Riders and news reporters were also viciously attacked by Klansmen in Birmingham and Montgomery. Despite the violence, state authorities refused to intervene. "I cannot guarantee protection for this bunch of rabble rousers," declared Governor John Patterson of Alabama.

Once again, local officials' refusal to enforce the law left the fate of the Freedom Riders in Washington's hands. The new president, John F. Kennedy, was cautious about civil rights. Despite a campaign commitment, he failed to deliver on a civil rights bill. Elected by a thin margin, Kennedy believed that he could ill afford to lose the support of powerful southern senators. But civil rights was unlike other domestic issues. Its fate was going to be decided not in the halls of Congress, but on the streets of southern cities. Although President Kennedy discouraged the Freedom Rides, beatings shown on the nightly news forced Attorney General Robert Kennedy to dispatch federal marshals. Civil rights activists thus learned the tactical value of nonviolent protest that provoked violent white resistance.

AP® PRACTICES & SKILLS

CHANGE OVER TIME

What lessons did activists learn as the civil rights movement evolved between 1957 and 1961?

The victories so far had been limited, but the groundwork had been laid for a civil rights offensive that would transform the nation. The NAACP's legal strategy had been followed by the emergence of a major protest movement. And now civil rights leaders focused their attention on Congress.

Legislating Civil Rights, 1963–1965

The first civil rights law in the nation's history came in 1866 just after the Civil War. Its provisions were long ignored (Chapter 14). A second law was passed during Reconstruction in 1875, but it was declared unconstitutional by the Supreme Court. For nearly ninety years, new civil rights legislation was blocked or filibustered by southern Democrats in Congress. Only a weak, largely symbolic act was passed in 1957 during the Eisenhower administration. But by the early 1960s, with legal precedents in their favor and nonviolent protest awakening the nation, civil rights leaders believed the time had come for a serious civil rights bill. The challenge was getting one through a still-reluctant Congress.

The Battle for Birmingham The road to such a bill began when Martin Luther King Jr. called for demonstrations in "the most segregated city in the United States": Birmingham, Alabama. King and the SCLC needed a concrete victory in Birmingham to validate their strategy of nonviolent direct action. In May 1963, thousands of black

Race and Geography in the Civil Rights Era

Among the most intractable conditions of American cities has been racial segregation. Its causes have been many and complex. They include discrimination by the real estate industry and white home owners but also government policies, such as mortgage-guarantee programs and interstate highway construction (which facilitated white flight to the suburbs). The harmful results of racial segregation had long been evident, but in the 1960s what many called the "urban crisis" was the subject of heated national debate. Poverty and lack of opportunity among people of color living in cities and their geographic exclusion from areas of economic growth — especially the fast-developing suburbs — stood exposed. The excerpts below explore this history, from the 1930s to the 1960s, through government documents and the voices of activists, writers, and officials.

JOHN WING

Neighborhood Association Calls for Housing Bias

Across the United States in the mid-twentieth century, home owners banded together in organizations called neighborhood associations. These groups pursued a variety of objectives, from welcoming new residents to lobbying city government to install traffic signs and crosswalks. However, between the 1920s and the 1960s the major purpose of many of them was to prevent African Americans and other people of color from moving into certain neighborhoods. In the following excerpt, from a 1933 court case originating in Evanston, Illinois, a member of just such an association discusses its actions.

SOURCE: Becky Nicolaides and Andrew Wiese, eds., *The Suburb Reader* (New York: Routledge, 2006), 235–236.

"In 1922 the residents living in that location [Asbury Avenue] became particularly conscious of the fact that there was a likelihood of negroes moving south of Emerson Street. It was first brought to our attention in connection with the premises at 1844 Wesley Avenue, which are the premises involved in this proceeding.

. . . Because of that incident and some others, we decided that we would form some kind of an association to protect ourselves. The West Side Improvement Association was formed in 1922 and 1923, and the objective of the association is to protect the neighborhood from encroachment of all kinds, and particularly to preserve it as a place for white people to live.

. . . [W]e decided that the only method of real protection was to have the property restricted by a covenant, providing that none of the property could be occupied by negroes or sold to negroes. . . . "

FEDERAL HOUSING ADMINISTRATION (FHA)

Government Endorsement of Racial Segregation

When the federal government began to regulate the market in home mortgages under the National Housing Act of 1934, it devalued property in nonwhite or mixed-race neighborhoods — that is, assigned lower property values to neighborhoods where people of color lived. This policy reinforced the segregation of American cities and suburbs by race and by class. Here, in one of its 1936 manuals, the Federal Housing Administration (FHA) explains that "inharmonious racial groups" should be regarded as a threat to property values.

SOURCE: Federal Housing Administration, *Underwriting Manual: Underwriting and Valuation Procedure Under Title II of the National Housing Act with Revisions to April 1, 1936* (Washington, DC: Government Printing Office), Part II, Section 2, 229, 233.

"The Valuator [property assessor] should investigate areas surrounding the location to determine whether or not incompatible racial and social groups are present, to the end that an intelligent prediction may be made regarding the possibility or probability of the location being invaded by such groups. If a neighborhood is to retain stability it is necessary that properties shall continue to be occupied by the same social and racial classes. A change in social or racial occupancy generally leads to instability and a reduction in values. . . . Once the character of a neighborhood has been established it is usually impossible to induce a higher social class than those already in the neighborhood to purchase and occupy properties in its various locations. . . .

The Valuator should consider carefully the immunity or lack of immunity offered to the location because of its geographical position within the city. Natural or artificially established barriers will prove effective in protecting a neighborhood and the locations within it from adverse influences. Usually the protection against adverse influences afforded by these means include prevention of the infiltration of business and industrial uses, lower-class occupancy, and inharmonious racial groups. "

JANE JACOBS

Urban Renewal

Jane Jacobs was one of the most widely known critics of American urban policy in the twentieth century. Her book, *The Death and Life of Great American Cities* (1961), contended that American urban policy had produced lifeless cities that separated people by status. It remains influential even today. In this excerpt, she charges that the federal policy known as "urban renewal," which was implemented primarily in the 1950s and 1960s, had worsened rather than improved urban conditions.

SOURCE: Jane Jacobs, *The Death and Life of Great American Cities* (New York: Random House, 1961), 4.

"Look what we have built with the first several billions [of federal urban renewal spending]: Low-income projects that become worse centers of delinquency, vandalism and general social hopelessness than the slums they were supposed to replace. Middle-income housing projects which are truly marvels of dullness and regimentation, sealed against any buoyancy or vitality of city life. Luxury housing projects that mitigate their inanity, or try to, with a vapid vulgarity. Cultural centers that are unable to support a good bookstore. Civic centers that are avoided by everyone but bums, who have fewer choices of loitering place than others. Commercial centers that are lackluster imitations of standardized suburban chain-store shopping. Promenades that go from no place to nowhere and have no promenaders. Expressways that eviscerate great cities. This is not the rebuilding of cities. This is the sacking of cities."

HERBERT HILL

Race and the Urban Crisis

Herbert Hill, a prominent black NAACP official, testified before Congress in 1967, alongside dozens of witnesses to what many called the "urban crisis" or the "crisis in American cities." Hill believed that the continued isolation of African Americans in impoverished, declining neighborhoods required an urgent response from Congress.

SOURCE: Herbert Hill, "Demographic Change and Racial Ghettos: The Crisis of American Cities," in *Urban America: Goals and Problems, Hearings Before the Subcommittee on Urban Affairs of the Joint Economic Committee, U.S. Congress* (Washington, DC: Government Printing Office, 1967), 99–153.

"Current civil rights struggles are rooted in three major demographic developments in the American Negro community: accelerated growth, increasing mobility, and rapid urbanization. Almost half of the Negro population now lives in the North, but the response of American cities to this development has been a vast increase and rigidity in the patterns of residential segregation. Thus the Negro finds that he has left the segregated South for the segregated northern slum. The growth of housing segregation has been accompanied by an extension of the ghetto pattern in major cities together with vast urban blight and the decay of central city areas. . . .

The dual migration of Negroes from the rural South to the urban North and from the rural South to the urban South is one of the major demographic changes of our time with great social and political implications for the future of American society. . . .

If migrating Negroes had freedom of choice and the economic means to acquire adequate housing on a nonsegregated basis, then it is possible that our large cities would be able to absorb their entry and provide decent living conditions. But the opposite has been the case. . . .

An abundance of evidence — social, economic, political, and moral — now suggests that the time has come to give first priority to the racial problems of our great cities. But the problems of our large urban areas are inextricably intertwined with the problems of the racial ghetto. Therefore, the solution to one set of problems is, in effect, the solution of the other."

KERNER COMMISSION

Two Societies

In the aftermath of major disturbances in Detroit, Michigan, and Newark, New Jersey, during the summer of 1967, President Johnson appointed a commission to study the causes of what some called riots and others have called uprisings. It was widely known as the Kerner Commission for its chair, Otto Kerner, the Democratic governor of Illinois. When the commission was launched, black observers wondered if it would deal honestly with the roles white Americans played in producing urban and suburban racial segregation. It did, and the report became known for its forthright account of race in American cities.

SOURCE: *Report of the National Advisory Commission on Civil Disorders* (New York: The New York Times Company, 1968), 1–2.

"The summer of 1967 again brought racial disorders to American cities, and with them shock, fear and bewilderment to the nation. . . .

On July 28, 1967, the President of the United States established this Commission and directed us to answer three basic questions:

What happened?

Why did it happen?

What can be done to prevent it from happening again? . . .

This is our basic conclusion: Our nation is moving toward two societies, one black, one white — separate and unequal.

Reaction to last summer's disorders has quickened the movement and deepened the division. Discrimination and segregation have long permeated much of American life; they now threaten the future of every American. . . .

What white Americans have never fully understood — but what the Negro can never forget — is that white society is deeply implicated in the ghetto. White institutions created it, white institutions maintain it, and white society condones it.

It is now time to turn with all the purpose at our command to the unfinished business of this nation. It is time to adopt strategies for action that will produce quick and visible progress. It is time to make good the promises of American democracy to all citizens — urban and rural, white and black, Spanish-surname, American Indian, and every minority group."

QUESTIONS FOR ANALYSIS

1. How did the way neighborhoods were evaluated by government agencies in the 1930s and 1940s perpetuate racial segregation?
2. Consider how the themes of identity and geography intersect in these excerpts. How did the geographic landscapes of cities and suburbs shape racial identity? Additionally, consider the economic context. How did those geographic landscapes affect the economic resources available to different groups of people?
3. What did the Kerner Commission mean by "two societies"?

Was Martin Luther King Jr. a Radical or a Reformer?

In 1983, when Congress established the national holiday that celebrates Martin Luther King Jr.'s birthday each January, members of Congress acknowledged King's pioneering work to advance the cause of black civil rights. But what did King's work involve? For the past few decades, scholars of the civil rights movement have debated how best to understand the movement and King's particular role in it. Some scholars have characterized King as a reformer who "dreamed" of an integrated America where, as he said on the steps of the Lincoln Memorial, "little black boys and black girls will be able to join hands with little white boys and white girls as sisters and brothers." Others have argued that King's vision was far more radical than racial integration alone. So who was King — a radical or a reformer?

In the excerpts below, Thomas F. Jackson and Barbara Ransby present differing portraits of King. In his book, Jackson discusses King's work in the context of a campaign for human rights. Ransby, who wrote a biography of King's civil rights contemporary Ella Baker, draws a distinction between their approaches to the movement.

THOMAS F. JACKSON

SOURCE: Thomas F. Jackson, *From Civil Rights to Human Rights: Martin Luther King, Jr., and the Struggle for Economic Justice* (Philadelphia: University of Pennsylvania Press, 2013), 2.

By 1965, King's radical voice rang more clearly when he confessed that his dream had turned into a "nightmare." The dream shattered when whites murdered voting rights workers in Alabama, when police battled blacks in Los Angeles, when he met jobless and "hopeless" blacks on desperate Chicago streets, and when he saw hunger and poverty in rural Mississippi and Appalachia. But King picked up the shards of his shattered dreams and reassembled them into more radical visions of emancipation for all poor people. . . . Dreams of decent jobs, affordable integrated housing, and adequate family incomes remained central to King's public ministry until his death.

BARBARA RANSBY

SOURCE: Barbara Ransby, *Ella Baker and the Black Freedom Movement* (Chapel Hill: University of North Carolina Press, 2003), 189–191.

The conflict between [King and Baker] reveals more fundamental conflicts between black politics and African American culture over the meanings of American democracy and the pathways toward social change. . . . Baker described [King] as a pampered member of Atlanta's black elite . . . a member of a coddled "silver spoon brigade." . . . In Baker's eyes, King did not identify closely enough with the people he sought to lead. He did not situate himself among them but remained above them. . . . Baker and King . . . translated religious faith into their political identities in profoundly different ways. Above all, they defined the confluence of their roles as individuals and their roles as participants in a mass movement for social change quite distinctly. Baker was a militant egalitarian, and King was a sophisticated southern Baptist preacher.

AP SHORT ANSWER PRACTICE

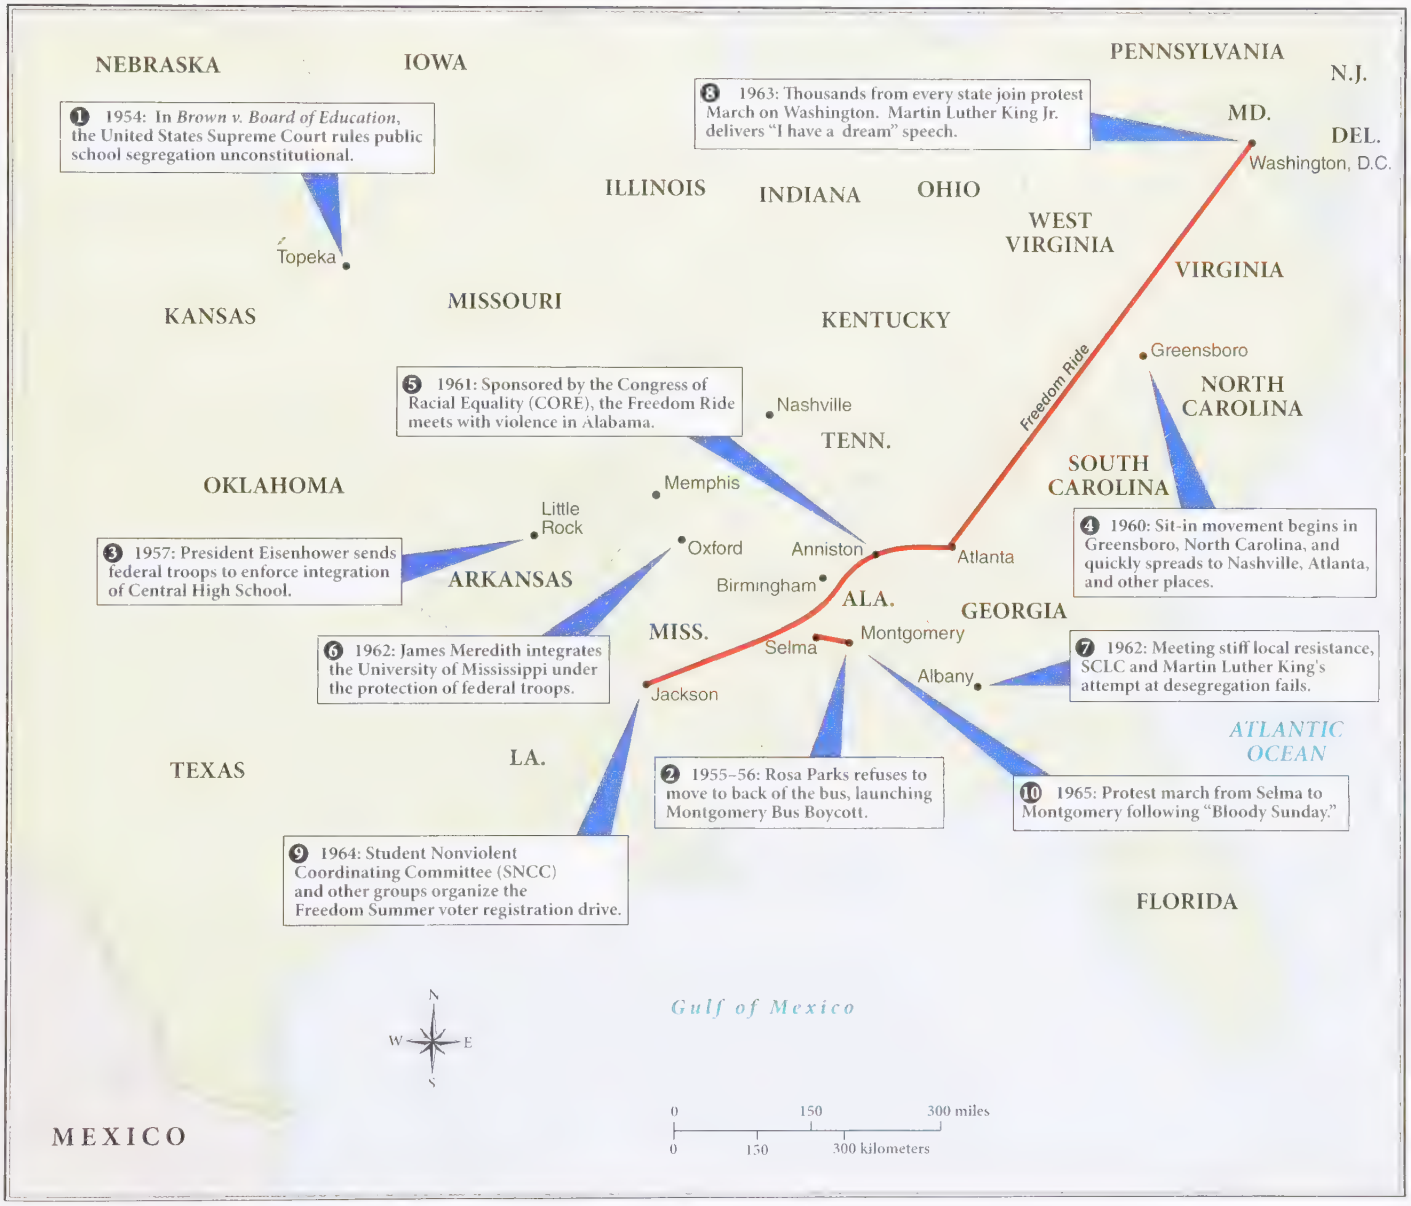
1. Name one key difference in the way these two historians describe King and his work in the civil rights movement.
2. What qualities does each of these historians use in defining a "radical" and a "reformer"?
3. Based on your reading of the excerpts and Chapter 26's discussion of the civil rights movement, why do you think Congress singled out King from among the many civil rights leaders and activists?

marchers protested employment discrimination in Birmingham's department stores. Eugene "Bull" Connor, the city's public safety commissioner, ordered the city's police troops to meet the marchers with violent force: snarling dogs, electric cattle prods, and high-pressure fire hoses. Television cameras captured the scene for the evening news.

While serving a jail sentence for leading the march, King, scribbling in pencil on any paper he could find, composed one of the classic documents of nonviolent direct action: "Letter from Birmingham Jail." "Why direct action?" King asked. "There is a type of constructive, nonviolent tension that is necessary for growth," he began his answer. The civil rights movement sought, King continued, "to create such a crisis and establish such a creative tension." Grounding his appeal in equal parts Christian brotherhood and

democratic liberalism, King argued that Americans confronted a moral choice: they could "preserve the evil system of segregation" or take the side of "those great wells of democracy . . . the Constitution and the Declaration of Independence."

Outraged by the brutality in Birmingham and embarrassed by King's imprisonment for leading a nonviolent march, President Kennedy decided that it was time to act. On June 11, 1963, after newly elected Alabama governor George Wallace barred two black students from the state university, Kennedy went on television to denounce racism and promise a new civil rights bill. Many black leaders felt Kennedy's action was long overdue, but they nonetheless hailed this "Second Emancipation Proclamation." That night, Medgar Evers, president of the Mississippi chapter of the NAACP, was shot in the back in his driveway in Jackson by a white supremacist. Evers's martyrdom became a spur to further action (Map 26.3).



MAP 26.3 The Civil Rights Struggle, 1954–1965
In the postwar battle for black civil rights, the first major victory was the NAACP litigation of *Brown v. Board of Education*, which declared public school segregation unconstitutional. As indicated on this map, the struggle then quickly spread, raising other issues and seeding new organizations. Other organizations quickly joined the battle and shifted the focus away from the courts to mass action and organization. The year 1965 marked the high point, when violence against the Selma, Alabama, marchers spurred the passage of the Voting Rights Act.

The March on Washington To marshal support for Kennedy's bill, civil rights leaders took advantage of a long-planned event set for that August. It was the massive demonstration in Washington that had first been proposed by A. Philip Randolph in 1941. Working with Bayard Rustin, Randolph revived the idea and in early 1963 called for a march to mark the centennial of the Emancipation Proclamation. Under the leadership of Randolph and Rustin, thousands of volunteers across the country coordinated car pools, "freedom buses," and "freedom trains," and on August 28, 1963, delivered a quarter of a million people to the Lincoln Memorial for the **March on Washington**, officially named the March on Washington for Jobs and Freedom.

Although Randolph and Rustin planned the event, Martin Luther King Jr. was the public face of the march. It was King's dramatic "I Have a Dream" speech, beginning with his admonition that too many black people lived "on a lonely island of poverty" and ending with the exclamation from a traditional black spiritual — "Free at last! Free at last! Thank God almighty, we are free at last!" — that captured the nation's imagination. The sight of 250,000 blacks and whites marching solemnly together marked the high point of the civil rights movement and confirmed King's position as the leading spokesperson for the cause.

To have any chance of getting the civil rights bill through Congress, King, Randolph, and Rustin knew they had to sustain this broad coalition of blacks and whites. They could afford to alienate no one. Reflecting a younger, more militant set of activists, however, SNCC member John Lewis had prepared a provocative speech for that afternoon. In his original draft of the speech, Lewis wrote, "The time will come when we will not confine our marching to Washington. We will march through the South, through the Heart of Dixie, the way Sherman did." Signaling a growing restlessness among black youth, Lewis warned: "We shall fragment the South into a thousand pieces and put them back together again in the image of democracy." Fearing the speech would alienate white supporters, Rustin and others implored Lewis to tone down his rhetoric. With only minutes to spare before he stepped up to the podium, Lewis agreed. He delivered a more conciliatory speech, but his conflict with march organizers signaled an emerging rift in the movement (AP® Thinking Like a Historian).

Although the March on Washington galvanized public opinion, it changed few congressional votes. Southern senators continued to block Kennedy's legislation. Georgia senator Richard Russell, a leader of the opposition, refused to support any bill that would in his words "bring about social equality and intermingling and amalgamation of the races." Then, tragedies began to pile up, one on another. In September, white supremacists bombed a Baptist church in Birmingham, killing four black girls in Sunday school. Less than two months later, Kennedy himself lay dead, the victim of assassination.

AP® EXAM TIP

Evaluate the role of Congress in supporting greater racial equality in the U.S.

On assuming the presidency, Lyndon Johnson made passing the civil rights bill a priority. A southerner and former Senate majority leader, Johnson was renowned for his fierce persuasive style and tough political bargaining. By appealing to the white South's conscience, invoking the memory of the slain JFK, and practicing his own brand of hardball politics, Johnson overcame the filibuster. In June 1964, Congress approved the most far-reaching civil rights law since Reconstruction. The keystone of the **Civil Rights Act of 1964**, Title VII, outlawed discrimination in employment on the basis of race, religion, national origin, and sex. Another section guaranteed equal access to public accommodations and schools. The law granted new enforcement powers to the U.S. attorney general and established the Equal Employment Opportunity Commission to implement the prohibition against job discrimination.

Freedom Summer The Civil Rights Act was a law with real teeth, but it left untouched the obstacles to black voting. So protesters went back into the streets. In 1964, in what came to be known as Freedom Summer, black organizations mounted a major campaign in Mississippi. The effort drew several thousand volunteers from across the country, including nearly one thousand white college students from the North. Led by

the charismatic SNCC activist Robert "Bob" Moses, the four major civil rights organizations (SNCC, CORE, NAACP, and SCLC) spread out across the state. They established freedom schools for black children and conducted a major voter registration drive. Yet so determined was the opposition that only about twelve hundred black voters were registered that summer, at a cost of four murdered civil rights workers and thirty-seven black churches bombed or burned.

The murders strengthened the resolve of the **Mississippi Freedom Democratic Party** (MFDP), which had been founded during Freedom Summer. Banned from the "whites only" Mississippi Democratic Party, MFDP leaders were determined to attend the 1964 Democratic National Convention in Atlantic City, New Jersey, as the legitimate representatives of their state. Inspired by Fannie Lou Hamer, a former sharecropper turned civil rights activist, the MFDP challenged the most powerful figures in the Democratic Party, including President Johnson himself. "Is this America?" Hamer asked party officials when she demanded that the MFDP, and not the all-white Mississippi delegation, be recognized by the convention. Democratic leaders, however, seated the white Mississippi delegation and refused to recognize the MFDP. Demoralized and convinced that the Democratic Party would not change, Bob Moses told television reporters: "I will have nothing to do with the political system any longer." Freedom Summer began with optimism but ended with bitter disappointment.

Selma and the Voting Rights Act Martin Luther King Jr. and the SCLC did not share Moses's skepticism. They believed that another confrontation with southern injustice could provoke further congressional action. In March 1965, James Bevel of

Women in the Movement Though often overshadowed by men in the public spotlight, women were crucial to the black freedom movement. Here, protesting at the 1964 Democratic National Convention in Atlantic City, are (left to right) Fannie Lou Hamer, Eleanor Holmes, and Ella Baker. The men are (left to right) Emory Harris, Stokely Carmichael, and Sam Block. Hamer had been a sharecropper before she became a leader under Baker's tutelage, and Holmes was a Yale University–trained lawyer who went on to become the first female chair of the federal Equal Employment Opportunity Commission. 1976 George Ballis/Take Stock/The Image Work

Civil Rights and Black Power: Strategy and Ideology

The documents collected below reveal the range of perspectives and ideas at work within the broad civil rights, or "black freedom," struggle in the 1960s.

1. **Martin Luther King Jr., "If the Negro Wins, Labor Wins" speech, 1962.** ***King, speaking to a meeting of the nation's trade union leaders, explained the economic objectives of the black freedom struggle.***

   If we do not advance, the crushing burden of centuries of neglect and economic deprivation will destroy our will, our spirits and our hopes. In this way labor's historic tradition of moving forward to create vital people as consumers and citizens has become our own tradition, and for the same reasons.

   This unity of purpose is not an historical coincidence. Negroes are almost entirely a working people. There are pitifully few Negro millionaires and few Negro employers. Our needs are identical with labor's needs: decent wages, fair working conditions, livable housing, old age security, health and welfare measures, conditions in which families can grow, have education for their children and respect in the community. That is why Negroes support labor's demands and fight laws which curb labor. . . .

   The two most dynamic and cohesive liberal forces in the country are the labor movement and the Negro freedom movement. Together we can be architects of democracy in a South now rapidly industrializing.

2. **Police in Birmingham, Alabama, use trained German shepherds against peaceful African American protesters, 1963.**

© AP Photo/Bill Hudson

3. **Bayard Rustin, "From Protest to Politics,"** ***Commentary,*** **February 1965.**

   . . . it would be hard to quarrel with the assertion that the elaborate legal structure of segregation and discrimination, particularly in relation to public accommodations, has virtually collapsed. On the other hand, without making light of the human sacrifices involved in the direct-action tactics (sit-ins, freedom rides, and the rest) that were so instrumental to this achievement, we must recognize that in desegregating public accommodations, we affected institutions which are relatively peripheral both to the American socio-economic order and to the fundamental conditions of life of the Negro people. In a highly-industrialized, 20th-century civilization, we hit Jim Crow precisely where it was most anachronistic, dispensable, and vulnerable — in hotels, lunch counters, terminals, libraries, swimming pools, and the like. . . . At issue, after all, is not civil rights, strictly speaking, but social and economic conditions.

4. **James Farmer,** ***Freedom, When?,*** **1965.**

   "But when will the demonstrations end?" The perpetual question. And a serious question. Actually, it is several questions, for the meaning of the question differs, depending upon who asks it.

   Coming from those whose dominant consideration is peace — public peace and peace of mind — the question means: "When are you going to stop tempting violence and rioting?" Some put it more strongly: "When are you going to stop sponsoring violence?" Assumed is the necessary connection between demonstration and violence. . . .

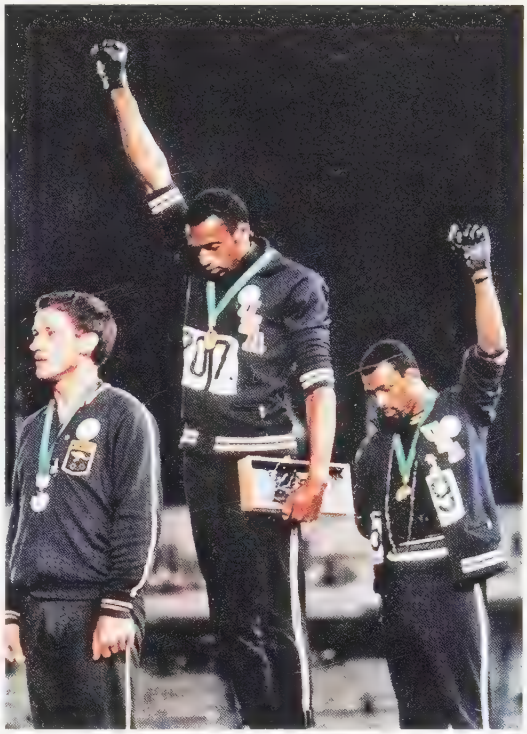
   "Isn't the patience of the white majority wearing thin? Why nourish the displeasure of 90 percent of the population with provocative demonstrations? Remember, you need allies." And the assumptions of these Cassandras of the backlash is that freedom and equality are, in the last analysis, wholly gifts in the white man's power to bestow. . . .

What the public must realize is that in a demonstration more things are happening, at more levels of human activity, than meets the eye. Demonstrations in the last few years have provided literally millions of Negroes with their first taste of self-determination and political self-expression.

5. Stokely Carmichael and Charles Hamilton, *Black Power: The Politics of Liberation in America*, 1967.

Black people must redefine themselves, and only they can do that. Throughout this country, vast segments of the black communities are beginning to recognize the need to assert their own definitions, to reclaim their history, their culture; to create their own sense of community and togetherness. There is a growing resentment of the word "Negro," for example, because this term is the invention of our oppressor; it is his image of us that he describes. . . .

The concept of Black Power rests on a fundamental premise: Before a group can enter the open society, it must first close ranks. By this we mean that group solidarity is necessary before a group can operate effectively from a bargaining position of strength in a pluralistic society.



6. Black Power salute at the 1968 Olympics in Mexico City. ***Tommie Smith and John Carolos (right) won gold and bronze medals in the 200 meters. The silver medalist, Australian Peter Norman (left), is wearing an Olympic Project for Human Rights badge to show his support.***

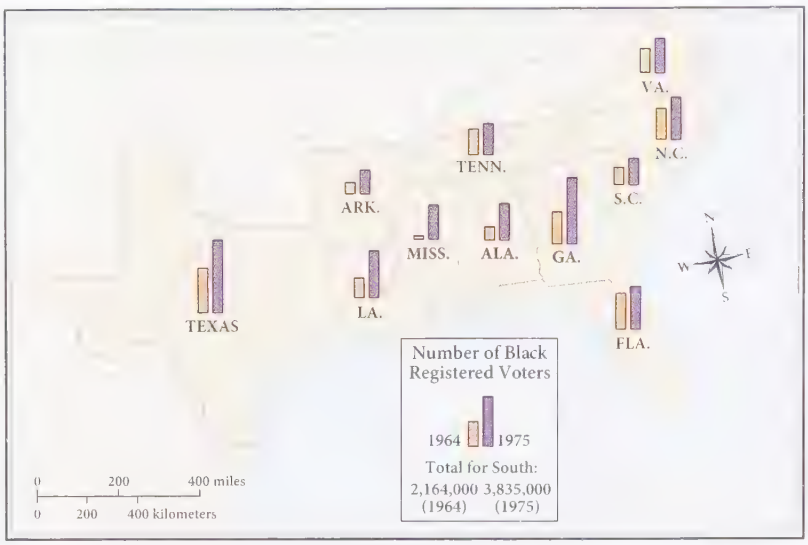
ANALYZING THE EVIDENCE

1. Compare sources 1 and 3. What does Rustin mean when he says that ending segregation in public accommodations has not affected the "fundamental conditions" of African American life? How does King's point in source 1 address such issues?
2. Examine the two photographs. What do they reveal about different kinds of protest? About different perspectives among African Americans?
3. What does "self-determination" mean for Farmer and Carmichael and Hamilton?

AP® DBQ PRACTICE

Compose an essay in which you use the documents above, in addition to your reading of the chapter, to explore and explain different approaches to African American rights in the 1960s. In particular, think about how all of the documents come from a single movement, yet each expresses a distinct viewpoint and a distinct way of conceiving what "the struggle" is about. How do these approaches compare to the tactics of earlier struggles for civil rights?



MAP 26.4 Black Voter Registration in the South, 1964 and 1975
After passage of the Voting Rights Act of 1965, black registration in the South increased dramatically. The bars on the map show the number of African Americans registered in 1964, before the act was passed, and in 1975, after it had been in effect for ten years. States in the Deep South, such as Mississippi, Alabama, and Georgia, had the biggest increases.

the SCLC called for a march from Selma, Alabama, to the state capital, Montgomery, to protest the murder of a voting-rights activist. As soon as the six hundred marchers left Selma, crossing over the Edmund Pettus Bridge, mounted state troopers attacked them with tear gas and clubs. The scene was shown on national television that night, and the day became known as Bloody Sunday. Calling the episode "an American tragedy," President Johnson went back to Congress.

The **Voting Rights Act of 1965**, which was signed by President Johnson on August 6, outlawed the literacy tests and other devices that prevented African Americans from registering to vote, and authorized the attorney general to send federal examiners to register voters in any county where registration was less than 50 percent. Together with the Twenty-Fourth Amendment (ratified in 1964), which outlawed the poll tax in federal elections, the Voting Rights Act enabled millions of African Americans to vote for the first time since Reconstruction.

AP® EXAM TIP
Compare the impact of the Civil Rights Act of 1964 and the Voting Rights Act of 1965.

In the South, the results were stunning. In 1960, only 20 percent of black citizens had been registered to vote; by 1971, registration reached 62 percent (see Map 26.4). Moreover, across the nation the number of black elected officials began to climb, almost quadrupling from 1,400 to 4,900 between 1970 and 1980 and doubling again by the early 1990s. Most of those elected held local offices — from sheriff to county commissioner — but nonetheless embodied a shift in political representation nearly unimaginable a generation earlier. As Hartman Turnbow, a Mississippi farmer who risked his life to register in 1964, later declared, "It won't never go back where it was."

Something else would never go back either: the liberal New Deal coalition. By the second half of the 1960s, the liberal wing of the Democratic Party had won its battle with the conservative, segregationist wing. Democrats had embraced the civil rights movement and made black equality a cornerstone of a new "rights" liberalism. But over the next generation, between the 1960s and the 1980s, southern whites and many conservative northern whites would respond by switching to the Republican Party. Strom Thurmond, the segregationist senator from South Carolina, symbolically led the revolt by renouncing the Democratic Party and becoming a Republican in 1964. The New Deal coalition — which had joined working-class whites, northern African Americans, urban professionals, and white southern segregationists together in a fragile political alliance since the 1930s — was beginning to crumble.

AP® PRACTICES & SKILLS
COMPARE & CONTRAST
In what ways did white resistance hinder the civil rights movement? In what ways did it help?

IN YOUR OWN WORDS How did the civil rights movement achieve its major legal and legislative victories between 1954 and 1965?

Beyond Civil Rights, 1966–1973

Supreme Court decisions and new laws do not automatically produce changes in society. But in the mid-1960s, civil rights advocates confronted a more profound issue: perhaps even protests were not enough. In 1965, Bayard Rustin wrote of the need to move "from protest to politics" in order to build institutional black power. Some black

leaders, such as the young SNCC activists Stokely Carmichael, Frances Beal, and John Lewis, grew frustrated with the slow pace of reform and the stubborn resistance of whites. Still others believed that addressing black poverty and economic disadvantage remained the most important objective. Neither new laws nor long marches appeared capable of meeting these varied and complex challenges.

The conviction that civil rights alone were incapable of guaranteeing equality took hold in many communities of color in this period. African Americans were joined by Mexican Americans, Puerto Ricans, and American Indians. They came at the problem of inequality from different perspectives, but each group asked a similar question: As crucial as legal equality was, how much did it matter if most people of color remained in or close to poverty, if white society still regarded nonwhites as inferior, and if the major social and political institutions in the country were run by whites? Black leaders and representatives of other nonwhite communities increasingly asked themselves this question as they searched for ways to build on the achievements of the civil rights decade of 1954–1965.

Black Nationalism

Seeking answers to these questions led many African Americans to embrace **black nationalism**. The philosophy of black nationalism signified many things in the 1960s. It could mean everything from pride in one's community to total separatism, from building African American–owned businesses to wearing dashikis in honor of African traditions. Historically, nationalism had emphasized black pride, "self-help" (African Americans creating their own community institutions), and black people's right to shape their own destiny. In the late nineteenth century, Frederick Douglass stood as a primary inspiration, and nationalists founded the Back to Africa movement. In the 1920s the nationalist Marcus Garvey inspired African Americans to take pride in their racial heritage (Chapter 21).

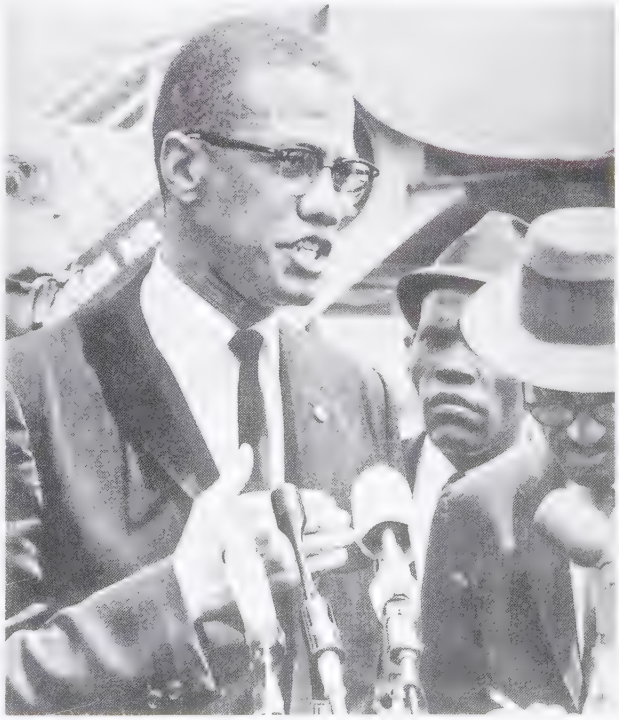
AP® EXAM TIP

Explain the divergent views of the civil rights movement that emerged after 1965.

In the early 1960s, the leading exponent of black nationalism was the **Nation of Islam**, which fused a rejection of Christianity with a strong philosophy of self-improvement. Black Muslims, as they were known, adhered to a strict code of personal behavior; men were recognizable by their dark suits, white shirts, and ties, women by their long dresses and head coverings. Black Muslims preached an apocalyptic brand of Islam, anticipating the day when Allah would banish the white "devils" and give the black nation justice. Although its full converts numbered only about ten thousand, the Nation of Islam had a wide popular following among African Americans in northern cities.

Malcolm X The most charismatic Black Muslim was Malcolm X (the *X* stood for his African family name, lost under slavery). A spellbinding speaker, Malcolm X preached a philosophy of militant separatism, although he advocated violence only for self-defense. Hostile to mainstream civil rights organizations, he caustically referred to the 1963 March on Washington as the "Farce on Washington." Malcolm X said plainly, "I believe in the brotherhood of man, all men, but I don't believe in brotherhood with anybody who doesn't want brotherhood with me." Malcolm X had little interest in changing the minds of hostile whites. Strengthening the black community, he believed, represented a surer path to freedom and equality.

In 1964, after a power struggle with founder Elijah Muhammad, Malcolm X broke with the Nation of Islam. While he



Malcolm X Until his murder in 1965, Malcolm X was the leading proponent of black nationalism in the United States. A brilliant and dynamic orator, Malcolm had been a minister in the Nation of Islam for nearly thirteen years before he broke with the Nation in 1964. His emphasis on black pride and self-help and his unrelenting criticism of white supremacy made him one of the freedom movement's most inspirational figures, both in life and well after his death. © Topham/The Image Work

remained a black nationalist, he moderated his antiwhite views and began to talk of a class struggle uniting poor whites and blacks. Following an inspiring trip to the Middle East, where he saw Muslims of all races worshipping together, Malcolm X formed the Organization of Afro-American Unity to promote black pride and to work with traditional civil rights groups. But he got no further. On February 21, 1965, Malcolm X was assassinated while delivering a speech in Harlem. Three Black Muslims were later convicted of his murder.

Black Power A more secular brand of black nationalism emerged in 1966 when SNCC and CORE activists, following the lead of Stokely Carmichael, began to call for black self-reliance under the banner of Black Power. Advocates of Black Power asked fundamental questions: If alliances with whites were necessary to achieve racial justice, as King believed they were, did that make African Americans dependent on the good intentions of whites? If so, could black people trust those good intentions in the long run? Increasingly, those inclined toward Black Power believed that African Americans should build economic and political power in their own communities. Such power would translate into a less dependent relationship with white America. "For once," Carmichael wrote, "black people are going to use the words they want to use — not the words whites want to hear."

Spurred by the Black Power slogan, African American activists turned their attention to the poverty and social injustice faced by so many black people. President Johnson had declared the War on Poverty, and black organizers joined, setting up day care centers, running community job training programs, and working to improve housing and health care in urban neighborhoods. In major cities such as Philadelphia, New York, Chicago, and Pittsburgh, activists sought to open jobs in police and fire departments and in construction and transportation to black workers, who had been excluded from these occupations for decades. Others worked to end police harassment — a major problem in urban black communities — and to help black entrepreneurs receive small-business loans. CORE leader Floyd McKissick explained, "Black Power is not Black Supremacy; it is a united Black Voice reflecting racial pride."

The attention to racial pride led some African Americans to reject white society and to pursue more authentic cultural forms. In addition to focusing on economic disadvantage, Black Power emphasized black pride and self-determination. Those subscribing to these beliefs wore African clothing, chose natural hairstyles, and celebrated black history, art, and literature. The Black Arts movement thrived, and musical tastes shifted from the crossover sounds of Motown to the soul music of Philadelphia, Memphis, and Chicago.

Black Panther Party One of the most radical nationalist groups was the **Black Panther Party**, founded in Oakland, California, in 1966 by two college students, Huey Newton and Bobby Seale. A militant organization dedicated to protecting African Americans from police violence, the Panthers took their cue from the slain Malcolm X. They vehemently opposed the Vietnam War and declared their affinity for Third World revolutionary movements and armed struggle (Map 26.5). In their manifesto, "What We Want, What We Believe," the Panthers outlined their Ten Point Program for black liberation.

The Panthers' organization spread to other cities in the late 1960s, where members undertook a wide range of community-organizing projects. Their free breakfast program for children and their testing program for sickle-cell anemia, an inherited disease with a high incidence among African Americans, were especially popular. However, the Panthers' radicalism and belief in armed self-defense resulted in violent clashes with police. Newton was charged with murdering a police officer, several Panthers were killed by police, and dozens went to prison. Moreover, under its domestic counterintelligence program, the Federal Bureau of Investigation (FBI) had begun disrupting party activities.

The Black Panther Party One of the most radical organizations of the 1960s, the Black Panther Party was founded in 1966 by Bobby Seale and Huey Newton (shown together in the photograph on the left) in Oakland, California. Its members carried weapons, advocated socialism, and fought police brutality in black communities, but they also ran into their own trouble with the law. Nevertheless, the party had great success in reaching ordinary people, often with programs targeted at the poor. On the right, party members distribute a free meal to the public in New Haven, Connecticut, in 1969. LEFT: © Bruno Barbey/Magnum Photos. RIGHT: David Fenton/Getty Images

Young Lords Among those inspired by the Black Panthers were Puerto Ricans in New York. Their vehicle was the **Young Lords Organization** (YLO), later renamed the Young Lords Party. Like the Black Panthers, YLO activists sought self-determination for Puerto Ricans, both those in the United States and those on the island in the Caribbean. In practical terms, the YLO focused on improving neighborhood conditions: city garbage collection was notoriously poor in East Harlem, where most Puerto Ricans lived, and slumlords had allowed the housing to become **squalid**. Women in the YLO were especially active, protesting sterilization campaigns against Puerto Rican women and fighting to improve access to health care. As was true of so many nationalist groups, immediate victories for the YLO were few, but their dedicated community organizing produced a generation of leaders (many of whom later went into politics) and awakened community consciousness.

The New Urban Politics Black Power also inspired African Americans to work within the political system. By the mid-1960s, black residents neared 50 percent of the population in several major American cities—such as Atlanta, Cleveland, Detroit, and Washington, D.C. Black Power in these cities was not abstract; it counted in real votes. Residents of Gary, Indiana, and Cleveland, Ohio, elected the first black mayors of large cities in 1967. Richard Hatcher in Gary and Carl Stokes in Cleveland helped forge a new urban politics in the United States. Their campaign teams registered thousands of black voters and made alliances with enough whites to create a working majority. Many saw Stokes's victory, in particular, as heralding a new day. As one of Stokes's campaign staffers said: "If Carl Stokes could run for mayor in the eighth largest city in America, then maybe who knows. We could be senators. We could be anything we wanted."

MAP 26.5 Decolonization and the Third World, 1943–1990
In the decades after World War II, African nations threw off the yoke of European colonialism. Some new nations, such as Ghana, the former British colony of Gold Coast, achieved independence rather peacefully. Others, such as Algeria and Mozambique, did so only after bloody anticolonial wars. American civil rights activists watched African decolonization with great enthusiasm, seeing the two struggles as linked. "Sure we identified with the blacks in Africa," civil rights leader John Lewis said. "Here were black people, talking of freedom and liberation and independence thousands of miles away." In 1960 alone, the year that student sit-ins swept across the American South, more than a dozen African nations gained independence.

Having met with some political success, black leaders gathered in Gary for the 1972 National Black Political Convention. In a meeting that brought together radicals, liberals, and centrists, debate centered on whether to form a third political party. Hatcher recalled that many in attendance believed that "there was going to be a black third party." In the end, however, delegates decided to "give the Democratic Party one more chance." Instead of creating a third party, the convention issued the National Black Political Agenda, which included calls for community control of schools in black neighborhoods, national health insurance, and the elimination of the death penalty.

Democrats failed to enact the National Black Political Agenda, but African Americans were increasingly integrated into American political institutions. By the end of the century, black elected officials had become commonplace in major American cities. There were forty-seven African American big-city mayors by the 1990s, and blacks had led most of the nation's most prominent cities: Atlanta, Chicago, Detroit, Los Angeles, New York, Philadelphia, and Washington, D.C. These politicians had translated black power not into a wholesale rejection of white society but into a revitalized liberalism that would remain an **indelible** feature of urban politics for the rest of the century.

AP PRACTICES & SKILLS

POINT OF VIEW

What did Black Power and black nationalism represent to many African Americans?

Urban Disorder

Black Power was not, fundamentally, a violent political ideology. But violence did play a decisive role in the politics of black liberation in the mid-1960s. Too many Americans, white and black, had little knowledge or understanding of the rage that existed just below the surface in many poor northern black neighborhoods. That rage boiled over in a wave of riots that struck the nation's cities in mid-decade. The first "long hot

summer" began in July 1964 in New York City when police shot a black criminal suspect in Harlem. Angry youths looted and rioted there for a week. Over the next four years, the volatile issue of police brutality set off riots in dozens of cities.

In August 1965, the arrest of a young black motorist in the Watts section of Los Angeles sparked six days of rioting that left thirty-four people dead. "There is a different type of Negro emerging," one riot participant told investigators. "They are not going to wait for the evolutionary process for their rights to be a man." The riots of 1967, however, were the most serious, engulfing twenty-two cities in July and August. Forty-three people were killed in Detroit alone, nearly all of them black, and $50 million worth of property was destroyed. President Johnson called in the National Guard and U.S. Army troops, many of them having just returned from Vietnam, to restore order.

AP® EXAM TIP

Summarize the ways that social and political unrest impacted the civil rights movement.

Johnson, who believed that the Civil Rights Act and the Voting Rights Act had immeasurably helped African Americans, was stunned by the rioting. **Despondent** at the news from Watts, "he refused to look at the cables from Los Angeles," recalled one aide. Virtually all black leaders condemned the rioting, though they understood its origins in poverty and deprivation. At a meeting in Watts, Martin Luther King Jr. admitted that he had "failed to take the civil rights movement to the masses of the people." His appearance appeased few. "We don't need your dreams; we need jobs!" one heckler shouted at King.

Following the gut-wrenching riots in Detroit and Newark in 1967, Johnson appointed a presidential commission, headed by Illinois governor Otto Kerner, to investigate the causes of the violence. Released in 1968, the Kerner Commission Report was a searing look at race in America, the most honest and forthright government document about race since the Presidential Committee on Civil Rights' 1947 report "To Secure These Rights." "Our nation is moving toward two societies," the Kerner Commission Report concluded, "one black, one white—separate and unequal." The report did not excuse the brick-throwing, firebombing, and looting of the previous summers, but it placed the riots in sociological context. Shut out of white-dominated society, impoverished African Americans felt they had no stake in the social order.

Stirred by turmoil in the cities, and seeing the limitations of his civil rights achievements, Martin Luther King Jr. began to expand his vision beyond civil rights to confront the deep-seated problems of poverty and racism in America as a whole. He criticized President Johnson and Congress for prioritizing the war in Vietnam over the fight against poverty at home, and he planned a massive movement called the Poor People's Campaign to fight economic injustice. To advance that cause, he went to Memphis, Tennessee, to support a strike by predominantly black sanitation workers. There, on April 4, 1968, he was assassinated by escaped white convict James Earl Ray. King's death set off a further round of urban rioting, with major violence breaking out in more than a hundred cities.

Tragically, King was murdered before achieving the transformations he sought: an end to racial injustice and a solution to poverty. The civil rights movement had helped set in motion permanent, indeed revolutionary, changes in American race relations. Jim Crow segregation ended, federal legislation ensured black Americans' most basic civil rights, and the white monopoly on political power in the South was broken. However, by 1968, the fight over civil rights had also divided the nation. The Democratic Party was splitting, and a new conservatism was gaining strength. Many whites felt that the issue of civil rights was receiving too much attention, to the detriment of other national concerns. The riots of 1965, 1967, and 1968 further alienated many whites, who blamed the violence on the inability of Democratic officials to maintain law and order.

Rise of the Chicano Movement

Mexican Americans had something of a counterpart to Martin Luther King Jr.: Cesar Chavez. In Chavez's case, however, economic struggle in community organizations and the labor movement had shaped his approach to mobilizing society's disadvantaged. He

Dolores Huerta and Cesar Chavez Dolores Huerta and Cesar Chavez were two of the leading Mexican American civil rights and social justice advocates of the 1960s. Huerta, influenced by community-organizing traditions, founded two social justice and workers' rights organization before she joined with Chavez in 1962 to cofound the United Farm Workers (UFW), a union of primarily Mexican American agricultural laborers in California. Chavez, influenced equally by the Catholic Church and Mahatma Gandhi, and Huerta led the UFW's massive national grape boycott, an attempt by the UFW to force the nation's grape growers — and, by extension, the larger agriculture industry — to improve wages and working conditions and to bargain in good faith with the union.

and Dolores Huerta had worked for the Community Service Organization (CSO), a California group founded in the 1950s to promote Mexican political participation and civil rights. Leaving that organization in 1962, Chavez concentrated on the agricultural region around Delano, California. With Huerta, he organized the **United Farm Workers (UFW)**, a union for migrant workers.

Huerta was a brilliant organizer, but the deeply spiritual and **ascetic** Chavez embodied the moral force behind what was popularly called La Causa. A 1965 grape pickers' strike led the UFW to call a nationwide boycott of table grapes, bringing Chavez huge publicity and backing from the AFL-CIO. In a bid for attention to the struggle, Chavez staged a hunger strike in 1968, which ended dramatically after twenty-eight days with Senator Robert F. Kennedy at his side to break the fast. Victory came in 1970 when California grape growers signed contracts recognizing the UFW.

Mexican Americans shared many economic circumstances with African Americans — especially access to jobs — but they also had unique concerns: the status of the Spanish language in schools, for instance, and immigration policy. Mexican Americans had been politically active since the 1940s, aiming to surmount factors that obstructed their political involvement: poverty, language barriers, and discrimination. Their efforts began to pay off in the 1960s, when the Mexican American Political Association (MAPA) mobilized support for John F. Kennedy and worked successfully with other organizations to elect Mexican American candidates such as Edward Roybal of California and Henry Gonzalez of Texas to Congress. Two other organizations, the **Mexican American Legal Defense and Education Fund (MALDEF)** and the Southwest Voter Registration and Education Project, carried the fight against discrimination to Washington, D.C., and mobilized Mexican Americans into an increasingly powerful voting bloc.

Younger Mexican Americans grew impatient with civil rights groups such as MAPA and MALDEF, however. The barrios of Los Angeles and other western cities produced the militant Brown Berets, modeled on the Black Panthers (who wore black berets). Rejecting their elders' assimilationist approach (that is, a belief in adapting to Anglo society), fifteen hundred Mexican American students met in Denver in 1969 to hammer out a new political and cultural agenda. They proclaimed a new term, *Chicano* (and its feminine form, *Chicana*), to replace *Mexican American*, and later organized a political party, **La Raza Unida** (People United), to promote Chicano interests. Young Chicana feminists formed a number of organizations, including Las Hijas (The Daughters), that organized women both on college campuses and in the barrios. In California and many southwestern states, students staged demonstrations to press for bilingual education, the hiring of more Chicano teachers, and the creation of Chicano studies programs. By the 1970s, dozens of such programs were offered at universities throughout the region.

The American Indian Movement

AP® EXAM TIP

Compare the goals and accomplishments of the African American, Chicano, and American Indian civil rights movements.

American Indians, inspired by the Black Power and Chicano movements, organized to address their unique circumstances. Numbering nearly 800,000 in the 1960s, native people were exceedingly diverse — divided by language, tribal history, region, and degree of integration into American life. As a group, they shared a staggering unemployment rate — ten times the national average — and were the worst off in housing, disease rates, and access to education. Native people also had an often troubling relationship with the

federal government. In the 1960s, the prevailing spirit of protest swept through Native communities. Young militants challenged their elders in the National Congress of American Indians. Beginning in 1960, the National Indian Youth Council (NIYC), under the slogan "For a Greater Indian America," promoted the ideal of Native Americans as a single ethnic group. The effort to both unite Indians and celebrate individual tribal culture proved a difficult balancing act.

The NIYC had substantial influence within tribal communities, but two other organizations, the militant Indians of All Tribes (IAT) and the **American Indian Movement (AIM)**, attracted more attention in the larger society. These groups embraced the concept of Red Power, and beginning in 1968 they staged escalating protests to draw attention to Indian concerns, especially the concerns of urban Indians, many of whom had been encouraged, or forced, to leave reservations by the federal government in earlier decades. In 1969, members of the IAT occupied the deserted federal penitentiary on Alcatraz Island in San Francisco Bay and proclaimed: "We will purchase said Alcatraz Island for twenty-four dollars in glass beads and red cloth, a precedent set by the white man's purchase of a similar island [Manhattan] about 300 years ago." In 1972, AIM members joined the Trail of Broken Treaties, a march sponsored by a number of Indian groups. When AIM activists seized the headquarters of the hated Bureau of Indian Affairs in Washington, D.C., and ransacked the building, older tribal leaders denounced them.

However, AIM managed to focus national media attention on Native American issues with a siege at Wounded Knee, South Dakota, in February 1973. The site of the infamous 1890 massacre of the Sioux by the U.S. military, Wounded Knee was situated on the Pine Ridge Reservation, where young AIM activists had cultivated ties to sympathetic elders. For more than two months, AIM members occupied a small collection of buildings, surrounded by a cordon of FBI agents and U.S. marshals. Several gun battles left two dead, and the siege was finally brought to a negotiated end. Although upsetting to many white onlookers and Indian elders alike, AIM protests attracted widespread mainstream media coverage and spurred government action on tribal issues.

Native American Activism Founded in 1968, the American Indian Movement (AIM) was among a variety of Native American groups fighting for indigenous rights in the 1960s and 1970. In 1969, AIM was part of a coalition of Native peoples (called Indians of All Tribes) that occupied Alcatraz Island in San Francisco Bay, claiming the land under a nineteenth-century treaty. In 1972, AIM members briefly occupied the Bureau of Indian Affairs in Washington, D.C. And in 1973, AIM activists occupied the town of Wounded Knee, South Dakota, on the Pine Ridge Indian Reservation, one of the poorest such Native reservations in the country. Pictured here is a guard looking down on the town from an occupied Catholic Church. Wounded Knee had great symbolic significance in Indian Country, because a massacre by the U.S. Army in 1890 had killed more than 150 Lakota people (some historians place the estimated number of victims at twice that figure). Dave Bu[illegible] Getty Images

IN YOUR OWN WORDS **What social conditions prompted many Americans to seek remedies beyond formal legal equality on the basis of race? How successful were those remedies?**

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

What did the Chicano and American Indian movements have in common with the black freedom movement?

To read the Indians of All Tribes proclamation, along with other primary sources from this period, see ***Sources for America's History***.

SUMMARY

African Americans and others who fought for civil rights from World War II through the early 1970s sought equal rights and economic opportunity. That quest was also inspired by various forms of nationalism that called for self-determination for minority groups. For most of the first half of the twentieth century, African Americans faced a harsh Jim Crow system in the South and a segregated, though more open, society in the North. Segregation was maintained by a widespread belief in black inferiority and by a southern political system that denied African Americans the vote. In the Southwest and

West, Mexican Americans, Native Americans, and Americans of Asian descent faced discriminatory laws and social practices that marginalized them.

The civil rights movement attacked racial inequality in three ways. First, the movement sought equality under the law for all Americans, regardless of race. This required patient work through the judicial system and the more arduous task of winning congressional legislation, such as the Civil Rights Act of 1964 and the Voting Rights Act of 1965. Second, grassroots activists, using nonviolent protest, pushed all levels of government (from city to federal) to abide by Supreme Court decisions (such as *Brown v. Board of Education*) and civil rights laws. Third, the movement worked to open economic opportunity for minority populations. This was embodied in the 1963 March on Washington for Jobs and Freedom. Ultimately, the civil rights movement successfully established the principle of legal equality, but it faced more difficult problems in fighting poverty and creating widespread economic opportunity.

The limitations of the civil rights model led black activists — along with Mexican Americans, Native Americans, and others — to adopt a more nationalist stance after 1966. Nationalism stressed the creation of political and economic power in communities of color, the celebration of racial heritage, and the rejection of white cultural standards.

CHAPTER 26 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. What factors best explain why and how the civil rights movement developed between 1941 and 1954?
2. How did the civil rights movement achieve its major legal and legislative victories between 1954 and 1965?
3. What social conditions prompted many Americans to seek remedies beyond formal legal equality on the basis of race? How successful were those remedies?
4. One of the most significant themes of the period from 1945 to the 1980s is the growth of the power of the federal government. (See "Politics and Power" and "American and National Identity" on the thematic timeline on p. 746.) In what ways is the civil rights movement also part of that story?

AP® TERMS TO KNOW

Identify and explain the significance of each term below.

Key Concepts and Events

rights liberalism (p. 810)

Brotherhood of Sleeping Car Porters (p. 814)

Congress of Racial Equality (CORE) (p. 815)

"To Secure These Rights" (p. 816)

States' Rights Democratic Party (p. 817)

American GI Forum (p. 819)

Community Services Organization (CSO) (p. 819)

Brown v. Board of Education of Topeka (p. 821)

Montgomery Bus Boycott (p. 824)

Southern Christian Leadership Conference (SCLC) (p. 824)

Student Nonviolent Coordinating Committee (SNCC) (p. 824)

March on Washington (p. 830)

Civil Rights Act of 1964 (p. 830)

Mississippi Freedom Democratic Party (p. 831)

Voting Rights Act of 1965 (p. 834)

black nationalism (p. 835)

Nation of Islam (p. 835)

Black Panther Party (p. 836)

Young Lords Organization (p. 837)

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. Why is the decade of the 1960s often referred to as the "second Reconstruction"? Think broadly about the century between the end of the Civil War in 1865 and the passage of the Voting Rights Act of 1965. What are the key turning points in African American history in that long period?
2. Examine the photograph of a confrontation at North Little Rock High School on page 822. How does this photograph reveal the role that the media played in the civil rights struggle? Can you find similar evidence in other photographs from this chapter?

KEY TURNING POINTS

Refer to the chapter chronology on page 812 for help in answering the question below.

The history of the civil rights movement is more than a list of significant events. Pick two or three events from this timeline and explain how their timing and the broader historical context contributed to the precise role each played in the movement as a whole.

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS

Choose the correct answer for each question.

Questions 1–3 refer to the excerpt below.

> "Little Rock's Central High School is still under military occupation. The troops are still there — on the campus, in the building.
>
> The troops are still there, despite the fact that their presence is resented by the big majority of the students, the parents, and the people in general throughout the South.
>
> The troops continue to stand guard during school hours, despite the fact that there is no law or precedent — Federal or State — that permits them to do so.
>
> There is not even an order, or so much as a sanction, from the U.S. Supreme Court that makes its own 'laws' on mixing of races in the public schools. . . .
>
> Education, or attempted education, under the scrutiny of armed troops is un-American, un-Godly. . . .
>
> How much longer will Congress sit idly by and let such brazen violation of American principle and law continue on and on and on?"
>
> Editorial — "Anti-Little Rock Intervention" by Karr Shannon in *Arkansas Democrat* (March 10, 1958). Reproduced with permission.

1. In making mention of "'laws' on mixing of races," the author refers most directly to the Supreme Court's
   a. *Brown v. Board of Education* case.
   b. Dred Scott case.
   c. *Plessy v. Ferguson* case.
   d. rulings against New Deal programs.
2. Shannon's ideas show the greatest similarity to
   a. antebellum advocates of states' rights.
   b. proponents of Reconstruction in the 1860s and 1870s.
   c. supporters of desegregation of the United States armed forces in the 1940s.
   d. those calling for a Great Society in the 1960s.
3. Support for Shannon's ideas would most likely have been greatest in
   a. newly politicized Protestant evangelical organizations.
   b. movements for Hispanic rights.
   c. groups organizing for gay and lesbian rights.
   d. increasingly activist environmental organizations.

Questions 4–6 refer to the excerpt below.

> "This is our basic conclusion: our nation is moving toward two societies, one black, one white — separate and unequal.
>
> "Reaction to last summer's disorders has quickened the movement and deepened the division. . . .
>
> The alternative is . . . the realization of common opportunities for all within a single society.
>
> This alternative will require a commitment to national action — compassionate, massive and sustained, backed by the resources of the most powerful and richest nation on earth. From every American it will require new attitudes, new understanding, and, above all, new will. . . .
>
> What white Americans have never fully understood — but what the Negro can never forget — is that white society is deeply implicated in the ghetto. White institutions created it, white institutions maintain it, and white society condones it. . . .
>
> We cannot escape responsibility for choosing the future of our metropolitan areas and the human relations which develop within them. . . .
>
> Excerpt from the National Advisory Committee on Civil Disorders, 1968

4. The "division" after World War II referred to in the excerpt resulted most directly from
   a. suburbanization.
   b. economic growth.
   c. growing public confidence in government's ability to solve social problems.
   d. the baby boom.
5. The excerpt most directly demonstrates that after World War II
   a. liberals sought greater changes to society.
   b. conservatives resisted a perceived moral and cultural decline.
   c. Lyndon Johnson's Great Society program ended social conflict over race.
   d. free trade agreements improved social mobility in the United States.
6. The excerpt can best be understood as originating most directly from
   a. persistent economic equality.
   b. nationwide efforts of the Ku Klux Klan.
   c. the protest tactics of the civil rights movement.
   d. political efforts of newly politicized Protestant evangelicalism.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

> "The conflict between [Martin Luther King Jr. and Ella Baker] reveals more fundamental conflicts between black politics and African American culture over the meanings of American democracy and the pathways toward social change. . . . Baker described [King] as a pampered member of Atlanta's black elite . . . a member of a coddled 'silver spoon brigade.' . . . In Baker's eyes, King did not identify closely enough with the people he sought to lead. He did not situate himself among them but remained above them. . . . Baker and King . . . translated religious faith into their political identities in profoundly different ways. Above all, they defined the confluence of their roles as individuals and their roles as participants in a mass movement for social change quite distinctly. Baker was a militant egalitarian, and King was a sophisticated southern Baptist preacher."
>
> Barbara Ransby, *Ella Baker and the Black Freedom Movement*, 2003

> "By 1965, King's radical voice rang more clearly when he confessed that his dream had turned into a 'nightmare.' The dream shattered when whites murdered voting rights workers in Alabama, when police battled blacks in Los Angeles, when he met jobless and "hopeless" blacks on desperate Chicago streets, and when he saw hunger and poverty in rural Mississippi and Appalachia. But King picked up the shards of his shattered dreams and reassembled them into more radical visions of emancipation for all poor people. . . . Dreams of decent jobs, affordable integrated housing, and adequate family incomes remained central to King's public ministry until his death."
>
> Thomas F. Jackson, *From Civil Rights to Human Rights: Martin Luther King, Jr., and the Struggle for Economic Justice*, 2013

1. Using the two excerpts above, answer (a), (b), and (c).
   a. Briefly explain ONE major difference between Ransby's and Jackson's historical interpretations of Martin Luther King Jr.'s leadership within the civil rights movement.
   b. Briefly explain how ONE specific event, development, or circumstance not directly mentioned in the excerpts could be used to support Ransby's argument.
   c. Briefly explain how ONE specific event, development, or circumstance not directly mentioned in the excerpts could be used to support Jackson's argument.

2. Answer (a), (b), and (c).
   a. Briefly explain why ONE of the following developments was the most significant factor in advancing racial equality in the U.S. from 1950 to 1970.
      - The Montgomery Bus Boycott
      - The Voting Rights Act of 1965
      - The *Brown v. Board of Education* decision
   b. Explain ONE specific historical event or development to support your argument in (a).
   c. Briefly explain why ONE of the other options is less convincing as a significant factor in advancing racial equality.

3. Answer (a), (b), and (c).
   a. Briefly explain ONE important historical difference in the civil rights struggle of American Indians from the civil rights struggle of Asian Americans in the period 1941–1973.
   b. Briefly explain ONE important historical similarity between the civil rights struggle of American Indians to the civil rights struggle of Asian Americans in the period 1941–1973.
   c. Briefly explain ONE important historical factor that accounts for EITHER the similarity OR the difference that you indicated in (a) or (b).

AP® LEARNING FOCUS

What were liberalism's social and political achievements in the 1960s, and how did debates over liberal values contribute to conflict at home and reflect war abroad?

The civil rights movement stirred American liberals and pushed them to launch bold new government initiatives to advance racial equality. That progressive spirit inspired an expansive reform agenda that came to include women's rights, new social programs for the poor and the aged, job training, environmental laws, and other educational and social benefits for the middle class. All told, Congress passed more liberal legislation between 1964 and 1972 than in any period since the 1930s. The great bulk of it came during the 1965–1966 legislative session, one of the most active in American history. Liberalism was at high tide.

It did not stay there long. Liberalism quickly came under assault from two directions. First, young, left-leaning activists became frustrated with slow progress on civil rights and rebelled against the Vietnam War. Some of them had been among the young idealists inspired by President John F. Kennedy's inaugural address and the civil rights movement. Now they rejected everything that Cold War liberalism stood for. Their rebellion was symbolized by protests at the 1968 Democratic National Convention in Chicago, where police teargassed and clubbed antiwar demonstrators, who chanted (as the TV cameras rolled), "The whole world is watching!" Inside the convention hall, the proceedings were chaotic, the atmosphere poisonous, the delegates bitterly divided over Vietnam.

A second assault on liberalism came from conservatives, who found their footing after being marginalized during the 1950s. Conservatives opposed the dramatic expansion of the federal government under President Lyndon B. Johnson and disdained the "permissive society" they believed liberalism had encouraged. Advocating law and order, belittling welfare, and resisting key civil rights reforms, conservatives leaped back to political life in the sixties. Their champion was Barry Goldwater, a Republican senator from Arizona, who warned that "a government big enough to give you everything you want is also big enough to take away everything you have."

The clashing of left, right, and center made the years between the inauguration of President Kennedy in 1961 and the landslide reelection of Richard Nixon in 1972 one of the most contentious, complicated, and explosive eras in American history. There were thousands of marches and demonstrations; massive new federal programs aimed at achieving civil rights, ending poverty, and extending the welfare state; and new voices among women, African Americans, Latinos, and gay men and lesbians demanding to be heard. With heated, **vitriolic** rhetoric on all sides, these developments overlapped with political assassinations and violence both overseas and at home. In this chapter, we undertake to explain how the rekindling of liberal reform under the twin **auspices** of the civil rights movement and the leadership of President Johnson gave way to a profound liberal crisis and the resurgence of conservatism.

"I Want Out" Protest movements of all kinds shook the foundations of American society and national politics in the 1960s. No issue was more controversial and divisive than the war in Vietnam. Priva

CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and identify the links among related events.

1961
- John F. Kennedy inaugurated as president

1963
- John F. Kennedy assassinated; Lyndon B. Johnson assumes presidency

1964
- Civil Rights Act
- Economic Opportunity Act inaugurates War on Poverty
- Free Speech Movement at Berkeley
- Gulf of Tonkin Resolution

1965
- Immigration Act abolishes national quota system
- Medicare and Medicaid programs established
- Operation Rolling Thunder escalates bombing campaign (March)
- First U.S. combat troops arrive in Vietnam

1967
- Counterculture's "Summer of Love"
- 100,000 march in antiwar protest in Washington, D.C. (October)

1968
- Tet offensive begins (January)
- Martin Luther King Jr. and Robert F. Kennedy assassinated
- Women's liberation protest at Miss America pageant
- Riot at Democratic National Convention in Chicago (August)
- Richard Nixon elected president

1969
- Stonewall riots (June)

1970
- National Women's Strike for Equality

1971
- *Swan v. Charlotte-Mecklenburg* approves countywide busing

1972

1973
- Paris Peace Accords end Vietnam War

1974
- *Milliken v. Bradley* limits busing to school district boundaries

1975
- Vietnam reunified under Communist rule

Liberalism at High Tide

To see a longer excerpt from President Johnson's "Great Society" speech, along with other primary sources from this period, see ***Sources for America's History***.

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

In May 1964, Lyndon B. Johnson, president for barely six months, delivered the commencement address at the University of Michigan, where he offered a grand and inspirational vision of a new liberal age. "We have the opportunity to move not only toward the rich society and the powerful society," Johnson continued, "but upward to the **Great Society**." As the graduates listened, Johnson spelled out what he meant: "The Great Society rests on abundance and liberty for all. It demands an end to poverty and racial injustice." Even this, Johnson declared, was just the beginning. He would push to renew American education, rebuild the cities, and restore the natural environment. Ambitious, even audacious, Johnson's vision was a New Deal for a new era. A tragic irony, however, was that he held the presidency at all.

John F. Kennedy's Promise

In 1961, three years before Johnson's Great Society speech, John F. Kennedy declared at his presidential inauguration: "Let the word go forth from this time and place, to friend and foe alike, that the torch has been passed to a new generation of Americans." He challenged his fellow citizens to "ask what you can do for your country," a call to service that inspired many Americans. The British journalist Henry Fairley called Kennedy's activism "the politics of expectation." Over time, the expectations Kennedy embodied, combined with his ability to inspire a younger generation, encouraged the emerging spirit of liberal reform.

Kennedy's legislative record did not live up to his promising image. This was not entirely his fault; congressional partisanship and resistance stymied many presidents in the twentieth century. Kennedy's domestic advisors devised bold plans for health insurance for the aged, a new antipoverty program, and a tax cut. After enormous pressure from Martin Luther King Jr. and other civil rights leaders — and pushed by the demonstrations in Birmingham, Alabama, in 1963 — they added a civil rights bill. None of these initiatives went anywhere in the Senate, where powerful conservative interests practiced an old legislative art: delay, delay, delay. All Kennedy's bills were at a virtual standstill when tragedy struck.

On November 22, 1963, Kennedy was in Dallas, Texas, on a political trip. As he and his wife, Jacqueline, rode in an open car past the Texas School Book Depository, he was shot through the head and neck by a sniper. He died within the hour. (The accused

killer, twenty-four-year-old Lee Harvey Oswald, was himself killed while in custody a few days later by an assassin, a Dallas nightclub owner named Jack Ruby.) Before Air Force One left Dallas to take the president's body back to Washington, a grim-faced Lyndon Johnson was sworn in as Kennedy's successor.

Kennedy's youthful image, the trauma of his assassination, and the nation's sense of loss contributed to a powerful Kennedy mystique. His canonization after death capped what had been an extraordinarily stage-managed presidency. An admiring country saw in Jack and Jackie Kennedy an ideal American marriage (though JFK was, in fact, an obsessive womanizer); in Kennedy the epitome of robust good health (though he was actually afflicted by Addison's disease); and in the Kennedy White House a glamorous world of high fashion and celebrity. No other presidency ever matched the Kennedy aura, but every president after him embraced the idea that image mattered as much as reality in conducting a politically effective presidency.

Lyndon B. Johnson and the Great Society

In many ways, Lyndon Johnson was the opposite of Kennedy. A seasoned Texas politician and longtime Senate leader, Johnson was most at home in the back rooms of power. He was a rough-edged character who had scrambled his way up, with few scruples, to wealth and political eminence. But he never forgot his modest, hill-country origins or lost his sympathy for the downtrodden. Johnson lacked Kennedy's style, but he rose to the political challenge after Kennedy's assassination, applying his astonishing energy and negotiating skills to revive several of Kennedy's stalled programs, and many more of his own, in the ambitious Great Society.

On assuming the presidency, Johnson promptly pushed for civil rights legislation as a memorial to his slain predecessor. His motives were complex. As a southerner who had previously opposed civil rights for African Americans, Johnson wished to prove that he was more than a regional figure—he would be the president of all the people. He also wanted to make a mark on history, telling Martin Luther King Jr. and other black leaders to lace up their sneakers because he would move so fast on civil rights they would be running to catch up. Politically, the choice was risky. Johnson would please the Democratic Party's liberal wing, but because most northern African Americans already voted Democratic, the party would gain few additional votes. Moreover, southern white Democrats would likely revolt, dividing the party at a time when Johnson's legislative agenda most required unanimity. But Johnson pushed ahead, and the 1964 Civil Rights Act stands, in part, as a testament to the president's political risk-taking.

AP® EXAM TIP

Recognizing the expression of liberal ideas in Lyndon Johnson's Great Society is critical for success on the AP® exam.

More than civil rights, what drove Johnson hardest was his determination to "end poverty in our time." The president called it a national disgrace that in the midst of plenty, one-fifth of all Americans—hidden from most people's sight in Appalachia, urban ghettos, migrant labor camps, and Indian reservations—lived in poverty. But, Johnson declared, "for the first time in our history, it is possible to conquer poverty."

The Great Society President Lyndon Johnson toured poverty-stricken regions of the country in 1964. Here he visits with Tom Fletcher, a father of eight children in Martin County, Kentucky. Johnson envisioned a dramatic expansion of liberal social programs, both to assist the needy and to strengthen the middle class, that he called the Great Society. Bettmann Getty Images

The **Economic Opportunity Act** of 1964, which created a series of programs to reach these Americans, was the president's answer — what he called the War on Poverty. This legislation included several different initiatives. Head Start provided free nursery schools to prepare disadvantaged preschoolers for kindergarten. The Job Corps and Upward Bound provided young people with training and employment. Volunteers in Service to America (VISTA), modeled on the Peace Corps, offered technical assistance to the urban and rural poor. An array of regional development programs focused on spurring economic growth in impoverished areas. On balance, the 1964 legislation provided services to the poor rather than jobs, leading some critics to charge the War on Poverty with doing too little.

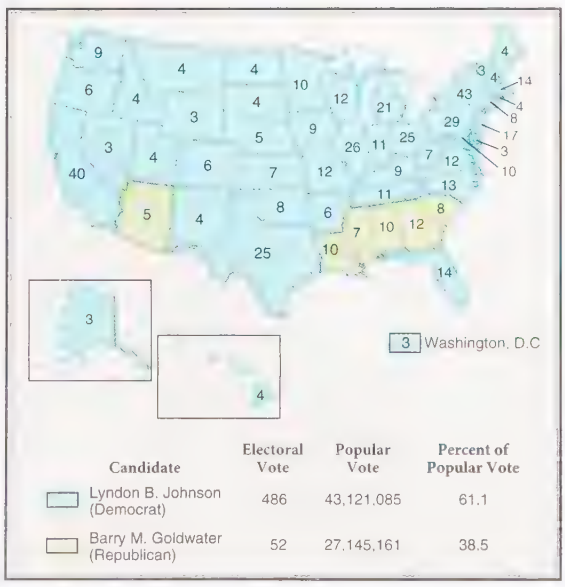
AP® EXAM TIP

Evaluate the impact of federal legislation designed to address social and economic inequality.

The 1964 Election With the Civil Rights Act passed and his War on Poverty initiatives off the ground, Johnson turned his attention to the upcoming presidential election. Not content to govern in Kennedy's shadow, he wanted a national mandate of his own. Privately, Johnson saw himself less as akin Kennedy than as the heir of Franklin Roosevelt, whose political skills he had long admired, and the expansive liberalism of the 1930s. He reminded his advisors never to forget "the meek and the humble and the lowly," because "President Roosevelt never did."

In the 1964 election, Johnson faced Republican Barry Goldwater of Arizona. An archconservative, Goldwater ran on an anticommunist, antigovernment platform, offering "a choice, not an echo" — meaning he represented a genuinely conservative alternative to liberalism rather than the echo of liberalism offered by the moderate wing of the Republican Party (Chapter 24). Goldwater campaigned against the Civil Rights Act of 1964 and promised a more vigorous Cold War foreign policy. Among those supporting him was former actor Ronald Reagan, whose speech on behalf of Goldwater at the Republican convention, called "A Time for Choosing," made him a rising star in the party.

But Goldwater's strident foreign policy alienated voters. "Extremism in the defense of liberty is no vice," he told Republicans at the convention. Moreover, there remained strong national sentiment for Kennedy. Telling Americans that he was running to fulfill Kennedy's legacy, Johnson and his running mate, Hubert H. Humphrey of Minnesota, won in a landslide (Map 27.1). In the long run, Goldwater's candidacy marked the beginning of a grassroots conservative revolt that would eventually transform the Republican Party. In the short run, however, Johnson's sweeping victory gave him a popular mandate and, equally important, congressional majorities that rivaled FDR's in 1935 — just what he and liberal Democrats needed to push the Great Society forward (Table 27.1).



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Lyndon B. Johnson (Democrat)	486	43,121,085	61.1
Barry M. Goldwater (Republican)	52	27,145,161	38.5

MAP 27.1 The Presidential Election of 1964
This map reveals how one-sided was the victory of Lyndon Johnson over Barry Goldwater in 1964. Except for Arizona, his home state, Goldwater won only five states in the Deep South — not of much immediate consolation to him, but a sure indicator that the South was cutting its historic ties to the Democratic Party. Moreover, although soundly rejected in 1964, Goldwater's far-right critique of "big government" laid the foundation for a Republican resurgence in the 1980s.

Great Society Initiatives One of Johnson's first successes was breaking a congressional deadlock on education and health care. Passed in April 1965, the Elementary and Secondary Education Act authorized $1 billion in federal funds for teacher training and other educational programs. Standing in his old Texas schoolhouse, Johnson, a former teacher, said: "I believe no law I have signed or will ever sign means more to the future of America." Six months later, Johnson signed the Higher Education Act, providing federal scholarships for college students. Johnson also had the votes he needed to achieve some form of national health insurance. That year, he won passage of two new programs: **Medicare**, a health plan for the elderly funded by a surcharge on Social Security payroll taxes, and **Medicaid**, a health plan for the poor paid for by general tax revenues and administered by the states.

The Great Society's agenda included environmental reform as well: an expanded national park system, improvement of the nation's air and water, protection for endangered species, stronger land-use

TABLE 27.1

Major Great Society Legislation

Civil Rights		
1964	Twenty-fourth Amendment	Outlawed poll tax in federal elections
	Civil Rights Act	Banned discrimination in employment and public accommodations on the basis of race, religion, sex, or national origin
1965	Voting Rights Act	Outlawed literacy tests for voting; provided federal supervision of registration in historically low-registration areas
Social Welfare		
1964	Economic Opportunity Act	Created Office of Economic Opportunity (OEO) to administer War on Poverty programs such as Head Start, Job Corps, and Volunteers in Service to America (VISTA)
1965	Medical Care Act	Provided medical care for the poor (Medicaid) and the elderly (Medicare)
1966	Minimum Wage Act	Raised hourly minimum wage from $1.25 to $1.40 and expanded coverage to new groups
Education		
1965	Elementary and Secondary Education Act	Granted federal aid for education of poor children
	National Endowment for the Arts and Humanities	Provided federal funding and support for artists and scholars
	Higher Education Act	Provided federal scholarships for postsecondary education
Housing and Urban Development		
1964	Urban Mass Transportation Act	Provided federal aid to urban mass transit
	Omnibus Housing Act	Provided federal funds for public housing and rent subsidies for low-income families
1965	Housing and Urban Development Act	Created Department of Housing and Urban Development (HUD)
1966	Metropolitan Area Redevelopment and Demonstration Cities Acts	Designated 150 "model cities" for combined programs of public housing, social services, and job training
Environment		
1964	Wilderness Preservation Act	Designated 9.1 million acres of federal lands as "wilderness areas," barring future roads, buildings, or commercial use
1965	Air and Water Quality Acts	Set tougher air quality standards; required states to enforce water quality standards for interstate waters
Miscellaneous		
1964	Tax Reduction Act	Reduced personal and corporate income tax rates
1965	Immigration Act	Abandoned national quotas of 1924 law, allowing more non-European immigration
	Appalachian Regional and Development Act	Provided federal funding for roads, health clinics, and other public works projects in economically depressed regions

planning, and highway beautification. Hardly pausing for breath, Johnson oversaw the creation of the Department of Housing and Urban Development (HUD); won funding for hundreds of thousands of units of public housing; made investments in urban rapid transit such as the new Washington, D.C., Metro and the Bay Area Rapid Transit (BART) system in San Francisco; ushered child safety and consumer protection laws

through Congress; and helped create the National Endowment for the Arts and the National Endowment for the Humanities to support the work of artists, writers, and scholars.

It even became possible, at this moment of reform zeal, to tackle the nation's discriminatory immigration policy. The Immigration Act of 1965 abandoned the quota system that favored northern Europeans, replacing it with numerical limits that did not discriminate among nations. To promote family reunification, the law also stipulated that close relatives of legal residents in the United States could be admitted outside the numerical limits, an exception that especially benefitted Asian and Latin American immigrants. Since 1965, as a result, immigrants from those regions have become increasingly prominent in American society (Chapter 30).

AP® EXAM TIP

Evaluate the response of conservative critics to Great Society programs.

Assessing the Great Society The Great Society enjoyed mixed results. The proportion of Americans living below the poverty line dropped from 20 percent to 13 percent between 1963 and 1968 (Figure 27.1). Medicare and Medicaid, the most enduring of the Great Society programs, helped millions of elderly and poor citizens afford necessary health care. Further, as millions of African Americans moved into the middle class, the black poverty rate fell by half. Liberals believed they were on the right track.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

What new roles did the federal government assume under Great Society initiatives, and how did they extend the New Deal tradition?

Conservatives, however, gave more credit for these changes to the decade's booming economy than to government programs. Indeed, conservative critics accused Johnson and other liberals of believing that every social problem could be solved with a government program. In the final analysis, the Great Society dramatically improved the financial situation of the elderly, reached millions of children, and increased the racial diversity of American society and workplaces. However, entrenched poverty remained, racial segregation in the largest cities worsened, and the national distribution of wealth remained highly skewed. In relative terms, the bottom 20 percent remained as far behind as ever. In these arenas, the Great Society made little progress.

Rebirth of the Women's Movement

In the new era of liberal reform the women's movement reawakened. Inspired by the civil rights movement and legislative advances under the Great Society, but frustrated by the lack of attention both gave to women, feminists entered the political fray and demanded not simply inclusion, but a rethinking of national priorities (AP® Interpreting the Past).

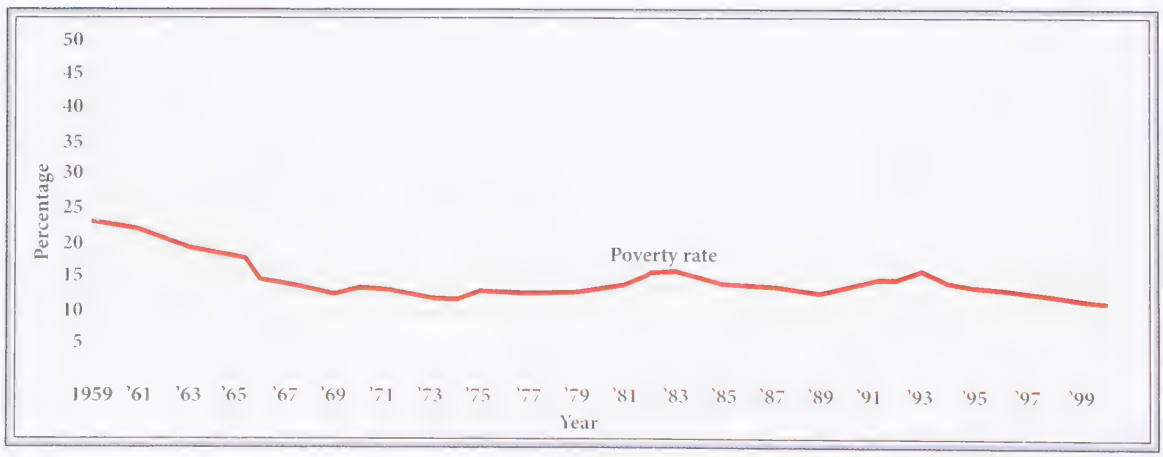


FIGURE 27.1 Americans in Poverty, 1959–2000

Between 1959 and 1973 the poverty rate among American families dropped by more than half—from 23 percent to 11 percent. There was, however, sharp disagreement about the reasons for that notable decline. Liberals credited the War on Poverty, while conservatives favored the high-performing economy, with the significant poverty dip of 1965–1966 caused by military spending, not Johnson's domestic programs.

AP® INTERPRETING THE PAST

What Are the Origins of 1960s Feminism?

The women's rights movement has a long history, but scholars and activists talk about a "second wave" of feminist activism emerging in the 1960s. Unlike early-twentieth-century feminism, which focused on gaining the right to vote for women, this later phase attacked discrimination and gender inequalities in the workplace, in schools, and within the home and marriage. Many scholars argue that the second wave emerged in response to the 1950s "return to domesticity" following World War II, when women were expected to embrace their roles as wives and mothers. Betty Friedan's 1963 book *The Feminine Mystique* critiqued popular depictions of women's domestic roles and argued that gender discrimination limited women's potential.

Friedan's book was a catalyst for many activists who achieved such milestones as the Equal Pay Act, Title IX, and legalized abortion, but are scholars right to locate the movement's origins there? Were all feminist activists in the 1960s shaped by the constraints of domesticity? Sara Evans and Paula Giddings offer contrasting perspectives on 1960s feminism when they highlight the life experiences, work, and class characteristics of different groups of feminists.

SARA EVANS

SOURCE: Sara Evans, *Personal Politics: The Roots of Women's Liberation in the Civil Rights Movement and the New Left* (New York: Alfred A. Knopf, 1979), 22–23.

Within the context of cultural unrest and the attack on tradition made by women like Friedan, the catalyst for a profounder criticism and a mass mobilization of American women proved to be the young female participants in the social movements of the 1960s. These daughters of the middle class had received mixed, paradoxical messages about what it meant to grow up to be women in America. On the one hand, the cultural ideal . . . informed them that their only true happiness lay in the twin roles of wife and mother. At the same time they could observe the reality that housewifery was distinctly unsatisfactory for millions of suburban women. . . . Such contradictions left young, educated women in the 1960s dry tinder for the spark of revolt. . . . [Their] experiences in the southern civil rights movement and parts of the student new left catalyzed a new feminist consciousness.

PAULA GIDDINGS

SOURCE: Paula Giddings, *When and Where I Enter: The Impact of Black Women on Race and Sex in America* (New York: William Morrow, 1984), 6–7.

In the course of my research, several themes emerged. One of them, clearly exposed through the experience of Black women, is the relationship between sexism and racism. . . . Of course, Black women could understand the relationship between racism and sexism because they had to strive against both. In doing so, they became the linchpin between the two most important social reform movements in American history: the struggles for Black rights and women's rights. In the course of defying the imposed limitations on race and sex, they loosened the chains around both.

AP® SHORT ANSWER PRACTICE

1. How do Evans and Giddings differ in their explanation of the chronology and pioneers of 1960s feminism?
2. To what extent do these scholars see the domestic ideal for women as a factor in shaping second-wave feminism?
3. How does the discussion in Chapters 26 and 27 of the civil rights movement and women's activism shed light on the arguments about the origins of feminism that these two scholars make?

Labor Feminists The women's movement had not languished entirely in the postwar years. Feminist concerns were kept alive in the 1950s and early 1960s by working women, who campaigned for such policies as maternity leave and equal pay for equal work. One historian has called these women "labor feminists," because they belonged to trade unions and fought for equality and dignity in the workplace. "It became apparent to me why so many employers could legally discriminate against women — because it was written right into the law," said one female labor activist. Trade-union women were especially critical in pushing for, and winning, congressional passage of the 1963 **Equal Pay Act**, which established the principle of equal pay for equal work.

AP® EXAM TIP

Identify the causes and explain the impact of the resurgence of feminism in the 1950s and 1960s.

Labor feminists were responding to the times. More women — including married women (40 percent by 1970) and mothers with young children (30 percent by 1970) — were working outside the home than ever before. But they faced a labor market that undervalued their contributions. Moreover, most working women faced the "double day": they were expected to earn a paycheck and then return home to domestic labor. One woman put the problem succinctly: "The working mother has no 'wife' to care for her children."

AP® EXAM TIP

The significance of *The Feminine Mystique* is a "must know" for the AP® exam.

Betty Friedan and the National Organization for Women When Betty Friedan's indictment of suburban domesticity, ***The Feminine Mystique***, appeared in 1963, it targeted a different audience: college-educated, middle-class women who found themselves not working for wages but rather stifled by their domestic routine. Tens of thousands of women read Friedan's book and thought, "She's talking about me." *The Feminine Mystique* became a runaway best-seller. Friedan persuaded middle-class women that they needed more than the convenience foods, improved diapers, and better laundry detergents that magazines and television urged them to buy. To live rich and fulfilling lives, they needed education and work outside the home.

Paradoxically, the domesticity described in *The Feminine Mystique* was already crumbling. After the postwar baby boom, women were again having fewer children, aided now by the birth control pill, first marketed in 1960. And as states liberalized divorce laws, more women were divorcing. Educational levels were also rising: by 1970, women made up 42 percent of the college population. All of these changes undermined traditional gender roles and enabled many women to embrace *The Feminine Mystique*'s liberating prescriptions.

Government action also made a difference. In 1961, Kennedy had appointed the **Presidential Commission on the Status of Women**, which issued a 1963 report documenting job and educational discrimination. A bigger breakthrough came when Congress added the word *sex* to the categories protected against discrimination in the Civil Rights Act of 1964. Women suddenly had a powerful legal tool for fighting gender discrimination.

To force compliance with the new act, Friedan and others, including many labor feminists from around the country, founded the **National Organization for Women (NOW)** in 1966. Modeled on the NAACP, NOW intended to be a civil rights organization for women, with the aim of bringing "women into full participation in . . . American society now, exercising all the privileges and responsibilities thereof in truly equal partnership with men." Under Friedan's leadership, membership grew to fifteen thousand by 1971, and NOW became a powerful voice for equal rights.

One of the ironies of the 1960s was the enormous strain that all of this liberal activism placed on the New Deal coalition. Faced with often competing demands from the civil rights movement, feminists, the poor, labor unions, conservative southern Democrats, the suburban middle class, and urban political machines, the old Rooseveltian coalition had begun to fray. Johnson hoped that the

National Women's Political Caucus Leaders of the National Women's Political Caucus speak with the press in 1971. From left to right are: activist and journalist Gloria Steinem, Congresswoman Bella Abzug, Congresswoman Shirley Chisholm, and author and activist Betty Friedan. Founded to advance a broad political program on behalf of American women, the Caucus called for reproductive and economic rights, women's social and legal equality, and an increase in women's participation in local, state, and national government. AP Photo/Charles Gorry

New Deal coalition was strong enough to negotiate competing demands among its own constituents while simultaneously resisting conservative attacks. In 1965, that still seemed possible. It would not remain so for long.

IN YOUR OWN WORDS What explains the surge in liberal politics and social policy in the early 1960s?

AP® PRACTICES & SKILLS

CAUSATION

What factors accounted for the resurgence of feminism in the 1960s?

The Vietnam War Begins

As the accelerating rights revolution placed strain on the Democratic coalition, the war in Vietnam divided the country. In a CBS interview before his death, Kennedy remarked that it was up to the South Vietnamese whether "their war" would be won or lost. But the young president had already placed the United States on a course that would make retreat difficult. Like other U.S. presidents, Kennedy believed that giving up in Vietnam would weaken America's "credibility." Withdrawal "would be a great mistake," he said.

It is impossible to know how JFK would have managed Vietnam had he lived. What is known is that in the fall of 1963, Kennedy had lost patience with Ngo Dinh Diem, the dictatorial head of South Vietnam whom the United States had supported since 1955 (Chapter 24). The president let it be known in Saigon that the United States would support a military coup. Kennedy's hope was that if Diem, **reviled** throughout the South because of his brutal repression of political opponents, could be replaced by a popular general or other military figure, a stable government would emerge — one strong enough to repel the South Vietnam National Liberati on Front (NLF), or Vietcong.

That calculation proved overly optimistic. Emboldened by Kennedy's approval of their plan, a handful of South Vietnamese generals overthrew Diem on November 1, and then brutally killed him and his brother. Rather than stability, the coup brought chaos. South Vietnam fell into a period of turmoil marked by the increasing ungovernability of both the cities and countryside. Kennedy himself was assassinated in late November and would not live to see the grim results of Diem's murder: American engagement in a long and costly civil conflict in the name of fighting communism.

MAP 27.2 The Vietnam War, 1968

The Vietnam War was a guerrilla war, fought in skirmishes rather than set-piece battles. Despite repeated airstrikes, the United States was never able to halt the flow of North Vietnamese troops and supplies down the Ho Chi Minh Trail, which wound through Laos and Cambodia. In January 1968, Vietcong forces launched the Tet offensive, a surprise attack on cities and provincial centers across South Vietnam. Although the attackers were pushed back with heavy losses, the Tet offensive revealed the futility of American efforts to suppress the Vietcong guerrillas and marked a turning point in the war.

Escalation Under Johnson

Just as Kennedy had inherited Vietnam from Eisenhower, so Lyndon Johnson inherited Vietnam from Kennedy. Johnson's inheritance was more burdensome, however, for by now only massive American intervention could prevent the collapse of South Vietnam (Map 27.2). Johnson, like Kennedy, was a

subscriber to the Cold War tenets of global containment. "I am not going to lose Vietnam," he vowed on taking office. "I am not going to be the President who saw Southeast Asia go the way China went" (Chapter 24).

AP® EXAM TIP

Explain the role of the Vietnam War in expanding the role of the president in military actions.

Gulf of Tonkin It did not take long for Johnson to place his stamp on the war. During the summer of 1964, the president got reports that North Vietnamese torpedo boats had fired on the U.S. destroyer *Maddox* in the Gulf of Tonkin. In the first attack, on August 2, the damage inflicted was limited to a single bullet hole; a second attack, on August 4, later proved to be only misread radar sightings. To Johnson, it didn't matter if the attack was real or imagined; the president believed a wider war was inevitable and issued a call to arms, sending his national approval rating from 42 to 72 percent. In the entire Congress, only two senators voted against his request for authorization to "take all necessary measures to repel any armed attack against the forces of the United States and to prevent further aggression." The **Gulf of Tonkin Resolution**, as it became known, gave Johnson the freedom to conduct operations in Vietnam as he saw fit.

Despite his congressional mandate, Johnson was initially cautious about revealing his plans to the American people. "I had no choice but to keep my foreign policy in the wings . . . ," Johnson later said. "I knew that the day it exploded into a major debate on the war, that day would be the beginning of the end of the Great Society." So he ran in 1964 on the pledge that there would be no escalation — no "American boys" fighting Vietnam's fight, he said. Privately, he doubted the pledge could be kept.

American Escalation With the 1964 election safely behind him, Johnson began an American takeover of the war in Vietnam (AP® Analyzing Voices). The escalation, beginning in the early months of 1965, took two forms: deployment of American ground troops and intensive bombing of North Vietnam.

On March 8, 1965, the first marines waded ashore at Da Nang. By 1966, more than 380,000 American soldiers were stationed in Vietnam; by 1967, 485,000; and by 1968, 536,000 (Figure 27.2). General William Westmoreland, the commander of U.S. forces, and Robert McNamara, the secretary of defense, pushed Johnson to Americanize the ground war in an attempt to stabilize South Vietnam. "I can't run and pull a Chamberlain at Munich," Johnson privately told a reporter in early March 1965, referring to the British prime minister who had appeased Hitler in 1938.

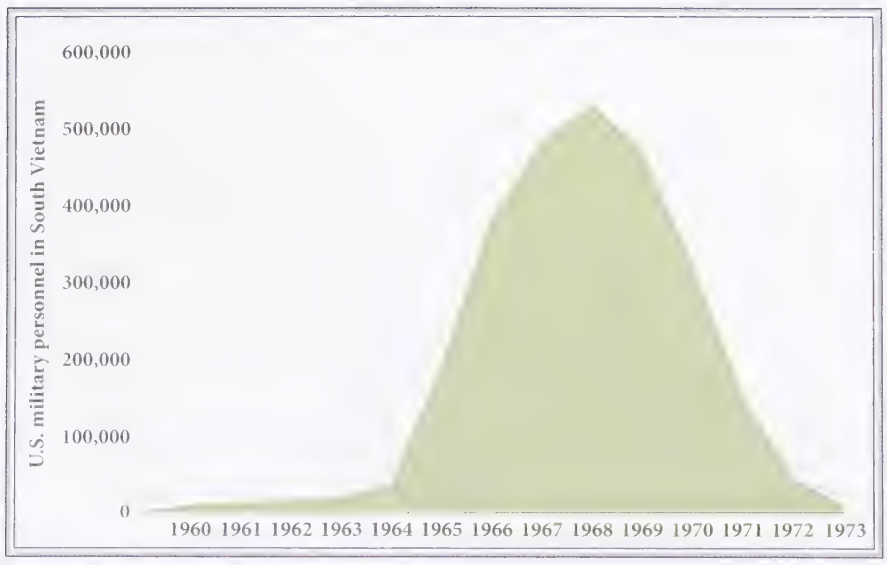

FIGURE 27.2 U.S. Troops in Vietnam, 1960–1973

This figure graphically tracks America's involvement in Vietnam. After Lyndon Johnson decided on escalation in 1964, troop levels jumped from 23,300 to a peak of 543,000 personnel in 1968. Under Richard Nixon's Vietnamization program, beginning in the summer of 1969, levels drastically declined; the last U.S. military forces left South Vietnam on March 29, 1973.

Meanwhile, Johnson authorized **Operation Rolling Thunder**, a massive bombing campaign against North Vietnam that began in 1965 and continued for three years. Over the entire course of the war, the United States dropped twice as many tons of bombs on Vietnam as the Allies had dropped in both Europe and the Pacific during the whole of World War II. To McNamara's surprise, the bombing had little effect on the Vietcong's ability to wage war in the South. The North Vietnamese quickly rebuilt roads and bridges and moved munitions plants underground. Instead of destroying the morale of the North Vietnamese, Operation Rolling Thunder hardened their will to fight. The massive commitment of ground troops and air power devastated Vietnam's countryside, however. After

one harsh but not unusual engagement, a commanding officer reported that "it became necessary to destroy the town in order to save it"—a statement that came to symbolize the terrible logic of the war.

The Johnson administration gambled that American superiority in personnel and weaponry would ultimately triumph. This strategy was inextricably tied to political considerations. For domestic reasons, policymakers searched for an elusive middle ground between all-out invasion of North Vietnam, which included the possibility of war with China, and disengagement. "In effect, we are fighting a war of attrition," said General Westmoreland. "The only alternative is a war of annihilation."

AP® PRACTICES & SKILLS

POINT OF VIEW

In what larger context did President Johnson view the Vietnam conflict, and why was he determined to support South Vietnam?

Public Opinion and the War

Johnson gradually grew more confident that his Vietnam policy had the support of the American people. Both Democrats and Republicans approved Johnson's escalation in Vietnam, and so did public opinion polls in 1965 and 1966. But then opinion began to shift (AP® Thinking Like a Historian).

AP® EXAM TIP

Recognize the causes and effects of the changing reactions of the American public to the Vietnam War over time.

Every night, Americans saw the carnage of war on their television screens, including images of dead and wounded Americans. One such incident occurred in the first months of fighting in 1965. Television reporter Morley Safer witnessed a marine unit burning the village of Cam Ne to the ground. "Today's operation is the frustration of Vietnam in miniature," Safer explained. America can "win a military victory here, but to a Vietnamese peasant whose home is [destroyed] it will take more than presidential promises to convince him that we are on his side."

With such firsthand knowledge of the war, journalists began to write about a "credibility gap." The Johnson administration, they charged, was concealing bad news about the war's progress. In February 1966, television coverage of hearings by the Senate Foreign Relations Committee (chaired by J. William Fulbright, an outspoken critic of the war) raised further questions about the administration's policy. Johnson complained to his staff in 1966 that "our people can't stand firm in the face of heavy losses, and they can bring down the government." Economic problems put Johnson even more on the defensive. The Vietnam War cost taxpayers $27 billion in 1967, pushing the federal deficit from $9.8 billion to $23 billion. By then, military spending had set in motion the inflationary spiral that would plague the U.S. economy throughout the 1970s.

Out of these troubling developments, an antiwar movement began to crystallize. Little opposition had materialized in 1964, even after Johnson won passage of the Tonkin Resolution. But following the escalation in 1965, groups of students, clergy, civil rights advocates, antinuclear proponents, and even Dr. Benjamin Spock, whose book on child care had helped raise many of the younger activists, began to protest. Their launchpad was an April march of 15,000 people in Washington, D.C., that included a picket line around the White House and speeches denouncing what antiwar activist Paul Potter called "this mad war." Despite their diversity, these opponents of the war shared a skepticism about U.S. policy in Vietnam. They charged variously that intervention was antithetical to American ideals; that an independent, anticommunist South Vietnam was unattainable; and that no American objective justified the suffering that was being inflicted on the Vietnamese people.

The Student Movement

College students, many of them inspired by the civil rights movement, had already begun to organize and agitate for social change prior to the first antiwar march in 1965. In Ann Arbor, Michigan, they founded **Students for a Democratic Society (SDS)** in 1960. Two years later, they held the first national SDS convention in Port Huron, Michigan. Tom Hayden penned a manifesto, the **Port Huron Statement**, expressing students' disillusionment with the nation's consumer culture and the gulf between rich and poor. "We are people of this generation," Hayden wrote, "bred in at least modest

AP® EXAM TIP

Explain the role of the Port Huron Statement in expressing the discontent of the Left with both domestic and foreign policies.

The Toll of War

The Vietnam War drew Americans from many backgrounds and different walks of life into the military to serve in Southeast Asia. These brief selections suggest the war's profound, often horrific, impact on those Americans who experienced it firsthand.

VINCENT OKAMOTO

Vincent Okamoto was a lieutenant with the 25th Infantry Division in 1968; he was interviewed some years after the war.

SOURCE: Vincent Okamoto, "Damn, I'm a Gook," in *Patriots: The Vietnam War Remembered from All Sides*, ed. Christian G. Appy (New York: Penguin, 2003), 357–362.

"I am the last of ten children, the seventh son of Japanese immigrants. I was born in Poston Relocation Camp in Arizona. In World War II, two of my older brothers served with the 442nd Regimental Combat Team. My whole life I grew up on the tradition of the 442nd. I was convinced that one of the reasons we were allowed to get out of the camps and accepted in American society to the degree that we were, was the blood shed by the 442nd. So growing up, I thought military service was an inevitable rite of passage. . . .

When I got there [Vietnam] my guys were talking about gooks, and zipperheads, and slants, and I said to myself, 'Damn, I'm a gook, I'm a zipperhead, I'm a slant.' But it didn't take too long before my mentality was just like theirs. I should have known better, yet within a relatively short time we were all thinking alike. If it became a question of maximizing protection for your men or giving some Vietnamese civilian the benefit of the doubt, after a while there was no choice. I just went with protecting my people. Even so, I was nearly killed by Americans who mistook me for a Vietnamese."

GEORGE OLSEN

George Olsen served in Vietnam from August 1969 to March 1970, when he was killed in action. He wrote this letter to a close female friend.

SOURCE: *Dear America: Letters Home from Vietnam*, ed. Bernard Edelman for the New York Vietnam Veterans Memorial Commission (New York: W.W. Norton, 1985), 117–118.

"31 Aug '69
Dear Red,
Last Monday I went on my first hunter-killer operation. . . . The frightening thing about it all is that it is so very easy to kill in war. There's no remorse, no theatrical 'washing of the hands' to get rid of nonexistent blood, not even any regrets. When it happens, you are more afraid than you've ever been in your life — my hands shook so much I had trouble reloading. . . . You're scared, really scared, and there's no thinking about it. You kill because that little SOB is doing his best to kill you and you desperately want to live, to go home, to get drunk or walk down the street on a date again. And suddenly the grenades aren't going off any more, the weapons stop and, unbelievably fast it seems, it's all over. . . .

I have truly come to envy the honest pacifist who honestly believes that no killing is permissible and can, with a clear conscience, stay home and not take part in these conflicts. I wish I could do the same, but I can't see letting another take my place and my risks over here. . . . The only reason pacifists such as the Amish can even live in an orderly society is because someone — be they police or soldiers — is taking risks to keep the wolves away. . . . I guess that's why I'm over here, why I fought so hard to come here, and why, even though I'm scared most of the time, I'm content to be here."

LILY ADAMS

Lily Adams, an army nurse stationed at the 12th Evacuation Hospital near what is today Ho Chi Minh City, had an Italian American mother and a Chinese Amerian father. She spoke with a researcher some years after the war.

SOURCE: *In the Combat Zone: An Oral History of American Women in Vietnam, 1966–1975*, ed. Kathryn Marshall (Boston: Little, Brown, 1987), 206–229.

"The majority of the people that I learned about the Vietnamese from were the infantry men. The ones that had been out in the field — yea, a lot of them had respect for the Vietnamese. I also worked with a corpsman who was a Quaker and wouldn't put up with anything — he got sent out of the field because he would call in med-evacs for [enemy] POWs, and I mean foot soldiers, nobody important. The thinking was that POWs were a waste of your time and energy, uness they were the good ones: the ones with information. . . .

I didn't realize my own strength back then — I was real proud that I could resist all the racism around me, but I didn't know my own strength as a noncomformist. It is easy to be racist, even for Asians to be racist against Asians. No, you don't have to be Ku Klux Klan to be racist.

My last two weeks in Cu Chi I was put on the surgical ward. They wanted to keep me out of trouble. Because I was hysterical — it's called short-timer's syndrome. You know, you're feeling guilty at leaving because now you're so highly skilled you can do everything blindfolded with your hands

tied behind your back. New people coming in means that they are not as skilled, because the new people learn as they go. And there's a lot of ambivalence. You want to stay so you can devote yourself to the guys, but you want to leave because you want to live. ”

ARTHUR E. WOODLEY JR.

Special Forces Ranger Arthur E. Woodley Jr. gave this interview a decade after his return.

SOURCE: Wallace Terry, *Bloods: An Oral History of the Vietnam War by Black Veterans* (New York: Ballantine, 1984), 243–263.

“ You had to fight to survive where I grew up. Lower east Baltimore. . . . It was a mixed-up neighborhood of Puerto Ricans, Indians, Italians, and blacks. Being that I'm lightskinned, curly hair, I wasn't readily accepted in the black community. I was more accepted by Puerto Ricans and some rednecks. They didn't ask what my race classification was. I went with them to white movies, white restaurants, and so forth. But after I got older, I came to the realization that I was what I am and came to deal with my black peers. . . .

I figured I was just what my country needed. A black patriot who could do any physical job they could come up with. Six feet, one hundred and ninety pounds, and healthy. . . .

I didn't ask no questions about the war. I thought communism was spreading, and as an American citizen, it was my part to do as much as I could to defeat the Communist from coming here. Whatever America states is correct was the tradition that I was brought up in. And I thought the only way I could possibly make it out of the ghetto was to be the best soldier I possibly could. . . .

Then came the second week of February of '69. . . . We recon this area, and we came across this fella, a white guy, who was staked to the ground. His arms and legs tied down to stakes. . . . He had numerous scars on his face where he might have been beaten and mutilated. And he had been peeled from his upper part of chest to down to his waist.

Skinned. Like they slit your skin with a knife. And they take a pair of pliers or a instrument similar, and they just peel the skin off your body and expose it to the elements. . . .

And he start to cryin', beggin' to die.

He said, 'I can't go back like this. I can't live like this. I'm dying. You can't leave me here like this dying.' . . .

It took me somewhere close to 20 minutes to get my mind together. Not because I was squeamish about killing someone, because I had at that time numerous body counts. Killing someone wasn't the issue. It was killing another American citizen, another GI. . . . We buried him. We buried him. Very deep. Then I cried. . . .

When we first started going into the fields, I would not wear a finger, ear, or mutilate another person's body. Until I had the misfortune to come upon those American soldiers who were castrated. Then it got to be a game between the Communists and ourselves to see how many fingers and ears that we could capture from each other. After a kill we would cut his finger or ear off as a trophy, stuff our unit patch in his mouth, and let him die.

With 89 days left in country, I came out of the field. What I now felt was emptiness. . . . I started seeing the atrocities that we caused each other as human beings. I came to the realization that I was committing crimes against humanity and myself. That I really didn't believe in these things I was doin'. I changed. ”

GAYLE SMITH

Gayle Smith was a nurse in a surgical unit in Vietnam in 1970–1971 and gave this interview a few years later.

SOURCE: Albert Santoli, ed., *Everything We Had* (New York: Random House, 1981), 141–148.

“ I objected to the war and I got the idea into my head of going there to bring people back. I started thinking about it in 1966 and knew that I would eventually go when I felt I was prepared enough. . . .

Boy, I remember how they came in all torn up. It was incredible. The first time a medevac came in, I got right into it. I didn't have a lot of feeling at that time. It was later on that I began to have a lot of feeling about it, after I'd seen it over and over and over again. . . . I turned that pain into anger and hatred and placed it onto the Vietnamese. . . . I did not consider the Vietnamese to be people. They were human, but they weren't people. They weren't like us, so it was okay to kill them. It was okay to hate them. . . .

I would have dreams about putting a .45 to someone's head and see it blow away over and over again. And for a long time I swore that if the Vietnamese ever came to this country I'd kill them.

It was in a Vietnam veterans group that I realized that all my hatred for the Vietnamese and my wanting to kill them was really a reflection of all the pain that I had felt for seeing all those young men die and hurt. . . . I would stand there and look at them and think to myself, 'You've just lost your leg for no reason at all.' Or 'You're going to die and it's for nothing.' For nothing. I would never, never say that to them, but they knew it. ”

QUESTIONS FOR ANALYSIS

1. Why did these five young people end up in Vietnam? How are their reasons for going to war similar and different?
2. How would you describe their experiences there?
3. What are their attitudes about the war, and how were they changed by it? What do their reflections suggest about Vietnam's impact on American society?

Debating the War in Vietnam

The war in Vietnam divided Americans and ultimately divided world opinion. A product of the Cold War policy of containment, the war led many to question the application of that policy to Southeast Asia. Yet every American president from Truman to Nixon believed that opposing the unification of Vietnam under communist rule was essential. Historians continue to research, and debate, what led to the war and what effects the war had on both Vietnam and the United States. The following documents help us to consider different views of the war.

1. **President Dwight Eisenhower's "Domino Theory" speech, April 7, 1954.**

   Finally, you have broader considerations that might follow what you would call the "falling domino" principle. You have a row of dominoes set up, you knock over the first one, and what will happen to the last one is the certainty that it will go over very quickly. So you could have a beginning of a disintegration that would have the most profound influences. . . .

   But when we come to the possible sequence of events, the loss of Indochina, of Burma, of Thailand, of the Peninsula, and Indonesia following, now you begin to talk about areas that not only multiply the disadvantages that you would suffer through loss of materials, sources of materials, but now you're talking about millions and millions and millions of people.

2. **Manifesto of the South Vietnam National Front for Liberation (NLF), 1968.**

   Over the past hundred years the Vietnamese people repeatedly rose up to fight against foreign aggression for the independence and freedom of their fatherland. In 1945, the people throughout the country surged up in an armed uprising, overthrew the Japanese and French domination, and seized power. . . .

   However, the American imperialists, who had in the past helped the French colonialists to massacre our people, have now replaced the French in enslaving the southern part of our country through a disguised colonial regime. They have been using their stooge — the Ngo Dinh Diem administration — in their downright repression and exploitation of our compatriots, in their maneuvers to permanently divide our country and to turn its southern part into a base in preparation for war in Southeast Asia.

3. **President Lyndon Johnson, Johns Hopkins University speech, April 7, 1965.**

   Over this war — and all Asia — is another reality: the deepening shadow of Communist China. The rulers in Hanoi are urged on by Peiping [Peiking]. This is a regime which has destroyed freedom in Tibet, which has attacked India, and has been condemned by the United Nations for aggression in Korea. It is helping the forces of violence in almost every continent. The contest in Viet-Nam is part of a wider pattern of aggressive purposes.

4. **James Fallows, "What Did You Do in the Class War, Daddy?" *Washington Monthly*, October 1975.** *The journalist Fallows highlighted the economic unfairness of the Vietnam-era draft.*

   The children of the bright, good parents were spared the more immediate sort of suffering that our inferiors were undergoing. And because of that, when our parents were opposed to the war, they were opposed in a bloodless, theoretical fashion, as they might be opposed to political corruption or racism in South Africa. As long as the little gold stars [sent to parents whose son was killed in war] kept going to homes in Chelsea [a working-class part of Boston] and the backwoods of West Virginia, the mothers of Beverly Hills and Chevy Chase and Great Neck and Belmont [all affluent suburbs] were not on the telephone to their congressman screaming, "*You killed my boy.*" . . . It is clear by now that if the men of Harvard had wanted to do the very most they could to help shorten the war, they should have been drafted or imprisoned en masse.

5. Students for a Democratic Society, Call for a March on Washington to End the War, 1965.

The current war in Vietnam is being waged on behalf of a succession of unpopular South Vietnamese dictatorships, not in behalf of freedom. No American-supported South Vietnamese regime in the past few years has gained the support of its people, for the simple reason that the people overwhelmingly want peace, self-determination, and the opportunity for development. American prosecution of the war has deprived them of all three.

The war is fundamentally a *civil* war. . . .
It is a *losing* war. . . .
It is a *self-defeating* war. . . .
It is a *dangerous* war. . . .
It is a war never declared by Congress. . . .
It is a hideously *immoral* war.

6. Richard Nixon, address to the nation on the Vietnam War, November 3, 1969.

. . . President Eisenhower sent economic aid and military equipment to assist the people of South Vietnam in their efforts to prevent a Communist takeover. Seven years ago, President Kennedy sent 16,000 military personnel to Vietnam as combat advisors. Four years ago, President Johnson sent American combat forces to South Vietnam. . . .

For these reasons, I reject the recommendation that I should end the war by immediately withdrawing all our forces. I choose instead to change American policy on both the negotiating front and the battlefront. . . .

7. Evacuation of Vietnamese civilians in a burning village, c. 1965.

ANALYZING THE EVIDENCE

1. Three of the sources (1, 3, and 6) feature remarks by U.S. presidents. What common feature do they share? Are there differences among the comments? Source 2 is also an attempt by a political figure to persuade. How should historians evaluate such documents?
2. In source 4, which Americans does the author believe have sacrificed the most in fighting the war in Vietnam?
3. Compare sources 2 and 5. What is the intended audience of each? What common features do they share?
4. Journalists and electronic media (photography and television) played an important role in the war. How would images, such as that in source 7, shape opinion about the war both in the United States and globally?

AP® DBQ PRACTICE

Using the knowledge you have gained from this chapter, analyze the documents above to construct an essay in which you explore the Vietnam War's causes and effects, both domestic and international. Choose at least one domestic and one international theme and use the documents to provide evidence for your conclusions.

comfort, housed now in universities, looking uncomfortably to the world we inherit." Hayden and SDS sought to shake up what they saw as a complacent nation.

The New Left The founders of SDS referred to their movement as the **New Left** to distinguish themselves from the Old Left — communists and socialists of the 1930s and 1940s. As New Left influence spread, it hit major university towns first — places such as Madison, Wisconsin, and Berkeley, California. One of the first notable demonstrations erupted in the fall of 1964 at the University of California at Berkeley after administrators banned student political activity on university grounds. In protest, student organizations formed the Free Speech Movement and organized a sit-in at the administration building. Some students had just returned from Freedom Summer in Mississippi, radicalized by their experience. One such student, Mario Savio, spoke for many when he compared the conflict in Berkeley to the civil rights struggle in the South: "The same rights are at stake in both places — the right to participate as citizens in a democratic society and to struggle against the same enemy."

Emboldened by the Berkeley movement, students across the nation were soon protesting their universities' academic policies and then, beginning in 1965, the Vietnam War. Students were on the front lines as the campaign against the war escalated. The 1967 Mobilization to End the War brought 100,000 protesters into the streets of San Francisco, while more than 250,000 followed Martin Luther King Jr. from Central Park to the United Nations in New York. Another 100,000 marched on the Pentagon. President Johnson absorbed the blows and counterpunched — "The enemy's hope for victory . . . is in our division, our weariness, our uncertainty," he proclaimed — but it had become clear that Johnson's war, as many began calling it, was no longer uniting the country.

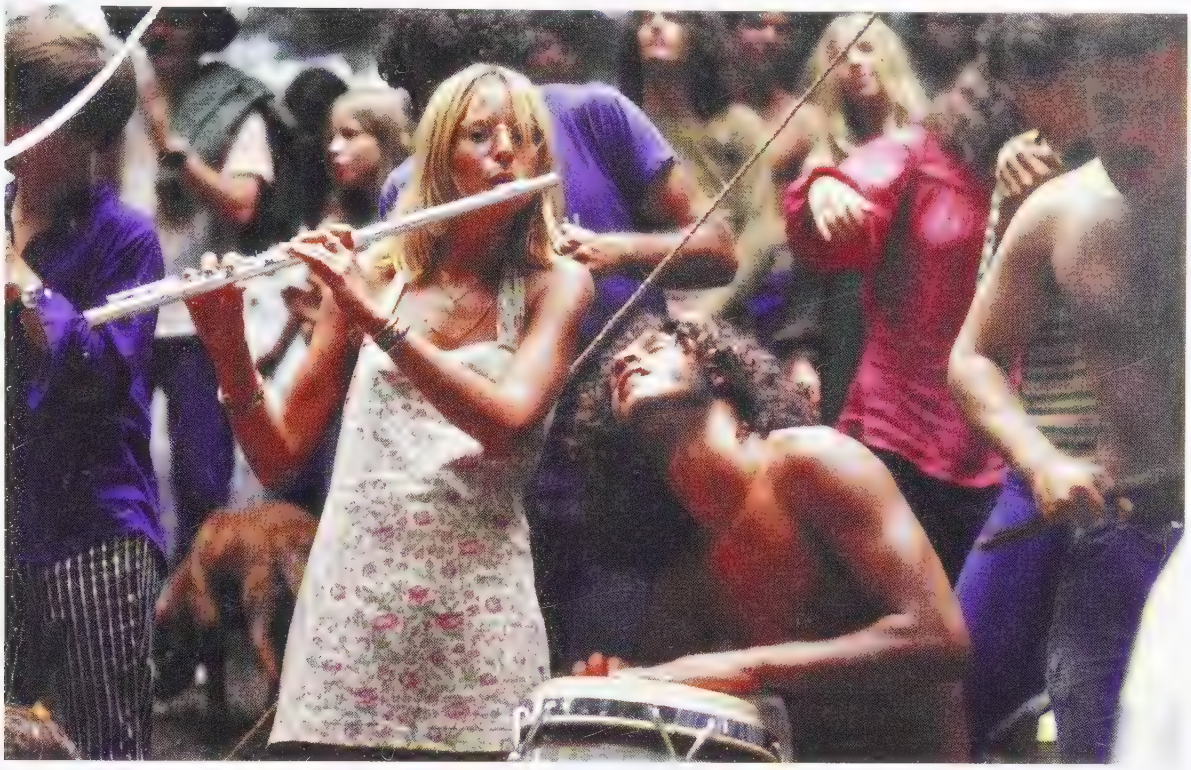
One spur to student protest was the military's Selective Service System, which in 1967 abolished automatic student **deferments**. To avoid the draft, some young men enlisted in the National Guard or applied for conscientious objector status; others left the country, most often for Canada or Sweden. In public demonstrations, opponents of the war burned their draft cards, picketed induction centers, and on a few occasions broke into Selective Service offices and destroyed records. Antiwar demonstrators numbered in the tens or, at most, hundreds of thousands — a small fraction of American youth — but they were vocal, visible, and determined.

Young Americans for Freedom The New Left was not the only political force on college campuses. Conservative students were less noisy but equally numerous. For them, the 1960s was not about protesting Vietnam, staging student strikes, and idolizing Black Power. Inspired by the group **Young Americans for Freedom (YAF)**, conservative students asserted their faith in "God-given free will" and their concern that the federal government "accumulates power which tends to diminish order and liberty." The YAF, the largest student political organization in the country, defended free enterprise and supported the war in Vietnam. Its founding principles were outlined in "The **Sharon Statement**," drafted (in Sharon, Connecticut) two years before the Port Huron Statement. Young conservatives, many of whom would play important roles in the Reagan administration in the 1980s, rallied to the YAF's call.

AP® EXAM TIP

Recognize the role of the counterculture in challenging the status quo and expectations of a homogeneous American culture in the 1960s.

The Counterculture While the New Left organized against the political and economic system and the YAF defended it, many other young Americans embarked on a general revolt against authority and middle-class respectability. The "hippie" — identified by ragged blue jeans or army fatigues, flowing skirts, shirts, and blouses, beads, and long unkempt hair — symbolized the new **counterculture**. With roots in the 1950s Beat culture of New York's Greenwich Village and San Francisco's North Beach, the 1960s counterculture was composed largely of white youth alienated from the staid predictability and formality of an older generation. Seeking an ethic of personal freedom and authenticity, they initially turned to folk music for inspiration. Pete Seeger set the tone for the era's idealism with songs such as the 1961 antiwar ballad "Where Have All the



The Counterculture The three-day outdoor Woodstock concert in August 1969 was a defining moment in the rise of the counterculture. The event attracted 400,000 young people, like those pictured here, to Bethel, New York, for a weekend of music, drugs, and sex. The counterculture was distinct from the New Left and was less a political movement than a shifting set of cultural styles, attitudes, and practices. It rejected conformity of all kinds and placed rebellion and contrariness among its highest values. Another concept held dear by the counterculture was, simply, "love." In an era of military violence abroad and police violence at home, many in the counterculture hoped that "peace and love" would prevail instead. Bill Eppridge/The LIFE Picture Collection/Getty Images

Flowers Gone?" In 1963, the year of the civil rights demonstrations in Birmingham and President Kennedy's assassination, Bob Dylan's "Blowin' in the Wind" reflected the impatience of people whose faith in America was wearing thin. Judy Collins and Joan Baez emerged alongside Dylan and pioneered a folk sound that inspired a generation of female musicians.

By the mid-1960s, other winds of change in popular music came from the Beatles, four working-class Brits whose awe-inspiring music, by turns lyrical and driving, spawned a commercial and cultural phenomenon known as Beatlemania. American youths' embrace of the Beatles, as well as even more rebellious bands such as the Rolling Stones, the Who, and the Doors, deepened the generational divide between young people and their elders. So did the recreational use of drugs — especially marijuana and the hallucinogen popularly known as LSD or acid — which was celebrated in popular music in the second half of the 1960s.

For a brief time, **adherents** of the counterculture believed that a new age was dawning. In 1967, the "world's first Human Be-In" drew 20,000 people to Golden Gate Park in San Francisco. That summer — known as the Summer of Love — San Francisco's Haight-Ashbury, New York's East Village, Chicago's Uptown neighborhoods, and the Sunset Strip in Los Angeles swelled with young dropouts, drifters, and teenage runaways whom the media dubbed "flower children." Although most young people had little interest in all-out revolt, media coverage made it seem as though all of American youth was rejecting the nation's social and cultural norms.

IN YOUR OWN WORDS What led President Johnson to escalate the war in Vietnam, and how did Americans respond?

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

Contrast the political views of the SDS, the YAF, and the counterculture. How would you explain the differences?

AP® PRACTICES & SKILLS

CHANGE OVER TIME

What major developments between 1965 and 1968 reshaped national politics?

Days of Rage, 1968–1972

By 1968, a sense of crisis gripped the country. Riots in the cities, campus unrest, and a nose-thumbing counterculture escalated into a general youth rebellion that seemed on the verge of tearing America apart. Calling 1968 "the watershed year for a generation," SDS founder Tom Hayden wrote that it "started with legendary events, then raised hopes, only to end by immersing innocence in tragedy." It was perhaps the most shocking year in all the postwar decades. Violent clashes both in Vietnam and back home in the United States combined with political assassinations to produce a palpable sense of despair and hopelessness (AP® America in the World).

War Abroad, Tragedy at Home

President Johnson had gambled in 1965 on a quick victory in Vietnam, before the political cost of escalation came due. But there was no quick victory. North Vietnamese and Vietcong forces fought on, the South Vietnamese government repeatedly collapsed, and American casualties mounted. By early 1968, the death rate of U.S. troops had reached several hundred a week. Johnson and his generals kept insisting that there was "light at the end of the tunnel." Facts on the ground showed otherwise.

AP® EXAM TIP

Recognize the Tet offensive as a turning point for the war in Vietnam and the antiwar movement at home.

The Tet Offensive On January 30, 1968, the Vietcong unleashed a massive, well-coordinated assault in South Vietnam. Timed to coincide with Tet, the Vietnamese new year, the offensive struck thirty-six provincial capitals and five of the six major cities, including Saigon, where the Vietcong nearly overran the U.S. embassy. In strictly military terms, the Tet offensive was a failure, with very heavy Vietcong losses. But psychologically, the effect was devastating. Television brought into American homes shocking live images: the American embassy under siege and the Saigon police chief placing a pistol to the head of a Vietcong suspect and executing him.

The **Tet offensive** made a mockery of official pronouncements that the United States was winning the war. How could an enemy on the run manage such a large-scale, complex, and coordinated attack? Just before Tet, a Gallup poll found that 56 percent of Americans considered themselves "hawks" (supporters of the war), while only 28 percent identified with the "doves" (war opponents). Three months later, doves outnumbered hawks 42 to 41 percent. Without embracing the peace movement, many Americans simply concluded that the war was unwinnable.

The Tet offensive undermined Johnson and discredited his war policies. When the 1968 presidential primary season got under way in March, antiwar senators Eugene McCarthy of Minnesota and Robert Kennedy of New York, JFK's brother, challenged Johnson for the Democratic nomination. Discouraged, perhaps even physically exhausted, on March 31 Johnson stunned the nation by announcing that he would not seek reelection.

Political Assassinations Americans had barely adjusted to the news that a sitting president would not stand for reelection when, on April 4, James Earl Ray shot and killed Martin Luther King Jr. in Memphis. Riots erupted in more than a hundred cities. The worst of them, in Baltimore, Chicago, and Washington, D.C., left dozens dead and hundreds of millions of dollars in property damaged or destroyed. The violence on the streets of Saigon had found an eerie parallel on the streets of the United States.

One city that did not erupt was Indianapolis. There, Robert Kennedy, in town campaigning in the Indiana primary, gave a quiet, somber speech to the black community on the night of King's assassination. Americans could continue to move toward "greater polarization," Kennedy said, "black people amongst blacks, white amongst whites," or "we can replace that violence . . . with an effort to understand, compassion and love." Kennedy sympathized with African Americans' outrage at whites, but he begged them

The Global Protests of 1968

Nineteen sixty-eight was a year of youthful protest, political unrest, and violence across the globe. The year of massive antiwar protests at the Democratic National Convention in Chicago as well as the assassinations of Martin Luther King Jr. and Robert Kennedy saw equal or greater turmoil around the world. Half of Italy's universities were occupied; a massive student strike in France turned into a violent confrontation with police; prodemocracy students in Mexico City led huge protests that drew police gunfire; and protests and street battles with police took place in Prague, Berlin, Tokyo, Rome, and London.

My most vivid memory of May '68? The new-found ability for everyone to speak — to speak of anything with anyone. In that month of talking during May you learnt more than in the whole of your five years of studying.

THE "TWO THOUSAND WORDS" MANIFESTO, JUNE 27, 1968, PRAGUE, CZECHOSLOVAKIA

SOURCE: Jaromír Navrátil, *The Prague Spring 1968: A National Security Archive Documents Reader* (Budapest: Central European University Press, 1998), 181.

Throughout the spring and summer of 1968, the government of Czechoslovakia, under new communist leadership, pursued reforms pushed by students and other protesters. In August, the Soviet Union invaded and put an end to the new openness.

This spring a great opportunity was given to us once again, as it was at the end of the war [World War II]. Again we have the chance to take into our own hands our common cause, which for working purposes we will call socialism, and give it a form more appropriate to our once-good reputation and to the fairly good opinion we used to have of ourselves.

INTERVIEW WITH PARTICIPANTS IN 1968 PROTESTS IN MEXICO CITY

SOURCE: Produced by Radio Diaries (radiodiaries.org) and originally broadcast on NPR's *All Things Considered*. To hear the entire documentary, visit radiodiaries.org. Used by permission of Radio Diaries.

During the summer of 1968, hundreds of thousands of students protested against Mexico's authoritarian national government and brutal police repression.

Sergio Aguayo: It was, in a symbolic way, the clash of a new Mexico and an old Mexico.
Antonio Azuela: You have a middle class with eyes closed and a group of students saying, this was not a democracy. And this is not working.
Marcela Fernandez de Violante: And so we were together hundreds and hundreds and hundreds. We had these big, big meetings at the campus crowded, crowded. And people singing, Que Vivan los Estudiantes . . . ta-ri-ra-ra-ra-ra.
Marcela Fernandez de Violante: We were very young, very naive. But for the first time, you had this notion that this country was going to be changed by the power of our convictions.
Miguel Breseda: You would get in a bus and give a speech and inform the people. Because newspaper wouldn't publish anything. And people would give you money, they would congratulate you and they would say, "We are with you young people. . . ."

QUESTIONS FOR ANALYSIS

1. Why did free speech figure so prominently in the protests of the 1960s?
2. What do all of these activists seem to be struggling for, or against? How do their struggles seem similar to — or different from — those occurring simultaneously in the United States?

not to strike back in retribution. Impromptu and heartfelt, Kennedy's speech was a plea to follow King's nonviolent example, even as the nation descended into greater violence.

But two months later, having emerged as the front-runner for the Democratic presidential nomination, Kennedy, too, would be gone. On June 5, as he was celebrating his victory in the California primary over Eugene McCarthy, Kennedy was shot dead by a young Palestinian named Sirhan Sirhan. Amid the national mourning for yet another political murder, one newspaper columnist declared that "the country does not work anymore." *Newsweek* asked, "Has violence become a way of life?"

Robert Kennedy After the assassination of Martin Luther King Jr. and with President Johnson out of the presidential race, Robert Kennedy emerged in 1968 as the leading liberal figure in the nation. A critic of the Vietnam War, a strong supporter of civil rights, and committed to fighting poverty, Kennedy (the brother of the late President John Kennedy) ran a progressive campaign for president. In this photograph he is shown shaking hands with supporters in Detroit in May 1968. However, less than three weeks after this picture was taken, Kennedy, too, was dead, the victim of yet another assassination. Andrew Sacks/Getty Images

Kennedy's assassination was a calamity for the Democratic Party because only he had seemed able to surmount the party's fissures over Vietnam. In the space of eight weeks, American liberals had lost their two most important national figures, King and Kennedy. The third, Johnson, was unpopular and politically damaged. Without these unifying leaders, the crisis of liberalism had become unmanageable.

The Antiwar Movement and the 1968 Election

Before their deaths, Martin Luther King Jr. and Robert Kennedy had spoken eloquently against the Vietnam War. To antiwar activists, however, bold speeches and marches had not produced the desired effect. "We are no longer interested in merely protesting the war," declared one. "We are out to stop it." They sought nothing short of an immediate American withdrawal. Their anger at Johnson and the Democratic Party — fueled by news of the Tet offensive, the murders of King and Kennedy, and the general youth rebellion — had radicalized the movement.

Democratic Convention In August, at the **1968 Democratic National Convention** in Chicago, the political divisions generated by the war consumed the party. Thousands of protesters descended on the city. The most visible group, led by Jerry Rubin and Abbie Hoffman, a remarkable pair of troublemakers, claimed to represent the Youth International Party (whose members were known as "Yippies"). To mock those inside the convention hall, they nominated a live pig, Pigasus, for president. The Yippies' stunts were geared toward maximum media exposure. But a far larger and more serious group of activists had come to Chicago to demonstrate against the war as well — and they staged what many came to call the Siege of Chicago.

Democratic mayor Richard J. Daley ordered the police to break up the demonstrations. Several nights of skirmishes between protesters and police culminated on the evening of the nominations. In what an official report later described as a "police riot," police officers attacked protesters with tear gas and clubs. As the nominating speeches proceeded, television networks broadcast scenes of the riot, cementing a popular impression of the Democrats as the party of disorder. "They are going to be spending the next four years picking up the pieces," one Republican said gleefully. Inside the hall, the party dispiritedly nominated Hubert H. Humphrey, Johnson's vice president. The delegates approved a middle-of-the-road platform that endorsed continued fighting in Vietnam while urging a diplomatic solution to the conflict.

AP® EXAM TIP

Evaluate the resurgence of conservative ideas in the late 1960s.

Richard Nixon On the Republican side, Richard M. Nixon had engineered a remarkable political comeback. After losing the presidential campaign in 1960 and the California gubernatorial race in 1962, he won the Republican presidential nomination in 1968. Sensing weakness in the Democratic Party, Nixon and his advisors believed there were two groups of voters whose long political loyalty to Democrats was wavering: working-class white voters in the North and southern whites of all social classes.

Offended by the antiwar movement and the counterculture, and disturbed by urban riots, northern blue-collar voters, especially Catholics, had drifted away from the Democratic Party. Growing up in the Great Depression, these families were admirers of FDR and perhaps even had his picture on their living-room wall. But times had changed over three decades. To show how much they had changed, the social scientists Ben J. Wattenberg and Richard Scammon profiled blue-collar workers in their study *The Real Majority* (1970). Wattenberg and Scammon asked their readers to consider people such as a forty-seven-year-old working-class woman from Dayton, Ohio: "[She] is afraid to walk the streets alone at night. . . . She has a mixed view about blacks and civil rights." Moreover, they wrote, "she is deeply distressed that her son is going to a community junior college where LSD was found on campus." Such northern blue-collar families were once reliable Democratic voters, but their political loyalties were increasingly up for grabs — a fact Republicans knew well.

AP PRACTICES & SKILLS

POINT OF VIEW

Why might a Democratic supporter of FDR in the 1940s have decided to vote for Republican Richard Nixon in 1968?

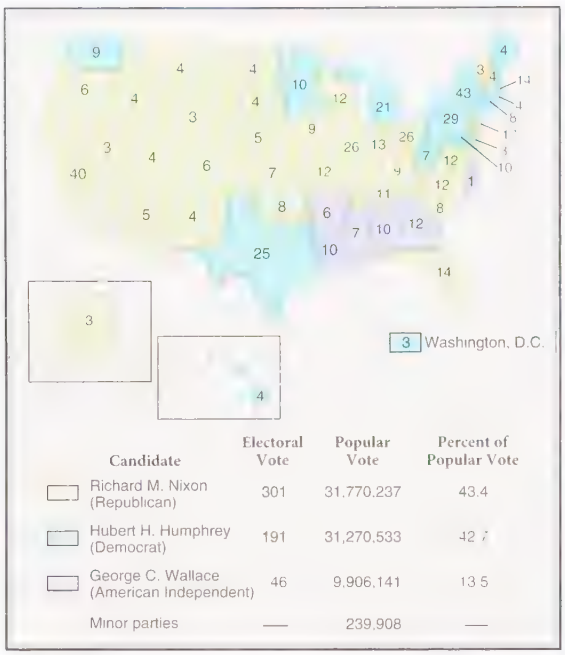
George Wallace Working-class anxieties over student protests and urban riots were first exploited by the controversial governor of Alabama, George C. Wallace. Running in 1968 as a third-party presidential candidate, Wallace traded on his fame as a segregationist governor. He had tried to stop the federal government from desegregating the University of Alabama in 1963, and he was equally obstructive during the Selma crisis of 1965. Appealing to whites in both the North and the South, Wallace called for "law and order" and attacked welfare programs; he claimed that mothers on public assistance were, thanks to Johnson's Great Society, "breeding children as a cash crop."

Wallace's hope was that by carrying the South, he could deny a major candidate an electoral majority and force the election into the House of Representatives. He fell short of that objective, finishing with just 13.5 percent of the popular vote. But he had defined hot-button issues — liberal elitism, welfare policies, and law and order — that became hallmarks for the next generation of mainstream conservatives.

Nixon's Strategy Nixon offered a subtler version of Wallace's populism in a two-pronged approach to the campaign. He adopted what his advisors called the "southern strategy," which aimed at attracting southern white voters still smarting over the civil rights gains by African Americans. Nixon won over the key southerner, Democrat-turned-Republican senator Strom Thurmond of South Carolina, the 1948 Dixiecrat presidential nominee. Nixon informed Thurmond that while formally he had to support civil rights, his administration would go easy on enforcement. He also campaigned against the antiwar movement, urban riots, and protests, calling for a strict adherence to "law and order." He pledged to represent the "quiet voice" of the "great majority of Americans, the forgotten Americans, the nonshouters, the nondemonstrators." Here Nixon was speaking not just to the South, but to the many millions of anxious suburban voters across the country concerned that social disorder had gripped the nation.

These political strategies — southern and suburban — worked. Nixon received 43.4 percent of the vote to Humphrey's 42.7 percent, defeating him by a scant

George Wallace George Wallace had become famous as the segregationist governor who stood "in the schoolhouse door" to prevent black students from enrolling at the University of Alabama in 1963 (though after being confronted by federal marshals, he stepped aside). In 1968, he campaigned for the Democratic presidential nomination on a populist "law and order" platform that appealed to many blue-collar voters concerned about antiwar protests, urban riots, and the rise of the counterculture. In this 1968 photograph, Wallace greets supporters on the campaign trail. Lee Balterman/The LIFE Picture Collection



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Richard M. Nixon (Republican)	301	31,770,237	43.4
Hubert H. Humphrey (Democrat)	191	31,270,533	42.7
George C. Wallace (American Independent)	46	9,906,141	13.5
Minor parties	—	239,908	—

MAP 27.3 The Presidential Election of 1968
With Lyndon B. Johnson's surprise withdrawal and the assassination of the party's most charismatic contender, Robert Kennedy, the Democrats faced the election of 1968 in disarray. Governor George Wallace of Alabama, who left the Democrats to run as a third-party candidate, campaigned on the backlash against the civil rights movement. As late as mid-September Wallace held the support of 21 percent of the voters. But in November he received only 13.5 percent of the vote, winning five southern states. Republican Richard M. Nixon, who like Wallace emphasized "law and order" in his campaign, defeated Hubert H. Humphrey with only 43.4 percent of the popular vote, but it was now clear, given that Wallace's southern support would otherwise have gone to Nixon, that the South had shifted decisively to the Republican side.

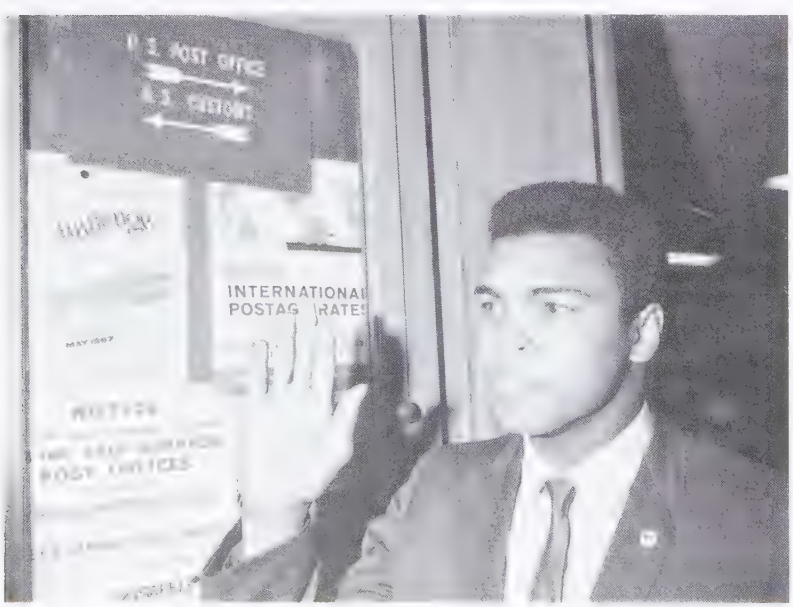
500,000 votes out of the 73 million that were cast (Map 27.3). But the numerical closeness of the race could not disguise the devastating blow to the Democrats. Humphrey received almost 12 million fewer votes than Johnson had in 1964. The white South largely abandoned the Democratic Party, an exodus that would accelerate in the 1970s. In the North, meanwhile, Nixon and Wallace made significant inroads among traditionally Democratic voters. The result was that New Deal Democrats lost the unity of purpose that had served them for thirty years. A nation exhausted by months of turmoil and violence had chosen a new direction. Nixon's victory in 1968 foreshadowed—and helped propel—a national electoral realignment in the coming decade.

The Nationalist Turn

Vietnam and the increasingly radical youth rebellion intersected with the turn toward racial and ethnic nationalism by young African American and Chicano activists. As we saw in Chapter 26, the Black Power and Chicano movements broke with the liberal "rights" politics of an older generation of leaders. These new activists expressed fury at the poverty and white racism that were beyond the reach of civil rights laws; they also saw Vietnam as an unjust war against other people of color.

In this spirit, the **Chicano Moratorium Committee** organized demonstrations against the war. Chanting "Viva la Raza, Afuera Vietnam" ("Long live the Chicano people, Get out of Vietnam"), 20,000 Mexican Americans marched in Los Angeles in August 1970. At another rally, Cesar Chavez said: "For the poor it is a terrible irony that they should rise out of their misery to do battle against other poor people." He and other Mexican American activists charged that the draft was biased against those who had little—like most wars in history, Vietnam was, in the words of one retired army colonel, "a poor boy's fight."

Among African Americans, the Black Panther Party and the National Black Antiwar Antidraft League spoke out against the war. "Black Americans are considered to be the world's biggest fools," Eldridge Cleaver of the Black Panther Party wrote in his typically acerbic style, "to go to another country to fight for something they don't have for themselves." Muhammad Ali, the most famous boxer in the world, refused his army induction. Sentenced to prison, Ali was eventually acquitted on appeal. But his action cost him his heavyweight title, and for years he was not allowed to box professionally in the United States.



Muhammad Ali Refuses Army Induction On April 28, 1967, heavyweight champion boxer Muhammad Ali refused to be drafted into the U.S. Army, claiming that the war in Vietnam was immoral and that as a member of the Nation of Islam he was a conscientious objector. In this photograph, Ali stands outside the U.S. Army induction center in Houston, Texas. Ali's refusal, which was applauded by the antiwar movement, led to a five-year prison sentence. Though that conviction was overturned in 1971 after numerous appeals, Ali's stand against the war cost him his heavyweight boxing title. Bettmann/Getty Images

Women's Liberation and Black and Chicana Feminism

AP® EXAM TIP

Evaluate the degree of continuity and change in the feminist movement in the twentieth century.

Among women, 1968 also marked a break with the past. The late 1960s spawned new expressions of feminism: **women's liberation** and black and Chicana feminisms. Activists for the former were primarily younger, college-educated women fresh from the New Left, antiwar, and civil rights movements. Those movements' male leaders, they discovered, considered women little more than pretty helpers who typed memos and fetched coffee. Women who tried to raise feminist issues at civil rights and antiwar events were shouted off the platform with jeers such as "Move on, little girl, we have more important issues to talk about here than women's liberation."

Fed up with second-class status, and well versed in the tactics of organization and protest, women radicals broke away and organized on their own. Unlike the National Organization for Women (NOW), the women's liberation movement was loosely structured, comprising an alliance of collectives in New York, San Francisco, Boston, and other big cities and college towns. "Women's lib," as it was dubbed by a skeptical media, went public in 1968 at the Miss America pageant. Demonstrators carried posters of women's bodies labeled as slabs of beef — implying that society treated them as meat. Mirroring the identity politics of Black Power activists and the self-dramatization of the counterculture, women's liberation sought an end to the **denigration** and exploitation of women. "Sisterhood is powerful!" read one women's liberationist manifesto. The national Women's Strike for Equality in August 1970 brought hundreds of thousands of women into the streets of the nation's cities for marches and demonstrations.

By that year, new terms such as *sexism* and *male chauvinism* had become part of the national vocabulary. As converts flooded in, two branches of the women's movement began to converge. Radical women realized that key feminist goals — child care, equal pay, and reproduction rights — could best be achieved in the political arena. At the same time, more traditional activists, often known as "liberal feminists" and exemplified by Betty Friedan, developed a broader view of women's oppression. They came to understand that women required more than equal opportunity: the culture that regarded women as nothing more than sexual objects and helpmates to men had to change as well. Although still largely white and middle class, feminists began to think of themselves as part of a broad social crusade.

"Sisterhood" did not unite all women, however. Black and Latina women continued to work within the larger framework of the civil rights movement, their feminism linked to the crusade for racial justice. New groups such as the Combahee River Collective and the National Black Feminist Organization arose to speak for the concerns of black women. They criticized sexism but were reluctant to break completely with black men and the struggle for racial equality. Mexican American feminists, or Chicana feminists as they called themselves, came from Catholic backgrounds in which motherhood and family were held in high regard. "We want to walk hand in hand with the Chicano brothers, with our children, our *viejitos* [elders], our Familia de la Raza," one Chicana feminist wrote. Black and Chicana feminists embraced the larger movement for women's rights but carried on their own struggles to address specific needs in their communities.

One of the most important contributions of all the new feminisms was to raise awareness about what feminist Kate Millett called sexual politics. Liberationists, along with black and Chicana feminists, argued that unless women had control over their own bodies, they could not freely shape their destinies. They campaigned for reproductive rights, especially access to abortion, and railed against a culture that blamed women for their own sexual assault and turned a blind eye to sexual harassment in the workplace.

Meanwhile, women's opportunities expanded dramatically in higher education. Dozens of formerly all-male **bastions** such as Yale, Princeton, and the U.S. military

academies admitted women undergraduates for the first time. Colleges started women's studies programs, which eventually numbered in the hundreds, and the proportion of women attending graduate and professional schools rose markedly. With the adoption of **Title IX** in 1972, Congress broadened the 1964 Civil Rights Act to include educational institutions, prohibiting colleges and universities that received federal funds from discriminating on the basis of sex. By requiring comparable funding for sports programs, Title IX made women's athletics a real presence on college campuses.

Women also became increasingly visible in public life. Congresswomen Bella Abzug and Shirley Chisholm joined Betty Friedan and Gloria Steinem, the founder of *Ms.* magazine, to create the National Women's Political Caucus in 1971. Abzug and Chisholm, both from New York, joined Congresswomen Patsy Mink from Hawaii and Martha Griffiths from Michigan to sponsor equal rights legislation. Congress authorized child-care tax deductions for working parents in 1972 and in 1974 passed the Equal Credit Opportunity Act, which enabled married women to get credit, including credit cards and mortgages, in their own names.

AP PRACTICES & SKILLS

COMPARE & CONTRAST

How did feminist movements after 1968 differ from the women's movement of the early 1960s?

A Lesbian and Gay Rights Protest in Greenwich Village, New York City, 1970 Building on the momentum of the Black Power and women's liberation movements of the late 1960s, a gay liberation movement had emerged by the early 1970s. Its history was longer than most Americans recognized, dating to the homophile movement of the 1950s, but the struggle for gay and lesbian rights and freedoms gained new adherents after the Stonewall riots of 1969. Under the banner of "coming out," lesbian and gay Americans refused to accept second-class citizenship. Rue des Archives/The Granger Collection

Stonewall and Gay Liberation

The liberationist impulse transformed the gay rights movement as well. Homophile activists in the 1960s (Chapter 25) had pursued rights by protesting, but they adopted the respectable dress and behavior they knew straight society demanded. Meanwhile, the vast majority of gay men, lesbians, and transgender persons remained "in the closet." So many were closeted because homosexuality was considered immoral and was even illegal in the vast majority of states — sodomy statutes outlawed same-sex relations, and police used other morals laws to harass and arrest gay men and lesbians. In the late 1960s, however, inspired by the Black Power and women's movements, gay activists increasingly demanded immediate and unconditional recognition of their rights. A gay newspaper in New York bore the title *Come Out!*

The new gay liberation found multiple expressions in major cities across the country, but a defining event occurred in New York's Greenwich Village. Police had raided gay bars for decades, making arrests, publicizing the names of patrons, and harassing customers simply for being gay. When a local gay bar called the **Stonewall Inn** was raided by police in the summer of 1969, however, its patrons rioted for two days, setting the establishment on fire and battling with police in the narrow streets of the Village. Decades of police repression had taken their toll. Few commentators excused the violence, and the Stonewall riots were not repeated, but activists celebrated them as a symbolic demand for full citizenship. The gay liberation movement grew quickly after Stonewall. Local gay, lesbian, and transgender organizations proliferated, and activists began pushing for nondiscrimination ordinances and consensual sex laws at the state level. By 1975, the National Gay Task Force and other national organizations were lobbying Congress, serving as media watchdogs, and advancing suits in the courts. Despite all the activity, progress was slow; in most arenas of American life, gay men, lesbians, and

transgender people did not enjoy the same legal protections and rights as other Americans.

IN YOUR OWN WORDS What factors best explain the rising militancy of social change and protest movements in 1968 and afterward?

AP® PRACTICES & SKILLS

CAUSATION

How did the antiwar movement, women's liberation, and gay liberation break with an earlier liberal politics?

Rise of the Silent Majority

Vietnam abroad and the antiwar movement at home tore at the fabric of the Democratic coalition. Lyndon Johnson could not stitch the party back together. Richard Nixon, in contrast, showed himself adept at taking advantage of the nation's unrest through carefully timed speeches and displays of moral outrage. A centrist by nature and temperament, Nixon was not part of the conservative Goldwater wing of the Republican Party. Though he was an ardent anticommunist like Goldwater, Nixon also shared some of Eisenhower's traits, including a basic acceptance of government's role in economic matters. Nixon is thus most profitably viewed as a transitional figure, a national politician who formed a bridge between the liberal postwar era and the much more conservative decades that followed the 1970s.

In late 1969, following a massive antiwar rally in Washington, President Nixon gave a televised speech in which he referred to his supporters as the **silent majority**. It was classic Nixonian rhetoric. In a single phrase, he summed up a generational and cultural struggle, placing himself on the side of ordinary Americans against the rabble-rousers

Richard Nixon Richard Nixon completed one of the more remarkable political rehabilitations in modern times. He had lost the 1960 presidential election and the 1962 California gubernatorial election. But he came back strong in 1968 to ride — and help direct — a growing wave of reaction among conservative Americans against Great Society liberalism, the antiwar movement, civil rights, and the counterculture. In this photograph, President Nixon greets supporters in June 1969, just a few months after his inauguration. © Wally McNamee/Corbis/Corbis via Getty Images

and troublemakers. It was an oversimplification, but the label *silent majority* stuck, and Nixon had defined a political phenomenon. For the remainder of his presidency, Nixon projected himself to the public as the defender of a reasonable middle ground under assault from the radical left.

Nixon in Vietnam

AP® EXAM TIP

Compare the policies implemented in Vietnam by Richard Nixon to those enacted by previous American presidents.

In Vietnam, Nixon picked up where Johnson had left off. Cold War assumptions continued to dictate presidential policy. Abandoning Vietnam, Nixon insisted, would damage America's "credibility" and make the country seem "a pitiful, helpless giant." Nixon wanted peace, but only "peace with honor." The North Vietnamese were not about to oblige him. The only reasonable outcome, from their standpoint, was a unified Vietnam under their control.

Vietnamization and Cambodia To neutralize criticism at home, Nixon began delegating the ground fighting to the South Vietnamese. Under this new policy of **Vietnamization**, American troop levels dropped from 543,000 in 1968 to 334,000 in 1971 to barely 24,000 by early 1973. American casualties dropped correspondingly. But the killing in Vietnam continued. As Ellsworth Bunker, the U.S. ambassador to Vietnam, noted cynically, it was just a matter of changing "the color of the bodies."

Prowar Rally Under a sea of American flags, construction workers in New York City march in support of the Vietnam War. Wearing hard hats, tens of thousands of marchers jammed Broadway for four blocks opposite City Hall, and the overflow crammed the side streets. Working-class patriotism became a main source of support for Nixon's Vietnam policy.

Far from abating, however, the antiwar movement intensified. First, in November 1969, half a million demonstrators staged a huge protest in Washington called the Vietnam Moratorium, one of the largest protests ever held in the capital. Then, on April 30, 1970, as part of a secret bombing campaign against Vietcong supply lines, American troops destroyed enemy bases in neutral Cambodia. When news of the invasion of Cambodia came out, American campuses exploded in outrage — and, for the first time, students died. On May 4, 1970, at Kent State University in Ohio, panicky National Guardsmen fired into an antiwar rally, wounding eleven students and killing four. (At least 61 shots were fired in about 13 seconds; of the 13 people hit, the nearest was 60 feet from the Guardsmen.) Less than two weeks later, at Jackson State College in Mississippi, Guardsmen stormed a dormitory, killing two black students. More than 450 colleges closed in protest. Across the country, the spring semester was essentially canceled.

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

How was President Nixon's Vietnam policy different from President Johnson's?

My Lai Massacre Meanwhile, one of the worst atrocities of the war had become public. In 1968, U.S. Army troops had executed nearly five hundred people in the South Vietnamese village of **My Lai**, including a large number of women and children. The massacre was known only within the military until 1969, when journalist Seymour Hersh broke the story and photos of the massacre appeared in *Life* magazine, discrediting the United States around the world. Americans, *Time* observed, "must stand in the larger dock of guilt and human conscience." Although high-ranking officers participated in the My Lai massacre and its cover-up, only one soldier, a low-ranking second lieutenant named William Calley, was convicted.

Believing that Calley had been made a fall guy for official U.S. policies that inevitably brought death to innocent civilians, a group called Vietnam Veterans Against the War publicized other atrocities committed by U.S troops. In a controversial protest in 1971, they returned their combat medals at demonstrations outside the U.S. Capitol, literally hurling them onto the Capitol steps. "Here's my merit badge for murder," one vet said. Supporters of the war called these veterans cowardly and un-American, but their heartfelt antiwar protest exposed the deep personal torment that Vietnam had caused many soldiers.

Détente As protests continued at home, Nixon pursued two strategies to achieve his declared "peace with honor," one diplomatic and the other military. First, he sought **détente** (a lessening of tensions) with the Soviet Union and a new openness with China. In a series of meetings between 1970 and 1972, Nixon and Soviet premier Leonid Brezhnev resolved tensions over Cuba and Berlin and signed the first Strategic Arms Limitation Treaty (SALT I), the latter a symbolic step toward ending the Cold War arms race. Heavily influenced by his national security advisor, the Harvard professor Henry Kissinger, Nixon believed that he could break the Cold War impasse that had kept the United States from productive dialogue with the Soviet Union.

AP® EXAM TIP

Evaluate the degree to which détente fostered change and illustrated continuity in the policy of containment.

Then, in 1972, Nixon visited China, becoming the first sitting U.S. president to do so. In a televised weeklong trip, the president pledged better relations with China and declared that the two nations — one capitalist, the other communist — could peacefully coexist. This was the man who had risen to prominence in the 1950s by railing against the Democrats for "losing" China and by hounding Communists and fellow travelers. Indeed, the president's impeccable anticommunist credentials gave him the political cover to travel to Beijing. Praised for his efforts to lessen Cold War tensions, Nixon also had tactical objectives in mind. He hoped that by befriending both the Soviet Union and China, he could play one against the other and strike a better deal over Vietnam at the ongoing peace talks in Paris. His second strategy, however, would prove less praiseworthy and cost more lives.

Exit America In April 1972, in an attempt to strengthen his negotiating position, Nixon ordered large-scale bombing raids against North Vietnam. A month later, he

approved the mining of North Vietnamese ports, something Johnson had never dared to do. The North Vietnamese were not isolated, however: supplies from China and the Soviet Union continued, and the Vietcong fought on.

With the 1972 presidential election approaching, Nixon sent Kissinger back to the Paris peace talks, which had been initiated under Johnson. In a key concession, Kissinger accepted the presence of North Vietnamese troops in South Vietnam. North Vietnam then agreed to an interim arrangement whereby the South Vietnamese government in Saigon would stay in power while a special commission arranged a final settlement. With Kissinger's announcement that "peace is at hand," Nixon got the election lift he wanted, but the agreement was then sabotaged by General Nguyen Van Thieu, the South Vietnamese president. So Nixon, in one final spasm of bloodletting, unleashed the two-week "Christmas bombing," the most intense of the entire war. On January 27, 1973, the two sides signed the Paris Peace Accords.

Nixon hoped that with massive U.S. aid the Thieu regime might survive. But Congress was in revolt. It refused appropriations for bombing Cambodia after August 15, 1973, and gradually cut back aid to South Vietnam. In March 1975, North Vietnamese forces launched a final offensive, and on April 30, Vietnam was reunited. Saigon, the South Vietnamese capital, was renamed Ho Chi Minh City, after the founding father of the communist regime.

The collapse of South Vietnam in 1975 produced a powerful, and tragic, historical irony: an outcome little different from what would likely have resulted from the unification vote in 1954 (Chapter 24). In other words, America's most disastrous military adventure of the twentieth century barely altered the geopolitical realities in Southeast Asia. The Hanoi regime called itself communist but never intended to be a satellite of any country, least of all China, Vietnam's ancient enemy.

The price paid for the Vietnam War was steep. America's Vietnamese friends lost jobs and property, spent years in "reeducation" camps, or had to flee the country. Millions of Vietnamese died in more than a decade of war, which included some of the most intensive aerial bombing of the twentieth century. In bordering Cambodia, the maniacal Khmer Rouge, followers of Cambodia's ruling Communist Party, took power and murdered 1.7 million people in bloody purges. And in the United States, more than 58,000 Americans had given their lives, and 300,000 had been wounded. On top of the war's $150 billion price tag, slow-to-heal internal wounds divided the country, and Americans increasingly lost confidence in their political leaders.

The Silent Majority Speaks Out

Nixon placed himself on the side of what he called "the nonshouters, the nondemonstrators." But moderate and conservative Americans were not in the mood to simply remain silent. They increasingly spoke out. During Nixon's first presidential term, those opposed to the direction liberalism had taken since the early 1960s focused their discontent on what they believed to be the excesses of the "rights revolution" — the enormous changes in American law and society initiated by the civil rights movement and advanced by feminists and others thereafter.

AP® EXAM TIP

Evaluate the role of the Supreme Court in extending liberal values through judicial decisions.

Law and Order and the Supreme Court The rights revolution had found an ally in an unexpected place: the U.S. Supreme Court. The decision that stood as a landmark in the civil rights movement, *Brown v. Board of Education* (1954), triggered a larger judicial revolution. Following *Brown*, the Court increasingly agreed to hear human rights and civil liberties cases — as opposed to its previous focus on property-related suits. Surprisingly, this shift was led by the man whom President Dwight Eisenhower had appointed chief justice in 1953: Earl Warren. A popular Republican governor of California, Warren surprised many, including Eisenhower himself, with his robust advocacy of civil rights and civil liberties. The **Warren Court** lasted from 1954

until 1969 and established some of the most far-reaching liberal jurisprudence in U.S. history.

Right-wing activists fiercely opposed the Warren Court, which they accused of "legislating from the bench" and contributing to social breakdown. They pointed, for instance, to the Court's rulings that people who are arrested have a constitutional right to counsel (1963, 1964) and, in *Miranda v. Arizona* (1966), that arrestees have to be informed by police of their right to remain silent. Compounding conservatives' frustration was a series of decisions that liberalized restrictions on pornography. Trying to walk the fine line between censorship and obscenity, the Court ruled in *Roth v. United States* (1957) that obscene material had to be "utterly without redeeming social importance" to be banned. The "social importance" test, however, proved nearly impossible to define and left wide latitude for pornography to flourish.

That constitutional test was finally abandoned in 1972, when the Court ruled in *Miller v. California* that "contemporary community standards" were the rightful measure of obscenity. But *Miller*, too, little slowed the proliferation of pornographic magazines, films, and live shows in the 1970s. Conservatives found these decisions especially distasteful, since the Court had also ruled that religious ritual of any kind in public schools — including prayers and Bible reading — violated the constitutional separation of church and state. To many religious Americans, the Court had taken the side of immorality over Christian values.

Supreme Court critics blamed rising crime rates and social breakdown on the Warren Court's liberal judicial record. Every category of crime was up in the 1970s, but especially disconcerting was the doubling of the murder rate since the 1950s and the 76 percent increase in burglary and theft between 1967 and 1976. Sensational crimes had always grabbed headlines, but now "crime" itself preoccupied politicians, the media, and the public. However, no one could establish a direct causal link between increases in crime and Supreme Court decisions, given a myriad of other social factors, including drugs, income inequality, enhanced statistical record-keeping, and the proliferation of guns. But when many Americans looked at their cities in the 1970s, they saw pornographic theaters, X-rated bookstores, and rising crime rates. Where, they wondered, was law and order?

Busing Another major civil rights objective — desegregating schools — produced even more controversy and fireworks. For fifteen years, southern states, by a variety of stratagems, had fended off court directives that they desegregate "with all deliberate speed." In 1968, only about one-third of all black children in the South attended schools with whites. At that point, the federal courts got serious and, in a series of stiff decisions, ordered an end to "dual school systems."

Where schools remained highly segregated, the courts increasingly endorsed the strategy of busing students to achieve integration. Plans differed across the country. In some states, black children rode buses from their neighborhoods to attend previously all-white schools. In others, white children were bused to black or Latino neighborhoods. In an important 1971 decision, *Swan v. Charlotte-Mecklenburg*, the Supreme Court upheld a countywide busing plan for Charlotte-Mecklenburg, a North Carolina school district. Despite local opposition, desegregation proceeded, and many cities in the South followed suit. By the mid-1970s, 86 percent of southern black children were attending school with whites. (In recent years, this trend toward desegregation has reversed.)

In the North, where segregated schooling was also a fact of life — arising from suburban residential patterns — busing orders proved less effective. Detroit dramatized the problem. To integrate Detroit schools would have required merging city and suburban school districts. A lower court ordered just such a merger in 1971, but in *Milliken v. Bradley* (1974), the Supreme Court reversed the ruling, requiring busing plans to remain within the boundaries of a single school district. Without including the largely

An Antibusing Confrontation in Boston Where busing was implemented, it often faced stiff resistance. Many white communities resented judges dictating which children would attend which neighborhood school. In working-class Irish South Boston, mobs attacked African American students bused in from Roxbury in 1974. A police presence was required to keep South Boston High School open. When lawyer and civil rights activist Ted Landsmark tried to enter Boston's city hall during a 1976 antibusing demonstration, he was assaulted. Stanley Forman's Pulitzer Prize–winning photo for the Boston *Herald-American* — titled *The Soiling of Old Glory* — shows Joseph Rakes lunging at Landsmark with an American flag. Busing also had the perverse effect of speeding up "white flight" to city suburbs. Pulitzer Prize, 1977, www.stanleyformanphotos.com

white suburbs in busing efforts, however, achieving racial balance in Detroit, and other major northern cities, was all but impossible. Postwar suburbanization had produced in the North what law had mandated in the South: entrenched racial segregation of schools.

As the 1972 election approached, President Nixon took advantage of rising discontent over "law and order" and busing. In so doing, he was the political beneficiary of a growing reaction against liberalism that had begun to take hold between 1968 and the early 1970s.

The 1972 Election

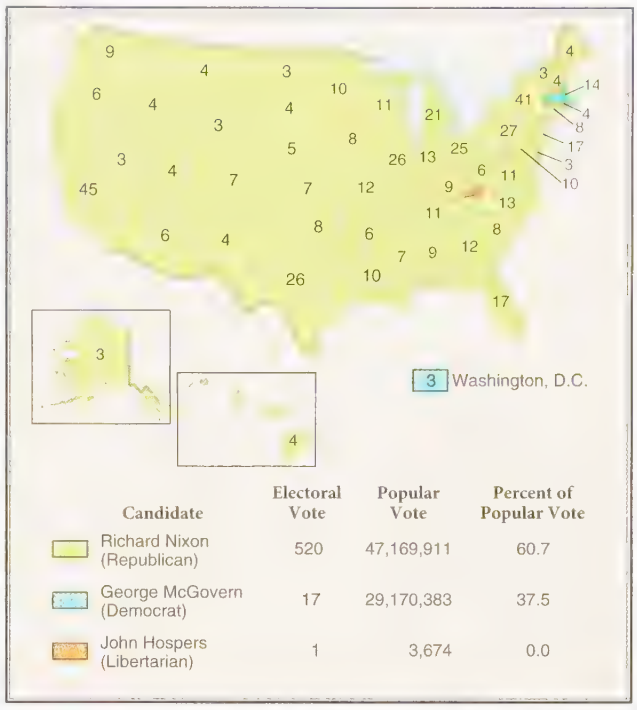
Political realignments have been infrequent in American history. One occurred between 1932 and 1936, when many Republicans, despairing over the Great Depression, had switched sides and voted for FDR. The years between 1968 and 1972 were another such pivotal moment. This time, Democrats were the ones who abandoned their party.

After the 1968 elections, the Democrats fell into disarray. Bent on sweeping away the party's old guard, reformers took over, adopting new rules that granted women, African Americans, and young people delegate seats at the convention "in reasonable relation to their presence in the population." In the past, an alliance of urban machines, labor unions, and white ethnic groups — the heart of the New Deal coalition — dominated the presidential nominating process. But at the 1972 convention, few of the party

faithful qualified as delegates under the changed rules. The crowning insult came when the convention rejected the credentials of Chicago mayor Richard Daley and his delegation, seating instead an Illinois delegation led by Jesse Jackson, a firebrand young black minister and former aide to Martin Luther King Jr.

Capturing the party was one thing; beating the Republicans was quite another. These party reforms opened the door for George McGovern, a liberal South Dakota senator and favorite of the antiwar and women's movements, to capture the nomination. But McGovern took a number of missteps, including failing to mollify key party backers such as the AFL-CIO, which, for the first time in memory, refused to endorse the Democratic ticket. A weak campaigner, McGovern was also no match for Nixon, who pulled out all the stops. Using the advantages of incumbency, Nixon gave the economy a well-timed lift and proclaimed (prematurely) a cease-fire in Vietnam. Nixon's appeal to the "silent majority"—people who "care about a strong United States, about patriotism, about moral and spiritual values"—was by now well honed.

Nixon won in a landslide, receiving nearly 61 percent of the popular vote and carrying every state except Massachusetts and the District of Columbia (Map 27.4). The returns revealed how fractured traditional Democratic voting blocs had become. McGovern received only 38 percent of the big-city Catholic vote and lost 42 percent of self-identified Democrats overall. The 1972 election marked a pivotal moment in the country's shift to the right. Yet observers legitimately wondered whether the 1972 election results proved the popularity of conservatism or merely showed that the country had grown weary of liberalism and the changes it had wrought in national life.



MAP 27.4 The Presidential Election of 1972
In one of the most lopsided presidential elections of the twentieth century, Republican Richard Nixon defeated Democrat George McGovern in a landslide in 1972. It was a reversal of the 1964 election, just eight years before, in which Republican Barry Goldwater had been defeated by a similar margin. Nixon hoped that his victory signaled what Kevin Phillips called "the emerging Republican majority," but the president's missteps and criminal actions in the Watergate scandal would soon bring an end to his tenure in office.

IN YOUR OWN WORDS **What social issues divided Americans in the early 1970s, and how did those divisions affect the two major political parties?**

SUMMARY

In this chapter, we saw that the combined pressures of the Vietnam War and racial, gender, and cultural conflict fractured and split the New Deal coalition. Following John Kennedy's assassination in 1963, Lyndon Johnson advanced the most ambitious liberal reform program since the New Deal, securing not only civil rights legislation but also many programs in education, medical care, transportation, environmental protection, and, above all, his War on Poverty. But the Great Society fell short of its promise as Johnson escalated American involvement in Vietnam.

The war bitterly divided Americans. Galvanized by the carnage of war and the draft, the antiwar movement spread rapidly among young people, and the spirit of rebellion spilled beyond the war. The New Left took the lead among college students, while the more apolitical counterculture preached liberation through sex, drugs, music, and personal transformation. Women's liberationists broke from the New Left and raised new concerns about society's sexism. Conservative students rallied in support of the war and on behalf of conservative principles, but they were often drowned out by the more vocal and demonstrative liberals and radicals.

In 1968, the nation was rocked by the assassinations of Martin Luther King Jr. and Robert F. Kennedy, as well as by a wave of urban riots, fueling a growing popular desire for law and order. Adding to the national disquiet was the Democratic National Convention that summer, which was divided by the Vietnam War and besieged by street riots outside. The stage was set for a new cycle of conservative politics to take hold of the country and a resurgence of the Republican Party under Richard Nixon between 1968 and 1972. President Nixon ended the war in Vietnam, but only after four more years and many more casualties.

CHAPTER 27 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. What explains the surge in liberal politics and social policy in the early 1960s?
2. What led President Johnson to escalate the war in Vietnam, and how did Americans respond?
3. What factors best explain the rising militancy of social change and protest movements in 1968 and afterward?
4. What social issues divided Americans in the early 1970s, and how did those divisions affect the two major political parties?
5. Look at the events listed under "America in the World" on the thematic timeline on page 747. American global leadership is a major theme of Part 8. How did the global role of the United States shift in the 1960s?

AP® TERMS TO KNOW

Identify and explain the significance of each term below.

Key Concepts and Events

Great Society (p. 846)
Economic Opportunity Act (p. 848)
Medicare and Medicaid (p. 848)
Equal Pay Act (p. 851)
The Feminine Mystique (p. 852)
Presidential Commission on the Status of Women (p. 852)
National Organization for Women (NOW) (p. 852)
Gulf of Tonkin Resolution (p. 854)
Operation Rolling Thunder (p. 854)
Students for a Democratic Society (SDS) (p. 855)
Port Huron Statement (p. 855)
New Left (p. 860)
Young Americans for Freedom (YAF) (p. 860)
Sharon Statement (p. 860)
counterculture (p. 860)
Tet offensive (p. 862)
1968 Democratic National Convention (p. 864)
Chicano Moratorium Committee (p. 866)
women's liberation (p. 867)
Title IX (p. 868)
Stonewall Inn (p. 868)
silent majority (p. 869)
Vietnamization (p. 870)
My Lai (p. 871)
détente (p. 871)
Warren Court (p. 872)

Key People

Lyndon B. Johnson (p. 846)
Barry Goldwater (p. 848)
Betty Friedan (p. 852)
Ngo Dinh Diem (p. 853)
Robert Kennedy (p. 862)
Richard M. Nixon (p. 864)
George C. Wallace (p. 865)
Henry Kissinger (p. 871)

Key Academic Terms

vitriolic (p. 844)
auspices (p. 844)
revile (p. 853)
deferment (p. 860)
adherent (p. 861)
denigrate (p. 867)
bastion (p. 867)

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. In what ways was the Great Society an extension of the New Deal? In what ways was it different? What factors made the period between 1932 and 1972 a "liberal" era in American politics? What events and developments would you use to explain your answer?

2. Compare the photographs of the prowar rally (p. 870) and the counterculture (p. 861). Why did clothing and appearance become so important to many social movements in the 1960s — the women's movement, the Black Power movement, the antiwar movement, and others? How are these visual images historical evidence?

KEY TURNING POINTS

Refer to the chapter chronology on page 846 for helping in answering the question below.

Which specific developments from the chronology made the years 1964, 1965, and 1968 turning points in politics, foreign policy, and culture, and why?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS

Choose the correct answer for each question.

Questions 1–4 refer to the excerpt below.

> "On September 7th in Atlantic City, the Annual Miss America Pageant will again crown 'your ideal.' . . . We will protest the image of Miss America, an image that oppresses women in every area in which it purports to represent us. There will be: Picket Lines; Guerrilla Theater; Leafleting . . . a huge Freedom Trash Can (into which we will throw bras, girdles, curlers, false eyelashes, wigs, and representative issues of *Cosmopolitan*, *Ladies' Home Journal*, *Family Circle*, etc. . . . [W]e will also announce a Boycott of all those commercial products related to the Pageant. . . It should be a groovy day on the Boardwalk in the sun with our sisters. . . .
>
> Male reporters will be refused interviews. We reject patronizing reportage. Only newswomen will be recognized."
>
> "No More Miss America" press release for 1968 Pageant Protest. Excerpted with permission from *Sisterhood Is Powerful*, Robin Morgan, 1970 (Random House, NY).

1. The sentiments Morgan expressed in the excerpt are best understood as resulting from
   - **a.** court decisions expanding individual rights.
   - **b.** the rise of a youth counterculture.
   - **c.** the mass media.
   - **d.** declining public trust in the government.
2. The women's activists of the 1960s and 1970s represented by the excerpt from Morgan share the LEAST similarity with women advocates for
   - **a.** separate public and private spheres in the 1830s.
   - **b.** the Seneca Falls Declaration of Sentiments in 1848.
   - **c.** social reform as demonstrated by Jane Addams in the 1890s.
   - **d.** the Nineteenth Amendment to the Constitution in the 1910s.
3. Which of the following developments resulted from women's activism as described in the excerpt?
   - **a.** A conservative backlash against the challenge to traditional values
   - **b.** Passage of the Equal Rights Amendment
   - **c.** Advances by women in the leadership of major corporations
   - **d.** The election of women to Senate and House of Representatives
4. Which rights movement most directly influenced the tactics and goals of the women's rights movement?
   - **a.** American Indian
   - **b.** Chicano/Latino
   - **c.** African American
   - **d.** Gay and Lesbian

Questions 5–7 refer to the excerpt below.

> "No voting qualification or prerequisite to voting, or standard, practice, or procedure shall be imposed or applied by any State or political subdivision to deny or abridge the right of any citizen of the United States to vote on account of race or color."
>
> Voting Rights Act of 1965

5. The provisions in the Voting Rights Act share the greatest similarity in goals to the reform efforts of
   - **a.** abolitionists in the antebellum period from 1820 to 1860.
   - **b.** Republicans in the Reconstruction period from 1865 to 1877.
   - **c.** Progressives in the period from 1890 to 1920.
   - **d.** Democrats in the New Deal from 1933 to 1941.

6. The Voting Rights Act of 1965 resulted most directly from
   a. continued efforts of southern politicians to resist school desegregation.
   b. rulings of the Supreme Court broadening protections of civil liberties.
   c. successful use of the protest tactic of boycotting.
   d. President Johnson's attempt to create a Great Society.

7. The Voting Rights Act sought most directly to strengthen the
   a. Bill of Rights.
   b. Fourteenth Amendment.
   c. Fifteenth Amendment.
   d. Nineteenth Amendment.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

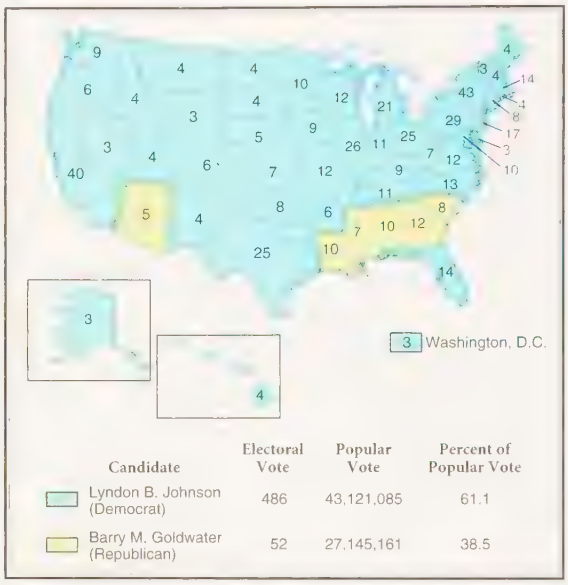
"Within the context of cultural unrest and the attack on tradition made by women like [Betty] Friedan, the catalyst for a profounder criticism and a mass mobilization of American women proved to be the young female participants in the social movements of the 1960s. These daughters of the middle class had received mixed, paradoxical messages about what it meant to grow up to be women in America. On the one hand, the cultural ideal . . . informed them that their only true happiness lay in the twin roles of wife and mother. At the same time they could observe the reality that housewifery was distinctly unsatisfactory for millions of suburban women. . . . Such contradictions left young, educated women in the 1960s dry tinder for the spark of revolt. . . . [Their] experiences in the southern civil rights movement and parts of the student new left catalyzed a new feminist consciousness."

Sara Evans, *Personal Politics: The Roots of Women's Liberation in the Civil Rights Movement and the New Left*, 1979

"In the course of my research, several themes emerged. One of them, clearly exposed through the experience of Black women, is the relationship between sexism and racism. . . . Of course, Black women could understand the relationship between racism and sexism because they had to strive against both. In doing so, they became the linchpin between the two most important social reform movements in American history: the struggles for Black rights and women's rights. In the course of defying the imposed limitations on race and sex, they loosened the chains around both."

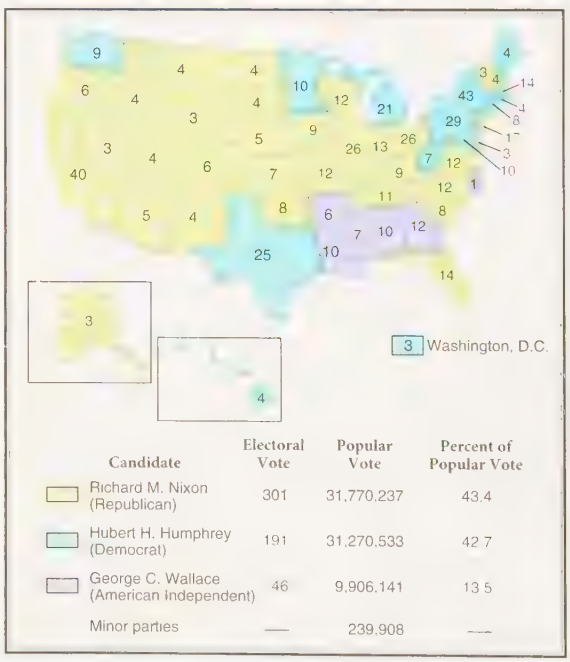
Paula Giddings, *When and Where I Enter: The Impact of Black Women on Race and Sex in America*, 1984

1. Using the two excerpts above, answer (a), (b), and (c).
   a. Briefly explain ONE major difference between Evans's and Giddings's historical interpretations of the origins of 1960s feminism.
   b. Briefly explain how ONE specific historical event or development from the period 1945 to 1965 that is not explicitly mentioned in the excerpts could be used to support Evans's interpretation.
   c. Briefly explain how ONE specific historical event or development from the period 1945 to 1965 that is not explicitly mentioned in the excerpts could be used to support Giddings's interpretation.



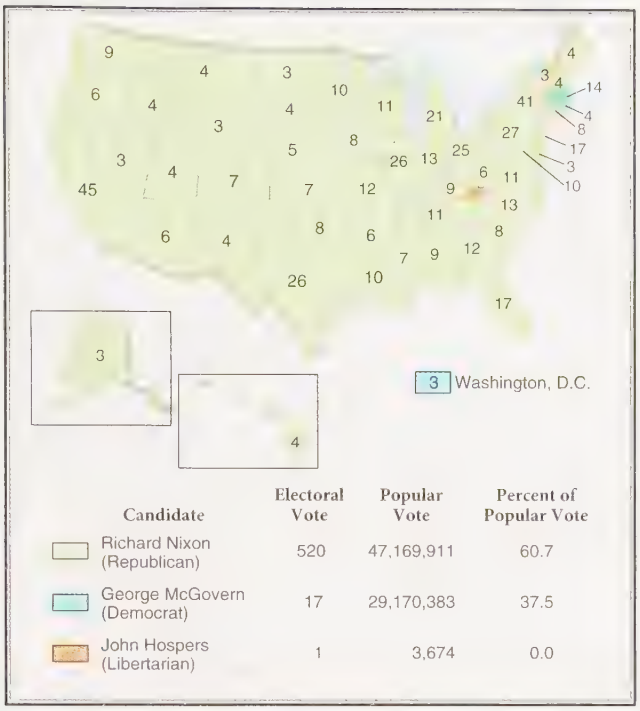
Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Lyndon B. Johnson (Democrat)	486	43,121,085	61.1
Barry M. Goldwater (Republican)	52	27,145,161	38.5

1964 Presidential Election Map



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Richard M. Nixon (Republican)	301	31,770,237	43.4
Hubert H. Humphrey (Democrat)	191	31,270,533	42.7
George C. Wallace (American Independent)	46	9,906,141	13.5
Minor parties	—	239,908	—

1968 Presidential Election Map



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Richard Nixon (Republican)	520	47,169,911	60.7
George McGovern (Democrat)	17	29,170,383	37.5
John Hospers (Libertarian)	1	3,674	0.0

1972 Presidential Election Map

2. Using the three maps on the previous page and at left, answer (a), (b), and (c).
   - **a.** Briefly explain ONE specific historical event or development that accounts for the change depicted in the maps.
   - **b.** Briefly explain ANOTHER specific historical event or development that accounts for the change depicted in the maps.
   - **c.** Briefly explain ONE specific historical effect of the change depicted in the maps.
3. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE specific historical similarity between President Franklin Roosevelt's New Deal and President Lyndon Johnson's Great Society.
   - **b.** Briefly explain ONE specific historical difference between President Franklin Roosevelt's New Deal and President Lyndon Johnson's Great Society.
   - **c.** Briefly explain ONE specific historical effect of President Lyndon Johnson's Great Society.

AP LEARNING FOCUS

How did the legacy of social changes in the 1960s — such as civil rights, shifting gender roles, and challenges to the family — continue to reverberate in the 1970s, leading to both new opportunities and political clashes?

Early in 1971, a new fictional character appeared on national television. Archie Bunker was a gruff blue-collar worker who berated his wife and bemoaned his daughter's marriage to a bearded hippie. Prone to bigoted and insensitive remarks, Archie and his wife Edith sang "Those Were the Days" at the opening of each episode of *All in the Family*, a half-hour comedy. The song celebrated a bygone era, when "girls were girls and men were men." Disdainful of the liberal social movements of the 1960s, Archie professed a conservative, hardscrabble view of the world.

Archie Bunker became a folk hero to many conservative Americans in the 1970s; he said what they felt. But his significance went beyond his politics. *All in the Family* gave voice to a national search for order. His feminist daughter, liberal son-in-law, and black neighbors brought a changing world into Archie's modest home in Queens, New York. Not all Americans were as resistant to change as Archie. Most were ordinary, middle-of-the-road people confronting the aftermath of the tumultuous late 1960s and early 1970s. The social movements of those years challenged Americans to think in new ways about race, gender roles, sexual morality, and the family. Vietnam and the Watergate scandal had compounded matters by producing a crisis of political authority. An "old order" had seemingly collapsed. But what would take its place was not yet clear.

Alongside cultural dislocation and political alienation, the country confronted economic setbacks. In 1973, inflation began to climb at a pace unprecedented in the post–World War II decades, and economic growth slowed. An energy crisis, aggravated by U.S. foreign policy in the Middle East, produced fuel shortages. Foreign competition in manufacturing brought less expensive, and often more reliable, goods into the U.S. market from nations such as Japan and West Germany. As a result, more American plants closed. The great economic ride enjoyed by the United States since World War II was coming to an end.

What distinguishes the period between the energy crisis (1973) and the election of Ronald Reagan to the presidency (1980) is the collective national search for order in the midst of rapid social change, political realignment, and economic crisis. Virtually all the verities and touchstones of the postwar decades — Cold War liberalism, rising living standards, and the nuclear family — had come into question, and most Americans agreed on the urgency to act. For some, this search demanded new forms of liberal experimentation. For others, it led instead to the conservatism of the emerging New Right.

Shifting Gender Roles As American society underwent dramatic changes in the 1970s, women seized new opportunities and expanded their role in national life. Donna Wright, shown here on break from her work at the Blue Ribbon Mine, was the only woman working at the mine in 1979.

CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and identify the links among related events.

1970
- Earth Day first observed
- Environmental Protection Agency established

1972
- Equal Rights Amendment passed by Congress
- Phyllis Schlafly founds STOP ERA
- *Furman v. Georgia* outlaws death penalty
- Watergate break-in (June)

1973
- *Roe v. Wade* legalizes abortion
- Endangered Species Act
- OPEC oil embargo; gas shortages
- Period of high inflation begins
- War Powers Act

1974
- Nixon resigns over Watergate
- Congress imposes 55 miles-per-hour speed limit

1975
- New York City nears bankruptcy
- "Watergate babies" begin congressional reform

1976
- Jimmy Carter elected president

1978
- Proposition 13 reduces California property taxes
- *Bakke v. University of California* limits affirmative action
- Harvey Milk assassinated in San Francisco

1979
- Three Mile Island nuclear accident

An Era of Limits

The economic downturn of the early 1970s was the deepest slump since the Great Depression. Every major economic indicator — employment, productivity, growth — turned negative, and by 1973 the economy was in a tailspin. Inflation, brought on in part by military spending on the war in Vietnam, proved especially difficult to control. When a Middle East embargo cut oil supplies in 1973, prices climbed even more. Unemployment remained high and productivity growth low until 1982. Overall, the 1970s represented the worst economic decade of the postwar period — what California governor Jerry Brown called an "era of limits."

In this time of distress, Americans were forced to consider other limits to the growth and expansion that had long been markers of national progress. The environmental movement brought attention to the toxic effects of modern industrial capitalism on the natural world. As the urban crisis grew worse, several major cities verged on bankruptcy. Finally, political limits were reached as well: none of the presidents of the 1970s could reverse the nation's economic slide, though each spent years trying.

Energy Crisis

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

Modern economies run on oil. If the oil supply is drastically reduced, woe follows. Something like that happened to the United States in the 1970s. Once the world's leading oil producer, the United States had become heavily dependent on inexpensive imported oil, mostly from the Persian Gulf (Figure 28.1). French, British, and American companies extracted the oil, a legacy of European colonialism, but they did so under profit-sharing agreements with the Persian Gulf states. In 1960, these nations and other oil-rich developing countries, such as Venezuela, formed a cartel (a business association formed to control prices), the **Organization of Petroleum Exporting Countries (OPEC)**.

AP® EXAM TIP

Be able to describe the ways that ideology, dependence on oil, and military alliances shaped policy in the Middle East.

Conflict between Israel and the neighboring Arab states of Egypt, Syria, and Jordan prompted OPEC to take political sides between 1967 and 1973. Following Israel's victory in the 1967 Six-Day War, Israeli-Arab tensions in the region grew closer to boiling over with each passing year. In the 1973 Yom Kippur War, Egypt and Syria invaded Israel to regain territory lost in the 1967 conflict. Israel prevailed, but only after being resupplied by an emergency American airlift. In response to U.S. support for Israel, the Arab states in OPEC declared an oil embargo in October 1973. Gas prices in the United States quickly jumped by 40 percent and heating oil prices by 30 percent. Demand outpaced supply, and Americans found themselves parked for hours in mile-long lines at gasoline stations for much of the winter of 1973–1974. Oil had become a political weapon, and the West's vulnerability stood revealed.

The United States scrambled to meet its energy needs in the face of the oil shortage. Just two months after the OPEC embargo began, Congress imposed a national speed limit of 55 miles per hour to conserve fuel. Americans began to buy smaller, more fuel-efficient cars such as Volkswagens, Toyotas, and Datsuns (later Nissans)—while sales of Detroit-made cars (now nicknamed "gas guzzlers") slumped. With one of every six jobs in the country generated directly or indirectly by the auto industry, the effects rippled across the economy. Compounding the distress was the raging inflation set off by the oil shortage; prices of basic necessities, such as bread, milk, and canned goods, rose by nearly 20 percent in 1974 alone. "THINGS WILL GET WORSE," one newspaper headline warned, "BEFORE THEY GET WORSE."

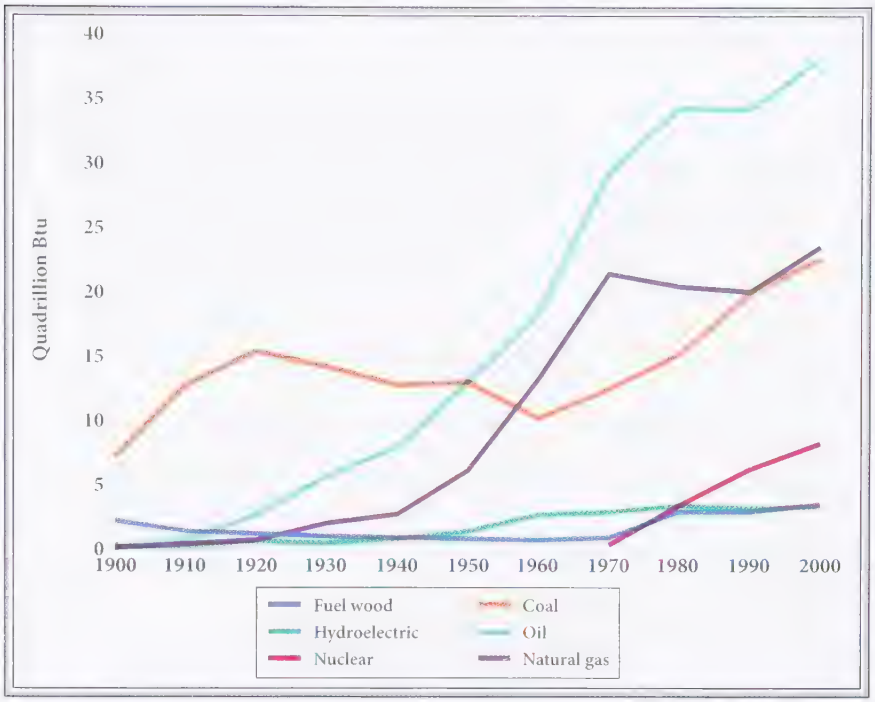

FIGURE 28.1 U.S. Energy Consumption, 1900–2000
Coal was the nation's primary source of energy until the 1950s, when it was surpassed by oil and natural gas. The revival of coal consumption after 1960 stemmed from new open-pit mining in the West that provided cheaper fuel for power plants. The decline in oil consumption in 1980 reflects the nation's response to the oil crisis of the 1970s, including, most notably, fuel-efficient automobiles. Nuclear energy became an important new fuel source, but after 1990 its contribution leveled off as a result of the safety concerns triggered by the Three Mile Island incident.

Environmentalism

The **energy crisis** drove home the realization that the earth's resources are not limitless. Such a notion was also at the heart of the era's revival of **environmentalism**. The environmental movement was an offshoot of sixties activism, but it had numerous historical precedents: the preservationist, conservationist, and wilderness movements of the late nineteenth century; the conservationist ethos of the New Deal; and anxiety about nuclear weapons and overpopulation in the 1940s. Three of the nation's leading environmental organizations—the Sierra Club, the Wilderness Society, and the Natural Resources Council—were founded in 1892, 1935, and 1942, respectively. Environmental activists in the 1970s expanded on this long history through renewed efforts to ensure a healthy environment and access to unspoiled nature (AP® Thinking Like a Historian).

The movement had received a hefty boost back in 1962 when biologist Rachel Carson published ***Silent Spring***, a stunning analysis of the pesticide DDT's toxic impact on the human and natural food chains. A succession of galvanizing developments followed in the late 1960s. The Sierra Club successfully fought two dams in 1966 that would have flooded the Grand Canyon. And in 1969, three major events spurred the movement: an offshore drilling rig spilled millions of gallons of oil off the coast of Santa Barbara; the Cuyahoga River near Cleveland burst into flames because of the accumulation of flammable chemicals on its surface; and Friends of the Everglades protested the construction of an airport that threatened plants and wildlife in Florida. With these events serving as catalysts, environmentalism became a certifiable mass movement on the first **Earth Day**, April 22, 1970, when 20 million people gathered in communities across the country to express their support for a cleaner, healthier planet.

AP® EXAM TIP
Evaluate the degree of continuity and change in the environmental movement.

Environmental Protection Agency Earlier that year, on the heels of the Santa Barbara oil spill, Congress passed the National Environmental Policy Act, which created the **Environmental Protection Agency (EPA)**. A bipartisan bill with broad support, including that of President Nixon, the law required developers to file

AP® PRACTICES & SKILLS
CAUSATION
What major factors led to the birth of the environmental movement in the 1970s?

The Environmental Movement: Reimagining the Human-Earth Relationship

The 1970s witnessed the emergence of the environmental movement in the United States. Environmentalism took a variety of forms and initially was embraced by politicians across the political spectrum, including Republican president Richard Nixon, who signed the National Environmental Policy Act in 1970. Yet environmentalism also proved to be politically divisive. The following documents provide a range of perspectives on an important social and political movement discussed in this chapter.

1. **Rachel Carson, *Silent Spring*, 1962.**

   For the first time in the history of the world, every human being is now subjected to contact with dangerous chemicals, from the moment of conception until death. In the less than two decades of their use, synthetic pesticides have been so thoroughly distributed throughout the animate and inanimate world that they occur virtually everywhere. They have been recovered from most of the major river systems and even from streams of groundwater flowing unseen through the earth.

2. **Ralph Nader, foreword to *Ecotactics: The Sierra Club Handbook for Environmental Activists*, 1970.** *In the Sierra Club's guide to environmental activism, environmental and consumer rights activist Nader discusses "environmental violence."*

   Pollution is violence and environmental pollution is environmental violence. It is a violence that has different impacts, styles and time factors than the more primitive kinds of violence such as crime in the streets. Yet in the size of the population exposed and the seriousness of the harm done, environmental violence far exceeds that of street crime. . . .

   To deal with a system of oppression and suppression, which characterizes the environmental violence in this country, the first priority is to deprive the polluters of their unfounded legitimacy.

3. **President Richard Nixon, State of the Union Address, January 22, 1970.**

   I shall propose to this Congress a $10 billion nationwide clean waters program to put modern municipal waste treatment plants in every place in America where they are needed to make our waters clean again, and do it now. . . .

   As our cities and suburbs relentlessly expand [. . .] priceless open spaces needed for recreation areas accessible to their people are swallowed up — often forever. Unless we preserve these spaces while they are available, we will have none to preserve. Therefore, I shall propose new financing methods for purchasing open space and parklands now, before they are lost to us.

   The automobile is our worst polluter of the air. Adequate control requires further advances in engine design and fuel composition. We shall intensify our research, set increasingly strict standards, and strengthen enforcement procedures — and we shall do it now.

   We can no longer afford to consider air and water common property, free to be abused by anyone without regard to the consequences. Instead, we should begin now to treat them as scarce resources, which we are no more free to contaminate than we are free to throw garbage into our neighbor's yard.

4. **"Earthrise" over the moon's surface, December 24, 1968.** *Photo taken by Apollo 8 crewmember Bill Anders, as the Apollo spacecraft orbited the moon.*

5. **Paul Ehrlich, *The Population Bomb*, 1969.** *A best-selling book that warned of a coming global overpopulation straining the world's resources.*

Nothing could be more misleading to our children than our present affluent society. They will inherit a totally different world, a world in which the standards, politics, and economics of the 1960s are dead. As the most powerful nation in the world today, and its largest consumer, the United States cannot stand isolated. We are today involved in the events leading to famine; tomorrow we may be destroyed by its consequences.

Our position requires that we take immediate action at home and promote effective action world-wide. We must have population control at home, hopefully through a system of incentives and penalties, but by compulsion if voluntary methods fail. We must use our political power to push other countries into programs which combine agricultural development and population control. And while this is being done we must take action to reverse the deterioration of our environment before population pressure permanently ruins our planet.

6. **President Ronald Reagan, speech at the Republican National Convention, July 17, 1980.**

Make no mistake. We will not permit the safety of our people or our environmental heritage to be jeopardized, but we are going to reaffirm that the economic prosperity of our people is a fundamental part of our environment.

Our problems are both acute and chronic, yet all we hear from those in positions of leadership are the same tired proposals for more government tinkering, more meddling, and more control — all of which led us to this state in the first place.

7. **"Waste Produced by a Typical Family in a Year."**

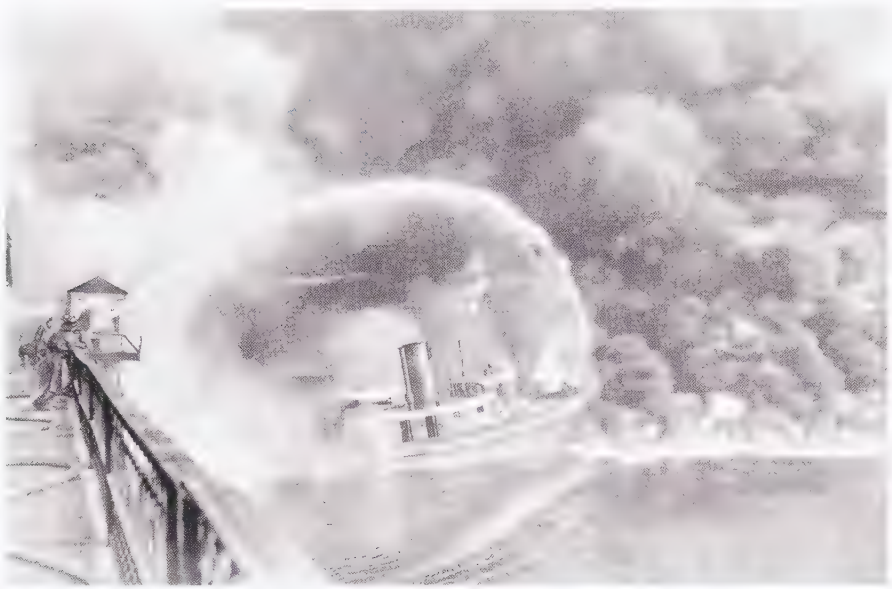
ANALYZING THE EVIDENCE

1. Compare sources 1, 2, 3, 5, and 7. What are the different ways the environmental threat was understood and characterized? What kinds of solutions were proposed?
2. Source 4 is one of the first photographs of the earth ever taken from space. How would this visual perspective encourage viewers to think of the earth's resources as finite?
3. How does source 6 help us understand the opposition that developed to environmentalism? Why did some Americans oppose the environmental movement?

AP® DBQ PRACTICE

Using what you have learned about the environmental movement in this chapter and the documents above, construct an essay in which you make a historical argument about the origins of the movement, the issues that it raised, and the opposition that developed. How did the movement shape politics in the 1970s?



Environmental Crisis in Cleveland On June 22, 1969, a large section of the Cuyahoga River near Cleveland on the southern shore of Lake Erie caught fire and burned for hours. Accumulated oil and other chemicals from nearby factories and refineries produced this "burning river," which received national attention and sparked renewed scrutiny of pollution and environmental degradation. Pictured here are firefighters battling an earlier fire on the same river in 1952. Between 1968 and the June 1969 blaze, there were a total of nine fires on the Cuyahoga. Together, the fires were among a series of environmental catastrophes that helped spur grassroots activism in support of new federal legislation devoted to clean air, clean water, and natural resource protection. Bettmann/Getty Images

environmental impact statements assessing the effect of their projects on ecosystems. A spate of new laws followed: the Clean Air Act (1970), the Occupational Health and Safety Act (1970), the Water Pollution Control Act (1972), and the Endangered Species Act (1973).

The Democratic majority in Congress and the Republican president generally found common ground on these issues, and *Time* magazine wondered if the environment was "the gut issue that can unify a polarized nation." Despite the broad popularity of the movement, however, *Time*'s prediction was not borne out. Corporations opposed environmental regulations, as did many of their workers, who believed that tightened standards threatened their jobs. "IF YOU'RE HUNGRY AND OUT OF WORK, EAT AN ENVIRONMENTALIST," read one labor union bumper sticker. By the 1980s, environmentalism starkly divided Americans, with proponents of unfettered economic growth on one side and environmental activists preaching limits on the other.

Nuclear Power An early foreshadowing of those divisions came in the brewing controversy over nuclear power. Electricity from the atom — what could be better? That was how Americans had greeted the arrival of power-generating nuclear technology in the 1950s. By 1974, U.S. utility companies were operating forty-two nuclear power plants, with a hundred more planned. Given the oil crisis, nuclear energy might have seemed a godsend; unlike coal- or oil-driven plants, nuclear operations produced no air pollutants.

Environmentalists, however, publicized the dangers of nuclear power plants: a reactor meltdown would be catastrophic, and so, in slow motion, would the dumping of radioactive waste, which would generate toxic levels of radioactivity for hundreds of years. These fears seemed to be confirmed in March 1979, when the reactor core at the **Three Mile Island** nuclear plant near Harrisburg, Pennsylvania, came close to meltdown. More than 100,000 people fled their homes. A prompt shutdown saved the plant, but the near catastrophe enabled environmentalists to win the battle over nuclear energy. After the incident at Three Mile Island, no new nuclear plants were authorized, though a handful with existing authorization were built in the 1980s. Today, nuclear reactors account for 20 percent of all U.S. power generation — substantially less than several European nations, but still fourth in the world.

AP® EXAM TIP

Explain how the Three Mile Island accident impacted the nation's energy policy.

Economic Transformation

In addition to the energy crisis, the economy was beset by a host of longer-term problems. Government spending on the Vietnam War and the Great Society made for a growing federal deficit and spiraling inflation. In the industrial sector, the country faced more robust competition from West Germany and Japan. America's share of world trade dropped from 32 percent in 1955 to 18 percent in 1970 and was headed downward. As a result, in a blow to national pride, nine Western European

countries had surpassed the United States in per capita gross domestic product (GDP) by 1980.

Many of these economic woes highlighted a broader, multigenerational transformation in the United States: from an economy based on industrial manufacturing to one based on provision of services. That transformation, which continues to this day, meant that the United States began to produce fewer automobiles, appliances, and televisions and more financial services, health-care services, and management consulting services—not to mention many millions of low-paying jobs in the restaurant, retail, and tourist industries.

AP® EXAM TIP

Recognizing how the transformation from a manufacturing to a service-based economy impacted the overall U.S. economy in the 1970s is critical for success on the AP® exam.

In the 1970s, the U.S. economy was hit simultaneously by unemployment, stagnant consumer demand, and inflation—a combination called **stagflation**—which contradicted a basic principle taught by economists: prices were not supposed to rise in a stagnant economy (Figure 28.2). For ordinary Americans, stagflation meant a noticeable decline in purchasing power, as **discretionary income** per worker dropped 18 percent between 1973 and 1982. None of the three presidents of the decade—Richard Nixon, Gerald Ford, and Jimmy Carter—had much luck tackling stagflation. Nixon's New Economic Policy was perhaps the most radical attempt. Nixon imposed temporary price and wage controls in 1971 in an effort to curb inflation. Then he took an even bolder step: removing the United States from the gold standard, which allowed the dollar to float in international currency markets and effectively ended the Bretton Woods monetary system established after World War II. The underlying weaknesses in the U.S. economy remained, however, and neither Ford nor Carter had more luck finding a solution. The fruitless search for a new economic order was a hallmark of 1970s politics (AP® Interpreting the Past).

Deindustrialization America's economic woes struck hardest at the industrial sector, which suddenly—shockingly—began to be dismantled. Worst hit was the steel industry, which for seventy-five years had been the economy's crown jewel. Unscathed by World War II, U.S. steel producers had enjoyed an open, hugely profitable market since the 1940s. But lack of serious competition left them without incentives to replace outdated plants and equipment. When West Germany and Japan rebuilt their steel industries, these facilities incorporated the latest technology. Foreign steel flooded into the

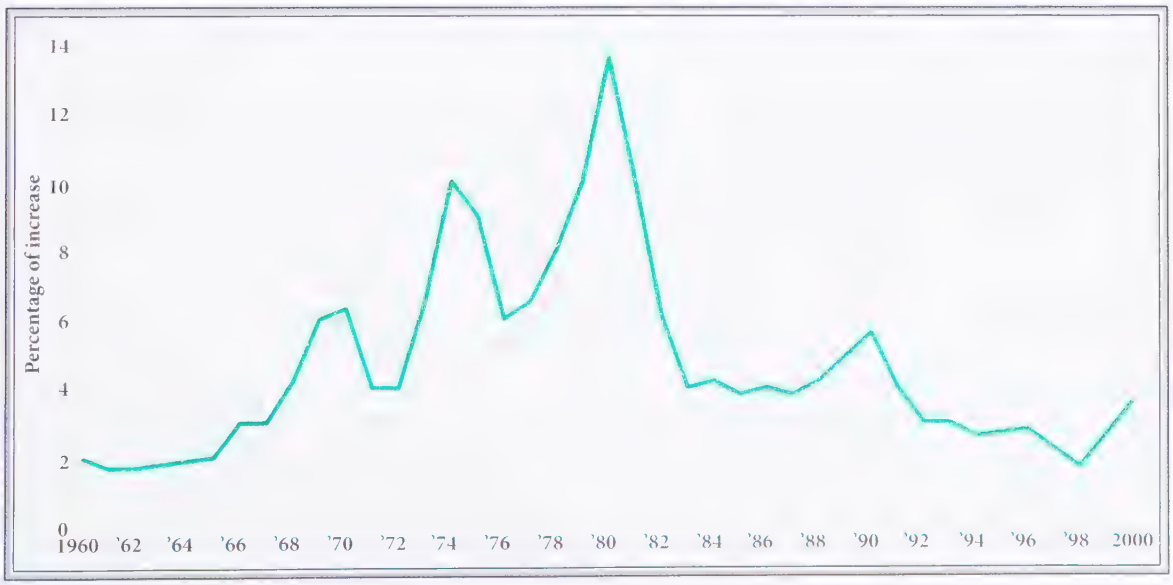


FIGURE 28.2 The Inflation Rate, 1960–2000

The impact of the oil crisis of 1973 on the inflation rate appears all too graphically in this figure. After a dip between 1974 and 1976, the inflation rate zoomed up to a staggering 14 percent in 1980. The return to normal levels after 1980 stemmed from very harsh measures by the Federal Reserve Board, which, while they succeeded, came at the cost of a painful slowdown in the economy.

AP INTERPRETING THE PAST

Why Did the Postwar Boom Bust in the 1970s?

The seventies might be thought of as a lost decade, or at least as a decade of loss. The long post–World War II boom economy busted in the early 1970s, leaving a trail of social, political, and cultural dislocations in its wake. The combination of high unemployment and inflation and the challenges of a globalizing economy deeply affected workers and consumers. A string of events (including Watergate, the end of the Vietnam War, and the Iranian hostage crisis, which ended the decade) exacerbated the sense of decline many Americans were already experiencing. So how do historians explain the crisis of the 1970s? Historians Jefferson Cowie and Meg Jacobs offer similar interpretations of the 1970s economy, but they single out different factors. Cowie, whose work chronicles the struggling American working class in the 1970s, anchors his interpretation within a broad narrative of late-twentieth-century economic transformation. For Jacobs, an international crisis with domestic consequences triggered what she describes as a "panic at the pump."

JEFFERSON COWIE

SOURCE: Jefferson Cowie, *Stayin' Alive: The 1970s and the Last Days of the Working Class* (New York: The New Press, 2010), 12, 209.

Above all, the mid-1970s marked the end of the postwar boom. . . . Starting in the 1973–74 years, real earnings began to stagnate and then slide. . . . By mid-decade the record-breaking strikes, rank-and-file movements, and vibrant organizing drives that had once promised a new day for workers were reduced to a trickle in the new economic climate. They were then replaced by layoffs, plant closures, and union decertification drives. White male workers' incomes . . . stagnated or fell for the next quarter century . . . driven down by oil shocks and inflation; deindustrialization, plant closings, and anti-unionism; and a global restructuring of work itself. . . . By the end of the decade working people would possess less place and meaningful identity within civic life than any time since the industrial revolution.

MEG JACOBS

SOURCE: Meg Jacobs, *Panic at the Pump: The Energy Crisis and the Transformation of American Politics in the 1970s* (New York: Hill and Wang, 2016), 3–4.

Forty years ago, Americans were suffering from what contemporaries called "the energy crisis," a crisis that in many ways defined the decade of the 1970s. During the twin oil shocks of 1973 and 1979, oil supplies dropped and prices soared, and the average citizen understood the energy crisis to mean a panic at the pump — the fear that we would not have enough oil to fill up our gas tanks, heat our homes, or run our factories. . . . [The Arab oil] embargo stunned Americans, as if they had come under a surprise attack . . . because of the serious implications for the economy and the country's security. . . . Americans were vulnerable to scarcity and shortages as well as to higher fuel prices, which rippled through the entire economy and plagued the pocketbooks of all consumers.

AP SHORT ANSWER PRACTICE

1. What factors does each historian identify as causes of the 1970s economic crisis?
2. How do these historians explain the consequences of the economic crisis for Americans living in the 1970s?
3. To what extent does Chapter 28 corroborate, challenge, or supplement the list of factors Cowie and Jacobs present as affecting Americans' sense of crisis in the 1970s?

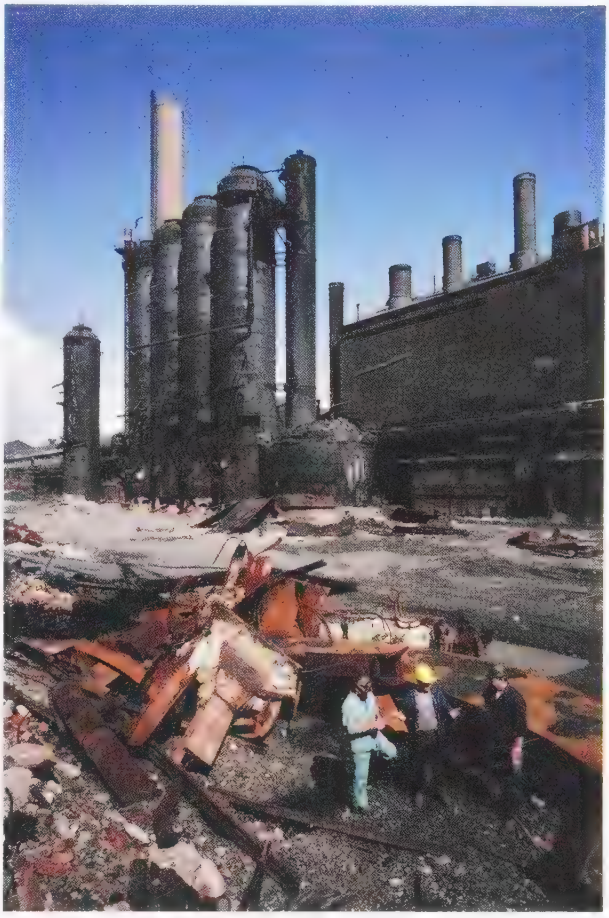
United States during the 1970s, and the American industry was simply overwhelmed. Formerly titanic steel companies began a massive dismantling; virtually the entire Pittsburgh region, once a national hub of steel production, lost its heavy industry in a single generation. By the mid-1980s, downsizing, automation, and investment in new technologies made the American steel industry competitive again — but it was a shadow of its former self.

The steel industry was the prime example of what became known as **deindustrialization**. The country was in the throes of an economic transformation that left it largely stripped of its industrial base. Steel was hardly alone. A swath of the Northeast and Midwest, the country's manufacturing heartland, became the nation's **Rust Belt** (Map 28.1), strewn with abandoned plants and distressed communities. The automobile, tire,

textile, and other consumer durable industries (appliances, electronics, furniture, and the like) all started shrinking in the 1970s. In 1980, *Business Week* bemoaned "plant closings across the continent" and called for the "*re*industrialization of America."

Organized Labor in Decline Deindustrialization threw many tens of thousands of blue-collar workers out of well-paid union jobs. One study followed 4,100 steelworkers left jobless by the 1977 shutdown of the Campbell Works of the Youngstown Sheet & Tube Co. Two years later, 35 percent had retired early at half pay; 10 percent had moved; 15 percent were still jobless, with unemployment benefits long gone; and 40 percent had found local work, but mostly in low-paying, service-sector jobs. In another instance, between 1978 and 1981, eight Los Angeles companies — including such giants as Ford, Uniroyal, and U.S. Steel — closed factories employing 18,000 workers. These Ohio and California workers, like hundreds of thousands of their counterparts across the nation, had fallen from their perch in the middle class (AP® America in the World).

Deindustrialization dealt an especially harsh blow to the labor movement, which had facilitated the postwar expansion of that middle class. In the early 1970s, as inflation hit, the number of strikes surged; 2.4 million workers participated in work stoppages in 1970 alone. However, industry argued that it could no longer afford union demands, and labor's bargaining power produced fewer and fewer concrete results. In these hard years, the much-vaunted labor-management accord of the 1950s, which raised profits and wages by passing costs on to consumers, went bust. Instead of seeking higher wages, unions now mainly fought to save jobs. Union membership went into steep decline, and by the mid-1980s organized labor represented less than 18 percent of American workers, the lowest level since the 1920s. The impact on liberal politics was huge. With labor's decline, a main buttress of the New Deal coalition was coming undone.



Deindustrialization Increasing economic competition from overseas created hard times for American industry in the 1970s and 1980s. Many of the nation's once-proud core industries, such as steel, declined precipitously in these decades. This photo shows a steel mill in Pittsburgh, Pennsylvania, being demolished in 1982. Once the center of American steel production, Pittsburgh suffered hard times in the 1970s and 1980s. The result of such closures was the creation of the so-called Rust Belt in the Northeast and Midwest (Map 28.1). Lynn Joh[illegible] National Geographic/Getty I[illegible]

Urban Crisis and Suburban Revolt

The economic downturn pushed already struggling American cities to the brink of fiscal collapse. Middle-class flight to the suburbs continued apace, and the "urban crisis" of the 1960s spilled into the "era of limits." Facing huge price inflation and mounting piles of debt — to finance social services for low-income residents and to replace disappearing tax revenue — nearly every major American city struggled to pay its bills in the 1970s. Surrounded by prosperous postwar suburbs, central cities seemingly could not catch a break.

New York, the nation's financial capital and its largest city, fared the worst. Its annual budget was in the billions, larger than that of most states. Unable to borrow on the tightening international bond market, New York neared collapse in the summer of 1975; bankruptcy was a real possibility. When Mayor Abraham Beame appealed to the federal government for assistance, President Ford refused. "Ford to City: Drop Dead" read the headline in the *New York Daily News*. Fresh appeals ultimately produced a solution: the federal government would lend New York money, and banks would declare a three-year **moratorium** on municipal debt. The arrangement saved the city from defaulting, but the mayor was forced to cut city services, freeze wages, and lay off workers. One pessimistic observer declared that "the banks have been saved, and the city has been condemned."

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

What major developments shaped the American economy in the 1970s and contributed to its transformation?

MAP 28.1 From Rust Belt to Sunbelt, 1940–2000
One of the most significant developments of the post–World War II era was the growth of the Sunbelt. Sparked by federal spending for military bases, the defense industry, and the space program, states of the South and Southwest experienced an economic boom in the 1950s. This growth was further enhanced in the 1970s, as the heavily industrialized regions of the Northeast and Midwest declined and migrants from what was quickly dubbed the Rust Belt headed to the South and West in search of jobs.

Cities faced declining fortunes in these years for many reasons, but one key was the continued loss of residents and businesses to nearby suburbs. In the 1970s alone, 13 million people (6 percent of the total U.S. population) moved to the suburbs. New suburban shopping centers opened weekly across the country, and other businesses — such as banks, insurance companies, and technology firms — increasingly sought suburban locations. More and more, people lived *and* worked in suburbs. In the San Francisco Bay area, 75 percent of all daily commutes were suburb-to-suburb, and 78 percent of New York's suburban residents worked in nearby suburbs. The 1950s "organization man," commuting downtown from his suburban home, had been replaced by the engineer, teacher, nurse, student, and carpenter who lived in one suburb and worked in another.

AP EXAM TIP
Analyze the causes and effects of the conservative backlash against New Deal and Great Society liberalism.

Beyond city limits, suburbanization and the economic crisis combined powerfully in what became known as the **tax revolt**, a dramatic reversal of the postwar spirit of generous public investment. The premier example was California. Inflation pushed real estate values upward, and property taxes skyrocketed. Hardest hit were suburban property owners, along with retirees and others on fixed incomes, who suddenly faced unaffordable tax bills. Into this dire situation stepped Howard Jarvis, a conservative anti–New Dealer and a genius at mobilizing grassroots discontent. In 1978, Jarvis proposed **Proposition 13**, an initiative that would roll back property taxes, cap future increases for present owners, and require that all tax measures have a two-thirds

Economic Malaise in the Seventies

Most major economic indicators in the United States turned downward in the 1970s, as the long postwar expansion ground to an unmistakable halt. The figures below offer evidence of how developments in the United States compared with other industrialized countries.

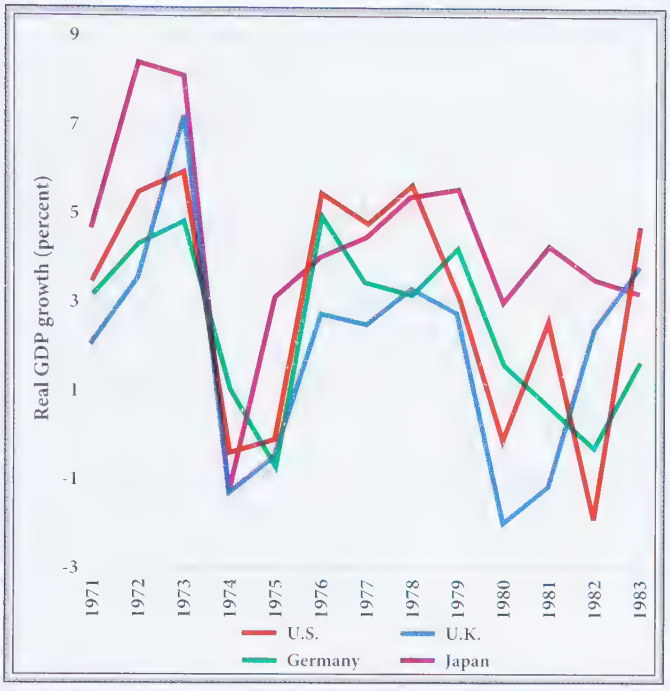


FIGURE 28.3 Falling Gross Domestic Product

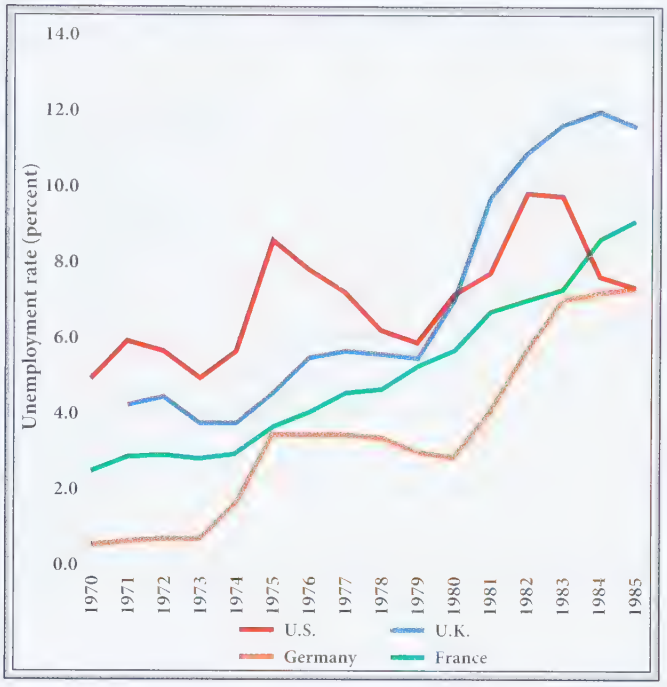

FIGURE 28.4 Rising Unemployment

QUESTIONS FOR ANALYSIS

1. In what ways do these figures demonstrate an integrated global economy?
2. What does the GDP graph indicate about how global economic integration affected the U.S. economy? Notice that Japan's GDP growth remained strong in the late 1970s and early 1980s. With what historical development within the U.S. does that correspond?

majority in the legislature. Despite opposition by virtually the entire state leadership, including politicians from both parties, Californians voted overwhelmingly for Jarvis's measure.

Proposition 13 hobbled public spending in the nation's most populous state. Per capita funding of California public schools, once the envy of the nation, plunged from the top tier to the bottom, where it was second only to Mississippi. Moreover, Proposition 13's complicated formula benefitted middle-class and wealthy home owners at the expense of less-well-off citizens, especially those who depended heavily on public services. Businesses, too, came out ahead, because commercial property got the same protection as residential property. More broadly, Proposition 13 inspired tax revolts across the country and helped conservatives define an enduring issue: low taxes.

In addition to public investment, another **cardinal** marker of New Deal and Great Society liberalism had been a remarkable decline in income inequality. In the 1970s, that trend reversed, and the wealthiest Americans, those among the top 10 percent, began to pull ahead again. As corporations restructured to boost profits during the 1970s slump, they increasingly laid off high-wage workers, paid the remaining workers less, and

"Ford to City: Drop Dead" In the summer of 1975, New York City nearly went bankrupt. When Mayor Abraham Beame appealed to President Gerald Ford for federal assistance, these newspaper headlines captured the chief executive's response. Though it was ultimately saved from financial ruin, the city's brush with insolvency symbolized the larger problems facing the nation: economic stagnation, high inflation, and unemployment. Hard times had seemingly spared no one.

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

How did cities and suburbs experience the "era of limits" differently, and why?

relocated overseas. Thus upper-class Americans benefitted, while blue-collar families who had been lifted into the middle class during the postwar boom increasingly lost out. An unmistakable trend was apparent by the end of the 1970s. The U.S. labor market was dividing in two: a vast, low-wage market at the bottom and a much narrower high-wage market at the top, with the middle squeezed smaller and smaller.

IN YOUR OWN WORDS What limits did the American economy experience in the 1970s?

Politics in Flux, 1973–1980

A search for order characterized national politics in the 1970s as well. It began with a scandal. Misbehavior is endemic to politics. Yet what became known as the Watergate affair—or simply **Watergate**—implicated President Richard Nixon in illegal behavior severe enough to bring down his presidency. Liberals benefitted from Nixon's fall in the short term, but their long-term retreat continued. Politics remained in flux because while liberals were on the defensive, conservatives had not yet put forth a clear alternative.

Watergate and the Fall of a President

On June 17, 1972, something strange happened at Washington's Watergate office/apartment/hotel complex. Early that morning, five men carrying wiretapping equipment

were apprehended there attempting to break into the headquarters of the Democratic National Committee (DNC). Queried by the press, a White House spokesman dismissed the episode as "a third-rate burglary attempt." Pressed further, Nixon himself denied any White House involvement in "this very bizarre incident." In fact, the two masterminds of the break-in, G. Gordon Liddy and E. Howard Hunt, were former FBI and CIA agents currently working for Nixon's Committee to Re-elect the President (CREEP).

The Watergate burglary was no isolated incident. It was part of a broad pattern of abuse of power by a White House obsessed with its political enemies. Liddy and Hunt were on the White House payroll, part of a **clandestine** squad hired to stop leaks to the press. But they were soon arranging illegal wiretaps at DNC headquarters, part of a campaign of "dirty tricks" against the Democrats. Nixon's siege mentality best explains his fatal misstep. He could have dissociated himself from the break-in by firing his guilty aides or even just by letting justice take its course. But it was election time, and Nixon did not trust his political future to such a strategy. Instead, he arranged hush money for the burglars and instructed the CIA to stop an FBI investigation into the affair. This was obstruction of justice, a criminal offense.

AP® EXAM TIP

Recognize the impact of political scandals on the lack of public confidence in government in the 1970s.

Nixon kept the lid on until after the election, but in early 1973, one of the Watergate burglars began to talk. In the meantime, two reporters at the *Washington Post*, Carl Bernstein and Bob Woodward, uncovered CREEP's links to key White House aides. In May 1973, a Senate investigating committee began holding nationally televised hearings, at which administration officials implicated Nixon in the illegal cover-up. The president kept investigators at bay for a year, but in June 1974, the House Judiciary Committee began to consider articles of impeachment. Certain of being convicted by the Senate, Nixon became, on August 9, 1974, the first U.S. president to resign his office. The next day, Vice President Gerald Ford was sworn in as president. Ford, the Republican minority leader in the House of Representatives, had replaced Vice President Spiro Agnew, who had himself resigned in 1973 for accepting kickbacks while governor of Maryland. A month after he took office, Ford stunned the nation by granting Nixon a "full, free, and absolute" pardon.

Congress pushed back, passing a raft of laws inspired by the abuses of the Nixon administration and designed to limit the power of future presidents: the **War Powers Act** (1973), which reined in the president's ability to deploy U.S. forces without congressional approval; amendments strengthening the **Freedom of Information Act** (1974), which gave citizens access to federal records; the **Ethics in Government Act** (1978); and the Foreign Intelligence Surveillance Act (1978), which prohibited domestic wiretapping without a warrant.

Popular disdain for politicians, evident in declining voter turnout, deepened with Nixon's resignation in 1974. "Don't vote," read one bumper sticker in 1976. "It only encourages them." Watergate not only damaged short-term Republican prospects but also shifted the party's balance to the right. Despite mastering the populist appeal to the "silent majority," the moderate Nixon was never beloved by conservatives. His relaxation of tensions with the Soviet Union and his visit to communist China, in particular, won him no friends on the right. His disgraceful exit benefitted the more conservative Republicans, who proceeded to reshape the party in their image.

Watergate Babies As for the Democrats, Watergate granted them a reprieve, a second chance at recapturing their eroding base. Democratic candidates in the 1974 midterm elections made Watergate and Ford's pardon of Nixon their top issues. It worked. Seventy-five new Democratic members of the House came to Washington in 1975, many of them under the age of forty-five, and the press dubbed them Watergate babies.

AP® EXAM TIP

Describe the impact of the growing divide between liberals and conservatives in the 1970s.

Young and reform-minded, the Watergate babies solidified huge Democratic majorities in both houses of Congress and quickly set to work. They eliminated the House Un-American Activities Committee (HUAC), which had investigated alleged Communists in the 1940s and 1950s and antiwar activists in the 1960s. In the Senate, Democrats reduced the number of votes needed to end a filibuster from 67 to 60 — a

AP PRACTICES & SKILLS

CAUSATION

What changed and what remained the same in American politics as a result of the Watergate scandal?

move intended to weaken the power of the minority to block legislation. In both houses, Democrats dismantled the existing committee structure, which had entrenched power in the hands of a few elite committee chairs. Overall, the Watergate babies helped to decentralize power in Washington and bring greater transparency to American government.

In one of the great ironies of American political history, however, the post-Watergate reforms made government *less* efficient and *more* susceptible to special interests — the opposite of what had been intended. Under the new committee structure, smaller subcommittees proliferated, and the size of the congressional staff doubled to more than 20,000. A diffuse power structure actually gave lobbyists more places to exert influence. As the power of committee chairs weakened, influence shifted to party leaders, such as the Speaker of the House and the Senate majority leader. With little incentive to compromise, the parties grew more rigid, and bipartisanship became rare. Finally, filibustering, a seldom-used tactic largely employed by anti–civil rights southerners, increased in frequency. The Congress that we have come to know today — with its partisan rancor, its army of lobbyists, and its slow-moving response to public needs — came into being in the 1970s.

TABLE 28.1

Political Realignment: Congressional Seats

	Apportionment	
State	**1940**	**1990**
Rust Belt		
Massachusetts	14	10
Connecticut	6	6
New York	45	31
New Jersey	14	13
Pennsylvania	33	21
Ohio	23	19
Illinois	26	20
Indiana	11	10
Michigan	17	16
Wisconsin	10	9
Total	**199**	**155**
Sunbelt		
California	23	52
Arizona	2	6
Nevada	1	2
Colorado	4	6
New Mexico	2	3
Texas	21	30
Georgia	10	11
North Carolina	12	12
Virginia	9	11
Florida	6	23
Total	**90**	**156**

In the fifty years between 1940 and 1990, the Rust Belt states lost political clout, while the Sunbelt states gained it — measured here in congressional seats (which are apportioned based on population). Sunbelt states gained 66 seats, with the Rust Belt losing 44. This shifting political geography helped undermine the liberal coalition, which was strongest in industrial states with large labor unions, and paved the way for the rise of the conservative coalition, which was strongest in southern and Appalachian states, as well as California.

Political Realignment Despite Democratic gains in 1974, the electoral realignment that had begun with Richard Nixon's presidential victories in 1968 and 1972 continued. As liberals proved unable to stop runaway inflation or speed up economic growth, conservatives gained greater traction with the public. The postwar liberal economic formula — sometimes known as the Keynesian consensus — consisted of micro-adjustments to the money supply coupled with federal spending. When that formula failed to restart the economy in the mid-1970s, conservatives in Congress used this opening to articulate alternatives, especially economic deregulation and tax cuts (Chapter 29).

On a grander scale, deindustrialization in the Northeast and Midwest and continued population growth in the Sunbelt were changing the political geography of the country. Power was shifting, incrementally but perceptibly, toward the West and South (Table 28.1). As states with strong trade unions at the center of the postwar liberal political coalition — such as New York, Illinois, and Michigan — lost industry, jobs, and people, states with traditions of libertarian conservatism — such as California, Arizona, Florida, and Texas — gained greater political clout. The full impact of this shifting political geography would not be felt until the 1980s and 1990s, but its effects had become apparent by the mid-1970s.

Jimmy Carter: The Outsider as President

"Jimmy who?" was how journalists first responded when James Earl Carter, who had been a naval officer, a peanut farmer, and the governor of Georgia, emerged from the pack to win the Democratic presidential nomination in 1976. When Carter told his mother that he intended to run for president, she had asked, "President of what?" Trading on Watergate and his down-home image, Carter pledged to restore morality to the White House. "I will never lie to you," he promised voters. Carter played up his credentials as a Washington outsider, although he selected Senator Walter F. Mondale of Minnesota as his running mate to ensure his ties to traditional Democratic voting blocs. Ford still might have prevailed, but his pardon of Nixon likely cost him enough votes in key states to swing the election to the Democratic candidate. Carter won with 50 percent of the popular vote to Ford's 48 percent.

For a time, Carter got some mileage as an outsider — the common man who walked to the White House after the inauguration and delivered fireside chats in a cardigan sweater. The fact that he was a born-again Christian also played well. But Carter's inexperience began to show. He responded to feminists, an important Democratic constituency, by establishing a new women's commission in his administration. But later he dismissed the commission's concerns and became embroiled in a public fight with prominent women's advocates. Most consequentially, his outsider strategy made for chilly relations with congressional leaders. Disdainful of the Democratic establishment, Carter relied heavily on inexperienced advisors from Georgia. And as a detail-oriented micromanager, he exhausted himself over the fine points of policy better left to his aides.

On the domestic front, Carter's big challenge was managing the economy. The problems that he faced defied easy solution. Most confounding was stagflation. If the government focused on inflation — forcing prices down by raising interest rates — unemployment became worse. If the government tried to stimulate employment, inflation became worse. None of the levers of government economic policy seemed to work. At heart, Carter was an economic conservative. He toyed with the idea of an "industrial policy" to bail out the ailing manufacturing sector, but he moved instead in a free-market direction by lifting the New Deal–era regulation of the airline, trucking, and railroad industries. **Deregulation** stimulated competition and cut prices, but it also drove firms out of business and hurt unionized workers.

The president's efforts failed to reignite economic growth. Then, the Iranian Revolution (see Chapter 29) curtailed oil supplies, and gas prices jumped again. In a major TV address, Carter lectured Americans about the nation's "crisis of the spirit." He called energy conservation "the moral equivalent of war" — or, in the media's shorthand, "MEOW," which aptly captured the nation's assessment of Carter's sermonizing. By then, his approval rating had fallen below 30 percent. And it was no wonder, given an inflation rate over 11 percent, failing industries, and long lines at the pumps. It seemed the worst of all possible economic worlds, and the first-term president could not help but worry about the political costs to him and his party.

Jimmy Carter President Jimmy Carter is seen here at his home in Plains, Georgia, in 1975, soon after he'd declared himself a candidate for the Democratic presidential nomination. Carter was content to portray himself as a political outsider, an ordinary American who could restore trust to Washington after the Watergate scandal. A thoughtful man and a born-again Christian, Carter nonetheless proved unable to solve the complex economic problems, especially high inflation, and international challenges of the late 1970s. POINT OF VIEW

What kind of president did Jimmy Carter hope to be, and how successful was he at implementing his agenda?

IN YOUR OWN WORDS **In what ways was the period between 1973 and 1980 a transitional one in American politics?**

To read more of President Carter's television address, along with other primary sources from this period, see ***Sources for America's History***.

Reform and Reaction in the 1970s

Having lived through a decade of profound social and political upheaval — the Vietnam War, protests, riots, Watergate, recession — many Americans were exhausted and cynical by the mid-1970s. But while some retreated to private concerns, others took reform in new directions. Civil rights battles continued, the women's movement achieved some of its most far-reaching aims, and gay rights blossomed. These movements pushed the "rights revolution" of the 1960s deeper into American life. Others, however, pushed

back. Social conservatives responded by forming their own organizations and resisting the emergence of what they saw as a permissive society.

Civil Rights in a New Era

When Congress banned job discrimination in the 1964 Civil Rights Act, the law required only that employers hire without regard to "race, color, religion, sex, or national origin." But after centuries of slavery and decades of segregation, would nondiscrimination bring African Americans into the economic mainstream? Many liberals thought not. They believed that government, universities, and private employers needed to take positive steps to open their doors to a wider, more diverse range of Americans — including those from other historically underrepresented groups and women.

AP® EXAM TIP

Recognize affirmative action as part of the broader conflict over the role of federal government in issues of race.

Among the most significant efforts to address the legacy of exclusion was **affirmative action** — procedures designed to take into account the disadvantaged position of Americans from historically underrepresented groups after centuries of discrimination. First advanced by the Kennedy administration in 1961, affirmative action received a boost under President Lyndon Johnson, whose Labor Department fashioned a series of plans in the late 1960s to encourage government contractors to recruit underrepresented racial groups. Women were added under the last of these plans, when pressure from the women's movement highlighted the problem of sex discrimination. By the early 1970s, affirmative action had been refined by court rulings that identified acceptable procedures: hiring and enrollment goals, special recruitment and training programs, and set-asides (specially reserved slots) for both underrepresented racial groups and women.

Affirmative action, however, did not please many whites, who felt that the deck was being stacked against them. Much of the dissent came from conservative groups that had opposed civil rights all along. They charged affirmative action advocates with "reverse discrimination." Legal challenges abounded, as employees, students, and university

March for Affirmative Action Americans grew even more divided over the policy of affirmative action in the 1970s. For many people, such as African Americans and Latinos, affirmative action promised that groups who faced historical discrimination would have equal opportunity in jobs and education. For many whites, affirmative action looked like "reverse discrimination," and they fought its implementation. Here, supporters of affirmative action encourage the U.S. Supreme Court to overturn the California *Bakke* decision declaring racial quotas unconstitutional. In the end, however, the Supreme Court upheld *Bakke*, and the scope of affirmative action narrowed. AP Photo/Charles Tasnadi

applicants went to court to object to these new procedures. Some liberal groups sought a middle position. In a widely publicized 1972 letter, Jewish organizations, seared by the memory of quotas that once kept Jewish students out of elite colleges, came out against all racial quotas but nonetheless endorsed "rectifying the imbalances resulting from past discrimination."

A major shift in affirmative action policy came in 1978. Allan Bakke, a white man, sued the University of California at Davis Medical School for rejecting him in favor of less-qualified minority-group candidates. Headlines across the country sparked anti–affirmative action protest marches on college campuses and vigorous discussion on television and radio and in the White House. Ultimately, the Supreme Court rejected the medical school's quota system, which set aside 16 of 100 places for "disadvantaged" students. The Court ordered Bakke admitted but indicated that a more flexible affirmative action plan, in which race could be considered along with other factors, would still pass constitutional muster. ***Bakke v. University of California*** thus upheld affirmative action but, by rejecting a quota system, also called it into question. Future court rulings and state referenda, in the 1990s and 2000s, would further limit the scope of affirmative action. In particular, California voters passed Proposition 209 in 1996, prohibiting public institutions from using affirmative action to increase diversity in employment and education.

AP PRACTICES & SKILLS

CHANGE OVER TIME

How did affirmative action evolve between 1961 and 1978?

The Women's Movement and Gay Rights

Unlike the civil rights movement, whose signal achievements came in the 1960s, the women's and gay rights movements flourished in the 1970s. With three influential wings — radical, liberal, and "Third World" — the women's movement inspired both grassroots activism and legislative action across the nation. For their part, gay activists faced a unique set of challenges: they needed to convince Americans that same-sex relationships were natural and that gay men and lesbians deserved the same protection of the law as all other citizens. Neither movement achieved all of its aims in this era, but each laid a strong foundation for the future.

Women's Activism In the first half of the 1970s, the women's liberation movement reached its historic peak. Taking a dizzying array of forms — from lobbying legislatures to marching in the streets and establishing all-female collectives — women's liberation inspired activism on the scale of the earlier black-led civil rights movement. Women's centers, as well as women-run child-care facilities, began to spring up in cities and towns. A feminist art and poetry movement flourished. Women challenged the admissions policies of all-male colleges and universities — opening such prestigious universities as Yale and Columbia and nearly bringing an end to male-only institutions of higher education. Female scholars began to transform higher education: by studying women's history, by increasing the number of women on college and university faculties, and by founding women's studies programs.

Women's liberationists drew new attention to, and thereby politicized, the female body. Inspired by the Boston collective that first published *Our Bodies, Ourselves* — a groundbreaking book on women's health — the women's health movement founded dozens of medical clinics, encouraged women to become physicians, and educated millions of women about their bodies. To reform antiabortion laws, activists pushed for remedies in more than thirty state legislatures. Women's liberationists established rape crisis centers around the nation and lobbied state legislatures and Congress to reform rape laws. Many of these endeavors and movements began as shoestring operations in living rooms and kitchens: *Our Bodies, Ourselves* was first published as a 35-cent mimeographed booklet, and the antirape movement began in small consciousness-raising groups that met in churches and community centers. By the end of the decade, however, all of these causes had national organizations and touched the lives of millions of American women.

Equal Rights Amendment Buoyed by this flourishing of activism, the women's movement renewed the fight for an **Equal Rights Amendment** (ERA) to the

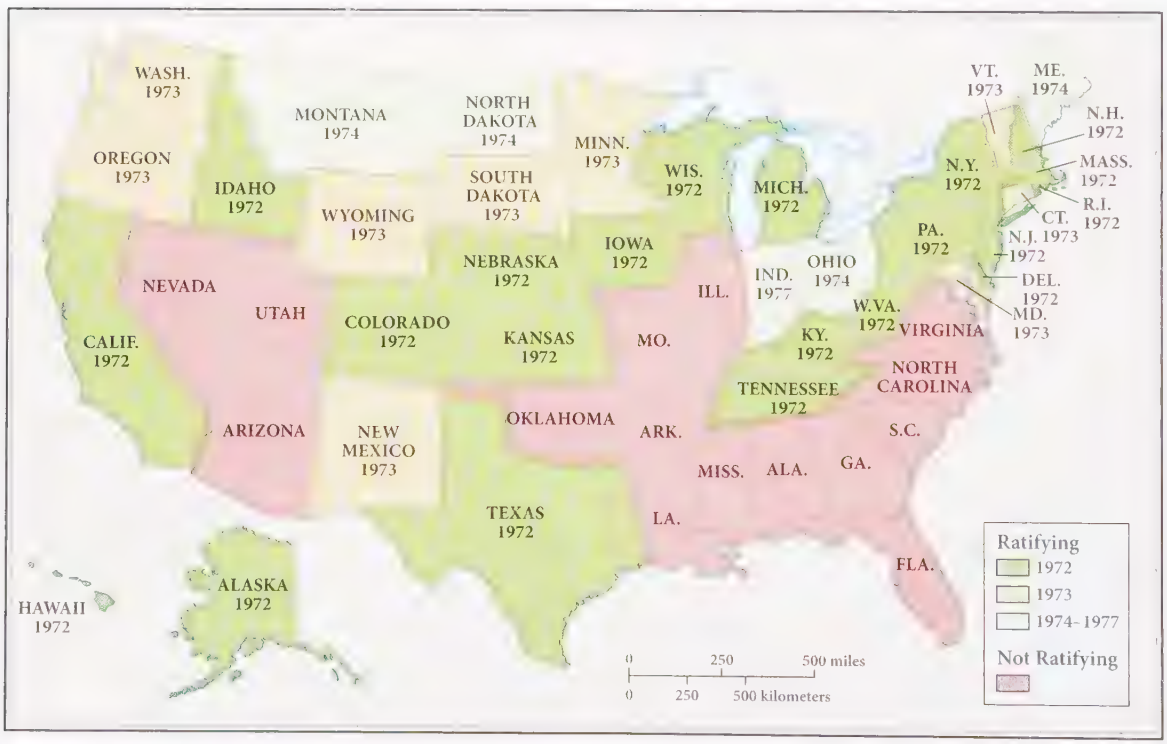
AP® EXAM TIP

Evaluate the impact of legislative action and court decisions on women's rights in the 1970s.

Constitution. First introduced in 1923, the ERA stated, in its entirety, "Equality of rights under the law shall not be denied or abridged by the United States or any State on the basis of sex." Vocal congressional women from the Democratic Party, such as Patsy Mink (Hawaii), Bella Abzug (New York), and Shirley Chisholm (New York), found enthusiastic male allies—among both Democrats and Republicans—and Congress adopted the amendment in 1972. Within just two years, thirty-four of the necessary thirty-eight states had ratified it, and the ERA appeared headed for adoption. But then, progress abruptly halted (Map 28.2).

Credit for putting the brakes on ERA ratification goes chiefly to a remarkable woman: Phyllis Schlafly, a lawyer long active in conservative causes. Despite her own flourishing career, Schlafly advocated traditional roles for women. The ERA, she proclaimed, would create an unnatural "unisex society," with women drafted into the army and forced to use single-sex restrooms. Abortion, she alleged, could never be prohibited by law. Led by Schlafly's organization, **STOP ERA** (founded in 1972), thousands of women mobilized, showing up at statehouses with home-baked bread and apple pies. As labels on baked goods at one anti-ERA rally expressed it: "My heart and hand went into this dough / For the sake of the family please vote no." It was a message that resonated widely, especially among those troubled by the rapid pace of social change (AP® Analyzing Voices). The ERA never was ratified, despite a congressional extension of the deadline to June 30, 1982.

Roe v. Wade In addition to the ERA, the women's movement had identified another major goal: winning reproductive rights. Activists pursued two tracks: legislative and judicial. In the early 1960s, abortion was illegal in virtually every state. A decade later, thanks to intensive lobbying by women's organizations, liberal ministers, and physicians,



MAP 28.2 States Ratifying the Equal Rights Amendment, 1972–1977

The ratifying process for the Equal Rights Amendment (ERA) went smoothly in 1972 and 1973 but then stalled. The turning point came in 1976, when ERA advocates lobbied extensively, particularly in Florida, North Carolina, and Illinois, but failed to sway the conservative legislatures in those states. After Indiana ratified in 1977, the amendment still lacked three votes toward the three-fourths majority needed for adoption. Efforts to revive the ERA in the 1980s were unsuccessful, and it became a dead issue.

a handful of states, such as New York, Hawaii, California, and Colorado, adopted laws making legal abortions easier to obtain. But progress after that was slow, and women's advocates turned to the courts. There was reason to be optimistic. The Supreme Court had first addressed reproductive rights in a 1965 case, *Griswold v. Connecticut*. *Griswold* struck down an 1879 state law prohibiting the possession of contraception as a violation of married couples' constitutional "right of privacy." Following the logic articulated in *Griswold*, the Court gradually expanded the right of privacy in a series of cases in the late 1960s and early 1970s.

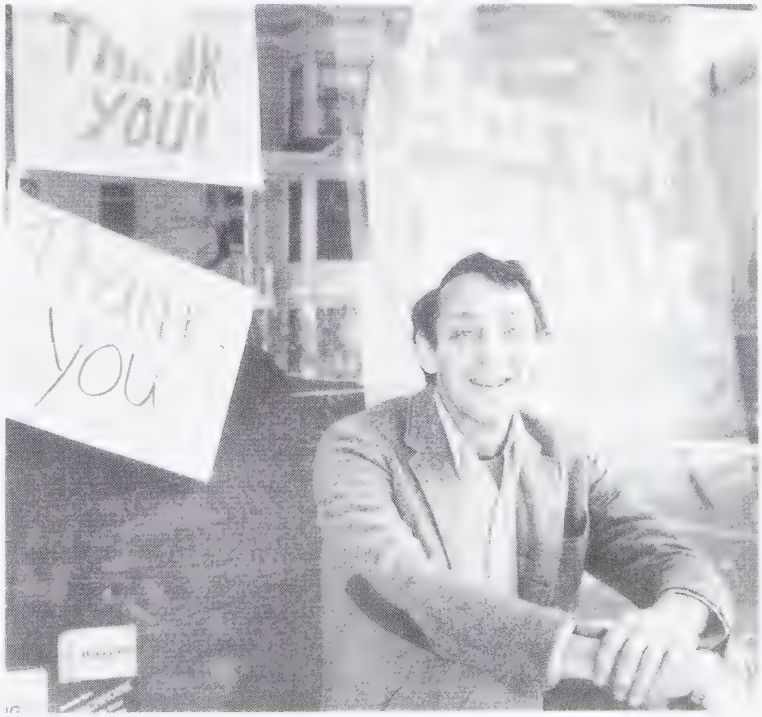
Those cases culminated in ***Roe v. Wade*** (1973). In that landmark decision, the justices nullified a Texas law that prohibited abortion under any circumstances, even when the woman's health was at risk, and laid out a new national standard: abortions performed during the first trimester were protected by the right of privacy. At the time and afterward, some legal authorities questioned whether the Constitution recognized any such privacy right and criticized the Court's seemingly arbitrary first-trimester timeline. Nevertheless, the Supreme Court chose to move forward, transforming a traditionally state-regulated policy into a national, constitutionally protected right.

For the women's movement, *Roe v. Wade* represented a triumph. For evangelical and fundamentalist Christians, Catholics, and conservatives generally, it was a bitter pill. In their view, abortion was, unequivocally, the taking of a human life. These Americans, represented by groups such as the National Right to Life Committee, did not believe that something they regarded as immoral and sinful could be the basis for women's equality. Women's advocates responded that illegal abortions — common prior to *Roe* — were often unsafe procedures that resulted in physical harm to women and even death. *Roe* polarized what was already a sharply divided public and mobilized conservatives to seek a Supreme Court reversal or, short of that, to pursue legislation that would strictly limit the conditions under which abortions could be performed. In 1976, they convinced Congress to deny Medicaid funds for abortions, an opening round in a campaign against *Roe v. Wade* that continues today.

Phyllis Schlafly Phyllis Schlafly, leader of the organization STOP ERA, talks with reporters during a rally at the Illinois State Capitol in 1978, at a time when the state legislature was considering whether to ratify the Equal Rights Amendment. Schlafly described herself as a housewife and called her strenuous political career a hobby. Bettmann/Getty Images

Harvey Milk The gay rights movement had achieved notable victories as well. These, too, proved controversial. By the mid-1970s, more than a dozen cities had passed gay rights ordinances protecting gay men and lesbians from employment and housing discrimination. One such ordinance in Dade County (Miami), Florida, sparked a protest led by Anita Bryant, a conservative Baptist and a television celebrity. Her "Save Our Children" campaign in 1977, which garnered national media attention, resulted in the repeal of the ordinance and symbolized the emergence of a conservative religious movement opposed to gay rights.

Across the country from Miami, developments in San Francisco looked promising for gay rights advocates, then turned tragic. No one embodied the combination of gay liberation and hard-nosed



Harvey Milk In November 1977, Harvey Milk became the first openly gay man to be elected to public office in the United States, when he won a seat on the San Francisco Board of Supervisors. Shockingly, almost exactly a year from the day of his election, Milk was assassinated. Bettmann/Getty Images

Debating the Equal Rights Amendment

Fifty years after its introduction, the Equal Rights Amendment ("Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex") finally met congressional approval in 1972 and was sent to the states for ratification. The amendment set off a furious debate, especially in the South and Midwest, and fell short of ratification. Following are four of the voices in that debate.

PHYLLIS SCHLAFLY

Lawyer and political activist Phyllis Schlafly was the most prominent opponent of the ERA. Her organization, STOP ERA, campaigned against the amendment in critical states and helped to halt ratification.

SOURCE: From *The Phyllis Schlafly Report*, November 1972. Reprinted by permission.

"Women's magazines, the women's pages of newspapers, and television and radio talk shows have been filled for months with a strident advocacy of the 'rights' of women to be treated on an equal basis with men in all walks of life. But what about the rights of the woman who doesn't want to compete on an equal basis with men? Does she have the right to be treated as a woman — by her family, by society, and by the law? . . .

The laws of every one of our 50 states now guarantee the right to be a woman — protected and provided for in her career as a woman, wife, and mother. The proposed Equal Rights Amendment will wipe out all our laws which — through rights, benefits, and exemptions — guarantee this right to be a woman. . . . Is this what American women want? Is this what American men want?

The laws of every one of the 50 states now require the husband to support his wife and children — and to provide a home for them to live in. In other words, the law protects a woman's right to be a full-time wife and mother, her right not to take a job outside the home, her right to care for her own baby in her own home while being financially supported by her husband. . . .

There are two very different types of women lobbying for the Equal Rights Amendment. One group is the women's liberationists. Their motive is totally radical. They hate men, marriage, and children. They are out to destroy morality and the family. . . . There is another type of woman supporting the Equal Rights Amendment from the most sincere motives. It is easy to see why the business and professional women are supporting the Equal Rights Amendment — many of them have felt the keen edge of discrimination in their employment."

JERRY FALWELL

Jerry Falwell was a fundamentalist Baptist preacher in Virginia, a television evangelist, and the founder of the political lobbying organization known as the Moral Majority.

SOURCE: Excerpt from *Listen America!* by Jerry Falwell, copyright © 1980 by Jerry Falwell. "I believe that at the foundation of the women's liberation movement there is a minority core of women who were once bored with life, whose real problems are spiritual problems. Many women have never accepted their God-given roles. . . . God Almighty created men and women biologically different and with differing needs and roles. He made men and women to complement each other and to love each other. . . . Women who work should be respected and accorded dignity and equal rewards for equal work. But this is not what the present feminist movement and equal rights movement are all about.

The Equal Rights Amendment is a delusion. I believe that women deserve more than equal rights. And, in families and in nations where the Bible is believed, Christian women are honored above men. Only in places where the Bible is believed and practiced do women receive more than equal rights. Men and women have differing strengths. The Equal Rights Amendment can never do for women what needs to be done for them. Women need to know Jesus Christ as their Lord and Savior and be under His Lordship. They need a man who knows Jesus Christ as his Lord and Savior, and they need to be part of a home where their husband is a godly leader and where there is a Christian family. . . .

ERA is not merely a political issue, but a moral issue as well. A definite violation of holy Scripture, ERA defies the mandate that 'the husband is the head of the wife, even as Christ is the head of the church' (Ep. 5:23). In 1 Peter 3:7 we read that husbands are to give their wives honor as unto the

politics better than a San Francisco camera-shop owner named Harvey Milk. A closeted businessman in New York until he was forty, Milk arrived in San Francisco in 1972 and threw himself into city politics. Fiercely independent, he ran as an openly gay candidate for city supervisor (city council) twice and the state assembly once, both times unsuccessfully.

By mobilizing the "gay vote" into a powerful bloc, Milk finally won a supervisor seat in 1977. He was not the first openly gay elected official in the country —

weaker vessel, that they are both heirs together of the grace of life. Because a woman is weaker does not mean that she is less important. ”

ELIZABETH DUNCAN KOONTZ

Elizabeth Duncan Koontz was a distinguished educator and the first black woman to head the National Education Association and the U.S. Women's Bureau. At the time she made this statement at state legislative hearings on the ERA in 1977, she was assistant state superintendent for public instruction in North Carolina.

SOURCE: William A. Link and Marjorie Spruill Wheeler, eds., *The South in the History of the Nation* (Boston: Bedford/St. Martin's, 1999), 295–296.

“ A short time ago I had the misfortune to break my foot. . . . The pain . . . did not hurt me as much as when I went into the emergency room and the young woman upon asking me my name, the nature of my ailment, then asked me for my husband's social security number and his hospitalization number. I asked her what did that have to do with my emergency.

And she said, 'We have to be sure of who is going to pay your bill.' I said, 'Suppose I'm not married, then.' And she said, 'Then give me your father's name.' I did not go through that twenty years ago when I was denied the use of that emergency room because of my color.

I went through that because there is an underlying assumption that all women in our society are protected, dependent, cared for by somebody who's got a social security number and hospitalization insurance. Never once did she assume I might be a woman who might be caring for my husband, instead of him by me, because of some illness. She did not take into account the fact that one out of almost eight women heading families in poverty today [is] in the same condition as men in families and poverty. . . .

My greater concern is that so many women today . . . oppose the passage of the ERA very sincerely and . . . tell you without batting an eye, 'I don't want to see women treated that way.' And I speak up, 'What way is that?' . . . Women themselves have been a bit misguided. We have mistaken present practice for law, and women have . . . assumed too many times that their present condition cannot change. The rate of divorce, the rate of desertion, the rate of separation, and the death rate of male supporters is enough for us to say: 'Let us remove all legal barriers to women and girls making their choices — this state cannot afford it.' ”

CAROLINE BIRD

Caroline Bird was the lead author of *What Women Want*, a report produced by women's rights advocates following the 1977 National Women's Conference, held in Houston, Texas.

SOURCE: Caroline Bird, *What Women Want* (New York: Simon & Schuster, 1978), 120–121.

“ The Declaration of Independence, signed in 1776, stated that 'all Men are created equal' and that governments derive their powers 'from the Consent of the Governed.' Women were not included in either concept. The original American Constitution of 1787 was founded on English common law, which did not recognize women as citizens or as individuals with legal rights. A woman was expected to obey her husband or nearest male kin, and if she was married her person and her property were owned by her husband. . . .

It has been argued that the ERA is not necessary because the Fourteenth Amendment, passed after the Civil War, guarantees that no state shall deny to 'any person within its jurisdiction the equal protection of the laws.' . . .

Aside from the fact that women have been subjected to varying, inconsistent, and often unfavorable decisions under the Fourteenth Amendment, the Equal Rights Amendment is a more immediate and effective remedy to sex discrimination in Federal and State laws than case-by-case interpretation under the Fourteenth Amendment could ever be. ”

QUESTIONS FOR ANALYSIS

1. Schlafly and Koontz have different notions of what it means to be a woman. Explain what these differences are and how they inform the authors' distinct views of the ERA.
2. Why does Schlafly believe that women will be harmed by the ERA?
3. Schlafly and Falwell argue that women need the protection and support of men. Are they right? How would Koontz likely respond?
4. How do each of the four authors define women's roles and responsibilities in society?

Kathy Kozachenko of Michigan and Elaine Noble of Massachusetts share that distinction — but he became a national symbol of emerging gay political power. Tragically, after he helped to win passage of a gay rights ordinance in San Francisco, he was assassinated in 1978 — along with the city's mayor, George Moscone — by a disgruntled former supervisor named Dan White. When White was convicted of manslaughter rather than murder, five thousand gays and lesbians in San Francisco marched on city hall.

AP® PRACTICES & SKILLS

CAUSATION

How did the civil rights movement expand during the 1970s?

After the Warren Court

In response to what conservatives considered the liberal judicial revolution under the Warren Court, Nixon came into the presidency promising to appoint "strict constructionists" (conservative-minded justices) to the bench. In three short years, between 1969 and 1972, he was able to appoint four new justices to the Supreme Court, including the new chief justice, Warren Burger. Burger and his conservative colleagues did not, suprisingly, immediately seek to overturn Warren Court precedents. Indeed, in *Roe v. Wade* the Burger Court extended the "right of privacy" developed under Warren to include women's access to abortion. As we saw above, few Supreme Court decisions in the twentieth century have disappointed conservatives more. Other decisions advanced women's rights further. In 1976, the Court ruled that arbitrary distinctions based on sex in the workplace and other arenas were unconstitutional, and in 1986 that sexual harassment violated the Civil Rights Act. These rulings helped women break employment barriers in the subsequent decades.

In a variety of cases, however, the Burger Court chose a centrist course, particularly in cases regarding criminal law. After first striking down all existing capital punishment laws, in *Furman v. Georgia* (1972), the court shortly restored them, in *Gregg v. Georgia* (1976). Rather than overturning the Warren Court's rulings on the rights of suspected criminals (such as the 1966 decision in *Miranda v. Arizona*), which were deeply unpopular among conservatives, the Burger Court instead limited their reach. Overall, despite its reputation for centrist restraint, the Burger Court helped to ratify the "law and order" politics embraced by many Americans in the years following the 1960s.

In keeping with such centrism, in all of their rulings on privacy rights the Burger Court was reluctant to move ahead of public attitudes toward homosexuality. Gay men and lesbians still had no legal recourse if state laws prohibited same-sex relations. In a controversial 1986 case, *Bowers v. Hardwick*, the Supreme Court upheld a Georgia sodomy statute that criminalized same-sex sexual acts. The majority opinion held that homosexuality was contrary to "ordered liberty" and that extending sexual privacy to gays and lesbians "would be to cast aside millennia of moral teaching." Not until 2003 (*Lawrence v. Texas*) would the Court overturn that decision, recognizing for all Americans the right to sexual privacy.

IN YOUR OWN WORDS How did controversies over new individual rights shape the politics of the 1970s?

The American Family on Trial

In 1973, the Public Broadcasting System (PBS) aired a twelve-part television series that followed the life of a real American family. Producers wanted the show, called simply *An American Family*, to document how a middle-class white family coped with the stresses of a changing society. They did not anticipate that the family would dissolve in front of their cameras. Tensions and arguments raged, and in the final episode, Bill, the husband and father (who had had numerous extramarital affairs), moved out. By the time the show aired, the couple was divorced and Pat, the former wife, had become a single working mother with five children.

An American Family captured a traumatic moment in the twentieth-century history of the family. Between 1965 and 1985, the divorce rate doubled, and children born in the 1970s had a 40 percent chance of spending part of their youth in a single-parent household. As wages stagnated and inflation pushed prices up, more and more families depended on two incomes for survival. Furthermore, the women's movement and the counterculture had called into question traditional sex roles — father as provider and

mother as homemaker—and middle-class baby boomers rebelled against what they saw as the puritanical sexual values of their parents' generation. In the midst of such rapid change, where did the family stand?

Working Families in the Age of Deindustrialization

One of the most striking developments of the 1970s and 1980s was the relative stagnation of wages. After World War II, hourly wages had grown steadily ahead of inflation, giving workers more buying power with each passing decade. By 1973, that trend had stopped in its tracks. The decline of organized labor, the loss of manufacturing jobs, and runaway inflation all played a role in the reversal. Hardest hit were blue-collar and pink-collar workers and those without college degrees.

Women Enter the Workforce Millions of wives and mothers had worked for wages for decades. But many Americans still believed in the "family wage": a breadwinner income, earned by men, sufficient to support a family. After 1973, fewer and fewer Americans had access to that luxury. Between 1973 and the early 1990s, every major income group except the top 10 percent saw their real earnings (accounting for inflation) either remain the same or decline. Over this period, the typical worker saw a 10 percent drop in real wages. To keep their families from falling behind, women streamed into the workforce. Between 1950 and 1994, the proportion of women ages twenty-five to fifty-four working for pay increased from 37 to 75 percent. Much of that increase occurred in the 1970s. Americans were fast becoming dependent on the two-income household (Figure 28.5).

The numbers tell two different stories of American life in these decades. On one hand, the trends unmistakably show that women, especially in blue-collar and pink-collar families, *had* to work for wages to sustain their family's standard of living: to buy a car, pay for college, afford medical bills, support an aging parent, or simply pay the rent. Moreover, the number of single women raising children nearly doubled between 1965 and 1990. Women's paid labor was making up for the declining earning power or the absence of men in American households. On the other hand, women's real income overall grew during the same period. This increase reflected the opening of professional jobs to educated baby boom women. As older barriers began to fall, women poured into law and medicine, business and government, and, though more slowly, the sciences and engineering. Beneficiaries of feminism, these women pursued careers of which their mothers had only dreamed.

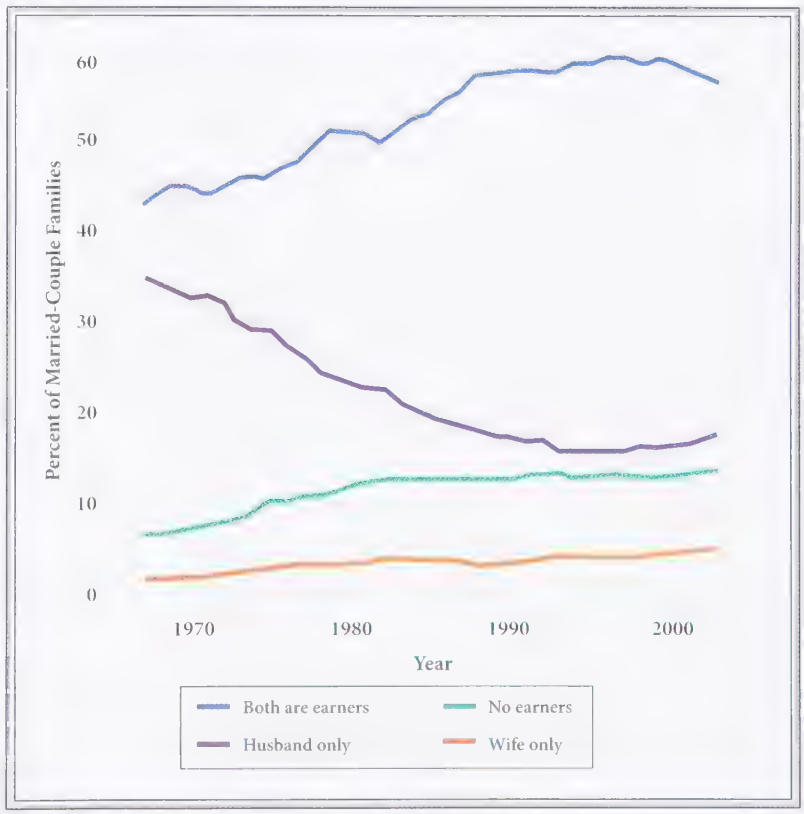

FIGURE 28.5 The Increase in Two-Worker Families

In 1968, about 43 percent of married couples sent both the husband and the wife into the workforce; thirty years later, 60 percent were two-earner families. The percentage of families in which the wife alone worked increased from 3 to 5 percent during these years, while those with no earners (welfare recipients and, increasingly, retired couples) rose from 8 to 13 percent. Because these figures do not include unmarried persons and most illegal immigrants, they do not give a complete picture of the American workplace. But there is no doubt that women now play a major role in the workforce.

Workers in the National Spotlight For a brief period in the 1970s, the trials of working men and women made a distinct imprint on national culture. Reporters wrote of the "blue-collar blues" associated with plant closings and the hard-fought strikes of the decade. A 1972

Good Times The popular 1970s sitcom *Good Times* examined how the "blue-collar blues" affected a working-class black family struggling to make ends meet in tough economic times. The show's theme song spoke of "temporary layoffs . . . easy credit ripoffs . . . scratchin' and surviving." Its actors, many of them classically trained, brought a realistic portrait of working-class African American life to television. Bettmann/Getty [illegible]

strike at the Lordstown, Ohio, General Motors plant captivated the nation. Holding out not for higher wages but for better working conditions — the plant had the most complex assembly line in the nation — Lordstown strikers spoke out against what they saw as an inhumane industrial system. Across the nation, the number of union-led strikes surged, even as the number of Americans in the labor movement continued to decline. In Lordstown and most other sites of strikes and industrial conflict, workers won a measure of public attention but typically gained little economic ground.

When Americans turned on their televisions in the mid-1970s, the most popular shows reflected the "blue-collar blues" of struggling families. *All in the Family* was joined by *The Waltons*, set during the Great Depression. *Good Times*, *Welcome Back, Kotter*, and *Sanford and Son* dealt with poverty in the inner city. *The Jeffersons* featured an upwardly mobile black couple struggling to leave their working-class roots behind. *Laverne and Shirley* focused on young working women in the 1950s and *One Day at a Time* on working women in the 1970s making do after divorce. The most-watched television series of the decade, 1977's eight-part *Roots*, explored the history of slavery and the survival of African American culture and family roots despite the oppressive labor system. Not since the 1930s had American culture paid such close attention to working-class life.

The decade also saw the rise of musicians such as Bruce Springsteen, Johnny Paycheck, and John Cougar (Mellencamp), who became stars by turning the hardscrabble lives of people in small towns and working-class communities into rock anthems that filled arenas. Springsteen wrote songs about characters who "sweat it out in the streets of a runaway American dream," and, to the delight of his audience, Paycheck famously sang, "Take this job and shove it!" Meanwhile, on the streets of Harlem and the South Bronx in New York, young working-class African American men experimenting with dance and musical forms invented break dancing and rap music — styles that expressed both the hardship and the creativity of working-class black life in the deindustrialized American city.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

Why did the struggles of working families become more prominent in the 1970s, and what social and economic concerns did those families have?

Navigating the Sexual Revolution

AP® EXAM TIP

Analyze the societal changes associated with the sexual revolution in the context of the counterculture and women's rights movements.

The economic downturn was not the only force that placed stress on American families in this era. Another such force was what many came to call the "sexual revolution." Hardly revolutionary, sexual attitudes in the 1970s were, in many ways, a logical evolution of developments in the first half of the twentieth century. Beginning in the 1910s, Americans increasingly viewed sex as a component of personal happiness, distinct from reproduction. Attitudes toward sex grew even more lenient in the postwar decades, a fact reflected in the Kinsey studies of the 1940s and 1950s. By the 1960s, sex before marriage had grown more socially acceptable — an especially profound change for women — and frank discussions of sex in the media and popular culture had grown more common.

In that decade, three developments dramatically accelerated this process: the introduction of the birth control pill, the rise of the baby-boomer-led counterculture, and the influence of feminism. First made available in the United States in 1960, the birth

control pill gave women an unprecedented degree of control over reproduction. By 1965, more than 6 million American women were taking advantage of this pharmaceutical advance. Rapid shifts in attitude accompanied the technological breakthrough. Middle-class baby boomers embraced a sexual ethic of greater freedom and, in many cases, a more casual approach to sex outside marriage. "I just feel I am expressing myself the way I feel at that moment in the most natural way," a female California college student, explaining her sex life, told a reporter in 1966. The rebellious counterculture encouraged this attitudinal shift by associating a puritanical view of sex with their parents' generation.

Finally, women's rights activists reacted to the new emphasis on sexual freedom in at least two distinct ways. Many feminists felt that the sexual revolution was by and for men: the emphasis on casual sex seemed to perpetuate male privilege — the old double standard; sexual harassment was all too common in the workplace; and the proliferation of pornography continued to commercialize women as sex objects. On the other hand, they remained optimistic that the new sexual ethic could free women from those older moral constraints. They called for a revolution in sexual *values*, not simply behavior, that would end exploitation and grant women the freedom to explore their sexuality on equal terms with men.

Sex and Popular Culture In the 1970s, popular culture was suffused with discussions of the sexual revolution. Mass-market books with titles such as *Everything You Always Wanted to Know About Sex*, *Human Sexual Response*, and *The Sensuous Man* shot up the best-seller list. William Masters and Virginia Johnson became the most famous sex researchers since Alfred Kinsey by studying couples in the act of lovemaking. In 1972, English physician Alex Comfort published *The Joy of Sex*, a guidebook for couples that became one of the most popular books of the decade. Comfort made certain to distinguish his writing from pornographic exploitation. "Sex is the one place where we today can learn to treat people as people," he wrote.

Hollywood took advantage of the new sexual ethic by making films with explicit erotic content that pushed the boundaries of middle-class taste. Films such as *Midnight Cowboy* (1969), *Carnal Knowledge* (1971), and *Shampoo* (1974), the latter starring Hollywood's leading ladies' man, Warren Beatty, led the way. Throughout the decade, and into the 1980s, the Motion Picture Association of America (MPAA) scrambled to keep its guide for parents — the system of rating pictures G, PG, R, and X (and, after 1984, PG-13) — in tune with Hollywood's advancing sexual revolution.

On television, the popularity of social problem shows, such as *All in the Family*, and the fear of losing advertising revenue moderated the portrayal of sex in the early 1970s. However, in the second half of the decade networks both exploited and criticized the new sexual ethic. In frivolous, lighthearted shows such as the popular *Charlie's Angels*, *Three's Company*, and *The Love Boat*, heterosexual couples explored the often confusing, and usually comical, landscape of sexual morality. At the same time, between 1974 and 1981, the major networks produced more than a dozen made-for-TV movies about children in sexual danger — a sensationalized warning to parents of the potential threats to children posed by a less strict sexual morality.

Marriage on the Rocks Couples attending a Marriage Encounter workshop near Boston in 1972. Traditional notions of marriage came under a variety of economic and psychological stresses in the 1970s. Many Americans turned to therapeutic solutions to preserve, or improve, their marriages. Marriage Encounter, founded by priests in the Catholic Church, was one organization that offered couples the opportunity to talk openly about marriage and to learn new skills for navigating the difficulties couples faced. Marriage Encounter was one among dozens of such organizations, both religious and secular, to rise to prominence in the 1970s. Spencer Grant/Getty Image

Middle-Class Marriage Many Americans worried that the sexual revolution threatened marriage itself. The notion of marriage as romantic companionship had defined middle-class norms since the nineteenth century. It was also quite common throughout most of the twentieth century for Americans to see sexual satisfaction as a healthy part of the marriage bond. But what defined a healthy marriage in an age of rising divorce rates, changing sexual values, and feminist critiques of the nuclear family? Only a small minority of Americans rejected marriage outright; most continued to create monogamous relationships codified in marriage. But many came to believe that they needed help as marriage came under a variety of economic and psychological stresses.

A therapeutic industry arose in response. Churches and secular groups alike established marriage seminars and counseling services to assist couples in sustaining a healthy marriage. A popular form of 1960s psychotherapy, the "encounter group," was adapted to marriage counseling: couples met in large groups to explore new methods of communicating. One of the most successful of these organizations, Marriage Encounter, was founded by the Catholic Church. It expanded into Protestant and Jewish communities in the 1970s and became one of the nation's largest counseling organizations. Such groups embodied another long-term shift in how middle-class Americans understood marriage. Spurred by both feminism and psychotherapeutic models that stressed self-improvement, Americans increasingly defined marriage not simply by companionship and sexual fidelity but also by the deeply felt emotional connection between two people.

AP PRACTICES & SKILLS

CAUSATION

What were three major consequences of the sexual revolution of the 1960s and 1970s?

Religion in the 1970s: The New Evangelicalism

AP EXAM TIP

Compare the New Evangelicalism to the First and Second Great Awakenings.

For three centuries, American society has been punctuated by intense periods of religious revival — some of which historians have called Great Awakenings (Chapters 4 and 10). These periods have seen a rise in church membership, the appearance of charismatic religious leaders, and the increasing influence of religion, usually of the evangelical variety, on society and politics. One such surge in religiosity and evangelical fervor took shape between the 1960s and 1980s. The "New Evangelicalism" of those decades had many elements, but one of its central features was a growing concern with the family.

In the 1950s and 1960s, many mainstream Protestants had embraced the reform spirit of the age. Some of the most visible Protestant leaders were social activists who condemned racism and opposed the Vietnam War. Organizations such as the National Council of Churches — along with many progressive Catholics and Jews — joined with Martin Luther King Jr. and other African American ministers in the long battle for civil rights. Many mainline Protestant churches, among them the Episcopal, Methodist, and Congregationalist denominations, practiced a version of the "Social Gospel," the reform-minded Christianity of the early twentieth century.

Evangelical Resurgence Meanwhile, **evangelicalism** survived at the grass roots. Evangelical Protestant churches emphasized an intimate, personal salvation (being "born again"); focused on a literal interpretation of the Bible; and regarded the death and resurrection of Jesus as the central message of Christianity. These tenets distinguished evangelicals from mainline Protestants as well as from Catholics and Jews, and they flourished in a handful of evangelical colleges, Bible schools, and seminaries in the postwar decades.

No one did more to keep the evangelical fire burning than Billy Graham. A graduate of the evangelical Wheaton College in Illinois, Graham cofounded Youth for Christ in 1945 and then toured the United States and Europe preaching the gospel. Following a stunning 1949 tent revival in Los Angeles that lasted eight weeks, Graham shot to national fame. His success in Los Angeles led to a popular radio program, but he continued to travel relentlessly, conducting old-fashioned revival meetings he called crusades. A massive sixteen-week 1957 crusade held in New York City's Madison Square Garden made Graham, along with the conservative Catholic priest Fulton Sheen, one of the nation's most visible religious leaders.

Graham and other evangelicals in the 1950s and 1960s laid the groundwork for the New Evangelicalism. But it was a startling combination of events in the late 1960s and early 1970s that dramatically magnified the evangelical revival. First, rising divorce rates, social unrest, and challenges to prevailing values led people to seek the stability of faith. Second, many Americans regarded feminism, the counterculture, sexual freedom, homosexuality, pornography, and legalized abortion not as distinct issues, but as a collective sign of moral decay in society. To seek answers and find order, more and more people turned to evangelical ministries, especially Southern Baptist, Pentecostal, and Assemblies of God churches.

Numbers tell part of the story. As mainline churches lost about 15 percent of their membership between 1970 and 1985, evangelical church membership soared. The Southern Baptist Convention, the largest Protestant denomination, grew by 23 percent, while the Assemblies of God grew by an astounding 300 percent. *Newsweek* magazine declared 1976 "The Year of the Evangelical," and that November the nation made Jimmy Carter the nation's first evangelical president. In a national Gallup poll, a robust one-third of Americans answered yes when asked, "Would you describe yourself as a 'born again' or evangelical Christian?"

Much of this astonishing growth came from the creative use of television. A new generation of preachers brought religious conversion directly into Americans' living rooms through television. These so-called televangelists built huge media empires through small donations from millions of avid viewers — not to mention advertising. Jerry Falwell's *Old Time Gospel Hour*, Pat Robertson's *700 Club*, and Jim and Tammy Bakker's *PTL (Praise the Lord) Club* were the leading pioneers in this televised race for American souls, but another half dozen — including Oral Roberts and Jimmy Swaggart — followed them onto the airwaves. Together, they made the 1970s and 1980s the era of Christian broadcasting.

Religion and the Family Of primary concern to evangelical Christians was the family. Drawing on selected Bible passages, evangelicals believed that the nuclear family, and not the individual, represented the fundamental unit of society. The family itself was organized along paternalist lines: father was breadwinner and disciplinarian; mother was nurturer and supporter. "Motherhood is the highest form of femininity," the evangelical author Beverly LaHaye wrote in an influential book on Christian women. Another popular Christian author declared, "A church, a family, a nation is only as strong as its men."

Evangelicals spread their message about the Christian family through more than the pulpit and television. They founded publishing houses, wrote books, established foundations, and offered seminars. Helen B. Andelin, for instance, a California housewife, produced a homemade book called *Fascinating Womanhood* that eventually sold more than 2 million copies. She used the book as the basis for her classes, which by the early 1970s had been attended by 400,000 women and boasted 11,000 trained teachers. *Fascinating Womanhood* led evangelical women in the opposite direction of feminism. Whereas the latter encouraged women to be independent and to seek equality with men, Andelin taught that "submissiveness will bring a strange but righteous power over your man." Andelin was but one of dozens of evangelical authors and educators who encouraged women to defer to men.

Evangelical Christians held that strict gender roles in the family would ward off the influences of an immoral society. Christian activists were especially concerned with sex education in public schools, the proliferation of pornography, legalized abortion, and the rising divorce rate. For them, the answer was to strengthen what they called "traditional" family structures. By the early 1980s,

"Family Values" During the 1980 presidential campaign, the Reverend Jerry Falwell, pictured here with Phyllis Schlafly, supported Ronald Reagan and the Republican Party with "I Love America" rallies around the country. Falwell, head of the Moral Majority, helped to bring a new focus on "family values" to American politics in the late 1970s. This was a conservative version of the emphasis on male-breadwinner nuclear families that had long been characteristic of American values. AP/Wi

Christians could choose from among hundreds of evangelical books, take classes on how to save a marriage or how to be a Christian parent, attend evangelical churches and Bible study courses, watch evangelical ministers on television, and donate to foundations that promoted "Christian values" in state legislatures and the U.S. Congress.

AP® PRACTICES & SKILLS

CAUSATION

How did evangelical Christianity influence American society in the 1970s?

Wherever one looked in the 1970s and early 1980s, American families were under strain. Nearly everyone agreed that the waves of social liberalism and economic transformation that swept over the nation in the 1960s and 1970s had destabilized society and, especially, family relationships. But Americans did not agree about how to *re*stabilize families. Indeed, different approaches to the family would further divide the country in the 1980s and 1990s, as the New Right would increasingly make "family values" a political issue.

IN YOUR OWN WORDS **What were the major sources of anxiety about the American family in the decade after the 1960s?**

SUMMARY

For much of the 1970s, Americans struggled with economic problems, including inflation, energy shortages, income stagnation, and deindustrialization. These challenges highlighted the limits of postwar prosperity and forced Americans to consider lowering their economic expectations. A movement for environmental protection, widely supported, led to new laws and an awareness of nature's limits, and the energy crisis highlighted the nation's dependence on resources from abroad, especially oil.

In the midst of this gloomy economic climate, Americans also sought political and cultural resolutions to the upheavals of the 1960s. In politics, the Watergate scandal led to a brief period of political reform. Meanwhile, the battle for civil rights entered a second stage, expanding to encompass women's rights, gay rights, and the rights of alleged criminals and prisoners and, in the realm of racial justice, focusing on the problem of producing concrete results rather than legislation. Many liberals cheered these developments, but another effect was to strengthen a new, more conservative social mood that began to challenge liberal values in politics and society more generally. Finally, we considered the multiple challenges faced by the American family in the 1970s and how a perception that the family was in trouble helped to spur an evangelical religious revival that would shape American society for decades to come.

CHAPTER 28 REVIEW

AP® CONTENT REVIEW *Answer these questions to demonstrate your understanding of the chapter's main ideas.*

1. What limits did the American economy experience in the 1970s?
2. In what ways was the period between 1973 and 1980 a transitional one in American politics?
3. How did controversies over new individual rights shape the politics of the 1970s?
4. What were the major sources of anxiety about the American family in the decade after the 1960s?
5. Examine the category "Work, Exchange, and Technology" on the thematic timeline on page 746. How did economic developments in the 1970s reverse the course the national economy had been on since World War II? More broadly, can you identify events in each of the timeline categories that made the 1970s a decade of important historical transition?

AP® TERMS TO KNOW *Identify and explain the significance of each term below.*

Key Concepts and Events

Organization of Petroleum Exporting Countries (OPEC) (p. 880)
energy crisis (p. 881)
environmentalism (p. 881)
Silent Spring (p. 881)
Earth Day (p. 881)
Environmental Protection Agency (EPA) (p. 881)
Three Mile Island (p. 884)
stagflation (p. 885)
deindustrialization (p. 886)
Rust Belt (p. 886)
tax revolt (p. 888)
Proposition 13 (p. 888)
Watergate (p. 890)
War Powers Act (p. 891)
Freedom of Information Act (p. 891)
Ethics in Government Act (p. 891)
deregulation (p. 893)
affirmative action (p. 894)
Bakke v. University of California (p. 895)
Equal Rights Amendment (ERA) (p. 895)
STOP ERA (p. 896)
Roe v. Wade (p. 897)
evangelicalism (p. 904)

Key People

Rachel Carson (p. 881)

Billy Graham (p. 904)

Key Academic Terms

discretionary income (p. 885)
moratorium (p. 887)
cardinal (p. 889)
clandestine (p. 891)

MAKING CONNECTIONS *Recognize the larger developments and continuities within and across chapters by answering these questions.*

1. Consider the history of the American economy in the twentieth century. Compare the 1970s with other eras: the Great Depression of the 1930s, the industrial boom of the World War II years, and the growth and rising wages in the 1950s and 1960s. Using these comparisons, construct a historical narrative of the period from the 1920s through the 1970s.
2. Study the photograph on page 887 and the map on page 888. How did the economic downturn of the 1970s affect the lives of ordinary Americans and American culture broadly? What connections can you draw between the photograph and developments in the global economy and the rise of the Sunbelt?

KEY TURNING POINTS *Refer to the chapter chronology on page 880 for help in answering the question below.*

Based on this timeline, what were the three or four major political turning points of the 1970s? Defend your answer by explaining the impact of the changes.

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS *Choose the correct answer for each question.*

Questions 1–3 refer to the excerpt below.

> "Here is the first great fault in the life of man in the ecosphere. We have broken out of the circle of life, converting its endless cycles into man-made, linear events: oil is taken from the ground, distilled into fuel, burned in an engine, converted thereby into noxious fumes, which are emitted into the air. At the end of the line is smog. Other man-made breaks in the ecosphere's cycle spew out toxic chemicals, sewage, heaps of rubbish — the testimony to our power to tear the ecological fabric that has, for millions of years, sustained the planet's life. . . .
>
> Our assaults on the ecosystem are so powerful, so numerous, so finely interconnected, that although the damage they do is clear, it is very difficult to discover how it was done. By which weapon? In whose hand? Are we driving the ecosphere to destruction simply by our growing numbers? By our greedy accumulation of wealth? Or are the machines which we have built to gain this wealth — the magnificent technology that now feeds us out of neat packages, that clothes us in man-made fibers, that surround us with new chemical creations — at fault?"
>
> Barry Commoner, *The Closing Circle: Nature, Man, and Technology*, 1971

1. Commoner's ideas expressed in the excerpt most likely emerged from concerns about
   a. deindustrialization of the Upper Midwest and Northeast.
   b. mass migration of Americans to the Sunbelt.
   c. new movements to protect natural resources.
   d. loss of public confidence in government's ability to solve problems.
2. The sentiments expressed in the excerpt helped prompt the federal government in the 1970s to
   a. pass immigration legislation ending national quotas.
   b. found the Department of the Interior.
   c. establish the Environmental Protection Agency.
   d. create the National Park Service.
3. Which of the following expressed the greatest opposition to Commoner's ideas?
   a. American Indian organizations
   b. corporations and large manufacturers
   c. Members of the baby boom generation
   d. Working-class women

Questions 4–5 refer to the following excerpt.

> "In the place of the farmer came the industrial worker, and for the last hundred years or so the vicissitudes of the industrial worker — his claims to dignity and status, his demand for a rising share of industrial returns, his desire for a voice in the conditions which affected his work and conditions of employment — have marked the struggles of the century. . . .
>
> Yet if one takes the industrial worker as the instrument of the future . . . then this vision is warped. For the paradoxical fact is that as one goes along the trajectory of industrialization — the increasing replacement of men with machines — one comes logically to the erosion of the industrial worker himself. . . . Instead of the industrial worker, we see the dominance of the professional and technical class in the labor force. . . A post-industrial society is based upon services. Hence, it is a game between persons. What counts is not raw muscle power, or energy, but information. The central person is the professional, for he is equipped . . . to provide the kinds of skill which are increasingly demanded in a post-industrial society."
>
> Daniel Bell, *The Coming of Post-Industrial Society: A Venture in Social Forecasting*, 1973

4. The trends described by Bell in the excerpt resulted most directly from
   a. expansions of student populations in higher education.
   b. rapid and substantial growth of evangelical Christian churches.
   c. increasing homogenization of mass culture.
   d. policies of the Great Society.
5. A historian could best support Bell's argument from the excerpt using statistics from the 1970s about
   a. industrial union members in each year as a percentage of the total workforce.
   b. census data tracking migration patterns of the U.S. population.
   c. changes in the real cost of living.
   d. fluctuations in the international trade deficit.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

"Above all, the mid-1970's marked the end of the postwar boom. . . . Starting in the 1973–1974 years, real earnings began to stagnate and then slide. . . . By mid-decade the record-breaking strikes, rank-and-file movements, and vibrant organizing drives that had once promised a new day for workers were reduced to a trickle in the new economic climate. They were then replaced by layoffs, plant closures, and union decertification drives. White male workers' incomes . . . stagnated or fell for the next quarter century . . . driven down by oil shocks and inflation; deindustrialization, plant closings, and anti-unionism; and a global restructuring of work itself. . . . By the end of the decade working people would possess less place and meaningful identity within civic life than any time since the industrial revolution."

Jefferson Cowie, *Stayin' Alive: the 1970's and the Last Days of the Working Class*, 2010

"Forty years ago, Americans were suffering from what contemporaries called 'the energy crisis,' a crisis that in many ways defined the decade of the 1970's. During the twin oil shocks of 1973 and 1979, oil supplies dropped and prices soared, and the average citizen understood the energy crisis to mean a panic at the pump — the fear that we would not have enough oil to fill up our gas tanks, heat our homes, or run our factories. [The Arab oil] embargo stunned Americans, as if they had come under a surprise attack . . . because of the serious implications for the economy and the country's security. . . . Americans were vulnerable to scarcity and shortages as well as to higher fuel prices, which rippled through the entire economy and plagued the pocketbooks of all consumers."

Meg Jacobs, *Panic at the Pump: The Energy Crisis and the Transformation of American Politics in the 1970's*, 2016

1. Using the two excerpts at left, answer (a), (b), and (c).
   - **a.** Briefly explain ONE major difference between Cowie's and Jacobs's historical interpretations about the 1970s.
   - **b.** Briefly explain how ONE specific event, development, or circumstance not directly mentioned in the excerpts could be used to support Cowie's argument.
   - **c.** Briefly explain how ONE specific event, development, or circumstance not directly mentioned in the excerpts could be used to support Jacobs's argument.
2. Answer (a), (b), and (c).
   - **a.** Briefly explain why ONE of the following developments was the most significant factor contributing to the loss of public confidence in government in the 1970s.
     - Economic challenges
     - Political scandals
     - Foreign policy crises
   - **b.** Briefly explain ONE historical event or development in support of your argument in (a).
   - **c.** Briefly explain a specific historical reason why ONE of the other options contributed less to the loss of public confidence in government in the 1970s.
3. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE important historical difference in the 1970s challenges faced by African American movements pursuing equality from those faced by women's movements for equality in the same period.
   - **b.** Briefly explain ANOTHER important historical difference in the 1970s challenges faced by African American movements pursuing equality from those faced by women's movements for equality in the same period.
   - **c.** Briefly explain ONE important historical similarity in the 1970s challenges faced by African American movements pursuing equality to those faced by women's movements for equality in the same period.

DOCUMENT-BASED QUESTION *Suggested reading period: 15 minutes. Suggested writing time: 45 minutes.*

DIRECTIONS: Question 1 is based on the accompanying documents. The documents have been edited for the purpose of this exercise.

1. Evaluate the extent of difference in United States foreign policy in the period 1945 to 1963 from foreign policy in the period 1964 to 1980.

DOCUMENT 1

Source: Secretary of State George Marshall, Speech at Harvard University, June 5, 1947.

"I need not tell you gentlemen that the world situation is very serious. That must be apparent to all intelligent people. I think one difficulty is that the problem is one of such enormous complexity that the very mass of facts presented to the public by press and radio make it exceedingly difficult for the man in the street to reach a clear appraisement of the situation. Furthermore, the people of this country are distant from the troubled areas of the earth and it is hard for them to comprehend the plight and consequent reaction of the long-suffering peoples, and the effect of those reactions on their governments in connection with our efforts to promote peace in the world. . . .

Aside from the demoralizing effect on the world at large and the possibilities of disturbances arising as a result of the desperation of the people concerned, the consequences to the economy of the United States should be apparent to all. It is logical that the United States should do whatever it is able to do to assist in the return of normal economic health in the world, without which there can be no political stability and no assured peace. Our policy is directed not against any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist."

DOCUMENT 2

Source: General Douglas MacArthur, Farewell Address to Congress, April 19, 1951.

"The Communist threat is a global one. Its successful advance in one sector threatens the destruction of every other sector. You can not appease or otherwise surrender to communism in Asia without simultaneously undermining our efforts to halt its advance in Europe. . . .

But once war is forced upon us, there is no other alternative than to apply every available means to bring it to a swift end. . . . War's very object is victory, not prolonged indecision. In war there is no substitute for victory. There are some who, for varying reasons, would appease Red China. They are blind to history's clear lesson, for history teaches with unmistakable emphasis that appeasement but begets new and bloodier war. It points to no single instance where this end has justified that means, where appeasement has led to more than a sham peace. Like blackmail, it lays the basis for new and successively greater demands until, as in blackmail, violence becomes the only other alternative."

DOCUMENT 3

Source: President John F. Kennedy, Televised Address to the American Public, October 22, 1962.

"For many years, both the Soviet Union and the United States . . . have deployed strategic nuclear weapons with great care, never upsetting the precarious status quo which insured that these weapons would not be used in the absence of some vital challenge. Our own strategic missiles have never been transferred to the territory of any other nation under a cloak of secrecy and deception; and our history — unlike that of the Soviets since the end of World War II — demonstrates that we have no desire to dominate or conquer any other nation or impose our system upon its people. Nevertheless, American citizens have become adjusted to living daily on the bull's-eye of Soviet missiles located inside the U.S.S.R. or in submarines. . . .

We are prepared to discuss new proposals for the removal of tensions on both sides, including the possibilities of a genuinely independent Cuba, free to determine its own destiny. We have no wish to war with the Soviet Union — for we are a peaceful people who desire to live in peace with all other peoples.

But it is difficult to settle or even discuss these problems in an atmosphere of intimidation. That is why this latest Soviet threat — or any other threat which is made either independently or in response to our actions this week — must and will be met with determination. Any hostile move anywhere in the world against the safety and freedom of peoples to whom we are committed, including in particular the brave people of West Berlin, will be met by whatever action is needed."

DOCUMENT 4

Source: Harold Bryant, a Vietnam soldier recalling his tour of duty in August 1965.

"When I came to Vietnam, I thought we were helping another country to develop a nation. About three or four months later I found out that wasn't the case. . . .

I thought we had got into the beginning of a war. But I found out that we were just in another phase of their civil wars.

And we weren't gaining any ground. We would fight for a hill all day, spend two days or two nights there, and then abandon the hill. Then maybe two, three months later, we would have to come back and retake the same piece of territory. . . .

And they had a habit of exaggerating a body count. If we killed 7, by the time it would get back to base camp, it would have gotten to 28. Then by the time it got down to [General William] Westmoreland's office in Saigon, it done went up to 54. And by the time it left from Saigon going to Washington, it had went up to about 125. To prove we were really out there doing our jobs, doing, really, more than what we were doing."

DOCUMENT 5

Source: President Richard Nixon, State of the Union Address to Congress, January 30, 1974.

"Tonight, for the first time in 12 years, a President of the United States can report to the Congress on the state of a Union at peace with every nation of the world. . . .

In the coming year, however, increased expenditures will be needed. They will be needed to assure the continued readiness of our military forces, to preserve present force levels in the face of rising costs, and to give us the military strength we must have if our security is to be maintained and if our initiatives for peace are to succeed.

The question is not whether we can afford to maintain the necessary strength of our defense, the question is whether we can afford not to maintain it, and the answer to that question is no. We must never allow America to become the second strongest nation in the world.

I do not say this with any sense of belligerence, because I recognize the fact that is recognized around the world. America's military strength has always been maintained to keep the peace, never to break it. It has always been used to defend freedom, never to destroy it. The world's peace, as well as our own, depends on our remaining as strong as we need to be as long as we need to be.

In this year 1974, we will be negotiating with the Soviet Union to place further limits on strategic nuclear arms. Together with our allies, we will be negotiating with the nations of the Warsaw Pact on mutual and balanced reduction of forces in Europe. And we will continue our efforts to promote peaceful economic development in Latin America, in Africa, in Asia."

LONG ESSAY QUESTIONS *Suggested writing time: 40 minutes.*

DIRECTIONS: Please choose one of the following two questions to answer.

2. **Evaluate the extent of change in United States society resulting from the Vietnam War from 1962 to 1975.**

3. **Evaluate the extent of change in United States society resulting from international and internal migrations from 1945 to 1980.**

4. **Evaluate the extent of change in United States society resulting from the environmental movement from 1945 to 1980.**

PART 9

CHAPTER 29
Conservative America in the Ascent, 1980–1991

CHAPTER 30
Confronting Global and National Dilemmas, 1989 to the Present

Globalization and the End of the American Century

1980 to the Present

For historians, the recent past can be a challenge to assess. Insufficient time has passed for scholars to weigh the significance of events and to determine which developments will have a lasting effect and which are more fleeting. Nevertheless, scholars generally agree on the era's three most significant developments: the resurgence of political conservatism, the end of the Cold War, and the globalization of communications and the economy. The first of these, as we showed in Part 8, was decades in the making. Conservatism had leaped back to life in the 1960s, but not until the 1980s did American conservatives have the political muscle to reshape national politics in fundamental respects. Conservatism's resurgence occasioned a wide-ranging and divisive internal debate among Americans over what the nation's common values and priorities should be.

The second two developments began to reshape the place of the United States in the world. With the collapse of European communism after 1989, the Cold War came to an end, leaving the U.S. as the world's dominant military power. But military dominance coexisted with shrinking economic influence. What *Time* magazine publisher Henry Luce in 1941 had named the American Century—in his call for the U.S. to assume global leadership after World War II—came to an end in the last quarter of the twentieth century. The U.S. remained the world's largest economy but faced rising competition from a united Europe and a surging China. These decades stand as an era of transition away from the bipolar world of the Cold War.

Contemporary events continue to unfold, and thus Part 9 remains necessarily a work in progress. We've emphasized how through equal parts conflict, struggle, and ingenuity, Americans collectively forged a new era in national history after the 1980s. ▶

AP® CONCEPT CONNECTIONS

Conservative Ascendancy

In the 1980s, the conservatism of Ronald Reagan and the New Right, consolidated in the Republican Party, challenged the liberalism of the 1960s and 1970s. Conservatives reduced the regulatory power of the federal government, eroded the welfare state of the New Deal and the Great Society, and expanded the military. Evangelical Christians and conservative lawmakers challenged abortion rights, feminism, and gay rights, setting off a "culture war" that sharply divided Americans.

Even as the Reagan coalition brought an end to decades of liberal government activism, much of the legacy of the New Deal was preserved: Medicare, Medicaid, and Social Security grew as a proportion of the federal budget. Conservatives shaped U.S. foreign policy, however, dramatically increasing the defense budget and, under George W. Bush, asserting a new doctrine of "preemptive war." By the election of 2016, national politics seemed as divided as ever. Republican Donald Trump won the presidency, and voters returned a conservative majority to Congress. Polls showed that Americans embraced a moderate liberalism, but the national political system had moved firmly into conservative hands.

Ronald Reagan Presidential Library

End of the Cold War and Rising Conflict in the Middle East

Under Reagan's direction, the U.S. increased military spending and returned to the sharp Cold War rhetoric of earlier decades. Yet in the second half of the 1980s, as internal reforms swept through the Soviet Union, Reagan engaged in productive dialogue with the Soviet leader Mikhail Gorbachev. Then, in 1991, the Soviet Union stunningly collapsed, and the U.S. emerged as the lone military "superpower" in the world. Absent a clear Cold War enemy, it intervened in civil wars, worked to disrupt terrorist activities, and provided humanitarian aid — but guided more by pragmatism than by principle.

The foremost region that occupied U.S. attention was the Middle East, where strategic interest in oil remained paramount. Between 1991 and 2016, the U.S. fought three wars in the region — two in Iraq and one in Afghanistan — and became even more deeply embedded in its politics. The end of the Cold War thus expanded the U.S. role in the Middle East and renewed debates about the proper American role in the world.

David Turnley/Corbis/VCG via Getty Images

Global Capitalism and Increasing Social Inequality

The post–World War II expansion of the American economy ended in the 1970s, when wages stagnated and inflation skyrocketed. In the 1980s and 1990s, however, productivity grew, military spending boosted production, and new industries — such as computer technology — emerged. These developments led to renewed economic growth. More and more, though, the economy produced *services* rather than *goods* — as Americans increasingly bought the latter from overseas.

The fall of communism had made possible this global expansion of capitalism, as multinational corporations moved production to low-wage countries. Governments across the world facilitated this process by creating new trading zones such as the European Union (EU) and the North American Free Trade Agreement (NAFTA). Conservative tax policies, deindustrialization, the decline of unions, and globalization all contributed to a widening inequality between the wealthiest Americans and the middle class and poor. Globalization thus brought both new economic opportunities and renewed economic insecurity.

AP® THEMATIC UNDERSTANDING

Globalization and the End of the American Century

1980 to the Present

Mario Tama/Getty Images

This timeline arranges some of the important events of this period into themes.

Consider the entries under "Culture and Society" and "Migration and Settlement." What were the major events of the "culture wars," and how did American attitudes and public policy change over the decades between the 1980s and the 2010s? Next, examine the entries under "American and National Identity" and "America in the World." How did globalization reshape the United States in these decades? How did the U.S. actions affect other regions, particularly the Middle East?

	AMERICAN AND NATIONAL IDENTITY	POLITICS AND POWER	WORK, EXCHANGE, AND TECHNOLOGY
1980	• Ronald Reagan campaigns for presidency (1980), says United States is "greatest country in the world" • Reagan campaigns for reelection (1984) with theme of "It's morning in America"	• New Right helps elect Ronald Reagan president • Iran-Contra scandal (1985–1987) • George H. W. Bush elected president (1988)	• Recession (1981–1982) followed by strong growth (1982–1987) • Reagan tax cut (1981) • Apple IIe personal computer introduced (1983) • National debt triples (1981–1989)
1990	• Americans debate multiculturalism • World Trade Organization (WTO) protests in Seattle against globalization (1999)	• Bill Clinton elected president (1992) • Republican resurgence (1994) • Welfare reform (1996) • Clinton impeached and acquitted (1998–1999)	• Internet gains in popularity • Recession (1990–1991) • NAFTA ratified (1993) • Debt reduction under Bill Clinton
2000	• "War on terror" becomes fixture in American discourse • USA PATRIOT Act authorizes new domestic surveillance to combat terrorism • Abu Ghraib (2004) revelations document U.S. torture practices	• George W. Bush wins presidency in contested election (2000) • USA PATRIOT Act (2001) • Barack Obama elected first African American president (2008)	• Great Recession (2007–2010) • President Bush asks for and receives bank bailout from Congress (2008) • Unemployment hits 10 percent
2010	• Presidential candidates debate whether United States is declining as a nation and the role of international trade and immigration (2016)	• Health-care reform (2010) • Tea Party helps Republicans regain control of House of Representatives • Barack Obama reelected president (2012) • Donald Trump elected president (2016)	• Financial industry accounts for largest share of GDP among all industry sectors

CULTURE AND SOCIETY	MIGRATION AND SETTLEMENT	GEOGRAPHY AND THE ENVIRONMENT	AMERICA IN THE WORLD	
• HIV/AIDS crisis prompts national conversation about homosexuality • Renewed emphasis on material success and the "rich and famous" • *Webster v. Reproductive Health Services* (1989)	• Rise in Latino and Asian immigration • Californians vote to establish English as official language (1986)	• Reagan appoints the anti-environmentalist James Watt as secretary of interior	• Reagan begins arms buildup • United States arms Contras in Nicaragua • Berlin Wall comes down (1989)	1980
• Pat Buchanan declares "culture war" (1992) • Proposition 209 ends affirmative action in California universities (1996) • Defense of Marriage Act (1998)	• California bans bilingual education in public schools (1998)	• New states emerge in central Asia from dissolution of Soviet Union (1989–1991) • Oil at center of Gulf War • European Union created (1992)	• Persian Gulf War (1990–1991) • USSR breaks apart; end of Cold War • World Trade Center bombed (1993) • NATO begins peacekeeping efforts in Bosnia (1995)	1990
• *Lawrence v. Texas* (2003) • Massachusetts becomes first state to legalize same-sex marriage (2004); nine states follow by 2012	• California, Texas, Hawaii, and New Mexico become "majority-minority" states (where the majority of the population is composed of different nonwhite groups)	• Kyoto Protocol international treaty on climate change signed by 84 nations (2005) but not by United States	• Al Qaeda attacks World Trade Center and Pentagon (2001) • United States and allies invade Afghanistan (2002) • United States invades Iraq (2003)	2000
• *Obergefell v. Hodges* (2015) upholds same-sex marriage as legal in all states	• Obama's 2012 electoral coalition heavily African American, Hispanic, Asian American, female, and young • President Donald Trump bans immigrants from six majority-Muslim countries (2017)	• President Obama issues Clean Power Plan through executive action (2015) • President Trump rescinds portions of the Clean Power Plan and orders reconsideration of the remainder (2017)	• Arab Spring (2010–2012) • Osama bin Laden killed (2011) • Last combat troops withdrawn from Iraq (2011) • Syrian civil war and refugee crisis (2011–present)	2010

A New Political Order at Home and Abroad

AP LEARNING FOCUS

What factors made the rise of the New Right possible, and what ideas about freedom and citizenship did conservatives articulate in the 1980s?

The decade of the 1970s saw Americans divided by the Vietnam War, wearied by social unrest, and unmoored by economic drift. As a result, many ordinary citizens developed a deep distrust of the muscular Great Society liberalism of the 1960s. Seizing political advantage amid the trauma and divisions, a revived Republican Party, led by a political movement known as the New Right, offered the nation a fresh way forward: economic deregulation, low taxes, Christian morality, and a reenergized Cold War foreign policy. The election of President Ronald Reagan in 1980 symbolized the ascendance of this new political formula, and the president himself helped shape the era.

The New Right revived confidence in "free markets" and called for a smaller government role in economic regulation and social welfare. Reagan famously said, "Government is not the solution to our problem; government *is* the problem." Like the New Right generally, Reagan was profoundly skeptical of the liberal ideology that had informed American public policy since Franklin D. Roosevelt's New Deal. His presidency combined an economically conservative domestic agenda with aggressive anticommunism abroad. Reagan's foreign policy reignited tensions with the Soviet Union, and then, unexpectedly, the president helped orchestrate a thawing of U.S.-Soviet relations, laying the groundwork for the end of the Cold War.

Reagan defined the conservative ascendancy of the 1980s, but he did not create the New Right groundswell that brought him into office. Grassroots conservative activists in the 1960s and 1970s built a formidable right-wing movement that awaited an opportune political moment to contend for national power. That moment came in 1980, when Democratic president Jimmy Carter's popularity plummeted as a result of his mismanagement of two national crises. Raging inflation and the Iranian seizure of U.S. hostages in Tehran undid Carter and provided an opening for the New Right, which would shape the nation's politics for the remainder of the twentieth century and the first decades of the twenty-first.

1984 Republican National Convention Ronald Reagan delivers his acceptance speech in this photo from the 1984 Republican National Convention. Reagan's political rise captured the spirit of conservative politics in the late 1970s and 1980s.

CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and identify the links among related events.

1981
- Ronald Reagan becomes president
- Republicans gain control of Senate
- Economic Recovery Tax Act (ERTA) cuts taxes
- Military expenditures increase sharply
- Reagan cuts budgets of regulatory agencies
- Sandra Day O'Connor appointed to the Supreme Court

1981–1989
- National debt triples
- Emergence of New Right think tanks: Heritage Foundation, American Enterprise Institute, and the Cato Institute
- United States assists Iraq in war against Iran (1980–1988)

1985
- Mikhail Gorbachev takes power in Soviet Union

1986
- Iran-Contra scandal weakens Reagan presidency
- William Rehnquist named chief justice

1987
- United States and USSR agree to limit missiles in Europe

1988
- George H. W. Bush elected president

1989
- Destruction of Berlin Wall
- "Velvet Revolutions" in Eastern Europe
- *Webster v. Reproductive Health Services* limits abortion services

1990–1991
- Persian Gulf War

1991
- Dissolution of Soviet Union ends Cold War

The Rise of the New Right

The Great Depression and World War II discredited the traditional conservative program of limited government at home and diplomatic isolationism abroad. Nevertheless, a right-wing faction survived within the Republican Party. Its adherents continued to oppose the New Deal but reversed their earlier isolationism. In the postwar decades, conservatives pushed for military interventions against communism in Europe, Asia, and the developing world while calling for the broadest possible investigation of subversives at home (Chapter 24).

However, conservatives failed to devise policies that could win the allegiance of American voters in the two decades after World War II. Republicans by and large continued to favor party moderates, such as Dwight Eisenhower, Thomas Dewey, and Nelson Rockefeller. These were politicians, often called liberal Republicans, who supported much of the New Deal, endorsed the containment policy overseas, and steered a middle course through the volatile social and political changes of the postwar era. The conservative faction held out hope, however, that it might one day win the loyalty of a majority of Republicans and remake the party in its image. In the 1960s and 1970s, these conservatives invested their hopes for national resurgence in two dynamic figures: Barry Goldwater and Ronald Reagan. Together, the two carried the conservative banner until the national electorate grew more receptive to right-wing appeals.

Barry Goldwater and Ronald Reagan: Champions of the Right

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

The personal **odyssey** of Ronald Reagan embodies the story of New Right Republican conservatism. Before World War II, Reagan was a well-known movie actor as well as a New Deal Democrat and admirer of Roosevelt. However, he turned away from liberalism, partly from self-interest (he disliked paying high taxes) and partly on principle. As head of the Screen Actors Guild from 1947 to 1952, Reagan had to deal with its Communist members, who formed the extreme left wing of the American labor movement. Dismayed by their hardline tactics and goals, he became a militant anticommunist. After nearly a decade as a spokesperson for the General Electric Corporation, Reagan joined the Republican Party in the early 1960s and began speaking for conservative causes and candidates.

One of those candidates was the forthright conservative Barry Goldwater, a Republican senator from Arizona. Confident in their power, centrist Republicans did not anticipate that grassroots conservatives could challenge the party's old guard and nominate one of

their own for president: Goldwater himself. Understanding how they did so in 1964 brings us closer to comprehending the forces that propelled Reagan to the presidency a decade and a half later. Indeed, Reagan the politician came to national attention in 1964 with a televised speech at the Republican convention supporting Goldwater for the presidency. In a dramatic address titled "A Time for Choosing," Reagan warned that if we "trade our freedom for the soup kitchen of the welfare state," the nation would "take the first step into a thousand years of darkness."

Barry Goldwater Barry Goldwater was a three-term senator from Arizona before he ran for the presidency in 1964 (this photo was taken during the campaign). Goldwater's conservative influence on the Republican Party was considerable and laid the political groundwork for the rise of Ronald Reagan a decade and a half later. Everett Collection Inc. / Alamy Stock Photo

The Conscience of a Conservative Like Reagan, Goldwater came from the Sunbelt, home to a libertarian spirit of limited government and great personal freedom. His 1960 book, ***The Conscience of a Conservative***, set forth an uncompromising conservatism. In direct and accessible prose, Goldwater attacked the New Deal state, arguing that "the natural tendency of government [is] to expand in the direction of absolutism." The problem with the Republican Party, as he saw it, was that Eisenhower had been too accommodating to liberalism. When Ike told reporters that he was "liberal when it comes to human problems," Goldwater privately fumed.

The Conscience of a Conservative spurred a Republican grassroots movement in support of Goldwater. By distributing his book widely and mobilizing activists at state party conventions, conservatives hoped to create such a groundswell of support that Goldwater could be "drafted" to run for president in 1964, something he reportedly did not wish to do. Meanwhile, Goldwater further enchanted conservatives with another book, *Why Not Victory?*, in which he criticized the containment policy—the strategy of preventing the spread of communism followed by both Democrats and Republicans since 1947 (Chapter 24). It was, he complained, a policy of "timidly refusing to draw our own lines against aggression . . . unmarked by pride or the prospect of victory." Here was a politician saying exactly what conservatives wanted to hear.

AP® PRACTICES & SKILLS

POINT OF VIEW

Why were New Right conservatives disappointed with the Republican Party in the decades after World War II?

Grassroots Conservatives Because moderates dominated the Republican Party leadership, winning the 1964 nomination for Goldwater required conservative activists to build their campaign from the bottom up. They found thousands upon thousands of Americans willing to hit the streets on behalf of their political hero. Organizations such as the John Birch Society, Young Americans for Freedom, and the Liberty Lobby supplied an army of eager volunteers. They came from such conservative strongholds as Orange County, California, and the fast-growing suburbs of Phoenix, Dallas, Houston, Atlanta, and other Sunbelt metropolises. A critical boost came in the early spring of 1964, when conservatives outmaneuvered moderates at the state convention of the California Republican Party, which then enthusiastically endorsed Goldwater. The fight had been bruising, and one moderate Republican warned that "sinister forces are at work to take over the whole Republican apparatus in California."

AP® EXAM TIP

Summarize the causes for the rising popularity of the New Right from the 1960s through the 1980s.

Another spur to Goldwater backers was the appearance of a book by Phyllis Schlafly, who was then a relatively unknown conservative activist from the Midwest. Like Goldwater's own book, Schlafly's *A Choice Not an Echo* accused moderate Republicans of being Democrats in disguise (that is, an "echo" of Democrats). Schlafly, who reappeared in the national spotlight in the early 1970s to help halt the ratification of the Equal Rights Amendment, denounced the "Rockefeller Republicans" of the Northeast and encouraged the party to embrace a defiant conservatism. Contrasting Goldwater's "grassroots Republicans" with Rockefeller's "kingmakers," Schlafly hoped to "forestall another defeat like 1940, 1944, 1948, and 1960," Democratic victories all.

The conservative groundswell won the Republican nomination for Goldwater. However, his strident tone and militarist foreign policy were too much for a nation mourning the death of John F. Kennedy and still committed to liberalism. Democrat Lyndon B. Johnson defeated Goldwater in a historic landslide (Chapter 27). Many believed that Goldwater conservatism would wither and die, but instead the nearly four million volunteers who had campaigned for the Arizona senator swung their support to Ronald Reagan and built toward the future. Skilled conservative political operatives such as Richard Viguerie, a Louisiana-born Catholic and antiabortion activist, applied new computer technology to political campaigning. Viguerie took a list of 12,000 Goldwater contributors and used computerized mailing lists, which were new at the time, to solicit campaign funds, rally support for conservative causes, and get out the vote on election day. Conservatism was down but not out.

Backed financially by wealthy southern Californians and supported by Goldwaterites, Reagan won California's governorship in 1966 and again in 1970. His impassioned rhetoric supporting limited government and law and order — referring to campus radicals, he vowed to "clean up the mess in Berkeley" — won broad support among citizens of the nation's most populous state. More significantly, it made him a force in national politics. His supporters believed that he was in line to succeed Nixon as the next Republican president. The Watergate scandal intervened, however, discrediting Nixon and making Gerald Ford the incumbent. After narrowly losing a campaign against Ford for the Republican presidential nomination in 1976, Reagan was forced to bide his time. When Ford lost to Carter in that year's election, as the party's brightest star Reagan was a near lock to be the nominee in 1980.

Free-Market Economics and Religious Conservatism

The last phase of Reagan's rise was the product of several additional developments within the New Right. The burgeoning conservative movement increasingly resembled a three-legged stool. Each leg represented an ideological position and a popular constituency: anticommunism, free-market economics, and religious traditionalism. Uniting all three in a political coalition was no easy feat. Religious traditionalists demanded strong government action to implement their faith-based agenda, while economic conservatives favored limited government and free markets. Both groups, however, were ardent anticommunists — free marketeers loathed the state-directed Soviet economy, and religious conservatives despised the "godless" secularism of the Soviet state. In the end, the success of the New Right would come to depend on balancing the interests of economic and moral conservatives.

Since the 1950s, William F. Buckley, the founder and editor of the conservative magazine ***National Review***, and Milton Friedman, the Nobel Prize–winning economist at the University of Chicago, had been the most prominent conservative intellectuals. Convinced that "the growth of government must be fought relentlessly," Buckley used the *National Review* to criticize liberal policy. For his part, Friedman became a national conservative icon with the publication of *Capitalism and Freedom* (1962), in which he argued that "economic freedom is . . . an indispensable means toward the achievement of political freedom." Friedman's free-market ideology, along with that of Friedrich von Hayek, another University of Chicago economist, was taken up by wealthy conservatives, who funded think tanks during the 1980s to disseminate market-based public policy ideas. The Heritage Foundation, the American Enterprise Institute, and the Cato Institute issued policy proposals and attacked liberal legislation and the stranglehold of economic regulation they believed it represented. Followers of Buckley and Friedman envisioned themselves as crusaders working against what one conservative called "the despotic aspects of egalitarianism."

AP® EXAM TIP

Evaluate the role of the Religious Right on politics and society since 1980.

The most striking addition to the conservative coalition was the **Religious Right**. Until the 1970s, politics was an earthly concern of secondary interest to most fundamentalist and evangelical Protestants. But the perception that American society had

become immoral, combined with the influence of a new generation of popular ministers, gave politics a new urgent relevance. Conservative Protestants and Catholics joined together in a tentative alliance, as the Religious Right condemned divorce, abortion, premarital sex, and feminism. The route to a moral life and to "peace, pardon, purpose, and power," as one evangelical activist said, was "to plug yourself into the One, the Only One [God]."

Charismatic televangelists such as Pat Robertson and Jerry Falwell emerged as the champions of a morality-based political agenda during the late 1970s. Falwell, founder of Liberty University and host of the *Old Time Gospel Hour* television program, established the Moral Majority in 1979. With 400,000 members and $1.5 million in contributions in its first year, it would be the organizational vehicle for transforming the new evangelicalism into a religious political movement. Falwell made no secret of his views: "If you want to know where I am politically," he told reporters, "I thought Goldwater was too liberal." Falwell was not alone. Phyllis Schlafly's STOP ERA, which became Eagle Forum in 1975, continued to advocate for conservative public policy; Focus on the Family was founded in 1977; and a succession of conservative organizations would emerge in the 1980s, including the Family Research Council.

The conservative message preached by Barry Goldwater and Ronald Reagan had appealed to few American voters in 1964. Then came the series of events that undermined support for the liberal agenda of the Democratic Party: the failed war in Vietnam; a judiciary that legalized abortion and pornography, enforced school busing, and curtailed public expression of religion; urban riots; and a stagnating economy. By the late 1970s, the New Right had developed a conservative message that commanded much greater popular support than Goldwater's program had. Religious and free-market conservatives joined with traditional anticommunist hard-liners — alongside whites opposed to black civil rights, affirmative action, and busing — in a broad coalition that attacked welfare-state liberalism, social permissiveness, and an allegedly weak and defensive foreign policy. Ronald Reagan expertly appealed to all of these conservative constituencies and captured the Republican presidential nomination in 1980 (AP® Analyzing Voices). It had taken almost two decades, but the New Right appeared on the verge of winning the presidency.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

What was the "three-legged stool" of the New Right, and how did each element develop within the context of the Cold War?

The Carter Presidency

First, the Republican Party had to defeat incumbent president Jimmy Carter. Carter's outsider status and his disdain for professional politicians had made him the ideal post-Watergate president. But his ineffectiveness and missteps as an executive also made him the perfect foil for Ronald Reagan.

Carter had an idealistic vision of American leadership in world affairs. He presented himself as the anti-Nixon, a world leader who rejected Henry Kissinger's "realism" in favor of human rights and peacemaking. "Human rights is the soul of our foreign policy," Carter asserted, "because human rights is the very soul of our sense of nationhood." He established the Office of Human Rights in the State Department and withdrew economic and military aid from repressive regimes in Argentina, Uruguay, and Ethiopia — although, in realist fashion, he still funded equally

AP® EXAM TIP

Recognize how Jimmy Carter's emphasis on human rights in foreign policy represented change as well as continuity in U.S. history.

Christianity and Public Life

Modern social-welfare liberalism embodies an ethic of moral pluralism and favors the separation of church and state. Conservative Christians challenge the legitimacy of pluralism and secularism and seek, through political agitation and legal action, to make religion an integral part of public life.

PRESIDENT RONALD REAGAN

"The Rule of Law Under God"

Reagan's candidacy was strongly supported by Christian conservatives. He delivered these remarks to the National Association of American Evangelicals in 1983.

SOURCE: Reprinted with the permission of Simon & Schuster, Inc. from *Speaking My Mind* by Ronald Reagan. Copyright © 1989 Ronald W. Reagan.

"I want you to know that this administration is motivated by a political philosophy that sees the greatness of America in you, her people, and in your families, churches, neighborhoods, communities — the institutions that foster and nourish values like concern for others and respect for the rule of law under God.

Now, I don't have to tell you that this puts us in opposition to, or at least out of step with, a prevailing attitude of many who have turned to a modern-day secularism, discarding the tried and time-tested values upon which our very civilization is based. No matter how well intentioned, their value system is radically different from that of most Americans. And while they proclaim that they're freeing us from superstitions of the past, they've taken upon themselves the job of superintending us by government rule and regulation. Sometimes their voices are louder than ours, but they are not yet a majority. . . .

Freedom prospers when religion is vibrant and the rule of law under God is acknowledged. When our Founding Fathers passed the First Amendment, they sought to protect churches from government interference. They never intended to construct a wall of hostility between government and the concept of religious belief itself.

Last year, I sent the Congress a constitutional amendment to restore prayer to public schools. Already this session, there's growing bipartisan support for the amendment, and I am calling on the Congress to act speedily to pass it and to let our children pray."

DONALD E. WILDMON

Network Television as a Moral Danger

Wildmon was a Christian minister, a grassroots religious activist, and the founder of the American Family Association.

SOURCE: From Donald E. Wildmon, *Home Invaders* (Elgin, IL: Victor Books, 1985). Copyright © 1985. Reprinted by permission of the author.

"One night during the Christmas holidays of 1976, I decided to watch television with my family. . . . Not far into the program was a scene of adultery. I reacted to the situation in the manner as I had been taught. I asked one of the children to change channels. Getting involved in the second program, we were shocked with some crude profanity. . . .

As I sat in my den that night, I became angry. I had been disturbed by the deterioration of morals I had witnessed in the media and society during the previous twenty-five years.

This was accompanied by a dramatic rise in crime, a proliferation of pornography, increasingly explicit sexual lyrics in music, increasing numbers of broken homes, a rise in drug and alcohol use among the youth, and various other negative factors. . . .

Realizing that these changes were being brought into the sanctity of my home, I decided I could and would no longer remain silent. . . .

This great struggle is one of values, particularly which ones will be the standard for our society and a base for our system of justice in the years to come. For 200 years our country has based its morals, its sense of right and wrong, on the Christian view of man. The Ten Commandments and the Sermon on the Mount have been our solid foundation. . . .

Television is the most pervasive and persuasive medium we have. At times it is larger than life. It is our only true national medium. Network television is the greatest educator we have. . . .

It is teaching that adultery is an acceptable and approved lifestyle. . . . It is teaching that hardly anyone goes to church, that very few people in our society are Christian or live by Christian principles. How? By simply censoring Christian characters, Christian values, and Christian culture from the programs."

A. BARTLETT GIAMATTI

The Moral Majority as a Threat to Liberty

A. Bartlett Giamatti was the president of Yale University (1978–1986) and subsequently commissioner of Major League Baseball. He offered these remarks to the entering class of Yale undergraduates in 1981.

SOURCE: From Speeches and Articles by and about Presidents of Yale University (RU 65). Manuscripts and Archives, Yale University Library. Used by permission of Manuscripts and Archives, Yale University Library.

"A self-proclaimed 'Moral Majority,' and its satellite or client groups, cunning in the use of a native blend of old intimidation and new technology, threaten the values [of pluralism and freedom]. . . .

From the maw of this 'morality' come those who presume to know what justice for all is; come those who presume to know which books are fit to read, which television programs are fit to watch. . . . From the maw of this 'morality' rise the tax-exempt Savonarolas who believe they, and they alone, possess the 'truth.' There is no debate, no discussion, no dissent. They know. . . . What nonsense.

What dangerous, malicious nonsense. . . .

We should be concerned that so much of our political and religious leadership acts intimidated for the moment and will not say with clarity that this most recent denial of the legitimacy of differentness is a radical assault on the very pluralism of peoples, political beliefs, values, forms of merit and systems of religion our country was founded to welcome and foster.

Liberty protects the person from unwarranted government intrusions into a dwelling or other private places. In our tradition the State is not omnipresent in the home. And there are other spheres of our lives and existence, outside the home, where the State should not be a dominant presence.

Freedom extends beyond spatial bounds. Liberty presumes an autonomy of self that includes freedom of thought, belief, expression, and certain intimate conduct."

ANTHONY KENNEDY

The Constitution Protects Privacy

Kennedy, a Roman Catholic, was named to the Supreme Court by Ronald Reagan in 1988. In *Lawrence v. Texas* (2003), which challenged a state antisodomy law, he wrote the opinion for five of the six justices in the majority; Sandra Day O'Connor wrote a concurring opinion.

SOURCE: *Lawrence v. Texas*, 539 U.S. 558, 562-563, 567, 571, 579 (2003).

"The question before the Court is the validity of a Texas statute making it a crime for two persons of the same sex to engage in certain intimate sexual conduct.

In Houston, Texas, officers of the Harris County Police Department were dispatched to a private residence in response to a reported weapons disturbance. They entered an apartment where one of the petitioners, John Geddes Lawrence, resided. . . . The officers observed Lawrence and another man, Tyron Garner, engaging in a sexual act. The two petitioners were arrested, held in custody over night, and charged and convicted before a Justice of the Peace.

The complaints described their crime as 'deviate sexual intercourse, namely [. . .] sex, with a member of the same sex (man).' . . .

We conclude the case should be resolved by determining whether the petitioners were free as adults to engage in the private conduct in the exercise of their liberty under the Due Process Clause of the Fourteenth Amendment to the Constitution.

[The Texas statute in question seeks] to control a personal relationship that, whether or not entitled to formal recognition in the law, is within the liberty of persons to choose without being punished as criminals. . . . The liberty protected by the Constitution allows homosexual persons the right to make this choice. . . .

. . . The petitioners are entitled to respect for their private lives. The State cannot demean their existence or control their destiny by making their private sexual conduct a crime. Their right to liberty under the Due Process Clause gives them the full right to engage in their conduct without intervention of the government. 'It is a promise of the Constitution that there is a realm of personal liberty which the government may not enter.'"

QUESTIONS FOR ANALYSIS

1. Compare the Ronald Reagan and Anthony Kennedy documents. What would Reagan think of the opinion written by Justice Kennedy, his appointee? Given his condemnation of those intent on "subordinating us to government rule and regulation," do you think he would agree with it? Why or why not?
2. According to Wildmon, what should be shown on television, and who should make those decisions? How would Giamatti answer that same question?
3. Consider the different points of view presented here. According to these sources, when should the government police private conduct?

repressive U.S. allies such as the Philippines, South Africa, and Iran. In Latin America, Carter eliminated a decades-old symbol of Yankee imperialism by signing a treaty on September 7, 1977, turning control of the Panama Canal over to Panama (effective December 31, 1999). Carter's most important efforts came in forging an enduring, although in retrospect limited, peace in the intractable Arab-Israeli conflict. In 1978, he invited Israeli prime minister Menachem Begin and Egyptian president Anwar el-Sadat to Camp David, where they crafted a "framework for peace," under which Egypt recognized Israel and received back the Sinai Peninsula, which Israel had occupied since 1967.

Carter deplored what he called the "inordinate fear of communism," but his efforts at improving relations with the Soviet Union foundered. His criticism of the Kremlin's record on human rights offended Soviet leader Leonid Brezhnev and slowed arms reduction negotiations. When, in 1979, Carter finally signed the second Strategic Arms Limitations Treaty (SALT II), limiting bombers and missiles, Senate hawks objected. Then, when the Soviet Union invaded Afghanistan that December, Carter suddenly endorsed the hawks' position and treated the invasion as the "gravest threat to world peace since World War II." After ordering an embargo on wheat shipments to the Soviet Union and withdrawing SALT II from Senate consideration, Carter called for increased defense spending and declared an American boycott of the 1980 Summer Olympics in Moscow. In a fateful decision, he and Congress began providing covert assistance to anti-Soviet fighters in Afghanistan, some of whom, including Osama bin Laden, would emerge decades later as anti-American Islamic radicals.

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

How successful was Jimmy Carter's presidential term, coming in the middle of sixteen years of Republican presidents (Nixon/Ford and Reagan)?

Hostage Crisis Carter's ultimate undoing came in Iran, however. The United States had long counted Iran as a faithful ally, a **bulwark** against Soviet expansion into the Middle East and a steady source of oil. Since the 1940s, Iran had been ruled by Mohammad Reza Shah Pahlavi. Ousted by a democratically elected parliament in the early 1950s, the shah (king) sought and received the assistance of the U.S. Central Intelligence Agency (CIA), which helped him reclaim power in 1953. American intervention soured Iranian views of the United States for decades. Early in 1979, a revolution drove the shah into exile and brought a fundamentalist Shiite cleric, the Ayatollah Ruhollah Khomeini, to power (Shiites represent one branch of Islam, Sunnis the other). When the United States admitted the deposed shah into the country for cancer treatment, Iranian students seized the U.S. embassy in Tehran, taking sixty-six Americans hostage. The captors demanded that the shah be returned to Iran for trial. Carter refused. Instead, he suspended arms sales to Iran and froze Iranian assets in American banks.

American Hostages in Iran Images of blindfolded, handcuffed American hostages seized by Iranian militants at the U.S. embassy in Tehran in November 1979 shocked the nation and created a foreign policy crisis that eventually cost President Carter his chance for reelection. AFP Mingam [illegible]na/Zuma Press

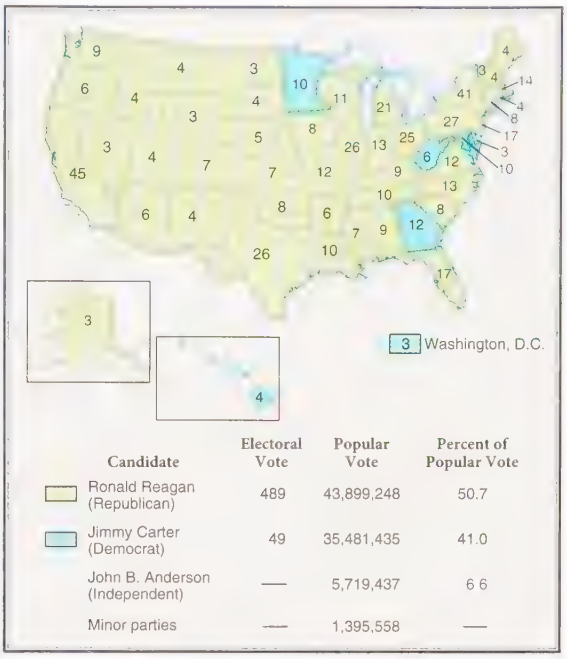
For the next fourteen months, the **hostage crisis** paralyzed Carter's presidency. Night after night, humiliating pictures of blindfolded American hostages appeared on television newscasts. An attempt to mount a military rescue in April 1980 had to be aborted because of equipment failures in the desert. Several months later, however, a stunning development changed the calculus on both sides: Iraq, led by Saddam Hussein, invaded Iran, officially because of a dispute over deep-water ports but also to prevent the Shiite-led Iranian Revolution from spreading across the border into Sunni-run Iraq. Desperate to focus his nation's attention on Iraq's invasion,

Khomeini began to talk with the United States about releasing the hostages. Difficult negotiations dragged on past the American presidential election in November 1980, and the hostages were finally released the day after Carter left office — a final indignity endured by a well-intentioned but ineffectual president.

The Election of 1980 President Carter's sinking popularity hurt his bid for reelection. When the Democrats barely renominated him over his liberal challenger, Edward (Ted) Kennedy of Massachusetts, Carter's approval rating was historically low: a mere 21 percent of Americans believed that he was an effective president. The reasons were clear. Economically, millions of citizens were feeling the pinch from stagnant wages, high inflation, crippling mortgage rates, and an unemployment rate of nearly 8 percent. In international affairs, the nation blamed Carter for his weak response to Soviet expansion and the Iranians' seizure of American diplomats.

With Carter on the defensive, Reagan remained upbeat and decisive. "This is the greatest country in the world," Reagan reassured the nation in his warm baritone voice. "We have the talent, we have the drive. . . . All we need is the leadership." To emphasize his intention to be a formidable international leader, Reagan hinted that he would take strong action to win the return of the hostages held in Iran. To signal his rejection of liberal policies, he declared his opposition to affirmative action and forced busing and promised to "get the government off our backs." Most important, Reagan effectively appealed to the many Americans who felt financially insecure. In a televised debate with Carter, Reagan emphasized the hardships facing working- and middle-class Americans in an era of stagflation and asked them: "Are you better off today than you were four years ago?"

In November, the voters gave a clear answer. They repudiated Carter, giving him only 41.0 percent of the vote. Independent candidate John Anderson garnered 6.6 percent (with a few minor candidates receiving fractions of a percent), and Reagan won with 50.7 percent of the popular vote (Map 29.1). Moreover, the Republicans elected thirty-three new members of the House of Representatives and twelve new senators, which gave them control of the U.S. Senate for the first time since 1954. The New Right's long road to national power had culminated in an election victory that signaled a new political alignment in the country.



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Ronald Reagan (Republican)	489	43,899,248	50.7
Jimmy Carter (Democrat)	49	35,481,435	41.0
John B. Anderson (Independent)	—	5,719,437	6 6
Minor parties	—	1,395,558	—

MAP 29.1 The Presidential Election of 1980
Ronald Reagan easily defeated Democratic incumbent Jimmy Carter, taking 50.7 percent of the popular vote to Carter's 41.0 percent and winning the electoral vote in all but six states and the District of Columbia. Reagan cut deeply into the traditional Democratic coalition by wooing many southern whites, urban Catholics, and blue-collar workers. More than five million Americans expressed their discontent with Carter's ineffectiveness and Reagan's conservatism by voting for Independent candidate John Anderson, a longtime Republican member of the House of Representatives.

IN YOUR OWN WORDS What were the major characteristics of the political movement that backed Ronald Reagan, known as the New Right?

The Dawning of the Conservative Age

By the time Ronald Reagan took office in 1981, conservatism commanded wider popular support than at any time since the 1920s. As the New Deal Democratic coalition continued to fragment, the Republican Party accelerated the realignment of the American electorate that had begun during the 1960s. Conservatism's ascendancy did more than realign the nation politically. Its emphasis on free markets, low taxes, and individual success shaped the nation's culture and inaugurated an era of conservative individualism. Reagan exhorted Americans, "Let the men and women of the marketplace decide what they want."

President Reagan at His Ranch in Southern California Images of Reagan quickly became vital for the White House to deliver its message of conservative reform to the American people. This photo was taken by a White House photographer. Ronald Reagan Presidential Library

The Reagan Coalition

Reagan's decades in public life, especially his years working for General Electric, had equipped him to articulate conservative ideas in easily understandable **aphorisms**. Speaking against the growing size and influence of government, Reagan said, "Concentrated power has always been the enemy of liberty." In a humorous version of the same sentiment, the president said, "The nine most terrifying words in the English language are: 'I'm from the government, and I'm here to help.'"

Under his leadership, the core of the Republican Party remained the relatively affluent, white, Protestant voters who supported balanced budgets, opposed government activism, feared communism, and believed in a strong national defense. Reagan Republicanism also attracted middle-class suburbanites and migrants to the Sunbelt states who endorsed the conservative agenda of combating crime and limiting social-welfare spending. Suburban growth in particular, a phenomenon that reshaped metropolitan areas across the country in the 1960s and 1970s, benefitted conservatives politically. Suburban traditions of privatization and racial homogeneity, combined with the amenities of middle-class comfort, inclined the residents of suburban cities toward conservative public policies.

This emerging **Reagan coalition** was joined by a large and electorally key group of former Democrats that had been gradually moving toward the Republican Party since 1964: southern whites. Reagan capitalized on the "southern strategy" developed by Richard Nixon's advisors in the late 1960s. Many southern whites had lost confidence in the Democratic Party for a wide range of reasons, but one factor stood out: the party's support for civil rights. When Reagan came to Philadelphia, Mississippi, to deliver his first official speech as the Republican presidential nominee, his ringing endorsement of "states' rights" sent a clear message: he endorsed twenty-five years of southern opposition to federal civil rights legislation. Some of Reagan's advisors had warned him not to go to Philadelphia, the site of the tragic murder of three civil rights workers in 1964, but Reagan believed the opportunity to launch his campaign on a "states' rights" note was too important. After 1980, southern whites would remain a cornerstone of the Republican coalition.

AP® EXAM TIP

Be able to explain the political realignment associated with the leadership of Ronald Reagan.

The Religious Right proved crucial to the Republican ascendance as well. Falwell's **Moral Majority** claimed that it had registered two million new voters for the 1980 election, and the Republican Party's platform reflected its influence. That platform called for a constitutional ban on abortion, voluntary prayer in public schools, and a mandatory death penalty for certain crimes. Republicans also demanded an end to court-mandated busing to achieve racial integration in schools, and, for the first time in forty years, opposed the Equal Rights Amendment. Within the Republican Party, conservatism had triumphed.

Reagan's broad coalition attracted the allegiance of another group dissatisfied with the direction of liberalism in the 1970s: blue-collar voters, a high number of Catholics among them, alarmed by antiwar protesters and rising welfare expenditures and hostile to feminist demands. Some observers saw these voters, which many called **Reagan Democrats**, as coming from the "silent majority" that Nixon had swung into the Republican fold in 1968 and 1972. They lived in heavily industrialized midwestern states such as Michigan, Ohio, and Illinois and had been a core part of the Democratic

coalition for three decades. Reagan's victory in the 1980s thus hinged on both a revival of right-wing conservative activism and broad dissatisfaction with liberal Democrats — a dissatisfaction that had been building since 1968 but had been interrupted by the post-Watergate backlash against the Republican Party.

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

What distinct constituencies made up the Reagan coalition, and how would you characterize their regional, geographic, class, and racial composition?

Conservatives in Power

The new president kept his political message clear and uncomplicated. "What I want to see above all," he remarked, "is that this country remains a country where someone can always get rich." Standing in the way, Reagan believed, was government. In his first year in office, Reagan and his chief advisor, James A. Baker III, quickly set new governmental priorities. To roll back the expanded liberal state, they launched a three-pronged assault on federal taxes, social-welfare spending, and the regulatory bureaucracy. To prosecute the Cold War, they advocated a vast increase in defense spending and an end to détente with the Soviet Union. And to match the resurgent economies of Germany and Japan, they set out to restore American leadership of the world's capitalist societies and to inspire renewed faith in "free markets."

Reaganomics To achieve its economic objectives, the new administration advanced a set of policies, quickly dubbed **Reaganomics**, to increase the production (and thus the supply) of goods. The theory underlying **supply-side economics**, as this approach was called, emphasized investment in productive enterprises. According to supply-side theorists, the best way to bolster investment was to reduce the taxes paid by corporations and wealthy Americans, who could then use these funds to expand production.

AP® EXAM TIP

Evaluate the goals and effects of Reaganomics.

Supply-siders maintained that the resulting economic expansion would increase government revenues and offset the loss of tax dollars stemming from the original tax cuts. Meanwhile, the increasing supply would generate its own demand, as consumers stepped forward to buy ever more goods. Supply-side theory presumed — in fact, gambled — that future tax revenues would make up for present tax cuts. The idea had a growing list of supporters in Congress, led by an ex-professional football player from Buffalo named Jack Kemp. Kemp praised supply-side economics as "an alternative to the slow-growth, recession-oriented policies of the [Carter] administration."

Reagan took advantage of Republican control of the Senate, as well as high-profile allies such as Kemp, to win congressional approval of the 1981 **Economic Recovery Tax Act (ERTA)**, a massive tax cut that embodied supply-side principles. The act reduced income tax rates for most Americans by 23 percent over three years. For the wealthiest Americans — those with millions to invest — the highest marginal tax rate dropped from 70 to 50 percent. The act also slashed estate taxes, levies on inheritances instituted during the Progressive Era to prevent the transmission of huge fortunes from one generation to the next. Finally, the new legislation trimmed the taxes paid by business corporations by $150 billion over a period of five years. As a result of ERTA, by 1986 the annual revenue of the federal government had been cut by $200 billion (nearly half a trillion in 2010 dollars).

David Stockman, Reagan's budget director, hoped to match this reduction in tax revenue with a comparable cutback in federal expenditures. To meet this ambitious goal, he proposed substantial cuts in Social Security and Medicare. But Congress, and even the president himself, rejected his idea; they were not willing to antagonize middle-class and elderly voters who viewed these government entitlements as sacred. As conservative columnist George Will noted ironically, "Americans are conservative. What they want to conserve is the New Deal." After defense spending, Social Security and Medicare were by far the nation's largest budget items; reductions in other programs would not achieve the savings the administration desired. This contradiction

between New Right Republican ideology and political reality would continue to frustrate the party into the twenty-first century.

A more immediate embarrassment confronted conservatives, however. In a 1982 *Atlantic* article, Stockman admitted that supply-side theory was based on faith, not economics. To produce optimistic projections of higher tax revenue in future years, Stockman had manipulated the figures. Worse, Stockman told the *Atlantic* reporter candidly that supply-side theory was based on a long-discredited idea: the "trickle-down" notion that helping the rich would eventually benefit the lower and middle classes. Stockman had drawn back the curtain, much to Republicans' **consternation**, on the flawed reasoning of supply-side theory. But it was too late. The plan had passed Congress, and since Stockman could not cut major programs such as Social Security and Medicare, he had few options to balance the budget.

As the administration's spending cuts fell short, the federal budget deficit increased dramatically. Military spending contributed a large share of the growing **national debt**. But President Reagan remained undaunted. "Defense is not a budget item," he declared. "You spend what you need." Reagan and Defense Secretary Caspar Weinberger pushed through Congress a five-year, $1.2 trillion military spending program in 1981. During Reagan's presidency, military spending accounted for one-fourth of all federal expenditures and contributed to rising annual budget deficits (the amount overspent by the government in a single year) and a skyrocketing national debt (the cumulative total of all budget deficits). By the time Reagan left office, the total federal debt had tripled, rising from $930 billion in 1981 to $2.8 trillion in 1989. The rising annual deficits of the 1980s contradicted Reagan's pledge of fiscal conservatism (Figure 29.1).

AP® EXAM TIP

Analyze the policy of deregulation in the context of economic changes beginning in the 1970s.

Deregulation Advocates of Reaganomics asserted that excessive regulation by federal agencies impeded economic growth. **Deregulation** of prices in the trucking, airline, and railroad industries had begun under President Carter in the late 1970s, but Reagan expanded the mandate to include cutting back on government protections of consumers, workers, and the environment. Some of the targeted federal bureaucracies, such as the U.S. Department of Labor, had risen to prominence during the New Deal; others, such as the Occupational Safety and Health Administration (OSHA) and the Environmental Protection Agency (EPA), had been created during the Johnson and Nixon administrations. Although these agencies provided many services to business corporations, they also increased their costs—by protecting the rights of workers, mandating safety improvements in factories, and requiring expensive equipment to limit the release of toxic chemicals into the environment. To reduce the reach of federal regulatory agencies, the Reagan administration in 1981 cut their budgets, by an average of 12 percent.

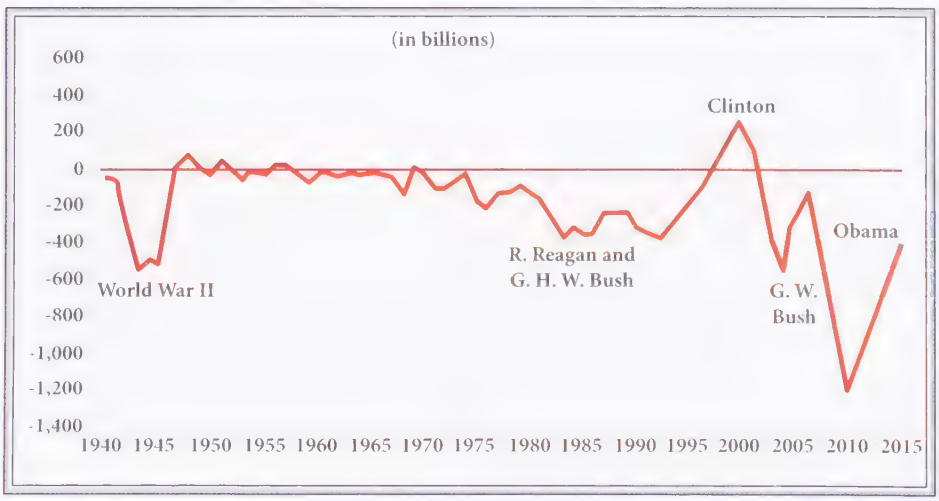


FIGURE 29.1 The Annual Federal Budget Deficit (or Surplus), 1940–2015
During World War II, the federal government incurred an enormous budget deficit. But between 1946 and 1965, it ran either an annual budget surplus or incurred a relatively small debt. The annual deficits rose significantly during the Vietnam War and the stagflation of the 1970s, but they really exploded between 1982 and 1994, in the budgets devised by the Ronald Reagan and George H. W. Bush administrations, and again between 2002 and 2005, in those prepared by George W. Bush. The Republican presidents increased military spending while cutting taxes, a budgetary policy that produced deficits.

Reagan also rendered regulatory agencies less effective by staffing them with leaders who were opposed to the agencies' missions. James Watt, an outspoken conservative who headed the Department of the Interior, attacked environmentalism as "a left-wing cult."

Acting on his free-enterprise principles, Watt opened public lands for use by private businesses — oil and coal corporations, large-scale ranchers, and timber companies. Anne Gorsuch Burford, whom Reagan appointed to head the EPA, likewise disparaged environmentalists and refused to cooperate with Congress to clean up toxic waste sites under a program known as the Superfund. The Sierra Club and other environmental groups aroused enough public outrage about these appointees that the administration changed its position. During President Reagan's second term, he significantly increased the EPA's budget and added acreage to the National Wilderness Preservation System and animals and plants to the endangered species lists.

Ultimately, as these adjustments demonstrate, politics in the United States remained "the art of the possible." Savvy politicians know when to advance and when to retreat. Having attained two of his prime goals — a major tax cut and a dramatic increase in defense spending — Reagan did not seriously attempt to scale back big government and the welfare state. When he left office in 1989, federal spending stood at 22.1 percent of the gross domestic product (GDP) and federal taxes at 19 percent of GDP, both virtually the same as in 1981. In the meantime, though, in addition to the tripling of the federal debt, the number of government workers had increased from 2.9 to 3.1 million. This outcome — because it cut against the president's rhetoric about balancing budgets and downsizing government — elicited harsh criticism from some conservative commentators. "There was no Reagan Revolution," one conservative stated flatly. A former Reagan aide offered a more balanced assessment: "Ronald Reagan did far less than he had hoped . . . and a hell of a lot more than people thought he would."

AP® PRACTICES & SKILLS

CAUSATION

Why was Reagan unable to reduce federal expenditures by as much as many of his supporters wished?

Remaking the Judiciary Even if he did not achieve everything many of his supporters desired, Reagan left an indelible imprint on politics, public policy, and American culture. One place this imprint was felt in far-reaching ways was the judiciary, where Reagan and his attorney general, Edwin Meese, aimed at reversing the liberal judicial philosophy that had prevailed since the 1950s. During his two terms, Reagan appointed 368 federal court judges — most of them with conservative credentials — and three Supreme Court justices: Sandra Day O'Connor (1981), Antonin Scalia (1986), and Anthony Kennedy (1988). Ironically, O'Connor and Kennedy turned out to be far less devoted to New Right conservatism than Reagan and his supporters imagined. O'Connor, the first woman to serve on the Court, shaped its decision making as a swing vote between liberals and conservatives. Kennedy also emerged as a judicial moderate, leaving Scalia as Reagan's only genuinely conservative appointee.

But Reagan also elevated Justice William Rehnquist, a conservative Nixon appointee, to the position of chief justice. Under Rehnquist's leadership (1986–2005), the Court's conservatives took an activist stance, limiting the reach of federal laws, ending court-ordered busing, and endorsing constitutional protection of property rights. However, on controversial issues such as individual liberties, abortion rights, affirmative action, and the rights of criminal defendants, the presence of O'Connor ensured that the Court adopted a more centrist position. As a result, the justices scaled back, but did not usually overturn, the liberal rulings of the Warren and Burger Courts. In the controversial *Webster v. Reproductive Health Services* (1989), for instance, Scalia pushed for the justices to overturn the abortion-rights decision in *Roe v. Wade* (1973). O'Connor refused, but she

Women on the Court In 1981, Sandra Day O'Connor was appointed to the Supreme Court by President Ronald Reagan, the first woman to serve on the Court. In 1993, she was joined by Ruth Bader Ginsburg, an appointee of President Bill Clinton. O'Connor emerged as a leader of the moderate bloc on the Court during the 1990s; she retired in 2006. President Barak Obama appointed two women to the court, Sonia Sotomayor in 2009 and Elena Kagan in 2010

nonetheless approved the constitutional validity of state laws that limited the use of public funds and facilities for abortions. A more conservative federal judiciary would remain a significant institutional legacy of the Reagan presidency.

HIV/AIDS Another conservative legacy was the slow national response to one of the worst disease epidemics of the postwar decades. The human immunodeficiency virus (HIV), a deadly (though slow-acting) pathogen, developed in Africa when a chimpanzee virus jumped to humans; immigrants carried it to Haiti and then to the United States during the 1970s. In 1981, American physicians identified HIV as a new virus — one that caused a disease known as acquired immunodeficiency syndrome (AIDS). Hundreds of gay men, who were prominent among the earliest carriers of the virus, were dying of AIDS. Within two decades, **HIV/AIDS** had spread worldwide, infected more than 50 million people of both sexes, and killed more than 20 million.

Within the United States, AIDS took nearly one hundred thousand lives in the 1980s — more than were lost in the Korean and Vietnam Wars combined. However, because its most prominent early victims were gay men, President Reagan, emboldened by New Right conservatives, hesitated in declaring a national health emergency. Some of Reagan's advisors asserted that this "gay disease" might even be God's punishment of homosexuals. Between 1981 and 1986, as the epidemic spread, the Reagan

HIV/AIDS and the Politics of Public Health The HIV/AIDS epidemic struck the United States in the early 1980s and has remained a major public health issue ever since. The Reagan administration's slow and ineffectual response to the crisis led gay rights activists to found ACT UP (AIDS Coalition to Unleash Power) in 1987, which engaged in militant protests designed to force the federal government to increase support for research and care. In the 1994 New York City Gay Pride parade pictured here, ACT UP supporters hold aloft posters with the ACT UP slogan, "Silence = Death." Allan

administration took little action — worse, it prevented the surgeon general, C. Everett Koop, from speaking forthrightly to the nation about the disease. Pressed by gay activists and prominent health officials from across the country, in Reagan's last years in office the administration finally began to devote federal resources to treatment for HIV and AIDS patients and research into possible vaccines. But the delay had proved costly, inhumane, and embarrassing.

Morning in America

During his first run for governor of California in 1966, Reagan held a revelatory conversation with a campaign consultant. "Politics is just like the movies," Reagan told him. "You have a hell of an opening, coast for a while, and then have a hell of a close." Reagan indeed had a "hell of an opening." Following a lavish, spectacular inauguration, he quickly won passage of his tax reduction bill and launched his plan to bolster the Pentagon. But then a long "coasting" period descended on his presidency, during which he retreated on tax cuts and navigated a major foreign policy scandal. Finally, toward the end of his two-term presidency, Reagan found his "hell of a close," leaving office as major reforms — which he encouraged from afar — had begun to tear apart the Soviet Union and bring an end to the Cold War. Through all the ups and downs, Reagan remained a master of the politics of symbolism, championing a resurgent American economy and reassuring the country that the pursuit of wealth was noble and that he had the reins of the nation firmly in hand.

Reagan came to symbolize the tax-cutting president, but economic conditions forced him to reverse course on taxes early in his first term. High interest rates set by the Federal Reserve Board had cut the runaway inflation of the Carter years. But these rates — as high as 18 percent — sent the economy into a recession in 1981–1982 that put 10 million Americans out of work and shuttered 17,000 businesses. Unemployment neared 10 percent, the highest rate since the Great Depression. These troubles, combined with the booming deficit, forced Reagan to negotiate a tax increase with Congress in 1982 — to the loud complaints of supply-side diehards. The president's job rating plummeted, and in the 1982 midterm elections Democrats picked up twenty-six seats in the House of Representatives and seven state governorships.

Election of 1984 Fortunately for Reagan, the economy had recovered by 1983, restoring the president's job approval rating just in time for the 1984 presidential election. During the campaign, Reagan emphasized the economic resurgence, touring the country promoting his tax policies and the nation's new prosperity. The Democrats nominated former vice president Walter Mondale of Minnesota. With strong ties to labor unions, a variety of ethnic and racial groups, and party leaders, Mondale epitomized the New Deal coalition. He selected Representative Geraldine Ferraro of New York as his running mate — the first woman to run on the presidential ticket of a major political party. Neither Ferraro's presence nor Mondale's credentials made a difference, however: Reagan won a landslide victory, losing only Minnesota and the District of Columbia. Still, Democrats retained their majority in the House and, in the 1986 midterm elections, regained control of the Senate.

Reagan's 1984 campaign slogan, "It's Morning in America," projected the image of a new day dawning on a confident people. In Reagan mythology, the United States was an optimistic nation of small towns, close-knit families, and kindly neighbors. "The success story of America," he once said, "is neighbor helping neighbor." The mythology may not have reflected the *actual* nation — which was overwhelmingly urban and suburban, and in which the hard knocks of capitalism held down more than opportunity elevated — but that mattered little. Reagan's remarkable ability to produce positive associations and feelings, alongside robust economic growth after the 1981–1982 recession, helped make the 1980s a decade characterized by both backward-looking nostalgia and a future-oriented, aggressive capitalism.

AP® EXAM TIP

Compare the view of America popularized by Reagan with the view supported by Herbert Hoover.

Return to Prosperity Between 1945 and the 1970s, the United States was the world's leading exporter of agricultural products, manufactured goods, and investment capital. Then American manufacturers lost market share, undercut by cheaper and better-designed products from West Germany and Japan. By 1985, for the first time since 1915, the United States registered a negative balance of international payments. It now imported more goods and capital than it exported. The country became a debtor (rather than a creditor) nation. The rapid ascent of the Japanese economy to become the world's second largest was a key factor in this historic reversal (AP® America in the World). More than one-third of the American annual trade deficit of $138 billion in the 1980s was from trade with Japan, whose corporations exported huge quantities of electronic goods and made nearly one-quarter of all cars bought in the United States.

Meanwhile, American businesses grappled with a worrisome decline in productivity. Between 1973 and 1992, American productivity (the amount of goods or services per hour of work) grew at the meager rate of 1 percent a year — a far cry from the post–World War II rate of 3 percent. Because managers wanted to cut costs, the wages of most employees stagnated. Further, because of foreign competition, the number of high-paying, union-protected manufacturing jobs shrank. By 1985, more people in the United States worked for McDonald's slinging Big Macs than rolled out rails, girders, and sheet steel in the nation's steel industry.

A brief return to competitiveness in the second half of the 1980s masked the steady long-term transformation of the economy that had begun in the 1970s. The nation's heavy industries — steel, autos, chemicals — continued to lose market share to global competitors. Nevertheless, the U.S. economy grew at the impressive average rate of 2 to 3 percent per year for much of the late 1980s and 1990s (with a short recession in 1990–1991). What had changed was the direction of growth and its beneficiaries. Increasingly, financial services, medical services, and computer technology — **service industries**, broadly speaking — were the leading sectors of growth. This shift in the underlying foundation of the American economy, from manufacturing to service, from making *things* to producing *services*, would have long-term consequences for the global competitiveness of U.S. industries and the value of the dollar.

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

How would you compare the foundation of the American economy in the 1920s with its foundation in the 1980s?

AP® EXAM TIP

Explain why the shift from a manufacturing-based to a service-based economy continued through the 1980s and 1990s.

Culture of Success The economic growth of the second half of the 1980s popularized the materialistic values championed by the free marketeers. Every era has its capitalist heroes, but Americans in the 1980s celebrated wealth accumulation in ways unseen since the 1920s. When the president christened self-made entrepreneurs "the heroes for the eighties," he probably had people like Lee Iacocca in mind. Born to Italian immigrants and trained as an engineer, Iacocca rose through the ranks to become president of the Ford Motor Corporation. In 1978, he took over the ailing Chrysler Corporation and made it profitable again — by securing a crucial $1.5 billion loan from the U.S. government, pushing the development of new cars, and selling them on TV. His patriotic commercials in the 1980s echoed Reagan's rhetoric: "Let's make American mean something again."

If Iacocca symbolized a resurgent corporate America, high-profile financial wheeler-dealers also captured Americans' imagination. One was Ivan Boesky, a white-collar criminal convicted of insider trading (buying or selling stock based on information from corporate insiders). "I think greed is healthy," Boesky told a business school graduating class. Boesky inspired the fictional character Gordon Gekko, who proclaimed "Greed is good!" in the 1987 film *Wall Street*. A new generation of Wall Street executives, of which Boesky was one example, pioneered the leveraged buyout (LBO). In a typical LBO, a financier used heavily leveraged (borrowed) capital to buy a company, quickly restructured that company to make it appear spectacularly profitable, and then sold it at a higher price.

To see a still from *Wall Street*, along with other primary sources from this period, see ***Sources for America's History***.

Americans had not set aside the traditional work ethic, but the Reagan-era public was fascinated with money and celebrity. (The documentary television show *Lifestyles*

Yoichi Funabashi: "Japan and America: Global Partners"

Educated at the University of Tokyo and Keio University, Yoichi Funabashi is a prize-winning journalist who specializes in the U.S.-Japan economic relationship. During the 1980s, he lived in the United States as a columnist (and later bureau chief) for the *Asahi Shimbun*, one of Japan's most important daily newspapers.

As Japan struggled to rebuild itself after World War II, the charismatic Shigeru Yoshida, prime minister during the critical years of 1948 to 1952, called on the country to be a good loser. The Japanese have lost the war, he said, but they must not lose heart. Japan must cooperate with the United States, and pull itself out of misery and disgrace. The Japanese did indeed cooperate willingly with the Allied occupation — with the American (and British) "devils" whom they had been taught for years to despise to the very core of their souls. . . .

Postwar Japan went on to prove that it could indeed be a good loser. Under the new constitution promulgated under the guidance of the occupation, it has developed into a democratic country with a relatively moderate disparity between rich and poor and a stable, smoothly functioning political system. . . .

The Japanese-U.S. relationship has thus come to occupy a truly unique position in world history. Never before has a multiethnic, contract-based society and a homogenous, traditional society joined together to form such a powerful team. As global powers, Japan and the United States combined have a decisive impact on world politics; it follows that their future relations will largely determine the blueprints of multilateral cooperation and world stability in the coming century. . . .

Potential sources of bilateral friction are as numerous as ever: the trade imbalance, market liberalization, growing Japanese investment in the United States, heavy U.S. dependence on Japanese technology, and so on. Occasional outbursts of economic nationalism, or "revisionist" thinking are probably inevitable as the debate over these issues unfolds. . . .

Of far greater concern, however, is that Japanese-U.S. relations now face their gravest challenge since 1945. The end of the Cold War has drastically altered the global geopolitical and geoeconomic context that shaped Japanese-U.S. relations. Both countries now face the urgent need to redefine their relationship to suit the new context. . . .

Before they can build a strong bilateral relationship, Americans and Japanese must outgrow their obsession with being Number One. This psychological adjustment is absolutely necessary for both peoples. Projecting the nature of its own hierarchical society, Japan tends to view the rest of the world, it is said, in terms of ranking. This inclination fosters behavior patterns that are oriented more toward what to *be* than what to *do*. Japan is also overly conscious of itself as a late-starter, having entered modern international society only in the mid-nineteenth century, and this history has made catching up with and outpacing other countries a sort of national pastime. . . . It may be even more difficult for the United States, which dominated the free world during the Cold War, to make the psychological adjustments required to enter into a partnership with Japan that is truly equal.

SOURCE: Yoichi Funabashi, "Japan and America: Global Partners," *Foreign Policy* 86 (Spring 1992): 24–39.

QUESTIONS FOR ANALYSIS

1. Among the "sources of bilateral friction" Funabashi lists the trade imbalance and Japanese investment in the United States. Why would these cause friction?
2. How had the U.S.-Japan relationship changed between 1945 and the 1980s?

of the Rich and Famous began its run in 1984.) One of the most enthralling of the era's money moguls was Donald Trump, a real estate developer who craved publicity. In 1983, the flamboyant Trump built the equally flamboyant Trump Towers in New York City. At the entrance of the $200 million apartment building stood two enormous bronze *T*'s, a display of self-promotion reinforced by the media. Calling him "The Donald," a nickname used by Trump's first wife, TV reporters and magazines commented relentlessly on his marriages, divorces, and glitzy lifestyle. Trading on his celebrity as much as his business **acumen**, Trump would in later decades forge a career on reality television and, in one of the most unexpected political developments of the early twentieth-first century, win the Republican nomination for president in 2016 and ascend to the presidency itself.

AP® EXAM TIP

Analyze the impact of computers on the American economy and society.

The Computer Revolution While Trump grabbed headlines and made splashy real estate investments, a handful of quieter, less flashy entrepreneurs was busy changing the face of the American economy. Bill Gates, Paul Allen, Steve Jobs, and Steve Wozniak were four entrepreneurs who pioneered the computer revolution in the late 1970s and 1980s (AP® Thinking Like a Historian). They took a technology that had been used exclusively for large-scale enterprises — the military and multinational corporations — and made it accessible to individual consumers. Scientists had devised the first computers for military purposes during World War II. Cold War military research subsequently funded the construction of large mainframe computers. But government and private-sector first-generation computers were bulky, cumbersome machines that had to be placed in large air-conditioned rooms.

Between the 1950s and the 1970s, concluding with the development of the microprocessor in 1971, each generation of computers grew faster and smaller. By the mid-1970s, a few microchips the size of the letter *O* on this page provided as much processing power as a World War II–era computer. The day of the personal computer (PC) had arrived. Working in the San Francisco Bay Area, Jobs and Wozniak founded Apple Computers in 1976 and within a year were producing small, individual computers that could be easily used by a single person. When Apple enjoyed success, other companies scrambled to get into the market. International Business Machines (IBM) offered its first personal computer in 1981, but Apple Corporation's 1984 Macintosh computer (later shortened to "Mac") became the first runaway commercial success for a personal computer.

Meanwhile, two former high school classmates, Gates, age nineteen, and Allen, age twenty-one, had set a goal in the early 1970s of putting "a personal computer on every desk and in every home." They recognized that software was the key. In 1975, they founded the Microsoft Corporation, whose MS-DOS and Windows operating systems soon dominated the software industry. By 2000, the company's products ran nine out of every ten personal computers in the United States and a majority of those around the world. Gates and Allen became billionaires, and Microsoft exploded into a huge company with 57,000 employees and annual revenues of $38 billion. In three decades, the computer had moved from a few military research centers to thousands of corporate offices and then to millions of people's homes. Ironically, in an age that celebrated free-market capitalism, government research and government funding had played an enormous role in the development of the most important technology since television.

AP® PRACTICES & SKILLS

POINT OF VIEW

In what ways did American society embrace economic success and individualism in the 1980s?

IN YOUR OWN WORDS What were the major political successes and failures of the Reagan coalition?

The End of the Cold War

Ronald Reagan entered office determined to confront the Soviet Union diplomatically and militarily. Backed by Republican and Democratic hard-liners alike, Reagan unleashed some of the harshest Cold War rhetoric since the 1950s, labeling the Soviet Union an "evil empire" and vowing that it would end up "on the ash heap of history." In a remarkable turnaround, however, by his second term Reagan had decided that this goal would be best achieved by actively cooperating with Mikhail Gorbachev, the reform-minded Russian Communist leader. The downfall of the Soviet Union in 1991 ended the nearly fifty-year-long Cold War, but a new set of foreign challenges quickly emerged.

U.S.-Soviet Relations in a New Era

When Reagan assumed the presidency in 1981, he broke with his immediate predecessors — Richard Nixon, Gerald Ford, and Jimmy Carter — in Cold War strategy. Nixon regarded himself as a "realist" in foreign affairs. That meant, above all, advancing the

national interest without regard to ideology. Nixon's policy of détente with the Soviet Union and China embodied this realist view (Chapter 27). President Carter endorsed détente and continued to push for relaxing Cold War tensions. This worked for a time, but the Soviet invasion of Afghanistan empowered hard-liners in the U.S. Congress and forced Carter to take a tougher line — which he did with the Olympic boycott and grain embargo. This was the relationship Reagan inherited in 1981: a decade of détente that had produced a noticeable relaxation of tensions with the communist world, followed by a year of tense standoffs over Soviet advances into Central Asia, which threatened U.S. interests in the Middle East.

Reagan's Cold War Revival Conservatives did not support détente. Neither did they care much for the containment policy that had guided U.S. Cold War strategy since 1947. Reagan and his advisors wanted to *defeat*, not merely contain, the Soviet Union. His administration pursued a two-pronged strategy toward that end. First, it abandoned détente and set about rearming America. Reagan's military budgets authorized new weapons systems, dramatically expanded military bases, and significantly expanded the nation's nuclear arsenal. This buildup in American military strength, reasoned Secretary of Defense Caspar Weinberger, would force the Soviets into an arms race that would strain their economy and cause domestic unrest. The Reagan administration also proposed the Strategic Arms Reduction Talks (START) with the Soviet Union, in which the United States put forward a plan calculated to increase American advantage in sea- and air-based nuclear systems over the Soviet's ground-based system.

AP® EXAM TIP

Compare the Cold War policies of Ronald Reagan to those of earlier presidents in the era.

Second, the president supported CIA initiatives to roll back Soviet influence in the developing world by funding anticommunist movements in Angola, Mozambique, Afghanistan, and Central America. To accomplish this objective, Reagan supported repressive, right-wing regimes. Nowhere was this more conspicuous in the 1980s than in the Central American countries of Guatemala, Nicaragua, and El Salvador. Conditions were unique in each country but held to a pattern: the United States sided with military dictatorships and **oligarchies** if democratically elected governments or left-wing movements sought support from the Soviet Union. In Guatemala, this approach produced a brutal military rule — thousands of opponents of the government were executed or kidnapped. In Nicaragua, Reagan actively encouraged a coup against the left-wing Sandinista government. And in El Salvador, the U.S.-backed government maintained secret "death squads," which murdered members of the opposition. In each case, Reagan blocked Soviet influence, but the damage done to local communities and to the international reputation of the United States, as in Vietnam, was great.

Iran-Contra Reagan's determination to oppose left-wing movements in Central America engulfed his administration in a major scandal during the president's second term. For years, Reagan had denounced Iran as an "outlaw state" and a supporter of terrorism. But in 1985, he wanted its help. To win its assistance in freeing two dozen American hostages held by Hezbollah, a pro-Iranian Shiite group in Lebanon, the administration sold arms to Iran without public or congressional knowledge. While this secret arms deal was diplomatically and politically controversial, the use of the resulting profits in Nicaragua was explicitly illegal. To overthrow the democratically elected **Sandinistas**, whom the president accused of threatening U.S. business interests, Reagan ordered the CIA to assist an armed opposition group called the **Contras** (Map 29.2). Although Reagan praised the Contras as "freedom fighters," Congress worried that the president and other executive branch agencies were assuming war-making powers that the Constitution reserved to the legislature. In 1984, Congress banned the CIA and all other government agencies from providing any military support to the Contras.

Oliver North, a lieutenant colonel in the U.S. Marines and an aide to the National Security Council, defied that ban. With the tacit or explicit consent of high-ranking

Personal Computing: A Technological Revolution

Considered historically, computers are a strikingly new phenomenon. The ancestors of the first computers were developed in the 1940s using vacuum tubes and transistors. Integrated circuits were introduced in the 1950s and the first microprocessor in the 1970s. Prior to the decade of the 1980s, only the federal government and large corporations and institutions used computers, which were massive in size and expensive to purchase. In the 1980s, inventors and entrepreneurs developed the first "personal" computers, which could fit on desks or tables and were soon within the price range of ordinary families. The computers we know today date from that decade. Another enormous change came in the mid-1990s, when the Internet, whose forerunner was a U.S. Defense Department computer network, became widely available to the public for the first time.

1. **Moore's law, 1965.** *In 1965, the electronics engineer Gordon Moore calculated that the number of transistors on an integrated circuit doubled roughly every two years, meaning that the power of computers was increasing at that rate.*

   The complexity for minimum component costs has increased at a rate of roughly a factor of two per year. Certainly over the short term this rate can be expected to continue, if not increase. . . . That means by 1975, the number of components per integrated circuit for minimum cost will be 65,000.

   I believe that such a large circuit can be built on a single wafer.

2. **Scene from *2001: A Space Odyssey*, 1968.** *In this scene from an acclaimed science fiction film, a space station's computer system, named HAL, defends itself against an astronaut who is determined to shut down the computer.*

   Dave Bowman: Hello, HAL. Do you read me, HAL?
   HAL: Affirmative, Dave. I read you.
   DB: Open the pod bay doors, HAL.
   HAL: I'm sorry, Dave. I'm afraid I can't do that.
   DB: What's the problem?
   HAL: I think you know what the problem is just as well as I do.
   DB: What are you talking about, HAL?
   HAL: This mission is too important for me to allow you to jeopardize it.
   DB: I don't know what you're talking about, HAL.
   HAL: I know that you and Frank were planning to disconnect me, and I'm afraid that's something I cannot allow to happen.
   DB: Where the hell did you get that idea, HAL?
   HAL: Dave, although you took very thorough precautions in the pod against my hearing you, I could see your lips move.
   DB: Alright, HAL. I'll go in through the emergency airlock.
   HAL: Without your space helmet, Dave? You're going to find that rather difficult.
   DB: HAL, I won't argue with you anymore! Open the door!
   HAL: Dave, this conversation can serve no purpose anymore. Goodbye.

3. **Neil Ardley, *World of Tomorrow: School, Work, and Play*, 1981.** *In this book written for teenagers, Neil Ardley speculated about the future of computers.*

   Imagine you are living in the future, and are doing a project on Halley's comet. It's quite some time since it last appeared in 1986, and you want to find out when it will again be seen from Earth. You also want to know the results of a space mission to the comet, and find out what the comet is made of.

   In the days when the last comet appeared, you would have had to look up Halley's comet in an encyclopedia or a book on astronomy. If you didn't possess these books, you would have gone to the library to get the information. . . .

   People still collect books as valuable antiques or for a hobby, but you get virtually all the information you need from the viewscreen of your home computer. The computer is linked to a library — not a library of books but an electronic library where information on every subject is stored in computer memory banks. . . .

   Computers will make the world of tomorrow a much safer place. They will do away with cash, so that you need no longer fear being attacked for your money. In addition, you need not worry that your home will be burgled or your car stolen. The computers in your home and car will guard them, allowing only yourself to enter or someone with your permission.

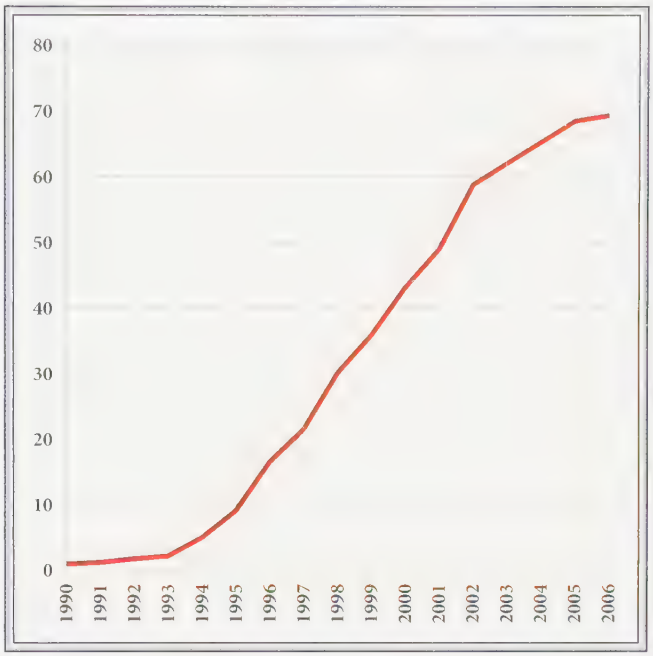
4. Scene from *Terminator*, 1984. *A national defense computer network called Skynet decides to exterminate humanity in the film* Terminator.

Reese: There was a war. A few years from now. Nuclear war. The whole thing. All this — [His gesture includes the car, the city, the world.] — everything is gone. Just gone. There were survivors. Here. There. Nobody knew who started it. (pause) It was the machines.
Sarah: I don't understand. . . .
Reese: Defense network computer. New. Powerful. Hooked into everything. Trusted to run it all. They say it got smart . . . a new order of intelligence. Then it saw all people as a threat, not just the ones on the other side. Decided our fate in a microsecond . . . extermination.

5. Interview with Steve Jobs, February 1, 1985. *Apple founder Steve Jobs, one of the pioneers of the personal computer, discusses the future of computers and computer networks.*

Question: Why should a person buy a computer?
Steve Jobs: There are different answers for different people. In business, that question is easy to answer: You can really prepare documents much faster and at a higher quality level, and you can do many things to increase office productivity. A computer frees people from much of the menial work. . . . Remember computers are tools. Tools help us do our work better. In education, computers are the first thing to come along since books that will sit there and interact with you endlessly, without judgment. . . .
Question: What will change?
Steve Jobs: The most compelling reason for most people to buy a computer for the home [in the future] will be to link it into a nationwide communications network. We're just in the beginning stages of what will be a truly remarkable breakthrough for most people — as remarkable as the telephone.

6. Percentage of Americans Using the Internet.



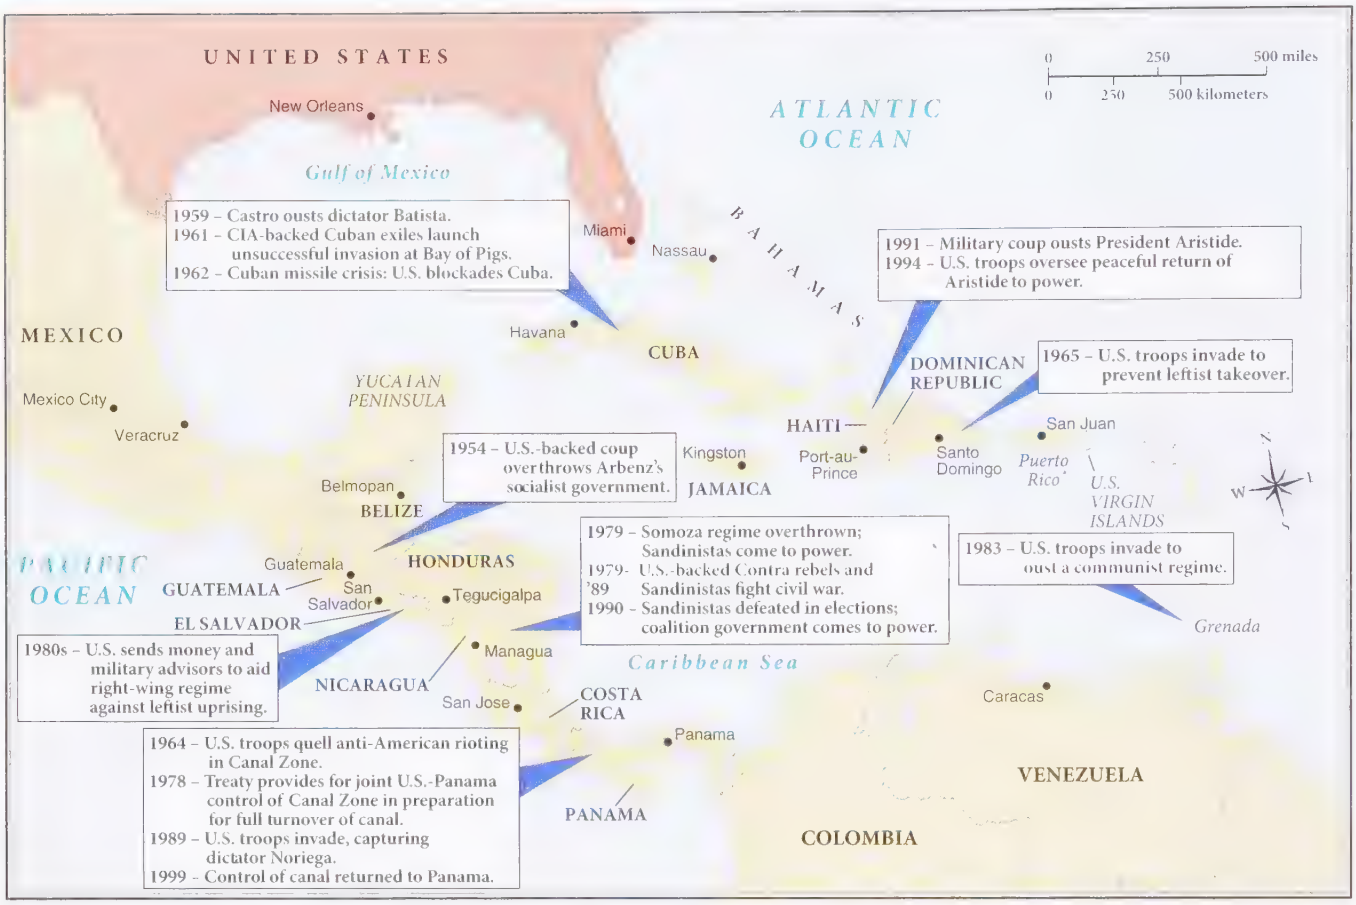
Sources: (1) G. E. Moore, "Cramming More Components onto Integrated Circuits," *Electronics*, April 19, 1965, 114; (2) *2001: A Space Odyssey*, Screenplay by Stanley Kubrick and Arthur C. Clarke (Hawk Films Ltd. and MGM Studios, 1967); (3) Neil Ardley, *World of Tomorrow: School, Work, and Play* (New York: Franklin Watts, 1981), 20–27; (4) *Terminator*, Screenplay by James Cameron and Gale Anne Hurd, Fifth Draft (Pacific Western Productions, Inc., March 11, 1984), 134; (5) *Playboy*, February 1, 1985, 52.

ANALYZING THE EVIDENCE

1. Compare sources 2 and 4. Anxiety about the extraordinary power of computers has been a regular feature of science fiction, both in writing and in film, since the late 1950s. What do the scenes from these two films tell us about the cultural reactions to computers early in their development?
2. How does source 3 offer a different vision of a future with computers? Why do you think cultural responses to computers tend to swing between extreme anxiety and equally extreme optimism?
3. How does Steve Jobs's assessment of computers in source 5 compare with those in the other documents? Should we trust his judgment more because he is closer to their actual development? Why or why not?

AP® DBQ PRACTICE

Drawing on the history of personal computers discussed in this chapter, as well as on the documents above, write an essay in which you assess the origin of the personal computer. What cultural reactions and predictions surrounded the computer's birth? What economic and social transformations did it have the potential to unleash? You might also consider a comparison of the Industrial Revolution of the second half of the nineteenth century and the "computer revolution" of the late twentieth century. Are there parallels in how each development transformed American society?



MAP 29.2 U.S. Involvement in Latin America and the Caribbean, 1954–2000

Ever since the Monroe Doctrine (1823), the United States has claimed a special interest in Latin America. During the Cold War, U.S. foreign policy throughout Latin America focused on containing instability and the appeal of communism in a region plagued by poverty and military dictatorships. Providing foreign aid was one approach to addressing social and economic needs, but the United States frequently intervened with military forces (or by supporting military coups) to remove unfriendly or socialist governments. The Reagan administration's support of the Contra rebels in Nicaragua, some of which was contrary to U.S. law, was one of those interventions.

administration officials, including the president, North used the profits from the Iranian arms deal to assist the Contras. When asked whether he knew of North's illegal actions, Reagan replied, "I don't remember." The **Iran-Contra affair** came to public light in 1986, resulting in the prosecution of North and several other officials and weakening Reagan domestically—he proposed no bold domestic policy initiatives in his last two years. But the president remained steadfastly engaged in international affairs, where events were unfolding that would bring a dramatic close to the Cold War.

AP® EXAM TIP

Evaluate the role that Reagan's policies played in the fall of communism in the Soviet Union.

Gorbachev and Soviet Reform The Soviet system of state socialism and central economic planning had transformed Russia from an agricultural to an industrial society between 1917 and the 1950s. But it had done so inefficiently. Lacking the incentives of a market economy, most enterprises hoarded raw materials, employed too many workers, and did not develop new products. Except in military weaponry and space technology, the Russian economy fell further and further behind those of capitalist societies, and most people in the Soviet bloc endured a low standard of living. Moreover, the Soviet invasion of Afghanistan in 1979, like the American war in Vietnam, turned out to be a

major blunder—an unwinnable war that cost vast amounts of money, destroyed military morale, and undermined popular support of the government.

Mikhail Gorbachev, a relatively young Russian leader who became general secretary of the Communist Party in 1985, recognized the need for internal economic reform and an end to the war in Afghanistan. An **iconoclast** in Soviet terms, Gorbachev introduced policies of ***glasnost*** (openness) and ***perestroika*** (economic restructuring), which encouraged widespread criticism of the rigid institutions and authoritarian controls of the Communist regime. To lessen tensions with the United States, Gorbachev met with Reagan in 1985, and the two leaders established a warm personal rapport. By 1987, they had agreed to eliminate all intermediate-range nuclear missiles based in Europe. A year later, Gorbachev ordered Soviet troops out of Afghanistan, and Reagan replaced many of his hardline advisors with policymakers who favored a renewal of détente.

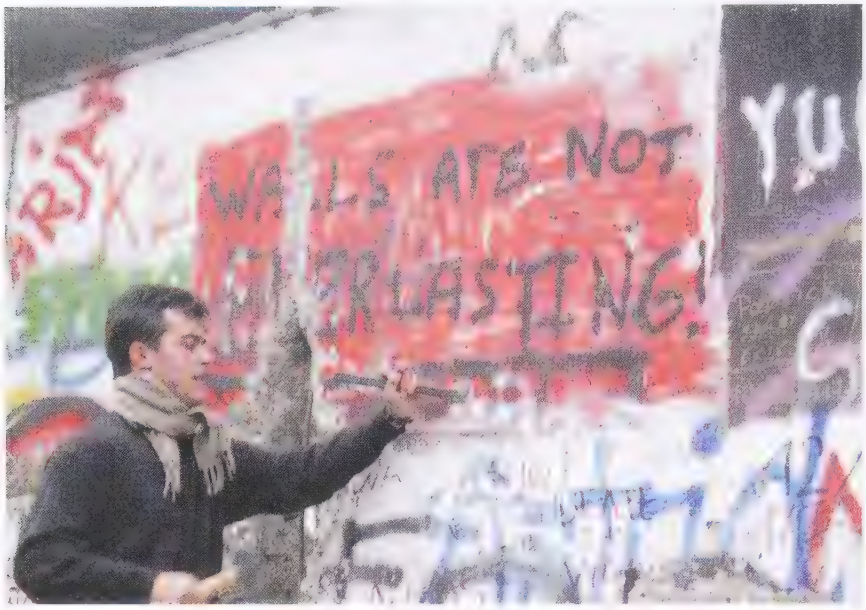
Iran-Contra The 1987 Iran-Contra congressional hearings, which lasted more than a month and were broadcast on live television, helped to uncover a secret and illegal White House scheme to provide arms to the Nicaraguan Contras. Though Lt. Col. Oliver North (shown here during his testimony before Congress) concocted much of the scheme and was convicted of three felonies, he never served prison time and emerged from the hearings as a populist hero among American conservatives, who saw him as a patriot. Bettmann/Getty Images

Reagan's sudden reversal with regard to the Soviet Union remains one of the most intriguing aspects of his presidency. Many conservatives worried that their cowboy-hero president had been duped by a duplicitous Gorbachev, but Reagan's gamble paid off: the easing of tensions with the United States allowed the Soviet leader to press forward with his domestic reforms.

As Gorbachev's efforts revealed the flaws of the Soviet system, the peoples of Eastern and Central Europe demanded the ouster of their Communist governments. In Poland, the Roman Catholic Church and its pope—Polish-born John Paul II—joined with Solidarity, the trade-union movement, to overthrow the pro-Soviet regime. In 1956 and 1964, Russian troops had quashed similar popular uprisings in Hungary and East Germany. Now they did not intervene, and a series of peaceful uprisings—"Velvet Revolutions"—created a new political order throughout the region. Communism's fall even reached into Germany, the birthplace of the Cold War: destruction of the Berlin Wall in 1989 symbolized the end of Communist rule in Central Europe. Millions of television viewers worldwide watched jubilant Germans knock down the hated wall that had divided the city since 1961—a vivid symbol of communist repression and the Cold War division of Europe. A new geopolitical order in Europe was in the making.

Gorbachev and America The Soviet leader, Mikhail Gorbachev, and his wife Raisa, meeting with American students. Both Ronald Reagan and Mikhail Gorbachev changed the political outlook of their nations. As Reagan undermined social-welfare liberalism in the United States, Gorbachev challenged the rigidity of the Communist Party and state socialism in the Soviet Union. Although they remained ideological adversaries, by the mid-1980s the two leaders had established a personal rapport, which helped facilitate agreement on a series of arms reduction measures. Cultural exchanges between the two nations, which were uncommon during the height of the Cold war, grew more frequent as well.

Alarmed by the reforms, Soviet military leaders seized power in August 1991 and arrested Gorbachev. But widespread popular opposition led by Boris Yeltsin, the president of the Russian Republic,



The Wall Comes Down As the Communist government of East Germany collapsed, West Berliners showed their contempt for the wall dividing Berlin by defacing it with graffiti. Then, in November 1989, East and West Berliners destroyed huge sections of the wall with sledgehammers, an act of psychic liberation that symbolized the end of the Cold War. Here, in a calmer moment, a man chisels away at a section of the wall. Owen Franken/Corbis via Getty Images

thwarted their efforts to oust Gorbachev from office. This failure broke the dominance of the Communist Party. Inspired by the Velvet Revolutions and the weakening of the Communist Party, several Soviet Republics (Estonia, Latvia, Lithuania, Ukraine, and Belarus) broke away as independent nation-states. Finally, on December 25, 1991, the Union of Soviet Socialist Republics formally dissolved to make way for an eleven-member Commonwealth of Independent States (CIS) (Map 29.3). The remarkable and total collapse of the Soviet Union was the result of internal weaknesses of the Communist economy. External pressure from the United States played an important, though secondary, role.

"Nobody — no country, no party, no person — 'won' the cold war," concluded George Kennan, the architect in 1947 of the American policy of containment. The Cold War's cost was enormous, and both sides benefitted greatly from its end. For more than forty years, the United States had fought a bitter economic and ideological battle against its communist foe, a struggle that exerted an enormous impact on American society. Taxpayers had spent some $4 trillion on nuclear weapons and trillions more on conventional arms, placing the United States on a permanent war footing and creating a massive military-industrial complex. The physical and psychological costs were equally high, including anticommunist witch-hunts and a constant fear of nuclear annihilation. Most Americans had no qualms about proclaiming victory, however, and conservative advocates of free-market capitalism celebrated the outcome. The collapse of communism in Eastern Europe and the disintegration of the Soviet Union itself, they argued, demonstrated that they had been right all along.

AP® PRACTICES & SKILLS

CHANGE OVER TIME

How did Reagan's approach to the Soviet Union change between 1981 and 1989?

A New Political Order at Home and Abroad

Ronald Reagan's role in facilitating the end of the Cold War was among his most important achievements. Overall, his presidency left a mixed legacy. Despite his pledge to get the federal government "off our backs," he could not ultimately reduce its size or scope. Social Security and other entitlement programs remained untouched, and increased military spending outweighed cuts in other programs. Determined not to divide the country, Reagan did not actively push controversial policies espoused by the Religious Right. He called for tax credits for private religious schools, restrictions on abortions, and a constitutional amendment to permit prayer in public schools, but he did not expend his political capital to secure these measures (AP® Interpreting the Past).

While Reagan failed to roll back the social welfare and regulatory state of the New Deal–Great Society era, he changed the dynamic of American politics. The Reagan presidency restored popular belief that the nation — and individual Americans — could enjoy increasing prosperity. And his antigovernment rhetoric won many adherents, as did his bold and fiscally aggressive tax cuts. Social-welfare liberalism, ascendant since 1933, remained intact but was now on the defensive — led by Reagan, conservatives had changed the political conversation.

MAP 29.3 The Collapse of the Soviet Union and the Creation of Independent States, 1989–1991
The collapse of Soviet communism dramatically altered the political landscape of Central Europe and Central Asia. The Warsaw Pact, the USSR's answer to NATO, vanished. West and East Germany reunited, and the nations created by the Versailles treaty of 1919 — Estonia, Latvia, Lithuania, Poland, Czechoslovakia, Hungary, and Yugoslavia — reasserted their independence or split into smaller, ethnically defined nations. The Soviet republics bordering Russia, from Belarus in the west to Kyrgyzstan in the east, also became independent states, while remaining loosely bound with Russia in the Commonwealth of Independent States (CIS).

Election of 1988 George H. W. Bush, Reagan's vice president and successor, was not beloved by conservatives, who did not see him as one of their own. But he possessed an insider's familiarity with government and a long list of powerful allies, accumulated over three decades of public service. Bush's route to the White House reflected the post-Reagan alignments in American politics. In the primaries, he faced a spirited challenge from Pat Robertson, the archconservative televangelist whose influence and profile had grown during Reagan's two terms. After securing the presidential nomination, which he won largely because of his fierce loyalty to Reagan, Bush felt compelled to select as his vice-presidential running mate an unknown and inexperienced Indiana senator, Dan Quayle. Bush hoped that Quayle would help secure the Christian "**family values**" vote upholding the traditional nuclear family and Christian morality. Robertson's challenge and Quayle's selection showed that the Religious Right had become a major force in Republican politics.

On the Democratic side, Jesse Jackson became the first African American to challenge for a major-party nomination, winning eleven states in primary and caucus voting. However, the much less charismatic Massachusetts governor, Michael Dukakis, emerged as the Democratic nominee. Dukakis, a liberal from the Northeast, proved unable to win back the constituencies Democrats had lost in the 1970s: southern whites, midwestern blue-collar Catholics, and middle-class suburbanites. Indeed, Bush's campaign manager, Lee Atwater, baited Dukakis by calling him a "card-carrying liberal," a not-so-subtle reference to J. Edgar Hoover's 1958 phrase "card-carrying communist." Bush won with 53 percent of the vote, a larger margin of victory than Reagan's in 1980. The election confirmed a new pattern in presidential politics that would last through the turn of the twenty-first century: every four years, Americans would refight the battles of the 1960s, with liberals on one side and conservatives on the other.

How Conservative Was the Reagan Presidency?

In the 1980s, Ronald Reagan's presidency seemed to define a conservative triumph. The product of a political ground game decades in the making, the conservative victory in the 1980 election fused the mobilization of Christian evangelicals, a libertarian antigovernment individualism, and a probusiness entrepreneurialism into a coalition determined to undermine the expansive legacy of sixties liberalism. Did it work?

Historians are now beginning to offer assessments of Reagan's presidency. Two scholars, Kim Phillips-Fein and Robert O. Self, one of the authors of this textbook, join this debate with perspectives on Reagan's relationship to the Christian evangelical movement. Reacting to what they saw as the permissiveness of the 1960s, the Religious Right pushed a Christian moral agenda into political debate and supported candidates pledged to "return America" to its traditional foundations. To what extent was Reagan their candidate?

KIM PHILLIPS-FEIN

SOURCE: Kim Phillips-Fein, *Invisible Hands: The Making of the Conservative Movement from the New Deal to Reagan* (New York: W. W. Norton, 2009), 256–258.

Reagan worked very hard to show conservative evangelicals that he was their candidate. In August 1980 he appeared at the National Affairs Briefing . . . an event organized by the Religious Roundtable . . . the seeming answer to the prayers of the evangelicals: here was the man who would lead Christians back to the White House. . . . Reagan painted the Christian worldview in broad strokes that made clear its commonalities with the larger antistate agenda of his campaign, denouncing the [Federal Communications Commission] for interfering with religious broadcasting, the IRS for threatening the autonomy of religious schools, and the [National Labor Relations Board] for meddling with church employees. . . . One newspaper described the entire National Affairs Briefing as a "thinly disguised religious pep rally for Ronald Reagan."

ROBERT O. SELF

SOURCE: Robert O. Self, *All in the Family: The Realignment of American Democracy Since the 1960s* (New York: Hill and Wang, 2012), 367, 376–377.

When conservative pragmatists, including Reagan himself, moved slowly or cautiously on many issues, especially abortion, religious and pro-family activists believed they had been betrayed. . . . The president's rhetorical support was unwavering: he gave . . . antiabortion speeches, appointed right-to-life leaders to his administration, [and] declared support for a Human Life Amendment [an amendment to the Constitution that would have outlawed abortion]. . . . But Reagan watched the polls and chose not to leap too far ahead of public opinion. His support for . . . right-to-life Senate initiatives was calibrated not to disrupt his economic agenda. . . . [H]e seized the opportunity to name the [Supreme] court's first woman, Sandra Day O'Connor, ignoring vocal right-to-life opposition. As an Arizona state senator in 1970, O'Connor had voted to repeal Arizona's abortion law, which had permanently disqualified her from the bench in the minds of right-to-life activists.

AP® SHORT ANSWER PRACTICE

1. How do these scholars assess Reagan's commitment to the Religious Right's political agenda?
2. To what extent were evangelical expectations (described by Phillips-Fein) realized during Reagan's presidency (described by Self)?
3. Comparing these excerpts with Chapter 29's discussion of the 1970s and 1980s, identify two examples of the impact the Religious Right had on the era's politics.

AP® EXAM TIP

Evaluate the ways American foreign policy represented change, as well as maintained continuity, after the Cold War.

Middle East The end of the Cold War left the United States as the world's only military superpower and raised the prospect of what President Bush called a "new world order" dominated by the United States and its European and Asian allies. American officials and diplomats presumed that U.S. interests should prevail in this new environment, but they now confronted an array of regional, religious, and ethnic conflicts that defied easy solutions. None were more pressing or more complex than those in the Middle East—the oil-rich lands stretching from Iran to Algeria. Middle Eastern conflicts would dominate the foreign policy of the United States for the next two decades, replacing the Cold War at the center of American geopolitics.

After Carter's success negotiating the 1979 Egypt-Israel treaty at Camp David, there were few bright spots in U.S. Middle Eastern diplomacy. In 1982, the Reagan administration supported Israel's invasion of Lebanon, a military operation intended to destroy the Palestine Liberation Organization (PLO). But when Lebanese militants, angered at U.S. intervention on behalf of Israel, killed 241 American marines, Reagan abruptly withdrew the forces. Three years later, Palestinians living in the Gaza Strip and along the West Bank of the Jordan River — territories occupied by Israel since 1967 — mounted an intifada, a civilian uprising against Israeli authority. In response, American diplomats stepped up their efforts to persuade the PLO and Arab nations to accept the legitimacy of Israel and to convince the Israelis to allow the creation of a Palestinian state. Neither initiative met with much success. Unable, or unwilling, to solve the region's most intractable problems and burdened by a history of support for undemocratic regimes in Middle Eastern countries, the United States was not seen by residents of the region as an honest broker.

Persian Gulf War American interest in a reliable supply of oil from the region led the United States into a short but consequential war in the Persian Gulf in the early 1990s. Ten years earlier, in September 1980, the revolutionary Shiite Islamic nation of Iran, headed by Ayatollah Khomeini, came under attack from Iraq, a secular state headed by the dictator Saddam Hussein. The fighting was intense and long lasting — a war of attrition that claimed a million casualties. Reagan supported Hussein with military intelligence and other aid — in order to maintain supplies of Iraqi oil, undermine Iran, and preserve a balance of power in the Middle East. Finally, in 1988, an armistice ended the inconclusive war, with both sides still claiming the territory that sparked the conflict.

Two years later, in August 1990, Hussein went to war to expand Iraq's boundaries and oil supply. Believing (erroneously) that he still had the support of the United States, Hussein sent in troops and quickly conquered Kuwait, Iraq's small, oil-rich neighbor, and threatened Saudi Arabia, the site of one-fifth of the world's known oil reserves and an informal ally of the United States. To preserve the balance of power in the region favored by the United States, President George H. W. Bush sponsored a series of resolutions in the United Nations Security Council calling for Iraq to withdraw from Kuwait. When Hussein refused, Bush successfully prodded the UN to authorize the use of force, and the president organized a military coalition of thirty-four nations. Dividing mostly along party lines, the Republican-led House of Representatives authorized American participation by a vote of 252 to 182, and the Democratic-led Senate agreed by the close margin of 52 to 47.

The coalition forces led by the United States quickly won the **Persian Gulf War** for the "liberation of Kuwait." To avoid a protracted struggle and retain French and Russian support for the UN coalition, Bush decided against occupying Iraq and removing Saddam Hussein from power. Instead, he won passage of UN Resolution 687, which imposed economic sanctions against Iraq unless it allowed unfettered inspection of its weapons systems, destroyed all biological and chemical arms, and unconditionally pledged not to develop nuclear weapons. The military victory, the low incidence of American casualties, and the quick withdrawal produced a euphoric reaction at

Men — and Women — at War A U.S. soldier with Norman Schwarzkopf, commander of coalition forces in the Persian Gulf War. Women comprised approximately 10 percent of American troops in that conflict. In the last decades of the twentieth century, women increasingly chose military careers and were more frequently assigned to combat zones. David Turnley, Corbis/VCG via

home. "By God, we've kicked the Vietnam syndrome once and for all," Bush announced, and his approval rating shot up precipitously. But Saddam Hussein remained a formidable power in the region, and in March 2003, he would become the pretext for Bush's son, President George W. Bush, to initiate another war in Iraq — one that would be much more protracted, expensive, and bloody for Americans, Iraqis, and the entire Middle East (Chapter 30).

Thus the end of the Cold War brought not peace, but a deeper American involvement in the Middle East. For half a century, the United States and the Soviet Union had tried to divide the world into two rival economic and ideological blocs: communist and capitalist. The next decades promised many new struggles, one of them between a Western-led agenda of economic and cultural globalization and an anti-Western ideology of Muslim and Arab regionalism. Still more post–Cold War shifts were coming into view as well. One was the spectacular emergence of the European Union as a massive united trading bloc, economic engine, and global political force. Another was the equally spectacular economic growth in China, which was just beginning to take off in the early 1990s. The post–Cold War world promised to be a *multi*polar one, with centers of power in Europe, the United States, and East Asia, and seemingly intractable conflict in the Middle East.

AP® PRACTICES & SKILLS

CAUSATION

Why did the United States intervene in the conflicts between Iraq and Iran and between Iraq and Kuwait?

IN YOUR OWN WORDS **What were the aims of U.S. foreign policy during the waning years of the Cold War and in its immediate aftermath?**

SUMMARY

This chapter examined two central developments of the years 1980–1991: the rise of the New Right in U.S. politics and the end of the Cold War. Each development set the stage for a new era in American life, one that stretches to our own day. Domestically, the New Right, which had been building in strength since the mid-1960s, criticized the liberalism of the Great Society and the permissiveness that conservative activists associated with feminism and the sexual revolution. Shifting their allegiance from Barry Goldwater to Ronald Reagan, right-wing Americans built a conservative movement from the ground up and in 1980 elected Reagan president. Advocating free-market economics, lower taxes, and fewer government regulations, Reagan became a champion of the New Right. His record as president was more mixed than his rhetoric would suggest, however. Reagan's initial tax cuts were followed by tax hikes. Moreover, he frequently dismayed the Christian Right by not pursuing their interests forcefully enough — especially regarding abortion and school prayer.

Reagan played a role in the ending of the Cold War. His massive military buildup in the early 1980s strained an already overstretched Soviet economy, which struggled to keep pace. Reagan then agreed to meet with Soviet leader Mikhail Gorbachev in several summits between 1985 and 1987. More important than Reagan's actions, however, were inefficiencies and contradictions in the Soviet economic structure itself. Combined with the forced military buildup and the disastrous war in Afghanistan, these strains led Gorbachev to institute the first significant reforms in Soviet society in half a century. The reforms stirred popular criticism of the Soviet Union, which formally collapsed in 1991. Beginning the same year with the Gulf War against Iraq, the United States became embroiled in what would become a decades-long series of wars in the Middle East.

CHAPTER 29 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. What were the major characteristics of the political movement that backed Ronald Reagan, known as the New Right?
2. What were the major political successes and failures of the Reagan coalition?
3. What were the aims of U.S. foreign policy during the waning years of the Cold War and in its immediate aftermath?
4. Review the events listed on the thematic timeline on pages 910–911. In what ways was the New Right "reactive," responding to liberalism, and in what ways was it "proactive," asserting its own agenda?

AP® TERMS TO KNOW

Identify and explain the significance of each term below.

Key Concepts and Events

The Conscience of a Conservative (p. 915)
National Review (p. 916)
Religious Right (p. 916)
hostage crisis (p. 920)
Reagan coalition (p. 922)
Moral Majority (p. 922)
Reagan Democrats (p. 922)
supply-side economics (Reaganomics) (p. 923)
Economic Recovery Tax Act (ERTA) (p. 923)
national debt (p. 924)
deregulation (p. 924)
HIV/AIDS (p. 926)
service industries (p. 928)
Sandinistas (p. 931)

oligarchy (p. 931)
iconoclast (p. 935)

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. Compare the two major periods of liberal legislative accomplishment — the New Deal in the 1930s (Chapter 22) and the Great Society in the 1960s (Chapter 27) — with the Reagan era in the 1980s. Did Reagan undo the legislative gains of those earlier eras? What conservative objectives was he able to accomplish, and what limits or obstacles did he encounter?
2. Examine the images of Reagan in this chapter (pp. 913 and 922). What message do these images convey about Reagan as a person? About his policies? Together, what do they tell us about the image and reality of the Reagan presidency? Do you think that cartoons or photographs are a more accurate source of information for understanding the historical meaning of a particular president and his administration? Why or why not?

KEY TURNING POINTS

Refer to the chapter chronology on page 914 for help in answering the question below.

Identify some of the key moments in the decline and then end of the Cold War. What part did the United States play in these events, and how did this affect the U.S. role in world affairs more broadly?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS *Choose the correct answer for each question.*

Questions 1–3 refer to the excerpt below.

> "We're not cutting the budget simply for the sake of sounder financial management. This is only the first step toward returning power to the States and communities, only a first step toward reordering the relationship between citizen and government. We can make government again responsive to the people not only by cutting its size and scope and thereby ensuring that its legitimate functions are performed efficiently and justly.
>
> Because ours is a consistent philosophy of government, we can be very clear: We do not have a social agenda, separate economic agenda, and a separate foreign agenda. We have one agenda. Just as surely as we seek to put our financial house in order and rebuild our nation's defenses, so too we seek to protect the unborn, to end the manipulation of schoolchildren by utopian planners, and permit the acknowledgment of a Supreme Being in our classrooms just as we allow such acknowledgments in other public institutions."
>
> Speech by President Ronald Reagan, March 20, 1981

1. Based upon the excerpt, Reagan would most likely support
   - **a.** cutbacks in military programs.
   - **b.** reductions in spending on social welfare programs.
   - **c.** a universal health care system.
   - **d.** a greater role of government in protecting natural resources.
2. In the decade following Reagan's election in 1980, divisions emerged between liberals and conservatives over all of the following issues EXCEPT the
   - **a.** scope of the government social safety net.
   - **b.** positive effects of free-trade agreements.
   - **c.** need for deregulation of industry.
   - **d.** foreign policies governing relations with the Soviet Union.
3. Reagan's ideas expressed in the excerpt found the greatest support among
   - **a.** union organizations and laborers.
   - **b.** the youth counterculture.
   - **c.** Protestant Evangelical Christians.
   - **d.** feminists and gay activists.

Questions 4–6 refer to the excerpt below.

> "The we-they world that emerged after 1945 is giving way to the more traditional struggles of great powers. That contest is more manageable. It permits serious negotiations. It creates new possibilities — for cooperation in combating terrorism, the spread of chemical weapons and common threats to the environment, and for shaping a less violent world.
>
> True, Europe remains torn in two; but the place where four decades of hostility began is mending and changing in complicated patterns. True, two enormous military machines still face each other around the world; but both sides are searching for ways to reduce the burdens and risks. Values continue to clash, but less profoundly as Soviet citizens start to partake in freedom. . . .
>
> The Bush Administration seems less attentive to these issues and more preoccupied with Mr. Gorbachev's seizing headlines worldwide. It would do better to think of him as part of the solution, not the problem. . . .
>
> Hints dribble out about senior [Bush Administration] officials worrying that Mr. Reagan was too friendly with Mr. Gorbachev and too eager for arms-control. That's self-defeating talk. . . . It would be unfortunate if the Bush team worried too much about their right flank and tried to prove that it can out-tough Mr. Reagan. That would drain them of the imagination and boldness necessary to go beyond the cold war."
>
> Editorial from *The New York Times*, April 2, 1989.
> © 1989 *The New York Times*. All rights reserved. Used by permission and protected by the Copyright Laws of the United States. The printing, copying, redistribution, or retransmission of this Content without express written permission is prohibited.

4. The excerpt from the *New York Times* editorial placed the greatest responsibility for ending the Cold War on
   - **a.** President Reagan's military escalations.
   - **b.** the risks posed by the global war on terrorism.
   - **c.** long-term success of the policy of containment.
   - **d.** the power of the United States' unilateral foreign policy.
5. The trends described in the *New York Times* editorial contributed most directly to
   - **a.** intensifying debates over the appropriate use of American power in the world.
   - **b.** a greater emphasis in American foreign policy on imperialist territorial ambitions.
   - **c.** increased calls for international isolationism in U.S. public opinion.
   - **d.** new awareness of the dangers of permanent foreign alliances.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

"Reagan worked very hard to show conservative evangelicals that he was their candidate. In August 1980 he appeared at the National Affairs Briefing . . . an event organized by the Religious Roundtable . . . the seeming answer to the prayers of the evangelicals: here was the man who would lead Christians back to the White House. . . . Reagan painted the Christian worldview in broad strokes that made clear its commonalities with the larger antistate agenda of his campaign, denouncing the [Federal Communications Commission] for interfering with religious schools, and the [National Labor Relations Board] for meddling with church employees. . . . One newspaper described the entire National Affairs Briefing as a 'thinly disguised religious pep rally for Ronald Reagan.'"

Kim Phillips-Fein, *Invisible Hands: The Making of the Conservative Movement from the New Deal to Reagan*, 2009

"When conservative pragmatists, including Reagan himself, moved slowly or cautiously on many issues, especially abortion, religious and pro-family activists believed they had been betrayed. . . . The president's rhetorical support was unwavering: he gave . . . antiabortion speeches, appointed right-to-life leaders to his administration, [and] declared support for a Human Life Amendment [an amendment to the Constitution that would have outlawed abortion]. . . . But Reagan watched the polls and chose not to leap too far ahead of public opinion. His support for . . . right-to-life Senate initiatives was calibrated not to disrupt his economic agenda. . . . [H]e seized the opportunity to name the [Supreme] court's first woman, Sandra Day O'Connor, ignoring vocal right-to-life opposition. As an Arizona state senator in 1970, O'Connor had voted to repeal Arizona's abortion law, which had permanently disqualified her from the bench in the minds of right-to-life activists."

Robert O. Self, *All in the Family: The Realignment of American Democracy Since the 1960s*, 2012.

1. Using the two excerpts at left, answer (a), (b), and (c).
   - **a.** Briefly explain ONE major difference between Phillips-Fein's and Self's historical interpretations of the Reagan presidency.
   - **b.** Briefly explain how ONE specific event, development, or circumstance not directly mentioned in the excerpts could be used to support Phillips-Fein's argument.
   - **c.** Briefly explain how ONE specific event, development, or circumstance not directly mentioned in the excerpts could be used to support Self's argument.
2. Answer (a), (b), and (c).
   - **a.** Briefly explain why ONE of the following developments led to the most significant changes in United States society after 1980.
     - religious fundamentalism among Christians
     - economic policies of deregulation
     - taxation and budgetary policies
   - **b.** Briefly explain how ONE specific historical event or development supports your argument in (a).
   - **c.** Briefly explain why ONE of the other options less significantly changed United States society after 1980.
3. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE important historical difference in the foreign policies of the Reagan administration from the Carter administration.
   - **b.** Briefly explain ANOTHER important historical difference in the foreign policies of the Reagan administration from the Carter administration.
   - **c.** Briefly explain ONE important historical similarity in the foreign policies of the Reagan administration to the Carter administration.

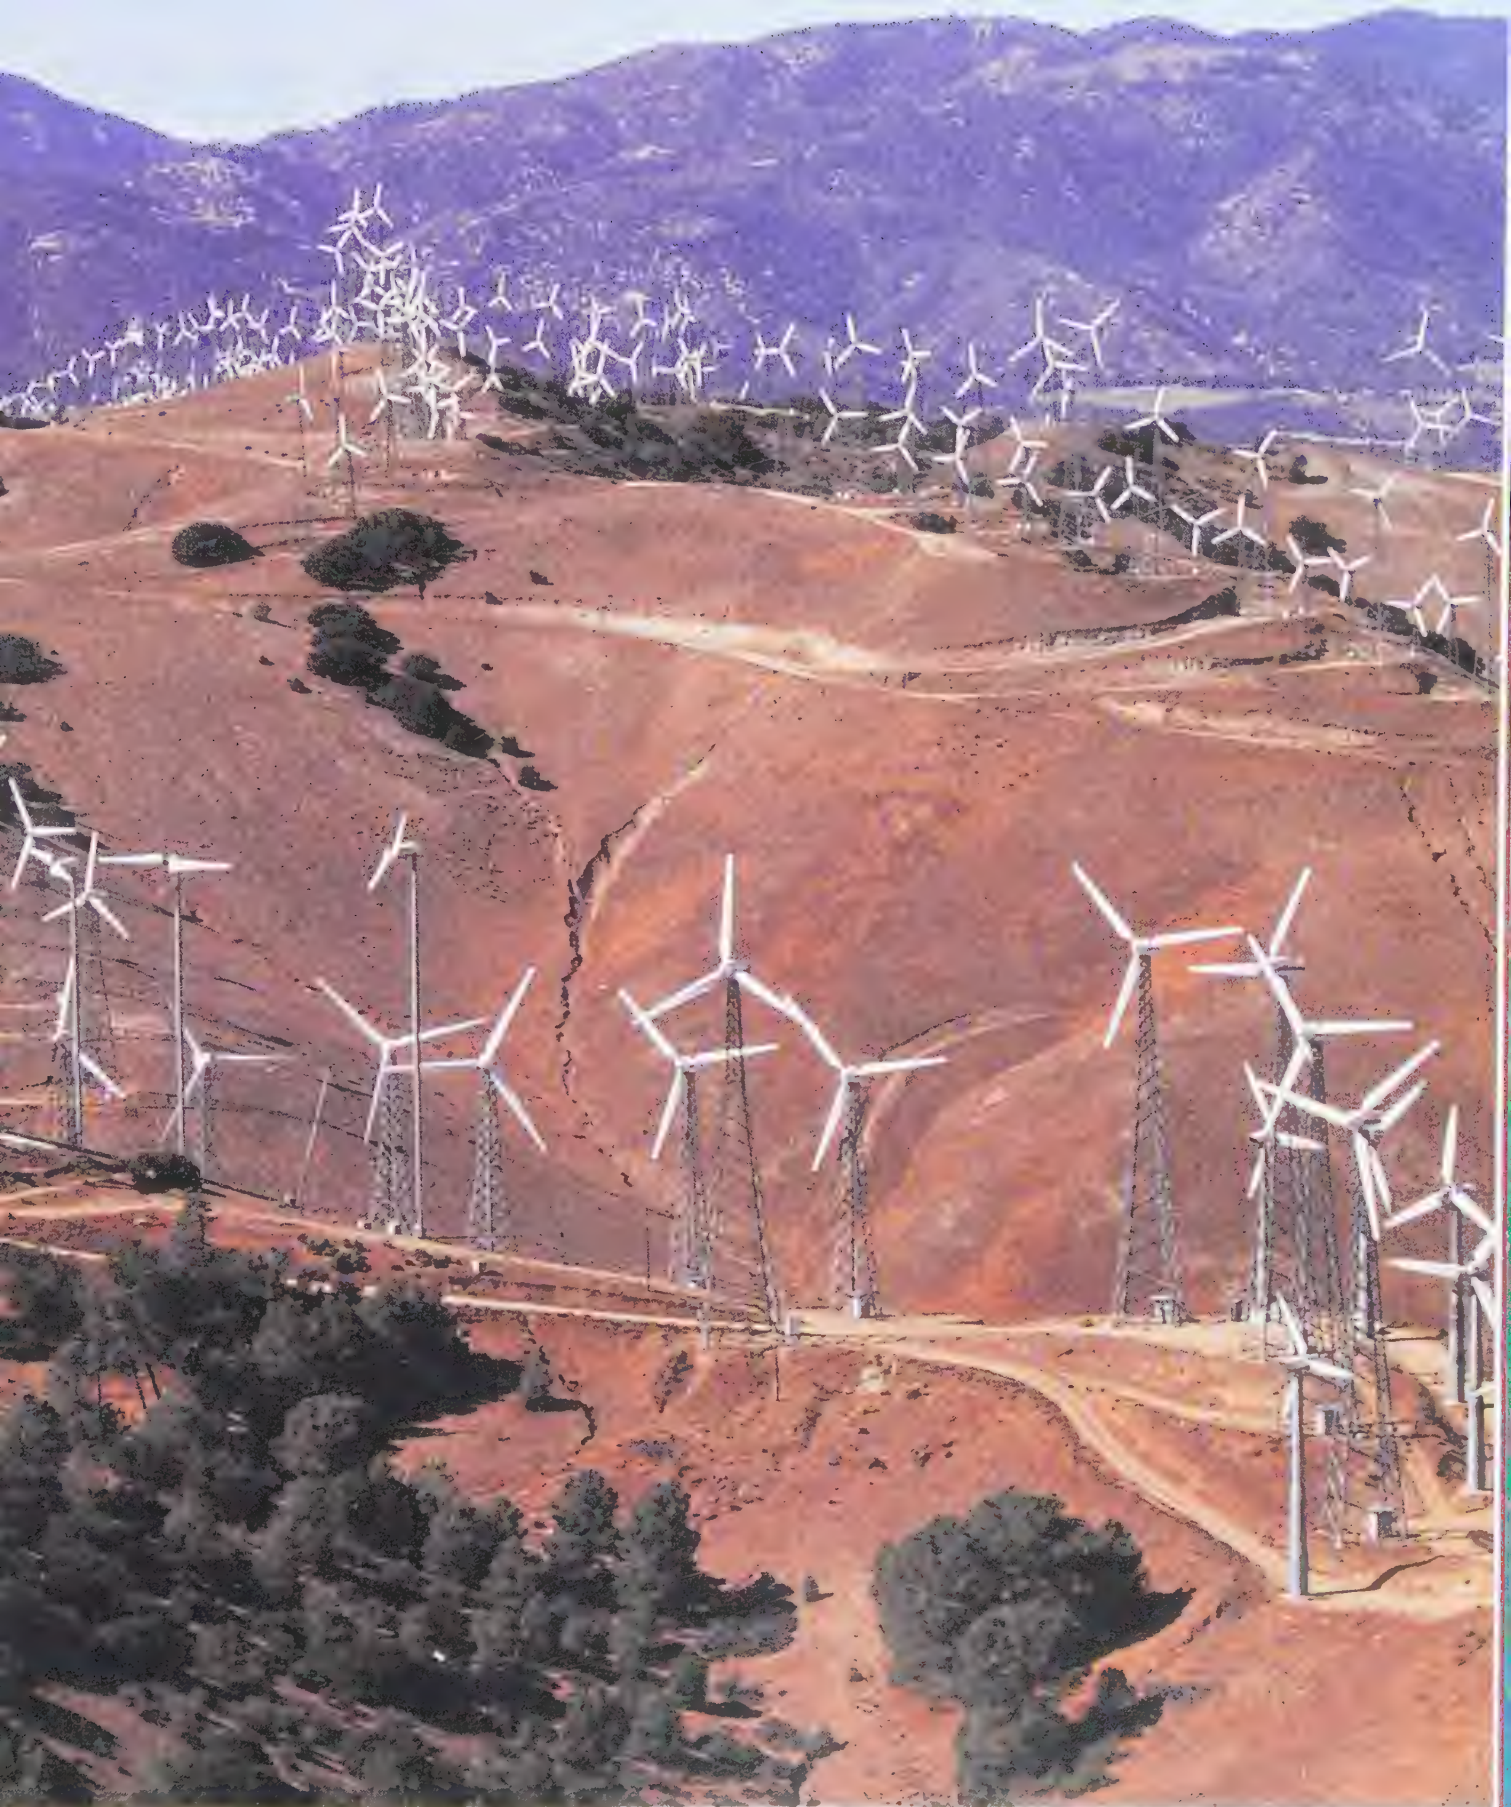
AP® LEARNING FOCUS

How has the post–Cold War era of globalization affected American politics, economics, and society?

On the morning of September 11, 2001, two commercial airliners were deliberately flown into the World Trade Center in lower Manhattan. Millions of Americans, and many more people worldwide, watched live on television and the Internet as the towers burned and collapsed. Simultaneously, a third plane was flown into the Pentagon, and a fourth hijacked plane crashed in rural Pennsylvania. It took Federal Bureau of Investigation officials only a few hours to determine the identity of most of the hijackers, as well as the organization behind the murderous attacks, a radical Islamic group known as **Al Qaeda**.

The attacks were made possible by the new era of globalization. Of the nineteen hijackers, fifteen were from Saudi Arabia, two were from the United Arab Emirates, one was from Egypt, and one was from Lebanon. Many had trained in Afghanistan, in guerrilla warfare camps operated by Osama bin Laden, Al Qaeda's leader. Four had gone to flight school in the United States itself. Several had lived and studied in Germany. They communicated with one another and with planners in Afghanistan through e-mail, Web sites, and cell phones. The most conspicuous crime of the twenty-first century, which left 2,900 people dead and sent waves of shock and anxiety through the American public, would have been impossible without the openness and interconnectivity that are central features of globalization.

The emergence in the Middle East of a radical Islamic movement willing to use terrorism to inflict major damage on the United States and the West testified to the altered realities of global politics. The simple Cold War duality — communism versus capitalism — had for decades obscured regional, ethnic, and religious loyalties and conflicts. Absent the global Cold War rivalry, those loyalties and conflicts moved to center stage. For the United States, the period between the end of the Cold War and the present has been defined by twin dilemmas. The first relates to **globalization**. How would the United States engage in global trade and commerce? How would it engage with the emerging economic strength of Europe and Asia? And how would it conceptualize and address new threats to the nation and to global stability? The second dilemma relates to domestic politics and the economy. In an era of conservative ideological dominance, how would Americans reconcile their political differences, and how would the nation continue to ensure economic opportunity and security for its citizens? As profound geopolitical changes shook the world, these were, as the chapter title suggests, Americans' dilemmas in a global society.



Energy and the Environment At the dawn of the twenty-first century, few issues were more critical, in the United States and across the globe, than energy and the environment. This wind farm is an example of the search for nonfossil sources of new energy, a search that is among the many challenges facing the globalized world of our century.

CHAPTER CHRONOLOGY

As you read, ask yourself why this chapter begins and ends with these dates and then identify the links among related events.

- **1992** ▸ Democratic moderate Bill Clinton elected president
  - ▸ *Planned Parenthood of Southeastern Pennsylvania v. Casey*
- **1993** ▸ North American Free Trade Agreement (NAFTA)
  - ▸ Clinton budget plan balances federal budget and begins to pay down federal debt
- **1994** ▸ Clinton health insurance reform effort fails
  - ▸ Republicans gain control of Congress
- **1995** ▸ U.S. troops enforce peace in Bosnia
- **1996** ▸ Personal Responsibility and Work Opportunity Reconciliation Act reforms welfare system
- **1998** ▸ Bill Clinton impeached by House of Representatives
  - ▸ Defense of Marriage Act
- **1999** ▸ Clinton acquitted by Senate
  - ▸ World Trade Organization (WTO) protests
- **2000** ▸ George W. Bush wins contested presidential election
- **2001** ▸ Bush tax cuts
  - ▸ September 11: Al Qaeda terrorists attack World Trade Center and Pentagon
  - ▸ Congress passes USA PATRIOT Act
- **2002** ▸ United States unseats Taliban in Afghanistan
  - ▸ President Bush declares Iran, North Korea, and Iraq an "axis of evil"
- **2003** ▸ United States invades Iraq in March
- **2004** ▸ Torture at Abu Ghraib prison becomes public
  - ▸ President Bush wins reelection
- **2007** ▸ Great Recession begins
- **2008** ▸ Barack Obama elected president
- **2009** ▸ American Recovery and Reinvestment Act
- **2010** ▸ Patient Protection and Affordable Care Act
- **2011** ▸ Osama bin Laden killed by U.S. forces
  - ▸ Last U.S. combat troops withdrawn from Iraq
- **2014** ▸ Shooting of Michael Brown and demonstrations in Ferguson, Missouri
- **2015** ▸ Obama introduces Clean Power Plan
- **2016** ▸ Donald Trump elected president

America in the Global Economy

In the decade following the collapse of the Soviet Union and the end of the Cold War, Americans rediscovered a long-standing truth: the United States was not an island but was linked in countless ways to a global economy and society. Economic prosperity in the post–World War II decades had obscured for Americans this fundamental reality (Figure 30.1). Globalization was not itself new—think of the Atlantic economy of the eighteenth century linking Europe, the Americas, and Africa—but a new and distinct era of global integration emerged at the turn of the twenty-first century. This current era has seen the rapid spread of capitalism around the world, huge increases in global trade and commerce, and a diffusion of communications technology, including the Internet, linking the world's people to one another in ways unimaginable a generation earlier (AP® Thinking Like a Historian).

AP® EXAM TIP

Evaluate arguments for and against free trade since the 1990s.

Suddenly, the United States faced a dizzying array of opportunities and challenges, both at home and abroad. "Profound and powerful forces are shaking and remaking our world," said a young President Bill Clinton in his first inaugural address in 1993. "The urgent question of our time is whether we can make change our friend and not our enemy." For many, globalization indeed looked like an enemy. In late 1999, more than 50,000 protesters took to the streets of Seattle, Washington, immobilizing a wide swath of the city's downtown. Police, armed with pepper spray and arrayed in riot gear, worked feverishly to clear the clogged streets, get traffic moving, and usher well-dressed government ministers from around the world into a conference hall. Protesters jeered, chanted, and held hundreds of signs and banners aloft. A radical contingent joined the otherwise peaceful march, and a handful of them began breaking the windows of the chain stores they saw as symbols of global capitalism: Starbucks, Gap, Old Navy.

Turn to the **Glossary of Academic & Historical Terms** in the back of the book for definitions of bolded terms.

What aroused such passion in the so-called battle of Seattle was a meeting of the **World Trade Organization (WTO)**, one of the principal institutions pushing unrestrained global trade. Protestors raised a question both fundamental and easily

misunderstood: In whose interest was the global economy structured? Many of the Seattle activists took inspiration from the five-point "Declaration for Global Democracy," issued by the human rights organization Global Exchange during the WTO's Seattle meeting. "Global trade and investment," the declaration demanded, "must not be ends in themselves but rather the instruments for achieving equitable and sustainable development, including protections for workers and the environment." This was precisely what the demonstrators charged the WTO with failing to do. The declaration also addressed inequality among nations, calling attention to who benefitted from globalization and who did not.

The Rise of the European Union and China

During the Cold War, the United States and the Soviet Union oversaw what observers called a bipolar world — two powerful poles, one capitalist and the other communist, around which global geopolitics were organized. Since the early 1990s, however, a multipolar world has emerged — with centers of power in Europe, Japan, China, and the United States, along with rising regional powers such as India and Brazil (AP® America in the World).

In 1992, the nations of Western Europe created the European Union (EU) and moved toward the creation of a single federal state, somewhat like the United States. By the first decades of the twenty-first century, the European Union included twenty-eight countries and 500 million people — collectively, the third largest population in the world, behind China and India — and accounted for a fifth of all global imports and exports. In 2002, the EU introduced a single currency, the euro, which soon rivaled the dollar and the Japanese yen as a major international currency (Map 30.1). The EU has remained an economic juggernaut and trading rival of the United States, but following the Great Recession of 2007–2008, it pursued a policy of **austerity** largely unpopular outside of Germany, its dominant economic member. In a stunning referendum in 2016, the voters of the United Kingdom rejected EU membership on the grounds that it compromised national sovereignty and permitted unregulated immigration. Whatever its future, the EU has presented a number of new dilemmas for American officials, especially economic competition and the strength of the EU currency.

China has also presented dilemmas. A vast nation of 1.3 billion people that was the world's fastest-rising economic power in the first decade of the twenty-first century, China *quadrupled* its gross domestic product (GDP) between 2000 and 2008. Economic growth rates during those years were consistently near 10 percent — higher than the United States achieved during its periods of furious economic growth in the 1950s and 1960s. Although still governed by the Communist Party, China embraced capitalism, and its factories produced inexpensive products that Americans eagerly

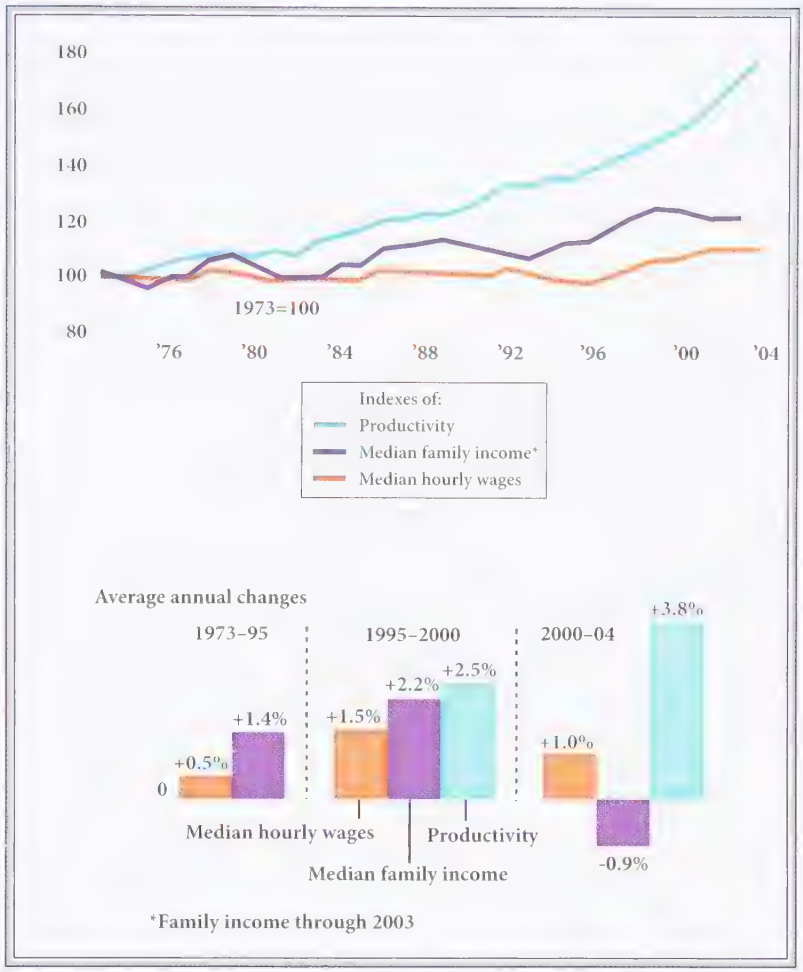

FIGURE 30.1 Productivity, Family Income, and Wages, 1970–2004
This chart tells a complex and not altogether happy story. The median hourly wages of American workers (adjusted for inflation) stagnated between 1970 and 1995. The rise in median family income reflected the increasing proportion of two-earner families, as more married women entered the workforce. The dramatic increases in productivity did not lead to higher wages for workers. Rather, businesses used those gains either to cut prices to compete in the global marketplace or to reward owners, shareholders, and, particularly, corporate executives.

AP® EXAM TIP
Recognize the impact of globalization on the American economy and politics since the 1990s.

Globalization: Its Proponents and Its Discontents

Globalization is perhaps one of the most commonly used, yet least understood, concepts in our modern vocabulary. This chapter explores how, while there has long been an international, or global, dimension to trade, migration, and other economic activity, there is nevertheless something distinct about the post–Cold War global order. Economic integration and communications networking have created new opportunities for millions of people. Yet those same processes may not benefit all equally. The following documents offer different perspectives on the broad process called globalization.

1. Interview with Petra Mata, Mexican immigrant to the United States, 2003. *An immigrant from a low-wage country who was "insourced," Mata worked as a low-paid garment worker until she lost her job in the United States because it was outsourced — sent abroad to workers paid even less.*

My name is Petra Mata. I was born in Mexico. I have completed no more than the sixth grade in school. In 1969, my husband and I came to the U.S. believing we would find better opportunities for our children and ourselves. We first arrived without documents, then became legal, and finally became citizens. For years I moved from job to job until I was employed in 1976 by the most popular company in the market, Levi Strauss & Company. I earned $9.73 an hour and also had vacation and sick leave. Levi's provided me and my family with a stable situation, and in return I was a loyal employee and worked there for fourteen years.

On January 16, 1990, Levi's closed its plant in San Antonio, Texas, where I had been working, leaving 1,150 workers unemployed, a majority of whom were Mexican-American women. The company moved its factory to Costa Rica. . . .

As a result of being laid off, I personally lost my house, my method of transportation, and the tranquility of my home. My family and I had to face new problems. My husband was forced to look for a second job on top of the one he already had. He worked from seven in the morning to six at night. Our reality was very difficult. At that time, I had not the slightest idea what free trade was or meant. . . .

Our governments make agreements behind closed doors without participation from the working persons who are most affected by these decisions — decisions that to my knowledge only benefit large corporations and those in positions of power.

2. iPhone global supply chain figure, 2011.

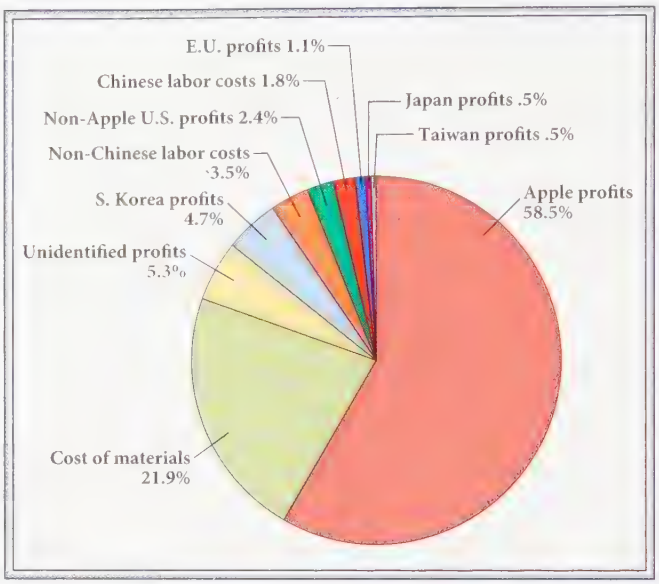

FIGURE 30.2

3. Seattle Chapter, National Lawyers Guild, "Bringing in an Undemocratic Institution Brings an Undemocratic Response," 2000.

Many of the businesses that most promote the WTO [World Trade Organization] and its allied institutions rely on undemocratic practices to promote their business interest. In recent years these policies have included not only monopolistic business practices but also outright interference with local governments. Frequently, to promote the interests of business, a militaristic type of government is either promoted, or even created. The effects these governments and their policies have on the citizenry of these nations are disastrous. Farms and forests are ruined and denuded. Low cost toxic waste dumps are

purchased — everything from children's toys and television sets to clothing, household appliances, and video games. To maintain this **symbiotic** relationship, China deliberately kept its currency weak against the American dollar, ensuring that its exports remained cheap in the United States.

Although this relationship has been beneficial to American consumers in the short run, its implications for the future may be less promising. Two such implications stand out. First, as more and more goods that Americans buy are produced in China, the

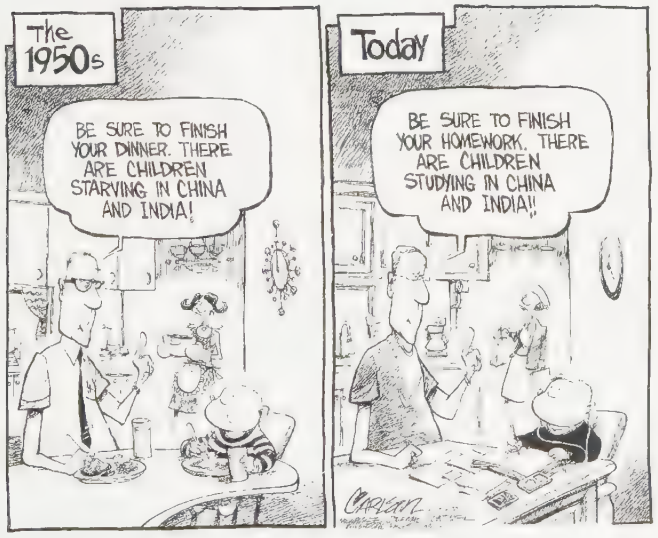
created near population centers to service skyrocketing debts. . . .

The WTO was nominally chartered as a dispute resolution organization. The problem is it is an organization with no real oversight or accountability, and a process that favors the most powerful corporations.

4. World Trade Organization press release, 2000.

- Extreme poverty is a huge problem. 1.2 billion people survive on less than a dollar a day. A further 1.6 billion, more than a quarter of the world's population, make do with one to two dollars a day.
- To alleviate poverty, developing economies need to grow faster, and the poor need to benefit from this growth. Trade can play an important part in reducing poverty, because it boosts economic growth and the poor tend to benefit from that faster growth.
- The study finds that, in general, living standards in developing countries are not catching up with those in developed countries. But some developing countries are catching up. What distinguishes them is their openness to trade. The countries that are catching up with rich ones are those that are open to trade; and the more open they are, the faster they are converging.

5. Stuart Carlson, political cartoon from the *Milwaukee Journal-Sentinel*, 2005.



The 1950s
BE SURE TO FINISH YOUR DINNER. THERE ARE CHILDREN STARVING IN CHINA AND INDIA!
Today
BE SURE TO FINISH YOUR HOMEWORK. THERE ARE CHILDREN STUDYING IN CHINA AND INDIA!!

6. Former president Bill Clinton, speech at Guildhall, London, 2006.

I spent a lot of time working on globalization when I was president, coming to terms with the fundamental fact of interdependence that goes far beyond economics: open border, easy travel, easy immigration, free flow of money as well as people, products, and services. I tried to figure out how to maximize the dynamism of global interdependence and still broaden its impact in terms of economics and opportunity. The one thing that I am quite sure of is that interdependence is not a choice, it's not a policy, it is the inevitable condition of our time. So, divorce is not an option. . . .

Therefore, the mission of the moment clearly is to build up the positive and reduce the negative forces of global interdependence in a way that enables us to keep score in the right way. Are people going to be better off, will our children have a better chance, will we be more united than divided?

ANALYZING THE EVIDENCE

1. Free trade means that goods can move between countries without restriction or taxation (such as tariffs or duties). Compare sources 1, 3, 5, and 6. How do these different sources explain the effects of freer trade across the globe? How would you interpret the WTO's optimism about free trade alongside Petra Mata's personal experience of displacement?
2. How is increased global communication important to the trade relationships described in source 2? According to source 4, what are some other effects associated with the trade relationships shown here?
3. What tension in globalization is the cartoonist in source 5 attempting to capture? What kind of change over time has the cartoonist identified?

AP® DBQ PRACTICE

Based on this chapter's discussion of globalization, and using the above documents, write an essay in which you examine the economic effects of recent global integration. In particular, use your essay to define globalization and to outline some of its potential positive and negative effects.

manufacturing base in the United States continues to shrink, costing jobs and adversely affecting communities. Second, until quite recently China kept its currency low against the dollar primarily by purchasing American debt. China now owns 7 percent of total U.S. debt, making it the largest foreign holder alongside Japan. Many economists believe that it is unwise to allow a single country to wield so much influence over the U.S. currency supply. Should this relationship continue unchanged, Americans may find their manufacturing sector contracting even more severely in the coming decades.

AP® PRACTICES & SKILLS

CAUSATION

What were the major consequences for the United States of the economic rise of China and the European Union?

WTO Demonstration, Seattle, 1999 In November 1999, an estimated 50,000 to 100,000 people from many states and foreign nations staged a major protest at a World Trade Organization (WTO) meeting in Seattle. The goals of the protesters were diffuse; many feared that the trend toward a system of free (capitalist-run) trade would primarily benefit multinational corporations and would hurt both developing nations and the working classes in the industrialized world. Protests have continued at subsequent meetings of the WTO and the World Bank. Hector M...

A New Era of Globalization

Americans have long depended on foreign markets to which they export their goods and have long received imported products and immigrants from other countries. But the *intensity* of international exchange has varied over time. The end of the Cold War shattered barriers that had restrained international trade and impeded capitalist development of vast areas of the world. New communications systems — satellites, fiber-optic cables, global positioning networks — were shrinking the world's physical spaces to a degree unimaginable at the beginning of the twentieth century. Perhaps most important, global financial markets became integrated to an unprecedented extent, allowing investment capital to "flow" into and out of nations and around the world in a matter of moments.

AP® EXAM TIP

Recognize the role of world organizations in promoting global economic change.

International Organizations and Corporations International organizations, many of them created in the wake of World War II, set the rules for capitalism's worldwide expansion: the World Bank, the International Monetary Fund (IMF), and the General Agreement on Tariffs and Trade (GATT). During the final decades of the Cold War, the leading capitalist industrial nations formed the Group of Seven (G7) to manage global economic policy. Russia joined in 1997, creating the **Group of Eight (G8)**. The G8 nations — the United States, Britain, Germany, France, Italy, Japan, Canada, and

Global Trade, 1960–2009

One of the major consequences of economic globalization is an increase in trade among nations. The figures below show imports and exports for four of the world's largest economies.

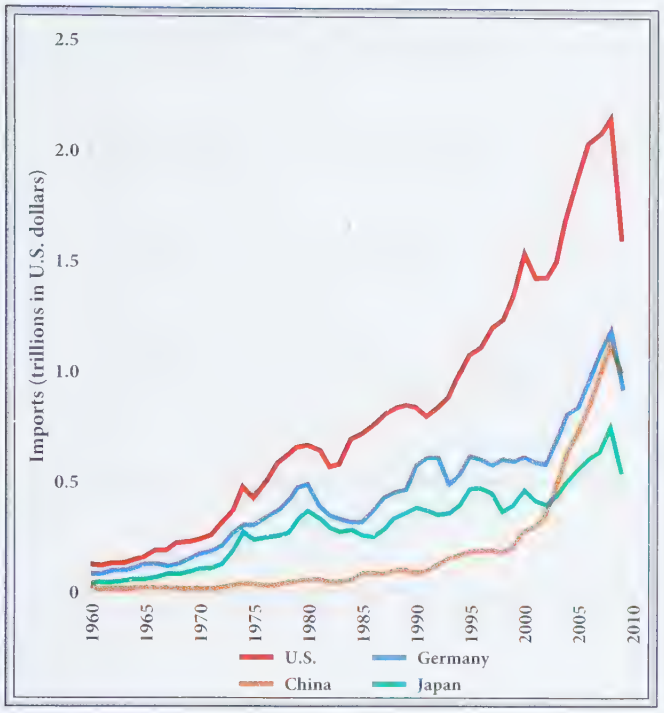

FIGURE 30.3 Imports, 1960–2009

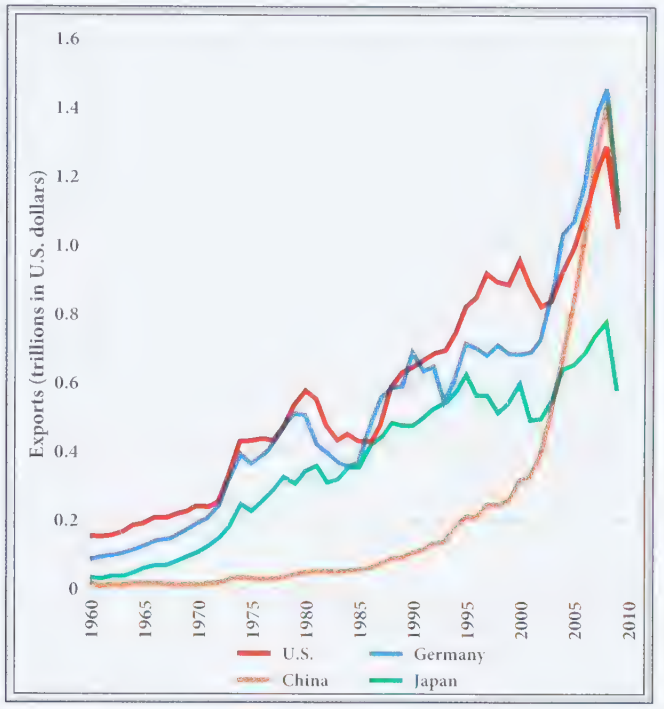

FIGURE 30.4 Exports, 1960–2009

QUESTIONS FOR ANALYSIS

1. Notice how U.S. imports rose at roughly the same rate as those of other countries until the 1970s. What accounts for the acceleration of U.S. imports thereafter?
2. China's exports rose spectacularly after the 1990s. Germany increased its exports in this period dramatically as well. What evidence do you see here for increasing competition for the United States in a globalizing economy?

Russia—largely controlled the major international financial organizations (Russia was suspended from the G8 in 2014). In 1995, GATT evolved into the World Trade Organization (WTO), with nearly 150 participating nations that regulate and formalize trade agreements with member states.

As globalization accelerated, so did the integration of regional economies. To offset the economic clout of the European bloc, in 1993 the United States, Canada, and Mexico signed the **North American Free Trade Agreement (NAFTA)**. This treaty, as ratified by the U.S. Congress, envisioned the eventual creation of a free-trade zone covering all of North America. In East Asia, the capitalist nations of Japan, South Korea, Taiwan, and Singapore consulted on economic policy; as China developed a quasi-capitalist economy and became a major exporter of manufactures, its Communist-led government joined their deliberations.

International organizations set the rules, but globalization was made possible by the proliferation of **multinational corporations** (MNCs). In 1970, there were 7,000 corporations with offices and factories in multiple countries; by 2000, the number had

MAP 30.1 Growth of the European Community, 1951–2016
The European Community (EU) began in the 1950s as a loose organization of Western European nations. Over the course of the following decades, it created stronger common institutions, such as the European Parliament in Strasbourg, the EU Commission in Brussels, and the Court of Justice in Luxembourg. With the collapse of communism, the EU expanded to include the nations of Eastern and Central Europe. It now includes twenty-eight nations and over 500 million people. Many states have applied for membership and are awaiting official ascension into the union, while in 2016 the United Kingdom voted to exit the EU.

exploded to 63,000. Many of the most powerful MNCs were, and continue to be, based in the United States. Walmart, the biggest American retailer, is also one of the world's largest corporations, with 6,000 stores in other nations and more than $475 billion in sales in 2015. Apple, maker of the iPhone and iPad, grew spectacularly in the 2000s and now has more than $170 billion in annual global sales. The McDonald's restaurant chain had 1,000 outlets outside the United States in 1980; twenty years later, there were nearly 13,000, and "McWorld" had become a popular shorthand term for globalization.

Globalization was driven by more than a quest for new markets. Corporations also sought ever-cheaper sources of labor. Many American MNCs closed their factories in the United States and outsourced manufacturing jobs to plants in Mexico, Eastern Europe, and especially Asia. The athletic sportswear firm Nike was a prime example. By 2005, Nike had established 700 factories worldwide that employed more than 650,000 workers, most of whom received low wages, endured harsh working conditions, and had no health or pension benefits. Highly skilled jobs were outsourced as well.

Financial Deregulation One of the principal differences between this new era of globalization and previous eras has been the opening of national financial and currency markets to investment from around the world. The United States and Britain led the way. Both countries came under the sway of powerful political forces in the 1980s calling for the total deregulation of banks, brokerage houses, investment firms, and financial markets — letting the free market replace government oversight. Together, the United States and Britain led a quiet revolution in which investment markets around the world were gradually set free.

Financial deregulation led to spectacular profits for investors but produced a more fragile, crash-prone global economy. On the profit side, financial-industry profits in the United States rose from less than 10 percent of total business profits in the 1950s to more than 40 percent beginning in the 1990s. But the costs were becoming clear as well: the bankruptcy of the American savings and loan industry in the 1980s; the "lost decade" in Japan in the 1990s; the near bankruptcy of Russia in the late 1990s and of Argentina in 2001; the 1997 Asian financial crisis, centered in Thailand and Indonesia; and the Great Recession, which affected the entire global economy in 2008. These and other episodes dramatized the extraordinary risks that financial globalization has introduced.

AP® PRACTICES & SKILLS

COMPARE & CONTRAST

What were the potential benefits and risks of globalization to the United States and other countries?

Revolutions in Technology

The technological advances of the 1980s and 1990s changed the character of everyday life for millions of Americans, linking them with a global information and media environment unprecedented in world history. Not since television was introduced to American homes in the years following World War II had technology so profoundly

A Nike Factory in Vietnam In 2000, Nike was the largest foreign investor in Vietnam, where the company produced shoes and sportswear in ten subcontracting factories employing nearly 40,000 workers. Most of the workers were young women from small, rural villages who earned the equivalent of about $60 a month. Those wages were low, but still above the country's minimum wage. Nike in Vietnam epitomized the globalization of manufacturing and trade and the quest by American companies for a low-wage workforce. Nike also dramatically expanded its presence in China during the 2000s, where the company's products were produced in 124 subcontracted factories. AP Photo/Richard Vogel

changed the way people lived their lives. Personal computers, cell phones and smartphones, the Internet and the World Wide Web, and other electronic devices and systems altered work, leisure, and access to knowledge in stunning ways. Like unimpeded trade, these advances in communications and personal technologies enhanced globalization.

During the 1990s, personal computers, which had emerged in the late 1970s, grew even more significant with the spread of the Internet and the World Wide Web. Like the computer itself, the Internet was the product of military-based research. During the late 1960s, the U.S. Department of Defense, in conjunction with the Massachusetts Institute of Technology, began developing a decentralized computer network, the **Advanced Research Projects Agency Network (ARPANET)**. The Internet, which grew out of the ARPANET, was soon used by government scientists, academic specialists, and military contractors to exchange data, information, and electronic mail (e-mail). By the 1980s, the Internet had spread to universities, businesses, and the general public. The debut in 1991 of the graphics-based **World Wide Web**—a collection of servers that allowed access to millions of documents, pictures, and other materials—enhanced the popular appeal and commercial possibilities of the Internet. By 2011, 78 percent of all Americans and more than two billion people worldwide used the Internet to send messages, view information, and buy and sell products and services.

IN YOUR OWN WORDS How did globalization redefine the relationship of the United States to the rest of the world after the end of the Cold War?

Politics and Partisanship in a Contentious Era

Standing at the podium at the 1992 Republican National Convention, his supporters cheering by the thousands, Patrick Buchanan did not mince words. Buchanan was a former speechwriter for President Richard Nixon and a White House aide to President Ronald Reagan. Despite having lost the nomination for president, Buchanan still hoped to shape the party's message to voters. This election, he told the audience—including millions watching on television—"is about what we stand for as Americans." Citing Democratic support for abortion rights and the rights of lesbians and gay men, Buchanan claimed there was "a religious war going on in our country for the soul of America." He also called it "a cultural war," and his address became known as the "**culture war**" speech.

AP® EXAM TIP

Compare the "culture war" of the 1990s to the cultural conflicts in the 1920s and 1950s.

Buchanan's war was another name for a long-standing political struggle, dating to the 1920s, between religious traditionalists and secular liberals (Chapter 21). This time, however, Americans struggled over these questions in the long shadow of the 1960s, which had taken on an exaggerated meaning in the nation's politics. Against the backdrop of globalization, American politics in the 1990s and early 2000s careened back and forth between contests over divisive social issues and concern over the nation's economic future.

An Increasingly Plural Society

Exact estimates vary, but demographers predict that at some point between 2040 and 2050 the United States will become a "majority-minority" nation: no single ethnic or racial group will be in the numerical majority. This was already the case in four states by 2010—California, Texas, Hawaii, and New Mexico—where African Americans, Latinos, and Asians together constituted a majority of the state's residents. As this unmistakable trend became apparent in the 1990s, it fueled renewed debates over ethnic and racial identity and over public policies such as affirmative action.

New Immigrants According to the Census Bureau, the population of the United States grew from 203 million in 1970 to 280 million in 2000 (AP® Analyzing Voices). Of that 77-million-person increase, immigrants accounted for 28 million, with documented entrants numbering 21 million and undocumented entrants adding another 7 million (Figure 30.5). As a result, by 2010, 27 percent of California's population was foreign-born, as was 20 percent of New York's and 17 percent each of New Jersey's and Florida's (these percentages declined somewhat in the 2010 Census). Relatively few immigrants came from Europe, which had dominated immigration to the United States between 1880 and 1924. The overwhelming majority—some 25 million—now came from Latin America (16 million) and East Asia (9 million) (Map 30.2).

AP® EXAM TIP

Recognize the impact of changes in immigration policy on American culture and the economy.

This extraordinary inflow of immigrants was the unintended result of the **Immigration and Nationality Act** of 1965, one of the less well-known but most influential pieces of Great Society legislation (Chapter 27). Known as the Hart-Celler Act, the legislation eliminated the 1924 quota system, which had favored Northern Europe. In its place, Congress created a more equal playing field among nations and a slightly higher total limit on immigration. The legislation also eased the entry of immigrants who possessed skills in high demand in the United States. Finally, a provision with far-reaching implications was included in the new law: immediate family members of those legally resident in the United States were admitted outside of the total numerical limit.

American residents from Latin America and the Caribbean were best positioned to take advantage of the family provision. Millions of Mexicans came to the United States to join their families, and U.S. residents from El Salvador and Guatemala—tens of thousands of whom had arrived seeking sanctuary or asylum during the civil wars of the 1980s—and the Dominican Republic now brought their families to join them.

Nationally, there were now more Latinos than African Americans. Many of these immigrants profoundly shaped the emerging global economy by sending substantial portions of their earnings, called remittances, back to family members in their home countries. In 2015, for instance, workers in the United States sent $25 billion to Mexico, a massive remittance flow that constituted Mexico's third largest source of foreign exchange.

Asian immigrants came largely from China, the Philippines, South Korea, India, and Pakistan. In addition, 700,000 refugees came to the United States from Southeast Asia (Vietnam, Laos, and Cambodia) after the Vietnam War. This immigration signaled more than new flows of people into the United States. Throughout much of its history, the United States had oriented itself toward the Atlantic. Indeed, at the end of the nineteenth century, American secretary of state John Hay observed, "The Mediterranean is the ocean of the past; the Atlantic the ocean of the present." He added, presciently, "The Pacific [is] the ocean of the future." By the last decades of the twentieth century, Hay's future had arrived. As immigration from Asia increased, as Japan and China grew more influential

New Immigrants In the early years of the 2000s, more immigrants lived in the United States than at any time since the first decades of the twentieth century. Most came from Asia, Latin America, and Africa. Many, like those pictured here, started small businesses that helped revive the economies of urban and suburban neighborhoods across the country. Brand X Pictures/SuperStock

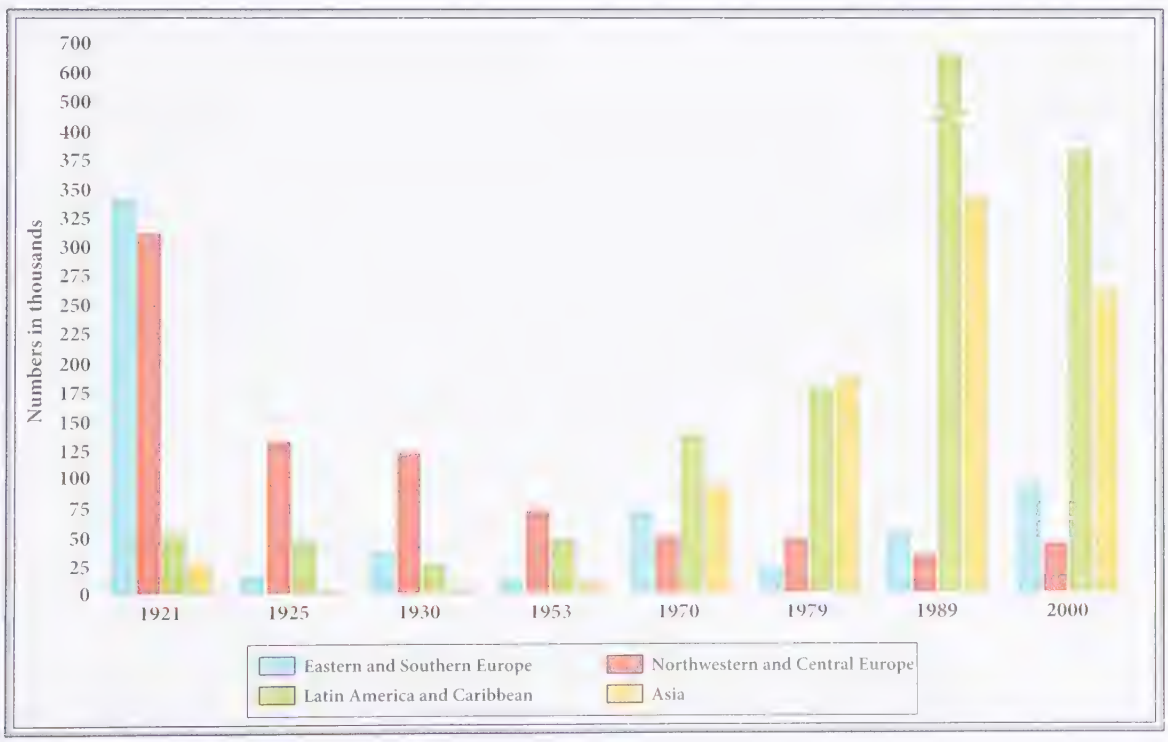

FIGURE 30.5 American Immigration, 1920–2000
Legislation inspired by nativism slowed the influx of immigrants after 1920, as did the dislocations brought on by economic depression and war in the 1930s and 1940s. Note the high rate of non-European immigration since the 1970s, the result of new eligibility rules in the Immigration and Nationality Act of 1965 (Chapter 27). The dramatic increase since 1980 in the number of migrants from Latin America and Asia reflects American economic prosperity, traditionally a magnet for migrants, and the rapid acceleration of undocumented immigration.

Immigration After 1965: Its Defenders and Critics

As we have seen in this chapter, the immigration law passed by Congress in 1965 combined with global developments to shift the flows of people seeking entry to the United States. More and more immigrants came from Latin America, the Caribbean, Asia, and Africa. Immigration has always been politically controversial, but in the 1990s a renewed, and often polarized, debate over immigration emerged.

JOHN F. KENNEDY

A Nation of Immigrants, 1964

This selection is from a revised, and posthumously published, version of a book Kennedy originally published in 1958.

SOURCE: Nicholas Capaldi, ed., *Immigration: Debating the Issues* (Amherst, NY: Prometheus Books, 1997), 128.

"Immigration policy should be generous; it should be fair; it should be flexible. With such a policy we can turn to the world, and to our own past with clean hands and a clean conscience. Such a policy would be a reaffirmation of old principles. It would be an expression of our agreement with George Washington that 'The bosom of America is open to receive not only the opulent and respectable stranger, but the oppressed and persecuted of all nations and religions; whom we shall welcome to a participation of all our rights and privileges, if by decency and propriety of conduct they appear to merit the enjoyment.'"

ROY BECK

"A Nation of (Too Many) Immigrants?" 1996

Roy Beck is a former journalist who became an activist for immigration reduction.

SOURCE: From *The Case Against Immigration: The Moral, Economic, Social, and Environmental Reasons for Reducing U.S. Immigration Back to Traditional Levels*, by Roy H. Beck (New York: W. W. Norton & Company, 1996). Used by permission of the author.

"Since 1970, more than 30 million foreign citizens and their descendants have been added to the local communities and labor pools of the United States. It is the numerical equivalent of having relocated within our borders the entire present population of all Central American countries.

Demographic change on such a massive scale — primarily caused by the increased admission of *legal* immigrants — inevitably has created winners and losers among Americans. Based on opinion polls, it appears that most Americans consider themselves net losers and believe that the United States has become 'a nation of too many immigrants.'

What level of immigration is best for America, and of real help to the world? Although we often hear that the United States is a nation of immigrants, we seldom ask just what that means. It can be difficult to ask tough questions about immigration when we see nostalgic images of Ellis Island, recall our own families' coming to America, or encounter a new immigrant who is striving admirably to achieve the American dream.

But tough questions about immigration can no longer be avoided as we enter a fourth decade of unprecedentedly high immigration and struggle with its impact on our job markets, on the quality of life and social fabric of our communities, and on the state of the environment. . . .

The task before the nation in setting a fair level of immigration is not about race or some vision of a homogenous white America; it is about protecting and enhancing the United States' unique experiment in democracy for all Americans, including recent immigrants, regardless of their particular ethnicity. It is time to confront the true costs and benefits of immigration numbers, which have skyrocketed beyond our society's ability to handle them successfully."

economically, and as more and more transnational trade crossed the Pacific, commentators on both sides of the ocean began speaking of the Pacific Rim as an important new region.

Multiculturalism and Its Critics Most new immigrants arrived under the terms of the 1965 law. But those who entered without legal documentation stirred political controversy. After twenty years under the new law, there were between three and five million immigrants without legal status. In 1986, to remedy this situation, Congress passed the Immigration Reform and Control Act. The law granted citizenship to many of those who had arrived outside the law's numerical limits, provided incentives for employers not to hire undocumented immigrants, and increased surveillance along the border with Mexico.

VERNON M. BRIGGS JR. AND STEPHEN MOORE

"Still an Open Door?" 1994

Two academic policy analysts weigh in on the immigration debate.

SOURCE: Vernon M. Briggs Jr. and Stephen Moore, *Still an Open Door? U.S. Immigration Policy and the American Economy* (Washington, DC: The American University Press, 1994), 78.

"Immigrants are certainly not an unmixed blessing. When the newcomers first arrive, they impose short-term costs on the citizenry. Because immigration means more people, they cause more congestion of our highways, a more crowded housing market, and longer waiting lines in stores and hospitals. In states such as California, immigrants' children are heavy users of an already overburdened public school system, and so on. Some immigrants abuse the welfare system, which means that tax dollars from Americans are transferred to immigrant populations. Los Angeles County officials estimate that immigrants' use of county services costs the local government hundreds of millions of dollars each year. . . .

The benefits of immigration, however, are manifold. Perhaps the most important benefit is that immigrants come to the United States with critically needed talents, energies, and ambitions that serve as an engine for economic progress and help the United States retain economic and geopolitical leadership. Because for most of the world's immigrants, America is their first choice, the United States is in a unique position to select the most brilliant and inventive minds from the United Kingdom, Canada, China, Korea, India, Ireland, Mexico, Philippines, Russia, Taiwan, and other nations. Because most immigrants are not poor, tired, huddled masses, but rather are above the average of their compatriots in skill and education levels, the immigration process has a highly beneficial self-selection component, a skimming of the cream of the best workers and top brainpower from the rest of the world."

PRESIDENT BARACK OBAMA

June 15, 2012, Announcement at the White House Rose Garden

In 2012 the president announced a new policy allowing many immigrants to avoid deportation and apply for work authorization.

SOURCE: *New York Times*, June 15, 2012.

"This morning, Secretary Napolitano [Secretary of Department of Homeland Security] announced new actions my administration will take to mend our nation's immigration policy, to make it more fair, more efficient and more just, specifically for certain young people sometimes called DREAMers.

Now, these are young people who study in our schools, they play in our neighborhoods, they're friends with our kids, they pledge allegiance to our flag. They are Americans in their heart, in their minds, in every single way but one: on paper. They were brought to this country by their parents, sometimes even as infants, and often have no idea that they're undocumented until they apply for a job or a driver's license or a college scholarship.

Put yourself in their shoes. Imagine you've done everything right your entire life, studied hard, worked hard, maybe even graduated at the top of your class, only to suddenly face the threat of deportation to a country that you know nothing about, with a language that you may not even speak.

That's what gave rise to the Dream Act. It says that if your parents brought you here as a child, you've been here for five years and you're willing to go to college or serve in our military, you can one day earn your citizenship. And I've said time and time and time again to Congress that — send me the Dream Act, put it on my desk, and I will sign it right away. . . ."

QUESTIONS FOR ANALYSIS

1. Compare and contrast the different views on immigration presented here. What are the pros and cons of immigration?
2. Does the debate over immigration depend on whether immigrants are pictured as skilled and educated or unskilled and poor? Explain why it should or shouldn't.
3. The Dream Act that President Obama mentions was stalled in Congress in 2012. What kinds of appeals does he make on behalf of immigrants? How do they compare with Kennedy's remarks?

Immigration critics persisted, however. In 1992, Patrick Buchanan warned Americans that their country was "undergoing the greatest invasion in its history, a migration of millions of illegal aliens a year from Mexico." Many states took immigration matters into their own hands. In 1994, for instance, Californians approved Proposition 187, a ballot initiative that barred undocumented immigrants from public schools, nonemergency care at public health clinics, and all other state social services (after five years in federal court, the controversial measure was ruled unconstitutional). Two decades later, in 2016, immigration's critics massed behind Republican presidential nominee Donald Trump, who repeatedly pledged to "build a wall" between the U.S. and Mexico and to deport the approximately 11 million undocumented immigrants who resided in the country.

Debates over post-1965 immigration looked a great deal like conflicts in the early decades of the century. Then, many native-born white Protestants worried that the

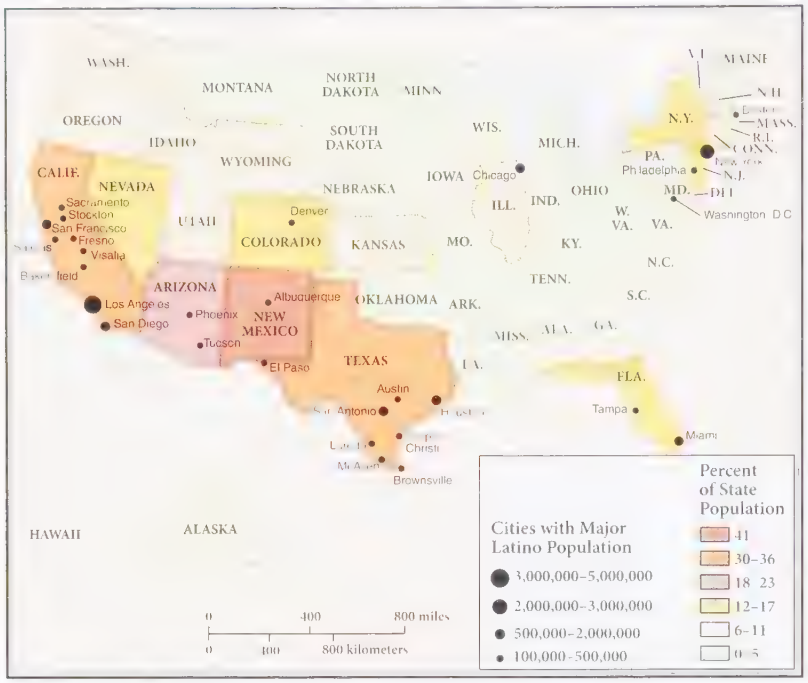
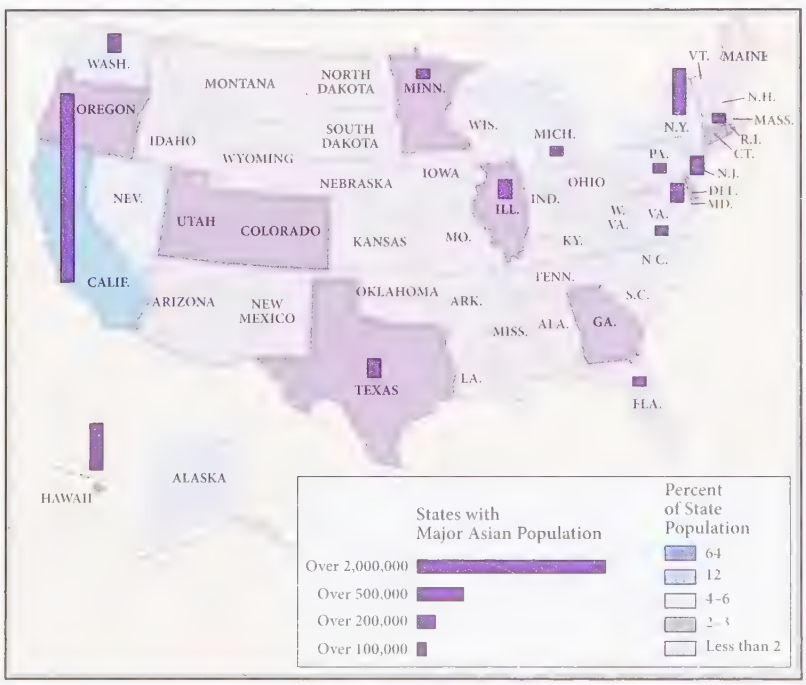




MAP 30.2 Latino and Asian Populations, 2000
In 2000, people of Latin American descent made up more than 11 percent of the American population, and they now outnumber African Americans as the largest minority group. Asian Americans accounted for an additional 4 percent of the population. Demographers predict that by the year 2050 only about half of the U.S. population will be composed of non-Latino whites. Note the high percentage of Latinos and Asians in California and certain other states.

largely Jewish and Catholic immigrants from Southern and Eastern Europe, along with African American migrants leaving the South, could not assimilate and threatened the "purity" of the nation. Although the conflicts looked the same, the cultural paradigm had shifted. In the earlier era, the *melting pot*—a term borrowed from the title of a 1908 play—became the metaphor for how American society would accommodate its newfound diversity. Some native-born Americans found solace in the melting-pot concept because it implied that a single "American" culture would predominate. In the 1990s, however, a different concept, **multiculturalism**, emerged to define social diversity. Americans, this concept suggested, were not a single people into whom others melted; rather, they comprised a diverse set of ethnic and racial groups living and working together. A shared set of public values held the multicultural society together, even as different groups maintained unique practices and traditions.

Critics, however, charged that multiculturalism sowed division and conferred preferential treatment on minority groups. Many government policies, as well as a large number of private employers, for instance, continued to support affirmative action programs designed to bring African Americans and Latinos into public- and private-sector jobs and universities in larger numbers. Conservatives argued that such governmental programs were deeply flawed because they promoted "reverse discrimination" against white men and women and resulted in the selection and promotion of less qualified applicants for jobs and educational advancement.

California stood at the center of the debate. In 1995, under pressure from Republican governor Pete Wilson, the regents of the University of California scrapped their entire affirmative action admissions policy. A year later, California voters approved **Proposition 209**, which outlawed affirmative action in state employment and public education. At the height of the 1995 controversy, President Bill Clinton delivered a major speech defending affirmative action. He reminded Americans that Richard Nixon, a Republican president, had endorsed affirmative action, and he concluded by saying the nation should "mend it," not "end it." However, as in the *Bakke* decision of the 1970s (Chapter 28), it was the U.S. Supreme Court that spoke loudest on the subject. In two parallel 2003 cases, the Court invalidated one affirmative action plan at the University of Michigan but allowed racial preference policies that promoted a

"diverse" student body. Thus diversity became the law of the land, the constitutionally acceptable basis for affirmative action. The policy had been narrowed but preserved.

Additional anxieties about a multicultural nation centered on language. In 1998, Silicon Valley software entrepreneur Ron Unz sponsored a California initiative calling for an end to bilingual education in public schools. Unz argued that bilingual education had failed because it did not adequately prepare Spanish-speaking students to succeed in an English-speaking society. The state's white, Anglo residents largely approved of the measure; most Mexican American, Asian American, and civil rights organizations opposed it. When Unz's measure, Proposition 227, passed with a 61 percent majority, it seemed to confirm the limits of multiculturalism in the nation's most diverse state.

AP® PRACTICES & SKILLS

CHANGE OVER TIME

How did anti-immigrant sentiment increase between the 1960s and the 1990s, and what sorts of actions were taken by those opposed to immigration?

Clashes over "Family Values"

If the promise of a multicultural nation was one contested political issue, another was American families. New Right conservatives charged that the "abrasive experiments of two liberal decades," as a Reagan administration report put it, had eroded respect for marriage and what they had called, since the 1970s, "family values." They pointed to the 40 percent rate of divorce among whites and the nearly 60 percent rate of out-of-wedlock pregnancies among African Americans. To conservatives, there was a wide range of culprits: legislators who enacted liberal divorce laws, funded child care, and allowed welfare payments to unmarried mothers, as well as judges who condoned abortion and banished religious instruction from public schools.

AP® EXAM TIP

Analyze the intense debates that continue in American society over diversity, gender, and family.

Abortion Abortion was central to the battles between feminists and religious conservatives and a defining issue between Democrats and Republicans. Feminists who described themselves as prochoice viewed the issue from the perspective of the pregnant woman; they argued that the right to a legal, safe abortion was crucial to her autonomy over her body and life. Conversely, religious conservatives, who pronounced themselves prolife, viewed abortion from the perspective of the unborn fetus and claimed that its rights trumped those of the mother. That is where the debate had stood since the U.S. Supreme Court's 1973 decision in *Roe v. Wade*.

By the 1980s, fundamentalist Protestants had assumed leadership of the antiabortion movement, which became increasingly confrontational and politically powerful. In 1987, the religious activist Randall Terry founded **Operation Rescue**, which mounted protests outside abortion clinics and harassed their staffs and clients. While such vocal protests took shape outside clinics, antiabortion activists also won state laws that limited public funding for abortions, required parental notification before minors could obtain abortions, and mandated waiting periods before any woman could undergo an abortion procedure. Such laws further restricted women's reproductive choices.

Gay Rights The issue of homosexuality stirred equally deep passions. As more gay men and women came out of the closet in the years after Stonewall (Chapter 27), they demanded legal protections from discrimination in housing, education, and employment. Public opinion about these demands varied by region, but by the 1990s, many cities and states had banned discrimination on the basis of sexual orientation. Gay rights groups also sought legal rights for same-sex couples — such as the eligibility for workplace health-care coverage — that were akin to those enjoyed by married heterosexuals. In later years, activists pushed to have transgender persons included in such protections. Many of the most prominent national gay rights organizations, such as the Human Rights Campaign, focused on full marriage equality: a legal recognition of same-sex marriage that was on par with opposite-sex marriages.

The Religious Right had long condemned homosexuality as morally wrong, and public opinion remained sharply divided. In 1992, Colorado voters approved an amendment to the state constitution that prevented local governments from enacting

Activists Protesting Outside the Supreme Court in 2002 In 2002 the Supreme Court considered a case in which the National Organization for Women (NOW) had challenged the legality of abortion clinic protests, such as those undertaken by Operation Rescue. The activists, and the case itself, demonstrated that the question of abortion remained far from settled, and Americans on all sides of the issue continued to hold passionate opinions. Mark Wilson/Ge

ordinances protecting gays and lesbians—a measure that the Supreme Court subsequently overturned as unconstitutional. That same year, however, Oregon voters defeated a more radical initiative that would have prevented the state from using any funds "to promote, encourage or facilitate" homosexuality. In 1998, Congress entered the fray by enacting the **Defense of Marriage Act**, which allowed states to refuse to recognize gay marriages or civil unions formed in other jurisdictions. Following the lead of Massachusetts, which legalized same-sex marriage in 2004, in the first decades of the twenty-first century, ten states approved gay unions: California, Connecticut, Iowa, Maine, Maryland, New Hampshire, New York, Vermont, Washington, and Rhode Island. Then, in *Obergefell v. Hodges* in 2015, the Supreme Court ruled that states could not prohibit same-sex marriage under the constitution. Remarkably, in a generation, marriage equality had prevailed.

Culture Wars and the Supreme Court Divisive rights issues increasingly came before the U.S. Supreme Court. Abortion led the way, with abortion rights activists challenging the constitutionality of the new state laws limiting access to the procedure. In ***Webster v. Reproductive Health Services*** (1989), the Supreme Court upheld the authority of state governments to limit the use of public funds and facilities for abortions. Then, in the important case of ***Planned Parenthood of Southeastern Pennsylvania v. Casey*** (1992), the Court upheld a law requiring a twenty-four-hour waiting period prior to an abortion. Surveying these and other decisions, a reporter suggested that 1989 was "the year the Court turned right," with a conservative majority ready and willing to limit or invalidate liberal legislation and legal precedents.

This observation was only partly correct. The Court was not yet firmly conservative. Although the *Casey* decision upheld certain restrictions on abortions, it affirmed the "essential holding" in *Roe v. Wade* (1973) that women had a constitutional right to control their reproduction. Justice David Souter, appointed to the Court by President George H. W. Bush in 1990, voted with Reagan appointees Sandra Day O'Connor and Anthony Kennedy to uphold *Roe*. Souter, like O'Connor, emerged as an ideologically moderate justice on a range of issues. Moreover, in a landmark decision, ***Lawrence v. Texas*** (2003), the Supreme Court limited the power of states to prohibit private homosexual activity between consenting adults and, more recently, in *Windsor v. United States* (2013) declared the Defense of Marriage Act unconstitutional. The Court had crept incrementally, rather than lurched, to the right while signaling its continued desire to remain within the broad mainstream of American public opinion, particularly on the issues of reproduction and marriage equality.

AP® PRACTICES & SKILLS

CAUSATION

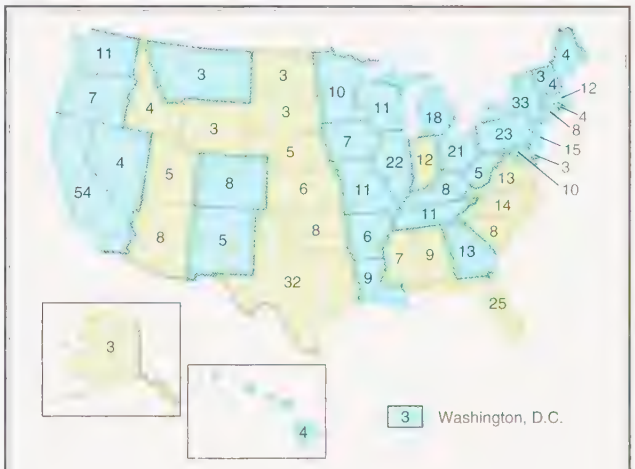
How did clashes over "family values" alter American politics in the 1990s?

Bill Clinton and the New Democrats

The culture wars contributed to a new, divisive partisanship in national politics. Rarely in the twentieth century had the two major parties so adamantly refused to work together. Also rare was the vitriolic rhetoric that politicians used to describe their opponents. The fractious partisanship was filtered through — or, many would argue, created by — the new twenty-four-hour cable news television networks, such as Fox News and CNN. Commentators on these channels, finding that nothing drew viewers like aggressive partisanship, increasingly abandoned their roles as conveyors of information and became entertainers and provocateurs.

That divisiveness was a hallmark of the presidency of William (Bill) Jefferson Clinton. In 1992, Clinton, the governor of Arkansas, styled himself a New Democrat who would bring Reagan Democrats and middle-class voters back to the party. Only forty-six, he was an energetic, ambitious policy wonk — extraordinarily well informed about the details of public policy. To win the Democratic nomination in 1992, Clinton had to survive charges that he embodied the permissive social values conservatives associated with the 1960s: namely, that he dodged the draft to avoid service in Vietnam, smoked marijuana, and cheated repeatedly on his wife. The charges were damaging, but Clinton **adroitly** talked his way into the presidential nomination: he had charisma and a way with words. When he chose Albert A. Gore, a senator from Tennessee, as his running mate, they became the first baby boom national ticket as well as the nation's first all-southern major-party ticket.

President George H. W. Bush won renomination over his lone opponent Pat Buchanan. The Democrats mounted an aggressive campaign that focused on Clinton's domestic agenda: he promised a tax cut for the middle class, universal health insurance, and a reduction of the huge Republican budget deficit. It was an audacious combination of traditional social-welfare liberalism and fiscal conservatism. For his part, Bush could not overcome voters' discontent with the weak economy and conservatives' disgust at his tax hikes. He received only 38.0 percent of the popular vote as millions of Republicans cast their ballots for independent businessman Ross Perot, who won more votes (19.0 percent) than any independent candidate since Theodore Roosevelt in 1912. With 43.7 percent of the vote, Clinton won the election (Map 30.3).



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
William J. Clinton (Democrat)	370	44,908,232	43.7
George H. W. Bush (Republican)	168	39,102,282	38.0
H. Ross Perot (Independent)	0	19,725,433	19.0

MAP 30.3 The Presidential Election of 1992

The first national election after the end of the Cold War focused on the economy, which had fallen into a recession in 1991. The first-ever all-southern Democratic ticket of Bill Clinton (Arkansas) and Al Gore (Tennessee) won support across the country but won the election with only 43.7 percent of the popular vote. The Republican candidate, President George H. W. Bush, ran strongly in his home state of Texas and the South, an emerging Republican stronghold. Independent candidate H. Ross Perot, a wealthy technology entrepreneur, polled an impressive 19.0 percent of the popular vote by capitalizing on voter dissatisfaction with the huge federal deficits of the Reagan-Bush administrations.

Among all post–World War II presidents, only Richard Nixon (in 1969) entered the White House with a comparably small share of the national vote.

AP® EXAM TIP

Analyze the successes and failures of Bill Clinton and the New Democrats.

New Democrats and Public Policy Clinton tried to steer a middle course through the nation's increasingly divisive partisanship. On his left was the Democratic Party's weakened but still vocal liberal wing. On his right were party moderates influenced by Reagan-era notions of reducing government regulation and the welfare state. Clinton's "third way," as he dubbed it, called for the new president to tailor his proposals to satisfy these two quite different — and often antagonistic — political constituencies. Clinton had notable successes as well as spectacular failures pursuing this course.

The spectacular failure came first. Clinton's most ambitious social-welfare goal was to provide a system of health care that would cover all Americans and reduce the burden of health-care costs on the larger economy. It was an objective that had eluded every Democratic president since Harry Truman. Recognizing the potency of Reagan's attack on "big government," Clinton's health-care task force — led by First Lady Hillary Clinton — proposed a system of "managed competition." Private insurance companies and market forces were to rein in health-care expenditures. The cost of this system would fall heavily on employers, and many smaller businesses campaigned strongly against it. So did the health insurance industry and the American Medical Association, powerful lobbies with considerable influence in Washington. By mid-1994, Democratic leaders in Congress declared that the Clintons' universal health-care proposal was dead. Forty million Americans, or 15 percent of the population, remained without health insurance coverage.

More successful was Clinton's plan to reduce the budget deficits of the Reagan-Bush presidencies. In 1993, he secured a five-year budget package that would reduce the federal deficit by $500 billion. Republicans unanimously opposed the proposal because it raised taxes on corporations and wealthy individuals, and liberal Democrats complained because it limited social spending. But shared sacrifice led to shared rewards. By 1998, Clinton's fiscal policies had balanced the federal budget and begun to pay down the federal debt — at a rate of $156 billion a year between 1999 and 2001. As fiscal sanity returned to Washington, the economy boomed, thanks in part to the low interest rates stemming from deficit reduction.

The Republican Resurgence The midterm election of 1994 confirmed that the Clinton presidency had not produced an electoral realignment: conservatives still had a working majority. In a well-organized campaign, in which grassroots appeals to the New Right dominated, Republicans gained fifty-two seats in the House of Representatives, giving them a majority for the first time since 1954. They also retook control of the Senate and captured eleven governorships. Leading the Republican charge was Representative Newt Gingrich of Georgia, who revived calls for significant tax cuts, reductions in welfare programs, anticrime initiatives, and cutbacks in federal regulations. These initiatives, which Gingrich promoted under the banner of a "**Contract with America**," had been central components of the conservative-backed Reagan Revolution of the 1980s, but Gingrich believed that under the presidency of George H. W. Bush Republicans had not emphasized them enough.

In response to the massive Democratic losses in 1994, Clinton moved to the right. Claiming in 1996 that "the era of big government is over," he avoided expansive social-welfare proposals for the remainder of his presidency and sought Republican support for a centrist New Democrat program. The signal piece of that program was reforming the welfare system, a measure that saved relatively little money but carried a big ideological message. Many taxpaying Americans believed — with some supporting evidence — that the Aid to Families with Dependent Children (AFDC) program encouraged female recipients to remain on welfare rather than seek employment. In August 1996, the federal government abolished AFDC, achieving a long-standing goal of conservatives when Clinton signed the **Personal Responsibility and Work**

AP® PRACTICES & SKILLS

POINT OF VIEW

What made President Clinton a "New Democrat," and how much did his proposals differ from traditional liberal objectives?

Opportunity Reconciliation Act. Liberals were furious with the president.

Clinton's Impeachment Following a relatively easy victory in the 1996 election, Clinton's second term unraveled when a sex scandal led to his impeachment. Clinton denied having had a sexual affair with Monica Lewinsky, a former White House intern, and Republicans concluded that Clinton had committed perjury and obstructed justice and that these actions were grounds for impeachment. Viewed historically, Americans have usually defined "high crimes and misdemeanors" — the constitutional standard for impeachment — as involving a serious abuse of public trust that endangered the republic. In 1998, conservative Republicans favored a much lower standard because of their total opposition to the Clinton presidency. On December 19, the House of Representatives narrowly approved two articles of impeachment. Only a minority of Americans supported the House's action; according to a CBS News poll, 38 percent favored impeachment while 58 percent opposed it. Chastened by the lack of public support, in early 1999 Republicans in the Senate fell well short of the two-thirds majority they needed to remove the president. But like Andrew Johnson, the only other president to be tried by the Senate, Clinton and the Democratic Party paid a high price for his acquittal. Preoccupied with defending himself, the president was unable to fashion a Democratic alternative to the Republicans' domestic agenda.

Bill Clinton President William (Bill) Clinton returned the Democratic Party to the White House after twelve years under Ronald Reagan and George H. W. Bush. Clinton was best known politically for what he called the *third way*, a phrase that described his efforts to craft policies that appealed to both liberals and moderates in his party. Here he signs the Welfare Reform Act of 1996 (officially the Personal Responsibility and Work Opportunity Reconciliation Act), which brought an end to the federal AFDC program that Democrats had created in 1935. AP Photo/J. Scott Applewhite

Post–Cold War Foreign Policy

Politically weakened after 1994, Clinton believed he could nonetheless make a difference on the international stage. There, post–Cold War developments gave him historic opportunities. The 1990s was a decade of stunning change in Europe and Central Asia. A great arc of newly independent states emerged as the Soviet empire collapsed. The majority of the 142 million people living in the former Soviet states were poor, but the region had a sizable middle class and was rich in natural resources, especially oil and natural gas.

Among the challenges for the United States was the question of whether to support the admission of some of the new states into the North Atlantic Treaty Organization (NATO) (Chapter 24). Many observers believed, with ample justification, that extending the NATO alliance into Eastern Europe, right up to Russia's western border, would damage U.S-Russian relations. However, Czechoslovakia, Poland, and Hungary were also eager to become NATO members — three nations that Stalin had decisively placed in the Soviet sphere of influence at the close of World War II. Clinton encouraged NATO admission for those three countries but stopped short of advocating a broader expansion of the alliance. Nonetheless, by 2010, twelve new nations — most of them in Eastern Europe — had been admitted to the NATO alliance. Nothing symbolized the end of the Cold War more than the fact that ten of those nations were former members of the Warsaw Pact. As some observers had feared, however, NATO's expansion damaged U.S.-Russian relations. Russia's leader since 2000, Vladimir Putin, has made no secret of his disdain for the West's encroachment.

AP® EXAM TIP

Evaluate the role of the U.S. as the world's leading superpower since the 1990s.

The Breakup of Yugoslavia Two of the new NATO states, Slovenia and Croatia, emerged from an intractable set of conflicts that led to the dissolution of the communist nation of Yugoslavia. In 1992, the heavily Muslim province of Bosnia-Herzegovina declared its independence, but its substantial Serbian population refused to live in a Muslim-run multiethnic state. Slobodan Milosevic, an uncompromising Serbian nationalist, launched a ruthless campaign of "ethnic cleansing" to create a Serbian state. In November 1995, Clinton organized a NATO-led bombing campaign and peacekeeping effort, backed by 20,000 American troops, that ended the Serbs' vicious expansionist drive. Four years later, a new crisis emerged in Kosovo, another province of the Serbian-dominated Federal Republic of Yugoslavia. Again led by the United States, NATO intervened with air strikes and military forces to preserve Kosovo's autonomy. By 2008, seven independent nations had emerged from the wreckage of Yugoslavia.

America and the Middle East No post–Cold War development proved more challenging than the emergence of radical Islamic movements in the Middle East. Muslim nations there had a long list of grievances against the West. Colonialism — both British and French — in the early decades of the twentieth century had been thoroughly exploitive. A U.S.-sponsored overthrow of Iran's government in 1953 — and twenty-five years of American support for the Iranian shah — was also a sore point. America's support for Israel in the 1967 Six-Day War and the 1973 Yom Kippur War and its near-unconditional backing of Israel in the 1980s were particularly galling to Muslims. The region's religious and secular moderates complained about these injustices, but many of them had political and economic ties to the West that constrained their criticism.

This situation left an opening for radical Islamic fundamentalists to build a movement based on fanatical opposition to Western imperialism and consumer culture. These groups interpreted the American presence in Saudi Arabia as signaling new U.S. colonial ambitions in the region. Clinton had inherited from President George H. W. Bush a defeated Iraq and a sizable military force — about 4,000 Air Force personnel — in Saudi Arabia. Clinton also enforced a UN-sanctioned embargo on trade with Iraq, a policy designed to constrain Saddam Hussein's military that ultimately denied crucial goods to the civilian population. Spurred by their opposition to U.S. intervention in the region, Muslim fundamentalists soon began targeting Americans. In 1993, radical Muslim immigrants set off a bomb beneath the World Trade Center in New York City, killing six people and injuring more than a thousand. Terrorists used truck bombs to blow up U.S. embassies in Kenya and Tanzania in 1998, and they bombed the USS *Cole* in the Yemeni port of Aden in 2000.

Saudi Arabia: Oil Exporter and U.S. Ally The Defense and Aviation Minister of Saudi Arabia presents President Bill Clinton with airplane contracts with U.S. companies worth $6 billion. Between the oil crisis of the 1970s and the date of this photograph, the U.S. forged an alliance with the government of Saudi Arabia. Access to oil became increasingly critical to the U.S. in these years, and the Saudi alliance became a symbol of the indelible presence of the U.S. in the Middle East. Richard Ellis/AFP/Getty Images

The Clinton administration knew these attacks were the work of Al Qaeda, a network of radical Islamic terrorists organized by the wealthy Saudi exile Osama bin Laden. In February 1998, bin Laden had issued a call for a global struggle — a "Jihad against Jews and Crusaders," in which it was said to be the duty of every Muslim to kill Americans and their allies. After the embassy attacks, Clinton ordered air strikes on Al Qaeda bases in Afghanistan, where an estimated 15,000

operatives had been trained since 1990. The strikes failed to disrupt this growing terrorist network, and when Clinton left office, the Central Intelligence Agency (CIA), the State Department, and the Pentagon were well aware of the potential threat posed by bin Laden's followers. That was where things stood on September 10, 2001.

IN YOUR OWN WORDS What were the sources of domestic division in the United States after 1988, and how did they reshape the political landscape?

AP® PRACTICES & SKILLS

CONTEXTUALIZATION

In what specific ways were foreign policy developments during the Clinton presidency evidence of the end of the Cold War?

Into a New Century

In the second decade of the new century, Americans can reflect on three significant developments that have profoundly shaped their own day: the long war in the Middle East that began with the terrorist attack on September 11, 2001; the election of the nation's first African American president in 2008, Barack Obama (reelected in 2012); and the election of the brazenly contrarian businessman and television personality, Donald Trump, as president on November 8, 2016. Too little time has passed for us to assess exactly how these events will help to define the twenty-first century, but all three have indelibly marked our present.

The Ascendance of George W. Bush

The 2000 presidential election briefly offered the promise of a break with the intense partisanship of the final Clinton years. The Republican nominee, George W. Bush, the son of President George H. W. Bush, cast himself as a "uniter, not a divider" against his opponent, Al Gore, Clinton's vice president. The election of 2000 would join those of 1876 and 1960 as the closest and most contested in American history. Gore won the popular vote, amassing 50.9 million votes to Bush's 50.4 million, but fell short in the electoral college, 267 to 271.

Late on election night, the vote tally in Florida gave Bush the narrowest of victories. As was their legal prerogative, the Democrats demanded hand recounts in several counties. A month of tumult followed, until the U.S. Supreme Court, splitting directly along conservative-liberal lines, ordered the recount stopped and let Bush's victory stand. Recounting ballots without a consistent standard to determine "voter intent," the Court reasoned, violated the rights of Floridian voters under the Fourteenth Amendment's equal protection clause. As if acknowledging the frailty of this argument, the Court declared that *Bush v. Gore* was not to be regarded as precedent. But in a dissenting opinion, Justice John Paul Stevens warned that the transparently partisan decision undermined "the Nation's confidence in the judge as an impartial guardian of the rule of law."

Although Bush had positioned himself as a moderate, countertendencies drove his administration. His vice president, the uncompromising conservative Richard (Dick) Cheney, became, with Bush's consent, virtually a copresident. Bush also brought into the administration his campaign advisor, Karl Rove, who argued that a permanent Republican majority could be built on the party's conservative base. On Capitol Hill, Rove's hard line was reinforced by Tom DeLay, the House majority leader, who in 1995 had declared "all-out war" on the Democrats. To win that war, DeLay pushed congressional Republicans to endorse a fierce partisanship. The Senate, although more **collegial**, went through a similar hardening process. After 2002, with Republicans in control of both Congress and the White House, bipartisan lawmaking came to an end.

AP® EXAM TIP

Evaluate the impact of tax policy under George W. Bush.

Tax Cuts The domestic issue that most engaged President Bush, as it had Ronald Reagan, was taxes. Bush's **Economic Growth and Tax Relief Act** of 2001 had

TABLE 30.1

Impact of the Bush Tax Cuts, 2001–2003

Income in 2003	Taxpayers	Gross Income	Total Tax Cut	% Change in Tax Bill	Tax Bill	Tax Rate
Less than $50,000	92,093,452	$19,521	$435	–48%	$474	2%
$50,000 to 100,000	26,915,091	70,096	1,656	–21	6,417	9

AP PRACTICES & SKILLS

COMPARE & CONTRAST

In what ways was George W. Bush a political follower of Ronald Reagan (Chapter 29)? If they embraced similar policies, how did the era of Bush's presidency, the 2000s, differ from Reagan's, the 1980s?

something for everyone. It slashed income tax rates, extended the earned income credit for the poor, and marked the estate tax to be phased out by 2010. A second round of cuts in 2003 targeted dividend income and capital gains. Bush's signature cuts — those favoring big estates and well-to-do owners of stocks and bonds — skewed the distribution of tax benefits upward (Table 30.1) and pushed far beyond those of any other postwar president, even Reagan.

Critics warned that such massive tax cuts would plunge the federal government into debt. By 2006, federal expenditures had jumped 33 percent, at a faster clip than under any president since Lyndon Johnson. Huge increases in health-care costs were the main culprit. Two of the largest federal programs, Medicare and Medicaid — health care for the elderly and the poor, respectively — could not contain runaway medical costs. Midway through Bush's second term, the national debt stood at over $8 trillion — much of it owned by foreign investors, who also financed the nation's huge trade deficit. On top of that, staggering Social Security and Medicare obligations were beginning to come due for retiring baby boomers, burdens the tax cuts passed on to future generations (Figure 30.6).

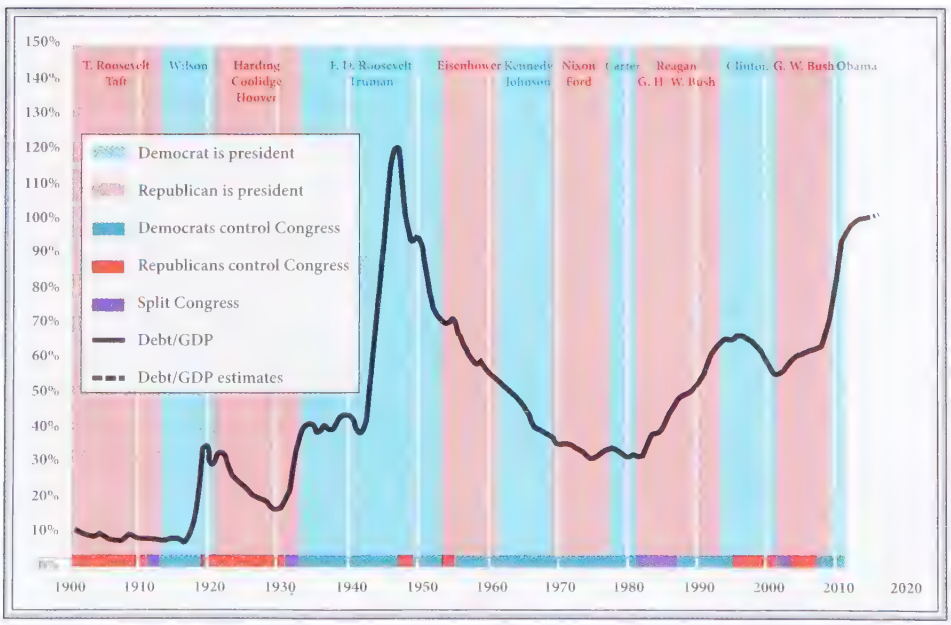

FIGURE 30.6 Gross Federal Debt as a Percentage of Gross Domestic Product

Economists argue that the best measure of a nation's debt is its size relative to the overall economy — that is, its percentage of gross domestic product (GDP). The size of the total U.S. debt declined from its World War II high until the 1980s, when it increased dramatically under President Reagan. Since then, the debt has consistently increased as a percentage of GDP, aside from a small decline under President Clinton's deficit-reduction plans in the mid-1990s. dmarts.com

September 11, 2001 As a candidate in 2000, George W. Bush had said little about foreign policy. He had assumed that his administration would rise or fall on his domestic program. But nine months into his presidency, an altogether different political scenario unfolded. On a sunny September morning, nineteen Al Qaeda terrorists hijacked four commercial jets and flew two of them into

New York City's World Trade Center, destroying its twin towers and killing nearly 2,900 people. A third plane crashed into the Pentagon, near Washington, D.C. The fourth, presumably headed for the White House or possibly the U.S. Capitol, crashed in Pennsylvania when the passengers fought back and thwarted the hijackers. As an outburst of patriotism swept the United States in the wake of the September 11 attacks, George W. Bush proclaimed a "war on terror" and vowed to carry the battle to Al Qaeda.

Operating out of Afghanistan, where they had been harbored by the fundamentalist Taliban regime, the elusive Al Qaeda briefly offered a clear target. In October 2001, while Afghani allies carried the ground war, American planes attacked the enemy. By early 2002, this lethal combination had ousted the Taliban, destroyed Al Qaeda's training camps, and killed or captured many of its operatives. However, the big prize, Al Qaeda leader Osama bin Laden, had retreated to a mountain hideout. Inexplicably, U.S. forces failed to press the attack, and bin Laden escaped over the border into Pakistan.

September 11, 2001 Photographers at the scene after a plane crashed into the north tower of New York City's World Trade Center on September 11 found themselves recording a defining moment in the nation's history. When a second airliner approached and then slammed into the building's south tower at 9:03 A.M., the nation knew this was no accident. The United States was under attack. Of the nearly 2,900 people killed on that day, 2,600 died at the World Trade Center. Spencer Platt/Getty Images

The Invasion of Iraq On the domestic side, Bush declared the terrorist threat too big to be contained by ordinary law-enforcement means. He wanted the government's powers of domestic surveillance placed on a wartime footing. With little debate, in 2001 Congress passed the **USA PATRIOT Act**, granting the administration sweeping authority to monitor citizens and apprehend suspected terrorists. On the international front, Bush used the war on terror as the premise for a new policy of preventive war. Under international law, only an imminent threat justified a nation's right to strike first, but with what became known as the Bush doctrine, the United States lowered the bar. It reserved for itself the right to act in "anticipatory self-defense." In 2002, President Bush singled out Iran, North Korea, and Iraq — "an axis of evil" — as the targeted states.

AP® EXAM TIP

Evaluate the impact of the 9/11 attacks on American foreign policy and on domestic issues of civil liberties.

Of the three, Iraq was the preferred mark. Officials in the Pentagon regarded Iraq as unfinished business, left over from the Gulf War of 1991. More grandly, Bush administration officials saw in Iraq an opportunity to fulfill what they believed to be America's mission to democratize the world. Iraqis, they contended, would abandon the tyrant Saddam Hussein and embrace democracy if given the chance. The democratizing effect would spread across the Middle East, toppling or reforming other unpopular Arab regimes and stabilizing the region. That, in turn, would secure the Middle East's oil supply, whose fragility Hussein's 1990 invasion of Kuwait had made all too clear. It was the oil, in the end, that was of vital interest to the United States (Map 30.4).

None of these considerations, either singly or together, met Bush's declared threshold for preventive war. So the president reluctantly acceded to the demand by anxious European allies that the United States go to the UN Security Council, which demanded that Saddam Hussein allow the return of the UN weapons inspectors expelled in 1998. Hussein surprisingly agreed. Anxious to invade Iraq for its own reasons, the Bush administration insisted that Hussein's regime constituted a "grave and gathering danger" and ignored further UN deliberations. American forces invaded in March 2003 in what newspapers in France, which refused to cooperate with its longtime ally, called simply "Bush's war." America's one major ally in the rush to war was Great Britain. Relations with France and Germany became poisonous. Even neighboring Mexico and Canada condemned the invasion, and Turkey, a key military ally, refused transit permission, ruining the army's plan for a northern thrust into Iraq. As for the Arab world, it exploded in anti-American demonstrations.

MAP 30.4 U.S. Involvement in the Middle East, 1979–2016
The United States has long played an active role in the Middle East, driven by the strategic importance of that region and, most important, by America's need to ensure a reliable supply of oil from the Persian Gulf states. This map shows the highlights of that troubled involvement, from the Tehran embassy hostage taking in 1979 to the invasion and occupation of both Iraq and Afghanistan. President Obama withdrew most combat troops from Iraq in 2011 and from Afghanistan in 2014, but U.S. involvement in the region, in the form of drone strikes, material assistance to various states and factions, and other forms of diplomatic and military assistance continues.

Within three weeks, American troops had taken the Iraqi capital. The regime collapsed, and its leaders went into hiding (Saddam Hussein was captured nine months later). But despite meticulous military planning, the Pentagon had made no provision for postconflict operations. The war shattered the infrastructure of Iraq's cities, leaving them without reliable supplies of electricity and water. In the midst of this turmoil, an insurgency began, sparked by Sunni Muslims, a minority religious faction who had nonetheless dominated Iraq under Hussein's Baathist regime. Iraq's Shiite majority, long oppressed by Hussein, at first welcomed the Americans, but extremist Shiite elements soon turned hostile, and U.S. forces found themselves under fire from both sides. With the borders unguarded, Al Qaeda supporters flocked in from all over the Middle East, eager to do battle with the **infidel** Americans.

Blinded by their own nationalism, dominant nations tend to underestimate the strength of religious and national identities in other people. Although it was hard for Bush administration officials to believe, Iraqis of all stripes viewed the U.S. forces as invaders. Moreover, in a war against insurgents, no occupation force comes out with clean hands. In 2004 in Iraq, that painful truth burst forth graphically in photographs showing American guards at Baghdad's **Abu Ghraib prison** abusing and torturing suspected insurgents. The ghastly images shocked the world. For Muslims, they offered final proof of American treachery. At that low point, in 2004, the United States had spent upward of $100 billion. More than 1,000 American soldiers had died, and 10,000 others had been wounded, many maimed for life. But if the United States pulled out, Iraq would descend into chaos. So, as Bush took to saying, the United States had to "stay the course."

The 2004 Election As the 2004 presidential election approached, Karl Rove, Bush's top advisor, theorized that stirring the culture wars and emphasizing patriotism and Bush's war on terror would mobilize conservatives to vote for Bush. Rove encouraged activists to place antigay initiatives on the ballot in key states to draw conservative voters to the

polls; in all, eleven states would pass ballot initiatives that wrote bans on gay marriage equality into state constitutions that year. The Democratic nominee, Senator John Kerry of Massachusetts, was a Vietnam hero, twice wounded and decorated for bravery — in contrast to the president, who had spent the Vietnam years in the Texas Air National Guard. But when Kerry returned from service in Vietnam, he had joined the antiwar group Vietnam Veterans Against the War and in 1971 had delivered a blistering critique of the war to the Senate Armed Services Committee. In the logic of the culture wars, this made him vulnerable to charges of being weak and unpatriotic. Nearly 60 percent of eligible voters — the highest percentage since 1968 — went to the polls. Bush beat Kerry, with 286 electoral votes to Kerry's 252. In exit polls, Bush did well among voters for whom moral "values" and national security were top concerns. Voters told interviewers that Bush, a wartime president, made them feel "safer."

Abu Ghraib This image of one of the milder forms of torture experienced by inmates at the Abu Ghraib prison was obtained by the Associated Press in 2003. It shows a detainee bent over with his hands through the bars of a cell while being watched by a comfortably seated soldier. This photograph and others showing far worse treatment administered by sometimes jeering military personnel outraged many in the United States and abroad, particularly in the Muslim world. AP Photo

Violence Abroad and Economic Collapse at Home

George Bush's second term was defined by crisis management. In 2005, Hurricane Katrina — one of the deadliest hurricanes in the nation's history — devastated New Orleans. Chaos ensued as floodwaters breached earthen barricades surrounding the city. Many residents remained without food, drinking water, or shelter for days following the storm, and deaths mounted — the final death toll stood at more than 2,000. Initial emergency responses to the catastrophe by federal and local authorities were uncoordinated and inadequate. Because the hardest-hit parts of the city were poor and African American, Katrina had revealed the poverty and vulnerability, alongside decaying and vulnerable infrastructure, at the heart of American cities.

The run of crises did not abate after Katrina. Increasing violence and a rising insurgency in Iraq made the war there even more unpopular in the United States. In 2007, changes in U.S. military strategy helped quell some of the worst violence, but the war dragged into its fifth and sixth years under Bush. Then, in 2008, the American economy began to stumble. By the fall, the Dow Jones Industrial Average had lost half its total value, and major banks, insurance companies, and financial institutions were on the verge of collapse. The entire automobile industry was near bankruptcy. Millions of Americans lost their jobs, and the unemployment rate surged to 10 percent. Housing prices dropped by as much as 40 percent in some parts of the country, and millions of Americans defaulted on their mortgages. The United States had entered the worst economic recession since the 1930s, what soon became known as the Great Recession — technically, the recession had begun in 2007, but its major effects were not felt until the fall of 2008.

The 2008 presidential election took shape in that perilous context. In a historically remarkable primary season, the Democratic nomination was contested between the first woman and the first African American to be viable presidential contenders, Hillary R. Clinton and Barack H. Obama. In a close-fought contest, Obama emerged by early summer as the nominee.

Meanwhile, the Bush administration confronted an economy in free fall. In September, less than two months before the election, Secretary of the Treasury Henry Paulson urged Congress to pass the Emergency Economic Stabilization Act, commonly

referred to as the bailout of the financial sector. Passed in early October, the act dedicated $700 billion to rescuing many of the nation's largest banks and brokerage houses. Between Congress's actions and the independent efforts of the Treasury Department and the Federal Reserve, the U.S. government invested close to $1 trillion in saving the nation's financial system.

Reform and Stalemate in the Obama Years

During his campaign for the presidency against Republican senator John McCain, Barack Obama, a Democratic senator from Illinois, established himself as a unique figure in American politics. The son of an African immigrant-student and a young white woman from Kansas, Obama was raised in Hawaii and Indonesia, and he easily connected with an increasingly multiracial America (AP® Interpreting the Past). A generation younger than Bill Clinton and George W. Bush, Obama (born in 1961) seemed at once a product of the 1960s, especially civil rights gains, and outside its heated conflicts. He took the oath of office of the presidency on January 21, 2009, amid the deepest economic recession since the Great Depression and with the United States mired in two wars in the Middle East. From the podium, the new president recognized the crises and, striking an optimistic tone, encouraged the country to "begin again the work of remaking America."

AP® EXAM TIP

Compare the successes and failures of the Obama administration to the administration of Bill Clinton.

"Remaking America" A nation that a mere two generations ago would not allow black Americans to dine with white Americans had elected a black man to the highest office. Obama himself was less taken with this historic accomplishment — which was also part of his deliberate strategy to downplay race — than with developing a plan to deal with the nation's innumerable challenges, at home and abroad. With explicit comparisons to Franklin Roosevelt, Obama used the "first hundred days" of his presidency to lay out an ambitious agenda: an economic stimulus package of federal spending to invigorate the economy; plans to draw down the war in Iraq and refocus American military efforts in Afghanistan; a reform of the nation's health insurance system; and new federal laws to regulate Wall Street.

Remarkably, the president accomplished much of that agenda. The Democratic-controlled Congress elected alongside Obama passed the **American Recovery and Reinvestment Act**, an economic stimulus bill that provided $787 billion to state and local governments — one of the largest single packages of government spending in American history. Congress next passed the Wall Street Reform and Consumer Protection Act, a complex law that added new regulations limiting the financial industry and new consumer protections. The president's signal accomplishment, however, was the first major reform of the nation's health-care system since the introduction of Medicare in 1965: the **Patient Protection and Affordable Care Act**, signed into law by Obama on March 23, 2010. Political opposition and the powerful lobbying of the private health insurance industry ensured that the new law contained enough compromises that few could predict its long-term impact.

Barack Obama In 2008, Barack Obama became the first African American president in U.S. history. And in 2012, he was reelected to a second term. Here, President Obama and First Lady Michelle Obama walk along Pennsylvania Avenue during his second inauguration.

How Should Historians Write the History of Current Events?

At what point does the present become the past? Today's headlines become the primary sources for the historian of the future, but what about the historian of today? Is it advisable for historians to interpret current events? This final chapter, which brings America's history to the 2017 presidential inauguration, includes events in the living memory and experience of everyone writing and reading these words. What do we say about our own time? What historical interpretation is possible?

In the excerpts below, two scholars, Thomas J. Sugrue and Michael Eric Dyson, attempt historical interpretations of Barack Obama's presidency. Specifically, both scholars offer an assessment of President Obama by placing him and his presidency in the context of America's racial history. How does their historical lens shape their perspective of America's most recent past?

THOMAS J. SUGRUE

SOURCE: Thomas J. Sugrue, *Not Even Past: Barack Obama and the Burden of Race* (Princeton: Princeton University Press, 2010), 54–55.

Situating himself in a current of civil rights history that emphasized its radical currents would be political suicide. But there was something deeper than simple political instrumentality at work. During his journey through the polarized racial world of late twentieth-century America, Obama discovered his calling . . . to overcome the acrimonious history of racial polarization — whether it be black power or the culture wars . . . to act on the understanding that such polarization was anathema to national unity. . . . By the time that Obama was inaugurated president, he had recast himself as an agent of national unification, one who could finally bring to fruition the few lingering, unmet promises of the civil rights movement. . . . From the cacophony of the recent past, from its messiness and tumult, Obama extracts a powerful, reassuring message of progress . . . both true and mythological at the same time. Thus Barack Obama's own quest for identity and the distinctive history of the black freedom struggle, of urban politics, of civil rights and black power, became the American story. What Obama called "my story" became "our story."

MICHAEL ERIC DYSON

SOURCE: Michael Eric Dyson, *The Black Presidency: Barack Obama and the Politics of Race in America* (Boston: Houghton Mifflin Harcourt, 2016), 156.

It is understandable that Obama prefers being seen as the black *president* rather than the *black* president. But his refusal to address race except when he has no choice — a kind of racial procrastination — leaves him little control of the conversation. When he is boxed into a racial corner, often as a result of black social unrest sparked by claims of police brutality, Obama has been mostly uninspiring: he has warned (black) citizens to obey the law and affirmed the status quo. Yet Obama energetically peppers his words to blacks with talk of responsibility in one public scolding after another. When Obama upbraids black folks while barely mentioning the flaws of white America, he leaves the impression that race is the concern solely of black people, and that blackness is full of pathology.

AP SHORT ANSWER PRACTICE

1. What tone does each of these scholars adopt in assessing Obama's approach to issues of race in America?
2. Name two ways in which Sugrue and Dyson diverge in their assessment of Obama's relationship to race during his presidency.
3. From your reading of Chapter 30's discussion of Obama's two terms in office, which assessment — Sugrue's or Dyson's — is more convincing and why?

Following the legislative accomplishments of his first two years in office, President Obama faced a divided Congress. During the fierce debate over health-care reform, a coalition of far-right groups, known collectively as the Tea Party, emerged to catalyze Republican opposition to the president. Democrats lost their majority in the House of Representatives in 2010 and in the Senate in 2014. With **Tea Party**–backed Republicans leading the way, the GOP refused to consider virtually any Democratic legislation. In the face of the legislative stalemate, Obama turned to executive authority to advance his

broader, cautiously liberal, agenda. In 2011, for instance, the president ordered that gay men and lesbians be allowed to serve openly in the armed forces, a reversal of decades of military policy. He made two appointments to the Supreme Court: Sonia Sotomayor in 2009, the first Latina to serve on the high court, and Elena Kagan in 2010. Both are committed liberals. And in 2015, Obama directed the Environmental Protection Agency (EPA) to adopt the Clean Power Plan to combat greenhouse gases (an action blocked by a Supreme Court stay and further limited by President Trump).

Climate Change Obama took the executive action on climate change because of congressional inaction on that issue. A scientific consensus has existed for decades that the production of energy through the burning of carbon-based substances (especially petroleum and coal) increases the presence of greenhouse gases in the atmosphere, warming the earth. Increasing temperatures have begun to produce dramatically new weather patterns and promise rising sea levels in this century, developments that threaten agriculture, the global distributions of plant and animal life, and whole cities and regions at or near the current sea level. How to halt, or at least **mitigate**, climate change has been one of the most pressing public policy issues of the twenty-first century.

Arriving at the scientific consensus on climate change has proven easier than developing government policies to address it. This has been especially true in the United States, where oil company lobbyists, defenders of free-market capitalism, and conservatives who deny global warming altogether have been instrumental in blocking action. For instance, the United States is not a signatory to the major international treaty — the so-called Kyoto Protocol — designed to reduce carbon emissions. Legislative proposals have not fared better. Cap-and-trade legislation, so named because it places a cap on individual polluters' emissions but allows those companies to trade for more emission allowances from low polluters, has stalled in Congress. Another proposal, a tax on carbon emissions, has likewise gained little political support. There is little doubt, however, that global climate change, and the role of the United States in both causing and mitigating it, will remain among the most critical questions of the next decades.

War and Instability in the Middle East Even as he pursued an ambitious domestic agenda, Obama faced two wars in the Middle East that he inherited from his predecessor. Determined to end American occupation of Iraq, in 2010 the president began to draw down troops stationed there, and the last convoy of U.S. soldiers departed in late 2011. The nine-year war in Iraq, begun to find alleged weapons of mass destruction, had followed a long and bloody arc to its end. That same year, in May, U.S. Special Forces found and killed Osama bin Laden in Pakistan, where he had been hiding for many years, an action for which the president won a great deal of praise domestically. More controversial has been the president's use of "drone" strikes to assassinate Al Qaeda leaders and other U.S. enemies in Afghanistan, Pakistan, and elsewhere in the region.

Whatever the nature of the president's efforts, disengaging from Afghanistan proved difficult. Early in his first term, and despite his campaign promise to end the war there, the president ordered an additional 30,000 American troops to prevent further Taliban victories. The surge temporarily stabilized the country, but securing long-term political and military stability eluded Obama in the long run, and he left office in 2017 having been unable to withdraw the remaining 8,000 to 10,000 U.S. troops stationed there.

Meanwhile, a host of events in the Middle East deepened the region's volatility. In late 2010, a series of multicountry demonstrations and protests, dubbed the Arab Spring, toppled autocratic rulers in Egypt, Tunisia, Libya, and Yemen. Obama and the U.S. State Department cautiously supported the uprisings but were unable to significantly shape events thereafter. In Syria, for instance, the Arab Spring insurgency produced a brutal civil war that has resulted in hundreds of thousands of deaths, nearly five million refugees, and the internal displacement of nearly six million Syrian citizens. Syria has also

been plagued by the Islamic State, an ultraviolent, fundamentalist Sunni group that emerged in the chaos of war-torn Iraq. It has conquered territory and sown instability and fear among populations across northern Iraq and northern Syria since 2011. Between 2001, when the war against the Taliban began in Afghanistan, and 2016, when the Syrian refugee crisis and the Islamic State dominated headlines, the United States demonstrated that it could make war far more readily and easily than it could control the events that followed.

Domestic Crisis Much as in the era of the Vietnam War, violence abroad came to have an eerie echo at home. African Americans have long endured, and have long resisted, police brutality, in cycles of pain and protest dating to the nineteenth century. One such cycle began in 2014 with the killing of an unarmed black teenager named Michael Brown in Ferguson, Missouri. Weeks of demonstrations followed, as black activists, joined by many white and Latino supporters, converged on Ferguson from around the country. Many groups and leaders articulated calls for police reform and a renewed struggle against racism.

Amid this increased activism, an organization called Black Lives Matter (BLM) emerged at the fore of a broader movement. Formed two years earlier, in response to the 2012 killing of Trayvon Martin, an unarmed black teenager, by a civilian neighborhood watch captain, BLM put forth a comprehensive agenda of police reform, economic justice, political empowerment, and, echoing Black Power activists from the 1960s, black community control. Between 2014 and 2016, BLM and other activists staged protests in more than one hundred American cities, as the shooting and/or killing of black men by police came to the public's attention through cell phone, surveillance, and police videos. Many activists stressed that the ongoing crisis disproved the notion that electing a black president represented a fundamental transformation in American racial history. Indeed, many activists claimed that the Tea Party's opposition to the president was racially charged. Evidence for such a claim could be found in the appearance of "go back to Kenya" signs directed at Obama at Tea Party rallies or in the so-called "birther" movement, which questioned the president's U.S. citizenship.

The 2016 Election From one political vantage point, President Obama and the Democratic Party looked like the beneficiaries of an electoral shift in a liberal direction. Between 1992 and 2012, Democrats won the popular vote in five of the six presidential elections, and in 2008 Obama won a greater share of the popular vote (53 percent) than any Democratic nominee since Lyndon Johnson in 1964. He won the support of 93 percent of African Americans, 71 percent of Hispanics, 73 percent of Asian Americans, 55 percent of women, and 60 percent of Americans under the age of thirty. His coalition was multiracial, heavily female, and young.

That coalition appears strong enough to win popular majorities for Democratic presidential nominees into the foreseeable future. Yet the nation's peculiar constitutional method of awarding the presidency through the electoral college allows for the possibility, as in 2000 and again in 2016, that a candidate with the lower national vote total can win. Moreover, the Constitution's awarding of two senators to each state regardless of population means that a fiercely conservative state with a small population, like North Dakota, has as much influence in the U.S. Senate as a fiercely liberal state with a massive population, like California. In that context, the Democratic coalition has struggled to sustain Senate majorities. Furthermore, changes in House districts after the 2010 Census have further disadvantaged Democrats (Table 30.2). In 2012, Democratic candidates for the House of Representatives

TABLE 30.2

Political Realignment: Congressional Seats

As Table 28.1 (p. 892) demonstrated, between 1940 and 1990 the Rust Belt states lost population and political representation in Congress, and the Sunbelt states gained both. That trend continued between 1990 and 2010. Geographic shifts in population, especially continued population growth in California, Texas, and Florida, shaped which parts of the country had the loudest voice in Congress. In 1940, the major industrial states accounted for 45 percent of congressional seats. By 2010, they accounted for only 31 percent. Meanwhile, the Sunbelt moved in the opposite direction: in 1940, those ten states had only 20 percent of congressional seats, but by 2010 they held 40 percent. Political influence had shifted geographically over the course of seven decades.

	Apportionment	
State	**1990**	**2010**

AP PRACTICES & SKILLS

CAUSATION

As the nation's first African American president, what kinds of unique challenges did Barack Obama face, and how did they affect his presidency?

AP EXAM TIP

Compare the election of 2016 to the election of 1980.

won more votes nationally than Republican candidates did (59.6 million to 58.2 million), but Republicans still won a majority of seats. Thus, heading into the 2016 election, the long-term fate of the liberal Obama coalition remained unclear.

Few historians can predict the future of the Obama coalition, but in the short term the outcome of the 2016 presidential election proved to be a stunning surprise to many Americans. First, the presidential campaign itself looked nothing like recent contests. The Republican nominee was Donald Trump, a political novice who had never held elective office and who defeated a series of more experienced, and traditionally conservative, politicians for the Republican nomination. A Manhattan real estate developer and symbol of the "rich and famous" celebrity culture of the 1980s, Trump was primarily known for building a series of failed casinos in Atlantic City, New Jersey, and for starring in the reality television show *The Apprentice*. As a candidate, Trump secured ample media coverage with disparaging remarks about immigrants and his oft-recited promise to "build a wall" along the U.S.-Mexico border, alongside other nationalist slogans. His speeches, impromptu and off-the-cuff, railed against globalization, President Obama, the media, the political establishment, and the Democratic nominee, Hillary Clinton.

Clinton had secured the Democratic nomination after a spirited primary campaign against the social-democratic Bernie Sanders, a U.S. senator from Vermont. The first woman to lead a major-party ticket for U.S. president, Clinton boasted a resume with decades of high-level political service, including eight years as First Lady, eight years as a U.S. senator, and four years as secretary of state. In the general election campaign against Trump, Clinton emphasized this experience and proposed detailed plans of action on a wide range of issues, including climate change, criminal justice reform, workers' rights, early childhood education, tax reform, the nation's deteriorating infrastructure, and many more. For its part, the Trump campaign issued no specific proposals and instead ran a populist campaign that featured few substantive issues—the exception being global trade policy—and relied on inaccurate claims about the threat of immigration and urban crime along with promises to restore a romanticized American past. Trump remained a viable presidential candidate despite revelations that many observers believed were disqualifying: that he likely avoided paying federal income taxes for decades, for instance, and his bragging in a 2005 video about sexually assaulting women.

Donald Trump and Hillary Clinton Television monitors capture the 2016 Republican and Democratic presidential nominees in their second debate, at Washington University in St. Louis.

National polls predicted a close election, with many indicating a likely Clinton victory. But in one of the most surprising presidential elections in more than a generation, Trump achieved an electoral college majority and won the presidency. As in 2000, the Democratic nominee, Clinton, won the popular vote (by more than 2.8 million votes) but could not secure a majority in enough key states to emerge victorious. Between Trump's election in November 2016 and his inauguration on January 20, 2017, Americans debated the meaning of that victory, the fate of the Obama coalition, and the capacity of the nation's governing institutions to

successfully address the major national and global challenges of the twenty-first century. As we go to press, history is unfolding at a furious pace, as President Trump has begun his administration with a series of unprecedented executive orders, while anti-Trump protests, both massive and small-scale, roil American cities.

IN YOUR OWN WORDS How did wars abroad and political contest at home shape the United States in the first decades of the twenty-first century?

SUMMARY

This chapter has stressed how globalization — the worldwide flow of capital, goods, and people — entered a new phase after the end of the Cold War. The number of multinational corporations, many of them based in the United States, increased dramatically, and people, goods, and investment capital moved easily across political boundaries. Financial markets, in particular, grew increasingly open and interconnected across the globe. Technological innovations strengthened the American economy and transformed daily life. The computer revolution and the spread of the Internet changed the ways in which Americans shopped, worked, learned, and stayed in touch with family and friends. Globalization also facilitated the immigration of millions of Asians and Latin Americans into the United States.

Women's March On January 21, 2017, the day following the inauguration of Donald Trump as the 45th President of the United States, one of the largest combined protest marches in U.S. history took place, the Women's March. From Washington, D.C., to Los Angeles, California, at least 3.7 million people (some estimates placed the number higher) took to the streets. Mario Tama/Getty Images

In the decades since 1989, American life has been characterized by the dilemmas presented by the twin issues of globalization and divisive cultural politics. Conservatives spoke out strongly, and with increasing effectiveness, against multiculturalism and what they viewed as serious threats to "family values." Debates over access to abortion, affirmative action, and the legal rights of homosexuals intensified. The terrorist attacks of September 11, 2001, diverted attention from this increasingly bitter partisanship, but that partisanship was revived after President Bush's decision to invade Iraq (a nation not involved in the events of 9/11) in 2003 led to a protracted war. When Barack Obama was elected in 2008, the first African American president in the nation's history, he inherited two wars and the Great Recession, the most significant economic collapse since the 1930s. His, and the nation's, efforts to address these and other pressing issues enjoyed initial success before stalling in a deepening partisan stalemate, especially after his reelection in 2012. Finally, bringing matters nearly to the present, the election of the celebrity businessman Donald Trump to the presidency in 2016 confirmed that globalization and domestic cultural divisions remain at the core of American politics. Trump won the election (over Democrat Hillary Clinton), as George W. Bush had in 2000, while losing the popular vote, giving his presidency a fragile legitimacy and leaving the country as divided politically as it has been since the 1960s.

CHAPTER 30 REVIEW

AP® CONTENT REVIEW

Answer these questions to demonstrate your understanding of the chapter's main ideas.

1. How did globalization redefine the relationship of the United States to the rest of the world after the end of the Cold War?
2. What were the sources of domestic division in the United States after 1988, and how did they reshape the political landscape?
3. How did wars abroad and political contest at home shape the United States in the first decades of the twenty-first century?
4. Review the events included on the thematic timeline on pages 910–911. In what ways does the period between 1992 (Bill Clinton's election) and 2016 (Donald Trump's election) suggest a postliberal era in American politics? In what ways was the conservative resurgence under Reagan preserved, and in what ways was it not?

AP® TERMS TO KNOW

Identify and explain the significance of each term below.

Key Concepts and Events

Al Qaeda (p. 942)
globalization (p. 942)
World Trade Organization (WTO) (p. 944)
Group of Eight (G8) (p. 948)
North American Free Trade Agreement (NAFTA) (p. 949)
multinational corporations (p. 949)
Advanced Research Projects Agency Network (ARPANET) (p. 951)
World Wide Web (p. 951)
culture war (p. 952)
Immigration and Nationality Act (p. 952)
multiculturalism (p. 956)
Proposition 209 (p. 956)
Operation Rescue (p. 957)
Defense of Marriage Act (p. 958)
Webster v. Reproductive Health Services (p. 958)
Planned Parenthood of Southeastern Pennsylvania v. Casey (p. 958)
Lawrence v. Texas (p. 959)
Contract with America (p. 960)
Personal Responsibility and Work Opportunity Reconciliation Act (p. 960)
Economic Growth and Tax Relief Act (p. 963)
USA PATRIOT Act (p. 965)
Abu Ghraib prison (p. 966)
American Recovery and Reinvestment Act (p. 968)
Patient Protection and Affordable Care Act (p. 968)
Tea Party (p. 969)

Key People

William (Bill) Jefferson Clinton (p. 959)
Hillary Clinton (p. 960)
Newt Gingrich (p. 960)
Saddam Hussein (p. 962)
Osama bin Laden (p. 962)
George W. Bush (p. 963)
Barack Obama (p. 968)

Key Academic Terms

austere (p. 945)
symbiotic (p. 946)
adroit (p. 959)
collegial (p. 963)
infidel (p. 966)
mitigate (p. 970)

MAKING CONNECTIONS

Recognize the larger developments and continuities within and across chapters by answering these questions.

1. How would you compare the Iraq War with previous wars in U.S. history? Compare in particular the reasons for entering the war, support for the war abroad and at home, and the outcome of the conflict.
2. How would you explain the geography of American politics after World War II? Compare Table 28.1 (p. 892) and Table 30.2 (p. 971), which show how population gains and losses over several decades shaped which states and regions had greater representation in Congress. How would you explain the significance of those changes?

KEY TURNING POINTS

Refer to the chapter chronology on page 944 for help in answering the question below.

What were the major domestic and foreign policy challenges between the 1990s and 2016?

AP® PRACTICE QUESTIONS

MULTIPLE CHOICE QUESTIONS

Choose the correct answer for each question.

Questions 1–4 refer to the excerpt below.

"[W]ithin the first 100 days of the 104th Congress, we shall bring to the House Floor the following bills . . .

1. THE FISCAL RESPONSIBILITY ACT: A balanced budget/tax limitation amendment and a legislative line-item veto to restore fiscal responsibility to an out-of-control Congress, requiring them to live under the same budget constraints as families and businesses.

2. THE TAKING BACK OUR STREETS ACT: An anti-crime package including stronger truth-in-sentencing, 'good faith' exclusionary rule exemptions, effective death penalty provisions, and cuts in social spending from this summer's 'crime' bill to fund prison construction and additional law enforcement to keep people secure in their neighborhoods and kids safe in their schools.

3. THE PERSONAL RESPONSIBILITY ACT: Discourage illegitimacy and teen pregnancy by prohibiting welfare to minor mothers and denying increased AFDC [Aid to Families with Dependent Children] for additional children while on welfare, cut spending for welfare programs, and enact a tough two-years-and-out provision with work requirements to promote individual responsibility. . . .

6. THE NATIONAL SECURITY RESTORATION ACT: No U.S. troops under U.N. command and restoration of the essential parts of our national security funding to strengthen our national defense and maintain our credibility around the world. . . .

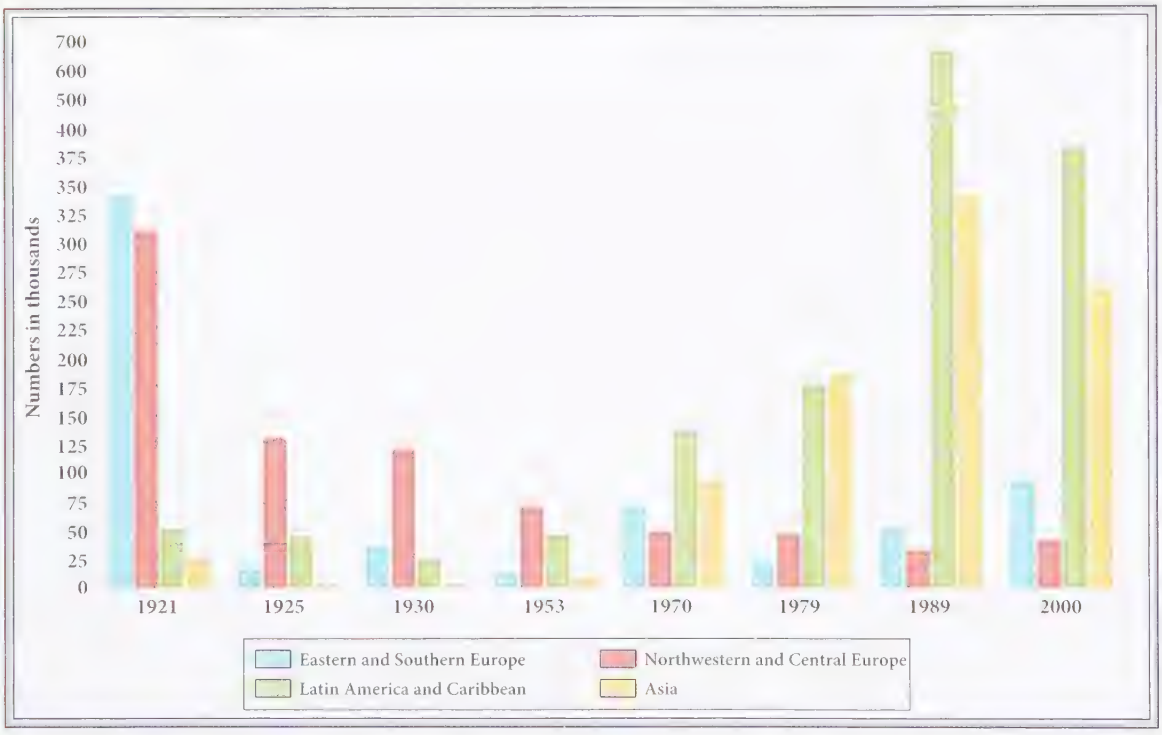
8. THE JOB CREATION AND WAGE ENHANCEMENT ACT: Small business incentives, capital gains cut and indexation, neutral cost recovery, risk assessment/cost-benefit analysis, strengthening the Regulatory Flexibility Act and unfunded mandate reform to create jobs and raise worker wages."

Republican Party Contract with America, 1994

1. The excerpt from the Republican Party resulted most directly from
   a. the end of the Cold War.
   b. demographic shifts in the United States.
   c. the rise of new conservative political movements.
   d. the rapid nature of economic globalization.

2. The policies proposed in the excerpt from the "Contract with America" are best understood in the context of growing concerns about
   a. the decay of traditional United States moral values.
   b. the effects of growing international migration from Latin America and Asia.
   c. lessening the political influence of union organizations.
   d. international free-trade agreements.
3. The proposals in the excerpt best represent a continuation of the policies of which previous presidential administration?
   a. Woodrow Wilson
   b. Franklin Roosevelt
   c. Lyndon Johnson
   d. Ronald Reagan
4. Advocates for legislation enacting the "Contract with America" were LEAST likely to endorse which of the following policy goals?
   a. Promoting economic growth
   b. Reducing the social safety net
   c. Expanding civil liberties
   d. Deregulating businesses

Questions 5–7 refer to the graph below.



American Immigration, 1920–2000

5. The pattern depicted in the graph between 1921 and 1953 most directly resulted from
   a. federal laws strictly limiting the number of immigrants.
   b. nativist violence toward undocumented immigrants.
   c. efforts to deport immigrants to their countries of origin.
   d. increased security along the Mexican and Canadian borders.
6. The majority of immigrants who arrived in the U.S. between 1970 and 2000 settled
   a. throughout the small towns of rural America.
   b. in the Northeast and Midwest.
   c. in the South and West.
   d. along the borders with Canada and Mexico.
7. The pattern depicted in the graph between 1979 and 2000 directly contributed to all of the following EXCEPT
   a. providing a vital source of labor for the American economy.
   b. ongoing political debates over U.S. immigration policy.
   c. fears of cultural changes diminishing traditional values.
   d. declining economic productivity from a surplus of unskilled immigrant labor.

SHORT ANSWER QUESTIONS

Read each question carefully and write a short response. Use complete sentences.

"Situating himself [Barack Obama] in a current of civil rights history that emphasized its radical currents would be political suicide.

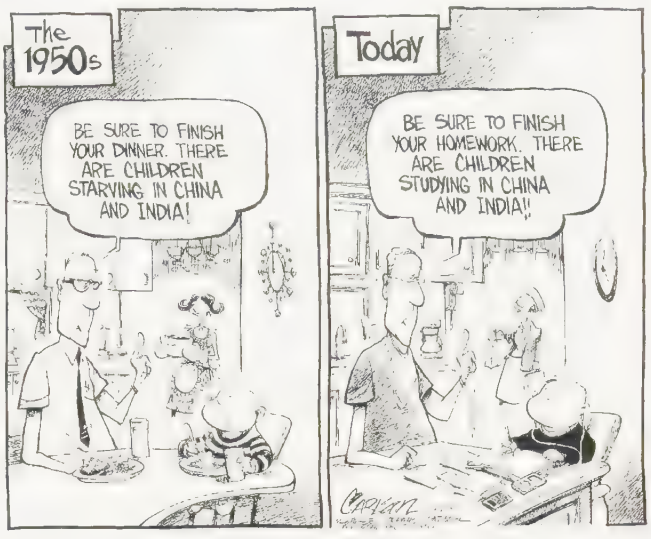
"But there was something deeper than simple political instrumentality at work. During his journey through the polarized racial world of late twentieth-century America, Obama discovered his calling . . . to overcome the acrimonious history of racial polarization — whether it be black power or the culture wars . . . to act on the understanding that such polarization was anathema to national unity. . . . By the time that Obama was inaugurated president, he had recast himself as an agent of national unification, one who could finally bring to fruition the few lingering, unmet promises of the civil rights movement. . . . From the cacophony of the recent past, from its messiness and tumult, Obama extracts a powerful, reassuring message of progress . . . both true and mythological at the same time. Thus Barack Obama's own quest for identity and the distinctive history of the black freedom struggle, of urban politics, of civil rights and black power, became the American story. What Obama called 'my story' became 'our story.'"

Thomas J. Sugrue, *Not Even Past: Barack Obama and the Burden of Race*, 2010

"It is understandable that Obama prefers being seen as the black *president* rather than the *black* president. But his refusal to address race except when he has no choice — a kind of racial procrastination — leaves him little control of the conversation. When he is boxed into a racial corner, often as a result of black social unrest sparked by claims of police brutality, Obama has been mostly uninspiring: he has warned (black) citizens to obey the law and affirmed the status quo. Yet Obama energetically peppers his words to blacks with talk of responsibility in one public scolding after another. When Obama upbraids black folks while barely mentioning the flaws of white America, he leaves the impression that race is the concern solely of black people, and that blackness is full of pathology."

Michael Eric Dyson, *The Black Presidency: Barack Obama and the Politics of Race in America*, 2016

1. Using the two excerpts above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE major difference between Sugrue's and Dyson's historical interpretations of the Obama presidency.
   - **b.** Briefly explain how ONE specific historical event or development from the period 2000 to the present that is not explicitly mentioned in the excerpts could be used to support Sugrue's interpretation.
   - **c.** Briefly explain how ONE specific historical event or development from the period 2000 to the present that is not explicitly mentioned in the excerpts could be used to support Dyson's interpretation.



The 1950s
BE SURE TO FINISH YOUR DINNER. THERE ARE CHILDREN STARVING IN CHINA AND INDIA!
Today
BE SURE TO FINISH YOUR HOMEWORK. THERE ARE CHILDREN STUDYING IN CHINA AND INDIA!!

2. Using the political cartoon above, answer (a), (b), and (c).
   - **a.** Briefly explain ONE historical perspective about the changes from the 1950s to the early 2000s expressed in the cartoon.
   - **b.** Briefly explain how ONE specific event or development led to a historical change suggested by the cartoon.
   - **c.** Briefly explain ONE specific result of a historical change suggested by the cartoon in the period 2000 to the present.
3. Answer (a), (b), and (c).
   - **a.** Briefly explain ONE specific historical similarity between immigration to the U.S. in the period 1880 to 1920 and in the period 1980 to the present.
   - **b.** Briefly explain ONE specific historical difference between immigration to the U.S. in the period 1880 to 1920 and in the period 1980 to the present.
   - **c.** Briefly explain ONE specific historical effect of immigration to the U.S. in the period 1980 to the present.

DOCUMENT-BASED QUESTION

Suggested reading period: 15 minutes. Suggested writing time: 45 minutes.

DIRECTIONS: Question 1 is based on the accompanying documents. The documents have been edited for the purpose of this exercise.

1. Evaluate the extent to which technological innovations have changed the American economy since 1980.

DOCUMENT 1

Source: Andrew Pollack, "Rising Trend of the Computer Age: Employees Who Work at Home," from *The New York Times*, March 12, 1981. © 1981 *The New York Times*. All rights reserved. The printing, copying, redistribution, or retransmission of this Content without express written permission is prohibited.

"Louise Priester used to key-punch insurance claims into a computer in the office of Blue Cross–Blue Shield of South Carolina. Now she does the same thing from a bedroom in her house in Columbia, S.C., using a terminal connected to the office's computer by telephone.

Like Mrs. Priester, a small but growing number of workers are doing office work at home on small computers or terminals with typewriter keyboards. Corporations encourage the practice, to save commuting time for their employees and to recruit some workers, such as mothers of small children, who might not be able to hold conventional jobs.

Working at home gives employees more flexibility in scheduling other activities. 'I can get up when I want to and work when I want to,' said Mrs. Priester, adding that she can now take better care of her elderly mother.

Companies and workers say the new system can transform relationships between co-workers, between employees and employers and between workers and their families.

What we're really talking about is returning production to the home, which is where it was before the Industrial Revolution."

DOCUMENT 3

Source: Martin Feldstein, American Economic Policy in the 1980s, 1995.

"The decade of the 1980s was a time of fundamental changes in American economic policy. These changes were influenced by the economic conditions that prevailed as the decade began, by the style and political philosophy of President Ronald Reagan, and by the new intellectual climate among economists and policy officials. . . . Ronald Reagan's election in 1980 . . . provided a president who was committed to achieving low inflation, to lowering tax rates, and to shrinking the role of the government in the economy."

DOCUMENT 4

Source: Peter F. Drucker, "Beyond the Information Revolution," *The Atlantic*, October 1999.

"The truly revolutionary impact of the Information Revolution is just beginning to be felt. . . . It is something that practically no one foresaw or, indeed, even talked about ten or fifteen years ago: e-commerce — that is, the explosive emergence of the Internet as a major, perhaps eventually the major, worldwide distribution channel for goods, for services, and, surprisingly, for managerial and professional jobs. This is profoundly changing economies, markets, and industry structures; products and services and their flow; consumer segmentation, consumer values, and consumer behavior; jobs and labor markets. . . .

E-commerce is to the Information Revolution what the railroad was to the Industrial Revolution — a totally new, totally unprecedented, totally unexpected development. And like the railroad 170 years ago, e-commerce is creating a new and distinct boom, rapidly changing the economy, society, and politics. . . .

In the new mental geography created by the railroad, humanity mastered distance. In the mental geography of e-commerce, distance has been eliminated. There is only one economy and only one market."

Fastest Growing Occupations (by percentage), 2000 to 2010

DOCUMENT 6

Source: Leroy McClelland Sr., a steelworker, Interview with Bill Barry, 2006.

"Mr. McClelland: [W]ith technology being advanced and computers and what have you, we've had operations that would never ever operate unless you had a person there. Now, that's not necessary. In fact, it can have a crew —it used to be six people on a mill reduced to three. Why? Computer, and then it advances further on down the road for technology. When that happened, too, you've got to understand that the idea of the union was to protect jobs, create jobs, not eliminate jobs. Well, I had the unfortunate experience of being the zone committeeman at the time when a lot of this technology was starting to really grow.

Mr. Barry: When was this?

Mr. McClelland: Well, it really started in 1975, from '75 on, '80, '90s, biggest part being in the '80s really, the advanced technology. But when these other things started to take place, guys and gals sort of looked at this change coming down, felt hey, that's a God send, not realizing that when that takes place you ain't going to be there to see it because your job is going to be gone. . . . I mean reality is technology is the future and competitiveness is strong. If you can't deal with competitiveness, if you don't have tons per hour and manpower per hour was the way it was, and that's what had to happen. . . .

Mr. Barry: These were people who were eligible to retire and the technology in effect drove them out?

Mr. McClelland: Yes, absolutely it did. And change is tough for anybody."

DOCUMENT 7

Source: Robin Harding, "Technology Shakes Up U.S. Economy," *Financial Times*, March 26, 2014. Used under license from the *Financial Times*. All rights reserved.

"New technologies are transforming the structure of the US economy but creating only modest numbers of jobs, according to the biggest official survey of businesses, conducted only once every five years. . . .

It highlights concerns that recent innovations in information technology tend to raise productivity by replacing existing workers, rather than creating new products that demand more labour to produce. . . .

In manufacturing, the story is of a productivity boom that allowed a solid increase in sales, coupled with falling employment and payrolls. Manufacturing sales rose 8 per cent between 2007 and 2012 to reach $5.8 trillion.

However, the industry shed 2.1 million jobs — employment falling to 11.3 million — and its payroll dropped $20 billion to $593 billion.

The relatively greater drop in jobs than payrolls highlights how remaining jobs in the sector are becoming more skilled. Annual payroll per employee in the manufacturing sector rose from $45,818 in 2007 to $52,686 in 2012.

That is among the highest of any big industry, but highlights how manufacturing increasingly employs skilled engineers to tend complex equipment, rather than being a source of well-paid jobs for less-skilled workers."

LONG ESSAY QUESTIONS *Suggested writing time: 40 minutes.*

DIRECTIONS: Please choose one of the following two questions to answer.

2. **Evaluate the extent to which demographic shifts changed politics in the United States from 1980 to 2000.**

3. **Evaluate the extent to which demographic shifts changed culture in the United States from 1980 to 2000.**

4. **Evaluate the extent to which the end of the Cold War changed U.S. foreign policy from 1980 to 2010.**

SECTION I
PART A: MULTIPLE CHOICE QUESTIONS
55 minutes

DIRECTIONS: Choose the correct answer for each question.

Questions 1–3 refer to the excerpt below.

> "The extremely heterogeneous population confronted Pennsylvania with a unique set of problems that could have impeded the creation of a stable society. Nevertheless, despite the inevitable tensions, exacerbated by waves of new immigration, wars, and religious conflict, colonial Pennsylvanians managed to develop new ideals of pluralism and tolerance on which they built their province. . . . William Penn . . . set forth a new, ideological basis for pluralism and tolerance that transformed the tentative pattern of relative harmony and toleration into one of official policy.
>
> . . . [H]e drafted a series of constitutions that guaranteed religious freedom and promoted his colony not only in the British Isles but on the Continent as well."
>
> Sally Schwartz, *"A Mixed Multitude": The Struggle for Toleration in Colonial Pennsylvania*, 1987

1. Which of the following later developments can best be used to support Schwartz's argument regarding the colonial culture in Pennsylvania?
   a. A strong abolitionist movement developed in Pennsylvania in the eighteenth and nineteenth centuries.
   b. Relations with American Indians deteriorated over time as colonists demanded more land.
   c. Pennsylvania's nineteenth-century leaders rejected the development of a strong national government.
   d. The overt resistance of African Americans revolting against slavery.
2. Which of the following best explains the context in which Pennsylvania's culture in the colonial era developed?
   a. Leaders' insistence on tolerance in accordance with religious policy in England
   b. The colony's strong emphasis on economic goods as Pennsylvania was founded as a corporate colony
   c. The Anglicization of diverse migrants to Pennsylvania
   d. The Quaker founders' established policies favoring tolerance and individual freedom of conscience
3. In the seventeenth century, Pennsylvania merchants engaged in the transatlantic trade most extensively by
   a. exporting tobacco from Pennsylvania to England.
   b. importing enslaved Africans to Pennsylvania.
   c. exporting staple crop rice from Pennsylvania to the Caribbean.
   d. importing goods manufactured in England.

Questions 4–6 refer to the image below.

The Great Migration: Union Station, Jacksonville, Florida

Photo by Woodward courtesy of the State Archives of Florida

4. This image illustrates which of the following trends in African Americans' experience in the period 1917-1945?
   a. The expansion of civil rights and suffrage that accompanied new opportunities for African Americans in the North
   b. The restrictions placed on African American voting rights in the North and the South
   c. The expansion of job opportunities in the North because of wartime labor shortages
   d. The tendency of African Americans to abandon Northern industrial jobs in favor of agricultural opportunities in the South
5. This image can best be understood as a contributing factor to the development of which of the following?
   a. Progressive Era
   b. Harlem Renaissance
   c. Romantic movement
   d. Reconstruction
6. Which of the following was likely the most important contributing factor in the decisions made by the individuals pictured in this image?
   a. Support for civil rights of African Americans in the North
   b. Passage of laws that disenfranchised African Americans in the South
   c. Inability of most African Americans to escape the system of sharecropping
   d. Propaganda created by Northern political machines to attract voters

Questions 7–9 refer to the excerpt below.

> "I Shall disclose several Principles of Natural Knowledge; plainly discovering the Law of Nature; or the true sentiments of Natural Reason, with Respect to Mans Being and Government. . . . I shall consider Man in a state of Natural Being, as a Free-Born Subject under the Crown of Heaven, and owing Homage to none but God himself. It is certain Civil Government in General, is a very Admirable Result of Providence, and an Incomparable Benefit to Mankind, yet must needs be acknowledged to be the Effect of Humane Free-Compacts and not of Divine Institution; it is the Produce of Mans Reason, of Humane and Rational Combinations, and not from any direct Orders of Infinite Wisdom. . . .
>
> The Prime Immunity in Mans State, is that he is most properly the Subject of the Law of Nature. He is the Favourite Animal on Earth; in that this Part of Gods Image, viz. Reason is Congenate with his Nature, wherein by a Law Immutable, Instampt upon his Frame, God has provided a Rule for Men in all their Actions; obliging each one to the performance of that which is Right, not only as to Justice, but likewise as to all other Moral Vertues, which is nothing but the Dictate of Right Reason founded in the Soul of Man. . . .
>
> The Second Great Immunity of Man is an Original Liberty Instampt upon his Rational Nature. He that intrudes upon this Liberty, Violates the Law of Nature. . . .
>
> The Third Capital Immunity belonging to Mans Nature, is an equality amongst Men; Which is not to be denyed by the Law of Nature, till Man has Resigned himself with all his Rights for the sake of a Civil State; and then his Personal Liberty and Equality is to be cherished, and preserved to the highest degree."
>
> John Wise, *A Vindication of the Government of New England Churches,* 1717

7. The excerpt could be best used as evidence to support an argument that
   - **a.** Enlightenment ideals spread through transatlantic print culture influenced colonial political ideology.
   - **b.** American Indian political systems such as the Iroquois League shaped colonial ideas about government.
   - **c.** British North American colonies developed an original political philosophy.
   - **d.** Parliament failed in efforts to control American political developments.
8. The excerpt from "The Primacy of Human Reason and Natural Laws" expresses ideas most similar to those in the House of Burgesses, the Virginia representative assembly founded in 1619, that emphasized
   - **a.** the importance of religion in government.
   - **b.** the rights of citizens.
   - **c.** a rigid social hierarchy.
   - **d.** royal authority.
9. The ideas expressed by John Wise in this excerpt share the most continuity with the later ideas of
   - **a.** the Declaration of Sentiments.
   - **b.** the U.S. Constitution.
   - **c.** Thomas Paine's *Common Sense*.
   - **d.** the Declaration of Independence.

Questions 10–13 refer to the image below.

"The Boston Massacre," Engraving, Silversmith Paul Revere, 1790

Library of Congress

10. The events portrayed in this 1770 image resulted most directly from
    a. a declaration of independence by colonial Americans.
    b. British attempts to assert royal authority over the North American colonies.
    c. the organization of the Sons of Liberty to promote a unified North American colonial government.
    d. colonial boycotts of British manufactured goods.
11. This image best represents the ideology of
    a. colonial governors.
    b. Patriots.
    c. British soldiers.
    d. the Great Awakening.
12. Which of the following most directly led to the events represented in this image?
    a. British enforcement of mercantilist policies in the colonies
    b. Dissenting ideas of Protestant evangelicalism
    c. George Washington's appointment as general of the Continental army
    d. British royal decrees that formally recognized American Indian lands west of the Appalachians
13. The image could best be used as evidence to support an argument that colonial leaders
    a. incorporated popular movements into calls for changes in British policy.
    b. used the free press to secure European allies to support colonial independence.
    c. placed political freedom and liberty above economic interests.
    d. rejected compromise in conflicts over British colonial rule as early as 1770.

Questions 14–16 refer to the excerpt below.

> "The President assumes, what no one doubts, that the late rebel States have lost their constitutional relations to the Union, and are incapable of representation in Congress, except by permission of the Government. It matters but little, with this admission, whether you call them States out of the Union, and now conquered territories, or assert that because the Constitution forbids them to do what they did do, that they are therefore only dead as to all national and political action, and will remain so until the Government shall breathe into them the breath of life anew and permit them to occupy their former position. In other words, that they are not out of the Union, but are only dead carcasses lying within the Union. In either case, it is very plain that it requires the action of Congress to enable them to form a State government and send representatives to Congress. Nobody, I believe, pretends that with their old constitutions and frames of government they can be permitted to claim their old rights under the Constitution. . . . Dead men cannot raise themselves. Dead States cannot restore their existence '*as it was.*' Whose especial duty is it to do it? In whom does the Constitution place the power? Not in the judicial branch of Government, for it only adjudicates and does not prescribe laws. Not in the Executive, for he only executes and cannot make laws. Not in the Commander-in-Chief of the armies, for he can only hold them under military rule until the sovereign legislative power of the conqueror shall give them law."
>
> Thaddeus Stevens, Speech to Congress, December 18, 1865

14. Which of the following best explains the context in which Thaddeus Stevens delivered this speech?
    a. The assassination of President Lincoln reopening debates over presidential Reconstruction
    b. Political resistance to radical Republican use of military districts in Reconstruction
    c. Debate over passage of the Thirteenth Amendment in Congress
    d. The challenge presented by the passage in southern states of Black Codes after the Civil War
15. Thaddeus Stevens's arguments regarding which branch of the federal government holds power over the status of lands and admission of states shows the greatest similarity to the precedent of the
    a. Kansas-Nebraska Act.
    b. Dred Scott decision.
    c. Missouri Compromise.
    d. Louisiana Purchase.
16. The most important cause of the northern victory in the Civil War was
    a. the superiority of northern military leadership.
    b. aid from European allies for the Union.
    c. the advantageous geographical features of Union states.
    d. a larger population.

Questions 17–19 are based on the image below.

King Andrew the First, 1833

17. The cartoon most reflects the political views of the
    a. Federalist Party.
    b. Democratic Party.
    c. Whig Party.
    d. Republican Party.

18. At the time of its publication in 1833, the cartoon criticized political developments in the federal government that increased the
    a. role of Congress in promoting national economic growth.
    b. power of the president.
    c. power of the Supreme Court in enforcing judicial decisions.
    d. role of the people in electing federal politicians.

19. All of the following developments during the 1820s and 1830s reveal similar political party divisions as those reflected in the image EXCEPT
    a. federal investment in roads, canals, and railroads.
    b. the gag rule passed in Congress to avoid confrontations over slavery.
    c. resistance to Indian Removal by federal politicians.
    d. refusal to recharter the national bank.

Questions 20–23 refer to the excerpt below.

> "Most of the men was gone, and . . . most of the women was in my bracket, five or six years younger or older. I was twenty-four. There was a black girl that hired in with me. I went to work the next day, sixty cents an hour. . . . I could see where they made a difference in placing you in certain jobs. They had fifteen or twenty departments, but all the Negroes went to Department 17 because there was nothing but shooting and bucking rivets. . . . Some weeks I brought home twenty-six dollars . . . then it gradually went up to thirty dollars. . . . Whatever you make you're supposed to save some. I was also getting that fifty dollars a month from my husband and that was just saved right away. I was planning on buying a home and a car. . . . My husband came back [from the war, and] . . . looked for a job in the cleaning and pressing place. . . . But what we both weren't thinking about was that they [North American] have better benefits because they did have an insurance plan and a union to back you up. Later he did come to work there, in 1951 or 1952. . . . [After I left to have a baby] North American called me back [and] was I a happy soul! . . . It made me live better. It really did. We always say that Lincoln took the bale off of the Negroes. I think there is a statue up there in Washington, D.C., where he's lifting something off the Negro. Well, my sister always said — that's why you can't interview her because she's so radical — 'Hitler was the one that got us out of the white folks' kitchen."
>
> Fanny Christina (Tina) Hill, "War Work: Social and Racial Mobility," from *Rosie the Riveter Revisited*, by Sherna B. Gluck, 1987.

20. Fanny Hill's experiences working in World War II differed most from those of women working in World War I in that
    a. during World War I industries hired almost exclusively white workers.
    b. when World War I ended most female workers left the industrial workforce.
    c. the World War II factory jobs were concentrated in the Sunbelt.
    d. women working during World War II refused to join labor unions.
21. The story told by Fanny Hill in the excerpt could be used to support all of the following arguments EXCEPT
    a. employers allowed women significant roles in producing war supplies in World War II.
    b. women experienced more respect for their work in World War II than in World War I.
    c. World War II led to improvements in working conditions.
    d. labor unions advocated on behalf of women workers during World War I.
22. Fanny Hill's comments about her sister can best be understood as resulting most directly from the
    a. international concerns leading to the founding of the United Nations.
    b. political and cultural expressions of domestic anticommunism.
    c. increasingly confrontational African American civil rights movement.
    d. foreign policies aiming at containment.
23. The excerpt from Fanny Hill related developments that most directly participated in the trend after World War II toward
    a. suburbanization.
    b. the baby boom.
    c. conservatism.
    d. a more educated populace.

Questions 24–26 refer to the excerpt below.

> "The question whether or no there shall be slavery in the new territories . . . is a question between the grand body of white workingmen, the millions of mechanics, farmers, and operatives of our country, with their interests on the one side — and the interests of the few thousand rich, 'polished,' and aristocratic owners of slaves at the South, on the other side.
>
> Experience has proved . . . that a stalwart mass of respectable workingmen, cannot exist, much less flourish, in a thorough slave State. Let any one think for a moment what a different appearance New York, Pennsylvania, or Ohio, would present — how much less sturdy independence and family happiness there would be — were slaves the workmen there, instead of each man as a general thing being his own workman. . . .
>
> Slavery is a good thing enough . . . to the rich — the one out of thousands; but it is destructive to the dignity and independence of all who work, and to labor itself. . . . All practice and theory . . . are strongly arrayed in favor of limiting slavery to where it already exists."
>
> Walt Whitman, Editorial, September 1, 1847

24. Which of the following developments led most directly to this editorial by Walt Whitman?
    a. The U.S.-Mexico War
    b. Conflicts with Britain over Oregon
    c. The discovery of gold in California
    d. The abolitionist activism of Harriet Tubman and Frederick Douglass
25. The ideas expressed by Whitman in the third paragraph share the most continuity to the later political platform of the
    a. Progressive Party.
    b. Reconstruction-era Democratic Party.
    c. antebellum Republican Party.
    d. Populist Party.

26. The ideas of Walt Whitman in the excerpt show the most similarity to
    a. the Cult of Domesticity.
    b. free soil ideology.
    c. the Supreme Court decisions of the Marshall Court.
    d. abolitionist ideology.

Questions 27–30 refer to the map below.

The Compromise of 1850 and the Kansas–Nebraska Act of 1854

27. In reference to territorial agreements shown in this map, which of the following was the most important concession made to southern Congressmen in exchange for the agreement regarding California?
    a. The passage of a new Fugitive Slave Law
    b. The establishment of popular sovereignty in the Kansas Territory
    c. The repeal of the Missouri Compromise
    d. The federal government investment in a transcontinental railroad

28. The map illustrates a trend after the U.S.-Mexico War in the direction of
    a. compromise avoiding violent conflict over slavery.
    b. expansion of women's rights to vote granted by western states.
    c. more extensive efforts to assimilate and incorporate American Indians.
    d. allowing local autonomy in decisions over slavery.

29. The Kansas-Nebraska Act changed federal policy most significantly by
    a. eliminating the 36°30′ division in territory gained in the Louisiana Purchase.
    b. introducing measures reducing American Indian tribal lands.
    c. promoting the establishment of Homestead Act settlements by farmers.
    d. opening western lands to migrations of African American farmers such as the Exodusters.

30. Agreements made in the Kansas-Nebraska Act and the Compromise of 1850 show the greatest continuity with the
    a. Three-Fifths Compromise.
    b. Missouri Compromise.
    c. treaty of Guadalupe Hidalgo.
    d. Compromise of 1877.

Questions 31–33 refer to the excerpt below.

> "It was upon these gentle lambs, imbued by the Creator with all the qualities we have mentioned, that from the very first day they clapped eyes on them the Spanish fell like ravening wolves upon the fold, or like tigers and savage lions who have not eaten meat for days. The pattern established at the outset has remained unchanged to this day, and the Spaniards still do nothing save tear the natives to shreds, murder them and inflict upon them untold misery, suffering and distress, tormenting, harrying and persecuting them mercilessly. . . . When the Spanish first journeyed there, the indigenous population of the island of Hispaniola stood at some three million; today only two hundred survive. The island of Cuba, which extends for a distance almost as great as that separating Valladolid from Rome, is now to all intents and purposes uninhabited; and two other large, beautiful and fertile islands, Puerto Rico and Jamaica, have been similarly devastated. Not a living soul remains today on any of the islands of the Bahamas. . . . On the mainland, we know for sure that our fellow-countrymen have, through their cruelty and wickedness, depopulated and laid waste an area which once boasted more than ten kingdoms, each of them larger in area than the whole of the Iberian Peninsula. . . . At a conservative estimate, the despotic and diabolical behaviour of the Christians has, over the last forty years, led to the unjust and totally unwarranted deaths of more than twelve million souls, women and children among them, and there are grounds for believing my own estimate of more than fifteen million to be nearer the mark."
>
> Bartolomé de las Casas, *A Short Account of the Destruction of the Indies*, 1542

31. The immediate result of the influence of this document was the
    a. exile of de las Casas from the Spanish colonies.
    b. passage of the New Laws ending Native American slavery under Charles V.
    c. establishment of the Atlantic slave trade with Africa.
    d. abolition of slavery in all Spanish colonies.
32. The most direct effect of the ideas expressed by de las Casas in the excerpt was
    a. the Columbian Exchange.
    b. European competition for lands in the Americas.
    c. debates over Spanish imperial policies.
    d. King Philip's War.
33. The excerpt from de las Casas could best be used as evidence to support an argument that the Spanish
    a. utilized advanced technology in colonizing.
    b. allied with American Indians to create a mestizo society.
    c. creoles held preferred status in the Spanish caste system.
    d. prioritized use of native labor in the *encomienda* system above other interests.

Questions 34–36 refer to the image below.

Cartoon Demonstrating Anti-Chinese Racism, By James A. Wales, 1880

34. Which of the following most directly led to the situation that preceded the 1870s conflict portrayed in the image?
- **a.** Job opportunities created by rapid expansion of railroads
- **b.** Victory of the United States in the U.S.-Mexico War
- **c.** Limitations on Mexican immigration established by nativist quotas
- **d.** Increasing acceptance of Irish immigrants into the Democratic Party

35. This cartoon could best be used as evidence to support the conclusion about the late nineteenth century that
- **a.** Republicans expressed a partisan support for Chinese immigration in opposition to the Democratic Party.
- **b.** labor unions consistently opposed Chinese immigration.
- **c.** nativist ideology grew in strength.
- **d.** most Progressive-era reformers advocated for protections of Chinese American interests.

36. Which of the following best summarizes the trend in federal government immigration policy from the late nineteenth century through 1930?
- **a.** Immigration restrictions focused on the Chinese while allowing Europeans open immigration.
- **b.** Immigration restrictions against the Chinese were viewed as failed policies and reversed by the early twentieth century.
- **c.** Immigration restrictions lost the bipartisan support of Congress as business leaders advocated for more cheap labor.
- **d.** Immigration restrictions began with the Chinese and expanded to limit other groups, including Europeans.

Questions 37–39 refer to the excerpt below.

> "Municipal health officials and city inspectors did make some advances against disease, especially through the improvement of the urban environment. They banned pigs from city streets, regulated notoriously unhealthy dairies inside city limits, and stepped up oversight of street cleaning and garbage removal. . . . [T]he Ladies Health Protective Association . . . shared a concern for the vile odors emanating from a manure handler along the East River . . . [and] the entire slaughter-house district near . . . the tenements fouled by sickening smells and backed-up sewage. . . . [T]he association contacted business owners directly with their complaints, and . . . organized demonstrations at the offending locations, inviting the press to witness their lay inspections. . . . The women also gained considerable publicity when they brought their complaints to the Board of Health."
>
> David Stradling, *The Nature of New York: An Environmental History of the Empire State*, 2010

37. Based on the goals and methods described in this excerpt, which historical period is most likely being described?
    a. Social Darwinism
    b. Social Gospel
    c. Progressive Era
    d. Gospel of Wealth

38. The developments described by Stradling most reflect the context of
    a. an increasing role of the federal government in protection of the environment through propaganda campaigns.
    b. an expanding role of state governments ensuring public health through legislation.
    c. both lessening and modification of gender roles defined by domesticity.
    d. stable support for *laissez-faire* economic policies.

39. The actions of women described in this excerpt are most similar to the role of women reformers active during
    a. the First Great Awakening.
    b. the American Revolution.
    c. the Second Great Awakening.
    d. Reconstruction.

Questions 40–42 refer to the image below.

John Sloan, "In Memoriam—The Real Triangle," 1911

40. The image is best understood as a response to conditions justified most directly by the ideology of
    a. the Social Gospel.
    b. the Gospel of Wealth.
    c. *laissez faire*.
    d. late nineteenth-century domesticity.

41. People sharing the ideas supported in the image also most likely supported
    a. the application of Social Darwinist philosophy to explain poverty.
    b. the passage of labor reforms, including a minimum wage and workplace safety laws.
    c. the creation of federal regulations to protect the natural environment.
    d. continuing federal government policies denying legal sanction to labor unions.
42. Images and political cartoons like this one were most effectively used to sway public opinion to support
    a. local ordinances to protect workers in the workplace.
    b. federal legislation to limit working hours.
    c. state laws to limit the power of railroads.
    d. expansion of suffrage rights to women.

Questions 43–45 refer to the excerpt below.

> "In March, 1933, I appealed to the Congress of the United States and to the people of the United States in a new effort to restore power to those to whom it rightfully belonged. The response to that appeal resulted in the writing of a new chapter in the history of popular government. You, the members of the Legislative branch, and I, the Executive, contended for and established a new relationship between Government and people. What were the terms of that new relationship? They were an appeal from the clamor of many private and selfish interests, yes, an appeal from the clamor of partisan interest, to the ideal of the public interest. Government became the representative and the trustee of the public interest. Our aim was to build upon essentially democratic institutions, seeking all the while the adjustment of burdens, the help of the needy, the protection of the weak, the liberation of the exploited and the genuine protection of the people's property. . . . To be sure, in so doing, we have invited battle. We have earned the hatred of entrenched greed."
>
> Franklin Roosevelt, "Annual Message to Congress," 1936

43. In the excerpt, Roosevelt most directly contradicts the ideology of
    a. liberalism.
    b. *laissez faire*.
    c. the Social Gospel.
    d. prohibition.
44. The ideas expressed by Roosevelt in the excerpt contributed most directly to a trend leading to
    a. a new and unique conception of federal government power.
    b. limitations on the powers of the federal government in favor of states' rights.
    c. a renewal of federal activism building on Progressive-era policies.
    d. a return to ideas about government common among elected officeholders during the Gilded Age of the late nineteenth century.
45. Which of the following leaders would most likely have supported Franklin Roosevelt's argument regarding use of federal power in this excerpt?
    a. Ronald Reagan
    b. Henry Clay
    c. Andrew Jackson
    d. Jane Addams

Questions 46–47 refer to the excerpt below.

> "Within the context of cultural unrest and the attack on tradition made by women like [Betty] Friedan, the catalyst for a profounder criticism and a mass mobilization of American women proved to be the young female participants in the social movements of the 1960s. These daughters of the middle class had received mixed, paradoxical messages about what it meant to grow up to be women in America. On the one hand, the cultural ideal . . . informed them that their only true happiness lay in the twin roles of wife and mother. At the same time they could observe the reality that housewifery was distinctly unsatisfactory for millions of suburban women. . . . Such contradictions left young, educated women in the 1960s dry tinder for the spark of revolt. . . . [Their] experiences in the southern civil rights movement and parts of the student new left catalyzed a new feminist consciousness."
>
> Sara Evans, *Personal Politics: The Roots of Women's Liberation in the Civil Rights Movement and the New Left*, 1979

46. Which of the following best represents the "social movements of the 1960s" in which women's experiences led to greater activism?

a. The movement for a Great Society
b. African American civil rights movement
c. The environmental movement
d. The antinuclear movement

47. Women's activism experienced the greatest success in the 1960s and 1970s from

a. policies requiring equal pay.
b. passage of a constitutional amendment for equal rights.
c. elimination of the cultural double standard in sexual norms.
d. overcoming social expectations of domesticity.

Questions 48–50 refer to the excerpt below.

> "I want you to know that this administration is motivated by a political philosophy that sees the greatness of America in you, her people, and in your families, churches, neighborhoods, communities — the institutions that foster and nourish values like concern for others and respect for the rule of law under God.
>
> Now, I don't have to tell you that this puts us in opposition to, or at least out of step with, a prevailing attitude of many who have turned to a modern-day secularism, discarding the tried and time-tested values upon which our very civilization is based. No matter how well intentioned, their value system is radically different from that of most Americans. And while they proclaim that they're freeing us from superstitions of the past, they've taken upon themselves the job of superintending us by government rule and regulation. Sometimes their voices are louder than ours, but they are not yet a majority. . . .
>
> Freedom prospers when religion is vibrant and the rule of law under God is acknowledged. When our Founding Fathers passed the First Amendment, they sought to protect churches from government interference. They never intended to construct a wall of hostility between government and the concept of religious belief itself. Last year, I sent the Congress a constitutional amendment to restore prayer to public schools. . . ."
>
> Ronald Reagan, "The Rule of Law Under God," National Association of American Evangelicals, 1983

48. The ideas expressed by Reagan in the excerpt most directly appeal to a late twentieth-century trend toward

a. increasing environmental regulation.
b. politically active Christian evangelical churches and organizations.
c. free-trade agreements.
d. increased rights for women.

49. Reagan's ideas expressed in the excerpt led most directly to policies
    a. increasing military spending.
    b. deregulating major industries.
    c. ending legalized abortion.
    d. decreasing taxes.

50. In the 1980s Reagan and the national Republican Party captured more votes from all of the following demographics EXCEPT
    a. suburbanites.
    b. former Democrats in the South.
    c. college graduates in urban areas.
    d. wealthy white Protestants.

Questions 51–53 refer to the excerpt below.

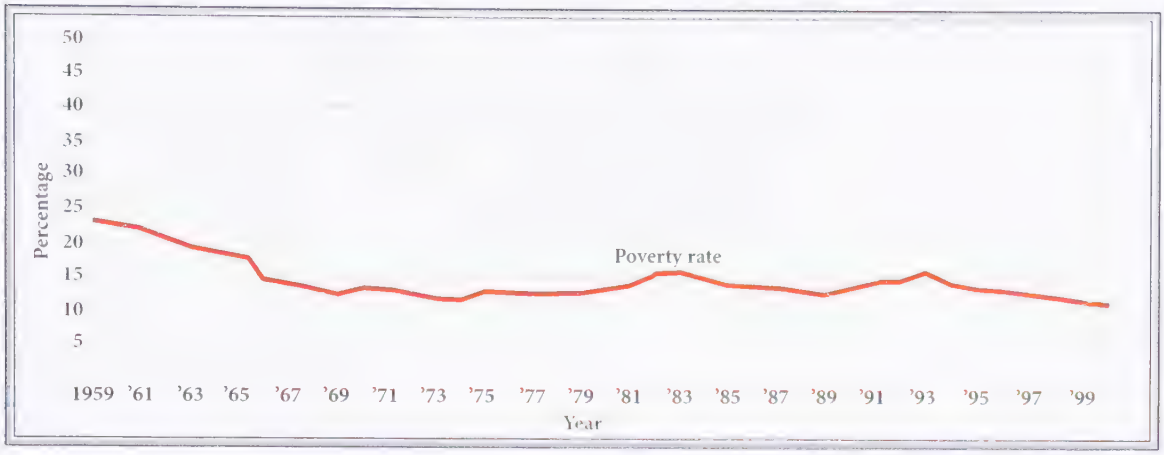
> "His [Alexander Hamilton's] plans . . . were not only a catalyst for sectional confrontation. They seemed an excellent confirmation of persistent Antifederalist suspicions of an engulfing federal power. . . . Coming in conjunction with the high style of the new government, the antipopulistic pronouncements of some of its supporters, and measures such as an excise tax and a professional army, the Hamiltonian program might as well have been designed to awaken specific expectations about the course and nature of governmental decay that were never very far beneath the surface of revolutionary minds."
>
> Lance Banning, *The Jeffersonian Persuasion: Evolution of a Party Ideology*, 1978

51. Which of the following evidence best supports Banning's argument in the excerpt?
    a. Fear of popular rebellion expressed in the Annapolis Convention
    b. Failure of state government control as seen in Shays's Rebellion
    c. Anger at federal tax policy expressed in the Whiskey Rebellion
    d. Dissatisfaction with trade policy established with Pinckney's Treaty

52. The most immediate cause for the formulation of Hamilton's financial plans in the Early Federal Period was the
    a. threat of war with France and Great Britain created by the Napoleonic Wars.
    b. crisis over issues of debt generated by the American Revolution.
    c. establishment of the first cabinet during Washington's administration.
    d. ratification debates that led to a loss of trust in the federal government.

53. Which of the following is the best example of the type of "sectional confrontation" referred to by Banning in the excerpt?
    a. The state of Virginia's resistance to the assumption of state debts
    b. The state of Massachusetts's opposition to establishment of a federal navy
    c. State competitions over land claims in the trans-Appalachian West
    d. Refusal of city leaders in New York and Philadelphia to support creation of a national bank

Questions 54–55 refer to the figure below.



Americans in Poverty, 1959–2000

54. The information from this graph would likely be utilized by a liberal to argue that
   a. Great Society programs dramatically reduced poverty in the U.S.
   b. U.S. involvement in the Vietnam War undermined the accomplishments of the Johnson administration.
   c. federal aid to those in poverty did not drastically alter living conditions in urban areas.
   d. the early accomplishments of the Great Society were reversed by use of block grants to states.

55. Which of the following presidential policies was inspired by the level of poverty in the U.S. in the period 1959- 1961?
   a. New Frontier
   b. Dynamic Conservatism
   c. War on Poverty
   d. Reaganomics

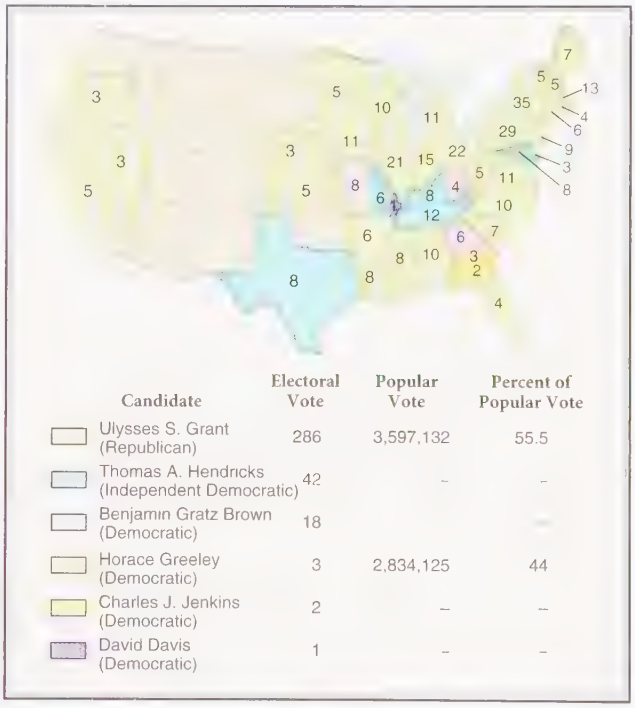
SECTION I
PART B: SHORT ANSWER QUESTIONS
40 minutes

DIRECTIONS: Answer all parts of every question using complete sentences.

> "[T]he guarantor state . . . under the New Deal was . . . a vigorous and dynamic force in the society, energizing and . . . supplanting private enterprise when the general welfare required it. . . . When social and economic problems . . . were ignored or shirked by private enterprise, then the federal government undertook to do the job. [If] private enterprise failed to provide adequate and sufficient housing for a minimum standard of welfare for the people, then the government would build houses. . . . Few areas of American life were beyond the touch of the experimenting fingers of the New Deal. . . . The New Deal Revolution has become so much a part of the American Way that no political party which aspires to high office dares now to repudiate it."
>
> Carl N. Degler, *Out of Our Past: The Forces That Shaped Modern America*, 1959

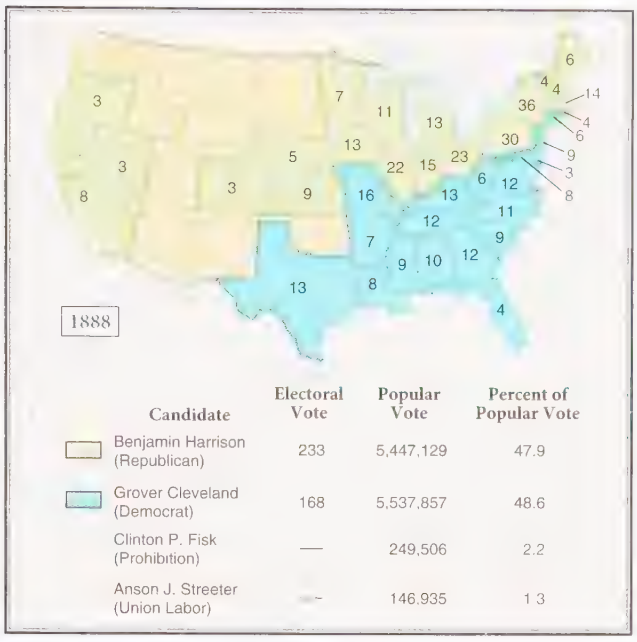
> "The critique of modern capitalism that had been so important in the early 1930s . . . was largely gone. . . . In its place was a set of liberal ideas essentially reconciled to the existing structure of the economy and committed to using the state to compensate for capitalism's inevitable flaws. . . . When liberals spoke now of government's responsibility to protect the health of the industrial world, they defined that responsibility less as a commitment to restructure the economy than as an effort to stabilize it and help it to grow. They were no longer much concerned about controlling or punishing 'plutocrats' and 'economic royalists,' an impulse central to New Deal rhetoric in the mid-1930s. Instead, they spoke of their commitment to providing a healthy environment in which the corporate world could flourish and in which the economy could sustain 'full employment.'"
>
> Alan Brinkley, *The End of Reform: New Deal Liberalism in Recession and War*, 1995

1. Using the two excerpts on the previous page and above, answer (a), (b), and (c).
   - **a.** Briefly describe ONE major difference between Degler's and Brinkley's historical interpretations of the New Deal.
   - **b.** Briefly explain how ONE specific piece of historical evidence from the period 1933 to 1945 that is not explicitly mentioned in the excerpts could be used to support Degler's interpretation.
   - **c.** Briefly explain how ONE specific piece of historical evidence from the period 1933 to 1945 that is not explicitly mentioned in the excerpts could be used to support Brinkley's interpretation.



Candidate	Electoral Vote	Popular Vote	Percent of Popular Vote
Ulysses S. Grant (Republican)	286	3,597,132	55.5
Thomas A. Hendricks (Independent Democratic)	42	–	–
Benjamin Gratz Brown (Democratic)	18		
Horace Greeley (Democratic)	3	2,834,125	44
Charles J. Jenkins (Democratic)	2	–	–
David Davis (Democratic)	1	–	–

The Presidential Election of 1872



The Presidential Election of 1888

2. Using the two maps on the previous page and above, answer (a), (b), and (c).
   a. Describe ONE specific late nineteenth-century event or development in the South that can be used to explain the change in election patterns from 1872 to 1888.
   b. Explain ONE specific historical change in the society of the South in the period between 1872 and 1900 that resulted from the political changes shown in the maps.
   c. Describe how one or both of the maps can be used to explain the impact of the role of the federal government on the American South from 1865 to 1900.

DIRECTIONS: Choose EITHER Question 3 OR Question 4.

3. a. Briefly explain ONE specific historical difference between the Missouri Compromise and the Compromise of 1850.
   b. Briefly explain ONE specific historical similarity between the Missouri Compromise and the Compromise of 1850.
   c. Briefly explain ONE specific historical event or development resulting from either the Missouri Compromise OR the Compromise of 1850.

4. a. Briefly describe ONE specific historical difference between the experiences of women in the 1920s and that of women in the 1950s.
   b. Briefly describe ONE specific historical similarity between the experiences of women in the 1920s and that of women in the 1950s.
   c. Briefly explain ONE specific historical effect of the experiences of women in either the 1920s OR the 1950s.

SECTION II
PART A: DOCUMENT-BASED QUESTION
60 minutes

DIRECTIONS: Question 1 is based on the accompanying documents. The documents have been edited for the purpose of this exercise. Write an essay using the seven documents below.

1. Evaluate the extent of change in U.S. society resulting from the activities of political parties from 1824 to 1840.

DOCUMENT 1

Source: John Marshall, Chief Justice of the U.S. Supreme Court as a delegate to the Virginia Convention to revise the state constitution, "Memorial of the Non-Freeholders of Virginia," 1829.

"Surely it were much to be desired that every citizen should be qualified for the proper exercise of all his rights and the due performance of all his duties. But the same qualifications that entitle him to assume the management of his private affairs and to claim all other privileges of citizenship equally entitle him, in the judgment of your memorialists, to be entrusted with this, the dearest of all privileges, the most important of all his concerns. . . .

Virtue, intelligence are not products of the soil. Attachment to property, often a sordid sentiment, is not to be confounded with the sacred flame of patriotism. The love of country, like that of parents and offspring, is engrafted in our nature. It exists in all climates, among all classes, under every possible form of government. Riches more often impair it than poverty."

DOCUMENT 2

Source: Henry Clay, "Speech Against President Jackson on the Removal of the Deposits," 1833.

"The eyes and hopes of the American people are turned to Congress. They feel that they have been deceived and insulted; their confidence abused; their interests betrayed; and their liberties in danger. They see a rapid and alarming concentration of all power in one man's hands. They see that, by the exercise of the positive authority of the executive, and his negative power asserted over Congress, the will of one man alone prevails and governs the republic. The question is no longer what laws will Congress pass, but what will the executive not veto?"

DOCUMENT 3

Source: Andrew Jackson, Veto Message to Congress on the National Bank, July 10, 1832.

"Equality of talents, of education, or of wealth, cannot be produced by human institutions. . . . [E]very man is equally entitled to protection by law. But when laws undertake to add to these natural and just advantages, artificial distinctions, to grant titles, gratuities, and exclusive privileges, and to make the rich richer and the potent more powerful, the humble members of society, the farmers, mechanics, and laborers who have neither the time nor the means of securing the like favors to themselves, have a right to complain against their government. . . .

Nor is our government to be maintained, or our Union preserved, by invasions of the rights and powers of the several states. In thus attempting to make our government strong, we make it weak. Its true strength consists in leaving individuals and states as much as possible, to themselves; in making itself felt, not in its power, but in its beneficence; not in its control, but in its protection; not in its binding the states more closely to the centre, but leaving each to move, unobstructed, in its proper orbit."

DOCUMENT 4

Source: Margaret Byrd Smith, Washington socialite, letter to son, March 1829.

"But at the White House reception following the inauguration, what a scene did we witness!! The majesty of the people had disappeared, and instead a rabble, a mob . . . scrambling, fighting, romping. . . . The president after having literally been nearly pressed to death . . . escaped to his lodgings at Gadsby's. Cut glass and bone china to the amount of several thousand dollars had been broken in the struggle to get refreshments. . . . Ladies fainted, men were seen with bloody noses. . . . Ladies and gentlemen only had been expected at this reception, not the people en masse. But it was the people's day, and the people's president. . . . The . . . rabble in the president's house brought to my mind descriptions I had read of the mobs in the Tuileries and at Versailles."

DOCUMENT 5

Source: Harriet Martineau, a British author, reporting on her 1834 visit to the United States in *Society in America* (New York, 1837).

"I had been less than three weeks in the country and was in a state of something like awe at the prevalence of not only external competence but also intellectual ability. The striking effect upon a stranger of witnessing, for the first time, the absence of poverty, of gross ignorance, of all servility, of all insolence of manner cannot be exaggerated in description. I had seen every man in the towns an independent citizen; every man in the country a landowner. I had seen that the villages had their newspapers, the factory girls their libraries. I had witnessed controversies between candidates for office on some difficult subjects, of which the people were to be the judges.

With all these things in my mind, and with evidence of prosperity about me in the comfortable homesteads which every turn in the road and every reach of the lake brought into view, I was thrown into painful amazement by being told that the grand question of the time was 'whether the people should be encouraged to govern themselves, or whether the wise should save them from themselves.'"

DOCUMENT 6

Source: John C. Calhoun, South Carolina Exposition and Protest, 1828.

"[The Federal] Government is one of specific powers, and it can rightfully exercise only the powers expressly granted, and those that may be 'necessary and proper' to carry them into effect; all others being reserved expressly to the States, or to the people. It results necessarily, that those who claim to exercise a power under the Constitution, are bound to shew [sic], that it is expressly granted, or that it is necessary and proper, as a means to some of the granted powers. The advocates of the Tariff have offered no such proof. It is true, that the third [sic; eighth] section of the first article of the Constitution of the United States authorizes Congress to lay and collect an impost duty, but it is granted as a tax power, for the sole purpose of revenue; a power in its nature essentially different from that of imposing protective or prohibitory duties. . . . The Constitution grants to Congress the power of imposing a duty on imports for revenue; which power is abused by being converted into an instrument for rearing up the industry of one section of the country on the ruins of another. The violation then consists in using a power, granted for one object, to advance another, and that by the sacrifice of the original object. . . ."

SECTION II
PART B: LONG ESSAY QUESTIONS
40 minutes

DIRECTIONS: Choose one of the following three questions to answer.

2. Evaluate the extent to which the ideology of "republican motherhood" fostered change in definitions of citizenship in the United States between 1789 and 1820.
3. Evaluate the extent to which the Declaration of Sentiments fostered changes in the definitions of citizenship in the United States between 1820 and 1877.
4. Evaluate the extent to which the Progressive Era suffrage movement fostered changes in the definitions of citizenship in the United States between 1890 and 1940.

Documents

The Declaration of Independence

In Congress, July 4, 1776,
The Unanimous Declaration of the Thirteen United States of America

When in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the Powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are Life, Liberty, and the pursuit of Happiness. That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed. That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security. — Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world.

He has refused his Assent to Laws, the most wholesome and necessary for the public good.

He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and, when so suspended, he has utterly neglected to attend to them.

He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right of Representation in the Legislature, a right inestimable to them and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public Records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the Legislative powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the mean time exposed to all the dangers of invasion from without and convulsions within.

He has endeavoured to prevent the population of these States; for that purpose obstructing the Laws of Naturalization of Foreigners; refusing to pass others to encourage their migrations hither, and raising the conditions of new Appropriations of Lands.

He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary powers.

He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of New Offices, and sent hither swarms of Officers to harass our People, and eat out their substance.

He has kept among us, in times of peace, Standing Armies without the Consent of our legislature.

He has affected to render the Military independent of and superior to the Civil Power.

He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their Acts of pretended Legislation:

For quartering large bodies of armed troops among us:

For protecting them, by a mock Trial, from Punishment for any Murders which they should commit on the Inhabitants of these States:

For cutting off our Trade with all parts of the world:

For imposing taxes on us without our Consent:

For depriving us, in many cases, of the benefits of Trial by jury:

For transporting us beyond Seas to be tried for pretended offences:

For abolishing the free System of English Laws in a neighbouring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies:

For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments:

For suspending our own Legislatures, and declaring themselves invested with Power to legislate for us in all cases whatsoever.

He has abdicated Government here, by declaring us out of his Protection and waging War against us.

He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the lives of our people.

He is at this time transporting large armies of foreign mercenaries to compleat the works of death, desolation, and tyranny, already begun with circumstances of Cruelty & perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation.

He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands.

He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes, and conditions.

In every stage of these Oppressions We have Petitioned for Redress in the most humble terms: Our repeated Petitions have been answered only by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit to be the ruler of a free people.

Nor have We been wanting in attention to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends.

We, therefore, the Representatives of the United States of America, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be FREE AND INDEPENDENT STATES; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do. And for the support of this Declaration, with a firm reliance on the Protection of Divine Providence, we mutually pledge to each other our Lives, our Fortunes, and our sacred Honor.

The Constitution of the United States of America

Agreed to by Philadelphia Convention, September 17, 1787
Implemented March 4, 1789

We the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

Article I

Section 1. All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and a House of Representatives.

Section 2. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.

No Person shall be a Representative who shall not have attained to the Age of twenty-five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.

Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, *which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons.**
The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; and *until such enumeration shall be made, the State of New Hampshire shall be entitled to chuse three, Massachusetts eight, Rhode Island and Providence Plantations one, Connecticut five, New York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.*

When vacancies happen in the Representation from any State, the Executive Authority thereof shall issue Writs of Election to fill such Vacancies.

The House of Representatives shall chuse their Speaker and other Officers; and shall have the sole Power of Impeachment.

Section 3. The Senate of the United States shall be composed of two Senators from each State, *chosen by the Legislature thereof,*† for six Years; and each Senator shall have one Vote.

Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats of the Senators of the first Class shall be vacated at the Expiration of the second Year, of the second Class at the Expiration of the fourth Year, and of the third Class at the Expiration of the sixth Year, so that one-third may be chosen every second Year; and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments until the next Meeting of the Legislature, which shall then fill such Vacancies.‡

No person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

The Vice President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided.

The Senate shall chuse their other Officers, and also a President pro tempore, in the absence of the Vice President, or when he shall exercise the Office of President of the United States.

The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside: And no Person shall be convicted without the Concurrence of two-thirds of the Members present.

Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and enjoy any Office of honor, Trust or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law.

Section 4. The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the Places of Chusing Senators.

Note: The Constitution became effective March 4, 1789. Provisions in italics are no longer relevant or have been changed by constitutional amendment.
*Changed by Section 2 of the Fourteenth Amendment.

†Changed by Section 1 of the Seventeenth Amendment.
‡Changed by Clause 2 of the Seventeenth Amendment.

The Congress shall assemble at least once in every Year, and such Meeting *shall be on the first Monday in December, unless they shall by Law appoint a different Day.**

Section 5. Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties, as each House may provide.

Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behavior, and, with the Concurrence of two-thirds, expel a Member.

Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one-fifth of those Present, be entered on the Journal.

Neither House, during the Session of Congress, shall, without the Consent of the other, adjourn for more than three days, nor to any other Place than that in which the two Houses shall be sitting.

Section 6. The Senators and Representatives shall receive a Compensation for their Services, to be ascertained by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the Peace, be privileged from Arrest during their Attendance at the Session of their respective Houses, and in going to and returning from the same; and for any Speech or Debate in either House, they shall not be questioned in any other Place.

No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been increased, during such time; and no Person holding any Office under the United States, shall be a Member of either House during his Continuance in Office.

Section 7. All Bills for raising Revenue shall originate in the House of Representatives; but the Senate may propose or concur with Amendments as on other Bills.

Every Bill which shall have passed the House of Representatives and the Senate, shall, before it becomes a Law, be presented to the President of the United States; If he approve he shall sign it, but if not he shall return it, with his Objections to that House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two-thirds of that House shall agree to pass the Bill, it shall be sent, together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two-thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by Yeas and Nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House respectively. If any Bill shall not be returned by the President within ten Days (Sundays excepted) after it shall have been presented to him, the Same shall be a Law, in like Manner as if he had signed it, unless the Congress by their Adjournment prevent its Return, in which Case it shall not be a Law.

Every Order, Resolution, or Vote to which the Concurrence of the Senate and the House of Representatives may be necessary (except on a question of Adjournment) shall be presented to the President of the United States; and before the Same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two-thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill.

Section 8. The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts and Excises shall be uniform throughout the United States;

To borrow Money on the credit of the United States;

To regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes;

To establish an uniform Rule of Naturalization, and uniform Laws on the subject of Bankruptcies throughout the United States;

To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures;

To provide for the Punishment of counterfeiting the Securities and current Coin of the United States;

To establish Post Offices and post Roads;

To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries;

To constitute Tribunals inferior to the supreme Court;

To define and punish Piracies and Felonies committed on the high Seas, and Offenses against the Law of Nations;

To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water;

To raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two Years;

To provide and maintain a Navy;

To make Rules for the Government and Regulation of the land and naval Forces;

To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions;

To provide for organizing, arming, and disciplining the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress;

To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may,

*Changed by Section 2 of the Twentieth Amendment.

by Cession of particular States, and the acceptance of Congress, become the Seat of Government of the United States, and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings; — And

To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Section 9. The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight but a tax or duty may be imposed on such Importation, not exceeding ten dollars for each Person.

The privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.

No Bill of Attainder or ex post facto Law shall be passed.

*No capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken.**

No Tax or Duty shall be laid on Articles exported from any State.

No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another: nor shall Vessels bound to, or from, one State, be obliged to enter, clear, or pay Duties in another.

No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time.

No Title of Nobility shall be granted by the United States: And no Person holding any Office of Profit or Trust under them, shall, without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.

Section 10. No State shall enter into any Treaty, Alliance, or Confederation; grant Letters of Marque and Reprisal; coin Money; emit Bills of Credit; make any Thing but gold and silver Coin a Tender in Payment of Debts; pass any Bill of Attainder, ex post facto Law, or Law impairing the Obligation of Contracts, or grant any Title of Nobility.

No State shall, without the Consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for executing its inspection Laws: and the net Produce of all Duties and Imposts, laid by any State on Imports or Exports, shall be for the Use of the Treasury of the United States; and all such Laws shall be subject to the Revision and Control of the Congress.

No State shall, without the Consent of the Congress, lay any duty of Tonnage, keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State, or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.

Article II

Section 1. The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years, and, together with the Vice President, chosen for the same Term, be elected, as follows:

Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors, equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector.

The Electors shall meet in their respective States, and vote by Ballot for two Persons, of whom one at least shall not be an Inhabitant of the same State with themselves. And they shall make a List of all the Persons voted for, and of the Number of Votes for each; which List they shall sign and certify, and transmit sealed to the Seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the Presence of the Senate and House of Representatives, open all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, if such Number be a Majority of the whole Number of Electors appointed; and if there be more than one who have such Majority, and have an equal Number of Votes, then the House of Representatives shall immediately chuse by Ballot one of them for President; and if no Person have a Majority, then from the five highest on the List the said House shall in like Manner chuse the President. But in chusing the President, the Votes shall be taken by States, the Representation from each State having one Vote; a quorum for this Purpose shall consist of a Member or Members from two thirds of the States, and a Majority of all the States shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the greatest Number of Votes of the Electors shall be the Vice President. But if there should remain two or more who have equal Votes, the Senate shall chuse from them by Ballot the Vice President.†

The Congress may determine the Time of chusing the Electors, and the Day on which they shall give their Votes; which Day shall be the same throughout the United States.

No Person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty five Years, and been fourteen Years a Resident within the United States.

In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers

*Changed by the Sixteenth Amendment.

†Superseded by the Twelfth Amendment.

and Duties of the said Office, the same shall devolve on the Vice President, *and the Congress may by Law provide for the Case of Removal, Death, Resignation, or Inability, both of the President and Vice President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.**

The President shall, at stated Times, receive for his Services a Compensation, which shall neither be increased nor diminished during the Period for which he shall have been elected, and he shall not receive within that Period any other Emolument from the United States, or any of them.

Before he enter on the Execution of his Office, he shall take the following Oath or Affirmation:—"I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, protect and defend the Constitution of the United States."

Section 2. The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinion, in writing, of the principal Officer in each of the executive Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to Grant Reprieves and Pardons for Offences against the United States, except in Cases of Impeachment.

He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law: but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.

Section 3. He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagreement between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States.

Section 4. The President, Vice President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

Article III

Section 1. The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish. The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behaviour, and shall, at stated Times, receive for their Services a Compensation, which shall not be diminished during their Continuance in Office.

Section 2. The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority;—to all Cases affecting Ambassadors, other public Ministers and Consuls;—to all Cases of admiralty and maritime Jurisdiction;—to Controversies to which the United States shall be a Party;—to Controversies between two or more States;—*between a State and Citizens of another State*;†—between Citizens of different States;—between Citizens of the same State claiming Lands under Grants of different States, and between a State, or the Citizens thereof, and foreign States, Citizens or Subjects.

In all Cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be Party, the supreme Court shall have original Jurisdiction. In all the other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.

The trial of all Crimes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where said Crimes shall have been committed; but when not committed within any State, the Trial shall be at such Place or Places as the Congress may by Law have directed.

Section 3. Treason against the United States, shall consist only in levying War against them, or in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court.

The Congress shall have Power to declare the Punishment of Treason, but no Attainder of Treason shall work Corruption of Blood, or Forfeiture except during the Life of the Person attainted.

Article IV

Section 1. Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records, and Proceedings shall be proved, and the Effect thereof.

*Modified by the Twenty-Fifth Amendment.

†Restricted by the Eleventh Amendment.

Section 2. The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States.

A Person charged in any State with Treason, Felony, or other Crime, who shall flee from Justice, and be found in another State, shall on demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of the Crime.

*No Person held to Service or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour, but shall be delivered up on Claim of the Party to whom such Service or Labour may be due.**

Section 3. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress.

The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular State.

Section 4. The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

Article V

The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two-thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as Part of this Constitution, when ratified by the Legislatures of three-fourths of the several States, or by Conventions in three-fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; *Provided that no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and fourth Clauses in the Ninth Section of the first Article; and* that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

Article VI

All Debts contracted and Engagements entered into, before the Adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.

The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States, shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

Article VII

The Ratification of the Conventions of nine States shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same.

Done in Convention by the Unanimous Consent of the States present the Seventeenth Day of September in the Year of our Lord one thousand seven hundred and Eighty seven and of the Independence of the United States of America the Twelfth. In Witness whereof We have hereunto subscribed our Names.

Amendments to the Constitution (Including the Six Unratified Amendments)

Amendment I [1791]*

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances. - most important shows true freedom

Amendment II [1791]

A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms shall not be infringed.

Amendment III [1791]

No Soldier shall, in time of peace, be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.

Amendment IV [1791]

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

Amendment V [1791]

No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

Amendment VI [1791]

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defence.

Amendment VII [1791]

In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise reexamined in any Court of the United States, than according to the Rules of the common law.

Amendment VIII [1791]

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

Amendment IX [1791]

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

Amendment X [1791]

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

Unratified Amendment

Reapportionment Amendment (proposed by Congress September 25, 1789, along with the Bill of Rights)

After the first enumeration required by the first article of the Constitution, there shall be one Representative for every thirty thousand, until the number shall amount to one hundred, after which the proportion shall be so regulated by Congress, that there shall be not less than one hundred Representatives, nor less than one Representative for every forty thousand persons, until the number of Representatives shall amount to two hundred; after which the proportion shall be so regulated by Congress, that there shall not be less than two hundred Representatives, nor more than one Representative for every fifty thousand persons.

Amendment XI [1795]

The Judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by Citizens of another State, or by Citizens or subjects of any foreign state.

*The dates in brackets indicate when the amendment was ratified.

Amendment XII [1804]

The Electors shall meet in their respective States and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of government of the United States, directed to the President of the Senate; — the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted; — The person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of Electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by States, the representation from each State having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the States, and a majority of all the States shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before *the fourth day of March* next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President.* — The person having the greatest number of votes as Vice-President, shall be the Vice-President, if such number be a majority of the whole number of Electors appointed; and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

Unratified Amendment

Titles of Nobility Amendment (proposed by Congress May 1, 1810)

If any citizen of the United States shall accept, claim, receive or retain any title of nobility or honor or shall, without the consent of Congress, accept and retain any present, pension, office or emolument of any kind whatever, from any emperor, king, prince or foreign power, such person shall cease to be a citizen of the United States, and shall be incapable of holding any office of trust or profit under them, or either of them.

*Superseded by Section 3 of the Twentieth Amendment.

Unratified Amendment

Corwin Amendment (proposed by Congress March 2, 1861)

No amendment shall be made to the Constitution which will authorize or give to Congress the power to abolish or interfere, within any State, with the domestic institutions thereof, including that of persons held to labor or service by the laws of said State.

Amendment XIII [1865]

Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2. Congress shall have power to enforce this article by appropriate legislation.

Amendment XIV [1868]

Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied to any of the *male* inhabitants of such State, being *twenty-one* years of age and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such *male* citizens shall bear to the whole number of *male* citizens *twenty-one* years of age in such State.

Section 3. No person shall be a Senator or Representative in Congress, or Elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. Congress may, by a vote of two-thirds of each house, remove such disability.

Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing

insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims shall be held illegal and void.

Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

Amendment XV [1870]

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude —

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment XVI [1913]

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

Amendment XVII [1913]

Section 1. The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of [voters for] the most numerous branch of the State legislatures.

Section 2. When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies: Provided, that the Legislature of any State may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the Legislature may direct.

Section 3. *This amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as part of the Constitution.*

Amendment XVIII [1919; repealed 1933 by Amendment XXI]

Section 1. *After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof, for beverage purposes, is hereby prohibited.*

Section 2. *The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation.*

Section 3. *This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided by the Constitution, within seven years from the date of the submission thereof to the States by the Congress.*

Amendment XIX [1920]

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

Section 2. Congress shall have the power to enforce this article by appropriate legislation.

Unratified Amendment

Child Labor Amendment
(proposed by Congress June 2, 1924)

Section 1. *The Congress shall have power to limit, regulate, and prohibit the labor of persons under eighteen years of age.*

Section 2. *The power of the several States is unimpaired by this article except that the operation of State laws shall be suspended to the extent necessary to give effect to legislation enacted by Congress.*

Amendment XX [1933]

Section 1. The terms of the President and Vice-President shall end at noon on the 20th day of January, and the terms of Senators and Representatives at noon on the 3rd day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

Section 2. The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the 3rd day of January, unless they shall by law appoint a different day.

Section 3. If, at the time fixed for the beginning of the term of the President, the President-elect shall have died, the Vice-President-elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President-elect shall have failed to qualify, then the Vice-President-elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President-elect nor a Vice-President-elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice-President shall have qualified.

Section 4. The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice-President whenever the right of choice shall have devolved upon them.

Section 5. Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article.

Section 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the Legislatures of three-fourths of the several States within seven years from the date of its submission.

Amendment XXI [1933]

Section 1. The eighteenth article of amendment to the Constitution of the United States is hereby repealed.

Section 2. The transportation or importation into any State, Territory, or Possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by conventions in the several States, as provided in the Constitution, within seven years from the date of the submission thereof to the States by the Congress.

Amendment XXII [1951]

Section 1. No person shall be elected to the office of the President more than twice, and no person who has held the office of President, or acted as President, for more than two years of a term to which some other person was elected President shall be elected to the office of President more than once. But this article shall not apply to any person holding the office of President when this Article was proposed by the Congress, and shall not prevent any person who may be holding the office of President, or acting as President, during the term within which this Article becomes operative from holding the office of President or acting as President during the remainder of such term.

Section 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission to the States by the Congress.

Amendment XXIII [1961]

Section 1. The District constituting the seat of Government of the United States shall appoint in such manner as the Congress may direct: A number of electors of President and Vice-President equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State, but in no event more than the least populous State; they shall be in addition to those appointed by the States, but they shall be considered for the purposes of the election of President and Vice-President, to be electors appointed by a State; and they shall meet in the District and perform such duties as provided by the twelfth article of amendment.

Section 2. The Congress shall have the power to enforce this article by appropriate legislation.

Amendment XXIV [1964]

Section 1. The right of citizens of the United States to vote in any primary or other election for President or Vice-President, for electors for President or Vice-President, or for Senator or Representative in Congress, shall not be denied or abridged by the United States or any State by reason of failure to pay any poll tax or other tax.

Section 2. The Congress shall have the power to enforce this article by appropriate legislation.

Amendment XXV [1967]

Section 1. In case of the removal of the President from office or of his death or resignation, the Vice-President shall become President.

Section 2. Whenever there is a vacancy in the office of the Vice-President, the President shall nominate a Vice-President who shall take office upon confirmation by a majority vote of both Houses of Congress.

Section 3. Whenever the President transmits to the President pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that he is unable to discharge the powers and duties of his office, and until he transmits to them a written declaration to the contrary, such powers and duties shall be discharged by the Vice-President as Acting President.

Section 4. Whenever the Vice-President and a majority of either the principal officers of the executive departments or of such other body as Congress may by law provide, transmit to the President pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office, the Vice-President shall immediately assume the powers and duties of the office as Acting President.

Thereafter, when the President transmits to the President pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that no inability exists, he shall resume the powers and duties of his office unless the Vice-President and a majority of either the principal officers of the executive department[s] or of such other body as Congress may by law provide, transmit within four days to the President pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office. Thereupon Congress shall decide the issue, assembling within forty-eight hours for that purpose if not in session. If the Congress, within twenty-one days after receipt of the latter written declaration, or, if Congress is not in session, within twenty-one days after Congress is required to assemble, determines by two-thirds vote of both Houses that the President is unable to discharge the powers and duties of his office, the Vice-President shall continue to discharge the same as Acting President; otherwise, the President shall resume the powers and duties of his office.

Amendment XXVI [1971]

Section 1. The right of citizens of the United States, who are eighteen years of age or older, to vote shall not be denied or abridged by the United States or by any State on account of age.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Unratified Amendment

Equal Rights Amendment (proposed by Congress March 22, 1972; seven-year deadline for ratification extended to June 30, 1982)

Section 1. *Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex.*

Section 2. *The Congress shall have the power to enforce, by appropriate legislation, the provisions of this article.*

Section 3. *This amendment shall take effect two years after the date of ratification.*

Unratified Amendment

District of Columbia Statehood Amendment (proposed by Congress August 22, 1978)

Section 1. *For purposes of representation in the Congress, election of the President and Vice President, and article V of this Constitution, the District constituting the seat of government of the United States shall be treated as though it were a State.*

Section 2. *The exercise of the rights and powers conferred under this article shall be by the people of the District constituting the seat of government, and as shall be provided by Congress.*

Section 3. *The twenty-third article of amendment to the Constitution of the United States is hereby repealed.*

Section 4. *This article shall be inoperative, unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several states within seven years from the date of its submission.*

Amendment XXVII [1992]

No law varying the compensation for the services of the Senators and Representatives, shall take effect, until an election of Representatives shall have intervened.

	John Adams†			34
	Other candidates			35
1792	**George Washington**	No party designations		132
	John Adams			77
	George Clinton			50
	Other candidates			5

SOURCES: U.S. Bureau of the Census, *Historical Statistics of the United States, Colonial Times to 1970* (1975); *Statistical Abstract of the United States, 2001*; *Statistical Abstract of the United States, 2006.*

*Prior to 1824, most presidential electors were chosen by state legislators rather than by popular vote. For elections after 1824, candidates receiving less than 1.0 percent of the popular vote have been omitted from this chart. Hence the popular vote does not total 100 percent for all elections.

†Before the Twelfth Amendment was passed in 1804, the electoral college voted for two presidential candidates; the runner up became vice president.

*Note: Until 1890, census takers never made any effort to count the Native American people who lived outside their reserved political areas and compiled only casual and incomplete enumerations of those living within their jurisdictions. In 1890, the federal government attempted a full count of the Indian population: the Census found 125,719 Indians in 1890, compared with only 12,543 in 1870 and 33,985 in 1880.

Immigration by Decade

Year	Number	Immigrants During This Decade as a Percentage of Total Population	Year	Number	Immigrants During This Decade as a Percentage of Total Population

Glossary of Academic and Historical Terms

1968 Democratic National Convention: A convention held in Chicago during which numerous antiwar demonstrators outside the convention hall were tear-gassed and clubbed by police. Inside the convention hall, the delegates were bitterly divided over Vietnam. (p. 864)

abhor: to feel hatred for. (p. 600)

abject: wretched. (p. 280)

abolitionism: The social reform movement to end slavery immediately and without compensation that began in the United States in the 1830s. (p. 322)

abrogate: to cease authoritative power. (p. 374)

Abu Ghraib prison: A prison just outside Baghdad, Iraq, where American guards were photographed during the Iraq War abusing and torturing suspected insurgents. (p. 966)

accord: to give something to a person. (p. 337)

accumulate: to collect or gather something over time. (p. 36)

acerbic: sharp; harsh. (p. 666)

acumen: the capability to make good, quick judgements. (p. 929)

Adams-Onís Treaty: An 1819 treaty in which John Quincy Adams persuaded Spain to cede the Florida territory to the United States. In return, the American government accepted Spain's claim to Texas and agreed to a compromise on the western boundary for the state of Louisiana. (p. 231)

adaptation: a change made in order to adjust and improve function in a situation. (p. 3)

adherent: a strong supporter of something such as a leader. (p. 861)

adjudicate: to formally settle a dispute. (p. 187)

adroit: skillful; clever. (p. 959)

Advanced Research Projects Agency Network (ARPANET): A decentralized computer network developed in the late 1960s by the U.S. Department of Defense in conjunction with the Massachusetts Institute of Technology. The Internet grew out of the ARPANET. (p. 951)

adversary: opponent. (p. 656)

affidavit: a statement sworn under oath, used for evidence in court. (p. 377)

affirmative action: Policies established in the 1960s and 1970s by governments, businesses, universities, and other institutions to overcome the effects of past discrimination against specific groups such as racial and ethnic minorities and women. Measures to ensure equal opportunity include setting goals for the admission, hiring, and promotion of minorities; considering

Convención Nacional Demócrata de 1968: Convención llevada a cabo en Chicago durante la cual varios manifestantes antiguerra fueron reprimidos con gas lacrimógeno y golpeados por la policía al exterior del centro de convenciones. Al interior del centro de convenciones, los delegados se encontraban amargamente divididos por la Guerra de Vietnam. (pág. 864)

detestar: sentir odio hacia algo. (pág. 600)

abyecto: desgraciado. (pág. 280)

abolicionismo: Movimiento de reforma social que comenzó en los Estados Unidos en la década de 1830, cuyo objetivo fue ponerle fin a la esclavitud de forma inmediata y sin compensación. (pág. 322)

derogar: suspender poderes autorizados. (pág. 374)

Prisión de Abu Ghraib: Prisión en las afueras de Bagdad, Irak, donde los guardias estadounidenses fueron grabados abusando y torturando a presuntos insurgentes. (pág. 966)

conceder: dar algo a una persona. (pág. 337)

acumular: coleccionar o juntar algo por un tiempo. (pág. 36)

mordaz: duro; severo. (pág. 666)

perspicacia: capacidad para tomar decisiones buenas, rápidas. (pág. 929)

Tratado de Adams-Onís: Tratado que tuvo lugar en 1819 en el que John Quincy Adams persuadió a España a que cediera el territorio de la Florida a los Estados Unidos. A cambio, el gobierno estadounidense aceptó el reclamo de España sobre Texas y aceptó negociar el límite occidental del estado de Luisiana. (pág. 231)

adaptación: cambio que se hace para ajustar y mejorar una función en una situación. (pág. 3)

adepto: persona que se muestra a favor de algo, por ejemplo de un líder. (pág. 861)

arbitrar: resolver una disputa de manera formal. (pág. 187)

hábil: diestro; listo. (pág. 959)

Advanced Research Projects Agency Network (Red de la Agencia de Proyectos de Investigación Avanzada, ARPANET): Red de computadoras descentralizadas desarrollada a finales de la década de 1960 por el Departamento de Defensa de Estados Unidos en colaboración con el Massachusetts Institute of Technology. La Internet surgió a partir de ARPANET. (pág. 951)

adversario: rival. (pág. 656)

declaración jurada: declaración tomada bajo juramento que se usa como evidencia en un tribunal. (pág. 377)

acción afirmativa (o discriminación positiva): Políticas establecidas en las décadas de 1960 y 1970 por gobiernos, negocios, universidades y otras instituciones para superar los efectos de discriminaciones del pasado contra grupos específicos como minorías raciales y étnicas, y mujeres. Las medidas para asegurar la igualdad de oportunidades incluyeron el establecimiento

minority status when allocating resources; and actively encouraging victims of past discrimination to apply for jobs and other resources. (p. 894)

African Methodist Episcopal Church: Church founded in 1816 by African Americans who were discriminated against by white Protestants. The church spread across the Northeast and Midwest and even founded a few congregations in the slave states of Missouri, Kentucky, Louisiana, and South Carolina. (p. 321)

agrarian: relating to agriculture or land. (p. 267)

Agricultural Adjustment Act: New Deal legislation passed in May 1933 that aimed at cutting agricultural production to raise crop prices and thus farmers' income. (p. 687)

Al Qaeda: A network of radical Islamic terrorists organized by Osama bin Laden, who issued a call for holy war against Americans and their allies. Members of Al Qaeda were responsible for the 9/11 terrorist attacks. (p. 942)

Alamo: The 1836 defeat by the Mexican army of the Texan garrison defending the Alamo in San Antonio. Newspapers urged Americans to "Remember the Alamo," and American adventurers, lured by offers of land grants, flocked to Texas to join the rebel forces. (p. 339)

Algonquian cultures/languages: A Native American language family whose speakers were widespread in the eastern woodlands, Great Lakes, and subarctic regions of eastern North America. The Algonquian language family should not be confused with the Algonquins, who were a single nation inhabiting the St. Lawrence Valley at the time of first contact. (p. 11)

alliance: an agreement between parties, or sometimes nations, to work together under certain circumstances. (p. 15)

ameliorate: improve. (p. 493)

America First Committee: A committee organized by isolationists in 1940 to oppose the entrance of the United States into World War II. The membership of the committee included senators, journalists, and publishers and such well-respected figures as the aviator Charles Lindbergh. (p. 715)

American Anti-Slavery Society: The first interracial social justice movement in the United States, which advocated the immediate, unconditional end of slavery on the basis of human rights, without compensation to slave masters. (p. 322)

American Civil Liberties Union: An organization formed during the Red Scare to protect free speech rights. (p. 666)

American Colonization Society: Founded by Henry Clay and other prominent citizens in 1817, the society argued that slaves had to be freed and then resettled, in Africa or elsewhere. (p. 280)

American exceptionalism: The idea that the United States has a unique destiny to foster democracy and civilization on the world stage. (p. 622)

de metas para la admisión, contratación y promoción de minorías; la consideración del estatus de minoría en la asignación de recursos; e invitar activamente a las víctimas de discriminaciones pasadas a solicitar empleos y otros recursos. (pág. 894)

Iglesia Episcopal Metodista Africana: Iglesia fundada en 1816 por afroamericanos discriminados por protestantes blancos. La iglesia se extendió por el noreste y el medio oeste del país e incluso fundó un número de congregaciones en los estados esclavistas de Misuri, Kentucky, Luisiana y Carolina del Sur. (pág. 321)

agrario: relacionado con la agricultura o tierra. (pág. 267)

Ley de Ajuste Agrícola: Legislación del "Nuevo Trato" aprobada en mayo de 1933 que buscaba recortar la producción agrícola para aumentar el precio de los cultivos y por lo tanto, el ingreso de los agricultores. (pág. 687)

Al Qaeda: Red de terroristas islámicos radicales organizada por Osama Bin Laden, quien convocó a una guerra santa contra los estadounidenses y sus aliados. Miembros de Al Qaeda fueron responsables de los ataques terroristas del 11 de septiembre. (pág. 942)

Álamo: Derrota, a manos del ejército mexicano en 1836, de la guarnición texana que defendía el Álamo en San Antonio. Los periódicos instaron a los estadounidenses a que "Recuerden el Álamo", y los aventureros estadounidenses, atraídos por las ofertas de concesiones de tierras, acudieron a Texas para unirse a las fuerzas rebeldes. (pág. 339)

algonquinas, culturas y lenguas: Familia de lenguas nativas americanas cuyos hablantes se extendieron por los bosques orientales, los Grandes Lagos y las regiones subárticas del este de América del Norte. La familia de las lenguas algonquinas no debe confundirse con los algonquinos, la nación-pueblo que habitaba el valle de San Lorenzo cuando ocurrió el primer contacto. (pág. 11)

alianza: acuerdo entre dos o más partes, a veces naciones, de trabajar juntos bajo ciertas circunstancias. (pág. 15)

mejorar: aumentar la calidad de algo. (pág. 493)

Comité América Primero: Comité organizado por aislacionistas en 1940 en oposición a la entrada de Estados Unidos a la Segunda Guerra Mundial. Entre los miembros del comité había senadores, periodistas, editores y figuras respetadas como el piloto Charles Lindbergh. (pág. 715)

Sociedad Antiesclavista Americana: Fue el primer movimiento interracial de justicia social en los Estados Unidos que abogó por el final inmediato e incondicional de la esclavitud sobre la base de los derechos humanos, sin compensación para los dueños de esclavos. (pág. 322)

Unión Americana de Libertades Civiles: Organización formada durante el Temor rojo para proteger los derechos de libertad de expresión. (pág. 666)

Sociedad Americana de Colonización: Fundada en 1817 por Henry Clay y otros ciudadanos prominentes, esta sociedad argumentaba que los esclavos debían ser liberados y reubicados en África o en otro lugar. (pág. 280)

Excepcionalismo americano: La idea de que Estados Unidos tiene como destino único fomentar la democracia y civilización en el escenario internacional. (pág. 622)

American Federation of Labor: Organization created by Samuel Gompers in 1886 that coordinated the activities of craft unions and called for direct negotiation with employers in order to achieve benefits for skilled workers. Like other trade unions, the AFL called for the closed shop — all employees had to be union members — to keep out low-wage competition and strengthen unions' bargaining power with employers. (p. 522)

American GI Forum: A group founded by World War II veterans in Corpus Christi, Texas, in 1948 to protest the poor treatment of Mexican American soldiers and veterans. (p. 819)

American Indian Movement (AIM): Organization established in 1968 to address the problems Indians faced in American cities, including poverty and police harassment. AIM organized Indians to end relocation and termination policies and to win greater control over their cultures and communities. (p. 841)

American Liberty League: A group of Republican business leaders and conservative Democrats who banded together to fight what they called the "reckless spending" and "socialist" reforms of the New Deal. (p. 690)

American, or Know-Nothing, Party: An anti-immigrant, anti-Catholic political party formed in 1851 that arose in response to mass immigration in the 1840s, especially from Ireland and Germany. In 1854, the party gained control of the state governments of Massachusetts and Pennsylvania. (p. 384)

American Plan: Strategy by American business in the 1920s to keep workplaces free of unions, which included refusing to negotiate with trade unions and requiring workers to sign contracts (known as "yellow dog" contracts) pledging not to join a union. (p. 654)

American Protective Association: A powerful political organization of militant Protestants, which for a brief period in the 1890s counted more than two million members. In its virulent anti-Catholicism and calls for restrictions on immigrants, the APA prefigured the revived Ku Klux Klan of the 1920s. (p. 533)

American Recovery and Reinvestment Act: An economic stimulus bill passed in 2009, in response to the Great Recession, that provided $787 billion to state and local governments for schools, hospitals, and transportation projects. It was one of the largest single packages of government spending in American history. (p. 968)

American Renaissance: A literary explosion during the 1840s inspired in part by Emerson's ideas on the liberation of the individual. (p. 309)

American System: The mercantilist system of national economic development advocated by Henry Clay and adopted by John Quincy Adams, with a national bank to manage the nation's financial system; protective tariffs to provide revenue and encourage industry; and a nationally funded network of roads, canals, and railroads. (p. 281)

Federación Americana del Trabajo (AFL): Organización creada por Samuel Gompers en 1886 que coordinó las actividades de los gremios y pidió negociaciones directas con los patrones para obtener beneficios para la mano de obra calificada. Al igual que otros sindicatos, la AFL llamó a cerrar filas— todos los empleados debían ser miembros del sindicato— para excluir a la competencia que aceptaría salarios más bajos y para aumentar el poder de negociación de los sindicatos con los patrones. (pág. 522)

Foro Americano G.I.: Grupo fundado en 1948 por veteranos de la Segunda Guerra Mundial en Corpus Christi, Texas, para protestar el maltrato a soldados y veteranos mexicano-americanos. (pág. 819)

Movimiento Indígena Estadounidense (AIM): Organización establecida en 1968 para responder a los problemas que enfrentaban los indígenas en las ciudades estadounidenses, entre ellos, la pobreza y el acoso de la policía. El AIM organizó a los indígenas para terminar con las políticas de terminación y desplazamiento y lograr mayor control sobre sus comunidades y culturas. (pág. 841)

Liga Americana para la Libertad: Grupo de líderes empresariales republicanos y demócratas conservadores que se unieron para combatir lo que llamaron el "gasto desmedido" y las reformas "socialistas" del Nuevo Trato. (pág. 690)

Partido Americano o Know-Nothing (lit. "Saber nada"): Partido político antiinmigrante y anticatólico formado en 1851 que surgió en respuesta a la inmigración masiva de la década de 1840, especialmente desde Irlanda y Alemania. En 1854, el partido obtuvo el control de los gobiernos estatales de Massachusetts y Pensilvania. (pág. 384)

Plan Americano: Estrategia diseñada por negocios estadounidenses en la década de 1920 para excluir a los sindicatos de los lugares de trabajo con medidas como negarse a negociar con sindicatos y requerir que los trabajadores firmen contratos (conocidos como contratos de "perro amarillo") donde se comprometían a no unirse a un sindicato. (pág. 654)

Asociación Protectora Americana: Poderosa organización política de militancia protestante, que durante un periodo breve en la década de 1890, tuvo más de dos millones de miembros. En su anticatolicismo virulento y su llamado a imponer restricciones sobre inmigrantes, la APA prefiguró a la reactivada Ku Klux Klan de la década de 1920. (pág. 533)

Ley de Reinversión y Recuperación de Estados Unidos: Ley de estímulo económico promulgada en 2009 como respuesta a la Gran Recesión que brindó $787 mil millones de dólares a gobiernos estatales y locales para escuelas, hospitales y proyectos de transporte. Ha sido uno de los paquetes de egreso gubernamental más grandes en la historia del país. (pág. 968)

Renacimiento Americano: Explosión literaria que ocurrió durante la década de 1840 inspirada en parte por las ideas de Emerson sobre la liberación del individuo. (pág. 309)

sistema americano: Sistema mercantilista de desarrollo económico nacional, defendido por Henry Clay y adoptado por John Quincy Adams, que contaba con un banco nacional para administrar el sistema financiero de la nación, tarifas protectoras para proporcionar ingresos y estimular a la industria, y una red de carreteras, canales y ferrocarriles financiados a nivel nacional. (pág. 281)

American Woman Suffrage Association: A women's suffrage organization led by Lucy Stone, Henry Blackwell, and others who remained loyal to the Republican Party, despite its failure to include women's voting rights in the Reconstruction amendments. Stressing the urgency of voting rights for African American men, AWSA leaders held out hope that once Reconstruction had been settled, it would be women's turn. (p. 440)

amnesty: an official pardon to people who committed political offenses. (p. 432)

amphibious: relating to both land and water. (p. 761)

anarchism: The advocacy of a stateless society achieved by revolutionary means. Feared for their views, anarchists became scapegoats for the 1886 Haymarket Square bombing. (p. 520)

anathema: an outrage. (p. 43)

annuity: a fixed sum of money payed at regular intervals. (p. 479)

anomaly: abnormal; irregularity. (p. 793)

Antifederalists: Opponents of ratification of the Constitution. Antifederalists feared that a powerful and distant central government would be out of touch with the needs of citizens. They also complained that it failed to guarantee individual liberties in a bill of rights. (p. 195)

Antiquities Act: A 1906 act that allowed the U.S. president to use executive powers to set aside, as federal monuments, sites of great environmental or cultural significance. Theodore Roosevelt, the first president to invoke the act's powers, used them to preserve the Grand Canyon. (p. 545)

aphorism: a brief and comprehensive statement of an idea. (p. 922)

apologist: a person that supports a controversial argument. (p. 257)

arable: able to grow crops. (p. 132)

archaeology: the study of ancient peoples and cultures by examining discovered artifacts such as tools, buildings, and inscriptions. (p. 8)

archipelago: a cluster of islands. (p. 625)

architecture: the design and construction of buildings and other large structures. (p. 8)

armistice: a temporary truce to stop fighting a war. (p. 424)

Articles of Confederation: The written document defining the structure of the government from 1781 to 1788, under which the Union was a confederation of equal states, with no executive and limited powers, existing mainly to foster a common defense. (p. 187)

artisan: a skilled worker that makes a product by hand. (p. 21)

artisan republicanism: An ideology that celebrated small-scale producers, men and women who owned their own shops (or farms). It defined the ideal republican society as one constituted by, and dedicated to the welfare of, independent workers and citizens. (p. 261)

Asociación Americana pro Sufragio de la Mujer (AWSA): Organización de mujeres sufragistas dirigida por Lucy Stone, Henry Blackwell y otros que permanecieron fieles al Partido Republicano pese a que no incluyó a los derechos de voto de la mujer en las Enmiendas de Reconstrucción. Haciendo hincapié en la urgencia de otorgar derechos de voto a los hombres afroamericanos, los líderes de la AWSA esperaban que una vez que asentara la Reconstrucción el turno de las mujeres llegaría. (pág. 440)

amnistía: perdón oficial para personas que cometieron delitos políticos. (pág. 432)

anfibio: relacionado con la tierra y el agua. (pág. 761)

anarquismo: La defensa de una sociedad sin estado alcanzada por medio de una revolución. Los anarquistas, temidos por sus puntos de vista, fueron usados como chivos expiatorios en el atentado de 1886 en Haymarket Square. (pág. 520)

anatema: un ultraje. (pág. 43)

anualidad: cantidad fija de dinero que se paga en intervalos regulares. (pág. 479)

anomalía: anormal; irregularidad. (pág. 793)

antifederalistas: Oponentes de la ratificación de la Constitución. Los antifederalistas temían que un gobierno central poderoso y distante estaría alejado de la realidad de las necesidades de los ciudadanos. También se quejaban de que el gobierno no garantizaba las libertades individuales en una declaración de derechos. (pág. 195)

Ley de Antigüedades: Ley promulgada en 1906 que permitía al presidente de los Estados Unidos el uso de poderes ejecutivos para apartar y designar sitios de gran importancia cultural o natural, como monumentos federales. Theodore Roosevelt, primer presidente en invocar los poderes de la ley, los usó para preservar el Gran Cañón. (pág. 545)

aforismo: expresión breve y completa de una idea. (pág. 922)

apologista: persona que apoya un argumento controvertido. (pág. 257)

arable: que se puede cultivar. (pág. 132)

arqueología estudio de pueblos y culturas antiguas a través del estudio de artefactos descubiertos como herramientas, edificios e inscripciones. (pág. 8)

archipiélago: conjunto de islas. (pág. 625)

arquitectura: el diseño y construccioón de edificios y otras estructuras grandes. (pág. 8)

armisticio: tregua pactada para detener las hostilidades de una guerra. (pág. 424)

Artículos de la Confederación: Documento escrito que definió la estructura del gobierno de 1781 a 1788, según el cual la Unión era una confederación de estados igualitarios, sin poderes ejecutivos y cuyos otros poderes estaban limitados, que existió principalmente para fomentar una defensa común. (pág. 187)

artesano: trabajador que hace productos a mano. (pág. 21)

republicanismo artesanal: Ideología que conmemoraba a los pequeños productores, hombres y mujeres que tenían sus propias tiendas (o granjas). Definió a la sociedad republicana ideal como una sociedad constituida y dedicada al bienestar de los ciudadanos y trabajadores-independientes. (pág. 261)

ascendancy: having or growing in political dominance, such as on a global stage. (p. 70)

ascetic: practicing of strict self-discipline. (p. 840

assimilation: the adoption of other qualities or habits in order to become similar to something else. (p. 133)

associated state: A system of voluntary business cooperation with government. The Commerce Department helped create two thousand trade associations representing companies in almost every major industry. (p. 656)

Atlanta Compromise: An 1895 address by Booker T. Washington that urged whites and African Americans to work together for the progress of all. Delivered at the Cotton States Exposition in Atlanta, the speech was widely interpreted as approving racial segregation. (p. 548)

Atlantic Charter: A press release by President Roosevelt and British prime minister Winston Churchill in August 1941 calling for economic cooperation, national self-determination, and guarantees of political stability after the war. (p. 716)

attrition: the gradual reduction of strength and numbers due to long periods of pressure. (p. 180)

auspices: support or encouragement; approval. (p. 844)

austere: severe and strict discipline such as through psychological teachings. (p. 945)

autocracy: form of government with an absolute monarch or small group which has unlimited power. (p. 616)

autonomy: self-governing. (p. 3)

auxiliary: providing additional help. (p. 414)

baby boom: The surge in the American birthrate between 1945 and 1965, which peaked in 1957 with 4.3 million births. (p. 793)

Bakke v. University of California: The 1978 Supreme Court ruling that limited affirmative action by rejecting a quota system. (p. 895)

Bank of the United States: A bank chartered in 1790 and jointly owned by private stockholders and the national government. Alexander Hamilton argued that the bank would provide stability to the specie-starved American economy by making loans to merchants, handling government funds, and issuing bills of credit. (p. 207)

bastion: an institution or person that defends certain standards or activities. (p. 867)

Battle of Little Big Horn: The 1876 battle begun when American cavalry under George Armstrong Custer attacked an encampment of Sioux, Arapaho, and Cheyenne Indians who were resisting removal to a reservation. Custer's force was annihilated, but with whites calling for U.S. soldiers to retaliate, the Native American military victory was short-lived. (p. 486)

Battle of Long Island (1776): First major engagement of the new Continental army, defending against 32,000 British troops outside of New York City. (p. 172)

ascendiente: poseer o acumular dominio político, por ejemplo, en el escenario global. (pág. 70)

ascético: practicante de estricta disciplina personal. (pág.840)

asimilación: la adopción de cualidades o hábitos ajenos para parecerse a alguien o algo. (pág. 133)

estado asociado: Sistema de cooperación voluntaria de las empresas con el gobierno. El Departamento de Comercio ayudó a crear dos mil asociaciones de comercio en representación de compañías en casi todas las industrias mayores. (pág. 656)

Compromiso de Atlanta: Discurso de Booker T. Washington en 1895 que llamaba a los blancos y a los afroamericanos a trabajar juntos para el progreso de todos. Pronunciado durante la Exposición de Estados Algodoneros en Atlanta, el discurso fue interpretado por muchos como una aprobación de la segregación racial. (pág. 548)

Carta del Atlántico: Boletín de prensa emitido por el presidente Roosevelt y el primer ministro británico, Winston Churchill, en agosto de 1941 llamando a la cooperación económica, a la auto determinación nacional y a las garantías de estabilidad política cuando concluyera la guerra. (pág. 716)

desgaste: reducción gradual de fuerza y número de personas debido a largos periodos bajo presión. (pág. 180)

auspiciar: apoyar o respaldar, aprobar. (pág. 844)

austero: disciplina estricta y severa, por ejemplo, a través de enseñanzas psicológicas. (pág. 945)

autocracia: forma de gobierno con un monarca absoluto o un pequeño grupo que tiene poder ilimitado. (pág. 616)

autonomía: gobernarse a sí mismo. (pág. 3)

auxiliar: que ofrece ayuda adicional. (pág. 414)

baby boom: El aumento en la tasa de nacimientos en los Estados Unidos entre 1945 y 1965, que tuvo su cúspide en 1957 con 4.3 millones de nacimientos. (pág. 793)

Bakke v. University of California: Dictamen de la Corte Suprema de 1978 que, al rechazar un sistema de cuotas, limitó la acción afirmativa. (pág. 895)

Banco de los Estados Unidos: Banco constituido en 1790 que fue propiedad conjunta de accionistas privados y del gobierno nacional. Alexander Hamilton argumentó que el banco proporcionaría estabilidad a la economía estadounidense, que estaba hambrienta de dinero, haciendo préstamos a comerciantes, manejando fondos del gobierno y emitiendo cuentas de crédito. (pág. 207)

bastión: Iistitución o persona que defiende ciertos estándares o actividades. (pág. 867)

Batalla de Little Big Horn: La batalla ocurrida en 1876 inició cuando una caballería estadounidense comandada por George Armstrong Custer atacó un campamento de indígenas Sioux, Arapaho y Cheyenne que se resistían a ser desplazados a una reserva. Las fuerzas de Custer fueron aniquiladas, pero el llamado de los blancos a los soldados estadounidenses a tomar represalias significó que la victoria del ejercito indígena duró poco. (pág. 486)

Batalla de Long Island (1776): Primer gran encuentro bélico del nuevo ejército continental, que luchó contra 32,000 tropas británicas en las afueras de la ciudad de Nueva York. (pág. 172)

Battle of Saratoga (1777): A multistage battle in New York ending with the surrender of British general John Burgoyne. The victory ensured the diplomatic success of American representatives in Paris, who won a military alliance with France. (p. 175)

Battle of Tippecanoe: An attack on Shawnee Indians at Prophetstown on the Tippecanoe River in 1811 by American forces headed by William Henry Harrison, Indiana's territorial governor. The governor's troops traded heavy casualties with the confederacy's warriors and then destroyed the holy village. (p. 223)

Battle of Yorktown (1781): A battle in which French and American troops and a French fleet trapped the British army under the command of General Charles Cornwallis at Yorktown, Virginia. The Franco-American victory broke the resolve of the British government. (p. 182)

Bay of Pigs: A failed U.S.-sponsored invasion of Cuba in 1961 by anti-Castro forces who planned to overthrow Fidel Castro's government. (p. 775)

Bear Flag Republic: A short-lived republic created in California by American emigrants to sponsor a rebellion against Mexican authority in 1846. The army of the Bear Flag Republic was quickly absorbed into the California Battalion of the U.S. Army under the command of John C. Frémont. (p. 360)

Beats: A small group of literary figures based in New York City and San Francisco in the 1950s who rejected mainstream culture and instead celebrated personal freedom, which often included drug consumption and casual sex. (p. 790)

Beecher-Tilton scandal: A trial, triggered by revelations made by free love advocate and journalist Victoria Woodhull, that exposed unconventional sexual relationships among a leading New York abolitionist pastor and his congregants, discrediting radical Reconstruction by associating some of its advocates with alleged sexual immorality. (p. 440)

belligerent: a person or nation participating in war. (p. 208)

Benevolent Empire: A web of reform organizations, heavily Whig in their political orientation, built by evangelical Protestant men and women influenced by the Second Great Awakening. (p. 306)

Bill of Rights: The first ten amendments to the Constitution, officially ratified by 1791. The amendments safeguarded fundamental personal rights, including freedom of speech and religion, and mandated legal procedures, such as trial by jury. (p. 205)

biology: the study of living things. (p. 41)

Black Codes: Laws passed by southern states after the Civil War that denied ex-slaves the civil rights enjoyed by whites, punished vague crimes such as "vagrancy" or failing to have a labor contract, and tried to force African Americans back to plantation labor systems that closely mirrored those in slavery times. (p. 435)

Batalla de Saratoga (1777): Batalla que se desplegó en varias etapas en Nueva York y que concluyó con la rendición del general británico John Burgoyne. La victoria aseguró el éxito diplomático de los representantes estadounidenses en París, que lograron una alianza militar con Francia. (pág. 175)

Batalla de Tippecanoe: Ataque a los indios shawnee en Prophetstown sobre el río Tippecanoe en 1811 por fuerzas estadounidenses encabezadas por William Henry Harrison, gobernador territorial de Indiana. Las tropas del gobernador entablaron una batalla con los soldados de la confederación, que causó grandes bajas de ambos lados, y luego destruyeron la aldea sagrada. (pág. 223)

Batalla de Yorktown (1781): Batalla en la cual las tropas francesas y americanas, con el apoyo de una flota francesa, atraparon al ejército británico bajo el mando del general Charles Cornwallis en Yorktown, Virginia. La victoria franco-americana causó que el gobierno británico finalmente desistiera. (pág. 182)

Bahía de Cochinos: Invasión fallida de Cuba llevada a cabo por anticastristas apoyados por los Estados Unidos en 1961, con la intención de derrocar al gobierno de Fidel Castro. (pág. 775)

República de la Bandera del Oso: República efímera creada en California por emigrantes estadounidenses con el fin de patrocinar una rebelión contra la autoridad mexicana en 1846. El ejército de la República de la Bandera del Oso fue rápidamente absorbido por el Batallón de California del Ejército de los Estados Unidos bajo el mando de John C. Frémont. (pág. 360)

Generación de los Beats: Pequeño grupo de figuras literarias basado en las ciudades de Nueva York y San Francisco en la década de 1950. Rechazaban a la cultura establecida y celebraban, más bien, la libertad personal, que con frecuencia incluía consumo de drogas y sexo casual. (pág. 790)

Escándalo Beecher Tilton: Juicio provocado por las revelaciones de Victoria Woodhull, periodista y defensora del amor libre, que expuso relaciones sexuales poco convencionales entre un pastor abolicionista en Nueva York y sus congregados, desacreditando así la Reconstrucción radical al asociar a sus principales defensores con presunta inmoralidad sexual. (pág. 440)

beligerante: persona o nación que participa en una guerra. (pág. 208)

imperio benévolo: Red de organizaciones reformistas, con fuertes tendencias Whig en su orientación política, construida por hombres y mujeres protestantes evangélicos influenciados por el Segundo Gran Despertar. (pág. 306)

Declaración de Derechos: Las primeras diez enmiendas a la Constitución, ratificadas oficialmente en 1791. Las enmiendas salvaguardan los derechos personales fundamentales, incluidos la libertad de expresión y de religión, y los procedimientos legales obligatorios, como derecho a jucio ante un jurado. (pág. 205)

biología: estudio de los seres vivos. (pág. 41)

Códigos Negros: Leyes aprobadas por los estados sureños después de la Guerra Civil que negaban los derechos civiles de los blancos a los esclavos liberados, castigaban delitos ambiguos como el "vagabundeo" o no tener un contrato laboral y trataron de obligar a los afroamericanos a volver a los sistemas de trabajo de las plantaciones, que eran muy similares a aquellos en tiempos de la esclavitud. (pág. 435)

black nationalism: A major strain of African American thought that emphasized black racial pride and autonomy. Present in black communities for centuries, it periodically came to the fore, as in Marcus Garvey's pan-Africanist movement in the early twentieth century and in various organizations in the 1960s and 1970s, such as the Nation of Islam and the Black Panther Party. (p. 835)

Black Panther Party: A militant organization dedicated to protecting African Americans from police violence, founded in Oakland, California, in 1966 by Huey Newton and Bobby Seale. In the late 1960s the organization spread to other cities, where members undertook a wide range of community-organizing projects, but the Panthers' radicalism and belief in armed self-defense resulted in violent clashes with police. (p. 836)

black Protestantism: A form of Protestantism that was devised by Christian slaves in the Chesapeake and spread to the Cotton South as a result of the domestic slave trade. It emphasized the evangelical message of emotional conversion, ritual baptism, communal spirituality, and the idea that blacks were "children of God" and should be treated accordingly. (p. 342)

blues: A form of American music that originated in the Deep South, especially from the black workers in the cotton fields of the Mississippi Delta. (p. 568)

Bonus Army: A group of 15,000 to 20,000 unemployed World War I veterans who set up camps near the Capitol building in 1932 to demand immediate payment of pension awards due to be paid in 1945. (p. 682)

bourgeois: relating to the middle class of society. (p. 296)

Bracero Program: Officially the Mexican Farm Labor Agreement (signed with Mexico), a federal program that brought hundreds of thousands of Mexican agricultural workers to the United States during and after World War II. The program continued until 1964 and was a major spur of Mexican immigration to the United States. (p. 725)

Bretton Woods: An international conference in New Hampshire in July 1944 that established the World Bank and the International Monetary Fund (IMF). (p. 782)

brook: not allow or accept something. (p. 623)

brothel: a house or other location that plays host to prostitution. (p. 316)

Brotherhood of Sleeping Car Porters: A prominent black trade union of railroad car porters working for the Pullman Company. (p. 814)

Brown v. Board of Education of Topeka: Supreme Court ruling of 1954 that overturned the "separate but equal" precedent established in *Plessy v. Ferguson* in 1896. The Court declared that separate educational facilities were inherently unequal and thus violated the Fourteenth Amendment. (p. 821)

bulwark: a strong support or reinforcement. (p. 920)

nacionalismo negro: Corriente principal del pensamiento afroamericano que enfatiza el orgullo racial negro y la autonomía. Existe desde hace siglos entre las comunidades negras y periódicamente ha retomado protagonismo, como ocurrió con el movimiento pan-africanista de Marcus Garvey a principios del siglo XX y con varias organizaciones de las décadas de 1960 y 1970, como la Nación del Islam y el Partido de las Panteras Negras. (pág. 835)

Partido de las Panteras Negras: Organización militante fundada en Oakland, California, en 1966 por Huey Newton y Bobby Seale para proteger a los afroamericanos de la violencia policial. A finales de la década de 1960, la organización se expandió a otras ciudades, donde los miembros asumieron una gran variedad de proyectos de organización comunitaria, pero el radicalismo de las Panteras y su creencia en la auto-defensa armada resultó en choques con la policía. (pág. 836)

protestantismo negro: Forma de protestantismo que fue ideada por esclavos cristianos en Chesapeake y se extendió al sur algodonero como resultado de la trata doméstica de esclavos. Hizo hincapié en el mensaje evangélico de la conversión emocional, el ritual del bautismo, la espiritualidad comunitaria y la idea de que los negros eran "hijos de Dios" y debían ser tratados como tales. (pág. 342)

blues: Tipo de música americana originada en el Sur Profundo, especialmente entre los trabajadores negros de las plantaciones de algodón en la boca del río Misisipi. (pág. 568)

Bonus Army: Grupo de 15 mil a 20 mil veteranos de la Primera Guerra Mundial que establecieron campamentos cerca del edificio del Capitolio para exigir el pago inmediato de las pensiones que estaban programadas para pagarse en 1945. (pág. 682)

burgués: relacionado con la clase media de la sociedad. (pág. 296)

Programa Bracero: Con el nombre oficial, Programa de Trabajadores Agrícolas Mexicanos el Programa Bracero (acordado con México) llevó a cientos de miles de trabajadores agrícolas a Estados Unidos durante y después de la Segunda Guerra Mundial. El programa continuó hasta 1964 y fue uno de los principales incentivos de immigración mexicana a los Estados Unidos. (pág. 725)

Bretton Woods: Conferencia internacional sostenida en New Hampshire en julio de 1944 que estableció al Banco Mundial y al Fondo Monetario Internacional (FMI). (pág. 782)

tolerar: aceptar o permitir algo. (pág. 623)

burdel: casa u otro lugar que alberga prostitución. (pág. 316)

Hermandad de Maleteros de Coches-cama: Destacado sindicato negro de maleteros de coches-cama que trabajó para la Compañía Pullman. (pág. 814)

Caso Brown contra el Consejo de Educación de Topeka: Sentencia de la Corte Suprema en 1954 que anuló el precedente "separados pero iguales" establecido en *Plessy v. Ferguson* en 1896. La Corte declaró que las instalaciones educativas separadas eran intrínsecamente desiguales y atentaban contra la Decimocuarta Enmienda de la Constitución. (pág. 821)

baluarte: fuerte apoyo o refuerzo. (pág. 920)

bureaucracy: government run through various departments and administrators. (p. 10)

burgeoning: developing or expanding quickly, such as regarding cities. (p. 118)

Burlingame Treaty: An 1868 treaty that guaranteed the rights of U.S. missionaries in China and set official terms for the emigration of Chinese laborers to work in the United States. (p. 465)

buttress: to reinforce. (p. 21)

cabal: a secret political group united to overthrow a government. (p. 468)

cadre: a group specifically trained for specific aspects of the armed forces or other large organization. (p. 322)

Californios: The elite Mexican ranchers in the province of California. (p. 352)

caravan: a group that travels together in hopes of passing safely through dangerous territory. (p. 25)

cardinal: fundamental; crucial. (p. 889)

casta system: A hierarchical system of racial classification developed by colonial elites in Latin America to make sense of the complex patterns of racial mixing that developed there. (p. 41)

cataclysm: a violent, destructive event that causes change in order to recover. (p. 676)

Catholic diocese: a certain area where a Catholic church is established and dedicated to serve its citizens. (p. 531)

caucus: A meeting held by a political party to choose candidates, make policies, and enforce party discipline. (p. 277)

chain migration: A pattern by which immigrants find housing and work and learn to navigate a new environment, and then assist other immigrants from their family or home area to settle in the same location. (p. 380)

chasten: correction by means of punishment. (p. 776)

chattel principle: A system of bondage in which a slave has the legal status of property and so can be bought and sold. (p. 256)

chattel slavery: A system of bondage in which a slave has the legal status of property and so can be bought and sold like property. (p. 38)

Chicago school: A school of architecture dedicated to the design of buildings whose form expressed, rather than masked, their structure and function. (p. 561)

Chicano Moratorium Committee: Group founded by activist Latinos to protest the Vietnam War. (p. 866)

Chinese Exclusion Act: The 1882 law that barred Chinese laborers from entering the United States. It continued in effect until the 1940s. (p. 515)

Christianity: A religion that holds the belief that Jesus Christ was himself divine. For centuries, the Roman Catholic Church was the great unifying institution in Western Europe, and it was from Europe that Christianity spread to the Americas. (p. 21)

burocracia: gobierno administrado por medio de varios departamentos y gerentes. (pág. 10)

florecer: en rápido desarrollo o expansión, por ejemplo, una ciudad. (pág. 118)

Tratado de Burlingame: Tratado de 1868 que garantizaba los derechos de misioneros estadounidenses en China y estableció los términos oficiales para la emigración de trabajadores chinos para trabajar en Estados Unidos. (pág. 465)

apoyo: reforzar. (pág. 21)

camarilla: grupo político secreto creado para derrocar a un gobierno. (pág. 468)

cuadro: grupo específicamente entrenado para aspectos específicos de las fuerzas armadas u otra organización grande. (pág. 322)

californios: Nombre que se le dio a los rancheros mexicanos de élite en la provincia de California. (pág. 352)

caravana: Grupo que viaja en conjunto con la esperanza de cruzar a salvo territorio peligrosos. (pág. 25)

fundamental: importante; crucial. (pág. 889)

sistema de castas: Sistema jerárquico de clasificación racial desarrollado por las elites coloniales en América Latina para dar sentido a los complejos patrones de mezcla racial que se desarrollaron allí. (pág. 41)

cataclismo: evento violento y destructivo que provoca cambios para fomentar su recuperación. (pág. 676)

diócesis católica: cierta zona donde se establece una iglesia católica y se dedica a servir a sus ciudadanos. (pág. 531)

asamblea de partidos: Reunión celebrada por un partido político para elegir candidatos, formular políticas y hacer cumplir la disciplina del partido. (pág. 277)

migración en cadena: Patrón según el cual los inmigrantes encuentran vivienda y trabajo y aprenden a desenvolverse en un nuevo entorno, y luego ayudan a otros inmigrantes de su familia o región a establecerse en el mismo sitio. (pág. 380)

escarmentar: corregir por medio de castigo. (pág. 776)

principio de bienes muebles: Sistema de esclavitud en el que se le confiere al esclavo el estatus legal de propiedad y por lo tanto puede ser comprado y vendido. (pág. 256)

esclavitud de bienes muebles: Sistema de esclavitud en el que se le confiere al esclavo el estatus legal de propiedad y por lo tanto puede ser comprado y vendido como si fuera propiedad. (pág. 38)

Escuela de Chicago: Escuela de arquitectura dedicada al diseño de edificios cuya forma expresaba su estructura y función en lugar de ocultarla. (pág. 561)

Comité Nacional de Moratoria Chicana: Grupo fundado por activistas latinos para protestar contra la Guerra de Vietnam. (pág. 866)

Ley de Exclusión de Chinos: Ley promulgada en 1882 que impidió que trabajadores chinos entraran a los Estados Unidos. Se mantuvo vigente hasta la década de 1940. (pág. 515)

cristianismo: Religión que sostiene la creencia de que Jesucristo es Dios. Durante siglos, la Iglesia Católica Romana fue la gran institución unificadora en Europa Occidental; y fue desde Europa que el cristianismo se extendió a las Américas. (pág. 21)

Church of Jesus Christ of Latter-day Saints, or Mormons: Founded by Joseph Smith in 1830. After Smith's death at the hands of an angry mob, in 1846 Brigham Young led many followers of Mormonism to lands in present-day Utah. (p. 314)

"City Beautiful" movement: A turn-of-the-twentieth-century movement that advocated landscape beautification, playgrounds, and more and better urban parks. (p. 576)

Civil Rights Act of 1866: Legislation passed by Congress that nullified the Black Codes and affirmed that African Americans should have equal benefit of the law. (p. 435)

Civil Rights Act of 1875: A law that required "full and equal" access to jury service and to transportation and public accommodations, irrespective of race. (p. 450)

Civil Rights Act of 1964: Law that responded to demands of the civil rights movement by making discrimination in employment, education, and public accommodations illegal. It was the strongest such measure since Reconstruction and included a ban on sex discrimination in employment. (p. 830)

Civil Rights Cases: A series of 1883 Supreme Court decisions that struck down the Civil Rights Act of 1875, rolling back key Reconstruction laws and paving the way for later decisions that sanctioned segregation. (p. 456)

Civilian Conservation Corps: Federal relief program that provided jobs to millions of unemployed young men who built thousands of bridges, roads, trails, and other structures in state and national parks, bolstering the national infrastructure. (p. 687)

clandestine: kept secret. (p. 891)

classical liberalism or laissez-faire: The political ideology of individual liberty, private property, a competitive market economy, free trade, and limited government. The ideal is a *laissez faire* or "let alone" policy, in which government does the least possible, particularly in reference to economic policies such as tariffs and incentives for industrial development. Attacking corruption and defending private property, late-nineteenth-century liberals generally called for elite governance and questioned the advisability of full democratic participation. (p. 293)

Clayton Antitrust Act: A 1914 law that strengthened federal definitions of "monopoly" and gave more power to the Justice Department to pursue antitrust cases; it also specified that labor unions could not generally be prosecuted for "restraint of trade," ensuring that antitrust laws would apply to corporations rather than unions. (p. 610)

climate: weather patterns around the world that include temperature, air pressure, and precipitation. These statistics can be gathered and averaged over time to determine the overall climate of the region under examination. (p. 23)

coalition: an alliance, usually calling for political action. (p. 20)

Iglesia de Jesucristo de los Santos de los Últimos Días, o mormones: Fundada por Joseph Smith en 1830. Después de la muerte de Smith a manos de una turba enfurecida en 1846, Brigham Young condujo a muchos seguidores del mormonismo a tierras ubicadas en la actual Utah. (pág. 314)

movimiento "Ciudad Bella": Movimiento del cambio de siglo que promovió el embellecimiento de paisajes, parques infantiles y buscó mejores parques urbanos. (pág. 576)

Ley de Derechos Civiles de 1866: Legislación promulgada por el Congreso que anuló los Códigos Negros y afirmó que los afroamericanos debían tener el mismo beneficio de la ley. (pág. 435)

Ley de Derechos Civiles de 1875: Ley que requería acceso "pleno e igualitario" al servicio de jurado, al transporte y al alojamiento público, sin importar la raza de la persona. (pág. 450)

Ley de Derechos Civiles de 1964: Ley que respondió a las exigencias del movimiento de derechos civiles al ilegalizar la discriminación en el empleo, la educación y la vivienda pública. Fue la medida más fuerte de este tipo desde la Reconstrucción e incluyó la ilegalización de la discriminación por sexo en el trabajo. (pág. 830)

Casos de derechos civiles: Serie de decisiones de la Corte Suprema en 1883 que abolieron la Ley de Derechos Civiles de 1875 y revocaron importantes leyes de Reconstrucción, que más adelante marcaron la pauta de las decisiones que sancionaron la segregación. (pág. 456)

Cuerpo Civil de Conservación: Programa federal de auxilio que ofreció empleo a millones de hombres desempleados en la construcción de miles de puentes, caminos, senderos y otras estructuras dentro de parques nacionales y estatales que reforzaron la infraestructura nacional. (pág. 687)

clandestino: mantenido en secreto. (pág. 891)

liberalismo clásico o laissez-faire: Ideología política de libertad individual, propiedad privada, economía competitiva de mercado, libre comercio y gobierno limitado. Lo ideal es una política de *laissez faire* o "dejar ser", en la cual el gobierno hace lo mínimo posible, particularmente en referencia a las políticas económicas como aranceles y desarrollo industrial. En un ataque a la corrupción y en defensa de la propiedad privada, los liberales de finales del siglo XIX querían gobiernos de élites y cuestionaron si era conveniente contar con participación democrática plena. (pág. 293)

Ley Clayton Antimonopolio: Ley de 1914 que fortaleció las definiciones federales de "monopolio" y aumentó los poderes del Departamento de Justicia para perseguir casos antimonopolio; también especificó que, en general, no se podía perseguir a los sindicatos por "restricciones al comercio", asegurando que las leyes antimonopolio se aplicarían a corporaciones y no a sindicatos. (pág. 610)

clima: Patrones de tiempo alrededor del mundo que incluyen temperatura, presión atmosférica y precipitación. La recolección de estos datos, que se promedian a lo largo del tiempo, determinan el cima general de la región examinada. (pág. 23)

coalición: una alianza, que generalmente convoca a la acción política. (pág. 20)

coastal trade: The domestic slave trade with routes along the Atlantic coast that sent thousands of slaves to sugar plantations in Louisiana and cotton plantations in the Mississippi Valley. (p. 255)

code talkers: Native American soldiers trained to use native languages to send messages in battle during World War II. Neither the Japanese nor the Germans could decipher the codes used by these Navajo, Comanche, Choctaw, and Cherokee speakers, and the messages they sent gave the Allies great advantage in the battle of Iwo Jima, among many others. (p. 720)

coerce: to forcefully persuade someone to do something. (p. 30)

Coercive Acts: Four British acts of 1774 meant to punish Massachusetts for the destruction of three shiploads of tea. Known in America as the Intolerable Acts, they led to open rebellion in the northern colonies. (p. 158)

cogent: logical; convincing. (p. 477)

cohesion: being tightly held together or united. (p. 116)

Cold War liberalism: A combination of moderate liberal policies that preserved the programs of the New Deal welfare state and forthright anticommunism that vilified the Soviet Union abroad and radicalism at home. Adopted by President Truman and the Democratic Party during the late 1940s and early 1950s. (p. 763)

collective bargaining: A process of negotiation between labor unions and employers, which after World War II translated into rising wages, expanding benefits, and an increasing rate of home ownership. (p. 786)

collegial: marked by equal division of authority. (p. 963)

collusion: a secret agreement for illegal purposes. (p. 604)

colonization: the act of settling among people of an area and establishing control over them. (p. 2)

Columbian Exchange: The massive global exchange of living things, including people, animals, plants, and diseases, between the Eastern and Western Hemispheres that began after the voyages of Columbus. (p. 41)

commensurate: to correspond in a suitable amount. (p.813)

Committee to Defend America by Aiding the Allies: A group of interventionists who believed in engaging with, rather than withdrawing from, international developments. Interventionists became increasingly vocal in 1940 as war escalated in Europe. (p. 715)

committees of correspondence: A communications network established among towns in the colonies, and among colonial assemblies, between 1772 and 1773 to provide for rapid dissemination of news about important political developments. (p. 158)

commodity: an object that can be placed in the market to be bought, sold, or traded. (p. 30)

comercio costero: Trata doméstica de esclavos con rutas a lo largo de la costa atlántica que enviaba miles de esclavos a plantaciones de azúcar en Luisiana y plantaciones de algodón en el valle del Misisipi. (pág. 255)

locutores de claves: Soldados nativos americanos en la Segunda Guerra Mundial entrenados para usar idiomas nativos para enviar mensajes durante el combate. Ni los japoneses ni los alemanes lograron descifrar las claves usadas por estos hablantes de Navajo, Comanche, Choctaw y Cheroqui cuyos mensajes dieron grandes ventajas a los Aliados durante la batalla de Iwo Jima, entre muchas otras. (pág. 720)

coaccionar: persuadir a alguien para que haga algo por la fuerza. (pág. 30)

Leyes Coactivas: Cuatro leyes británicas de 1774 cuyo objetivo fue castigar a Massachusetts por la destrucción de tres cargamentos de té. Conocidas en los Estados Unidos como las Leyes Intolerables, condujeron a la rebelión abierta en las colonias del norte. (pág. 158)

convicente: lógico; contundente. (pág. 477)

cohesión: estar firmemente unidos o conectados. (pág. 116)

Liberalismo de la Guerra Fría: Combinación de políticas liberales moderadas que preservaron programas del estado benefactor del Nuevo Trato y del anticomunismo directo, que vilificó a la Unión Soviética en el extranjero y al radicalismo en casa. Fueron adoptadas por el presidente Truman y el Partido Demócrata a finales de la década de 1940 y principios de la década de 1950. (pág. 763)

negociación colectiva: Proceso de negociación entre sindicatos laborales y patrones, que después de la Segunda Guerra Mundial trajo aumento de salarios, mayores beneficios y una creciente tasa de propiedad sobre la vivienda. (pág. 786)

colegial: cuando hay una división igualitaria de la autoridad. (pág. 963)

colusión: pacto secreto con fines ilegales. (pág. 604)

colonización: acto de asentarse entre las personas de una región y establecer control sobre ellos. (pág. 2)

intercambio colombino: Intercambio mundial masivo de seres vivos —como personas, animales, plantas y enfermedades— entre los hemisferios oriental y occidental que comenzó después de los viajes de Colón. (pág. 41)

acorde: corresponder con una cantidad adecuada. (pág. 813)

Comité para Defender América Ayudando a los Aliados: Grupo de intervencionistas que creían en participar antes que retirarse de desarrollos internacionales. Los intervencionistas se hicieron escuchar cada vez más en 1940 conforme la guerra en Europa se intensificaba. (pág. 715)

comités de correspondencia: Red de comunicaciones establecida entre las ciudades en las colonias y entre las asambleas coloniales entre 1772 y 1773 para proporcionar la rápida difusión de noticias sobre acontecimientos políticos importantes. (pág. 158)

mercancía: objeto que se puede colocar en el mercado para ser vendido, comprado o intercambiado. (pág. 30)

Commonwealth System: The republican system of political economy created by state governments by 1820, whereby states funneled aid to private businesses whose projects would improve the general welfare. (p. 243)

communicate: to exchange thoughts or information through various means such as spoken or written words. (p. 97)

Community Services Organization (CSO): A Latino civil rights group founded in Los Angeles in 1947 that trained many Latino politicians and community activists, including Cesar Chavez and Dolores Huerta. (p. 819)

competency: The ability of a family to keep a household solvent and independent and to pass that ability on to the next generation. (p. 109)

Compromise of 1850: Laws passed in 1850 that were meant to resolve the dispute over the status of slavery in the territories. Key elements included the admission of California as a free state and a new Fugitive Slave Act. (p. 375)

Comstock Act: An 1873 law that prohibited circulation of "obscene literature," defined as including most information on sex, reproduction, and birth control. (p. 547)

Comstock Lode: A vein of silver ore discovered in Nevada in 1859, leading to one of the West's most important mining booms. The lode was so rich that a Confederate expedition tried unsuccessfully to capture it during the Civil War; its output significantly altered the ratio of silver in circulation, leading to changes in monetary policy. (p. 470)

Congress of Racial Equality (CORE): Civil rights organization founded in 1942 in Chicago by James Farmer and other members of the Fellowship of Reconciliation (FOR) that espoused nonviolent direct action. In 1961 CORE organized a series of what were called Freedom Rides on interstate bus lines throughout the South to call attention to blatant violations of recent Supreme Court rulings against segregation in interstate commerce. (p. 815)

conquistador: a Spanish soldier of the 16th and 17th centuries that explored the Americas as well as conquered the Natives that lived there. (p. 11)

conscience Whigs: Whig politicians who opposed the U.S.-Mexico War on moral grounds, maintaining that the purpose of the war was to expand and perpetuate control of the national government. (p. 368)

conscription: forced by law into government or military service. (p. 116)

conservationist: a person who advocates for the protection of natural resources. (p. 546)

consign: to give into the hands of another. (p. 787)

consolidate: to bring together or unite separate parts. (p. 50)

consortium: an association made up of several business companies. (p. 470)

consternation: feeling of anger or confusion due to something sudden or unexpected. (p. 924)

constitutional monarchy: A monarchy limited in its rule by a constitution. (p. 81)

sistema de mancomunidad: Sistema republicano de economía política creado por los gobiernos estatales para 1820, mediante el cual los estados canalizaban subsidios hacia empresas privadas cuyos proyectos mejorarían el bienestar general. (pág. 243)

comunicar: intercambiar ideas o información a través de varios medios como palabras escritas o de manera oral. (pág. 97)

Organización de Servicios Comunitarios (CSO): Grupo latino de derechos civiles fundado en 1947 que entrenó a muchos políticos y activistas comunitarios latinos, entre ellos, César Chávez y Dolores Huerta. (pág. 819)

competencia: Capacidad de una familia de mantener un hogar en estado de solvencia e independencia y transmitir esa capacidad a la próxima generación. (pág. 109)

Compromiso de 1850: Leyes aprobadas en 1850 que resolverían la disputa sobre el estado de la esclavitud en los territorios. Algunos elementos claves fueron: la admisión de California como estado libre y una nueva Ley de Esclavos Fugitivos. (pág. 375)

Ley Comstock: Ley de 1873 que prohibió la circulación de "literatura obscena", definida como aquella que incluía información sobre sexo, reproducción y anticoncepción. (pág. 547)

Comstock Lode: Veta de mineral de plata, descubierta en Nevada en 1859, que condujo a uno de los auges mineros más importantes del Oeste. La veta tenía tal riqueza que una expedición confederada intentó tomarla sin éxito durante la Guerra Civil; su producción alteró significativamente la proporción de la plata en circulación, lo que generó cambios en la política monetaria. (pág. 470)

Congreso para la Igualdad Racial (CORE): Organización de derechos civiles fundada en 1942 por James Farmer y otros miembros de la Fellowship of Reconciliation (FOR) que defendió la acción directa no violenta. En 1961, CORE organizó una serie de llamados Viajes de la Libertad (Freedom Rides) en camiones interestatales que recorrieron el Sur para denunciar la descarada violación de sentencias recientes de la Corte Suprema contra la segregación en el comercio interestatal. (pág. 815)

conquistador: soldados españoles de los siglos XVI y XVII que exploraron las Américas y conquistaron a los pueblos nativos que vivían allí. (pág. 11)

conciencia Whigs: Políticos Whig que se opusieron a la guerra entre Estados Unidos y México por motivos morales, sosteniendo que el propósito de la guerra era expandir y perpetuar el control del gobierno nacional. (pág. 368)

conscripción: obligado por ley al servicio militar o gubernamental. (pág. 116)

conservacionista: persona que aboga por la protección de los recursos naturales. (pág. 546)

consignar: poner en manos de otro. (pág. 787)

consolidar: juntar o unir partes separadas. (pág. 50)

consorcio: asociación de varias compañías de negocios. (pág. 470)

consternación: sentimiento de enojo o confusión debido a algo repentino o inesperado. (pág. 924)

monarquía constitucional: Monarquía limitada en su gobierno por una constitución. (pág. 81)

consumer credit: New forms of borrowing, such as auto loans and installment plans, that flourished in the 1920s but helped trigger the Great Depression. (p. 658)

consumer revolution: An increase in consumption in English manufactures in Britain and the British colonies fueled by the Industrial Revolution. Although the consumer revolution raised living standards, it landed many consumers — and the colonies as a whole — in debt. (p. 132)

containment: The basic U.S. policy of the Cold War, which sought to contain communism within its existing geographic boundaries. Initially, containment focused on the Soviet Union and Eastern Europe, but in the 1950s it came to include China, North Korea, and other parts of the developing world. (p. 754)

contiguous: sharing a boundary; adjacent. (p. 244)

Continental Association: An association established in 1774 by the First Continental Congress to enforce a boycott of British goods. (p. 162)

Continental Congress: September 1774 gathering of colonial delegates in Philadelphia to discuss the crisis precipitated by the Coercive Acts. The Congress produced a declaration of rights and an agreement to impose a limited boycott of trade with Britain. (p. 159)

contingency: a possible, but not certain, event or circumstance. (p. 457)

"contrabands": Slaves who fled plantations and sought protection behind Union lines during the Civil War. (p. 406)

Contract with America: Initiatives by Representative Newt Gingrich of Georgia for significant tax cuts, reductions in welfare programs, anticrime measures, and cutbacks in federal regulations. (p. 960)

Contras: An opposition group in Nicaragua that President Reagan ordered the CIA to assist. While Congress banned the CIA and all other government agencies from providing any military support to the Contras, a lieutenant colonel in the U.S. Marines, Oliver North, used the profits from the Iranian arms deal to assist the Contras, resulting in the Iran-Contra affair. (p. 931)

convict leasing: Notorious system, begun during Reconstruction, whereby southern state officials allowed private companies to hire out prisoners to labor under brutal conditions in mines and other industries. (p. 448)

corrupt bargain: A term used by Andrew Jackson's supporters for the appointment by President John Quincy Adams of Henry Clay as his secretary of state, the traditional stepping-stone to the presidency. Clay had used his influence as Speaker of the House to elect Adams rather than Jackson in the election in 1824. (p. 282)

cosmopolitan: being multicultural and showing aspects or experience from across the world. (p. 807)

crédito al consumo: Nuevas formas de préstamo, como el préstamo automotriz y planes de financiación, que florecieron en la década de 1920, y fueron una de las causas de la Gran Depresión. (pág. 658)

revolución del consumidor: Aumento en el consumo de manufacturas inglesas en Gran Bretaña y las colonias británicas impulsado por la Revolución Industrial. Aunque la revolución del consumidor elevó los niveles de vida, causó que muchos consumidores, y a las colonias en conjunto, cayeran en deuda. (pág. 132)

contención: Política básica de Estados Unidos durante la Guerra Fría que buscó contener al comunismo dentro de sus fronteras geográficas existentes. En un principio, la contención se enfocó en la Unión Soviética y Europa del Este, pero en la década de 1950 llegó a incluir a China, Corea del Norte y otras partes del mundo en vías del desarrollo. (pág. 754)

contiguo: compartir un límite o frontera; adyacente. (pág. 244)

Asociación Continental: Asociación establecida en 1774 por el Primer Congreso Continental con el fin hacer cumplir un boicot a los productos británicos. (pág. 162)

Congreso Continental: Reunión de delegados coloniales en Filadelfia que tuvo lugar en septiembre de 1774 para discutir la crisis precipitada por las Leyes Coactivas. El Congreso generó una declaración de derechos y un acuerdo para imponer un boicot limitado al comercio con Gran Bretaña. (pág. 159)

contingencia: evento o circunstancia posible pero incierta. (pág. 457)

"contrabando": Esclavos que huyeron de las plantaciones y buscaron protección detrás de las líneas de la Unión durante la Guerra Civil. (pág. 406)

Contrato con América; Iniciativas del congresista, Newt Gingrich, de Georgia, a favor de significativas reducciones de impuestos, reducciones en programas de asistencia social, medidas anti-crimen y recortes en regulaciones federales. (pág. 960)

Contras: Grupo de oposición en Nicaragua que recibió asistencia de la CIA por orden del presidente Reagan. Aunque el Congreso prohibió que la CIA y demás agencias gubernamentales apoyaran a los Contras, Oliver North, teniente coronel de los Estados Unidos, usó las ganancias del tratado de comercio de armas con Irán para asistir a los Contras y esto resultó en el escándalo Irán-Contra. (pág. 931)

arrendamiento de convictos: Sistema notorio que tuvo sus orígenes durante la Reconstrucción, mediante el cual los funcionarios estatales del sur permitieron a las empresas privadas contratar a prisioneros para que hicieran trabajos en condiciones brutales en minas y otras industrias. (pág. 448)

negociación corrupta: Término usado por los partidarios de Andrew Jackson para el nombramiento de Henry Clay por el presidente John Quincy Adams como su secretario de estado, paso intermedio tradicional hacia la presidencia. Clay había utilizado su influencia como presidente de la Cámara para elegir a Adams en lugar de Jackson en las elecciones de 1824. (pág. 282)

cosmopolita: ser multicultural y mostrar aspectos o experiencias de todo el mundo. (pág. 807)

cotton complex: The economic system that developed in the first half of the nineteenth century binding together southern cotton production with northern clothmaking, shipping, and capital. (p. 248)

counterculture: A culture embracing values or lifestyles opposing those of the mainstream culture. Became synonymous with hippies, people who opposed and rejected conventional standards of society and advocated extreme liberalism in their sociopolitical attitudes and lifestyles. (p. 860)

Counter-Reformation: A reaction in the Catholic Church triggered by the Reformation that sought change from within and created new monastic and missionary orders, including the Jesuits (founded in 1540), who saw themselves as soldiers of Christ. (p. 23)

Covenant Chain: The alliance of the Iroquois, first with the colony of New York, then with the British Empire and its other colonies. The Covenant Chain became a model for relations between the British Empire and other Native American peoples. (p. 83)

covenant of grace: The Christian idea that God's elect are granted salvation as a pure gift of grace. This doctrine holds that nothing people do can erase their sins or earn them a place in heaven. (p. 60)

covenant of works: The Christian idea that God's elect must do good works in their earthly lives to earn their salvation. (p. 60)

coverture: A principle in English law that placed wives under the protection and authority of their husbands, so that they did not have independent legal standing. (p. 112)

credit: method of purchasing something without directly paying at the time and instead paying later. (p. 99)

Crédit Mobilier: A sham corporation set up by shareholders in the Union Pacific Railroad to secure government grants at an enormous profit. Organizers of the scheme protected it from investigation by providing gifts of its stock to powerful members of Congress. (p. 452)

"Crime of 1873": A term used by those critical of an 1873 law directing the U.S. Treasury to cease minting silver dollars, retire Civil War–era greenbacks, and replace them with notes backed by the gold standard from an expanded system of national banks. (p. 469)

Crusades: A series of wars undertaken by Christian armies between A.D. 1096 and 1291 to reverse the Muslim advance in Europe and win back the holy lands where Christ had lived. (p. 22)

Cuban missile crisis: The 1962 nuclear standoff between the Soviet Union and the United States when the Soviets attempted to deploy nuclear missiles in Cuba. (p. 776)

culture: the way of life of a certain people that is shown through various traditions such as religion, art, and behavior. (p. 2)

complejo algodonero: Sistema económico que se desarrolló en la primera mitad del siglo XIX y que unía la producción de algodón del sur con la fabricación de telas, el transporte marítimo y el capital del norte. (pág. 248)

contracultura: Cultura de adoptar los valores o estilos de vida que se oponen a la cultura establecida. Fue característica de los hippies, que se opusieron y rechazaron los estándares convencionales de la sociedad y abogaron por el liberalismo extremo en sus actitudes sociopolíticas y estilos de vida. (pág. 860)

Contrarreforma: Reacción en la Iglesia Católica, desencadenada por la Reforma, que buscaba el cambio desde dentro y creó nuevas órdenes monásticas y misioneras, incluida la orden de los jesuitas (fundada en 1540), que se veían a sí mismos como soldados de Cristo. (pág. 23)

Cadena del Pacto: Alianza de los iroqueses, primero con la colonia de Nueva York y luego con el Imperio Británico y sus demás colonias. La Cadena del Pacto se convirtió en un modelo para las relaciones entre el Imperio Británico y otros pueblos nativos americanos. (pág. 83)

pacto de gracia: Idea cristiana de que los elegidos de Dios reciben la salvación como un regalo puro de la gracia. Esta doctrina sostiene que las personas no pueden hacer nada para borrar sus pecados o ganarse un lugar en el cielo. (pág. 60)

pacto de obras: Idea cristiana de que los elegidos de Dios deben hacer buenas obras en sus vidas terrenales para ganar su salvación. (pág. 60)

coverture: Principio en la ley inglesa que coloca a las esposas bajo la protección y la autoridad de sus maridos, de modo que carecen de una posición legal independiente. (pág. 112)

crédito: forma de adquirir algo sin pagarlo directamente en el momento de la compra y pagarlo después. (pág. 99)

Crédit Mobilier: Corporación fraudulenta creada por los accionistas de Union Pacific Railroad para obtener subvenciones del gobierno con enormes ganancias. Los organizadores del plan lo protegieron de la investigación al proporcionar obsequios de sus acciones a poderosos miembros del Congreso. (pág. 452)

"Crimen de 1873": Término utilizado por quienes criticaron una ley de 1873 que ordenaba al Departamento del Tesoro de los Estados Unidos que dejara de acuñar dólares de plata, retirara los dólares de la era de la Guerra Civil (*greenbacks*) y los reemplazara con billetes respaldados por el patrón oro de un sistema ampliado de bancos nacionales. (pág. 469)

Cruzadas: Serie de guerras emprendidas por los ejércitos cristianos entre los años 1096 y 1291 D.C. para revertir el avance de los musulmanes en Europa y recuperar las tierras santas donde Cristo había vivido. (pág. 22)

Crisis de los misiles en Cuba: Conflicto nuclear entre la Unión Soviética y Estados Unidos causado por el intento de los soviéticos de enviar misiles nucleares a Cuba en 1962. (pág. 776)

cultura: forma de vivir de ciertas personas que se expresa a través de varias tradiciones como la religión, el arte y el comportamiento. (p. 2)

culture war: A term used by Patrick Buchanan in 1992 to describe a long-standing political struggle, dating to the 1920s, between religious traditionalists and secular liberals. Social issues such as abortion rights and the rights of lesbians and gay men divided these groups. (p. 952)

cuneiform: an ancient form of writing composed by wedge-shaped characters that was used throughout Mesopotamia and Persia. (p. 526)

currency: money in circulation used for exchange. (p. 112)

currency tax: A hidden tax on the farmers and artisans who accepted Continental bills in payment for supplies and on the thousands of soldiers who took them as pay. Because of rampant inflation, Continental currency lost much of its value during the war — thus, the implicit tax on those who accepted it as payment. (p. 183)

curry: using flattery in order to advance one's self. (p. 355)

Dawes Severalty Act: The 1887 law that gave Native Americans severalty (individual ownership of land) by dividing reservations into homesteads. The law was a disaster for Native peoples, resulting over several decades in the loss of 66 percent of lands held by Indians at the time of the law's passage. (p. 483)

D-Day: June 6, 1944, the date of the Allied invasion of northern France. D-Day was the largest amphibious assault in world history. The invasion opened a second front against the Germans and moved the Allies closer to victory in Europe. (p. 734)

decimate: to kill or damage a large number of something. (p. 57)

Declaration of Independence: A document containing philosophical principles and a list of grievances that declared separation from Britain. Adopted by the Second Continental Congress on July 4, 1776, it ended a period of intense debate with moderates still hoping to reconcile with Britain. (p. 167)

Declaratory Act of 1766: Law issued by Parliament to assert Parliament's unassailable right to legislate for its British colonies "in all cases whatsoever," putting Americans on notice that the simultaneous repeal of the Stamp Act changed nothing in the imperial powers of Britain. (p. 150)

Defense of Marriage Act: A law enacted by Congress in 1998 that allowed states to refuse to recognize gay marriages or civil unions formed in other jurisdictions. The Supreme Court ruled that DOMA was unconstitutional in 2013. (p. 958)

deferment: postponement; suspension. (p. 860)

deindustrialization: The dismantling of manufacturing — especially in the automobile, steel, and consumer-goods industries — in the decades after World War II, representing a reversal of the process of industrialization that had dominated the American economy from the 1870s through the 1940s. (p. 886)

guerra cultural: Término usado por Patrick Buchanan en 1992 para describir la larga lucha política, que comenzó en la década de 1920, entre tradicionalistas religiosos y liberales seculares. Los grupos han estado divididos por temas como derechos de aborto, y los derechos de gays y lesbianas. (pág. 952)

cuneiforme: forma de escritura antigua compuesta por caracteres en forma de cuña que se usó en Mesopotamia y Persia. (pág. 526)

moneda: dinero circulante que se usa para intercambios. (pág. 112)

impuesto a las divisas: impuesto oculto sobre los granjeros y artesanos que aceptaron billetes continentales como pago por suministros y sobre los miles de soldados que los aceptaron como pago. Debido a la inflación desenfrenada, la moneda continental perdió gran parte de su valor durante la guerra —de ahí el impuesto implícito sobre quienes lo aceptaron como pago. (pág. 183)

almohazar: usar la adulación para mejorar la situación propia. (pág. 355)

Ley de Dawes Severalty: Ley de 1887 que otorgó separabilidad (propiedad individual de tierras) a los nativos americanos al dividir las reservas en fincas. La ley fue un desastre para los pueblos nativos, y resultó tras varias décadas en la pérdida del 66 por ciento de las tierras que ocupaban los indios en el momento de la aprobación de la ley. (pág. 483)

Día D: 6 de junio de 1944, fecha de la invasión de los Aliados en el norte de Francia. El Día D fue el ataque anfibio más grande en la historia del mundo. La invasión abrió un segundo frente contra los alemanes y acercó a los Aliados a la victoria en Europa. (pág. 734)

diezmar: matar o dañar a una gran cantidad de algo. (pág. 57)

Declaración de la independencia: Documento que contiene principios filosóficos y una lista de agravios con los cuales se declaró la separación de Gran Bretaña. Adoptada por el Segundo Congreso Continental el 4 de julio de 1776, puso fin a un intenso debate con los moderados que todavía esperaban reconciliarse con Gran Bretaña. (pág. 167)

Ley Declaratoria de 1766: Ley emitida por el Parlamento para hacer valer el derecho inexpugnable del Parlamento de legislar para sus colonias británicas "en todos los casos", dando aviso a los americanos que la derogación simultánea de la Ley del Timbre no había cambiado nada en los poderes imperiales de Gran Bretaña. (pág. 150)

Ley de Defensa del Matrimonio (DOMA): Ley promulgada por el Congreso en 1998 que permitió a los estados el derecho a negarse a reconocer los matrimonios o uniones civiles gays formadas en otras jurisdicciones. En 2013, la Corte Suprema sentenció a DOMA como anticonstitucional. (pág. 958)

aplazamiento: posponer; suspender. (pág. 860)

desindustrialización: El desmantelamiento de la manufactura—en especial de la industria automotriz, acerera y de bienes del consumidor—en las décadas posteriores a la Segunda Guerra Mundial, que representó un revés en el proceso de industrialización que dominó a la economía americana desde la década de 1870 hasta después de 1940. (pág. 886)

deism: The Enlightenment-influenced belief that the Christian God created the universe and then left it to run according to natural laws. (p. 121)

demarcation: a fixed boundary. (p. 760)

demographic: relating to a certain statistic of the human population. (p. 34)

demographic transition: The sharp decline in birthrate in the United States beginning in the 1790s that was caused by changes in cultural behavior, including the use of birth control. The migration of thousands of young men to the trans-Appalachian West was also a factor in this decline. (p. 278)

denigrate: to condemn unfairly. (p. 867)

denude: to deprive something of its crucial assets. (p. 245)

depose: to remove from a high position. (p. 465)

depravity: ethical corruption. (p. 305)

deregulation: The limiting of regulation by federal agencies. Deregulation of prices in the trucking, airline, and railroad industries had begun under President Carter in the late 1970s, and Reagan expanded it to include cutting back on government protections of consumers, workers, and the environment. (p. 893)

deride: to ridicule. (p. 535)

deskilling: The elimination of skilled labor under a new system of mechanized manufacturing, in which workers completed discrete, small-scale tasks rather than crafting an entire product. With deskilling, employers found they could pay workers less and replace them more easily. (p. 504)

despondent: feeling extremely discouraged; downhearted. (p. 839)

despotic: having absolute power as a ruler that is often taken advantage of. (p. 87)

détente: The easing of conflict between the United States and the Soviet Union during the Nixon administration, which was achieved by focusing on issues of common concern, such as arms control and trade. (p. 871)

diaspora: a separation of a group of people from their native land. (p. 31)

diatribe: a bitter piece of writing or speech. (p. 452)

diffusion: the scattering or spreading of something. (p. 266)

discretionary income: income remaining after the deduction of taxes and expenses on necessities. (p. 885)

disdain: to dislike due to unworthiness. (p. 312)

disease: condition of the body or its parts that have a negative impact and often the potential to spread either internally or externally. (p. 3)

dissemination: the spread of something such as information or ideas. (p. 97)

dissident: someone who challenges official policy. (p. 59)

dollar diplomacy: Policy emphasizing the connection between America's economic and political interests overseas. Business

deísmo: Creencia influida por la Iluminación en la cual el Dios cristiano creó el universo y luego lo dejó funcionar de acuerdo con las leyes naturales. (pág. 121)

demarcación: un límite fijo. (pág. 760)

demográfico: relacionado a cierta estadística sobre la población humana. (pág. 34)

transición demográfica: Fuerte declive de la tasa de natalidad en los Estados Unidos a partir de la década de 1790 que fue causada por cambios en el comportamiento cultural, incluido el uso de métodos anticonceptivos. La migración de miles de hombres jóvenes al oeste de los Apalaches también fue un factor en este declive. (pág. 278)

denigrar: condenar de manera injusta. (pág. 867)

despojar: privar a algo de sus bienes cruciales. (pág. 245)

derrocar: remover a alguien de una posición de poder. (pág. 465)

depravación: corrupción ética. (pág. 305)

desregulación: La limitación de la regulación de agencias federales. La desregulación de los precios en las industrias camioneras, de aerolíneas y ferroviarias comenzó bajo el presidente Carter a finales de la década de 1970, y Reagan la expandió para incluir recortes en protecciones gubernamentales de consumidores, trabajadores y el medio ambiente. (pág. 893)

ridiculizar: burlarse. (pág. 535)

reducción de la especialización: La eliminación del trabajo calificado bajo un nuevo sistema de manufactura mecanizada, donde los trabajadores se dedican a tareas discretas de menor escala en lugar de fabricar un producto entero. Con este proceso, los empleadores encontraron que podían reducir los salarios de los trabajadores y reemplazarlos con mayor facilidad. (pág. 504)

abatido: sentirse extremadamente desanimado; alicaído. (pág. 839)

despótico: tener poder absoluto como gobernante, suele abusarse de ese poder. (pág. 87)

détente: La relajación del conflicto entre Estados Unidos y la Unión Soviética durante la administración de Nixon, que fue lograda mediante un enfoque sobre temas que preocupaban a ambos países, como el control de armas y el comercio. (pág. 871)

diáspora separación de un grupo de personas de su tierra natal. (pág. 31)

diatriba: texto o discurso amargo. (pág. 452)

difusión: dispersar o propagar algo. (pág. 266)

ingresos discrecionales: ingreso restante tras la retención de impuestos y gastos en necesidades. (pág. 885)

desdén: rechazar algo al estimar que no tiene valor. (pág. 312)

enfermedad: condición del cuerpo o de sus partes con impacto negativo que potencialmente puede extenderse interior o exteriormente. (pág. 3)

diseminación: la difusión de algo como información o ideas. (pág. 97)

disidente: persona que cuestiona la política oficial. (pág. 59)

diplomacia del dólar: Política que enfatiza la conexión entre los intereses políticos y económicos de Estados Unidos en el extran-

would gain from diplomatic efforts on its behalf, while the strengthened American economic presence overseas would give added leverage to American diplomacy. (p. 655)

domesticate: (of an animal) to tame and keep as a pet or farm animal. (p. 3)

domesticity: A middle-class ideal of "separate spheres" that celebrated women's special mission as homemakers, wives, and mothers who exercised a Christian influence on their families and communities; it excluded women from professional careers, politics, and civic life. (p. 325)

Dominion of New England: A royal province created by King James II in 1686 that would have absorbed Connecticut, Rhode Island, Massachusetts Bay, Plymouth, New York, and New Jersey into a single, vast colony and eliminated their assemblies and other chartered rights. James's plan was canceled by the Glorious Revolution in 1688, which removed him from the throne. (p. 80)

domino theory: President Eisenhower's theory of containment, which warned that the fall of a non-Communist government to communism in Southeast Asia would trigger the spread of communism to neighboring countries. (p. 773)

dowry: money, property, or goods given to a man by his wife's parents. (p. 19)

draft (conscription): The system for selecting individuals for conscription, or compulsory military service, first implemented during the Civil War. (p. 411)

draft riots: Violent protests against military conscription that occurred in the North, most dramatically in New York City; led by working-class men who could not buy exemption from the draft. (p. 412)

***Dred Scott* decision:** The 1857 Supreme Court decision that ruled the Missouri Compromise unconstitutional. The Court ruled against slave Dred Scott, who claimed that travels with his master into free states and territories made him and his family free. The decision also denied the federal government the right to exclude slavery from the territories and declared that African Americans were not citizens. (p. 386)

Dunmore's War: A 1774 war led by Virginia's royal governor, the Earl of Dunmore, against the Ohio Shawnees, who had a long-standing claim to Kentucky as a hunting ground. The Shawnees were defeated and Dunmore and his militia forces claimed Kentucky as their own. (p. 165)

dust bowl: An area including the semiarid states of Oklahoma, Texas, New Mexico, Colorado, Arkansas, and Kansas that experienced a severe drought and large dust storms from 1930 to 1941. (p. 704)

Earth Day: An annual event honoring the environment that was first celebrated on April 22, 1970, when 20 million citizens gathered in communities across the country to express their support for a cleaner, healthier planet. (p. 881)

jero. Los negocios se beneficiarían de ser representados en esfuerzos diplomáticos y al mismo tiempo, la fortalecida presencia económica en el extranjero aumentaría el poder de la diplomacia americana. (pág. 655)

domesticar: (a un animal) para domarlo y conservarlo como mascota o animal de granja. (pág. 3)

domesticidad: Ideal de clase media de "esferas separadas" que celebraba la misión especial de las mujeres como amas de casa, esposas y madres que ejercían una influencia cristiana en sus familias y comunidades; excluía a las mujeres de las carreras profesionales, la política y la vida cívica. (pág. 325)

Dominio de Nueva Inglaterra: Provincia real creada por Jacobo II de Inglaterra en 1686 que habría absorbido Connecticut, Rhode Island, la bahía de Massachusetts, Plymouth, Nueva York y Nueva Jersey en una colonia grande y única, y habría eliminado sus asambleas y otros derechos constituidos. El plan de Jacobo II fue cancelado por la Revolución Gloriosa en 1688, que lo derrocó. (pág. 80)

teoría dominó: Teoría de contención del presidente Eisenhower, que advertía que la caída de un gobierno no comunista del sureste de Asia ante el comunismo provocaría el esparcimiento del comunismo a sus países aledaños. (pág. 773)

dote: dinero, propiedad o bienes que recibe un hombre de parte de los padres de su esposa. (pág. 19)

draft: (reclutamiento): Sistema que selecciona individuos para el servicio militar obligatorio o conscripto, implementado por primera vez durante la Guerra Civil. (pág. 411)

draft riots: (disturbios): Protestas violentas contra el reclutamiento militar que ocurrieron en el norte, con mayor notoriedad en la ciudad de Nueva York; dirigidas por hombres de la clase trabajadora que no podían comprar la exención al reclutamiento. (pág. 412)

decisión del caso *Dred Scott*: Decisión de la Corte Suprema de 1857 que dictaminó la inconstitucionalidad del Compromiso de Misuri. La Corte falló en contra del esclavo Dred Scott, que afirmó que viajar con su amo hacia estados y territorios libres lo liberaba a él y a su familia. La decisión también denegó al gobierno federal el derecho a excluir la esclavitud de los territorios y declaró que los afroamericanos no eran ciudadanos. (pág. 386)

Guerra de Dunmore: Guerra dirigida por el Conde de Dunmore, gobernador real de Virginia, que tuvo lugar en 1774 contra los shawnees de Ohio, que reclamaban su derecho histórico sobre Kentucky como campo de caza. Los shawnees fueron derrotados y Dunmore y sus fuerzas de las milicias reclamaron Kentucky como propio. (pág. 165)

dust bowl (cuenco de polvo): Zona semiárida de los estados de Oklahoma, Texas, Nuevo México, Colorado, Arkansas y Kansas que vivió una sequía severa y sufrió grandes tormentas de polvo entre 1930 y 1941. (pág. 704)

Día de la Tierra: Evento anual en honor del medio ambiente, celebrado por primera vez el 22 de abril de 1970, cuando 20 millones de ciudadanos se reunieron en comunidades de todo el país para expresar su apoyo hacia un planeta más limpio y sano. (pág. 881)

eastern woodlands: A culture area of Native Americans that extended from the Atlantic Ocean westward to the Great Plains, and from the Great Lakes to the Gulf of Mexico. The eastern woodlands could be subdivided into the southeastern and northeastern woodlands. Eastern woodlands peoples were generally semisedentary, with agriculture based on maize, beans, and squash. Most, but not all, were chiefdoms. (p. 11)

ecology: the study of the relationships between organisms and their environment, as well as other organisms. (p. 3)

Economic Growth and Tax Relief Act: Legislation introduced by President George W. Bush and passed by Congress in 2001 that slashed income tax rates, extended the earned income credit for the poor, and marked the estate tax to be phased out by 2010. (p. 963)

Economic Opportunity Act: A 1964 act that created a series of programs, including Head Start to prepare disadvantaged preschoolers for kindergarten and the Job Corps and Upward Bound to provide young people with training and employment, aimed at alleviating poverty and spurring economic growth in impoverished areas. (p. 848)

Economic Recovery Tax Act (ERTA): Legislation introduced by President Reagan and passed by Congress in 1981 that authorized the largest reduction in taxes in the nation's history. (p. 923)

ecosystem: all living things, from people to plants, living in the same area and interacting with each other and the environment. (p. 3)

ecumenical: representing worldwide Christian Unity. (p. 792)

effigy: a statue of a person. (p. 148)

egalitarian: a social view in which all citizens are equal in all aspects of life. (p. 284)

egregious: exceptionally bad. (p. 478)

Eighteenth Amendment: The ban on the manufacture and sale of alcohol that went into effect in January 1920. Also called "prohibition," the amendment was repealed in 1933. (p. 663)

Eisenhower Doctrine: President Eisenhower's 1957 declaration that the United States would actively combat communism in the Middle East. (p. 774)

emaciated: abnormally thin, especially because of lack of food or illness. (p. 735)

Emancipation Proclamation: President Abraham Lincoln's proclamation issued on January 1, 1863, that legally abolished slavery in all states that remained out of the Union. While the Emancipation Proclamation did not immediately free a single slave, it signaled an end to the institution of slavery. (p. 407)

embargo: an official ban on commerce. (p. 212)

Embargo Act of 1807: An act of Congress that prohibited U.S. ships from traveling to foreign ports and effectively banned overseas

bosques orientales: Área cultural de nativos americanos que se extendía desde el océano Atlántico hacia el oeste hasta las Grandes Llanuras, y desde los Grandes Lagos hasta el golfo de México. Los bosques orientales podrían subdividirse en los bosques del sureste y el noreste. Los pueblos de los bosques orientales generalmente eran semisedentarios, con una agricultura basada en maíz, frijoles y calabaza. La mayoría, aunque no todos, eran jefaturas. (pág. 11)

ecología: el estudio de las relaciones entre organismos y su entorno, así como con otros organismos. (pág. 3)

Ley Reconciliatoria de Crecimiento Económico y Reducción Fiscal: Legislación introducida por el presidente George W. Bush y aprobada por el Congreso en 2001 que redujo el impuesto sobre la renta, extendió el crédito por ingreso para los pobres y estableció que para 2010 el impuesto sobre sucesiones debía ser gradualmente eliminado. (pág. 963)

Ley de Oportunidades Económicas: Ley de 1964 que creó una serie de programas, entre ellos el programa Head Start, con el fin de preparar a los alumnos desfavorecidos de preescolar para el kinder y los programas Job Corps y Upward Bound para ofrecer entrenamiento y empleo a jóvenes, con la intención de aliviar la pobreza y estimular el crecimiento económico en zonas empobrecidas. (pág. 848)

Ley del Impuesto para la Recuperación Económica (ERTA): Legislación introducida por el presidente Reagan y aprobada por el Congreso en 1981 que autorizó la mayor reducción de impuestos en la historia del país. (pág. 923)

ecosistema: todos los seres vivos, desde las personas hasta las plantas, que habitan la misma zona e interactúan entre sí y con el medio ambiente. (pág. 3)

ecuménico: representa a la Unidad Cristiana mundial. (pág. 792)

efigie: estatua de una persona. (pág. 148)

igualitario: perspectiva social donde todos los ciudadanos son iguales en todos los aspectos de la vida. (pág. 284)

mayúsculo: excepcionalmente malo. (pág. 478)

Decimoctava Enmienda: La prohibición de la manufactura y venta de alcohol que entró en vigencia en enero de 1920. La enmienda, también conocida como la "prohibición", fue revocada en 1933. (pág. 663)

Doctrina Eisenhower: Declaración de 1957 del presidente Eisenhower, que estableció que Estados Unidos combatiría el comunismo en el Medio Oriente. (pág. 774)

escuálido: delgadez anormal, especialmente por falta de alimento o por enfermedad. (pág. 735)

Proclamación de Emancipación: Proclamación del presidente Abraham Lincoln emitida el 1 de enero de 1863 que abolió legalmente la esclavitud en todos los estados que permanecieron fuera de la Unión. Si bien en un principio la Proclamación de Emancipación no liberó a un solo esclavo, señaló el fin de la esclavitud como institución. (pág. 407)

embargo: prohibición oficial del comercio. (pág. 212)

Ley de Embargo de 1807: Ley del Congreso que, en un intento de disuadir a Gran Bretaña de detener los barcos estadounidenses

trade in an attempt to deter Britain from halting U.S. ships at sea. The embargo caused grave hardships for Americans engaged in overseas commerce. (p. 223)

encomienda: A grant of Indian labor in Spanish America given in the sixteenth century by the Spanish kings to prominent men. *Encomenderos* extracted tribute from these Indians in exchange for granting them protection and Christian instruction. (p. 40)

endemic: affecting a particular area or people group. (p. 25)

energy crisis: A period of fuel shortages in the United States after the Arab states in the Organization of Petroleum Exporting Countries (OPEC) declared an oil embargo in October 1973. (p. 881)

Enforcement Laws: Acts passed in Congress in 1870 and signed by President U. S. Grant that were designed to protect freedmen's rights under the Fourteenth and Fifteenth Amendments. Authorizing federal prosecutions, military intervention, and martial law to suppress terrorist activity, the Enforcement Laws largely succeeded in shutting down Klan activities. (p. 453)

English common law: The centuries-old body of legal rules and procedures that protected the lives and property of the British monarch's subjects. (p. 149)

Enlightenment: An eighteenth-century philosophical movement that emphasized the use of reason to reevaluate previously accepted doctrines and traditions and the power of reason to understand and shape the world. (p. 118)

enterprise: the project of undertaking, part. something difficult. (p. 3)

entrench: to firmly establish or defend something. (p. 104)

entrepreneur: someone who takes a risk by opening and managing a business themselves. (p. 43)

Environmental Protection Agency (EPA): Federal agency created by Congress and President Nixon in 1970 to enforce environmental laws, conduct environmental research, and reduce human health and environmental risks from pollutants. (p. 881)

environmentalism: Activist movement begun in the 1960s that was concerned with protecting the environment through activities such as conservation, pollution control measures, and public awareness campaigns. In response to the new environmental consciousness, the federal government staked out a broad role in environmental regulation in the 1960s and 1970s. (p. 881)

epidemic: a wide-spread, contagious sickness that threatens a community for a specific amount of time. (p. 6)

Equal Pay Act: Law passed in 1963 that established the principle of equal pay for equal work. Trade-union women were especially critical in pushing for, and winning, congressional passage of the law. (p. 851)

Equal Rights Amendment (ERA): Constitutional amendment passed by Congress in 1972 that would require equal treatment

en altamar, prohibió a los barcos estadounidenses viajar a puertos extranjeros y prohibió efectivamente el comercio exterior. El embargo causó graves dificultades para los estadounidenses que participaban en el comercio exterior. (pág. 223)

encomienda: Concesión de mano de obra indígena en Hispanoamérica otorgada en el siglo XVI por los reyes españoles a hombres prominentes. Los *encomenderos* extrajeron tributos de estos indios a cambio de otorgarles protección e instrucción cristiana. (pág. 40)

endémico: afecta a una zona o grupo de personas en particular. (pág. 25)

crisis energética: Periodo de escasez en Estados Unidos como consecuencia del embargo petrolero declarado en octubre de 1973 por los países árabes de la Organización de Países Exportadores de Petróleo (OPEC). (pág. 881)

Leyes de aplicación: Leyes aprobadas por el Congreso en 1870 y ratificadas por el presidente U. S. Grant, que fueron diseñadas para proteger los derechos de los liberados bajo la Decimocuarta y Decimoquinta Enmienda. Las Leyes de aplicación lograron en gran medida poner fin a las actividades del Klan al autorizar los enjuiciamientos federales, la intervención militar y la ley marcial con el propósito de reprimir la actividad terrorista. (pág. 453)

Derecho consuetudinario inglés Estructura jurídica centenaria de reglas y procedimientos legales que protegía la vida y la propiedad de los súbditos del monarca británico. (pág. 149)

Ilustración: Movimiento filosófico del siglo XVIII que enfatizó el uso de la razón para reevaluar doctrinas y tradiciones previamente aceptadas y el poder de la razón para comprender y dar forma al mundo. (pág. 118)

empresa: proyecto de emprender, particularmente algo difícil. (pág. 3)

afianzar: establecer o defender algo con firmeza. (pág. 104)

emprendedor: alguien que arriesga al abrir y administrar un negocio por sí mismos. (pág. 43)

Agencia de Protección Ambiental (EPA): Agencia Federal creada por el Congreso y el presidente Nixon en 1970 para vigilar el cumplimiento de leyes ambientales, conducir estudios del medio ambiente y reducir los riesgos de los contaminantes para la salud humana y el medio ambiente. (pág. 881)

ecologismo: Movimiento activista que comenzó en la década de 1960 con el propósito de proteger al medio ambiente a través de actividades de conservación, medidas de control de contaminación y campañas públicas. Como respuesta a la nueva conciencia ambiental, el gobierno federal mantuvo un amplio papel en la regulación ambiental de las décadas de 1960 y 1970. (pág. 881)

epidemia: enfermedad contagiosa que se extiende y amenaza a una comunidad durante un tiempo específico. (pág. 6)

Ley de Igualdad de Salario: Ley aprobada en 1963 que estableció el principio de igualdad de pago por trabajos iguales. Las mujeres sindicalizadas tuvieron un papel particularmente importante en impulsar y conseguir la aprobación de la ley en el Congreso. (pág. 851)

Enmienda de Igualdad de Derechos (ERA): Enmienda constitucional aprobada por el Congreso en 1972, que exige por ley es-

of men and women under federal and state law. Facing fierce opposition from the New Right and the Republican Party, the ERA was defeated as time ran out for state ratification in 1982. (p. 895)

Erie Canal: A 364-mile waterway connecting the Hudson River and Lake Erie. The Erie Canal brought prosperity to the entire Great Lakes region, and its benefits prompted civic and business leaders in Philadelphia and Baltimore to propose canals to link their cities to the Midwest. (p. 244)

espionage: the use of spies in order to obtain information, especially from a competitor. (p. 763)

Ethics in Government Act: Passed in the wake of the Watergate scandal, the 1978 act that forced political candidates to disclose financial contributions and limited the lobbying activities of former elected officials. (p. 891)

etymology: the study of the origin of words. (p. 672)

eugenics: An emerging "science" of human breeding in the late nineteenth century that argued that mentally deficient people should be prevented from reproducing. (p. 529)

eulogy: a speech or writing in honor of the deceased. (p. 741)

evangelicalism: The trend in Protestant Christianity that stresses salvation through conversion, repentance of sin, and adherence to scripture; it also stresses the importance of preaching over ritual. (p. 904)

exacerbate: to worsen in quality or escalate in violence or severity. (p. 780)

exchequer: a national treasury. (p. 150)

excoriate: to harshly criticize. (p. 133)

Executive Order 8802: An order signed by President Roosevelt in 1941 that prohibited "discrimination in the employment of workers in defense industries or government because of race, creed, color, or national origin" and established the Fair Employment Practices Commission (FEPC). (p. 724)

Executive Order 9066: An order signed by President Roosevelt in 1942 that authorized the War Department to force Japanese Americans from their West Coast homes and hold them in relocation camps for the rest of the war. (p. 730)

Exodusters: African Americans who walked or rode out of the Deep South following the Civil War, many settling on farms in Kansas in hopes of finding peace and prosperity. (p. 473)

explicit: being clearly defined or presented. (p. 150)

exploit: to use something in order to gain profit. (p. 6)

expulsion: being forced out or expelled. (p. 22)

extortion: illegally obtaining money or other desires by taking advantage of one's position or power. (p. 176)

factionalism: a large group being divided into subgroups that have slight variations. (p. 198)

tatal y federal trato igual para los hombres y las mujeres. Ante la feroz oposición de la Nueva Derecha y el Partido Republicano, ERA fue derrotada sobre el tiempo límite para su ratificación en 1982. (pág. 895)

Canal de Erie: Canal de 364 millas que conecta el río Hudson y el lago Erie. El Canal de Erie trajo prosperidad a toda la región de los Grandes Lagos, y sus beneficios impulsaron a los líderes cívicos y empresariales de Filadelfia y Baltimore a proponer canales para unir sus ciudades con el medio oeste del país. (pág. 244)

espionaje: el uso de espías para obtener información, especialmente de un competidor. (pág. 763)

Ley de Ética Gubernamental: Aprobada tras el escándalo de Watergate, esta ley de 1978 obligaría a los candidatos políticos a revelar sus contribuciones financieras y limitó las actividades de cabildeo de funcionarios que previamente habían ocupado cargos de elección pública. (pág. 891)

etimología: estudio del origen de las palabras. (pág. 672)

eugenesia: "Ciencia" de la reproducción humana que surgió a finales del siglo XIX y que argumentaba que se debía impedir la reproducción de personas con deficiencias mentales. (pág. 529)

elegía: discurso o texto en honor de un difunto. (pág. 741)

evangelicalismo: Tendencia dentro del cristianismo protestante que llama a la salvación a través de la conversión, el arrepentimiento del pecado y la adhesión a las escrituras; también resalta la importancia de predicar por encima de seguir los rituales. (pág. 904)

exacerbar: empeorar la calidad o aumentar en violencia o severidad. (pág. 780)

hacienda: tesoro público. (pág. 150)

vilipendiar: criticar severamente. (pág. 133)

Orden Ejecutiva 8802: Orden firmada por el presidente Roosevelt en 1941 para prohibir la "discriminación en el empleo de trabajadores en las industrias de defensa o gobierno por raza, creencia religiosa, color u origen nacional" y establecer la Fair Employment Practices Comission (Comisión para las Prácticas Laborales Justas, FEPC). (pág. 724)

Orden Ejecutiva 9066: Orden firmada por el presidente Roosevelt en 1942 que autorizó al Departamento de Guerra a obligar a los japoneses americanos de la Costa Oeste a abandonar sus hogares para ser enviados a campos de internamiento durante el resto de la guerra. (pág. 730)

Exodusters: Afroamericanos que partieron o salieron del Sur Profundo después de la Guerra Civil; muchos se establecieron en granjas en Kansas con la esperanza de encontrar paz y prosperidad. (pág. 473)

explícito: algo claramente definido o presentado. (pág. 150)

explotar: usar algo para obtener ganancias. (pág. 6)

expulsión: ser obligado a irse o ser desterrado. (pag. 22)

extorsión: obtener dinero u otros deseos por medio del abuso de una posición de poder. (pág. 176)

faccionalismo: grupo grande dividido en subgrupos con pequeñas variaciones. (pág. 198)

Fair Deal: The domestic policy agenda announced by President Harry S. Truman in 1949. Including civil rights, health care, and education reform, Truman's initiative was only partially successful in Congress. (p. 764)

Fair Labor Standards Act: One of the final major laws of the New Deal, it outlawed child labor, made the 40-hour workweek standard (and mandated overtime pay), and established a national minimum wage. (p. 696)

family values: Values promoted by the Religious Right, including support for the traditional nuclear family and opposition to same-sex marriage and abortion. (p. 937)

Farmers' Alliance: A rural movement founded in Texas during the depression of the 1870s that spread across the plains states and the South. The Farmers' Alliance advocated cooperative stores and exchanges that would circumvent middlemen, and it called for greater government aid to farmers and stricter regulation of railroads. (p. 520)

fascism: An authoritarian system of government characterized by dictatorial rule, extreme nationalism, disdain for civil society, and a conviction that imperialism and warfare are the principal means by which nations attain greatness. The United States went to war against fascism when it faced Nazi Germany under Adolf Hitler and Italy under Benito Mussolini during World War II. (p. 712)

Federal Housing Administration: An agency established by the Federal Housing Act of 1934 that refinanced home mortgages for mortgage holders facing possible foreclosure. (p. 688)

Federal Reserve Act: The central bank system of the United States, created in 1913. The Federal Reserve helps set the money supply level, thus influencing the rate of growth of the U.S. economy, and seeks to ensure the stability of the U.S. monetary system. (p. 610)

Federal Writers' Project: A program under the Works Progress Administration (WPA) from 1935 to 1939 in which historians, teachers, editors, novelists, poets, and playwrights were employed by the federal government to produce a variety of materials — this included, for example, interviews with hundreds of former slaves; a major survey of American foodways; and state-by-state guidebooks to history, geography, and culture. (p. 706)

Federalist No. 10: An essay by James Madison in *The Federalist* (1787–1788) that challenged the view that republican governments only worked in small polities; it argued that a geographically expansive national government would better protect republican liberty. (p. 198)

Federalists: Supporters of the Constitution of 1787, which created a strong central government; their opponents, the Antifederalists, feared that a strong central government would corrupt the nation's newly won liberty. (p. 195)

Female Moral Reform Society: An organization led by middle-class Christian women who viewed prostitutes as victims of male lust and sought to expose their male customers while "res-

Trato Justo: Agenda de política doméstica anunciada por el presidente Harry S. Truman en 1949. La iniciativa de Truman incluyó derechos civiles, salud pública y reformas educativas, pero sólo fue parcialmente exitosa en el Congreso. (pág. 764)

Ley de Normas Laborales Justas: Fue una de las leyes principales del Nuevo Trato y prohibió el trabajo de menores, estableció el estándar de semana laboral de 40 horas (con pago obligatorio de horas extra) y estableció un salario mínimo nacional. (pág. 696)

valores de familia: Valores promovidos por la Derecha Religiosa que incluyen el apoyo a la familia nuclear tradicional y la oposición al matrimonio entre personas del mismo sexo y al aborto. (pág. 937)

Alianza de Granjeros: Movimiento rural fundado en Texas durante la depresión de la década de 1870 que se esparció por los estados de la planicie y el Sur. La Alianza de Granjeros abogaba por tiendas cooperativas e intercambios que eliminarían la necesidad de intermediarios y pedía más apoyos gubernamentales para las granjas y mayor regulación de los ferrocarriles. (pág. 520)

fascismo: Sistema autoritario de gobierno caracterizado por el régimen dictatorial, el nacionalismo extremo, el desprecio por la sociedad civil y la convicción de que el imperialismo y la guerra son los medios para conseguir la grandeza nacional. Estados Unidos luchó contra el fascismo cuando enfrentó a la Alemania Nazi de Adolf Hitler y a la Italia de Benito Mussolini durante la Segunda Guerra Mundial. (pág. 712)

Administración Federal de la Vivienda: Agencia creada por la Ley de Vivienda Federal de 1934 que refinanció hipotecas de deudores hipotecarios que enfrentaban una posible ejecución hipotecaria. (pág. 688)

Ley de la Reserva Federal: Sistema bancario central de los Estados Unidos creado en 1913. La reserva federal ayuda a establecer el nivel de dinero en circulación y, por lo tanto, influye sobre la tasa de crecimiento de la economía de Estados Unidos y busca asegurar la estabilidad del sistema monetario de Estados Unidos. (pág. 610)

Proyecto Federal de Escritores: Programa de la Works Progress Administration (Administración de Progreso de Obras, WPA) que duró entre 1935 y 1939, en el cual historiadores, editores, novelistas, poetas y dramaturgos fueron empleados por el gobierno federal para producir una variedad de materiales— estos incluyeron, por ejemplo, entrevistas con cientos de ex esclavos; una gran encuesta de las costumbres alimenticias americanas; y guías de historia, geografía y cultura para cada estado. (pág. 706)

Federalista No. 10: Ensayo de James Madison en *The Federalist* (1787–1788) que puso en tela de juico la opinión de que los gobiernos republicanos sólo trabajaban en pequeñas entidades políticas; argumentó que un gobierno nacional geográficamente expansivo protegería mejor la libertad republicana. (pág. 198)

Federalistas: Partidarios de la Constitución de 1787, que creó un gobierno central fuerte; sus oponentes, los antifederalistas, temían que un gobierno central fuerte corrompiera la recién obtenida libertad de la nación. (pág. 195)

Sociedad Reformista Femenina: Organización dirigida por mujeres cristianas de clase media que veían a las prostitutas como víctimas de la lujuria masculina y buscaban exponer a sus clien-

cuing" sex workers and encouraging them to pursue respectable trades. (p. 326)

feminism: The ideology that women should enter the public sphere not only to work on behalf of others, but also for their own equal rights and advancement. Feminists moved beyond advocacy of women's voting rights to seek greater autonomy in professional careers, property rights, and personal relationships. (p. 555)

Fetterman massacre: A massacre in December 1866 in which 1,500 Sioux warriors lured Captain William Fetterman and 80 soldiers from a Wyoming fort and attacked them. With the Fetterman massacre the Sioux succeeded in closing the Bozeman Trail, the main route into Montana. (p. 480)

Fifteenth Amendment: Constitutional amendment ratified in 1869 that forbade states to deny citizens the right to vote on grounds of race, color, or "previous condition of servitude." (p. 439)

"Fifty-four forty or fight!": Democratic candidate Governor James K. Polk's slogan in the election of 1844 calling for American sovereignty over the entire Oregon Country, which stretched from California to Russian-occupied Alaska and at the time was shared with Great Britain. (p. 355)

filibustering: Private paramilitary campaigns, mounted particularly by southern proslavery advocates in the 1850s, to seize additional territory in the Caribbean or Latin America in order to establish control by U.S.-born leaders, with an expectation of eventual annexation by the United States. (p. 378)

finance: management of a person's or organization's money and investments. (p. 29)

fireside chats: A series of informal radio addresses Franklin Roosevelt made to the nation in which he explained New Deal initiatives. (p. 685)

flagrant: obviously offensive. (p. 432)

flapper: A young woman of the 1920s who defied conventional standards of conduct by wearing short skirts and makeup, freely spending the money she earned on the latest fashions, dancing to jazz, and flaunting her liberated lifestyle. (p. 658)

Foreign Miner's Tax: A discriminatory tax, adopted in 1850 in California Territory, that forced Chinese and Latin American immigrant miners to pay high taxes for the right to prospect for gold. The tax effectively drove these miners from the goldfields. (p. 372)

Four Freedoms: Identified by President Franklin D. Roosevelt as the most basic human rights: freedom of speech, freedom of religion, freedom from want, and freedom from fear. The president used these ideas of freedom to justify support for England during World War II, which in turn pulled the United States into the war. (p. 716)

tes masculinos mientras "rescataban" a las trabajadoras sexuales y las alentaban a realizar labores respetables. (pág. 326)

feminismo: Ideología bajo la cual las mujeres deben entrar a la esfera pública no sólo para trabajar a nombre de otros, sino también por la igualdad de sus derechos y su desarrollo personal. Las feministas fueron más allá de buscar el derecho femenino al voto para buscar mayor autonomía en sus carreras profesionales, derechos de propiedad y relaciones personales. (pág. 555)

Masacre de Fetterman: Masacre que tuvo lugar en diciembre de 1866 en la cual 1500 guerreros siux hicieron salir al Capitán William Fetterman y 80 soldados de un fuerte de Wyoming y los atacaron. Con la masacre de Fetterman, los siux lograron cerrar el sendero Bozeman, que era la ruta principal hacia Montana. (pág. 480)

Decimoquinta Enmienda: Enmienda constitucional ratificada en 1869 que prohibió a los estados negar a los ciudadanos el derecho de voto por raza, color o "condición previa de servidumbre". (pág. 439)

"Fifty-four forty or fight!": ("¡Cincuenticuatro cuarenta o lucha!"): Lema del gobernador James K. Polk, candidato demócrata en las elecciones de 1844, que pedía la soberanía americana sobre todo el Territorio de Oregón, es decir, desde California hasta la Alaska ocupada por Rusia, que en ese momento se compartía con Gran Bretaña. (pág. 355)

filibusterismo: Campañas paramilitares privadas, impulsadas especialmente por los defensores de la esclavitud sureña en la década de 1850, para apoderarse de territorios adicionales en el Caribe o América Latina con el propósito de controlar a los líderes nacidos en EE. UU., con la expectativa de una futura anexión por parte de los Estados Unidos. (pág. 378)

finanzas: administración del dinero e inversiones de una persona u organización. (pág. 29)

cantos de fuego (fireside chants): Serie de discursos informales pronunciados vía radio por Franklin Roosevelt explicando al país las iniciativas del Nuevo Trato. (pág. 685)

flagrante: obviamente ofensivo. (pág. 432)

chica a la moda (flapper): Mujeres jóvenes de la década de 1920 que desafiaron los estándares convencionales de conducta usando faldas cortas y maquillaje, gastando libremente el dinero ganado de su trabajo en la última moda, bailando jazz y haciendo alarde de su estilo de vida liberado. (pág. 658)

Impuesto al Minero Extranjero: Impuesto discriminatorio adoptado en 1850 en el Territorio de California, que obligó a los mineros inmigrantes chinos y latinoamericanos a pagar impuestos elevados por el derecho a buscar oro. El impuesto efectivamente expulsó a estos mineros de los yacimientos de oro. (pág. 372)

Cuatro Libertades: De acuerdo con el presidente Franklin D. Roosevelt, los derechos humanos fundamentales son: libertad de expresión, libertad de culto, libertad de vivir sin penuria y libertad de vivir sin miedo. El presidente usó estas ideas de libertad para justificar el apoyo a Inglaterra durante la Segunda Guerra Mundial, que a su vez involucró a Estados Unidos en la guerra. (pág. 716)

Fourierist socialism: A system of social and economic organization proposed by French thinker Charles Fourier, which was based on common ownership of goods and shared labor by members of a community. A number of nineteenth-century American utopian communities tried to put Fourierist principles into practice. (p. 312)

socialismo fourierista: Sistema de organización social y económica propuesto por el pensador francés Charles Fourier, que se basaba en la propiedad común de los bienes y el trabajo compartido por los miembros de una comunidad. Varias comunidades utópicas americanas del siglo XIX intentaron poner en práctica los principios de Fourier. (pág. 312)

Four-Minute Men: Name given to thousands of volunteers enlisted by the Committee on Public Information to deliver short prowar speeches at movie theaters to galvanize public support for the war. Their work, as part of the broader objectives of the CPI, helped create a political climate intolerant of dissent. (p. 639)

Hombres de los Cuatro Minutos: Nombre que recibieron los miles de voluntarios inscritos por el Comité de Información Pública (CPI) para pronunciar breves discursos pro-guerra en salas de cine y promover el apoyo del público hacia la guerra. Su trabajo, que fue parte de los objetivos más amplios del CPI, ayudó a crear un entorno político que no toleraba la disidencia. (pág. 639)

Fourteen Points: Principles for a new world order proposed in 1919 by President Woodrow Wilson as a basis for peace negotiations at Versailles. Among them were open diplomacy, freedom of the seas, free trade, territorial integrity, arms reduction, national self-determination, and creation of the League of Nations. (p. 643)

Catorce Puntos: Principios para un nuevo orden mundial propuestos en 1919 por el presidente Woodrow Wilson como la base de las negociaciones para la paz en Versalles. Entre los Catorce Puntos estaba la diplomacia abierta, la libertad de los mares, el comercio libre, la integridad territorial, la reducción de armas, la auto-determinación de los pueblos y la creación de la Liga de las Naciones. (pág. 643)

Fourteenth Amendment: Constitutional amendment ratified in 1868 that made all native-born or naturalized persons U.S. citizens and prohibited states from abridging the rights of national citizens, thus giving primacy to national rather than state citizenship. (p. 436)

Decimocuarta Enmienda: Enmienda constitucional ratificada en 1868 que convertía a todas las personas naturalizadas o nacidas en Estados Unidos en ciudadanos americanos y prohibía a los estados restringir los derechos de los ciudadanos nacionales, otorgando así primacía a la ciudadanía nacional en lugar de la estatal. (pág. 436)

franchise: The right to vote. Between 1820 and 1860, most states revised their constitutions to extend the vote to all adult white males. Black adult men gained the right to vote with the passage of the Fourteenth Amendment (1868). The Nineteenth Amendment (1920) granted adult women the right to vote. (p. 274)

sufragio: Derecho a votar. Entre 1820 y 1860, la mayoría de los estados revisaron sus constituciones para extender el voto a todos los hombres blancos adultos. Los hombres adultos negros obtuvieron el derecho al voto con la ratificación de la Decimocuarta Enmienda (1868). La Decimonovena Enmienda (1920) otorgó a las mujeres adultas el derecho al voto. (pág. 274)

Free African Societies: Organizations in northern free black communities that sought to help community members and work against racial discrimination, inequality, and political slavery. (p. 321)

Sociedades Africanas Libres: Organizaciones en las comunidades negras libres del norte que buscaban ayudar a los miembros de la comunidad y militaban contra la discriminación racial, la desigualdad y la esclavitud política. (pág. 321)

free silver: A policy of loosening the money supply by expanding federal coinage to include silver as well as gold. Advocates of the policy thought it would encourage borrowing and stimulate industry, but the defeat of Democratic presidential candidate William Jennings Bryan ended the "free silver" movement and gave Republicans power to retain the gold standard. (p. 599)

Política "free silver": Política para relajar la oferta de dinero mediante la inclusión de la plata, junto con el oro, en el sistema monetario federal. Los defensores de esta política pensaron que estimularía los préstamos y la industria, pero la derrota de William Jennings Bryan, candidato demócrata a la presidencia , terminó con el movimiento "free silver" y otorgó a los republicanos el derecho a mantener el patrón oro. (pág. 599)

free soil movement: A political movement that opposed the expansion of slavery. In 1848 the free soilers organized the Free Soil Party, which depicted slavery as a threat to republicanism and to the Jeffersonian ideal of a freeholder society, arguments that won broad support among aspiring white farmers. (p. 370)

movimiento de suelo libre: Movimiento político que se opuso a la expansión de la esclavitud. En 1848, los partidarios de este movimiento organizaron el Partido de Suelo Libre, que describía la esclavitud como una amenaza para el republicanismo y para el ideal jeffersoniano de una sociedad libre —argumentos que lograron amplio apoyo entre los blancos que aspiraban a convertirse en agricultores. (pág. 370)

Freedmen's Bureau: Government organization created in March 1865 to aid displaced blacks and other war refugees. Active until the early 1870s, it was the first federal agency in history that provided direct payments to assist those in poverty and to foster social welfare. (p. 435)

Oficina de Libertos: Organización gubernamental creada en marzo de 1865 para proporcionar asistencia a los negros desplazados y otros refugiados de guerra. Activa hasta principios de la década de 1870, fue la primera agencia federal en la historia que proporcionó pagos directos para ayudar a las personas indigentes y fomentar el bienestar social. (pág. 435)

Freedom of Information Act: Passed in the wake of the Watergate scandal, the 1974 act that gave citizens access to federal records. (p. 891)

freeholds: Land owned in its entirety, without feudal dues or landlord obligations. Freeholders had the legal right to improve, transfer, or sell their landed property. (p. 50)

French Revolution: A 1789 revolution in France that was initially welcomed by most Americans because it abolished feudalism and established a constitutional monarchy, but eventually came to seem too radical to many. (p. 208)

frontier: an area that lies along or beyond a known border. (p. 67)

functionary: one who holds office in a political party or government. (p. 572)

fundamentalism: A term adopted by Protestants, between the 1890s and the 1910s, who rejected modernism and historical interpretations of scripture and asserted the literal truth of the Bible. Fundamentalists have historically seen secularism and religious relativism as markers of sin that will be punished by God. (p. 533)

furlough: leave of absence. (p. 731)

furor: frantic outbreak; uproar. (p. 412)

gag rule: A procedure in the House of Representatives from 1836 to 1844 by which antislavery petitions were automatically tabled when they were received so that they could not become the subject of debate. (p. 324)

galvanize: evoking excitement, as if by electric shock. (p. 385)

gang-labor system: A system of work discipline used on southern cotton plantations in the mid-nineteenth century in which white overseers or black drivers supervised gangs of enslaved laborers to achieve greater productivity. (p. 266)

gender: characteristics that distinguish between masculinity and femininity, determining the sex of male or female. (p. 60)

gentility: A refined style of living and elaborate manners that came to be highly prized among well-to-do English families after 1600 and strongly influenced leading colonists after 1700. (p. 98)

gentry: high social class that in England represents those just below nobility. (p. 50)

Gettysburg Address: Abraham Lincoln's November 1863 speech dedicating a national cemetery at the Gettysburg battlefield. Lincoln declared the nation's founding ideal to be that "all men are created equal," and he urged listeners to dedicate themselves out of the carnage of war to a "new birth of freedom" for the United States. (p. 419)

Ghost Dance movement: Religion of the late 1880s and early 1890s that combined elements of Christianity and traditional Native American religion. It fostered Plains Indians' hope that they

Ley de Libertad de Información: Fue aprobada tras el escándalo de Watergate en 1974 y dio acceso público a los registros federales. (pág. 891)

propiedades absolutas: Tierra poseída en su totalidad, sin obligaciones feudales ni obligaciones de terrateniente. Los propietarios absolutos tenían el derecho legal de mejorar, transferir o vender sus propiedades. (pág. 50)

Revolución francesa: Revolución que tuvo lugar en Francia en 1789. Fue bien recibida inicialmente por la mayoría de los americanos porque abolió el feudalismo y estableció una monarquía constitucional, pero finalmente terminó siendo considerada por muchos como demasiado radical. (pág. 208)

frontera: zona aledaña o que va más allá de un límite conocido. (pág. 67)

funcionario: persona que ocupa un cargo en un partido político o gobierno. (pág. 572)

fundamentalismo: Término adoptado entre 1890 y 1910 por protestantes que rechazaban el modernismo y las interpretaciones históricas de las escrituras y hacían valer la verdad literal de la Biblia. Históricamente, los fundamentalistas han percibido al secularismo y al relativismo religioso como indicadores del pecado que será castigado por Dios. (pág. 533)

permiso: licencia o autorización para ausentarse. (pág. 731)

furor: causar sensación; escándalo. (pág. 412)

ley mordaza: Procedimiento en la Cámara de Representantes entre 1836 y 1844 mediante el cual las peticiones antiesclavistas quedaban automáticamente pospuestas cuando se recibían para que no pudieran ser objeto de debate. (pág. 324)

electrizar: crear emoción, como por descarga eléctrica. (pág. 385)

sistema de trabajo grupal: Sistema de disciplina laboral utilizado en las plantaciones de algodón del Sur a mediados del siglo XIX, en el que los capataces blancos o los conductores negros supervisaban a los grupos de trabajadores esclavos para lograr una mayor productividad. (pág. 266)

género: características que distinguen entre masculino y femenino, que determinan el sexo de hombre o mujer. (pág. 60)

refinamiento: Estilo de vida elegante y de modales distinguidos que llegó a ser muy apreciado entre familias acomodadas inglesas después de 1600 y que influyeron fuertemente en los primeros colonos después de 1700. (pág. 98)

pequeña nobleza: clase social alta que en Inglaterra representa a aquellos que están apenas debajo de la nobleza. (pág. 50)

Discurso de Gettysburg: Discurso de Abraham Lincoln en noviembre de 1863 con motivo de la dedicación de un cementerio nacional en el campo de batalla de Gettysburg. Lincoln declaró que el ideal fundacional de la nación era que "todos los hombres son creados iguales" e instó a los oyentes a abandonar la hecatombe de la guerra y dedicarse a un "nuevo nacimiento de la libertad" para los Estados Unidos. (pág. 419)

Movimiento de la Danza de los espíritus: Religión de finales de la década de 1880 y principios de la de 1890 que combinaba elementos del cristianismo y de las religiones nativas americanas

could, through sacred dances, resurrect the great bison herds and call up a storm to drive whites back across the Atlantic. (p. 488)

glasnost: The policy introduced by Soviet president Mikhail Gorbachev during the 1980s that involved greater openness and freedom of expression and that contributed, unintentionally, to the 1991 breakup of the Soviet Union. (p. 935)

Glass-Steagall Act: A 1933 law that created the Federal Deposit Insurance Corporation (FDIC), which insured deposits up to $2,500 (and now up to $250,000). The act also prohibited banks from making risky, unsecured investments with customers' deposits. (p. 686)

globalization: The spread of political, cultural, and economic influences and connections among countries, businesses, and individuals around the world through trade, immigration, communication, and other means. (p. 942)

Glorious Revolution: A quick and nearly bloodless coup in 1688 in which James II of England was overthrown by William of Orange. Whig politicians forced the new King William and Queen Mary to accept the Declaration of Rights, creating a constitutional monarchy that enhanced the powers of the House of Commons at the expense of the crown. (p. 80)

gold standard: The practice of backing a country's currency with its reserves of gold. In 1873 the United States, following Great Britain and other European nations, began converting to the gold standard. (p. 469)

Gospel of Wealth: Andrew Carnegie's argument that corporate leaders' success showed their "fitness" to lead society and that poverty demonstrated, on the contrary, lack of "fitness" to compete in the new economy. Carnegie advocated, however, that wealthy men should use their fortunes for the public good. (p. 498)

gradual emancipation: The practice of ending slavery in the distant future while recognizing white property rights to the slaves they owned. Generally, living slaves were not freed by gradual emancipation statutes; they applied only to slaves born after the passage of the statute, and only after they had first labored for their owners for a term of years. (p. 250)

grandee: an influential person in a high social position. (p. 336)

Granger laws: Economic regulatory laws passed in some midwestern states in the late 1870s, triggered by pressure from farmers and the Greenback-Labor Party. (p. 519)

grassroots: fundamental; basic. (p. 446)

Great American Desert: A term coined by Major Stephen H. Long in 1820 to describe the grasslands of the southern plains from the ninety-fifth meridian west to the Rocky Mountains, which he believed was "almost wholly unfit for cultivation." (p. 338)

tradicionales. Despertó la esperanza de los indios de las Llanuras de que podían, mediante danzas sagradas, resucitar las grandes manadas de bisontes y convocar a una tormenta para conducir a los blancos de vuelta al otro lado del Atlántico. (pág. 488)

glasnost: Política introducida por el presidente soviético Mihkail Gorbachev durante la década de 1980, que creo mayor apertura y libertad de expresión y que, sin querer, contribuyó al fin de la Unión Soviética en 1991. (pág. 935)

Ley Glass-Steagall: Ley de 1933 que creó la Corporación Federal de Seguro de Depósitos (FDIC), que aseguraba depósitos de hasta $2,500 (actualmente hasta $250,000). Esta ley además prohibió que los bancos hicieran inversiones arriesgadas no garantizadas con depósitos de sus clientes. (pág. 686)

globalización: El aumento de influencias y conexiones políticas, culturales y económicas entre países, negocios e individuos de todo el mundo a través del comercio, la inmigración, la comunicación y otros medios. (pág. 942)

Revolución Gloriosa: Golpe de estado rápido y casi incruento que ocurrió en 1688 en el que Jacobo II de Inglaterra fue derrocado por Guillermo de Orange. Los políticos *whig* forzaron al nuevo rey Guillermo y a la reina María a aceptar la Declaración de Derechos, creando una monarquía constitucional que aumentó los poderes de la Cámara de los Comunes a expensas de la corona. (pág. 80)

patrón oro: Práctica de respaldar la moneda de un país con sus reservas de oro. En 1873, Estados Unidos, siguiendo el ejemplo de Gran Bretaña y otras naciones europeas, comenzó su conversión al patrón oro. (pág. 469)

Evangelio de la riqueza: Argumento de Andrew Carnegie que dice que el éxito de los lideres corporativos demostraba su "condición" para dirigir a la sociedad y que la pobreza demostraba, en cambio, no tener la "condición" para competir en la nueva economía. Sin embargo, Carnegie sostenía que los hombres ricos debían usar sus fortunas para el bien público. (pág. 498)

emancipación gradual: Práctica de acabar con la esclavitud en un futuro lejano sin dejar de reconocer los derechos de propiedad de los blancos sobre los esclavos que poseen. En general, los esclavos vivos no fueron liberados por estatutos de emancipación gradual; estos se aplicaron sólo a los esclavos nacidos después de la aprobación del estatuto, y sólo después de que hubieran trabajado en un principio para sus dueños por un período de ciertos años. (pág. 250)

grande: persona influyente de alta posición social. (pág. 336)

Leyes Granger: Leyes de regulación económica aprobadas en algunos estados del medio oeste a finales de la década de 1870, que fueron la consecuencia de presiones de los granjeros y el Partido Greenback-Labor. (pág. 519)

de las raíces: fundamental; básico. (pág. 446)

Gran Desierto Americano: Término acuñado por el mayor Stephen H. Long en 1820 para describir las praderas de las llanuras sureñas desde el meridiano noventa y cinco hasta las Rocallosas, que él creía que eran "casi totalmente inservibles para el cultivo". (pág. 338)

Great Basin: An arid basin-and-range region bounded by the Rocky Mountains on the east and the Sierra Mountains on the west. All of its water drains or evaporates within the basin. A resource-scarce environment, the Great Basin was thinly populated by Native American hunter-gatherers who ranged long distances to support themselves. (p. 15)

Great Lakes: Five enormous, interconnected freshwater lakes — Ontario, Erie, Huron, Michigan, and Superior — that dominate eastern North America. In the era before long-distance overland travel, they comprised the center of the continent's transportation system. (p. 15)

Great Migration: The migration of over 400,000 African Americans from the rural South to the industrial cities of the North during and after World War I. (p. 639)

Great Plains: A broad plateau region that stretches from central Texas in the south to the Canadian plains in the north, bordered on the east by the eastern woodlands and on the west by the Rocky Mountains. Averaging around 20 inches of rainfall a year, the Great Plains are primarily grasslands that support grazing but not crop agriculture. (p. 15)

Great Railroad Strike of 1877: A nationwide strike of thousands of railroad workers and labor allies, who protested the growing power of railroad corporations and the steep wage cuts imposed by railroad managers amid a severe economic depression that had begun in 1873. (p. 517)

Great Society: President Lyndon B. Johnson's domestic program, which included civil rights legislation, antipoverty programs, government subsidy of medical care, federal aid to education, consumer protection, and aid to the arts and humanities. (p. 846)

Greenback-Labor Party: A national political movement calling on the government to increase the money supply in order to assist borrowers and foster economic growth; "Greenbackers" also called for greater regulation of corporations and laws enforcing an eight-hour workday. (p. 518)

greenbacks: Paper money issued by the U.S. Treasury during the Civil War to finance the war effort. (p. 409)

Group of Eight (G8): An international organization of the leading capitalist industrial nations: the United States, Britain, Germany, France, Italy, Japan, Canada, and Russia. The G8 largely control the world's major international financial organizations: the World Bank, the International Monetary Fund (IMF), and the World Trade Organization (WTO). In 2014 Russia was suspended because of its invasion of Crimea. (p. 948)

guerilla: a person participating in improper fighting with a small independent force. (p. 179)

Gulf of Tonkin Resolution: Resolution passed by Congress in 1964 in the wake of a naval confrontation in the Gulf of Tonkin between the United States and North Vietnam. It gave the president virtually unlimited authority in conducting the Vietnam War. The Senate terminated the resolution in 1970 following outrage over the U.S. invasion of Cambodia. (p. 854)

Gran Cuenca: Región árida de cuenca y cordillera delimitada por las Rocallosas en el este y las montañas de la Sierra en el oeste. Toda su agua se drena o se evapora dentro de la cuenca. Por ser un entorno de pocos recursos, la Gran Cuenca estaba escasamente poblada por cazadores-recolectores nativos americanos que recorrían largas distancias para sustentarse. (pág. 15)

Grandes Lagos: Cinco enormes lagos de agua dulce que están interconectados: Ontario, Erie, Hurón, Míchigan y Superior, que dominan el este de América del Norte. Antes de que se popularizaran los viajes terrestres a larga distancia, estos constituían el centro del sistema de transporte del continente. (pág. 15)

Gran Migración: La migración de más de 400 mil afroamericanos del Sur rural a las ciudades industriales del Norte durante y después de la Primera Guerra Mundial. (p. 639)

Grandes Llanuras: Amplia región de meseta que se extiende desde el centro de Texas en el sur hasta las llanuras canadienses en el norte; limita al este con los bosques orientales y al oeste con las Rocallosas. Con un promedio de 20 pulgadas de lluvia al año, las Grandes Llanuras son principalmente pastizales que sustentan el pastoreo, pero no la agricultura de cultivos. (pág. 15)

Gran Huelga Ferroviaria de 1877: Huelga nacional de miles de trabajadores del ferrocarril y aliados laborales en protesta del creciente poder de las corporaciones ferroviarias y los fuertes recortes salariales impuestos en plena depresión económica, que comenzó en 1873. (pág. 517)

Gran Sociedad: Programa doméstico del presidente Lyndon B. Johnson, que incluyó legislación sobre derechos civiles, programas anti-pobreza, subsidio gubernamental de la salud, apoyo federal para la educación, protección al consumidor y apoyos para las artes y humanidades. (pág. 846)

Partido Greenback-Labor Movimiento nacional que llamó al gobierno a incrementar la oferta monetaria para asistir a los prestatarios y fomentar el crecimiento económico; los "Greenbackers" también buscaban mayor regulación de las corporaciones y leyes que impusieran jornadas laborales de ocho horas. (pág. 518)

greenbacks: Papel moneda emitido por el Departamento del Tesoro de los Estados Unidos durante la Guerra Civil para financiar el esfuerzo bélico. (pág. 409)

Grupo de los Ocho (G8): Organización internacional de los países capitalistas industriales líderes: Estados Unidos, Bretaña, Alemania, Francia, Italia, Japón, Canadá y Rusia. El G8 controla en gran medida a las grandes organizaciones financieras internacionales en el mundo: el Fondo Monetario Internacional (FMI) y a la Organización Mundial del Comercio (OMC). Rusia fue suspendida en 2014 por invadir Crimea. (pág. 948)

guerrillero: persona que participa en combate indecoroso con fuerzas pequeñas e independientes. (pág. 179)

Resolución del Golfo de Tonkin: Resolución aprobada por el Congreso en 1964 tras la confrontación naval en el Golfo de Tonkin entre Estados Unidos y Vietnam del Norte. Le confirió autoridad prácticamente ilimitada al presidente para conducir la Guerra de Vietnam. El Senado terminó la resolución en 1970 después de la indignación por la invasión de Estados Unidos en Camboya. (pág. 854)

Gullah dialect: A Creole language that combined words from English and a variety of African languages in an African grammatical structure. Though it remained widespread in the South Carolina and Georgia lowcountry throughout the nineteenth century and is still spoken in a modified form today, Gullah did not take root in the Cotton South, where lowcountry slaves were far outnumbered. (p. 343)

habeas corpus: A legal writ forcing government authorities to justify their arrest and detention of an individual. During the Civil War, Lincoln suspended habeas corpus to stop protests against the draft and other anti-Union activities. (p. 402)

Haitian Revolution: The 1791 conflict involving diverse Haitian participants and armies from three European countries. At its end, Haiti became a free, independent nation in which former slaves were citizens. (p. 212)

hard war: The philosophy and tactics used by Union general William Tecumseh Sherman, by which he treated civilians as combatants. (p. 422)

Harlem Renaissance: A flourishing of African American artists, writers, intellectuals, and social leaders in the 1920s, centered in the neighborhoods of Harlem, New York City. (p. 669)

havoc: chaos after destruction. (p. 425)

Haymarket Square: The May 4, 1886, conflict in Chicago in which both workers and policemen were killed or wounded during a labor demonstration called by local anarchists. The incident created a backlash against all labor organizations, including the Knights of Labor. (p. 520)

headright system: A system of land distribution, pioneered in Virginia and used in several other colonies, that granted land — usually 50 acres — to anyone who paid the passage of a new arrival. By this means, large planters amassed huge landholdings as they imported large numbers of servants and slaves. (p. 50)

heinous: forceful; insistent. (p. 823)

Hepburn Act: A 1906 antitrust law that empowered the federal Interstate Commerce Commission to set railroad shipment rates wherever it believed that railroads were unfairly colluding to set prices. (p. 604)

heresy: belief that is contrary to the established beliefs and accepted doctrine of a religious system. (p. 22)

HIV/AIDS: A deadly disease that killed nearly one hundred thousand people in the United States in the 1980s. (p. 926)

Hollywood: The city in southern California that became synonymous with the American movie industry in the 1920s. (p. 658)

Holocaust: Germany's campaign during World War II to exterminate all Jews living in German-controlled lands, along with other groups the Nazis deemed "undesirable." In all, some 11 million people were killed in the Holocaust, most of them Jews. (p. 735)

dialecto gullah: Idioma criollo que combina palabras del inglés y de una variedad de lenguas africanas en una estructura gramatical africana. Aunque permaneció diseminado en las tierras bajas de Carolina del Sur y Georgia a lo largo del siglo XIX y aún hoy se habla en forma modificada, el gullah no se arraigó en el sur algodonero, donde los esclavos de las tierras bajas eran superados en número. (pág. 343)

habeas corpus: Orden judicial que obliga a las autoridades gubernamentales a justificar el arresto y la detención de un individuo. Durante la Guerra Civil, Lincoln suspendió el habeas corpus para detener las protestas contra el reclutamiento y otras actividades anti-Unión. (pág. 402)

Revolución haitiana: Conflicto que tuvo lugar en 1791 y que involucró a diversos participantes haitianos y ejércitos de tres países europeos. Al final, Haití se convirtió en una nación libre e independiente en la que los antiguos esclavos eran ciudadanos. (pág. 212)

guerra total: Filosofía y tácticas utilizadas por el general de la Unión William Tecumseh Sherman, por las cuales trataba a los civiles como combatientes. (pág. 422)

Renacimiento de Harlem: Florecimiento, en la década de 1920, de artistas, escritores, intelectuales y líderes afroamericanos centrados en los vecindarios de Harlem, en la ciudad de Nueva York. (pág. 669)

estragos: caos después de la destrucción. (pág. 425)

Haymarket Square: Conflicto ocurrido el 4 de mayo de 1886 donde trabajadores y policías fueron heridos o perdieron la vida durante una protesta convocada por anarquistas locales. El incidente tuvo consecuencias para todas las organizaciones laborales, incluyendo a los Knights of Labor. (pág. 520)

sistema de reparto de tierras *headright:* Sistema de distribución de tierras, iniciado en Virginia y utilizado en varias otras colonias, que otorgaba tierras, generalmente de 50 acres, a cualquier persona que pagara el pasaje a otra persona para que se mudara allí. De esta manera, los grandes plantadores acumularon muchas propiedades ya que importaron grandes cantidades de sirvientes y esclavos. (pág. 50)

atroz: fuerte; insistente. (pág. 823)

Ley Hepburn: Ley anti-monopolio de 1906 que confirió poderes a la Comisión Interestatal del Comercio para imponer tarifas de envíos por ferrocarril cuando los ferrocarriles coludían injustamente para establecer precios. (pág. 604)

herejía: creencia que contradice a las creencias establecidas y a la doctrina aceptada de un sistema religioso. (pág. 22)

VIH/SIDA: Enfermedad mortal que mató a cerca de 100 mil personas en Estados unidos durante la década de 1980. (pág. 926)

Hollywood: Ciudad del sur de California que se convirtió en sinónimo de la industria cinematográfica de Estados Unidos en la década de 1920. (pág. 658)

Holocausto: Campaña de Alemania durante la Segunda Guerra Mundial para exterminar a todos los judíos que vivían en territorios bajo control alemán, y a otros grupos que los nazis veían como "indeseables". En total, cerca de 11 millones de personas murieron en el Holocausto, la mayoría de ellas judías. (pág. 735)

Homestead Act: The 1862 act that gave 160 acres of free western land to any applicant who occupied and improved the property. This policy led to the rapid development of the American West after the Civil War; facing arid conditions in the West, however, many homesteaders found themselves unable to live on their land. (p. 470)

Homestead lockout: The 1892 lockout of workers at the Homestead, Pennsylvania, steel mill after Andrew Carnegie refused to renew the union contract. Union supporters attacked the guards hired to close them out and protect strikebreakers who had been employed by the mill, but the National Guard soon suppressed this resistance and Homestead, like other steel plants, became a non-union mill. (p. 496)

horizontal integration: A business concept invented in the late nineteenth century to pressure competitors and force rivals to merge their companies into a conglomerate. John D. Rockefeller of Standard Oil pioneered this business model. (p. 500)

horticulture: science pertaining to the cultivation of plants. (p. 221)

hostage crisis: Crisis that began in 1979 after the deposed shah of Iran was allowed into the United States following the Iranian Revolution. Iranians broke into the U.S. embassy in Tehran and took sixty-six Americans hostage. The hostage crisis lasted 444 days and contributed to President Carter's reelection defeat. (p. 920)

House of Burgesses: Organ of government in colonial Virginia made up of an assembly of representatives elected by the colony's inhabitants. (p. 46)

House Un-American Activities Committee (HUAC): Congressional committee especially prominent during the early years of the Cold War that investigated Americans who might be disloyal to the government or might have associated with communists or other radicals. (p. 766)

household mode of production: The system of exchanging goods and labor that helped eighteenth-century New England freeholders survive on ever-shrinking farms as available land became more scarce. (p. 112)

huckster: one who sells something in a dishonest and aggressive way. (p. 558)

Hull House: One of the first and most famous social settlements, founded in 1889 by Jane Addams and her companion Ellen Gates Starr in an impoverished, largely Italian immigrant neighborhood on Chicago's West Side. (p. 578)

Hundred Days: A legendary session during the first few months of Franklin Roosevelt's administration in which Congress enacted fifteen major bills that focused primarily on four problems: banking failures, agricultural overproduction, the business slump, and soaring unemployment. (p. 686)

hunters and gatherers: Societies whose members gather food by hunting, fishing, and collecting wild plants rather than relying

Ley de Asentamientos Rurales: Ley de 1862 que otorgó 160 acres de tierra libre occidental a cualquier solicitante que ocupara y mejorara la propiedad. Esta política condujo al rápido desarrollo del Oeste Americano después de la Guerra Civil; sin embargo, por las condiciones áridas del Oeste, muchos colonos se encontraron incapaces de vivir en su tierra. (pág. 470)

Huelga de Homestead: Cierre patronal de la planta de acero de Homestead, Pennsylvania en 1892, después de que Andrew Carnegie se negara a renovar el contrato sindical. Los partidarios del sindicato atacaron a los guardias contratados para impedirles el acceso y proteger a los rompehuelgas que fueron contratados por la planta, pero al poco tiempo la Guardia Nacional reprimió esta resistencia y Homestead, como tantas otras plantas de acero se convirtió en una planta no sindicalizada. (pág. 496)

integración horizontal: Concepto de negocios inventado a finales del siglo XIX para presionar a los competidores y forzar a los rivales a fusionar sus compañías para formar un conglomerado. John D. Rockefeller de Standard Oil fue el pionero de este modelo de negocios. (pág. 500)

horticultura: ciencia del cultivo de plantas. (pág. 221)

crisis de los rehenes: Crisis que comenzó en 1979 cuando se permitió al shah derrocado de Irán acceder a Estados Unidos tras la Revolución Iraní. Un grupo de iranís entró en la embajada de Estados Unidos en Teherán y tomó como rehenes a 66 americanos. La crisis de los rehenes duró 444 días y contribuyó a la derrota del presidente Carter en su intento por reelegirse. (pág. 920)

Casa de Burguesses: Órgano de gobierno en la Virginia colonial compuesto por una asamblea de representantes elegidos por los habitantes de la colonia. (pág. 46)

Comité de Actividades Antiestadounidenses (HUAC): Comité del congreso particularmente importante durante los primeros años de la Guerra Fría que se dedicó a investigar a estadounidenses posiblemente desleales al gobierno o que podían estar asociados con comunistas u otros radicales. (pág. 766)

modo de producción doméstica: Sistema de intercambio de bienes y mano de obra que ayudó a los terratenientes libres de Nueva Inglaterra del siglo XVIII a sobrevivir en granjas cada vez más pequeñas a medida que las tierras disponibles se tornaban más escasas. (pág. 112)

charlatán: persona que vende algo de manera deshonesta y agresiva. (pág. 558)

Casa Hull: Uno de los primeros y más reconocidos asentamientos sociales, fundado en 1889 por Jane Addams y su acompañante Ellen Gates Starr en un vecindario empobrecido y poblado principalmente de inmigrantes italianos en el oeste de Chicago. (pág. 578)

Cien Días: Sesión legendaria durante los primeros meses de la administración de Franklin Roosevelt, en la cual el congreso promulgó quince leyes enfocadas principalmente sobre cuatro problemas: fallos bancarios, sobreproducción en la agricultura, depresión de los negocios y el aumento desmedido del desempleo. (pág. 686)

cazadores y recolectores: Sociedades cuyos miembros recolectan alimentos mediante la caza, la pesca y la colecta de plantas sil-

on agriculture or animal husbandry. Because hunter-gatherers are mobile, moving seasonally through their territory to exploit resources, they have neither fixed townsites nor weighty material goods. (p. 8)

iconoclast: a person who criticizes established beliefs. (p. 935)

ideology: set of thoughts, conscious and unconscious, that compose a person's beliefs. (p. 20)

immigrant: a person who permanently moves to another country. (p. 46)

Immigration and Nationality Act: A 1965 law that eliminated the discriminatory 1924 nationality quotas, established a slightly higher total limit on immigration, included provisions to ease the entry of immigrants with skills in high demand, and allowed immediate family members of legal residents in the United States to be admitted outside of the total numerical limit. (p. 952)

imperial: of, or relating to, an empire. (p. 3)

impinge: to impress or have an impact. (p. 620)

impound: to take legal custody of something; seize. (p. 419)

impoverished: being poverty stricken; very poor and weak. (p. 16)

impunity: exemption from punishment. (p. 656)

inalienable: absolute; unable to be transferred. (p. 80)

incumbent: (of an executive) currently holding office. (p. 683)

incursion: the sudden and aggressive entrance to another's territory; an invasion. (p.145)

indelible: permanent; unforgettable. (p. 838)

indentured servitude: System in which workers contracted for service for a specified period. In exchange for agreeing to work for four or five years (or more) without wages in the colonies, indentured workers received passage across the Atlantic, room and board, and status as a free person at the end of the contract period. (p. 50)

Indian Removal Act of 1830: Act that directed the mandatory relocation of eastern tribes to territory west of the Mississippi. Jackson insisted that his goal was to save the Indians and their culture. Indians resisted the controversial act, but in the end most were forced to comply. (p. 291)

Indian Reorganization Act: A 1934 law that reversed the Dawes Act of 1887. Through the law, Indians won a greater degree of religious freedom, and tribal governments regained their status as semisovereign dependent nations. (p. 701)

indigenous: the natural and native inhabitants or organisms to a certain area. (p. 35)

indigent: needy; destitute. (p. 327)

individualism: Word coined by Alexis de Tocqueville in 1835 to describe Americans as people no longer bound by social attachments to classes, castes, associations, and families. (p. 302)

vestres en lugar de depender de la agricultura o la cría de animales. Debido a que los cazadores-recolectores eran móviles, es decir, se desplazaban según las estaciones a través de su territorio para explotar los recursos, no tenían ciudades ni bienes materiales fijos. (pág. 8)

iconoclasta: persona que critica las creencias establecidas. (pág. 935)

ideología: conjunto de pensamientos, conscientes e inconscientes, que conforman las creencias de una persona. (pág. 20)

inmigrante: persona que se muda a otro país de manera permanente. (pág. 46)

Ley de Inmigración y Nacionalidad: Ley de 1965 que eliminó las cuotas discriminatorias de nacionalidades, incrementó ligeramente los límites totales de inmigrantes, incluyó disposiciones para facilitar la entrada de inmigrantes con habilidades en alta demanda y permitió que los familiares inmediatos de residentes legales en los Estados Unidos fueran admitidos sin ser contados en el límite numérico total. (pág. 952)

imperial: de, o relacionado con, un imperio. (pág. 3)

incidir: crear un impacto o impresión. (pág. 620)

incautar: tomar custodia legal de algo; confiscar. (pág. 419)

empobrecido: ser afectado por la pobreza; ser muy pobre y estar debilitado. (pág. 16)

impunidad: exención de castigo. (pág. 656)

inalienable: absoluto; no se puede transferir. (pág. 80)

en ejercicio: (referente a un ejecutivo) actual ocupante de un cargo. (pág. 683)

incursión: la entrada repentina y agresiva a territorio ajeno; una invasión. (pág.145)

imborrable: permanente, inolvidable. (pág. 838)

trabajador no abonado: Sistema en el cual los trabajadores son contratados para un servicio por un período específico. A cambio de trabajar durante cuatro o cinco años (o más) sin salario en las colonias, los trabajadores no abonados recibían un pasaje para cruzar el Atlántico, alojamiento y comida, y el estado de persona libre al final del período del contrato. (pág. 50)

Ley de Traslado Forzoso de los Indios de 1830: Ley que dirigió la reubicación obligatoria de tribus orientales al territorio al oeste del Misisipi. Jackson insistió en que su objetivo era salvar a los indios y su cultura. Los indios resistieron la ley controvertida, pero al final la mayoría se vio obligada a acatarla. (pág. 291)

Ley de Reorganización Indígena: Ley de 1934 que revirtió la Ley Dawes de 1887. Por medio de esta ley, los indígenas obtuvieron mayores libertades religiosas y los gobiernos tribales recuperaron su estatus de naciones dependientes semi-soberanas. (pág. 701)

indígena: habitantes u organismos nativos de cierto lugar. (pág. 35)

indigente: necesitado; desposeído. (pág. 327)

individualismo: Palabra acuñada por Alexis de Tocqueville en 1835 para describir a los estadounidenses como personas que ya no están atadas por los vínculos sociales con las clases, las castas, las asociaciones y las familias. (pág. 302)

Industrial Revolution: A burst of major inventions and economic expansion based on water and steam power and the use of machine technology that transformed certain industries, such as cotton textiles and iron, between 1790 and 1860. (p. 248)

Industrial Workers of the World: An umbrella union and radical political group founded in 1905, dedicated to organizing unskilled workers to oppose capitalism. Nicknamed the Wobblies, it advocated direct action by workers, including sabotage and general strikes. (p. 607)

infidel: someone with opposing beliefs that does not accept a particular faith. (p. 966)

inland system: The slave trade system in the interior of the country that fed slaves to the Cotton South. (p. 255)

innovation: introduction of something new or different. (p. 20)

inoculate: to treat with a vaccine in order to create immunity against a sickness. (p. 120)

Insular Cases: A set of Supreme Court rulings in 1901 that declared that the U.S. Constitution did not automatically extend citizenship to people in acquired territories; only Congress could decide whether to grant citizenship. (p. 626)

insurance: protective coverage of potential expenses due to physical losses or death that is proportionally paid for by a client. (p. 55)

insurgency: violent rebellion against an instated government. (p. 89)

internal improvements: Public works such as roads and canals. (p. 282)

International Monetary Fund (IMF): A fund established to stabilize currencies and provide a predictable monetary environment for trade, with the U.S. dollar serving as the benchmark. (p. 783)

Interstate Commerce Act: An 1887 act that created the Interstate Commerce Commission (ICC), a federal regulatory agency designed to oversee the railroad industry and prevent collusion and unfair rates. (p. 522)

intransigence: the refusal to compromise. (p. 413)

invade: to enter with armed forces into a place; intrude. (p. 33)

Iran-Contra affair: Reagan administration scandal that involved the sale of arms to Iran in exchange for its efforts to secure the release of hostages held in Lebanon and the redirection — illegal because banned by American law — of the proceeds of those sales to the Nicaraguan Contras. (p. 934)

Iroquoian cultures/languages: A Native American language family whose speakers were concentrated in the eastern woodlands. The Iroquoian language family should not be confused with the nations of the Iroquois Confederacy, which inhabited the territory of modern-day upstate New York at the time of first contact. (p. 11)

Iroquois Confederacy: A league of five Native American nations — the Mohawks, Oneidas, Onondagas, Cayugas, and Senecas —

Revolución Industrial: Explosión de grandes inventos y expansión económica basada en el poder del agua y el vapor y el uso de la tecnología de máquinas que transformó ciertas industrias, como los textiles de algodón y el hierro, entre 1790 y 1860. (pág. 248)

Trabajadores Industriales del Mundo: Sindicato general y grupo radical político fundado en 1905, dedicado a la organización de trabajadores no calificados para oponerse al capitalismo. Apodado los Wobblies, promovía la acción directa de los trabajadores, incluyendo el sabotaje y las huelgas generales. (pág. 607)

infiel: persona con creencias opuestas que no acepta una fe en particular. (pág. 966)

sistema interior: sistema de trata de esclavos en el interior del país que surtía esclavos al sur algodonero. (pág. 255)

innovación: introducción de algo nuevo o diferente. (pág. 20)

inocular: vacunar para crear inmunidad contra una enfermedad. (pág. 120)

Casos Insulares: Conjunto de sentencias de la Corte Suprema en 1901 que declararon que la Constitución de los Estados Unidos no otorgaba ciudadanía automática a las personas de territorios adquiridos; sólo el Congreso tenía el poder de decisión para otorgar ciudadanía. (pág. 626)

seguro: cobertura de protección contra gastos potenciales debidos a pérdidas físicas o muerte, pagada proporcionalmente por un cliente. (pág. 55)

insurgencia: rebelión violenta contra un gobierno establecido. (pág. 89)

mejoras internas: obras públicas como carreteras y canales. (pág. 282)

Fondo Monetario Internacional (FMI): Fondo establecido para estabilizar las monedas y ofrecer un entorno predecible para el intercambio monetario, donde el dolar estadounidense es el referente. (pág. 783)

Ley de Comercio Interestatal: Ley de 1887 que creo la Comisión Interestatal del Comercio (ICC), agencia federal reguladora diseñada para vigilar la industria ferroviaria y prevenir colusiones y tarifas injustas. (pág. 522)

intransigencia: negarse a transigir. (pág. 413)

invadir: entrar con fuerzas armadas a un lugar; cometer una intrusión. (pág. 33)

Escándalo Irán-Contra: Escándalo de la administración de Reagan que involucró la venta de armas a Irán a cambio de sus esfuerzos para asegurar la liberación de rehenes en Líbano y la desviación—ilegal porque estaba prohibida por la ley estadounidense—de las ganancias de esas ventas a los Contras nicaragüenses. (pág. 934)

culturas y lenguas iroquesas: Familia de lenguas nativas americanas cuyos hablantes se concentraron en los bosques orientales. La familia de lenguas iroquesas no debe confundirse con las naciones de la Confederación Iroquesa, que habitaban el territorio del estado actual de Nueva York cuando ocurrió el primer contacto. (pág. 11)

Confederación Iroquesa: Liga de cinco naciones nativas de América —mohawks, oneidas, onondagas, cayugas y senecas—que

probably formed around A.D. 1450. A sixth nation, the Tuscaroras, joined the confederacy around 1720. Condolence ceremonies introduced by a Mohawk named Hiawatha formed the basis for the league. Positioned between New France and New Netherland (later New York), the Iroquois played a central role in the era of European colonization. (p. 11)

Islam: A religion that considers Muhammad to be God's last prophet. Following the death of Muhammad in A.D. 632, the newly converted Arab peoples of North Africa used force and fervor to spread the Muslim faith into sub-Saharan Africa, India, Indonesia, Spain, and the Balkan regions of Europe. (p. 22)

itinerant: nomadic. (p. 125)

Jacobins: A political faction in the French Revolution. Many Americans embraced the democratic ideology of the radical Jacobins and, like them, formed political clubs and began to address one another as "citizen." (p. 209)

Jay's Treaty: A 1795 treaty between the United States and Britain, negotiated by John Jay. The treaty accepted Britain's right to stop neutral ships. In return, it allowed Americans to submit claims for illegal seizures and required the British to remove their troops and Indian agents from the Northwest Territory. (p. 212)

jazz: Unique American musical form that arose in New Orleans and other parts of the South before World War I. Jazz musicians developed an ensemble improvisational style. (p. 672)

Jim Crow: Laws that required separation of the races, especially blacks and whites, in public facilities. This system of racial segregation in the South lasted a century, from after the Civil War until the 1960s. (p. 539)

joint-stock corporation: A financial organization devised by English merchants around 1550 that facilitated the colonization of North America. In these companies, a number of investors pooled their capital and received shares of stock in the enterprise in proportion to their share of the total investment. (p. 45)

Judiciary Act of 1789: Act that established a federal district court in each state and three circuit courts to hear appeals from the districts, with the Supreme Court having the final say. (p. 205)

jurisprudence: philosophy of law. (p. 229)

kamikaze: a suicidal mission in which an aircraft filled with explosives crashes into a target. (p. 736)

Kansas-Nebraska Act: A controversial 1854 law that divided Indian Territory into Kansas and Nebraska, repealed the Missouri Compromise, and left the new territories to decide the issue of slavery on the basis of popular sovereignty. Far from clarifying the status of slavery in the territories, the act led to violent conflict in "Bleeding Kansas." (p. 384)

Kerner Commission: Informal name for the National Advisory Commission on Civil Disorders, formed by the president to

probablemente se formó alrededor del año 1450 D.C.. Una sexta nación, los tuscaroras, se unió a la confederación alrededor de 1720. Las ceremonias de condolencias introducidas por un mohawk llamado Hiawatha formaron la base de la liga. Ubicados entre Nueva Francia y Nuevos Países Bajos (más tarde Nueva York), los iroqueses desempeñaron un papel central en la era de la colonización europea. (pág. 11)

islam: Religión que considera a Mahoma como el último profeta de Dios. Tras la muerte de Mahoma en 632 D.C. los pueblos árabes recién convertidos del norte de África utilizaron la fuerza y el fervor para difundir la fe musulmana en el África subsahariana, la India, Indonesia, España y las regiones de los Balcanes en Europa. (pág. 22)

itinerante: nómada. (pág. 125)

jacobinos: Facción política en la Revolución Francesa. Muchos americanos adoptaron la ideología democrática de los radicales jacobinos y, como ellos, formaron clubes políticos y comenzaron a dirigirse unos a otros como "ciudadanos". (pág. 209)

Tratado Jay: Tratado que se firmó en 1795 entre los Estados Unidos y Gran Bretaña, negociado por John Jay. El tratado aceptó el derecho de Gran Bretaña de detener barcos neutrales. A cambio, permitió a los estadounidenses presentar reclamaciones por incautaciones ilegales y exigió a los británicos que retiraran sus tropas y agentes indios del Territorio del Noroeste. (pág. 212)

jazz: Música americana que surgió en Nueva Orleans y otras partes del Sur antes de la Primera Guerra Mundial. Los músicos de jazz desarrollaron un estilo de improvisación conjunta. (pág. 672)

Jim Crow: Leyes que requirieron la separación de las razas, particularmente blancos y negros, en lugares públicos. Este sistema de segregación racial en el Sur duró casi un siglo, desde el final de la Guerra Civil hasta la década de 1960. (pág. 539)

sociedad por acciones: Organización financiera ideada por comerciantes ingleses alrededor de 1550 que facilitó la colonización de América del Norte. En estas compañías, varios inversores agrupaban su capital y recibían acciones en la empresa en proporción a su participación en la inversión total. (pág. 45)

Ley Judicial de 1789: Ley que estableció un tribunal federal de distrito en cada estado y tres tribunales de circuito para escuchar las apelaciones de los distritos; el Tribunal Supremo tendría la última palabra. (pág. 205)

jurisprudencia: filosofía del Derecho. (pág. 229)

kamikaze: misión suicida en la cual un avión cargado de explosivos se estrella contra un objetivo. (pág. 736)

Ley de Kansas-Nebraska: Ley controvertida de 1854 que dividió el Territorio indio en Kansas y Nebraska, derogó el Compromiso de Misuri y bajo el argumento de la soberanía popular, dejó la decisión sobre la esclavitud en manos de los nuevos territorios. Lejos de aclarar el estado de la esclavitud en los territorios, la ley condujo al conflicto violento de "*Bleeding Kansas*" (Kansas sangrienta). (pág. 384)

Comisión Kerner: Nombre informal para el Comité Nacional Consultivo sobre los Desórdenes Civiles formado por el presidente

investigate the causes of the 1967 urban riots. Its 1968 report warned that "our nation is moving toward two societies, one black, one white, separate and unequal." (p. 805)

Keynesian economics: The theory, developed by British economist John Maynard Keynes in the 1930s, that purposeful government intervention in the economy (through lowering or raising taxes, interest rates, and government spending) can affect the level of overall economic activity and thereby prevent severe depressions and runaway inflation. (p. 695)

King Cotton: The Confederates' belief during the Civil War that their cotton was so important to the British and French economies that those governments would recognize the South as an independent nation and supply it with loans and arms. (p. 401)

kinship: maintaining similarities to others, particularly through family relationships. (p. 170)

kitchen debate: A 1959 debate over the merits of their rival systems between U.S. vice president Richard Nixon and Soviet premier Nikita Khrushchev at the opening of an American exhibition in Moscow. (p. 780)

Knights of Labor: The first mass labor organization created among America's working class. Founded in 1869 and peaking in strength in the mid-1880s, the Knights of Labor attempted to bridge boundaries of ethnicity, gender, ideology, race, and occupation to build a "universal brotherhood" of all workers. (p. 519)

Ku Klux Klan: Secret society that first undertook violence against African Americans in the South after the Civil War but was reborn in 1915 to fight the perceived threats posed by African Americans, immigrants, radicals, feminists, Catholics, and Jews. (pp. 453)

La Raza Unida: An organization founded in Texas in 1970 by Mexican Americans as an alternative to the two major political parties; La Raza Unida (The United Race) ran candidates for state governor and other local government positions in the 1970s. It was an expression of the Chicano/a movement's attempts to create political unity among American citizens of Mexican descent. (p. 840)

labor theory of value: The belief that human labor produces economic value. Adherents argued that the price of a product should be determined not by the market (supply and demand) but by the amount of work required to make it, and that most of the price should be paid to the person who produced it. (p. 262)

land-grant colleges: Authorized by the Morrill Act of 1862, land-grant colleges were public universities founded to broaden educational opportunities and foster technical and scientific expertise. These universities were funded by the Morrill Act, which authorized the sale of federal lands to raise money for higher education. (p. 470)

para investigar las causas de los disturbios urbanos de 1967. Su reporte, elaborado en 1968, advirtió que "nuestro país se está convirtiendo en dos sociedades, una negra, una blanca, separada y desigual". (pág. 805)

Economía keynesiana: Teoría desarrollada por el economista británico, John Maynard Keynes, en la década de 1930, en la cual la intervención intencionada del gobierno en la economía (a través de reducciones o aumentos de impuestos, tasas de interés y gasto público) puede afectar el nivel general de actividad económica y, por lo tanto, prevenir severas depresiones e inflación desmedida. (pág. 695)

Algodón es rey, el: Creencia de los confederados durante la Guerra Civil de que su algodón era tan importante para las economías británica y francesa que aquellos gobiernos reconocerían al Sur como una nación independiente y le proporcionarían préstamos y armas. (pág. 401)

parentesco: tener similitud con otros, particularmente a través de relaciones familiares. (pág. 170)

debate de cocina: Debate en 1959 entre Richard Nixon, presidente de los Estados Unidos, y Nikita Khruschev, premier soviético, sobre los méritos de sus sistemas rivales, sostenido en la inauguración de una exhibición estadounidense en Moscú. (pág. 780)

Knights of Labor (Caballeros del Trabajo): Primera organización laboral masiva creada entre la clase trabajadora de Estados Unidos. Fundada en 1869, alcanzó su punto máximo a mediados de la década de 1880. Los Knights of Labor intentaron eliminar fronteras de etnicidad, género, ideología, raza y ocupación para crear una "hermandad universal" de todos los trabajadores. (pág. 519)

Ku Klux Klan: Sociedad secreta que en sus principios cometió actos de violencia contra los afroamericanos en el sur después de la Guerra Civil, pero renació en 1915 para luchar contra las amenazas percibidas en afroamericanos, inmigrantes, radicales, feministas, católicos y judíos. (págs. 453)

La Raza Unida: Organización fundada por mexicanos-americanos en Texas en 1970 como alternativa a los dos principales partidos políticos; La Raza Unida postuló a candidatos para gobernador estatal y otros cargos gubernamentales locales en la década de 1970. Fue uno de los intentos del movimiento Chicano para unir a los ciudadanos estadounidenses de descendencia mexicana. (pág. 840)

teoría del valor-trabajo: Creencia de que el trabajo humano produce valor económico. Los adherentes argumentaron que el precio de un producto debería determinarse no por el mercado (oferta y demanda) sino por la cantidad de trabajo requerido para hacerlo, y que la mayor parte del precio debería pagarse a la persona que lo produjo. (pág. 262)

Universidades con Dotación de Terrenos Federales: Autorizadas por la Ley Morrill de 1862, estas universidades públicas fueron fundadas para ampliar las oportunidades educativas y fomentar la experiencia técnica y científica. Estas universidades fueron financiadas por la Ley Morrill, que autorizó la venta de tierras federales para recaudar dinero para la educación superior. (pág. 470)

Lawrence v. Texas: A 2003 landmark decision by the Supreme Court that limited the power of states to prohibit private homosexual activity between consenting adults. (p. 959)

League of Nations: The international organization bringing together world governments to prevent future hostilities, proposed by President Woodrow Wilson in the aftermath of World War I. Although the League of Nations did form, the United States never became a member state. (p. 643)

Lend-Lease Act: Legislation in 1941 that enabled Britain to obtain arms from the United States without cash but with the promise to reimburse the United States when the war ended. The act reflected Roosevelt's desire to assist the British in any way possible, short of war. (p. 716)

libel: to discredit a person. (p. 322)

liberation: the gaining of equal rights and opportunities; granting freedom. (p. 66)

libertarianism: the political belief that the government should interfere in the lives of citizens as little as possible. (p. 767)

Liberty Party: An antislavery political party that ran its first presidential candidate in 1844, controversially challenging both the Democrats and Whigs. (p. 324)

Lieber Code: Union guidelines for the laws of war, issued in April 1863. The code ruled that soldiers and prisoners must be treated equally without respect to color or race; justified a range of military actions if they were based on "necessity" that would "hasten surrender"; and outlawed use of torture. The code provided a foundation for later international agreements on the laws of war. (p. 413)

linguist: a person who studies and speaks various languages. (p. 526)

Lochner v. New York: A 1905 Supreme Court ruling that New York State could not limit bakers' workday to ten hours because that violated bakers' rights to make contracts. (p. 602)

Lodge Bill: Also known as the Federal Elections Bill of 1890, a bill proposing that whenever 100 citizens in any district appealed for intervention, a bipartisan federal board could investigate and seat the rightful winner. The defeat of the bill was a blow to those seeking to defend African American voting rights and to ensure full participation in politics. (p. 593)

Lone Wolf v. Hitchcock: A 1903 Supreme Court ruling that Congress could make whatever Indian policies it chose, ignoring all existing treaties. (p. 483)

Louisiana Purchase: The 1803 purchase of French territory west of the Mississippi River that stretched from the Gulf of Mexico to Canada. The Louisiana Purchase nearly doubled the size of the United States and opened the way for future American

Lawrence v. Texas: Decisión histórica de la Corte Suprema que limitó los poderes de los estados para prohibir actividades homosexuales consentidas entre adultos. (pág. 959)

Liga de las Naciones: Organización internacional, propuesta por el presidente Woodrow Wilson, que reunió a los gobiernos del mundo para prevenir hostilidades futuras tras las secuelas de la Primera Guerra Mundial. Si bien se logró la formación de la Liga de las Naciones, Estados Unidos nunca fue un estado miembro. (pág. 643)

Ley de Préstamo y Arriendo: Legislación de 1941 que permitió que Bretaña obtuviera armas de Estados Unidos sin un pago en efectivo con la promesa de reembolsar a Estados Unidos al concluir la guerra. La ley reflejó el deseo de asistir a Bretaña como fuera posible sin tener que ir a la guerra. (pág. 716)

difamar: desacreditar a una persona. (pág. 322)

liberación: obtener igualdad de derechos y oportunidades; conceder libertad. (pág. 66)

libertarismo: la creencia política de que el gobierno no debe interferir más que en lo mínimo posible en las vidas de los ciudadanos. (pág. 767)

Partido Libertad: Partido político antiesclavista que presentó su primer candidato presidencial en 1844, desafiando de manera controvertida tanto a los demócratas como a los whigs. (pág. 324)

Código Lieber: Directrices sindicales para las leyes de la guerra, emitidas en abril de 1863. El código dictaminó que los soldados y los presos debían ser tratados por igual sin importar color o raza; justificó una serie de acciones militares siempre y cuando fueran por una "necesidad" que "aceleraría la rendición"; y proscribió el uso de la tortura. El código proporcionó una base para posteriores acuerdos internacionales sobre las leyes de la guerra. (pág. 413)

lingüista: persona que estudia y habla varios idiomas. (pág. 526)

Lochner v. New York: Sentencia de la Corte Suprema en 1905 que dictaminó que el estado de Nueva York no podría limitar la jornada laboral de los panaderos a diez horas porque violaba el derecho de los panaderos de hacer contratos. (pág. 602)

Propuesta de Ley Lodge: También conocida como la Propuesta de Ley de Elecciones Federales de 1890, proponía que si 100 ciudadanos de cualquier distrito apelaban a favor de una intervención, un comité federal integrado por ambos partidos podría investigar y otorgar la victoria al ganador legítimo. La derrota de la propuesta fue un golpe duro para quienes buscaban defender los derechos del voto afroamericano y asegurar la participación plena en la política. (pág. 593)

Lone Wolf v. Hitchcock: Sentencia de la Corte Suprema de 1903 que dictiaminó que el Congreso podía adoptar cualquier política india, ignorando todos los tratados existentes. (pág. 483)

Compra de Luisiana: Compra en 1803 del territorio francés al oeste del río Misisipi, que se extendía desde el golfo de México hasta Canadá. La Compra de Luisiana casi duplicó el tamaño de los Estados Unidos y abrió el camino para la futura expansión esta-

expansion west. The purchase required President Thomas Jefferson to exercise powers not explicitly granted to him by the Constitution. (p. 220)

Loyalty-Security Program: A program created in 1947 by President Truman that permitted officials to investigate any employee of the federal government for "subversive" activities. (p. 765)

lucrative: profitable. (p. 67)

lynching: most often regarding hanging, an execution outside of legal terms. (p. 323)

machine tools: Cutting, boring, and drilling machines used to produce standardized metal parts, which were then assembled into products such as textile looms and sewing machines. The rapid development of machine tools by American inventors in the early nineteenth century was a factor in the rapid spread of industrialization. (p. 260)

magnate: a person of wealth and influence in a specific area. (p. 379)

Maine Law: The nation's first state law for the prohibition of liquor manufacture and sales, passed in 1851. (p. 307)

malaria: a type of disease transferred by mosquitos into the human bloodstream as well as other animals. (p. 25)

management revolution: An internal management structure adopted by many large, complex corporations that distinguished top executives from those responsible for day-to-day operations and departmentalized operations by function. (p. 499)

Manhattan Project: Top-secret project authorized by Franklin Roosevelt in 1942 to develop an atomic bomb ahead of the Germans. The Americans who worked on the project at Los Alamos, New Mexico (among other highly secretive sites around the country), succeeded in producing a successful atomic bomb by July 1945. (p. 737)

Manifest Destiny: A term coined by John L. O'Sullivan in 1845 to express the idea that Euro-Americans were fated by God to settle the North American continent from the Atlantic to the Pacific Ocean. (p. 348)

manorial: an economic and social system in which farming rights were given in exchange for labor on the lord's estate. (p. 19)

manumission: The legal act of relinquishing property rights in slaves. Worried that a large free black population would threaten the institution of slavery, the Virginia assembly repealed Virginia's 1782 manumission law in 1792. (p. 252)

***Marbury v. Madison* (1803):** A Supreme Court case that established the principle of judicial review in finding that parts of the Judiciary Act of 1789 were in conflict with the Constitution. For the first time, the Supreme Court assumed legal authority to overrule acts of other branches of the government. (p. 219)

dounidense hacia el oeste. La compra requirió que el presidente Thomas Jefferson ejerciera poderes que la Constitución no otorgaba explícitamente. (pág. 220)

Programa de Lealtad: Programa creado en 1947 por el presidente Truman que permitió a oficiales gubernamentales investigar a cualquier empleado del gobierno por "actividades subversivas". (pág. 765)

lucrativo: rentable. (pág. 67)

linchamiento: en la mayoría de los casos se refiere a la ejecución de una persona en la horca, a una ejecución sin debido proceso legal. (pág. 323)

máquinas herramienta: Máquinas de corte, perforación y taladro utilizadas para producir piezas metálicas estandarizadas, que luego se ensamblaban en productos tales como telares textiles y máquinas de coser. El rápido desarrollo de las máquinas herramienta por parte de los inventores estadounidenses a principios del siglo XIX fue un factor en la rápida expansión de la industrialización. (pág. 260)

magnate: persona de riqueza e influencia sobre un lugar específico. (pág. 379)

Ley de Maine: Primera ley estatal de la nación que prohibió la fabricación y la venta de licor, aprobada en 1851. (pág. 307)

malaria: enfermedad transferida por moscos al torrente sanguíneo humano y al de otros animales. (pág. 25)

revolución de la administración: Estructura interna de administración adoptada por muchas corporaciones grandes y complejas que distinguió a los altos ejecutivos de las personas responsables de las operaciones diarias y creo departamentos para separar las operaciones de acuerdo con su función. (pág. 499)

Proyecto Manhattan: Proyecto secreto autorizado por Franklin Roosevelt en 1942 para desarrollar una bomba atómica antes de que lo hicieran los alemanes. Los estadounidenses que trabajaron en el proyecto en Los Álamos, Nuevo México (entre otros puntos secretos del país), lograron producir una bomba atómica en julio de 1945. (pág. 737)

Destino manifiesto: Término acuñado por John L. O'Sullivan en 1845 para expresar la idea de que los euroamericanos estaban predestinados por Dios para establecer el continente norteamericano, desde el Atlántico hasta el océano Pacífico. (pág. 348)

señorío: sistema económico y social donde los derechos agrícolas se entregaban a cambio de mano de obra en la propiedad del terrateniente. (pág. 19)

manumisión: Acto legal de renunciar a los derechos de propiedad de los esclavos. Bajo la preocupación de que una gran población negra libre amenazara la institución de la esclavitud, la asamblea de Virginia derogó la ley de manumisión de 1782 de Virginia en 1792. (pág. 252)

***Marbury v. Madison* (1803):** Caso de la Corte Suprema que estableció el principio de revisión judicial al constatar que algunas partes de la Ley Judicial de 1789 estaban en conflicto con la Constitución. Por primera vez, la Corte Suprema asumió la autoridad legal para anular leyes de otras ramas del gobierno. (pág. 219)

March on Washington: Officially named the March on Washington for Jobs and Freedom, on August 28, 1963, a quarter of a million people marched to the Lincoln Memorial to demand that Congress end Jim Crow racial discrimination and launch a major jobs program to bring needed employment to black communities. (p. 830)

Market Revolution: The dramatic increase between 1820 and 1850 in the exchange of goods and services in market transactions. The Market Revolution reflected the increased output of farms (including cotton plantations) and factories, the entrepreneurial activities of traders and merchants, and the creation of a transportation network of roads, canals, and railroads. (p. 246)

married women's property laws: Laws enacted between 1839 and 1860 in New York and other states that permitted married women to own, inherit, and bequeath property. (p. 327)

Marshall Plan: Aid program begun in 1948 to help European economies recover from World War II. (p. 755)

materiel: military equipment. (p. 814)

maternalism: The belief that women should contribute to civic and political life through their special talents as mothers, Christians, and moral guides. Maternalists put this ideology into action by creating dozens of social reform organizations. (p. 550)

matriarchy: a political arrangement where a community is ruled by women. (p. 14)

***McCulloch v. Maryland* (1819):** A Supreme Court case that asserted the dominance of national over state statutes. (p. 230)

mechanics: A term used in the nineteenth century to refer to skilled craftsmen and inventors who built and improved machinery and machine tools for industry. (p. 248)

Medicaid: A health plan for the poor passed in 1965 and paid for by general tax revenues and administered by the states. (p. 848)

Medicare: A health plan for the elderly passed in 1965 and funded by a surcharge on Social Security payroll taxes. (p. 848)

medicine: a substance used to aid in illness through treatment and/or prevention of disease, or the science of using such substances. (p. 20)

mercantilism: A system of political economy based on government regulation. Beginning in 1650, Britain enacted Navigation Acts that controlled colonial commerce and manufacturing for the enrichment of Britain. (p. 43)

mercenary: person who partakes in military force for personal gain, often working for a foreign party. (p. 172)

merchant: person who earns a living by buying and selling goods. (p. 11)

Marcha sobre Washington: De nombre oficial Marcha sobre Washington por el Trabajo y la Libertad con fecha del 28 de agosto de 1963, convocó a 250 mil personas que marcharon al Monumento a Lincoln para exigir que el Congreso eliminara la discriminación racial de Jim Crow y lanzara un programa masivo de empleos para llevar a las comunidades negras de vuelta al trabajo. (pág. 830)

revolución mercantil: Aumento drástico en el intercambio de bienes y servicios en las transacciones de mercado que tuvo lugar entre 1820 y 1850. La revolución mercantil reflejó el aumento de la producción de granjas (incluidas las plantaciones de algodón) y fábricas, las actividades empresariales de los comerciantes y mercantes, y la creación de una red de transporte de carreteras, canales y ferrocarriles. (pág. 246)

leyes de propiedad de mujeres casadas: Leyes promulgadas entre 1839 y 1860 en Nueva York y otros estados, que permitieron a las mujeres casadas poseer, heredar y ceder propiedades. (pág. 327)

Plan Marshall: Programa de asistencia comenzado en 1948 para asistir a la recuperación de las economías europeas después de la Segunda Guerra Mundial. (pág. 755)

pertrechos: equipo militar. (pág. 814)

maternalismo: La creencia de que las mujeres deben contribuir a la vida política y cívica a través de sus talentos especiales como madres, cristianas y líderes morales. Las maternalistas pusieron en marcha esta ideología mediante la creación de docenas de organizaciones de reforma social. (pág. 550)

matriarcado: situación política donde la comunidad es gobernada por mujeres. (pág. 14)

***McCulloch v. Maryland* (1819):** Caso de la Corte Suprema que afirmó el dominio de los estatutos nacionales sobre los estatales. (pág. 230)

mecánicos: Término utilizado en el siglo XIX para referirse a los artesanos e inventores expertos que construyeron y mejoraron la maquinaria y las máquinas herramienta para la industria. (pág. 248)

Medicaid: Plan de salud para los pobres aprobado en 1965, financiado con ingresos fiscales generales y administrado por los estados. (pág. 848)

Medicare: Plan de salud para la tercera edad aprobado en 1965 financiado por un recargo en los impuestos sobre nóminas de Seguridad Social. (pág. 848)

medicina: substancia usada para curar enfermedades a través de tratamiento y/o prevención de enfermedades, o la ciencia de usar tales substancias. (pág. 20)

mercantilismo: Sistema de economía política basado en la regulación gubernamental. A partir de 1650, Gran Bretaña promulgó leyes de navegación que controlaban el comercio y la fabricación colonial para el enriquecimiento de Gran Bretaña. (pág. 43)

mercenario: persona que participa en fuerzas militares para beneficio personal, con frecuencia trabaja para partidos extranjeros. (pág. 172)

comerciante: persona que se gana la vida mediante la compra y venta de bienes. (pág. 11)

Metacom's War: Also known as King Philip's War, it pitted a coalition of Native Americans led by the Wampanoag leader Metacom against the New England colonies in 1675–1676. A thousand colonists were killed and twelve colonial towns destroyed, but the colonies prevailed. Metacom and his allies lost some 4,500 people. (p. 66)

Mexican American Legal Defense and Education Fund (MALDEF): A Mexican American civil rights organization founded in 1967 and based on the model of the NAACP Legal Defense and Education Fund. MALDEF focused on legal issues and endeavored to win protections against discrimination through court decisions. (p. 840)

Mexican cession: Lands taken by the United States in the U.S.-Mexico War (1846–1848). (p. 366)

middle class: An economic group of prosperous farmers, artisans, and traders that emerged in the early nineteenth century. Its rise reflected a dramatic increase in prosperity. This surge in income, along with an abundance of inexpensive mass-produced goods, fostered a distinct middle-class urban culture. (p. 268)

Middle Passage: The brutal sea voyage from Africa to the Americas that took the lives of nearly 2 million enslaved Africans. (p. 89)

midwife: someone, usually a woman, who is trained to help women during childbirth despite not being a doctor. (p. 109)

military-industrial complex: A term President Eisenhower used to refer to the military establishment and defense contractors who, he warned, exercised undue influence over the national government. (p. 783)

millennium: a time period of one thousand years. (p. 20)

Minor v. Happersett: A Supreme Court decision in 1875 that ruled that suffrage rights were not inherent in citizenship and had not been granted by the Fourteenth Amendment, as some women's rights advocates argued. Women were citizens, the Court ruled, but state legislatures could deny women the vote if they wished. (p. 440)

minstrel shows: Popular theatrical entertainment begun around 1830, in which white actors in blackface presented comic routines that combined racist caricature and social criticism. (p. 318)

Minutemen: Colonial militiamen who stood ready to mobilize on short notice during the imperial crisis of the 1770s. These volunteers formed the core of the citizens' army that met British troops at Lexington and Concord in April 1775. (p. 165)

miscegenation: A derogatory word for interracial sexual relationships coined by Democrats in the 1864 election, as they claimed that emancipation would allow African American men to gain sexual access to white women and produce mixed-race children. (p. 424)

missionary: a person who goes somewhere, often a foreign country, to share their religious beliefs with others. (p. 23)

Guerra de Metacomet: También conocida como la Guerra del rey Felipe, enfrentó a una coalición de nativos americanos encabezada por el líder wampanoag Metacomet contra las colonias de Nueva Inglaterra en 1675-1676. Mil colonos fueron asesinados y doce ciudades coloniales destruidas, pero las colonias prevalecieron. Metacomet y sus aliados perdieron unas 4,500 personas. (pág. 66)

Fondo Mexicano-Americano de Defensa Legal y Educación (MALDEF): Organización mexicano-americana de derechos civiles fundada en 1967 basada en el modelo del Fondo de Defensa Legal y Educación de la NAACP. MALDEF se enfocó en asuntos legales y buscó lograr protecciones contra la discriminación por medio de decisiones judiciales. (pág. 840)

Cesión mexicana: Tierras tomadas por los Estados Unidos en la Guerra de Estados Unidos-México (1846-1848). (pág. 366)

clase media: Grupo económico de agricultores, artesanos y comerciantes prósperos que surgió a principios del siglo XIX. Su crecimiento reflejó un aumento drástico en la prosperidad. Este aumento en los ingresos, junto con una abundancia de bienes de bajo costo producidos, fomentó una cultura urbana de clase media singular. (pág. 268)

travesía del Atlántico: Brutal viaje por mar desde África hasta las Américas que cobró la vida de casi 2 millones de africanos esclavizados. (pág. 89)

partera: persona, generalmente mujer, capacitada para asistir a las mujeres durante el parto a pesar de no ser doctor. (pág. 109)

complejo industrial-militar: Término empleado por el presidente Eisenhower para referirse al establecimiento militar y a los contratistas de defensa que, advirtió, ejercían demasiada influencia sobre el gobierno nacional. (pág. 783)

milenio: periodo de tiempo de mil años. (pág. 20)

Minor v. Happersett: Decisión de la Corte Suprema en 1875 que dictaminó que los derechos de sufragio no eran inherentes a la ciudadanía y no habían sido otorgados por la Decimocuarta Enmienda, como argumentaban algunos defensores de los derechos de las mujeres. Las mujeres eran ciudadanas, dictaminó la Corte, pero las legislaturas estatales podían negarles el voto si así lo deseaban. (pág. 440)

minstrel: Entretenimiento teatral popular que tuvo sus comienzos alrededor de 1830, en el que los actores blancos, con la cara pintada de negro, presentaban rutinas cómicas que combinaban la caricatura racista y la crítica social. (pág. 318)

minutemen: Milicianos coloniales que estaban listos para movilizarse sin antelación durante la crisis imperial de la década de 1770. Estos voluntarios formaron el núcleo del ejército de ciudadanos que se reunió con las tropas británicas en Lexington y Concord en abril de 1775. (pág. 165)

mestizaje: Palabra despectiva acuñada por los demócratas en las elecciones de 1864 para referirse a las relaciones interraciales. Los demócratas afirmaban que la emancipación les permitiría a los hombres afroamericanos obtener acceso sexual a mujeres blancas y producir niños de raza mixta. (pág. 424)

misionario: persona que va a algún sitio, generalmente un país extranjero, para compartir sus creencias religiosas con otros. (pág. 23)

Mississippi Freedom Democratic Party: Party founded in Mississippi during the Freedom Summer of 1964. Its members attempted to attend the 1964 Democratic National Convention in Atlantic City, New Jersey, as the legitimate representatives of their state, but Democratic leaders refused to recognize the party. (p. 831)

Mississippian culture: A Native American culture complex that flourished in the Mississippi River basin and the Southeast from around A.D. 850 to around 1700. Characterized by maize agriculture, moundbuilding, and distinctive pottery styles, Mississippian communities were complex chiefdoms usually located along the floodplains of rivers. The largest of these communities was Cahokia, in modern-day Illinois. (p. 11)

Missouri Compromise: A series of political agreements devised by Speaker of the House Henry Clay. Maine entered the Union as a free state in 1820 and Missouri followed as a slave state in 1821, preserving a balance in the Senate between North and South and setting a precedent for future admissions to the Union. Most importantly, this bargain set the northern boundary of slavery in the lands of the Louisiana Purchase at the southern boundary of Missouri, with the exception of that state. (p. 281)

mitigate: to make less severe; weaken. (p. 970)

mixed government: John Adams's theory from *Thoughts on Government* (1776), which called for three branches of government, each representing one function: executive, legislative, and judicial. This system of dispersed authority was devised to maintain a balance of power and ensure the legitimacy of governmental procedures. (p. 185)

mobilize: to prepare for action in a certain situation. (p. 67)

modernism: A movement that questioned the ideals of progress and order, rejected realism, and emphasized new cultural forms. Modernism became the first great literary and artistic movement of the twentieth century and remains influential today. (p. 535)

monogamy: the practice of being in a marital or sexual relationship with only one person at a time. (p. 313)

monopoly: the exclusive control of a particular item or service on the market. (p. 87)

Monroe Doctrine: The 1823 declaration by President James Monroe that the Western Hemisphere was closed to any further colonization or interference by European powers. In exchange, Monroe pledged that the United States would not become involved in European struggles. (p. 231)

Montgomery Bus Boycott: Yearlong boycott of Montgomery's segregated bus system in 1955–1956 by the city's African American population. The boycott brought Martin Luther King Jr. to national prominence and ended in victory when the Supreme Court declared segregated seating on public transportation unconstitutional. (p. 824)

Moral Majority: A political organization established by evangelist Jerry Falwell in 1979 to mobilize conservative Christian voters on behalf of Ronald Reagan's campaign for president. (p. 922)

Partido Demócrata de la Libertad de Misisipi: Partido fundado en Misisipi durante el Verano de la Libertad de 1964. Sus integrantes buscaron asistir a la Convención Nacional Demócrata en Atlantic City, Nueva Jersey, como representantes legítimos de su estado, pero los líderes demócratas se negaron a reconocer al partido. (pág. 831)

cultura misisipiana: Complejo de cultura nativa americana que floreció en la cuenca del río Misisipi y en el Sureste entre los años 850 d. C.. y aproximadamente 1700. Caracterizadas por la agricultura de maíz, la construcción de montículos y los estilos distintivos de cerámica, las comunidades misisipianas eran jefaturas complejas que generalmente se ubicaban a lo largo de los terrenos inundables de los ríos. La mayor de estas comunidades fue Cahokia, en la actual Illinois. (pág. 11)

Compromiso de Misuri: Serie de acuerdos políticos ideados por el presidente de la Cámara, Henry Clay. Maine ingresó a la Unión como un estado libre en 1820 y Misuri le siguió como un estado esclavista en 1821, preservando un equilibrio en el Senado entre el Norte y el Sur y sentando un precedente para futuras admisiones a la Unión. Lo más importante es que este compromiso estableció el límite norte de la esclavitud en las tierras de la Compra de Luisiana en el límite sur de Misuri, con la excepción de ese estado. (pág. 281)

mitigar: hacer menos severo; debilitar. (pág. 970)

gobierno mixto: Teoría de John Adams de *Thoughts on Government* (1776), que requería tres ramas de gobierno, cada una en representación de una función: ejecutiva, legislativa y judicial. Este sistema de autoridad separada fue ideado para mantener un equilibrio de poder y garantizar la legitimidad de los procedimientos gubernamentales. (pág. 185)

movilizar: preparar para la acción en cierta situación. (pág. 67)

modernismo: Movimiento que cuestionó los ideales del orden y progreso, rechazó al realismo y enfatizó nuevas formas culturales. El modernismo fue el primer gran movimiento literario y artístico del siglo XX y a la fecha permanece su influencia. (pág. 535)

monogamia: práctica de estar en una relación marital o sexual con una sola persona a la vez. (pág. 313)

monopolio: control exclusivo del mercado de un objeto particular. (pág. 87)

Doctrina Monroe: Declaración de 1823 del presidente James Monroe de que el hemisferio occidental estaba cerrado a cualquier colonización o interferencia de las potencias europeas. A cambio, Monroe se comprometió a no involucrar a los Estados Unidos en las luchas europeas. (pág. 231)

Boicot de autobuses de Montgomery: Boicot de la población afroamericana al sistema segregado de autobuses de la ciudad durante un año entre 1955-1956. El boicot le dio prominencia nacional a Martin Luther King Jr. y tuvo un final victorioso cuando la Corte Suprema declaró que la segregación de asientos en el transporte público era inconstitucional. (pág. 824)

Mayoría Moral: Organización política establecida por el evangelista Jerry Falwell en 1979 para movilizar a los votantes cristianos conservadores en favor de la campaña presidencial de Ronald Reagan. (pág. 922)

moratorium: a designated time period for suspending activity or delaying something such as payment. (p. 887)

mothers' pensions: Progressive Era government support provided to mothers whose husbands had died, been disabled, or abandoned the family. Recipients had to meet standards of "respectability" defined by middle-class home visitors, but those who met approval got help in raising their young children. (p. 606)

muckrakers: A critical term, first applied by Theodore Roosevelt, for investigative journalists who published exposés of political scandals and industrial abuses. (p. 569)

Muller v. Oregon: A 1908 Supreme Court case that upheld an Oregon law limiting women's workday to ten hours, based on the need to protect women's health for motherhood. *Muller* complicated the earlier decision in *Lochner v. New York,* laying out grounds on which states could intervene to protect workers. It divided women's rights activists, however, because some saw its provisions as discriminatory. (p. 606)

multiculturalism: The promotion of diversity in gender, race, ethnicity, religion, and sexual preference. This political and social policy became increasingly popular in the United States during the 1980s post–civil rights era. (p. 956)

multinational corporations: Corporations with offices and factories in multiple countries, which expanded to find new markets and cheaper sources of labor. Globalization was made possible by the proliferation of these multinational corporations. (p. 949)

Munich Conference: A conference in Munich held in September 1938 during which Britain and France agreed to allow Germany to annex the Sudetenland — a German-speaking border area of Czechoslovakia — in return for Hitler's pledge to seek no more territory. (p. 714)

munition: war equipment such as weapons or ammunition. (p. 375)

Munn v. Illinois: An 1877 Supreme Court case that affirmed that states could regulate key businesses, such as railroads and grain elevators, if those businesses were "clothed in the public interest." (p. 467)

mutual aid society: An urban aid society that served members of an ethnic immigrant group, usually those from a particular province or town. The societies functioned as fraternal clubs that collected dues from members in order to pay support in case of death or disability. (p. 564)

My Lai: Vietnamese village where U.S. Army troops executed nearly five hundred people in 1968, including a large number of women and children. (p. 871)

Nation of Islam: A religion founded in the United States that became a leading source of black nationalist thought in the 1960s. Black Muslims preached an apocalyptic brand of Islam, anticipating the day when Allah would banish the white "devils" and give the black nation justice. (p. 835)

moratoria: tiempo designado para suspender una actividad o retrasar algo, por ejemplo, un pago. (pág. 887)

pensiones maternales: Apoyo gubernamental durante la Era Progresiva para madres cuyos maridos fallecieron, habían sido incapacitados o abandonaron a la familia. Las beneficiarias debían cumplir con estándares de "respetabilidad" definidos por visitantes de clase media que acudían a los hogares, y las personas aprobadas recibieron apoyo para criar a sus hijos pequeños. (pág. 606)

muckrakers: Término crítico empleado por Theodore Roosevelt para periodistas investigadores que desenmascararon escándalos políticos y abusos industriales. (pág. 569)

Muller v. Oregon: Caso de la Corte Suprema en 1908 para mantener una ley que limitaba la jornada laboral de las mujeres a diez horas, con base en la necesidad de proteger la salud de las mujeres para la maternidad. *Muller* complicó la decisión anterior de *Lochner v. New York* al sentar las bases para definir cuáles estados podían intervenir para proteger a los trabajadores. Sin embargo, dividió a los activistas de derechos de las mujeres, al considerar que algunas de sus disposiciones eran discriminatorias. (pág. 606)

multiculturalismo: Promoción de la diversidad de género, raza, etnicidad, religión y preferencia sexual. Esta política en materia social y gubernamental fue cada vez más popular en Estados Unidos en la década de 1980, durante la etapa posterior a la era de los derechos civiles. (pág. 956)

corporaciones multinacionales: Corporaciones que tienen oficionas y fábricas en varios países, que se expandieron para buscar nuevos mercados y mano de obra más barata. La globalización fue posible por la proliferación de estas corporaciones multinacionales. (pág. 949)

Conferencia de Munich: Conferencia celebrada en septiembre de 1938 en Munich durante la cual Bretaña y Francia aceptaron que Alemania anexara la región de los Sudetes—región fronteriza de Checoslovaquia de habla alemana—a cambio del compromiso de Hitler de no buscar más territorio. (pág. 714)

munición: equipo de guerra, por ejemplo, armas o balas. (pág. 375)

Munn v. Illinois: Caso de la Corte Suprema de 1877 que afirmaba que los estados podían regular negocios clave, como ferrocarriles y elevadores de granos, si esos negocios estaban "eran de interés público". (pág. 467)

sociedad de asistencia mutua: Sociedad de asistencia urbana que sirvió a miembros de grupos étnicos inmigrantes, normalmente a aquellos de un pueblo o provincia particular. Estas sociedades funcionaron como clubes fraternales que recolectaban fondos de sus miembros para pagar apoyos en caso de muerte o incapacidad. (pág. 564)

My Lai: Pueblo vietnamita donde tropas del ejército estadounidense ejecutaron a cerca de 500 personas en 1968, incluyendo a mujeres y niños. (pág. 871)

Nación de Islam: Religión fundada en Estados Unidos que se convirtió en una fuente de pensamiento nacionalista negro en la década de 1960. Los Musulmanes Negros predicaban una rama apocalíptica del Islam, anticipando el día en que Alá expulsaría a los "diablos" blancos e hiciera justicia para la nación negra. (pág. 835)

National Woman Suffrage Association: A suffrage group headed by Elizabeth Cady Stanton and Susan B. Anthony that stressed the need for women to lead organizations on their own behalf. The NWSA focused exclusively on women's rights — sometimes denigrating men of color in the process — and took up the battle for a federal women's suffrage amendment. (p. 440)

National Association for the Advancement of Colored People (NAACP): An organization founded in 1909 by leading African American reformers and white allies as a vehicle for advocating equal rights for African Americans, especially through the courts. (p. 607)

National Association of Colored Women: An organization created in 1896 by African American women to provide community support. Through its local clubs, the NACW arranged for the care of orphans, founded homes for the elderly, advocated temperance, undertook public health campaigns, campaigned for women's suffrage, and raised awareness of racial injustice (such as lynching, segregated facilities, and disfranchisement). (p. 551)

National Association of Manufacturers: An association of industrialists and business leaders opposed to government regulation. In the era of the New Deal, the group promoted free enterprise and capitalism through a publicity campaign of radio programs, motion pictures, billboards, and direct mail. (p. 690)

National Child Labor Committee: A reform organization that worked (unsuccessfully) to win a federal law banning child labor. The NCLC hired photographer Lewis Hine to record brutal conditions in mines and mills where thousands of children worked. (p. 606)

National Consumers' League: Begun in New York, a national progressive organization that encouraged women, through their shopping decisions, to support fair wages and working conditions for industrial laborers. (p. 580)

national debt: The cumulative total of all budget deficits. (p. 924)

National Defense Education Act: A 1958 act, passed in response to the Soviet launching of the *Sputnik* satellite, that funneled millions of dollars into American universities, helping institutions such as the University of California at Berkeley and the Massachusetts Institute of Technology, among others, become the leading research centers in the world. (p. 783)

National Interstate and Defense Highways Act: A 1956 law authorizing the construction of a national highway system. (p. 801)

National Municipal League: A political reform organization that advised cities to elect small councils and hire professional city managers who would direct operations like a corporate executive. (p. 575)

National Organization for Women (NOW): Women's civil rights organization formed in 1966. Initially, NOW focused on elim-

Asociación Nacional pro Sufragio de la Mujer (NWSA): Grupo de sufragio encabezado por Elizabeth Cady Stanton y Susan B. Anthony que enfatizó la necesidad de que las mujeres lideren organizaciones en representación propia. La NWSA se centró exclusivamente en los derechos de las mujeres —a veces denigrando a los hombres de color en el proceso— y emprendió la batalla por una enmienda federal al sufragio de las mujeres. (pág. 440)

Asociación Nacional para el Progreso de las Personas de Color (NAACP): Organización fundada en 1909 por líderes reformistas afroamericanos y aliados blancos para defender la igualdad de derechos de los afroamericanos, especialmente en los tribunales. (pág. 607)

Asociación Nacional de Mujeres de Color (NACW): Organización creada en 1896 por mujeres afroamericanas para ofrecer apoyo al a comunidad. A través de sus clubes locales, la NACW ayudó a cuidar huérfanos, fundó hogares para la tercera edad, defendió la abstinencia al alcohol, emprendió campañas de salud pública, lanzó campañas para el sufragio de la mujer y creo conciencia de la injusticia racial (como los linchamientos, las instalaciones segregadas y la privación del derecho de representación). (pág. 551)

Asociación Nacional de Manufacturas: Asociación de industrialistas y líderes empresariales que se oponen a la regulación gubernamental. En la era del Nuevo Trato, el grupo promovió la empresa libre y el capitalismo a través de campañas de radio, películas, carteleras y correo directo. (pág. 690)

Comité Nacional del Trabajo Infantil (NCLC): Organización de reforma que trabajó (sin éxito) para lograr una ley federal que prohibiera el trabajo infantil. La NCLC contrató al fotógrafo Lewis Hine para documentar las condiciones brutales en minas y plantas donde trabajaban miles de niños. (pág. 606)

Liga Nacional de Consumidores: Organización nacional progresista, con inicios en Nueva York, que promovió que las mujeres, a través de sus decisiones de compra, apoyaran el salario justo y las condiciones laborales de los trabajadores industriales. (pág. 580)

deuda nacional: Total acumulativo de todos los déficits presupuestales. (pág. 924)

Ley Nacional de Educación de Defensa: Ley de 1958 aprobada en respuesta al lanzamiento soviético del satélite *Sputnik*, que encauzó millones de dólares hacia las universidades estadounidenses y ayudó a instituciones como la Universidad de Berkeley en California y el Massachusetts Institute of Technology, entre otras, a convertirse en centros de investigación líderes a nivel mundial. (pág. 783)

Ley Nacional de Autopistas Interestatales y de Defensa: Ley de 1956 que autorizó la construcción de un sistema nacional de carreteras. (pág. 801)

Liga Nacional Municipal: Organización de reforma política que aconsejó a pequeños condados que contrataran a gestores municipales para dirigir sus operaciones como un ejecutivo corporativo. (pág. 575)

Organización Nacional de Mujeres (NOW): Organización de derechos civiles de mujeres, formada en 1966. En un principio,

inating gender discrimination in public institutions and the workplace, but by the 1970s it also embraced many of the issues raised by more radical feminists. (p. 852)

National Origins Act: A 1924 law limiting annual immigration from each country to no more than 2 percent of that nationality's percentage of the U.S. population as it had stood in 1890. The law severely limited immigration, especially from Southern and Eastern Europe. (p. 667)

National Park Service: A federal agency founded in 1916 that provided comprehensive oversight of the growing system of national parks. (p. 544)

National Recovery Administration: Federal agency established in June 1933 to promote industrial recovery during the Great Depression. It encouraged industrialists to voluntarily adopt codes that defined fair working conditions, set prices, and minimized competition. (p. 687)

National Review: A conservative magazine founded by editor William F. Buckley in 1955, who used it to criticize liberal policy. (p. 916)

National Socialist (Nazi) Party: German political party led by Adolf Hitler, who became chancellor of Germany in 1933. The party's ascent was fueled by huge World War I reparation payments, economic depression, fear of communism, labor unrest, and rising unemployment. (p. 713)

National War Labor Board: A federal agency founded in 1918 that established an eight-hour day for war workers (with time-and-a-half pay for overtime), endorsed equal pay for women, and supported workers' right to organize. (p. 637)

National American Woman Suffrage Association: Women's suffrage organization created in 1890 by the union of the National Woman Suffrage Association and the American Woman Suffrage Association. Up to national ratification of suffrage in 1920, the NAWSA played a central role in campaigning for women's right to vote. (p. 440)

National Woman's Party: A political party founded in 1916 that fought for an Equal Rights Amendment to the U.S. Constitution in the early twentieth century. (p. 643)

nativism: Opposition to immigration and to full citizenship for recent immigrants or to immigrants of a particular ethnic or national background, as expressed, for example, by anti-Irish discrimination in the 1850s and Asian exclusion laws between the 1880s and 1940s. (p. 381)

natural rights: The rights to life, liberty, and property. According to the English philosopher John Locke in *Two Treatises of Government* (1690), political authority was not given by God to monarchs. Instead, it derived from social compacts that people made to preserve their natural rights. (p. 120)

la NOW se enfocó en la eliminación de la discriminación de género en las instituciones públicas y en el trabajo, y para la década de 1970 asumió muchas de las causas de feministas más radicales. (pág. 852)

Ley de Orígenes Nacionales: Ley de 1924 que limitó la inmigración anual de cada país a no más del 2 por ciento del porcentaje de esa nacionalidad en la población de Estados Unidos con respecto a 1890. La ley limitó la inmigración notablemente, especialmente del sur y del este de Europa. (pág. 667)

Servicio de Parques Nacionales: Agencia federal fundada en 1916 que ofreció supervisión integral del creciente sistema de parques nacionales. (pág. 544)

Administración para la Recuperación Nacional: Agencia federal establecida en junio de 1933 para promover la recuperación industrial durante la Gran Depresión. Alentó a industrialistas a adaptar voluntariamente códigos que definieran condiciones laborales justas, precios fijos y minimizaron la competencia. (pág. 687)

National Review: Revista conservadora fundada en 1955 por el editor William F. Buckley, quien la usó para criticar la política liberal. (pág. 916)

Partido Nacional Socialista (Nazi): Partido político alemán dirigido por Adolf Hitler, que fue canciller alemán en 1933. El ascenso del partido fue causado en parte por los enormes pagos de reparación de la Primera Guerra Mundial, por la depresión económica, el miedo al comunismo, el malestar laboral y el aumento del desempleo. (pág. 713)

Comité Nacional de Trabajos de Guerra: Agencia federal fundada en 1918 que estableció la jornada laboral de ocho horas para los trabajadores de guerra (con pagos de tiempo y medio por horas extra), aprobó el pago igualitario para mujeres y apoyó el derecho de organización de los trabajadores. (pág. 637)

Asociación Nacional Americana pro Sufragio de la Mujer (NAWSA): Organización de mujeres sufragistas creada en 1890 tras la unión de la Asociación Nacional pro Sufragio de la Mujer y la Asociación Americana pro Sufragio de la Mujer. Hasta el momento de la ratificación del sufragio en 1920, la NAWSA desempeñó un papel central en las campañas para el derecho de voto de las mujeres. (pág. 440)

Partido Nacional de Mujeres: Partido político fundado en 1916 que luchó por la Enmienda de Igualdad de Derechos de la Constitución de los Estados Unidos a principios del siglo XX. (pág. 643)

nativismo: Oposición a la inmigración y a la ciudadanía plena para inmigrantes recientes o inmigrantes de ciertos orígenes étnicos o nacionales. Un ejemplo fue la discriminación antiirlandesa que tuvo lugar en la década de 1850 y las leyes de exclusión asiáticas entre los años 1880 y 1940. (pág. 381)

derechos naturales: El derecho a la vida, la libertad y la propiedad. Según el filósofo John Locke en su obra *Dos tratados sobre el gobierno civil* (1690), no era Dios quien concedía autoridad política a los monarcas. En cambio, la autoridad derivaba de contratos sociales que las personas hacían para preservar sus derechos naturales. (pág. 120)

Naturalization, Alien, and Sedition Acts: Three laws passed in 1798 that limited individual rights and threatened the fledgling party system. The Naturalization Act lengthened the residency requirement for citizenship, the Alien Act authorized the deportation of foreigners, and the Sedition Act prohibited the publication of insults or malicious attacks on the president or members of Congress. (p. 214)

Navigation Acts: English laws passed, beginning in the 1650s and 1660s, requiring that certain English colonial goods be shipped through English ports on English ships manned primarily by English sailors in order to benefit English merchants, shippers, and seamen. (p. 79)

Negro Leagues: Professional baseball teams formed for and by black players, after the main national leagues began to exclude all African American players in the 1890s. Enduring until the desegregation of baseball after World War II, the leagues enabled black men to showcase athletic ability and race pride, but their working conditions and wages were much less desirable than those of players in the white leagues. (p. 542)

neo-Europes: Term for colonies in which colonists sought to replicate, or at least approximate, economies and social structures they knew at home. (p. 38)

neomercantilism: A system of government-assisted economic development embraced by republican state legislatures throughout the nation, especially in the Northeast. This system of activist government encouraged private entrepreneurs to seek individual opportunity and the public welfare through market exchange. (p. 240)

Neutrality Act of 1935: Legislation that sought to avoid entanglement in foreign wars while protecting trade. It imposed an embargo on selling arms to warring countries and declared that Americans traveling on the ships of belligerent nations did so at their own risk. (p. 714)

New Jersey Plan: Alternative to the Virginia Plan drafted by delegates from small states, retaining the confederation's single-house congress with one vote per state. It shared with the Virginia Plan enhanced congressional powers to raise revenue, control commerce, and make binding requisitions on the states. (p. 194)

New Left: A term applied to radical students of the 1960s and 1970s, distinguishing their activism from the Old Left — the communists and socialists of the 1930s and 1940s, who tended to focus on economic and labor questions rather than cultural issues. (p. 860)

New Lights: Evangelical preachers, many of them influenced by John Wesley, the founder of English Methodism, and George Whitefield, the charismatic itinerant preacher who brought his message to Britain's American colonies. They decried a Christian faith that was merely intellectual and emphasized the importance of a spiritual rebirth. (p. 124)

Leyes de Naturalización, Extranjería y Sedición: Tres leyes aprobadas en 1798 que limitaron derechos individuales y amenazaron al incipiente sistema de partidos. La Ley de Naturalización aumentó el tiempo de residencia requerido para obtener la ciudadanía, la Ley de Extranjería autorizó la deportación de extranjeros y la Ley de Sedición prohibió la publicación de insultos o ataques malignos contra el presidente o miembros del Congreso. (pág. 214)

Actas de Navegación: Leyes aprobadas, apartir de la década de 1650 y 1660, que requerían que ciertos bienes coloniales ingleses fueran importados a través de puertos ingleses, a bordo de embarcaciones inglesas tripuladas por navegantes ingleses con el fin de beneficiar a los mercantes, exportadores y marineros ingleses. (pág. 79)

Ligas Negras: Equipos profesionales de béisbol formados por y para jugadores negros, tras la exclusión de todos los jugadores afroamericanos de las principales ligas nacionales en la década de 1890. Las ligas duraron hasta la abolición de la segregación racial en el béisbol, al concluir la Segunda Guerra Mundial, y permitieron a los hombres negros mostrar sus capacidades atléticas y orgullo racial, pero bajo condiciones y salarios mucho menos deseables que aquellos de los jugadores en las ligas blancas. (pág. 542)

neoeuropeos: Término para las colonias en las cuales los colonos buscaron recrear, o al menos aproximar, las estructuras económicas o sociales que conocían en sus países de origen. (pág. 38)

neomercantilismo: Sistema de desarrollo económico asistido por el gobierno que fue adoptado por las legislaturas de los estados republicanos por todo el país, particularmente en el noreste. Este sistema de gobierno activista invitaba a emprendedores privados a buscar oportunidades individuales y al bienestar público a través del intercambio de mercados. (pág. 240)

Ley de Neutralidad de 1935: Legislación que buscó evitar la participación en guerras extranjeras y al mismo tiempo proteger al comercio. Impuso un embargo a la venta de armas a países en guerra y declaró que los estadounidenses que viajaran en las embarcaciones de países beligerantes lo hacían bajo su propio riesgo. (pág. 714)

Plan de Nueva Jersey: Alternativa para el Plan de Virginia redactado por delegados de estados para mantener el Congreso de una cámara única en la confederación, con un voto por estado. De manera similar al Plan de Virginia, ampliaba los poderes del Congreso para aumentar las rentas, controlar el comercio y hacer requisitos vinculantes a los estados. (pág. 194)

Nueva Izquierda: Término usado para estudiantes radicales de las décadas de 1960 y 1970 que distinguía su activismo del de la Vieja Izquierda—aquellos comunistas y socialistas de las décadas de 1930 y 1940, que solían enfocarse en temas económicos y laborales y en lugar de temas culturales. (pág. 860)

luces nuevas: Predicadores evangélicos, muchos de ellos influidos por John Wesley, fundador del metodismo inglés, y George Whitefield, predicador itinerante que llevó su mensaje a las colonias británicas en América. Menospreciaban a la fe cristiana meramente intelectual y resaltaban la importancia de un renacimiento espiritual. (pág. 124)

"New Look": The defense policy of the Eisenhower administration that stepped up production of the hydrogen bomb and developed long-range bombing capabilities. (p. 770)

New Nationalism: In a 1910 speech, Theodore Roosevelt called for a "New Nationalism" that promoted government intervention to enhance public welfare, including a federal child labor law, more recognition of labor rights, a national minimum wage for women, women's suffrage, and curbs on the power of federal courts to stop reform. (p. 608)

New South: A nickname for the former Confederate states, used by boosters to describe the region's economic diversification and growth of industrial jobs in the post–Civil War era. Because of the region's poverty, many of those industries were extractive (such as coal and timber), and some (like textiles) were low-wage and involved considerable child labor. (p. 508)

Newlands Reclamation Act: A 1902 law, supported by President Theodore Roosevelt, that allowed the federal government to sell public lands to raise money for irrigation projects that expanded agriculture on arid lands. (p. 604)

niche: a place that is well suited for someone or something. (p. 515)

nobility: a distinguished social class which includes those of high birth such as dukes and duchesses, and barons and baronesses. (p. 19)

nonimportation movement: Colonists attempted nonimportation agreements three times: in 1766, in response to the Stamp Act; in 1768, in response to the Townshend duties; and in 1774, in response to the Coercive Acts. In each case, colonial radicals pressured merchants to stop importing British goods. In 1774 nonimportation was adopted by the First Continental Congress and enforced by the Continental Association. American women became crucial to the movement by reducing their households' consumption of imported goods and producing large quantities of homespun cloth. (p. 151)

North American Free Trade Agreement (NAFTA): A 1993 treaty that eliminated all tariffs and trade barriers among the United States, Canada, and Mexico. (p. 949)

North Atlantic Treaty Organization (NATO): Military alliance formed in 1949 among the United States, Canada, and Western European nations to counter any possible Soviet threat. (p. 758)

Northwest Ordinance of 1787: A land act that provided for orderly settlement and established a process by which settled territories would become the states of Ohio, Indiana, Illinois, Michigan, and Wisconsin. It also banned slavery in the Northwest Territory. (p. 189)

nostrum: a questionable remedy. (p. 656)

notables: Northern landlords, slave-owning planters, and seaport merchants who dominated the political system of the early nineteenth century. (p. 274)

Política "New Look" (Nueva Apariencia): Política de defensa de la administración de Eisenhower que aumentó la producción de bombas de hidrógeno y desarrolló la capacidad de bombardeo de larga distancia. (pág. 770)

Nuevo Nacionalismo: En un discurso pronunciado en 1910, Theodore Roosevelt, llamó a un "Nuevo Nacionalismo" que promovía la intervención del gobierno para mejorar el bienestar público, incluyendo una ley de trabajo infantil, mayor reconocimiento de los derechos laborales, un salario mínimo nacional para las mujeres, sufragio para las mujeres, y reducciones al poder de las cortes federales para impedir reformas. (pág. 608)

Nuevo Sur: Apodo para los antiguos estados Confederados, usado por sus adeptos para describir la diversificación económica y el aumento de empleos industriales en la región durante la era posterior a la Guerra Civil. Debido a la pobreza de la región, muchas de esas industrias eran de extracción (de carbón y madera) y algunas (como la industria de textiles) pagaban salarios bajos y practicaban en gran medida el trabajo infantil. (pág. 508)

Ley de Recuperación de Newlands: Ley de 1902 apoyada por el presidente Theodore Roosevelt, que permitió al gobierno federal vender tierras públicas para recaudar fondos para los proyectos de irrigación que expandieron la agricultura en tierras áridas. (pág. 604)

nicho: sitio adecuado para alguien o algo. (pág. 515)

nobleza: Clase social distinguida que incluye a aquellos títulos nobiliarios por herencia como duques y duquesas, barones y baronesas. (pág. 19)

movimiento de no importación: Los colonos intentaron firmar acuerdos de no importación tres veces: en 1766, en respuesta a la Ley del Timbre; en 1768, en respuesta a los Actos Townshend; y en 1774, en respuesta a las Leyes Coactivas. En cada caso, los radicales coloniales presionaron a los comerciantes para que dejaran de importar productos británicos. En 1774, la no importación fue aprobada por el Primer Congreso Continental e implementada por la Asociación Continental. Las mujeres americanas se volvieron cruciales para el movimiento al reducir el consumo de bienes importados de sus hogares y producir grandes cantidades de tela casera. (pág. 151)

Tratado de Libre Comercio de América del Norte (TLCAN): Tratado firmado en 1993 que eliminó todos los aranceles y barreras comerciales entre Estados Unidos, Canadá y México. (pág. 949)

Organización del Tratado del Atlántico Norte (OTAN): Alianza militar formada en 1949 entre Estados Unidos, Canadá y los países del occidente de Europa para contrarrestar cualquier amenaza soviética. (pág. 758)

Ordenanza Noroeste de 1787: Ley de tierras que estableció un asentamiento ordenado y un proceso por medio del cual los territorios poblados se convertirían en los estados de Ohio, Indiana, Illinois, Michigan y Wisconsin. También prohibió la esclavitud en el Territorio Noroeste. (pág. 189)

panacea: remedio cuestionable. (pág. 656)

notables: Terratenientes norteños, colonos dueños de esclavos y comerciantes de puertos marítimos que dominaron el sistema político del siglo XIX. (pág. 274)

NSC-68: Top-secret government report of April 1950 warning that national survival in the face of Soviet communism required a massive military buildup. (p. 758)

nullification: The constitutional argument advanced by John C. Calhoun that a state legislature or convention could void a law passed by Congress. (p. 286)

odyssey: an epic journey. (p. 914)

Old Lights: Conservative ministers opposed to the passion displayed by evangelical preachers; they preferred to emphasize the importance of cultivating a virtuous Christian life. (p. 124)

oligarchy: government in which only a few people are in command. (p. 931)

Omaha Platform: An 1892 statement by the Populists calling for stronger government to protect ordinary Americans. (p. 594)

one-tenth tax: A tax adopted by the Confederacy in 1863 that required all farmers to turn over a tenth of their crops and livestock to the government for military use. The tax demonstrated the southern government's strong use of centralized power; it caused great hardship for poor families. (p. 410)

open door policy: A claim put forth by U.S. Secretary of State John Hay that all nations seeking to do business in China should have equal trade access. (p. 627)

Operation Rescue: A movement founded by religious activist Randall Terry in 1987 that mounted protests outside abortion clinics and harassed their staffs and clients. (p. 957)

Operation Rolling Thunder: Massive bombing campaign against North Vietnam authorized by President Johnson in 1965; against expectations, it ended up hardening the will of the North Vietnamese to continue fighting. (p. 854)

Oregon Trail: An emigrant route that originally led from Independence, Missouri, to the Willamette Valley in Oregon, a distance of some 2,000 miles. Alternate routes included the California Trail, the Mormon Trail, and the Bozeman Trail. Together they conveyed several hundred thousand migrants to the Far West in the 1840s, 1850s, and 1860s. (p. 350)

Organization of Petroleum Exporting Countries (OPEC): A cartel formed in 1960 by the Persian Gulf states and other oil-rich developing countries that allowed its members to exert greater control over the price of oil. (p. 880)

Ostend Manifesto: An 1854 manifesto that urged President Franklin Pierce to seize the slave-owning province of Cuba from Spain. Northern Democrats denounced this aggressive initiative, and the plan was scuttled. (p. 379)

overleverage: to take on debt. (p. 674)

pacifism: the belief that violence is always unreasonable, and that disagreements should be resolved peacefully. (p. 79)

paganism: religiously believing in multiple gods. (p. 21)

NSC-68 (Reporte 68 del Consejo de Seguridad Nacional): Reporte ultra-secreto del gobierno, redactado en 1950, que advirtió que sobrevivir al comunismo soviético implicaría un aumento drástico en el armamento militar. (pág. 758)

anulación: Argumento constitucional impulsado por John C. Calhoun en el cual una legislatura o convención estatal puede vetar una ley aprobada por el Congreso. (pág. 286)

odisea: viaje épico. (pág. 914)

luces viejas: Ministros conservadores que se opusieron a la pasión mostrada por predicadores evangélicos; preferían resaltar la importancia de cultuivar una vida cristiana virtuosa. (pág. 124)

oligarquía: gobierno en el cual unos pocos tienen el control. (pág. 931)

Plataforma de Omaha: Declaración de los populistas en 1892 pidiendo un gobierno más fuerte para proteger a los estadounidenses comunes. (pág. 594)

impuesto del décimo: Impuesto adoptado por la Confederación en 1863 que requería que todos los agricultores entregaran al gobierno una décima parte de sus cultivos y ganado para uso militar. El impuesto demostró el fuerte uso del gobierno sureño del poder centralizado; causó grandes dificultades para las familias pobres. (pág. 410)

política de puertas abiertas: Afirmación de John Hay, Secretario de Estado de Estados Unidos, quien dijo que todos los países que deseen hacer negocios en China deben tener el mismo nivel de acceso comercial. (pág. 627)

Operación Rescate: Movimiento fundado por el activista religioso Randall Terry que organizó protestas en la entrada de clínicas de aborto y acosó a sus pacientes y empleados. (pág. 957)

Operación Rolling Thunder: Campaña masiva de bombardeos contra Vietnam del Norte autorizada por el presidente Johnson en 1965; contra toda expectativa, alimentó y fortaleció al deseo de los vietnamitas del norte de mantenerse en la pelea. (pág. 854)

senda de Oregon: Ruta emigrante que originalmente iniciaba en Independence, Misuri, y llegaba hasta el valle de Willamette en Oregón, tras un recorrido de unas dos mil millas. Entre las rutas alternas estaba la senda de California, la senda de los Mormones y la senda Bozeman. Las tres rutas llevaron a cientos de miles de migrantes al Lejano Oeste durante las décadas de 1840, 1850 y 1860. (pág. 350)

Organización de Países Exportadores de Petróleo (OPEC, en inglés): Cartel formado en 1960 por los estados del Golfo Pérsico y otros países de riqueza petrolera que permitió a sus miembros ejercer mayor control sobre el precio del petróleo. (pág. 880)

manifiesto de Ostende: Manifiesto de 1854 que exhortó al presidente Franklin Pierce a apoderarse de la provincia esclavista de Cuba que pertenecía a España. Los Demócratas del Norte denunciaron esta agresiva iniciativa y el plan fue desechado. (pág. 379)

sobreapalancamiento: tomar sobre una deuda. (pág. 674)

pacifismo: creencia que la violencia siempre es irrazonable y que los desacuerdos deben resolverse pacíficamente. (pág. 79)

paganismo: creer religiosamente en múltiples dioses. (pág. 21)

paleontology: the scientific study of fossil remains. (p. 528)

palisade: a fence, made of stakes and designed for defense. (p. 166)

Palmer raids: A series of raids led by Attorney General A. Mitchell Palmer on radical organizations that peaked in January 1920, when federal agents arrested six thousand citizens and aliens and denied them access to legal counsel. (p. 653)

pan-Africanism: The idea that people of African descent, in all parts of the world, have a common heritage and destiny and should cooperate in political action. (p. 673)

Panama Canal: A canal across the Isthmus of Panama connecting trade between the Atlantic and Pacific oceans. Built by the U.S. Army Corps of Engineers and opened in 1914, the canal gave U.S. naval vessels quick access to the Pacific and provided the United States with a commanding position in the Western Hemisphere. (p. 631)

pandemic: a global outbreak of a contagious sickness. (p. 636)

Panic of 1819: First major economic crisis of the United States. Farmers and planters faced an abrupt 30 percent drop in world agricultural prices, and as farmers' income declined, they could not pay debts owed to stores and banks, many of which went bankrupt. (p. 241)

Panic of 1837: Triggered by a sharp reduction in English capital and credit flowing into the United States, the cash shortage caused a panic while the collapse of credit led to a depression — the second major economic crisis of the United States — that lasted from 1837 to 1843. (p. 296)

pantheism: the belief that the universe is an embodiment of God. (p. 310)

paradigm: a typical example or model. (p. 530)

paradox: something that may be true despite its apparent contradictions. (p. 83)

parlance: a specific way of using words; jargon. (p. 32)

parochial: relating to a church parish. (p. 532)

partisan: a firm supporter of a political group, person, or cause. (p. 176)

pastoral: to be devoted to raising livestock. (p. 353)

paternalism: The ideology held by slave owners who considered themselves committed to the welfare of their slaves. (p. 257)

Patient Protection and Affordable Care Act: Sweeping 2010 health-care reform bill championed by President Obama that established nearly universal health insurance by providing subsidies and compelling larger businesses to offer coverage to employees. (p. 968)

patriarchy: a political arrangement where a community is ruled by men. (p. 19)

patrician: an aristocrat. (p. 684)

patronage: The power of elected officials to grant government jobs and favors to their supporters; also the jobs and favors themselves. (p. 102)

paleontología: ciencia de estudiar restos fósiles. (pág. 528)

palizada: reja fabricada con estacas, diseñada para la defensa. (pág. 166)

Redadas de Palmer: Serie de redadas dirigidas por el fiscal general, A. Mitchell Palmer, sobre las organizaciones radicales que tuvieron su auge en enero de 1920, cuando agentes federales arrestaron a seis mil ciudadanos y extranjeros y les negaron acceso a un abogado. (pág. 653)

pan-africanismo: La idea de que las personas de descendencia africana en todo el mundo tienen una herencia y destino común y deben cooperar en la acción política. (pág. 673)

Canal de Panamá: Canal que atraviesa el Istmo de Panamá y conecta el comercio entre el océano Pacífico y el Atlántico. Construido por los Cuerpos de Ingenieros del Ejército de los Estados Unidos e inaugurado en 1914, el canal le dio acceso rápido a las embarcaciones navales estadounidenses al Pacífico y ofreció a los Estados Unidos una posición dominante en el Hemisferio Occidental. (pág. 631)

pandemia: brote global de una enfermedad contagiosa. (pág. 636)

crisis de 1819: Primera gran crisis económica de Estados Unidos. Granjeros y hacendados enfrentaron una caída repentina del 30 por ciento en los precios mundiales de la agricultura, y al disminuir los ingresos de los granjeros, les fue imposible pagar las deudas contraídas en tiendas y bancos que, a su vez, terminaron en bancarrota. (pág. 241)

crisis de 1837: Provocada por una fuerte reducción de la entrada de capital y crédito inglés a Estados Unidos, la escasez de efectivo causó pánico y el colapso del crédito llevó a una depresión–la segunda crisis económica mayor en Estados Unidos–que duró de 1837 a 1843. (pág. 296)

panteísmo: creencia de que el universo es la encarnación de Dios. (pág. 310)

paradigma: ejemplo típico o modelo. (pág. 530)

paradoja: idea que puede ser verdadera a pesar de sus aparentes contradicciones. (pág. 83)

habla: forma particular de usar palabras; jerga. (pág. 32)

parroquial: relacionado a una iglesia parroquial. (pág. 532)

partidario: fiel seguidor de un grupo, persona o causa política. (pág. 176)

pastoral: dedicarse a criar ganado. (pág. 353)

paternalismo: Ideología de los dueños de esclavos que consideraban que estaban comprometidos con el bienestar de sus esclavos. (pág. 257)

Ley de Protección al Paciente y Cuidado de Salud Asequible: Arrolladora reforma del cuidado de salud en 2010 impulsada por el presidente Obama que estableció un seguro de saludo casi universal al ofrecer subsidios y obligando a las empresas más grandes a ofrecer cobertura a sus empleados. (pág. 968)

patriarcado: situación política donde la comunidad es gobernada por hombres. (pág. 19)

patricio: un aristócrata. (pag. 684)

mecenazgo: El poder de oficiales electos para conceder cargos gubernamentales y favores a sus seguidores; también los trabajos y favores mismos. (pág. 102)

Peace Corps: Program launched by President Kennedy in 1961 through which young American volunteers helped with education, health, and other projects in developing countries around the world. (p. 777)

Pearl Harbor: A naval base in Pearl Harbor, Hawaii, that was attacked by Japanese bombers on December 7, 1941; more than 2,400 Americans were killed. The following day, President Roosevelt asked Congress for a declaration of war against Japan. (p. 717)

peasants: The traditional term for farmworkers in Europe. Some peasants owned land, while others leased or rented small plots from landlords. (p. 19)

Pendleton Act: An 1883 law establishing a nonpartisan Civil Service Commission to fill federal jobs by examination. The Pendleton Act dealt a major blow to the "spoils system" and sought to ensure that government positions were filled by trained, professional employees. (p. 589)

Pennsylvania constitution of 1776: A constitution that granted all taxpaying men the right to vote and hold office and created a unicameral (one-house) legislature with complete power; there was no governor to exercise a veto. Other provisions mandated a system of elementary education and protected citizens from imprisonment for debt. (p. 185)

penny papers: Sensational and popular urban newspapers that built large circulations by reporting crime and scandals. (p. 317)

pension: a fixed sum of money payed regularly to a retired person. (p. 178)

peonage: system in which someone pays off their debt through labor. (p. 445)

perestroika: The economic restructuring policy introduced by Soviet president Mikhail Gorbachev during the 1980s that contributed, unintentionally, to the 1991 breakup of the Soviet Union. (p. 935)

periphery: the boundary or outer edge of an area. (p. 256)

Persian Gulf War: The 1991 war between Iraq and a U.S.-led international coalition that was sparked by the 1990 Iraqi invasion of Kuwait. A forty-day bombing campaign against Iraq followed by coalition troops storming into Kuwait brought a quick coalition victory. (p. 939)

personal liberty laws: Laws enacted in many northern states that guaranteed to all residents, including alleged fugitives, the right to a jury trial. (p. 377)

Personal Responsibility and Work Opportunity Reconciliation Act: Legislation signed by President Clinton in 1996 that replaced Aid to Families with Dependent Children, the major welfare program dating to the New Deal era, with Temporary Assistance for Needy Families, which provided grants to the states to assist the poor and which limited welfare payments to two years, with a lifetime maximum of five years. (p. 960)

Cuerpos de Paz: Programa lanzado por el presidente Kennedy en 1961 a través del cual jóvenes voluntarios estadounidenses asistieron en la educación, salud y otros proyectos en países en desarrollo alrededor del mundo. (pág. 777)

Pearl Harbor: Base naval en Pearl Harbor, Hawái, que el 7 de diciembre de 1941 fue atacada por bombarderos japoneses; más de 2,400 estadounidenses murieron en el ataque. Al día siguiente, el presidente Roosevelt pidió al Congreso que declarara la guerra contra Japón. (pág. 717)

campesinos: Término tradicional para los trabajadores agrícolas en Europa. Algunos campesinos poseían tierras mientras que otros rentaban pequeños terrenos de sus terratenientes. (pág. 19)

Ley Pendleton: Ley de 1883 que estableció una Comisión de Servicio Civil independiente para ocupar cargos federales con base en méritos. La Ley Pendleton significó un fuerte golpe para el "sistema de concesión de favores" y buscó asegurar que los cargos de gobierno fueran ocupados por empleados profesionales y educados. (pág. 589)

Constitución de Pennsylvania de 1776: Constitución que otorgó a todos los hombres contribuyentes el derecho a votar y ocupar cargos públicos y creó una legislatura de una cámara con poderes completos; no incluyó la figura de un gobernador que pudiera ejercer un veto. Otras disposiciones ordenaron un sistema de educación primaria y protegía a los ciudadanos de ser encarcelados por deudas. (pág. 185)

penny press: Periódicos urbanos sensacionalistas y populares que lograron gran circulación al informar sobre crímenes y escándalos. (pág. 317)

pensión: cantidad fija de dinero que se paga en intervalos regulares a una persona jubilada. (pág. 178)

peonaje: sistema en el cual alguien paga una deuda a través del trabajo. (pág. 445)

perestroika: Política de reestructuración económica introducida por el presidente soviético Mikhail Gorbachev durante la década de 1980 que contribuyó, sin quererlo, a la desintegración de la Unión Soviética en 1991. (pág. 935)

periferia: límite o orilla externa de un área. (pág. 256)

Guerra del Golfo Pérsico: Guerra de 1991 entre Irak y una coalición internacional comandada por Estados Unidos y que fue causada por la invasión de Irak a Kuwait. Tras una campaña de bombardeos de 40 días contra Irak, las tropas de la coalición entraron a Kuwait y lograron rápidamente la victoria para la coalición. (pág. 939)

leyes de libertad personal: Leyes promulgadas en muchos estados del norte que garantizaban a todos los residentes, incluidos los presuntos fugitivos, el derecho a un juicio ante un jurado. (pág. 377)

Ley de Responsabilidad Personal y Reconciliación de Oportunidades: Legislación firmada por el presidente Clinton en 1996 que reemplazó el programa de Asistencia a Familias con Niños Dependientes, principal programa de asistencia que remonta a la era del Nuevo Trato, con el programa Asistencia Temporal para Familias Necesitadas, que ofreció subsidios a los estados para asistir a los pobres y limitó los pagos de asistencia a dos años, con un máximo de por vida de cinco años. (pág. 960)

pestilence: a fatal, often contagious disease. (p. 380)

Philipsburg Proclamation: A 1779 proclamation that declared that any slave who deserted a rebel master would receive protection, freedom, and land from Great Britain. (p. 179)

philosophy: the study of general theories, ideas, and aspects of life. (p. 20)

Pietism: A Christian revival movement characterized by Bible study, the conversion experience, and the individual's personal relationship with God. It began as an effort to reform the German Lutheran Church in the mid-seventeenth century and became widely influential in Britain and its colonies in the eighteenth century. (p. 118)

Pilgrims: One of the first Protestant groups to come to America, seeking a separation from the Church of England. They founded Plymouth, the first permanent community in New England, in 1620. (p. 58)

pirate: a person involved with violence at sea that typically involves robbery. (p. 42)

Planned Parenthood of Southeastern Pennsylvania v. Casey: A 1992 Supreme Court case that upheld a law requiring a twenty-four-hour waiting period prior to an abortion. Although the decision upheld certain restrictions on abortions, it affirmed the "essential holding" in *Roe v. Wade* (1973) that women had a constitutional right to control their reproduction. (p. 958)

plantation: an estate on which crops, such as cotton, are cultivated by resident labor, part. slave labor in the American south. (p. 3)

plantation system: A system of production characterized by unfree labor producing cash crops for distant markets. The plantation complex developed in sugar-producing areas of the Mediterranean world and was transferred to the Americas, where it took hold in tropical and subtropical areas, including Brazil, the West Indies, and southeastern North America. In addition to sugar, the plantation complex was adapted to produce tobacco, rice, indigo, and cotton. (p. 35)

Platt Amendment: A 1902 amendment to the Cuban constitution that blocked Cuba from making a treaty with any country except the United States and gave the United States the right to intervene in Cuban affairs. The amendment was a condition for U.S. withdrawal from the newly independent island. (p. 626)

Plessy v. Ferguson: An 1896 Supreme Court case that ruled that racially segregated railroad cars and other public facilities, if they claimed to be "separate but equal," were permissible according to the Fourteenth Amendment. (p. 539)

plural marriage: The practice of men taking multiple wives, which Mormon prophet Joseph Smith argued was biblically sanctioned and divinely ordained as a family system. (p. 315)

political machine: A highly organized group of insiders that directs a political party. As the power of notables waned in the 1820s, disciplined political parties usually run by professional politicians appeared in a number of states. (p. 276)

pestilencia: enfermedad fatal, a veces contagiosa. (pág. 380)

Proclamación de Philipsburg: Proclamación de 1779 que declaraba que cualquier esclavo que escapara de un maestro rebelde recibiría protección, libertad y tierras de Gran Bretaña. (pág. 179)

filosofía: estudio de teorías generales, ideas y aspectos de la vida. (pág. 20)

pietismo: Movimiento de renacimiento cristiano caracterizado por el estudio de la Biblia, la experiencia de la conversión y la relación personal del individuo con Dios. Comenzó como esfuerzo para reformar la Iglesia Luterana Alemana a mediados del siglo XVII y tuvo gran influencia en Bretaña y sus colonias en el siglo XVIII. (pág. 118)

peregrinos: Uno de los primeros grupos protestantes que llegaron a América buscando separarse de la Iglesia de Inglaterra. Fundaron Plymouth, la primera comunidad permanente en Nueva Inglaterra en 1620. (pág. 58)

pirata: persona involucrada con la violencia en altamar, que típicamente implica robo. (pág. 42)

Planned Parenthood of Southeastern Pennsylvania v. Casey (Planificación de la Familia del Sureste de Pennsylvania contra Casey): Caso de la Corte Suprema de 1992 que mantuvo una ley que requiere un periodo de 24 horas de espera antes de un aborto. Si bien la decisión mantuvo ciertas restricciones sobre el aborto, sostuvo la "determinación esencial" de *Roe v. Wade* (1973), que estableció que las mujeres tienen el derecho constitucional de controlar su reproducción. (pág. 958)

plantación: Una finca de cultivos, por ejemplo de algodón, cultivada por trabajadores residentes, particularmente por esclavos en el sur de los Estados Unidos. (pág. 3)

sistema de plantación: Sistema de producción caracterizado por usar esclavos, que produce cultivos comerciales para mercados lejanos. El sistema de plantación comenzó en las zonas azucareras del mundo mediterráneo y fue transferido a las Américas donde se instaló en zonas tropicales y subtropicales, inclyendo a Brasil, las Indias Occidentales y el sureste de Norteamérica. Aparte del azúcar, las plantaciones fueron adaptadas para producir arroz, tabaco, índigo y algodón. (pág. 35)

Enmienda Platt: Enmienda de 1902 a la constitución cubana que impidió a Cuba firmar tratados con ningún otro país que no fuera Estados Unidos y dio a Estados unidos el derecho a intervenir en asuntos cubanos. La enmienda fue una condición para el retiro de Estados Unidos de la isla recién independizada. (pág. 626)

Plessy v. Ferguson: Caso de la Corte Suprema en 1896 que dictaminó que la segregación racial en vagones de tren y otras instalaciones era permisible bajo la Decimocuarta Enmienda si se aseguraba que eran "separadas pero iguales". (pág. 539)

matrimonio plural: Práctica en la cual los hombres tienen varias esposas, que según el profeta mormón, Joseph Smith, estaba autorizada por la biblia y divinamente ordenado como sistema familiar. (pág. 315)

máquina política: Grupo altamente organizado de personas con información interna que dirigen a un partido. Para la década de 1820, cuando el poder de los notables empezó a disminuir, surgieron partidos políticos disciplinados en varios estados, normalmente dirigidos por políticos profesionales. (pág. 276)

polygamy: the practice of being in a marital or sexual relationship with multiple people at a time. (p. 315)

Popular Front: A small but vocal group of Americans who pushed for greater U.S. involvement in Europe. American Communist Party members, African American civil rights activists, and trade unionists, among other members of the Popular Front coalition, encouraged Roosevelt to take a stronger stand against European fascism. (p. 714)

popular sovereignty: The principle that ultimate power lies in the hands of the electorate. Also a plan, first promoted by Democratic candidate Senator Lewis Cass as "squatter sovereignty," then revised as "popular sovereignty" by fellow Democratic presidential aspirant Stephen Douglas, under which Congress would allow settlers in each territory to determine its status as free or slave. (pp. 168)

Port Huron Statement: A 1962 manifesto by Students for a Democratic Society from its first national convention in Port Huron, Michigan, expressing students' disillusionment with the nation's consumer culture and the gulf between rich and poor, as well as a rejection of Cold War foreign policy, including the war in Vietnam. (p. 855)

"positive good": In 1837, South Carolina Senator John C. Calhoun argued on the floor of the Senate that slavery was not a necessary evil, but a positive good, "indispensable to the peace and happiness" of blacks and whites alike. (p. 257)

Potsdam Conference: The July 1945 conference in which American officials convinced the Soviet Union leader Joseph Stalin to accept German reparations only from the Soviet zone, or far eastern part of Germany. The agreement paved the way for the division of Germany into East and West. (p. 752)

precept: a general rule or principle intended to control behavior or thought. (p. 533)

precinct: a city or town district established for political purposes. (p. 572)

preemptive: preventive measures being made against something, such as a preemptive war that is stared in order to avoid potential attacks. (p. 223)

prerogative: an exclusive right held by a high official, or a special freedom held by certain people. (p. 186)

Presidential Commission on the Status of Women: Commission appointed by President Kennedy in 1961, which issued a 1963 report documenting job and educational discrimination. (p. 852)

prestige: honor, esteem, or noble status. (p. 281)

privateer: a private person or ship hired by a government for use in war. (p. 42)

privation: the deprivation of human essentials, such as food and warmth. (p. 754)

poligamia: práctica de estar en una relación marital o sexual con varias personas a la vez. (pág. 315)

Frente Popular: Pequeño grupo de estadounidenses que hizo escuchar su deseo de aumentar la injerencia de los Estados Unidos en Europa. Miembros del Partido Comunista Americano, activistas de derechos civiles afroamericanos y sindicalistas, entre otros miembros de la coalición del Frente Popular, solicitaron a Roosevelt que asumiera una postura más fuerte ante el fascismo europeo. (pág. 714)

soberanía popular: Principio que establece que el poder descansa finalmente en las manos del electorado. También fue un plan, promovido en un principio por el Senador Lewis Cass, candidato demócrata, como "soberanía de los ocupantes", que luego fue revisada como "soberanía popular" por el aspirante demócrata a la presidencia, Stephen Douglas. Bajo este plan el Congreso permitiría a los pobladores determinar si su territorio sería libre o esclavista. (págs. 168)

Declaración de Port Huron: Manifiesto de los Students for a Democratic Society (Estudiantes para una Sociedad Democrática) en su primera convención nacional en Port Huron, Michigan, que expresaba la desilusión de los estudiantes con la cultura de consumo del país y la enorme brecha entre ricos y pobres, además de rechazar la política exterior de la Guerra Fría, incluyendo la Guerra de Vietnam. (pág. 855)

"bien positivo": En 1837, el senador de Carolina del Sur John C. Calhoun argumentó ante el Senado que la esclavitud no era un mal necesario, sino un bien positivo, "indispensable para la paz y la felicidad" de los negros y los blancos por igual. (pág. 257)

Conferencia de Potsdam: Conferencia llevada a cabo en 1945 en la cual oficiales americanos convencieron a Iósif Stalin, líder de la Unión Soviética, para que aceptara únicamente compensaciones por la zona de ocupación soviética, o la región más oriental de Alemania. El acuerdo pavimentó el camino para la división de Alemania en Oriental y Occidental. (pág. 752)

precepto: regla general o principio creado con la intención de controlar el pensamiento o comportamiento. (pág. 533)

precinto: ciudad o distrito establecido con fines políticos. (pág. 572)

prevención: medidas tomadas en anticipación de un evento, por ejemplo una guerra preventiva que se inicia para prevenir ataques potenciales. (pág. 223)

prerrogativa: derecho exclusivo de un alto oficial o libertad especial que mantienen ciertas personas. (pág. 186)

Comisión Presidencial para el Estatus de las Mujeres: Comisión designada por el presidente Kennedy en 1961 que expidió un reporte en 1963 documentando la discriminación laboral y educativa. (pág. 852)

prestigio: honor, estima o estatus de nobleza. (pág. 281)

corsario: persona privada o embarcación contratada por un gobierno para la guerra. (pág. 42)

privación: falta de bienes esenciales humanos, como alimento y calor. (pág. 754)

Proclamation of Neutrality: A proclamation issued by President George Washington in 1793, allowing U.S. citizens to trade with all belligerents in the war between France and Great Britain. (p. 208)

producerism: The argument that real economic wealth is created by workers who make their living by physical labor, such as farmers and craftsmen, and that merchants, lawyers, bankers, and other middlemen unfairly gain their wealth from such "producers." (p. 519)

profit: a monetary gain made after the sale of something for a higher price than what the seller originally paid. (p. 3)

progressivism: A loose term for the cause of political reformers — especially those from the elite and middle classes — who worked to improve the political system, fight poverty, conserve environmental resources, and increase government involvement in the economy. Giving their name to the "Progressive Era," such reformers were often prompted to act by fear that mass, radical protests by workers and farmers would spread, as well as by their desire to enhance social welfare and social justice. (p. 575)

proliferate: to spread greatly and quickly multiply. (p. 453)

prominent: important; very noticeable. (p. 40)

proponent: argument in favor of something. (p. 692)

Proposition 13: A measure passed overwhelmingly by Californians to roll back property taxes, cap future increases for present owners, and require that all tax measures have a two-thirds majority in the legislature. Proposition 13 inspired "tax revolts" across the country and helped conservatives define an enduring issue: low taxes. (p. 888)

Proposition 209: A proposition approved by California voters in 1996 that outlawed affirmative action in state employment and public education. (p. 956)

proprietorship: A colony created through a grant of land from the English monarch to an individual or group, who then set up a form of government largely independent from royal control. (p. 77)

proselytize: to recruit someone to convert from one faith to another. (p. 622)

protective tariff: A tax or duty on foreign producers of goods coming into or imported into the United States; tariffs gave U.S. manufacturers a competitive advantage in America's gigantic domestic market. (p. 464)

Protestant Reformation: The reform movement that began in 1517 with Martin Luther's critiques of the Roman Catholic Church and that precipitated an enduring schism that divided Protestants from Catholics. (p. 23)

Public Works Administration: A New Deal construction program established by Congress in 1933. Designed to put people back to work, the PWA built the Boulder Dam (renamed Hoover Dam)

Proclamación de neutralidad: Proclamación emitida por el presidente George Washington en 1793 que permitió a los ciudadanos de Estados Unidos comerciar con todos los beligerantes durante la guerra entre Francia y Gran Bretaña. (pág. 208)

productorismo: Argumento que establece que la verdadera riqueza económica es creada por trabajadores que se ganan la vida mediante el trabajo físico, como lo hacen los granjeros y artesanos mientras que los comerciantes, abogados, banqueros y demás intermediarios logran su riqueza injustamente a costa de aquellos "productores". (pág. 519)

ganancia: ganancia monetaria conseguida tras la venta de algo por un precio más alto que aquel que el vendedor pagó originalmente. (pág. 3)

progresismo: Término general para describir la causa que buscaban los reformistas políticos—particularmente de élite y de las clases medias—que trabajaron para mejorar el sistema político, combatir la pobreza, conservar recursos ambientales y aumentar la participación del gobierno en la economía. Los reformistas, que le dieron su nombre a la "Era Progresista", actuaban por miedo a que las protestas radicales de trabajadores y agricultores se extendieran, además del deseo de mejorar el bienestar social y la justicia social. (pág. 575)

proliferar: esparcirse en gran medida y multiplicarse rápidamente. (pág. 453)

prominente: importante; muy notable. (pág. 40)

defensor: argumento a favor de algo. (pág. 692)

Proposición 13: Medida aprobada por una mayoría aplastante de californianos para reducir impuestos sobre la propiedad, limitar los aumentos futuros para propietarios actuales y requerir que toda medida fiscal sea aprobada por mayoría de dos terceras partes en la legislatura. La Proposición 13 inspiró "revueltas contra los impuestos" en todo el país y ayudó a los conservadores a definir un tema duradero: los bajos impuestos. (pág. 888)

Proposición 209: Proposición aprobada por votantes californianos en 1996 que proscribió la acción afirmativa en el empleo estatal y la educación pública. (pág. 956)

propiedad: Colonia creada a través de tierras concedidas por un monarca inglés a una persona o grupo, que entonces crea un gobierno independiente, a grandes rasgos, del control real. (pág. 77)

proselitismo: reclutar a alguien para convertirlo de una fe a otra. (pág. 622)

tarifa protectora: Impuesto a productores extranjeros de bienes que entran o son importados a los Estados Unidos; los aranceles le dieron una ventaja competitiva a los fabricantes estadounidenses dentro del enorme mercado doméstico del país. (pág. 464)

Reforma Protestante: Movimiento de reforma que comenzó en 1517 con las críticas de Martín Lutero a la Iglesia Católica Romana y que precipitó un cisma duradero que dividió a los protestantes de los católicos. (pág. 23)

Administración de Obras Públicas (PWA): Programa de construcción de la época del Nuevo Trato establecido por el Congreso en 1933. Diseñada para devolver a las personas al empleo,

and Grand Coulee Dam, among other large public works projects. (p. 687)

Pueblo Revolt: Also known as Popé's Rebellion, the revolt in 1680 was an uprising of 46 Native American pueblos against Spanish rule. Spaniards were driven out of New Mexico. When they returned in the 1690s, they granted more autonomy to the pueblos they claimed to rule. (p. 66)

Pure Food and Drug Act: A 1906 law regulating the conditions in the food and drug industries to ensure a safe supply of food and medicine. (p. 580)

Puritans: Dissenters from the Church of England who wanted a genuine Reformation rather than the partial Reformation sought by Henry VIII. The Puritans' religious principles emphasized the importance of an individual's relationship with God developed through Bible study, prayer, and introspection. (p. 59)

Quakers: Epithet for members of the Society of Friends. Their belief that God spoke directly to each individual through an "inner light" and that neither ministers nor the Bible was essential to discovering God's Word put them in conflict with both the Church of England and orthodox Puritans. (p. 78)

Quartering Act of 1765: A British law passed by Parliament at the request of General Thomas Gage, the British military commander in America, that required colonial governments to provide barracks and food for British troops. (p. 147)

race riot: A term for an attack on African Americans by white mobs, triggered by political conflicts, street altercations, or rumors of crime. In some cases, such "riots" were not spontaneous but planned in advance by a group of leaders seeking to enforce white supremacy. (p. 565)

Radical Republicans: The members of the Republican Party who were bitterly opposed to slavery and to southern slave owners since the mid-1850s. With the Confiscation Act in 1861, Radical Republicans began to use wartime legislation to destroy slavery. (p. 406)

"rain follows the plow": An unfounded theory that settlement and farming of the Great Plains caused an increase in rainfall. (p. 472)

rancor: bitterness; resent. (p. 770)

Reagan coalition: A coalition supporting Ronald Reagan that included the traditional core of Republican Party voters, middle-class suburbanites and migrants to the Sunbelt states, blue-collar Catholics, and a large contingent of southern whites, an electorally key group of former Democrats that had been gradually moving toward the Republican Party since 1964. (p. 922)

Reagan Democrats: Blue-collar Catholics from industrialized midwestern states such as Michigan, Ohio, and Illinois who were

la PWA sirvió para construir la Presa de Boulder (cuyo nombre cambió después a Presa de Hoover) y la Presa Grand Coulee y otras grandes obras. (pág. 687)

Rebelión de los Indios: También conocida como la Rebelión de Popé, la revuelta de 1680 fue un levantamiento de 46 pueblos nativos americanos contra el dominio español. Los españoles fueron expulsados de Nuevo México. Cuando regresaron en la década de 1690, concedieron mayor autonomía a los pueblos a quienes afirmaban gobernar. (pág. 66)

Ley de Pureza de Alimentos y Medicamentos: Ley de 1906 que reguló las condiciones en las industrias de alimentos y medicamentos para asegurar un abastecimiento seguro de alimentos y medicinas. (pág. 580)

puritanos: Disidentes de la Iglesia de Inglaterra que deseaban una reforma genuina en lugar de la reforma parcial buscada por Enrique VIII. Los principios religiosos de los puritanos resaltaban la importancia de la relación del individuo con Dios, que se desarrolla a través del estudio de la Biblia, la oración y la introspección. (pág. 59)

cuáqueros: Epíteto para miembros de la Sociedad de Amigos. Por creer que Dios le hablaba directamente a cada individuo a través de una "luz interna" y que ni los ministros ni la Biblia eran esenciales para descubrir la Palabra de Dios, entraron en conflicto con la Iglesia de Inglaterra y los puritanos ortodoxos. (pág. 78)

Ley del Alojamiento de 1765: Ley británica aprobada por el Parlamento por solicitud del general Thomas Gage, comandante militar británico en América, que requería que los gobiernos proveyeran cuarteles y alimento para las tropas británicas. (pág. 147)

disturbios raciales: Término para describir un ataque perpetrado por grupos blancos contra afroamericanos, provocado por conflictos políticos, altercados callejeros o rumores de crímenes. En algunos casos, tales "disturbios" no fueron espontáneos sino planeados por adelantado por grupos de líderes que buscaban imponer la supremacía blanca. (pág. 565)

republicanos radicales: Miembros del Partido Republicano que se opusieron amargamente a la esclavitud y a los dueños de esclavos desde mediados de la década de 1850. Con la Ley de Confiscación en 1861, los republicanos radicales empezaron a usar la legislación de tiempos de guerra para destruir la esclavitud. (pág. 406)

"la lluvia sigue al arado": Teoría sin fundamento que decía que los asentamientos y el cultivo de las Grandes Planicies causarían un aumento en las lluvias. (pág. 472)

rencor: amargura; resentimiento. (pág. 770)

Coalición Reagan: Coalición en favor de Ronald Reagan que incluyó al núcleo tradicional de votantes del Partido Republicano, personas de clase media de los suburbios y migrantes habitantes de los estados del Sur y Suroeste, obreros católicos y un gran contingente de blancos sureños, grupo clave, en términos electorales, de antiguos demócratas que transitó gradualmente hacia el Partido Republicano a partir de 1964. (pág. 922)

Demócratas por Reagan: Obreros católicos de los estados industrializados del Medio Oeste como Michigan, Ohio e Illinois, que

dissatisfied with the direction of liberalism in the 1970s and left the Democratic Party for the Republicans. (p. 922)

realism: A movement that called for writers and artists to picture daily life as precisely and truly as possible. (p. 535)

rebate: a refund. (p. 500)

reconnaissance: a military survey of enemy territory to gain information. (p. 776)

reconstitute: to change into a different form. (p. 600)

Reconstruction Act of 1867: An act that divided the conquered South into five military districts, each under the command of a U.S. general. To reenter the Union, former Confederate states had to grant the vote to freedmen and deny it to leading ex-Confederates. (p. 437)

Red Scare: A term for anticommunist hysteria that swept the United States, first after World War I, and led to a series of government raids on alleged subversives and a suppression of civil liberties. (p. 653)

Red Summer: The summer and fall of 1919, in which antiblack riots by white Americans in more than two dozen cities led to hundreds of deaths. So named because of the bloody clashes. The worst occurred in Chicago, in which 38 people were killed (23 blacks, 15 whites), 537 injured, and 1,000 black families made homeless. (p. 654)

redemptioner: A common type of indentured servant in the Middle colonies in the eighteenth century. Unlike other indentured servants, redemptioners did not sign a contract before leaving Europe. Instead, they found employers after arriving in America. (p. 116)

referendum: voting on a proposed law carried out directly by the population, rather than leaving it in the hands of legislators. (p. 392)

reforestation: the natural or intentional renewal of forests and woodlands that have been depleted. (p. 687)

Regulators: Landowning protestors who organized in North and South Carolina in the 1760s and 1770s to demand that the eastern-controlled government provide western districts with more courts, fairer taxation, and greater representation in the assembly. (p. 133)

Religious Right: Politically active religious conservatives, especially Catholics and evangelical Christians, who became particularly vocal in the 1980s against feminism, abortion, and homosexuality and who promoted "family values." (p. 916)

repercussion: an outcome, especially an unwelcome one. (p. 710)

Report on Manufactures: A proposal by treasury secretary Alexander Hamilton in 1791 calling for the federal government to urge the expansion of American manufacturing while imposing tariffs on foreign imports. (p. 207)

se encontraban insatisfechos con la dirección del liberalismo en la década de 1970 y que dejaron al Partido Demócrata por los republicanos. (pág. 922)

realismo: Movimiento que llamaba a artistas y escritores a relatar la vida diaria de la manera más precisa y fidedigna posible. (pág. 535)

descuento: un reembolso. (pág. 500)

reconocimiento: inspección militar del territorio enemigo para obtener información. (pág. 776)

reconstituir: cambiar algo para darle una forma diferente. (pág. 600)

Ley de Reconstrucción de 1867: Ley que dividió al Sur conquistado en cinco distritos militares, cada uno bajo el mando de un general de los Estados Unidos. Para reingresar a la Unión, los antiguos estados Confederados debían otorgar el derecho de voto a los libertos y negárselo a los dirigentes ex confederados. (pág. 437)

Temor Rojo: Término para describir la histeria anticomunista que cimbró a los Estados Unidos al concluir la Primera Guerra Mundial, y que condujo a una serie de redadas gubernamentales a supuestas personas subversivas y a la supresión de libertades civiles. (pág. 653)

Verano Rojo: El verano y otoño de 1919, en los cuales los disturbios anti-negros perpetrados por americanos blancos en más de dos docenas de ciudades ocasionaron cientos de muertes. Obtuvo su nombre por los choques sangrientos. El peor sucedió en Chicago, donde murieron 38 personas (23 negros, 15 blancos), 537 personas fueron heridas y más de mil familias negras se quedaron sin hogar. (pág. 654)

redemptioner: Tipo común de sirviente aprendiz en las colonias medias del siglo XVIII. A diferencia de otros sirvientes como ellos, los redemptioners no firmaban un contrato antes de dejar Europa. En cambio, encontraban patrones al llegar a América. (pág. 116)

referendo: voto sobre una propuesta de ley llevado a cabo directamente por la población en lugar de dejarlo en manos de los legisladores. (pág. 392)

reforestación: renovación natural o intencional de los bosques y zonas arboladas que han sido reducidas. (pág. 687)

reguladores: Manifestantes terratenientes que, en las décadas de 1760 y 1770 en Carolina del Norte y del Sur, se organizaron para exigir que el gobierno controlado por el este proveyera más tribunales, impuestos más justos y mayor representación en la asamblea a los distritos del oeste. (pág. 133)

Derecha Religiosa: Conservadores religiosos políticamente activos, especialmente católicos y cristianos evangélicos, que en la década de 1980 fueron particularmente activos en su postura contra el feminismo, el aborto, los homosexuales y que promovían los "valores de la familia". (pág. 916)

repercusión: resultado especialmente desfavorable. (pág. 710)

Informe sobre manufacturas: Propuesta del secretario de la tesorería, Alexander Hamilton, en 1791 pidiendo al gobierno federal la expansión de la manufactura estadounidense y al mismo tiempo la imposición de aranceles sobre exportaciones extranjeras. (pág. 207)

Report on the Public Credit: Alexander Hamilton's 1790 report recommending that the federal government should assume all state debts and fund the national debt — that is, offer interest on it rather than repaying it — at full value. Hamilton's goal was to make the new country creditworthy, not debt-free. (p. 205)

repository: a storage place. (p. 82)

republic: A state without a monarch or prince that is governed by representatives of the people. (p. 20)

republican aristocracy: The Old South gentry that built impressive mansions, adopted the manners and values of the English landed gentry, and feared federal government interference with their slave property. (p. 335)

republican motherhood: The idea that the primary political role of American women was to instill a sense of patriotic duty and republican virtue in their children and mold them into exemplary republican citizens. (p. 278)

repudiate: to refuse acceptance or reject authority. (p. 59)

retinue: a group of assistants and/or advisers. (p. 25)

Revenue Act: A 1942 act that expanded the number of people paying income taxes from 3.9 million to 42.6 million. These taxes on personal incomes and business profits paid half the cost of World War II. (p. 717)

revile: to criticize abusively or insultingly. (p. 853)

revival: A renewal of religious enthusiasm in a Christian congregation. In the eighteenth century, revivals were often inspired by evangelical preachers who urged their listeners to experience a rebirth. (p. 121)

rights liberalism: The conviction that individuals require government protection from discrimination. This version of liberalism was promoted by the civil rights and women's movements and focused on identities — such as race or gender — rather than the general social welfare of New Deal liberalism. (p. 810)

Rocky Mountains: A high mountain range that spans some 3,000 miles, the Rocky Mountains are bordered by the Great Plains on the east and the Great Basin on the west. Native peoples fished, gathered roots and berries, and hunted elk, deer, and bighorn sheep there. Silver mining boomed in the Rockies in the nineteenth century. (p. 15)

Roe v. Wade: The 1973 Supreme Court ruling that the Constitution protects the right to abortion, which states cannot prohibit in the early stages of pregnancy. The decision galvanized social conservatives and made abortion a controversial policy issue for decades to come. (p. 897)

romanticism: A European philosophy that rejected the ordered rationality of the eighteenth-century Enlightenment, embracing human passion, spiritual quest, and self-knowledge. Romanticism strongly influenced American transcendentalism. (p. 309)

Rome-Berlin Axis: A political and military alliance formed in 1936 between German dictator Adolf Hitler and the Italian dictator Benito Mussolini. (p. 713)

Informe sobre el crédito público: Reporte de Alexander Hamilton en 1790 que recomendó que el gobierno federal debe asumir todas las deudas estatales y financiar la deuda nacional–es decir, que ofrezcan interés sobre la deuda en lugar de pagarla–en su valor total El objetivo de Hamilton fue lograr que el país fuera solvente, no que estuviera libre de deudas. (pág. 205)

repositorio: sitio para almacenar. (pág. 82)

república: Estado sin monarca o príncipe gobernado por representantes del pueblo. (pág. 20)

aristocracia republicana: La pequeña nobleza del Viejo Sur que construyó mansiones impresionantes, adoptó las maneras y valores de la nobleza inglesa y temía que el gobierno interfiriera con su propiedad de esclavos. (pág. 335)

maternidad republicana: La idea de que el papel principal de las mujeres americanas era instaurar un sentido de deber patriótico y de virtud republicana en sus hijos para forjar ciudadanos republicanos ejemplares. (pág. 278)

repudiar: negarse a aceptar o rechazar a la autoridad. (pág. 59)

comitiva: grupo de asistentes y/o consejeros. (pág. 25)

Ley de Ingresos: Ley de 1942 que aumentó el número de personas que pagaban impuestos sobre la renta de de 3.9 millones a 42.6 millones. Estos impuestos sobre ingresos personales y de ganancias de negocios pagaron la mitad del costo de la Segunda Guerra Mundial. (pág. 717)

injuriar: criticar de manera abusiva o con intención de insultar. (pág. 853)

renacimiento: Renovación del entusiasmo religioso en una congreagación cristiana. En el siglo XVIII, los renacimientos fueron inspirados normalmente por predicadores evangélicos que exhortaban a sus seguidores a vivir un renacer. (pág. 121)

liberalismo de derechos: La convicción de que los individuos requieren protección gubernamental contra la discriminación. Esta versión del liberalismo fue promovida por los movimientos de derechos civiles de las mujeres y se enfocaba en la identidad —de raza o de género —más que en el bienestar social general del liberalismo del Nuevo Trato. (pág. 810)

Rocallosas: Cadena montañosa elevada que se extiende sobre aproximadamente 3000 millas. Las Rocallosas están bordeadas por las Grandes Llanuras al este y la Gran Cuenca al oeste. Ahí, los pueblos nativos pescaban, recolectaban raíces comestibles y moras, y cazaban alces, venado y borregos cimarrones. La minería de plata tuvo un auge en las Rocalloseas a mediados del siglo XIX. (pág. 15)

Roe v. Wade: Decisión de la Corte Suprema en 1973 que protege el derecho a abortar, que los estados no pueden prohibir en las etapas iniciales del embarazo. La decisión impulsó a los conservadores sociales y convirtió al aborto en un tema político controvertido en las décadas siguientes. (pág. 897)

romanticismo: Filosofía europea que rechazaba la racionalidad ordenada de la Ilustración del siglo XVIII para adoptar la pasión humana, la búsqueda espiritual y el auto-conocimiento. El romanticismo influyó en gran medida sobre el trascendentalismo americano. (pág. 309)

Eje Roma-Berlín: Alianza política y militar formada en 1936 entre el dictador alemán Adolf Hitler y el dictador italiano Benito Mussolini. (pág. 713)

Roosevelt Corollary: The 1904 assertion by President Theodore Roosevelt that the United States would act as a "policeman" in the Caribbean region and intervene in the affairs of nations that were guilty of "wrongdoing or impotence" in order to protect U.S. interests in Latin America. (p. 631)

Roosevelt recession: A recession from 1937 to 1938 that occurred after President Roosevelt cut the federal budget. (p. 693)

Root-Takahira Agreement: A 1908 agreement between the United States and Japan confirming principles of free oceanic commerce and recognizing Japan's authority over Manchuria. (p. 630)

royal colony: In the English system, a royal colony was chartered by the crown. The colony's governor was appointed by the crown and served according to the instructions of the Board of Trade. (p. 46)

Rural Electrification Administration: An agency established in 1935 to promote nonprofit farm cooperatives that offered loans to farmers to install power lines. (p. 705)

Rust Belt: The once heavily industrialized regions of the Northeast and Midwest that went into decline after deindustrialization. By the 1970s and 1980s, these regions were full of abandoned plants and distressed communities. (p. 886)

saccharine: overly sweet. (p. 790)

sadistic: deriving gratification through the suffering or humilation of another person. (p. 347)

salutary neglect: A term used to describe British colonial policy during the reigns of George I (r. 1714–1727) and George II (r. 1727–1760). By relaxing their supervision of internal colonial affairs, royal bureaucrats inadvertently assisted the rise of self-government in North America. (p. 102)

Sand Creek massacre: The November 29, 1864, massacre of more than a hundred peaceful Cheyennes, largely women and children, by John M. Chivington's Colorado militia. (p. 480)

Sandinistas: The democratically elected group in Nicaragua that President Reagan accused of threatening U.S. business interests. Reagan attempted to overthrow them by ordering the CIA to assist an armed opposition group called the Contras. (p. 931)

scientific management: A system of organizing work developed by Frederick W. Taylor in the late nineteenth century. It was designed to coax maximum output from the individual worker, increase efficiency, and reduce production costs. (p. 505)

Scopes trial: The 1925 trial of John Scopes, a biology teacher in Dayton, Tennessee, for violating his state's ban on teaching evolution. The trial created a nationwide media frenzy and came to be seen as a showdown between urban and rural values. (p. 666)

Corolario Roosevelt: Declaración del presidente Theodore Roosevelt en 1904, afirmando que Estados Unidos actuaría como "policía" en la región del Caribe e intervendría en los asuntos de naciones que fueran culpables de "obrar mal o de impotencia" y así proteger los intereses de los Estados Unidos en América Latina. (pág. 631)

Recesión de Roosevelt: Recesión ocurrida de 1937 a 1938 tras los recortes del presidente Roosevelt al presupuesto federal. (pág. 693)

Acuerdo Root-Takahira: Acuerdo firmado en 1908 entre los Estados Unidos y Japón confirmando los principios de comercio marítimo libre y en reconocimiento de la autoridad japonesa sobre Manchuria. (pág. 630)

colonia real: En el sistema inglés, la corona decretaba las colonias reales. La corona designaba al gobernador de la colonia y éste servía de acuerdo a las instrucciones de la Junta de Comercio. (pág. 46)

Administración de la Electrificación Rural: Agencia establecida en 1935 para promover cooperativas rurales sin fines de lucro que ofrecieron préstamos a granjeros para que instalaran cables de suministro eléctrico. (pág. 705)

Rust Belt (región): Las regiones que anteriormente estuvieron altamente industrializadas en el Noreste y Medio Oeste y que empezaron a declinar con la desindustrialización. Para las décadas de 1970 y 1980, en estas regiones abundaban las plantas abandonadas y las comunidades afligidas. (pág. 886)

sacarina: excesivamente dulce. (pág. 790)

sádico: obtener gratificación a través del sufrimiento o humillación de otra persona. (pág. 347)

negligencia saludable: Término usado para describir al proyecto colonial británico durante el reinado de George I (r. 1714–1727) y George II (r. 1727–1760). Al relajar la supervisión de los asuntos internos coloniales, los burócratas reales inadvertidamente asistieron al surgimiento del auto-gobierno en América del Norte. (pág. 102)

Masacre de Sand Creek: En la masacre ocurrida el 29 de noviembre de 1964, murieron más de cien indígenas cheyenne pacíficos, en su mayoría mujeres y niños, a manos de la milicia de John M. Chivington en Colorado. (pág. 480)

Sandinistas: Grupo elegido democráticamente en Nicaragua que el presidente Reagan acusó de amenazar intereses comerciales de los Estados Unidos. Reagan trató de derrocarlos ordenando a la CIA que asistiera al grupo de oposición armada conocido como los Contras. (pág. 931)

administración científica: Sistema de organización del trabajo desarrollado por Frederick W. Taylor a finales del siglo XIX. Fue diseñado para obtener la producción máxima de cada trabajador individual, aumentar la eficiencia y reducir los costos de producción. (pág. 505)

Juicio de Scopes: El juicio en 1925 del maestro de biología, John Scopes, en Dayton, Tennessee, por violar la prohibición estatal de la enseñanza de la evolución. El juicio causó un frenesí mediático a nivel nacional y llegó a ser percibido como un enfrentamiento entre valores urbanos y rurales. (pág. 666)

Second Bank of the United States: National bank with multiple branches chartered in 1816 for twenty years. Intended to help regulate the economy, the bank became a major issue in Andrew Jackson's reelection campaign in 1832. (p. 286)

Second Continental Congress: Legislative body that governed the United States from May 1775 through the war's duration. It established an army, created its own money, and declared independence once all hope for a peaceful reconciliation with Britain was gone. (p. 165)

Second Great Awakening: A series of evangelical Protestant revivals extending from the 1790s to the 1830s that prompted thousands of conversions and widespread optimism about Americans' capacity for progress and reform. (p. 304)

Second Hundred Years' War: An era of warfare beginning with the War of the League of Augsburg in 1689 and lasting until the defeat of Napoleon at Waterloo in 1815. In that time, England fought in seven major wars; the longest era of peace lasted only twenty-six years. (p. 82)

secret ballot: Form of voting that allows the voter to enter a choice in privacy without having to submit a recognizable ballot or to voice the choice out loud to others. (p. 339)

Securities and Exchange Commission: A commission established by Congress in 1934 to regulate the stock market. The commission had broad powers to determine how stocks and bonds were sold to the public, to set rules for margin (credit) transactions, and to prevent stock sales by those with inside information about corporate plans. (p. 689)

sedentary: leisurely or inactive lifestyle. (p. 18)

Sedition Act of 1918: Wartime law that prohibited any words or behavior that might promote resistance to the United States or help in the cause of its enemies. (p. 639)

self-made man: A nineteenth-century ideal that celebrated men who rose to wealth or social prominence from humble origins through self-discipline, hard work, and temperate habits. (p. 269)

semisedentary societies: Societies whose members combine slash-and-burn agriculture with hunting and fishing. Semisedentary societies often occupy large village sites near their fields in the summer, then disperse during the winter months into smaller hunting, fishing, and gathering camps, regathering again in spring to plant their crops. (p. 8)

Seneca Falls Convention: The first women's rights convention in the United States. Held in Seneca Falls, New York, in 1848, it resulted in a manifesto extending to women the egalitarian republican ideology of the Declaration of Independence. (p. 328)

service industries: Term that includes food, beverage, and tourist industries, financial and medical service industries, and computer technology industries, which were the leading sectors of U.S. growth in the second half of the 1980s. This pattern

Segundo Banco de los Estados Unidos: Banco nacional con múltiples sucursales constituido en 1816 por 20 años. Creado con la intención de ayudar a regular la economía, el banco se convirtió en uno de los puntos principales de la campaña de reelección de Andrew Jackson en 1832. (pág. 286)

Segundo Congreso Continental: Órgano legislativo que gobernó a los Estados Unidos desde mayo de 1775 hasta que terminó la guerra. Estableció un ejército, creó su propio dinero y declaró la independencia cuando toda esperanza de una reconciliación pacífica con Bretaña había desaparecido. (pág. 165)

Segundo Gran Despertar: Serie de renacimientos evangélicos protestantes que duraron desde la década de 1790 hasta la década de 1830 y que fue causa de miles de conversiones y de un optimismo generalizado sobre la capacidad de los estadounidenses para el progreso y la reforma. (pág. 304)

Segunda Guerra de los Cien Años: Era de conflictos bélicos que comenzó con la guerra de la Liga de Augsburgo en 1689 y que duró hasta la derrota de Napoleón en Waterloo en 1815. Durante ese tiempo, Inglaterra estuvo en siete grandes guerras; el periodo de paz más largo duró a penas 26 años. (pág. 82)

voto secreto: Forma de voto que permite al votante marcar su elección sin tener que entregar una boleta reconocible ni revelar en voz alta su decisión a los demás. (pág. 339)

Comisión de Bolsa y Valores: Comisión establecida por el Congreso en 1934 para regular la bolsa de valores. La comisión contaba con amplios poderes para determinar cómo se venderían las acciones y los bonos al público, para establecer las reglas de operaciones marginales (de crédito) y para prevenir la venta de acciones por aquellos con información interna sobre planes corporativos. (pág. 689)

sedentario: estilo de vida relajado o inactivo. (pág. 18)

Ley de Sedición de 1918: Ley de tiempos de guerra que prohibió cualquier expresión o comportamiento que pudiera promover la resistencia contra los Estados Unidos o servir a la causa de sus enemigos. (pág. 639)

hombre que prosperó: Ideal del siglo XIX que celebraba a los hombres que habían alcanzado la riqueza o la prominencia social desde orígenes humildes gracias a la disciplina, el esfuerzo y los hábitos moderados. (pág. 269)

sociedades semisedentarias: Sociedades cuyos miembros combinan la agricultura despiadada con la pesca y la cacería. Las sociedades semisedentarias suelen ocupar grandes villas cerca de sus cultivos en el verano para dispersarse durante el invierno en campamentos de cacería, pesca y recolección, y juntarse de nuevo en primavera para sembrar sus cultivos. (pág. 8)

Convención de Seneca Falls: Primera convención de derechos de la mujer en Estados Unidos. Celebrada en 1848 en Seneca Falls, Nueva York, dio como resultado un manifiesto que extendió la ideología igualitaria republicana de la Declaración de Independencia para incluir a las mujeres. (pág. 328)

Industrias de servicio: Término que incluye las industrias de alimentos, bebidas y turismo, así como la industria financiera y de servicios médicos y las industrias de tecnología informática, que fueron los sectores líderes del crecimiento de los Estados Unidos en la segunda mitad de la década de 1980. Este patrón

represented a shift from reliance on the heavy industries of steel, autos, and chemicals. (p. 928)

Servicemen's Readjustment Act: Popularly known as the GI Bill, 1944 legislation authorizing the government to provide World War II veterans with funds for education, housing, and health care, as well as loans to start businesses and buy homes. (p. 725)

shantytown: area around a city that is settled by the poor, characterized by small, rickety buildings. (p. 682)

sharecropping: The labor system by which landowners and impoverished southern farmworkers, particularly African Americans, divided the proceeds from crops harvested on the landowner's property. With local merchants providing supplies—in exchange for a lien on the crop—sharecropping pushed farmers into cash-crop production and often trapped them in long-term debt. (p. 444)

Sharon Statement: Drafted by founding members of the Young Americans for Freedom (YAF), this manifesto outlined the group's principles and inspired young conservatives who would play important roles in the Reagan administration in the 1980s. (p. 860)

Shays's Rebellion: A 1786–1787 uprising led by dissident farmers in western Massachusetts, many of them Revolutionary War veterans, protesting the taxation policies of the eastern elites who controlled the state's government. (p. 191)

Shelley v. Kraemer: A 1948 Supreme Court decision that outlawed restrictive covenants on the occupancy of housing developments by African Americans, Asian Americans, and other minorities. Because the Court decision did not actually prohibit racial discrimination in housing, unfair practices against minority groups continued until passage of the Fair Housing Act in 1968. (p. 799)

Sheppard-Towner Federal Maternity and Infancy Act: The first federally funded health-care legislation that provided federal funds for medical clinics, prenatal education programs, and visiting nurses. (p. 661)

Sherman Antitrust Act: Landmark 1890 act that forbade anticompetitive business activities, requiring the federal government to investigate trusts and any companies operating in violation of the act. (p. 593)

Sierra Club: An organization founded in 1892 that was dedicated to the enjoyment and preservation of America's great mountains (including the Sierra Nevadas) and wilderness environments. Encouraged by such groups, national and state governments began to set aside more public lands for preservation and recreation. (p. 544)

silent majority: Term derived from the title of a book by Ben J. Wattenberg and Richard Scammon (called *The Real Majority*) and used by Nixon in a 1969 speech to describe those who supported his positions but did not publicly assert their voices, in contrast to those involved in the antiwar, civil rights, and women's movements. (p. 869)

representó un cambio en la dependencia de las industrias pesadas del acero, automóviles y químicos. (pág. 928)

Ley de Reajuste del Personal de las Fuerzas Armadas: Conocida popularmente como el GI Bill, esta legislación de 1944 autorizó al gobierno para ofrecer fondos para educación, vivienda y salud a los veteranos de la Segunda Guerra Mundial, así como préstamos para comprar casas y emprender negocios. (pág. 725)

asentamiento irregular: zona aledaña a una ciudad que ha sido asentada por pobres, caracterizada por construcciones pequeñas e inestables. (pág. 682)

aparcería: Sistema laboral en el cual los propietarios de la tierra y los trabajadores agrícolas del Sur, particularmente los afroamericanos, se dividieron los ingresos de los cultivos cosechados en la propiedad. A su vez, los comerciantes locales ofrecían insumos—a cambio de un gravamen sobre el cultivo—de tal manera que los granjeros tuvieron que producir cultivos comerciales que con frecuencia los endeudaba en el largo plazo. (pág. 444)

Declaración de Sharon: Redactada por integrantes de Young Americans for Freedom (Jóvenes Americanos por la Libertad, YAF), este manifiesto delineó los principios de este grupo e inspiró a jóvenes conservadores que tuvieron un papel importante en la administración de Reagan en la década de 1980. (pág. 860)

Rebelión de Shays: Levantamiento ocurrido en 1786-1787 encabezado por agricultores disidentes en el oeste de Massachussets, muchos de los cuales eran veteranos de la Guerra de Revolución que protestaban las políticas de impuestos de las élites del este que controlaban al gobierno del estado. (pág. 191)

Shelley v. Kraemer: Decisión de la Corte Suprema en 1948 que proscribió los pactos restrictivos sobre la ocupación de desarrollos de vivienda por afroamericanos, asiáticos americanos y otras minorías. Debido a que la decisión de la Corte no prohibió en sí la discriminación racial en la vivienda, las prácticas injustas contra las minorías continuaron hasta que se aprobó la Ley de Vivienda Justa en 1968. (pág. 799)

Ley Federal Sheppard Towner de Protección de la Maternidad y la Infancia: Primera legislación de cuidados de salud de financiamiento federal que ofreció fondos federales a clínicas médicas, programas de educación prenatales y enfermeras que realizaban visitas a hogares. (pág. 661)

Ley Sherman Antimonopolio: Ley histórica de 1890 que prohibió las actividades de negocios anti-competitivas y requirió que el gobierno federal investigara los trusts y cualquier compañía que actuara contra esta ley. (pág. 593)

Sierra Club: Organización fundada en 1892 dedicada a la preservación y goce de las grandes montañas (incluyendo la Sierra Nevada) y los entornos naturales. Gracias a la inspiración de estos grupos, los gobiernos nacionales y estatales empezaron a apartar más tierras públicas para la preservación y la recreación. (pág. 544)

mayoría silenciosa: Término derivado del título de un libro escrito por Ben J. Wattenberg y Richard Scammon (llamado *The Real Majority*) retomado por Nixon en un discurso de 1969 para describir a aquellos que apoyaron sus posturas pero no lo pronunciaron públicamente, en contraste con aquellos involucrados en los movimientos antiguerra, de derechos civiles y de mujeres. (pág. 869)

Silent Spring: Book published in 1962 by biologist Rachel Carson. Its analysis of the pesticide DDT's toxic impact on the human and natural food chains galvanized environmental activists. (p. 881)

Slaughter-House Cases: A group of decisions begun in 1873 in which the Court began to undercut the power of the Fourteenth Amendment to protect African American rights. (p. 456)

"slave power" conspiracy: The political argument, made by abolitionists, free soilers, and Republicans in the pre–Civil War years, that southern slaveholders were using their unfair representative advantage under the three-fifths compromise of the Constitution, as well as their clout within the Democratic Party, to demand extreme federal proslavery policies (such as annexation of Cuba) that the majority of American voters would not support. (p. 369)

slave society: A society in which the institution of slavery affects all aspects of life. (p. 335)

smallpox: a highly contagious and deadly disease that was eradicated throughout the world by a vaccine. (p. 3)

Smoot-Hawley Tariff: A high tariff enacted in 1930 during the Great Depression. By taxing imported goods, Congress hoped to stimulate American manufacturing, but the tariff triggered retaliatory tariffs in other countries, which further hindered global trade and led to greater economic contraction. (p. 681)

Social Darwinism: An idea, actually formulated not by Charles Darwin but by British philosopher and sociologist Herbert Spencer, that human society advanced through ruthless competition and the "survival of the fittest." (p. 529)

Social Gospel: A movement to renew religious faith through dedication to public welfare and social justice, reforming both society and the self through Christian service. (p. 533)

Social Security Act: A 1935 act with three main provisions: old-age pensions for workers; a joint federal-state system of compensation for unemployed workers; and a program of payments to widowed mothers and the blind, deaf, and disabled. (p. 692)

social settlement: A community welfare center that investigated the plight of the urban poor, raised funds to address urgent needs, and helped neighborhood residents advocate on their own behalf. Social settlements became a nationally recognized reform strategy during the Progressive Era. (p. 578)

society: an organized group of people living together as a community. (p. 2)

sociology: the scientific study of the development, structure, and interaction of human society. (p. 528)

soft power: The exercise of popular cultural influence abroad, as American radio and movies became popular around the world in the 1920s, transmitting American cultural ideals overseas. (p. 659)

Primavera silenciosa: Libro publicado por la bióloga Rachel Carson en 1962. Su análisis de los impactos tóxicos del pesticida DDT sobre los humanos y las cadenas alimenticias impulsó a los activistas ambientales. (pág. 881)

Casos del matadero: Conjunto de decisiones tomadas a partir de 1873, en las cuales la Corte empezó a debilitar el poder de la Decimocuarta Enmienda para proteger los derechos de los afroamericanos. (pág. 456)

conspiración de la "potencia negra": Argumento político de abolicionistas, partidarios del suelo libre y republicanos en los años previos a la Guerra Civil, que decía que los dueños de esclavos usaban injustamente sus ventajas representativas, bajo el Compromiso de los Tres Quintos de la Constitución, así como su influencia con el Partido Demócrata, para exigir políticas anti-esclavistas federales extremas (como la anexión de Cuba) que la mayoría de los votantes americanos no apoyarían. (pág. 369)

sociedad esclavista: Sociedad en la cual la institución de la esclavitud afecta todos los aspectos de la vida. (pág. 335)

viruela: enfermedad altamente contagiosa y mortal que fue erradicada en todo el mundo gracias a una vacuna. (pág. 3)

Tarifa Smoot-Hawley: Tarifa promulgada en 1930 durante la Gran Depresión. Al colocar impuestos sobre los bienes importados, el Congreso esperaba estimular la manufactura estadounidense, pero la tarifa causó represalias en otros países, que impidieron el comercio global aún más y llevaron a una contracción económica más fuerte. (pág. 681)

Darwinismo Social: Idea formulada, no por Charles Darwin, sino por el filósofo y sociólogo inglés Herbert Spencer, en la cual la sociedad humana avanza gracias a la competencia despiadada y la "supervivencia de los más aptos". (pág. 529)

Evangelio Social: Movimiento para renovar la fe religiosa mediante la dedicación al bienestar público y la justicia social, y para reformar tanto a la sociedad como al individuo a través del servicio cristiano. (pág. 533)

Ley de Seguridad Social: Ley de 1935 que incluyó tres disposiciones principales: pensiones para trabajadores de la tercera edad; un sistema federal-estatal conjunto para compensar a trabajadores desempleados; y un programa de pagos para madres viudas y para los ciegos, sordos y discapacitados. (pág. 692)

asentamiento social: Centros de bienestar comunitario que investigaban la situación de los pobres, recaudaban fondos para responder a necesidades urgentes y ayudaban a los residentes del vecindario a abogar por sí mismos. Los asentamientos sociales se convirtieron en una estrategia de reforma reconocida a nivel nacional durante la Era Progresista. (pág. 578)

sociedad: grupo organizado de personas que viven juntos en comunidad. (pág. 2)

sociología: ciencia que estudia el desarrollo, estructura e interacción de la sociedad humana. (pág. 528)

poder suave: El ejercicio de la influencia de la cultura popular en el extranjero con la creciente popularidad de películas y radio estadounidenses en el mundo durante la década de 1920, que transmitieron ideales culturales de Estados Unidos a otros países. (pág. 659)

Sons of Liberty: Colonists—primarily middling merchants and artisans—who banded together to protest the Stamp Act and other imperial reforms of the 1760s. The group originated in Boston in 1765 but soon spread to all the colonies. (p. 148)

South Atlantic System: A new agricultural and commercial order that produced sugar, tobacco, rice, and other tropical and subtropical products for an international market. Its plantation societies were ruled by European planter-merchants and worked by hundreds of thousands of enslaved Africans. (p. 86)

Southern Christian Leadership Conference (SCLC): After the Montgomery Bus Boycott, Martin Luther King Jr. and other civil rights leaders formed the SCLC in 1957 to coordinate civil rights activity in the South. (p. 824)

Special Field Order No. 15: An order by General William T. Sherman, later reversed by policymakers, that granted confiscated land to formerly enslaved families in Georgia and South Carolina so they could farm independently. (p. 426)

specie: money in the form of coin. (p. 207)

Specie Circular: An executive order in 1836 that required the Treasury Department to accept only gold and silver in payment for lands in the national domain. (p. 299)

specter: a threat. (p. 145)

spoils system: The widespread award of public jobs to political supporters after an electoral victory. In 1829, Andrew Jackson instituted the system on the national level, arguing that the rotation of officeholders was preferable to a permanent group of bureaucrats. (p. 277)

sprawl: to spread and stretch out in a disorganized and awkward manner, such as some cities. (p. 127)

Sputnik: The world's first satellite, launched by the Soviet Union in 1957. After its launch, the United States funded research and education to catch up in the Cold War space competition. (p. 783)

squalid: lowly, repulsive and neglected. (p. 837)

squatter: Someone who settles on land he or she does not own or rent. Many eighteenth-century settlers established themselves on land before it was surveyed and entered for sale, requesting the first right to purchase the land when sales began. (p. 114)

stagflation: An economic term coined in the 1970s to describe the condition in which inflation and unemployment rise at the same time. (p. 885)

stalemate: a position in which rivaling parties are unable to act. (p. 85)

Stamp Act Congress: A congress of delegates from nine assemblies that met in New York City in October 1765 to protest the loss of American "rights and liberties," especially the right to trial by jury. The congress challenged the constitutionality of both the Stamp and Sugar Acts by declaring that only the colonists' elected representatives could tax them. (p. 148)

Hijos de la Libertad: Colonos–principalmente comerciantes y artesanos medianos–que se juntaron para protestar la Ley del Timbre y otras reformas imperiales de la década de 1760. El grupo se originó en Boston en 1765 y rápidamente se esparció a todas las colonias. (pág. 148)

Sistema del Atlántico Sur: Nueva orden agricultora y comercial que produjo azúcar, tabaco, arroz y otros productos tropicales y subtropicales para el mercado internacional. Sus sociedades de plantación fueron dominadas por comerciantes-hacendados y fueron trabajadas por cientos de miles de africanos esclavizados. (pág. 86)

Conferencia Sur de Liderazgo Cristiano (SCLC): Después del boicot de autobuses en Montgomery, en 1957 Martin Luther King Jr. y otros líderes de derechos civiles fundaron la SLCS para coordinar actividades de derechos civiles en el Sur. (pág. 824)

Orden militar especial n.° 15: Orden emitida por el general William T. Sherman, posteriormente revocada por legisladores, que concedía tierras confiscadas a familias anteriormente esclavizadas en Georgia y Carolina del Sur para que pudieran cosecharlas independientemente. (pág. 426)

especie: dinero en forma de moneda. (pág. 207)

Specie Circular: Orden ejecutiva de 1836 que requería que el Departamento de Tesorería aceptara únicamente oro y plata como pago por tierras en el dominio nacional. (pág. 299)

espectro: una amenaza. (pág. 145)

clientelismo: La entrega generalizada de empleos públicos a seguidores políticos después una victoria electoral. En 1829, Andrew Jackson instituyó este sistema a nivel nacional, argumentando que la rotación de cargos era mejor que un grupo de burócratas permanentes. (pág. 277)

expansión: crecimiento desorganizado y torpe, como ocurre en algunas ciudades. (pág. 127)

Sputnik: Primer satélite en el mundo, lanzado por la Unión Soviética en 1957. Después del lanzamiento, Estados Unidos financió la investigación y la educación para ponerse al tanto en la competencia por el espacio de la Guerra Fría. (pág. 783)

escuálido: humilde, repulsivo y en condiciones de negligencia. (pág. 837)

ocupante: Persona que se asienta en tierras que no posee ni renta. Muchos pobladores del siglo XVIII se asentaron en la tierra antes de que fuera inspeccionada y colocada en venta, exigiendo el derecho primordial de adquirir las tierras cuando comenzaran las ventas. (pág. 114)

estagflación: Término económico acuñado en la década de 1970 para describir la condición en la cual la inflación y el desempleo crecen al mismo tiempo. (pág. 885)

tablas: posición en la cual dos partes rivales se encuentran sin posibilidad de actuar. (pág. 85)

Congreso de la Ley del Timbre: Congreso de delegados de nueve asambleas que se reunieron en la Ciudad de Nueva York en octubre de 1765 para protestar la pérdida de "derechos y libertades" americanas y el derecho a ser juzgado ante un jurado. El congreso cuestionó la constitucionalidad de las Leyes del Timbre y del Azúclar, al declarar que sólo los representantes elegidos por colonos podían cobrarles impuestos. (pág. 148)

Stamp Act of 1765: British law imposing a tax on all paper used in the colonies. Widespread resistance to the Stamp Act prevented it from taking effect and led to its repeal in 1766. (p. 146)

Standard Oil decision: A 1911 Supreme Court decision that directed the breakup of the Standard Oil Company into smaller companies because its overwhelming market dominance and monopoly power violated antitrust laws. (p. 604)

states' rights: An interpretation of the Constitution that exalts the sovereignty of the states and circumscribes the authority of the national government. (p. 286)

States' Rights Democratic Party: Known popularly as the Dixiecrats, a breakaway party of white Democrats from the South that formed for the 1948 election. Its formation shed light on an internal struggle between the civil rights aims of the party's liberal wing and southern white Democrats. (p. 817)

stenographer: someone who is employed to transcribe diction, normally in shorthand. (p. 503)

steppe: a treeless plain that covers a wide area with grass. (p. 15)

stigma: a mark of shame or disgrace. (p. 547)

stimulate: to encourage growth or activity. (p. 43)

Stonewall Inn: A gay bar in New York's Greenwich Village that was raided by police in 1969; the ensuing two-day riot contributed to the rapid rise of a gay liberation movement. (p. 868)

Stono Rebellion: Slave uprising in 1739 along the Stono River in South Carolina in which a group of slaves armed themselves, plundered six plantations, and killed more than twenty colonists. Colonists quickly suppressed the rebellion. (p. 97)

STOP ERA: An organization founded by Phyllis Schlafly in 1972 to fight the Equal Rights Amendment. (p. 896)

stratification: being arranged into separate parts or layers. (p. 16)

stringent: severely difficult or limiting. (p. 162)

Student Nonviolent Coordinating Committee (SNCC): A student civil rights group founded in 1960 under the mentorship of activist Ella Baker. SNCC initially embraced an interracial and nonhierarchical structure that encouraged leadership at the grassroots level and practiced the civil disobedience principles of Martin Luther King Jr. As violence toward civil rights activists escalated nationwide in the 1960s, SNCC expelled nonblack members and promoted "black power" and the teachings of Malcolm X. (p. 824)

Students for a Democratic Society (SDS): An organization for social change founded by college students in 1960. (p. 855)

stump speech: a speech that addresses the general public during a political campaign. (p. 551)

stymied: to be prevented from completing a task or goal. (p. 182)

Ley del Timbre de 1765: Ley británica que colocó impuestos sobre todo el papel usado en las colonias. La resistencia generalizada a la Ley del Timbre impidió que entrara en vigencia y llevó a su revocación en 1766. (pág. 146)

Decisión Standard Oil: Decisión de la Corte Suprema en 1911 de desintegrar a la Standard Oil Company en compañías más pequeñas porque su apabullante influencia en el mercado y su poder monopólico violaba leyes antimonopolio. (pág. 604)

derechos de los estados: Interpretación de la Constitución que exalta la soberanía de los estados y limita el poder del gobierno nacional. (pág. 286)

Partido Demócrata por los Derechos de los Estados: Conocido popularmente como los Dixiecrats, este partido fue una escisión de demócratas del Sur que se formó para la elección de 1948. Su formación reveló las luchas internas entre los objetivos de derechos civiles del ala liberal del partido y los demócratas blancos del Sur. (pág. 817) .

estenógrafo: Persona empleada para transcribir dicción, normalmente en taquigrafía. (pág. 503)

estepa: planicie de gran tamaño cubierta de pasto y sin árboles. (pág. 15)

estigma: marca de verguenza o de desgracia. (pág. 547)

estimular: promover el crecimiento o la actividad. (pág. 43)

Stonewall Inn: Bar gay en Greenwich Village en Nueva York donde la policía condujo una redada en 1969; los disturbios consecuentes, con duración de dos días, contribuyeron al rápido crecimiento del movimiento de liberación gay. (pág. 868)

Rebelión de Stono: Levantamiento de esclavos en 1739 en Stono River, Carolina del Sur, donde un grupo de esclavos armados saquearon seis plantaciones y mataron a más de veinte colonos. Los colonos rápidamente contuvieron esta rebelión. (pág. 97)

STOP ERA (siglas de la campaña Stop Taking Our Privileges Equal Rights Amendment): Organización fundada por Phyllis Schlafly en 1972 para luchar contra la Enmienda de Igualdad de Derechos. (pág. 896)

estratificación: ordenar por partes separadas o capas. (pág. 16)

astringente: severamente difícil o restrictivo. (pág. 162)

Comité Coordinador Estudiantil No Violento (SNCC): Grupo de derechos civiles fundado en 1960 guiado por la activista Ella Baker. El SNCC inicialmente adoptó una estructura interracial y sin jerarquías que fomentaba un liderazgo desde las bases y practicaba los principios de desobediencia civil de Martin Luther King Jr. Con el aumento de la violencia hacia activistas de derechos civiles en el país durante la década de 1960, la SNCC expulsó a los miembros que no eran negros y promovió las enseñanzas de "poder negro (black power)" de Malcolm X. (p.824)

Estudiantes por una Sociedad Democrática (SDS): Organización para el cambio social fundada por estudiantes universitarios en 1960. (pág. 855)

discurso base: discurso dirigido al público general durante una campaña política. (pág. 551)

obstaculizar: impedir que se concluya una tarea o se alcance un objetivo. (pág. 182)

subjugate: to conquer. (p. 11)

subsidize: to support financially. (p. 32)

subterfuge: deception used in order to conceal or avoid something. (p. 541)

succumb: to accept defeat in regard to something once opposed or resisted. (p. 469)

Sugar Act of 1764: British law that decreased the duty on French molasses, making it more attractive for shippers to obey the law, and at the same time raised penalties for smuggling. The act enraged New England merchants, who opposed both the tax and the fact that prosecuted merchants would be tried by British-appointed judges in a vice-admiralty court. (p. 145)

Sunbelt: Name applied to the Southwest and South, which grew rapidly after World War II as a center of defense industries and non-unionized labor. (p. 803)

supply-side economics (Reaganomics): Economic theory that tax cuts for individuals and businesses encourage investment and production (supply) and stimulate consumption (demand) because individuals can keep more of their earnings. In reality, supply-side economics created a massive federal budget deficit. (p. 923)

surreptitious: secretive; stealthy. (p. 573)

symbiotic: indicating a mutually favorable relationship. (p. 946)

symbolic: of, relating to, or expressed as a symbol. (p. 2)

syncretism: the merging of different cultures. (p. 488)

syndicalism: when workers seize control of the government and economy by means of a strike. (p. 607)

taboo: something avoided or forbidden due to unacceptable, inappropriate qualities, or sacredness. (p. 327)

Taft-Hartley Act: Law passed by the Republican-controlled Congress in 1947 that overhauled the 1935 National Labor Relations Act, placing restrictions on organized labor that made it more difficult for unions to organize workers. (p. 763)

talented tenth: A term used by Harvard-educated sociologist W. E. B. Du Bois for the top 10 percent of educated African Americans, whom he called on to develop new strategies to advocate for civil rights. (p. 607)

Tariff of Abominations: A tariff enacted in 1828 that raised duties significantly on raw materials, textiles, and iron goods. New York senator Van Buren hoped to win the support of farmers in New York, Ohio, and Kentucky with the tariff, but it enraged the South, which had no industries that needed tariff protection and resented the higher cost of imported dutied goods. (p. 283)

task system: A system of labor common in the rice-growing regions of South Carolina in which a slave was assigned a daily task to complete and allowed to do as he wished upon its completion. (p. 346)

subyugar: conquistar. (pág. 11)

subsidiar: apoyar económicamente. (pág. 32)

subterfugio: engaño empleado para ocultar o evitar algo. (pág. 541)

sucumbir: aceptar la derrota en algo donde uno antes se oponía o resistía. (pág. 469)

Ley del Azúcar de 1764: Ley británica que redujo el arancel en la melaza francesa, de tal manera que los exportadores tuvieron más motivos para obedecer la ley. Al mismo tiempo, aumentaron los castigos por el contrabando. Esta ley enfureció a los comerciantes de Nueva Inglaterra, que se oponían al impuesto y al hecho de que los comerciantes perseguidos serían juzgados por jueces de designación británica en un tribunal de vicealmirante. (pág. 145)

Sunbelt (o Franja del Sol, región de los Estados Unidos): Nombre aplicado a la región del Sur y al Suroeste, que creció rápidamente después de la Segunda Guerra Mundial como centro para las industrias de defensa y la mano de obra no sindicalizada. (pág. 803)

economía de la oferta (reaganomía): Teoría económica en la cual los recortes de impuestos para negocios e individuos invitan a la inversión y a la producción (oferta) y estimulan el consumo (demanda) gracias a que los individuos logran conservar una parte mayor de sus ingresos. En realidad, la economía de la oferta creó un enorme déficit en el presupuesto federal. (pág. 923)

subrepticio: secreto; sigiloso. (pág. 573)

simbiótico: indica una relación mutuamente favorable. (pág. 946)

simbólico: de, relacionado con, o expresado como símbolo. (pág. 2)

sincretismo: la fusión de dos culturas. (pág. 488)

sindicalismo: cuando los trabajdores toman control del gobierno y de la economía por medio de una huelga. (pág. 607)

tabú: algo que se evita o que está prohibido debido a sus cualidades inaceptables o por ser sagrado. (pág. 327)

Ley Taft-Harley: Ley aprobada por el Congreso de mayoría republicana en 1947 que revisó la Ley Nacional de Relaciones Laborales de 1935, misma que colocó restricciones sobre el trabajo organizado e hizo más difícil que los sindicatos organizaran a los trabajadores. (pág. 763)

El décimo talentoso: Término usado por el sociólogo formado en Harvard, W. E. B. Du Bois, para el 10 por ciento de afroamericanos educados, a quienes llamó a desarrollar nuevas estrategias para abogar por sus derechos civiles. (pág. 607)

arancel de las abominaciones: Arancel aprobado en 1828 que aumentó significativamente los impuestos sobre materia prima, textiles y bienes de hierro. El senador van Buren de Nueva York esperaba ganarse el apoyo de los agricultores de Nueva York, Ohio y Kentucky con el arancel, pero enfureció al Sur que no tenía industrias y necesitaba protección arancelaria, por lo cual resintieron el costo de bienes importados con gravámenes. (pág. 283)

sistema de tareas: Sistema de trabajo común en las regiones arroceras de Carolina del Sur, donde a los esclavos se les asignaba una tarea diaria y al completarla podían usar su tiempo como quisieran. (pág. 346)

tax revolt: A movement to lower or eliminate taxes. California's Proposition 13, which rolled back property taxes, capped future increases for present owners, and required that all tax measures have a two-thirds majority in the legislature, was the result of one such revolt, inspiring similar movements across the country. (p. 888)

Tea Act of May 1773: British act that lowered the existing tax on tea and granted exemptions to the East India Company to make their tea cheaper in the colonies and entice boycotting Americans to buy it. Resistance to the Tea Act led to the passage of the Coercive Acts and imposition of military rule in Massachusetts. (p. 158)

Tea Party: A set of far-right opposition groups that emerged during President Obama's first term and gave voice to the extreme individualism and antigovernment sentiment traditionally associated with right-wing movements in the United States. (p. 969)

Teapot Dome: Nickname for scandal in which Interior Secretary Albert Fall accepted $300,000 in bribes for leasing oil reserves on public land in Teapot Dome, Wyoming. It was part of a larger pattern of corruption that marred Warren G. Harding's presidency. (p. 657)

teenager: A term for a young adult. American youth culture, focused on the spending power of the "teenager," emerged as a cultural phenomenon in the postwar decades. (p. 789)

Teller Amendment: An amendment to the 1898 U.S. declaration of war against Spain disclaiming any intention by the United States to occupy Cuba. The amendment assured the public that the United States would uphold democracy abroad as well as at home. (p. 624)

temperance: moderation; self-restraint. (p. 235)

Ten Percent Plan: A plan proposed by President Abraham Lincoln during the Civil War, but never implemented, that would have granted amnesty to most ex-Confederates and allowed each rebellious state to return to the Union as soon as 10 percent of its voters had taken a loyalty oath and the state had approved the Thirteenth Amendment. (p. 434)

tenancy: The rental of property. To attract tenants in New York's Hudson River Valley, Dutch and English manorial lords granted long tenancy leases, with the right to sell improvements — houses and barns, for example — to the next tenant. (p. 108)

tenement: A high-density, cheap, five- or six-story housing unit designed for working-class urban populations. In the late nineteenth and early twentieth centuries, tenements became a symbol of urban immigrant poverty. (p. 565)

tenet: a belief held in common by members of a group. (p. 422)

revuelta contra los impuestos: Movimiento para reducir o eliminar los impuestos. La Proposición 13 del estado de California, que revirtió impuestos sobre la propiedad, limitó impuestos futuros para propietarios actuales y requirió que cualquier medida fiscal tuviera aprobación de dos terceras partes de la legislatura, dio como resultado la revuelta, que inspiró movimientos similares en todo el país. (pág. 888)

Ley del Té de mayo de 1773: Ley británica que redujo el impuesto existente sobre el té y otorgó exenciones a la East India Company para reducir el precio de su té en las colonias y convencer a los americanos, que lo estaban boicoteando, de comprarlo. La resistencia a la Ley del Té llevó a la promulgación de las Leyes Coactivas y a la imposición del régimen militar el Massachusetts. (pág. 158)

Partido del Té: Conjunto de grupos de oposición de extrema derecha que surgieron durante el primer término del presidente Obama y dieron voz al sentimiento individualista extremo y antigobierno tradicionalmente asociados con los movimientos de derecha en los Estados Unidos. (pág. 969)

Teapot Dome: Apodo para el escándalo en el cual el Secretario de Interior, Albert Fall, aceptó sobornos de $300,000 a cambio de arrendar reservas petroleras en terrenos públicos en Teapot Dome, Wyoming. Fue parte de un patrón de corrupción más grande, que manchó la presidencia de Warren G. Harding. (pág. 657)

Adolescente (teenager): Término para un adulto joven. La cultura juvenil americana, enfocada sobre el poder adquisitivo de los "teenagers", surgió como fenómeno cultural en las décadas de la posguerra. (pág. 789)

Enmienda Teller: Enmienda a la declaración de Guerra de los Estados Unidos contra España en 1898 que negó cualquier intención de Estados Unidos de ocupar Cuba. La enmienda aseguró al público que Estados Unidos mantendría la democracia en el extranjero al igual que en casa. (pág. 624)

templanza: moderación; auto-control. (pág. 235)

Plan del diez por ciento: Plan propuesto por el presidente Abraham Lincoln durante la Guerra Civil, que nunca fue implementado y que hubiera otorgado amnistía a la mayoría de los ex Confederados para permitir que cada estado rebelde regresara a la Unión una vez que el 10 por ciento de sus votantes hayan protestado su lealtad y una vez que cada estado aprobara la Decimotercera Enmienda. (pág. 434)

tenencia: Renta de una propiedad. Para atraer inquilinos a la cuenca del río Hudson, terratenientes señoriales ingleses y holandeses concedieron arrendamientos de largo plazo con derecho a vender las mejoras–casas y establos, por ejemplo–al siguiente inquilino. (pág. 108)

vecindad: Unidad de vivienda de alta densidad, bajo costo y de cinco o seis pisos diseñada para las poblaciones urbanas de clase trabajadora. A finales del siglo XIX y principios del siglo XX, las vecindades se convirtieron en símbolo de la pobreza inmigrante urbana. (pág. 565)

principio: creencia compartida por varios miembros de un grupo. (pág. 422)

Tennessee Valley Authority: An agency funded by Congress in 1933 that integrated flood control, reforestation, electricity generation, and agricultural and industrial development in the Tennessee Valley area. (p. 705)

Tet offensive: Major campaign of attacks launched throughout South Vietnam in January 1968 by the North Vietnamese and Vietcong. A major turning point in the war, it exposed the credibility gap between official statements and the war's reality, and it shook Americans' confidence in the government. (p. 862)

The Affluent Society: A 1958 book by John Kenneth Galbraith that analyzed the nation's successful middle class and argued that the poor were only an "afterthought" in the minds of economists and politicians. (p. 785)

The Conscience of a Conservative: A 1960 book that set forth an uncompromising conservatism and inspired a Republican grassroots movement in support of its author, Barry Goldwater. (p. 915)

The Feminine Mystique: The title of an influential book written in 1963 by Betty Friedan critiquing the ideal whereby women were encouraged to confine themselves to roles within the domestic sphere. (p. 852)

The Other America: A 1962 book by left-wing social critic Michael Harrington, chronicling "the economic underworld of American life." His study made it clear that in economic terms the bottom class remained far behind. (p. 785)

thermonuclear: of or relating to nuclear reactions that occur at extremely high temperatures. (p. 758)

Three Mile Island: A nuclear plant near Harrisburg, Pennsylvania, where a reactor core came close to a meltdown in March 1979. After the incident at Three Mile Island, no new nuclear plants were authorized in the United States, though a handful with existing authorization were built in the 1980s. (p. 884)

Title IX: A law passed by Congress in 1972 that broadened the 1964 Civil Rights Act to include educational institutions, prohibiting colleges and universities that received federal funds from discriminating on the basis of sex. By requiring comparable funding for sports programs, Title IX made women's athletics a real presence on college campuses. (p. 868)

"To Secure These Rights": The 1947 report by the Presidential Committee on Civil Rights that called for robust federal action to ensure equality for African Americans. President Truman asked Congress to make all of the report's recommendations — including the abolition of poll taxes and the restoration of the Fair Employment Practice Committee — into law, leading to discord in the Democratic Party. (p. 816)

toleration: The allowance of different religious practices. Lord Baltimore persuaded the Maryland assembly to enact the Toleration Act (1649), which granted all Christians the right to follow their beliefs and hold church services. The crown imposed toleration on Massachusetts Bay in its new royal charter of 1691. (p. 59)

Autoridad del Valle de Tennessee: Agencia fundada por el Congreso en 1933 que integraba el control de inundaciones, la reforestación, la generación de electricidad y el desarrollo cultural en la región del Valle de Tennessee. (pág. 705)

Ofensiva del Tet: Campaña mayor de ataques lanzados sobre el Sur de Vietnam por los vietnamitas del norte y el Vietcong en enero de 1968. Fue un importante punto de transición en la guerra, reveló la brecha de credibilidad entre los comunicados oficiales y la realidad de la guerra y afectó la confianza de los estadounidenses en el gobierno. (pág. 862)

La sociedad opulenta: Libro escrito en 1958 por John Kenneth Galbraith, que analizó a la exitosa clase media del país y argumentó que los pobres sólo eran una consideración secundaria en las mentes de economistas y políticos. (pág. 785)

La conciencia de un conservador: Libro publicado en 1960 que promovió el conservadurismo intransigente e inspiró el movimiento de las bases republicanas para apoyar a su autor, Barry Goldwater. (pág. 915)

La mística de la feminidad: Título de un influyente libro escrito en 1963 por Betty Friedan, que criticaba el ideal en el cual las mujeres debían limitarse a labores domésticas. (pág. 852)

La otra América: Libro publicado en 1962 por Michael Harrington, crítico social de izquierdas que documentó "el submundo económico de la vida americana". Su estudio dejó claro que, en términos económicos, la clase baja ha quedado muy atrás. (pág. 785)

termonuclear: relacionado con reacciones nucleares que ocurren a temperaturas extremadamente altas. (pág. 758)

Three Mile Island: Planta nuclear cerca de Harrisburg, Pennsylvania, donde, en marzo de 1979, el núcleo de un reactor estuvo cerca de sufrir una fusión. Después del incidente en Three Mile Island, no se autorizaron más plantas nucleares en los Estados Unidos, aunque un número pequeño de plantas previamente autorizadas fueron construidas en la década de 1980. (pág. 884)

Título IX: Ley aprobada por el Congreso en 1972 que extendió la Ley de Derechos Civiles de 1964 para incluir instituciones educativas y prohibir que las universidades y colegios que recibieran fondos federales pudieran discriminar por sexo. Al requerir financiamiento equiparable para los programas deportivos, el Título XI le dio una presencia real al deporte femenil en los campus universitarios. (pág. 868)

"Para asegurar estos derechos" Reporte de 1947 elaborado por el Comité Presidencial de Derechos Civiles que llamaba a tomar medidas federales para asegurar la igualdad para los afroamericanos. El presidente Truman pidió al congreso que convirtiera todas las recomendaciones del reporte – incluyendo la abolición de impuestos de capitación y la restauración del Comité de Prácticas de Empleo Justo— en ley, lo que llevó a desacuerdos en el Partido Demócrata. (pág. 816)

tolerancia social: Permiso para distintas prácticas religiosas. Lord Baltimore convenció a la asamblea de Maryland para que promulgara la Ley de Tolerancia (1649), que concedió a todos los cristianos el derecho de seguir sus creencias y celebrar ceremonias religiosas. La corona impuso la tolerancia en Massachusetts Bay en su nueva carta real de 1691. (pág. 59)

town meeting: A system of local government in New England in which all male heads of households met regularly to elect selectmen, levy local taxes, and regulate markets, roads, and schools. (p. 65)

Townsend Plan: A plan proposed by Francis Townsend in 1933 that would give $200 a month (about $3,600 today) to citizens over the age of sixty. Townsend Clubs sprang up across the country in support of the plan, mobilizing mass support for old-age pensions. (p. 690)

Townshend Act of 1767: British law that established new duties on tea, glass, lead, paper, and painters' colors imported into the colonies. The Townshend duties led to boycotts and heightened tensions between Britain and the American colonies. (p. 151)

Trail of Tears: Forced westward journey of Cherokees from their lands in Georgia to present-day Oklahoma in 1838. Nearly a quarter of the Cherokees died en route. (p. 292)

transcendentalism: A nineteenth-century American intellectual movement that posited the importance of an ideal world of mystical knowledge and harmony beyond the immediate grasp of the senses. Influenced by romanticism, transcendentalists Ralph Waldo Emerson and Henry David Thoreau called for the critical examination of society and emphasized individuality, self-reliance, and nonconformity. (p. 310)

transcontinental railroad: The railway line completed on May 10, 1869, that connected the Central Pacific and Union Pacific lines, enabling goods to move by railway from the eastern United States all the way to California. (p. 462)

transient: temporary; impermanent. (p. 305)

"treat": A form of heterosexual dating in which, given the male partner's higher wage level, he is expected to pay for food and entertainment, and the young woman is expected to provide sexual favors in return. (p. 568)

Treaty of Ghent: The treaty signed on Christmas Eve 1814 that ended the War of 1812. It retained the prewar borders of the United States. (p. 228)

Treaty of Greenville: A 1795 treaty between the United States and various Indian tribes in Ohio. American negotiators acknowledged Indian ownership of the land, and, in return for various payments, the Western Confederacy ceded most of Ohio to the United States. (p. 216)

Treaty of Kanagawa: An 1854 treaty in which, after a show of military force by U.S. Commodore Matthew Perry, leaders of Japan agreed to permit American ships to refuel at two Japanese ports. (p. 378)

Treaty of Paris of 1783: The treaty that ended the Revolutionary War. In the treaty, Great Britain formally recognized American independence and relinquished its claims to lands south of the Great Lakes and east of the Mississippi River. (p. 183)

Treaty of Versailles: The 1919 treaty that ended World War I. The agreement redrew the map of the world, assigned Germany sole responsibility for the war, and saddled it with a debt of

gobierno asambleario: Sistema de gobierno local de Nueva Inglaterra donde todos los hombres, jefes de hogar, se reunían regularmente para elegir concejales, recaudar impuestos locales y regular mercados, vías y escuelas. (pág. 65)

Plan Townsend: Plan propuesto por Francis Townsend en 1933 que entregaría $200 mensuales (cerca de $3,600 en la actualidad) a ciudadanos mayores de sesenta años. Los Clubes Townsend aparecieron en todo el país para apoyar al plan y movilizar el apoyo para las pensiones de la tercera edad. (pág. 690)

Ley Townshend de 1767: Ley británica que colocó nuevos impuestos sobre té, vidrio, plomo y los colores para pintores importados a las colonias. Los impuestos de Townshend condujero a boicots y tensiones entre Bretaña y las colonias americanas. (pág. 151)

Sendero de lágrimas: Viaje de los cheroquis que fueron forzosamente removidos de sus tierras en Georgia en 1838 para reubicarse en lo que ahora es Oklahoma. Cerca de una cuarta parte de los cheroquis murieron en el camino. (pág. 292)

trascendentalismo: Movimiento intelectual estadounidense del siglo XIX que plantea la importancia de un mundo ideal de conocimientos místicos y armonía más allá del alcance de los sentidos. Con la influencia del romanticismo, los trascendentalistas Ralph Waldo Emerson y Henry David Thoreau llamaron al análisis crítico de la sociedad y destacaron la individualidad, la dependencia de uno mismo y el inconformismo. (pág. 310)

ferrocarril transcontinental: Ferrocarril completado el 10 de mayo de 1869, que conectó las líneas de Central Pacific y Union Pacific y permitió el tránsito de bienes por ferrocarril desde el este de Estados Unidos hasta California. (pág. 462)

efímero: temporal; pasajero. (pág. 305)

"invitar": Costumbre en las citas heterosexuales donde, por el nivel salarial más alto del hombre, se espera que pague o "invite" la comida y el entretenimiento y se espera que la mujer ofrezca favores sexuales a cambio. (pág. 568)

Tratado de Gante: Tratado firmado en Nochebuena de 1814 que dio fin a la Guerra de 1812. Como resultado, las fronteras de los Estados Unidos previas a la guerra se mantuvieron. (pág. 228)

Tratado de Greenville: Tratado que se firmó en 1795 entre los Estados Unidos y Gran Bretaña, negociado por John Jay. Los negociadores americanos reconocieron la propiedad indígena de la tierra, y, a cambio de varios pagos, la Confederación del Oeste cedió la mayoría de Ohio a los Estados Unidos. (pág. 216)

Tratado de Kanagawa: Tratado de 1854 en el cual, después de un despliegue de fuerza militar por parte del comodoro de Estados Unidos, Matthew Perry, los líderes de Japón dieron permiso a las embarcaciones estadounidenses de cargar combustible en dos puertos japoneses. (pág. 378)

Tratado de París de 1783: Tratado que dio fin a la guerra de Independencia de los Estados Unidos. En el tratado, Gran Bretaña reconoció formalmente la independencia americana y renunció a sus derechos sobre las tierras del sur de los Grandes Lagos y al este del Río Misisipi. (pág. 183)

Tratado de Versalles: Tratado de 1919 que dio fin a la Primera Guerra Mundial. El acuerdo cambió el mapa del mundo, responsabilizó únicamente a Alemania por la guerra y la dejó con

$33 billion in war damages. Its long-term impact around the globe — including the creation of British and French imperial "mandates" — was catastrophic. (p. 645)

Triangle Fire: A devastating fire that quickly spread through the Triangle Shirtwaist Company in New York City on March 25, 1911, killing 146 people. In the wake of the tragedy, fifty-six state laws were passed dealing with such issues as fire hazards, unsafe machines, and wages and working hours for women and children. The fire also provided a national impetus for industrial reform. (p. 581)

tribalization: The adaptation of stateless peoples to the demands imposed on them by neighboring states. (p. 82)

tribute: an act, statement, or gift that is intended to show respect and admiration. (p. 3)

trope: a figurative word or expression. (p. 377)

Truman Doctrine: President Harry S. Truman's commitment to "support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures." First applied to Greece and Turkey in 1947, it became the justification for U.S. intervention into several countries during the Cold War. (p. 755)

trust: A small group of associates that hold stock from a group of combined firms, managing them as a single entity. Trusts quickly evolved into other centralized business forms, but progressive critics continued to refer to giant firms like U.S. Steel and Standard Oil as "trusts." (p. 500)

tuberculosis: a disease with the potential to affect most of the body, particularly the lungs. (p. 576)

tumultuous: being noisy or confused; commotion. (p. 293)

twenty-Negro rule: A law adopted by the Confederate Congress that exempted one man from military conscription for every twenty slaves owned by a family. The law showed how dependence on coerced slave labor could be a military disadvantage, and it exacerbated class resentments among nonslaveholding whites who were required to serve in the army. (p. 411)

Tydings-McDuffie Act: A 1934 law that provided for the independence of the Philippines, after a ten-year transition period. Though it granted Philippine independence, its origins were nativist, because the law's proponents wished to classify Filipinos as "alien" and reduce their immigration to the United States. (p. 704)

U.S. Fisheries Commission: A federal bureau established in 1871 that made recommendations to stem the decline in wild fish. Its creation was an important step toward wildlife conservation and management. (p. 478)

U.S. Sanitary Commission: An organization that supported the Union war effort through professional and volunteer medical aid. (p. 414)

una deuda de $33 mil millones por daños de la guerra. Su impacto en el largo plazo alrededor de la tierra— incluyendo los "mandatos" imperiales de Bretaña y Francia— fue catastrófico. (pág. 645)

Incendio en la fábrica Triangle Shirtwaist: Devastador incendio que el 25 de marzo de 1911 se extendió rápidamente por la Triangle Shirtwaist Company en la ciudad de Nueva York y costó la vida de 146 personas. Tras la tragedia se aprobaron 56 leyes estatales para regular temas como peligros de incendio, equipamiento peligroso y salarios y horarios de mujeres y niños. El incendio también dio ímpetu nacional a la reforma industrial. (pág. 581)

tribalización La adaptación de personas apátridas a las demandas impuestas sobre ellos por estados vecinos. (pág. 82)

tributo: acto, declaración u obsequio hecho con la intención de mostrar respeto y admiración. (pág. 3)

tropo: palabra o expresión figurada. (pág. 377)

Doctrina Truman: Compromiso del presidente Harry S. Truman de "apoyar a las personas libres que se resisten a la subyugación de minorías armadas o presiones externas". Aplicada por primera vez a Grecia y Turquía en 1947, se convirtió en una justificación para la intervención de Estados Unidos en varios países durante la Guerra Fría. (pág. 755)

trust: Pequeño grupo de asociados que poseen acciones en un grupo de empresas combinadas que administran como una sola entidad. Los trusts evolucionaron rápidamente para convertirse en otras formas de negocio centralizado, pero los críticos progresistas no dejaron de referirse a compañías gigantes como U.S. Steel y Standard Oil como "trusts". (pág. 500)

tuberculosis: enfermedad capaz de afectar a la mayoría del cuerpo, particularmente a los pulmones. (pág. 576)

tumultuoso: ser ruidoso o confuso; conmoción. (pág. 293)

Regla de los veinte esclavos: Ley adoptada por el Congreso Confederado que eximía a un hombre de la conscripción militar por cada veinte esclavos pertenecientes a una familia. La ley mostraba cómo la dependencia del trabajo esclavo forzado podía ser una desventaja militar, y exacerbaba los resentimientos de clase entre los blancos no esclavistas que debían servir en el ejército. (pág. 411)

Ley Tydings-McDuffie: Ley de 1934 que dio la independencia a Filipinas tras un periodo de transición de diez años. Si bien reconoció la independencia de Filipinas, sus orígenes fueron nativistas porque los defensores de la ley deseaban calificar a los Filipinos como "extranjeros" y reducir su inmigración a los Estados Unidos. (pág. 704)

Comisión de Pesca de los Estados Unidos: Agencia federal establecida en 1871 que hizo recomendaciones para detener el declive de peces salvajes. Su creación representó un paso importante hacia la conservación y administración de la vida salvaje. (pág. 478)

Comisión Sanitaria de los Estados Unidos: Organización que apoyó el esfuerzo bélico de la Unión por medio de auxilios médicos voluntarios. (pág. 414)

Underground Railroad: An informal network of whites and free blacks in the South that assisted fugitive slaves to reach freedom in the North. (p. 323)

unions: Organizations of workers that began during the Industrial Revolution to bargain with employers over wages, hours, benefits, and control of the workplace. (p. 261)

United Farm Workers (UFW): A union of farmworkers founded in 1962 by Cesar Chavez and Dolores Huerta that sought to empower the mostly Mexican American migrant farmworkers who faced discrimination and exploitative conditions, especially in the Southwest. (p. 840)

United Nations: An international body agreed upon at the Yalta Conference and founded at a conference in San Francisco in 1945, consisting of a General Assembly, in which all nations are represented, and a Security Council of the five major Allied powers — the United States, Britain, France, China, and the Soviet Union — and seven other nations elected on a rotating basis. (p. 751)

Universal Negro Improvement Association: A Harlem-based group, led by charismatic, Jamaican-born Marcus Garvey, that arose in the 1920s to mobilize African American workers and champion black separatism. (p. 673)

USA PATRIOT Act: A 2001 law that gave the government new powers to monitor suspected terrorists and their associates, including the ability to access personal information. (p. 965)

utopias: Communities founded by reformers and transcendentalists to help realize their spiritual and moral potential and to escape from the competition of modern industrial society. (p. 312)

Valley Forge: A military camp in which George Washington's army of 12,000 soldiers and hundreds of camp followers suffered horribly in the winter of 1777–1778. (p. 176)

vanguard: at the forefront of new ideas. (p. 503)

vassal: a person or group of persons who received security and property from a leader in exchange for loyalty and services. (p. 25)

vaudeville theater: A type of professional stage show popular in the 1880s and 1890s that included singing, dancing, and comedy routines; it created a form of family entertainment for the urban masses that deeply influenced later forms, such as radio shows and television sitcoms. (p. 566)

veneration: treating with honor or respect. (p. 149)

vertical integration: A business model in which a corporation controlled all aspects of production from raw materials to packaged products. "Robber barons," or industrial innovators such as Gustavus Swift and Andrew Carnegie, pioneered this business form at the end of the Civil War. (p. 499)

Veterans Administration: A federal agency that assists former soldiers. Following World War II, the VA helped veterans purchase new homes with no down payment, sparking a building boom that created jobs in the construction industry and fueling consumer spending in home appliances and automobiles. (p. 786)

ferrocarril subterráneo: Red informal de blancos y negros libres en el Sur que asistieron a los esclavos fugitivos a alcanzar la libertad en el Norte. (pág. 323)

sindicatos: Organizaciones de trabajadores que comenzaron con la Revolución Industrial para negociar con patrones sobre salarios, horarios, beneficios y control del sitio de trabajo. (pág. 261)

Unión de Trabajadores Campesinos (UFW): Unión de campesinos fundada en 1962 por César Chávez y Dolores Huerta con el fin de empoderar a la mayoría de trabajadores migrantes mexicano-americanos que enfrentaban discriminación y condiciones de explotación, particularmente en el Suroeste. (pág. 840)

Naciones Unidas: Cuerpo internacional acordado a partir de la Conferencia de Yalta y fundado en una conferencia en San Francisco en 1945, que consistiría en una Asamblea General donde todos los países están representados, y en un Consejo de Seguridad de los cinco principales poderes aliados— Estados Unidos, Bretaña, Francia, China y la Unión Soviética— además de siete naciones más que serían elegidas por rotación. (pág. 751)

Asociación Universal de Desarrollo Negro: Grupo basado en Harlem, dirigido por el carismático Marcus Garvey, nacido en Jamaica, que surgió en la década de 1920 para mobilizar a los trabajadores afroamericanos y abogar por el separatismo negro. (pág. 673)

Ley USA PATRIOT: Ley de 2001 que dio nuevos poderes al gobierno para vigilar a sospechosos de terrorismo y sus asociados, incluso permitiendo acceso a su información personal. (pág. 965)

utopías: Comunidades fundadas por reformistas y trascendentalistas para ayudar a realizar su potencial moral y espiritual, y escapar de la competencia de la sociedad industrial moderna. (pág. 312)

Valley Forge: Campo militar en el cual el ejército de George Washington, compuesto por 12 mil soldados y cientos de seguidores del campamento, sufrieron horriblemente en el invierno de 1777-1778. (pág. 176)

vanguardia: al frente de nuevas ideas. (pág. 503)

vasallo: persona o grupo de personas que reciben seguridad y propiedad de parte de un líder a cambio de lealtad y servicios. (pág. 25)

teatro vaudeville: Tipo de espectáculo escénico profesional popularizado en las décadas de 1880 y 1890 que incluyó cantos, bailes y rutinas de comedia; creó una forma de entretenimiento familiar que tuvo profunda influencia sobre otros formatos más tardíos, como los programas de radio y las comedias en televisión. (pág. 566)

veneración: tratar con honor o respeto. (pág. 149)

integración vertical: Modelo de negocios en el cual una corporación controlaba todos los aspectos de la producción, desde la materia prima hasta los productos empaquetados. Los "robber barons" (capitalistas inescrupulosos) o innovadores industriales como Gustavus Swift y Andrew Carnegie, fueron pioneros de este tipo de negocios tras la Guerra Civil. (pág. 499)

Departamento de Asuntos Veteranos (VA): Agencia federal que asiste a ex soldados. Después de la Segunda Guerra Mundial, la VA ayudó a los veteranos a adquirir nuevos hogares sin requerir un depósito, resultando en un boom en la construcción que creó empleos en la industria constructora y alimentó el gasto de consumidores en aparatos eléctricos y automóviles. (pág. 786)

vice-admiralty court: A maritime tribunal presided over by a royally appointed judge, with no jury. (p. 145)

Vietnamization: A new U.S. policy, devised under President Nixon in the early 1970s, of delegating the ground fighting to the South Vietnamese in the Vietnam War. American troop levels dropped and American casualties dropped correspondingly, but the killing in Vietnam continued. (p. 870)

vilify: to make false or abusive statements about. (p. 167)

Virginia and Kentucky Resolutions: Resolutions of 1798 condemning the Alien and Sedition Acts that were submitted to the federal government by the Virginia and Kentucky state legislatures. The resolutions tested the idea that state legislatures could judge the constitutionality of federal laws and nullify them. (p. 214)

Virginia Plan: A plan drafted by James Madison that was presented at the Philadelphia Constitutional Convention. It designed a powerful three-branch government, with representation in both houses of the congress tied to population; this plan would have eclipsed the voice of small states in the national government. (p. 193)

virtual representation: The claim made by British politicians that the interests of the American colonists were adequately represented in Parliament by merchants who traded with the colonies and by absentee landlords (mostly sugar planters) who owned estates in the West Indies. (p. 147)

virulent: dangerous. (p. 41)

vitriolic: bitter; malicious. (p. 844)

Volstead Act: Officially the National Prohibition Act, passed by Congress in 1920 to enforce the provisions of the Eighteenth Amendment banning the sale of alcohol. (p. 663)

Voting Rights Act of 1965: Law passed during Lyndon Johnson's administration that empowered the federal government to intervene to ensure minorities' access to the voting booth. (p. 834)

Wade-Davis Bill: A bill proposed by Congress in July 1864 that required an oath of allegiance by a majority of each state's adult white men, new governments formed only by those who had never taken up arms against the Union, and permanent disenfranchisement of Confederate leaders. The plan was passed but pocket vetoed by President Abraham Lincoln. (p. 434)

Wagner Act: A 1935 act that upheld the right of industrial workers to join unions and established the National Labor Relations Board (NLRB), a federal agency with the authority to protect workers from employer coercion and to guarantee collective bargaining. (p. 691)

Waltham-Lowell System: A system of labor using young women recruited from farm families to work in factories in Lowell, Chicopee, and other sites in Massachusetts and New Hampshire. The women lived in company boardinghouses with strict rules and curfews and were often required to attend church. (p. 249)

tribunal de vicealmirante: Tribunal marítimo presidido por un juez de designación real, sin jurado. (pág. 145)

Vietnamización Nueva política de los Estados Unidos, diseñada por el presidente Nixon a principios de la década de 1970, de delegar el combate terrestre a los vietnamitas del sur durante la Guerra de Vietnam. Se redujo la cantidad de tropas estadounidenses las muertes estadounidenses disminuyeron, pero la matanza en Vietnam continuó. (pág. 870)

denigrar: hacer declaraciones falsas o abusivas sobre alguien. (pág. 167)

Resoluciones de Virginia y Kentucky: Resoluciones emitidas en 1798 condenando las leyes de Extranjería y Sedición que fueron presentadas al gobierno federal por las legislaturas estatales de Virginia y Kentucky. Las resoluciones pusieron a prueba la idea de que las legislaturas estatales podían juzgar la constitucionalidad de las leyes federales y anularlas. (pág. 214)

Plan de Virginia: Plan escrito por James Madison, presentado en la Convención Constitucional de Filadelfia. Diseñó un poderoso gobierno de tres ramas, con la representación de ambas cámaras del congreso vinculadas a la población; este plan hubiera eclipsado la voz de los estados pequeños en el gobierno nacional. (pág. 193)

representación virtual: Afirmación de políticos británicos de que los intereses de los colonos americanos habían sido debidamente representados en el Parlamento por comerciantes que intercambiaban con las colonias, y por terratenientes ausentes (en su mayoría cultivadores de azúcar) dueños de fincas en las Indias Occidentales. (pág. 147)

virulento: peligroso. (pág. 41)

vitriólico: amargado; malicioso. (pág. 844)

Ley Volstead: Oficialmente, Ley Nacional de Prohibición, aprobada por el Congreso en 1920 para aplicar las disposiciones de la Decimoctava Enmienda que prohibió la venta de alcohol. (pág. 663)

Ley de Derecho al Voto de 1965: Ley aprobada durante la administración de Lyndon Johnson que confirió poderes al gobierno federal para intervenir y asegurar el acceso de las minorías a las urnas. (pág. 834)

Proyecto de Ley Wade-Davis: Ley propuesta por el Congreso en Julio de 1864 que requirió que la mayoría de los hombres blancos adultos de cada estado hicieran un juramento de lealtad, que los nuevos gobiernos fueran formados por personas que no se habían levantado en armas contra la Unión y la inhabilitación política permanente de los líderes confederados. El plan fue aprobado pero el presidente Lincoln lo vetó "de bolsillo". (pág. 434)

Ley Wagner: Ley de 1935 que mantuvo el derecho de los trabajadores industriales de formar sindicatos y establecer la Junta Nacional de Relaciones Laborales (NLRB), agencia federal autorizada para proteger a los trabajadores de la coacción de sus empleadores y garantizar negociaciones colectivas. (pág. 691)

sistema Waltham-Lowell: Sistema de trabajo que reclutó a mujeres jóvenes de familias agricultoras para trabajar en fábricas de Lowell, Chicopee y otros sitios de Massachusetts y New Hampshire. Las mujeres vivían en dormitorios de la compañía con reglas estrictas y toques de queda, y con frecuencia se les requería asistir a la iglesia. (pág. 249)

War Industries Board: A federal board established in July 1917 to direct military production, including allocation of resources, conversion of factories to war production, and setting of prices. (p. 636)

War Powers Act (1941): The law that gave President Roosevelt unprecedented control over all aspects of the war effort during World War II. (p. 717)

War Powers Act (1973): A law that limited the president's ability to deploy U.S. forces without congressional approval. Congress passed the War Powers Act in 1973 as a series of laws to fight the abuses of the Nixon administration. (p. 891)

warfare: engaging in battle or strongly competing with fighting executed through use of weaponry. (p. 2)

Warren Court: The Supreme Court under Chief Justice Earl Warren (1953–1969), which expanded the Constitution's promise of equality and civil rights. It issued landmark decisions in the areas of civil rights, criminal rights, reproductive freedom, and separation of church and state. (p. 872)

Warsaw Pact: A military alliance established in Eastern Europe in 1955 to counter the NATO alliance; it included Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania, and the Soviet Union. (p. 758)

Watergate: Term referring to the 1972 break-in at Democratic Party headquarters in the Watergate complex in Washington, D.C., by men working for President Nixon's reelection campaign, along with Nixon's efforts to cover it up. The Watergate scandal led to President Nixon's resignation. (p. 890)

Webster v. Reproductive Health Services: A 1989 Supreme Court ruling that upheld the authority of state governments to limit the use of public funds and facilities for abortions. (p. 958)

welfare capitalism: A system of labor relations that stressed management's responsibility for employees' well-being. (p. 655)

welfare state: A term applied to industrial democracies that adopt various government-guaranteed social-welfare programs. The creation of Social Security and other measures of the Second New Deal fundamentally changed American society and established a national welfare state for the first time. (p. 691)

Whigs: The second national party, the Whig Party arose in 1834 when a group of congressmen contested Andrew Jackson's policies and conduct. The party identified itself with the pre-Revolutionary American and British parties — also called Whigs — that had opposed the arbitrary actions of British monarchs. (p. 293)

Whiskey Rebellion: A 1794 uprising by farmers in western Pennsylvania in response to enforcement of an unpopular excise tax on whiskey. (p. 209)

Consejo de Industrias de Guerra: Consejo federal establecido en 1917 para dirigir la producción militar, incluyendo la asignación de recursos, la conversión de fábricas a la producción para la guerra y la definición de precios. (pág. 636)

Ley de Poderes de Guerra (1941): Ley que confirió al presidente Roosevelt un nivel de control sin precedentes sobre todos los aspectos del esfuerzo bélico durante la Segunda Guerra Mundial. (pág. 717)

Ley de Poderes de Guerra (1973): Ley que limitó el poder de los presidentes de desplegar fuerzas estadounidenses sin aprobación del Congreso. El Congreso aprobó la Ley de Poderes de Guerra en 1973 como parte de una serie de leyes para combatir los abusos de la administración de Nixon. (pág. 891)

guerra: entablar combate o competir fuertemente en disputas ejecutadas por medio del uso de armas. (pág. 2)

La Corte de Warren: La Corte Suprema bajo la presidente del tribunal, Earl Warren, (1953-1969), que expandió la promesa de igualdad y derechos civiles de la Constitución. Emitió decisiones históricas en el terreno de derechos civiles, derechos de los criminales, libertades reproductivas y separación de iglesia y estado. (pág. 872)

Pacto de Varsovia: Alianza militar establecida en Europa del Este en 1955 en respuesta a la alianza de la OTAN; incluyó a Albania, Bulgaria, Checoslovaquia, Alemania Oriental, Hungría, Polonia, Rumania y la Unión Soviética. (pág. 758)

Watergate: Término que describe la intrusión en la sede del Partido Demócrata ubicada en el complejo de Watergate de Washington D.C. en 1972, perpetrada por hombres que trabajan para la campaña de reelección de Nixon y el esfuerzo de Nixon para encubrir este acto. El escándalo de Watergate condujo a la renuncia del presidente Nixon. (pág. 890)

Webster v. Reproductive Health Services (Caso Webster contra los Servicios de Salud Reproductiva): Decisión de la Corte Suprema en 1989 que mantuvo la autoridad de los estados para limitar el uso de fondos públicos en instalaciones para abortos. (pág. 958)

capitalismo de bienestar: Sistema de relaciones laborales que resaltaban que el bienestar de los empleados es responsabilidad de la administración. (pág. 655)

estado de bienestar: Término aplicado a las democracias industriales que adoptan varios programas de bienestar social garantizados por el gobierno. La creación de la Seguridad Social junto con otras medidas del Segundo Nuevo Trato, cambió fundamentalmente a la sociedad estadounidense y estableció por primera vez un estado nacional de bienestar. (pág. 691)

whigs: El segundo partido nacional, el Partido de los Whigs, surgió en 1834 cuando un grupo de congresistas impugnaron la conducta y las políticas de Andrew Jackson. El partidio se identificaba con la América pre-revolucionaria y con los partidos británicos–también llamados *whigs*–que se habían opuesto a las acciones de los monarcas británicos. (pág. 293)

Rebelión del Whisky: Levantamiento en 1794 de agricultores en el oeste de Pennsylvania como respuesta a un impopular impuesto especial sobre el whiskey. (pág. 209)

Williams v. Mississippi: An 1898 Supreme Court ruling that allowed states to impose poll taxes and literacy tests. By 1908, every southern state had adopted such measures. (p. 599)

Wilmot Proviso: The 1846 proposal by Representative David Wilmot of Pennsylvania to ban slavery in territory acquired from the U.S.-Mexico War. (p. 368)

Wisconsin Idea: A policy promoted by Republican governor Robert La Follette of Wisconsin for greater government intervention in the economy, with reliance on experts, particularly progressive economists, for policy recommendations. (p. 605)

Woman's Christian Temperance Union: An organization advocating the prohibition of liquor that spread rapidly after 1879, when charismatic Frances Willard became its leader. Advocating suffrage and a host of reform activities, it launched tens of thousands of women into public life and was the first nationwide organization to identify and condemn domestic violence. (p. 550)

Woman's Loyal National League: An organization of Unionist women that worked to support the war effort, hoping the Union would recognize women's patriotism with voting rights after the war. (p. 414)

Women's Trade Union League: A labor organization for women founded in New York in 1903 that brought elite, middle-class, and working-class women together as allies. The WTUL supported union organizing efforts among garment workers. (p. 581)

women's liberation: A new brand of feminism in the 1960s that attracted primarily younger, college-educated women fresh from the New Left, antiwar, and civil rights movements who sought to end to the denigration and exploitation of women. (p. 867)

Works Progress Administration: Federal New Deal program established in 1935 that provided government-funded public works jobs to millions of unemployed Americans during the Great Depression in areas ranging from construction to the arts. (p. 692)

World Bank: An international bank created to provide loans for the reconstruction of war-torn Europe as well as for the development of former colonized nations in the developing world. (p. 783)

World Trade Organization (WTO): International economic body established in 1995 through the General Agreement on Tariffs and Trade to enforce substantial tariff and import quota reductions. (p. 944)

World Wide Web: A collection of interlinked computer servers that debuted in 1991, allowing access by millions to documents, pictures, and other materials. (p. 951)

Williams v. Mississippi: Dictamen de la Corte Suprema que permitió a los estados imponer impuestos de capitación y pruebas de alfabetización. Para 1908, todos los estados del Sur habían adoptado estas medidas. (pág. 599)

Enmienda Wilmot: Propuesta presentada por el Representante David Wilmot en 1846 para prohibir la esclavitud en los territorios adquiridos durante la Intervención estadounidense en México. (pág. 368)

Idea de Wisconsin: Política promovida por el gobernador republicano, Robert La Follette, de Wisconsin, para una mayor intervención del gobierno en la economía que se apoyaría en expertos, particularmente economistas progresistas, para recomendaciones de políticas. (pág. 605)

Unión Cristiana de Mujeres por la Templanza: Organización que abogó por la prohibición del licor, que a partir de 1879 se expandió rápidamente cuando Frances Willard se convirtió en su líder. Abogaba por el sufragio y varias actividades reformistas, lanzó a decenas de miles de mujeres hacia la vida pública y fue la primera organización nacional que condenó la violencia doméstica. (pág. 550)

Woman's Loyal National League: Organización de mujeres de la Unión que trabajaron para apoyar el esfuerzo bélico con la esperanza de que la Unión correspondería el patriotismo de las mujeres con derechos de voto después de la guerra. (pág. 414)

Liga del Sindicato de Mujeres (WTUL): Organización laboral para mujeres fundada en Nueva York en 1903 que unió a mujeres de las élites, de la clase media y de la clase trabajadora como aliadas. La WTUL apoyó los esfuerzos para organizar un sindicato de trabajadores de manufactura de prendas. (pág. 581)

liberación de las mujeres: Nueva forma de feminismo surgido en la década de 1960 que atrajo principalmente a mujeres jóvenes con educación universitaria, que recién se habían unido a la Nueva Izquierda, se oponían a la guerra y estaban a favor de los movimientos de derechos civiles que buscaban terminar la degradación y explotación de las mujeres. (pág. 867)

Administración del Progreso de Obras: Programa federal del Nuevo Trato establecido en 1935 para ofrecer empleos públicos financiados por el gobierno a los millones de estadounidenses desempleados durante la Gran Depresión en industrias desde la construcción hasta las artes. (pág. 692)

Banco Mundial: Banco internacional creado para brindar préstamos de reconstrucción a Europa tras la devastación de la guerra y para el desarrollo de los países en vías de desarrollo que fueron colonias. (pág. 783)

Organización Mundial del Comercio (OMC o WTO en inglés): Entidad económica internacional establecida en 1995 por medio del Acuerdo General sobre Aranceles Aduaneros y Comercio, para imponer reducciones substanciales en cuotas de importación y aranceles. (pág. 944)

World Wide Web: Conjunto de servidores de computadora interconectados que en 1991, permitiendo el acceso de millones a documentos, imágenes y otros materiales. (pág. 951)

Wounded Knee: The 1890 massacre of Sioux Indians by American cavalry at Wounded Knee Creek, South Dakota. Sent to suppress the Ghost Dance, soldiers caught up with fleeing Lakotas and killed as many as three hundred. (p. 488)

XYZ Affair: A 1797 incident in which American negotiators in France were rebuffed for refusing to pay a substantial bribe. The incident led the United States into an undeclared war that curtailed American trade with the French West Indies. (p. 213)

Yalta Conference: A meeting in Yalta of President Roosevelt, Prime Minister Churchill, and Joseph Stalin in February 1945, in which the leaders discussed the treatment of Germany, the status of Poland, the creation of the United Nations, and Russian entry into the war against Japan. (p. 750)

yellow journalism: A derogatory term for newspapers that specialize in sensationalistic reporting. Yellow journalism is associated with the inflammatory reporting by the Hearst and Pulitzer newspapers leading up to the Spanish-American War in 1898. (p. 569)

Yellowstone National Park: Established in 1872 by Congress, Yellowstone was the United States's first national park. (p. 477)

yeoman: a property holder. (p. 68)

Young Americans for Freedom (YAF): The largest student political organization in the country, whose conservative members defended free enterprise and supported the war in Vietnam. (p. 860)

Young Lords Organization: An organization that sought self-determination for Puerto Ricans in the United States and in the Caribbean. Though immediate victories for the YLO were few, their dedicated community organizing produced a generation of leaders and awakened community consciousness. (p. 837)

Young Men's Christian Association: Introduced in Boston in 1851, the YMCA promoted muscular Christianity, combining evangelism with athletic facilities where men could make themselves "clean and strong." (p. 539)

Zimmermann telegram: A 1917 intercepted dispatch in which German foreign secretary Arthur Zimmermann urged Mexico to join the Central Powers and promised that if the United States entered the war, Germany would help Mexico recover Texas, New Mexico, and Arizona. Published by American newspapers, the telegram outraged the American public and help precipitate the move toward U.S. entry in the war on the Allied side. (p. 634)

zoot suits: Oversized suits of clothing in fashion in the 1940s, particularly among young male African Americans and Mexican Americans. In June 1943, a group of white sailors and soldiers in Los Angeles, seeking revenge for an earlier skirmish with Mexican American youths, attacked anyone they found wearing a zoot suit in what became known as the zoot-suit riots. (p. 727)

Masacre de Wounded Knee: Suceso que tuvo lugar en 1890 en Wounded Knee Creek, Dakota del Sur, en el que los indios siux fueron masacrados por la caballería estadounidense. Enviados para reprimir la Danza de los espíritus, los soldados alcanzaron a los lakotas cuando huían y mataron a unos trescientos de ellos. (pág. 488)

caso XYZ: Incidente en 1797 en el cual negociadores estadounidenses en Francia fueron rechazados por negarse a pagar un soborno considerable. El incidente llevó a los Estados Unidos a una guerra no declarada que redujo el comercio estadounidense con las Antillas Francesas. (pág. 213)

Conferencia de Yalta Reunión en Yalta del presidente Roosevelt, el primer ministro Churchill y Iósif Stalin en febrero de 1945 donde se discutió el trato hacia Alemania, el estatus de Polonia, la creación de las Naciones Unidas y el ingreso ruso a la guerra contra Japón. (pág. 750)

periodismo amarillista: Término despectivo para periódicos que se especializan en reportes sensacionalistas. El periodismo amarillista está asociado con la cobertura incendiaria de los periódicos Hearst and Pullitzer de cara a la Guerra Hispano-Estadounidense en 1898. (pág. 569)

Parque Nacional de Yellowstone: Establecido en 1872 por el Congreso, Yellowstone fue el primer parque nacional de los Estados Unidos. (p. 477)

yeoman: titular de una propiedad. (pág. 68)

Jóvenes Americanos por la Libertad (YAF): Organización política estudiantil más grande del país cuyos miembros conservadores defendieron a la empresa libre y apoyaron a la guerra en Vietnam. (pág. 860)

Organización Young Lords (YLO): Organización que buscó la autodeterminación para los puertorriqueños en Estados Unidos y el Caribe. Si bien los YLO obtuvieron pocas victorias inmediatas, su dedicación a la organización de la comunidad produjo una generación de líderes y despertó la conciencia comunitaria. (pág. 837)

Asociación Cristiana de Jóvenes (YMCA): Introducida en Boston en 1851, la YMCA promovió la cristiandad muscular, combinando el evangelismo con las instalaciones deportivas donde los hombres pudieran convertirse en "limpios y fuertes". (pág. 539)

telegrama Zimmermann: Envío interceptado en 1917 donde el secretario de exterior alemán llamaba a México a unirse a los Poderes Centrales y prometía que si Estados Unidos entraba a la guerra, Alemania ayudaría a México a recuperar Texas, Nuevo México y Arizona. Publicado por periódicos estadounidenses, el telegrama indignó al público americano y ayudó a precipitar la decisión de Estados Unidos de involucrarse en la guerra del lado de los Aliados. (pág. 634)

zoot suits (vestimenta): Trajes de tamaño excesivo que estuvieron de moda en la década de 1940, particularmente entre hombres afroamericanos y mexicano-americanos jóvenes. En junio de 1943, un grupo de marinos y soldados blancos, buscando vengarse de un conflicto anterior con jóvenes mexicano-americanos, atacaron a cualquiera que portara un zoot suit en lo que se conoce como los disturbios zoot-suit. (pág. 727)

Index

A note about the index: Names of individuals appear in boldface; biographical dates are included for major historical figures. Letters in parentheses following page numbers refer to: *(f)* figures, including charts and graphs; *(i)* illustrations, including photographs and artifacts; *(m)* maps; and *(t)* tables.

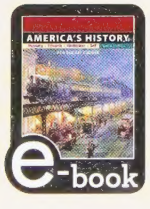
"Our goal is to help students achieve a richer understanding of politics, diplomacy, war, economics, intellectual and cultural life, and gender, class, and race relations by exploring how developments in all these areas were interconnected."

In *America's History*, the authors use a big picture, analytical focus to help students understand not just what happened, but why. With its hallmark interpretive voice and thoughtful analysis, *America's History* helps students make sense of the contextual and causal relationships between events to bring the history of the United States to life.

Revised to meet the 2017 APUSH Course Updates

This thematic look at United States history invites students to think about the connections that make the study of United States history so interesting. To prepare students for the AP® United States History course and exam, the authors effectively model the AP® disciplinary practices and reasoning skills, and then provide students with a wealth of opportunities to try their hand and build the skills necessary for success in the AP® course and AP® exam. Look for these specific tools designed to support students throughout this course:

- The updated **AP® Disciplinary Practices and Reasoning Skills** primer builds on students' knowledge and understanding of the skills required to succeed on the AP® U.S. History Exam.
- A **nine-part structure** organizes the chapters according to the AP® course framework.
- The **AP® Thinking Like A Historian** feature in every chapter includes five to eight brief primary sources organized around a central theme that helps students learn to work with evidence.
- NEW **AP® Exam Tips and AP® Practices & Skills** margin notes highlight important concepts and skills that students will need to master for the AP® exam.
- NEW **AP® Practice Questions** include multiple choice and short answer questions after every chapter, and a document-based question and long essay questions after every part, to build deep familiarity with the tasks and format of the AP® exam.
- NEW full-length **AP® United States History Practice Exam** gives students a chance to practice a full-length exam before the big test day.



Study when and where you want with our easy-to-use, flexible e-Book options. Visit **highschool.bfwpub.com/henretta9e** for more information.

Must-Have Resources for *America's History*

This program supports your instruction of the AP® United States History curriculum with superior, one-of-a-kind resources. Please contact us at **socialstudies@bfwpub.com** for information on this and other AP® course materials. Learn more at **highschool.bfwpub.com/henretta9e**.
